IT is probable that the era of "centennialism," if the coinage of such a word be permissible, which set in about 1875, is now at an end for a long time to come. The successive events of the American Revolution, of the period of confusion which followed it, and of the final establishment of sound national government, have all had their days of remembrance, concluded fittingly by the great celebration of last April in New York City; and it is not easy to see any near occasion for renewing the series. There have been events in our history for which remembrance might be suggested during the next twenty years; but they are those in which the United States can claim no peculiar property, such as the discovery of America, or events in the special history of the individual States, which can hardly excite general interest, or such as the voyages of the Cabots, which, however important, are somewhat too academic to enlist any genuine popular enthusiasm. It is most probable, then, that we are to have no recurrence of "centennial" anniversaries this side of the naval victories of 1812 at least, and that patriotism must content itself for that length of time with the simple and less heroic interests of the present, relying no longer for inspiration upon the great occasions of the past.

It should not be believed that the occasions of the present lose in real dignity by comparison with those of the past, any more than that the fathers of the Republic would have been better engaged in holding "centennial" celebrations themselves than in doing the duty which lay nearest to them. It is not by great occasions, or by the spasmodic energies of a desperate patriotism, that the rank of a people in history is to be measured. Such events are like the stamp of the die upon the coin; it may be impressed on bullion or on base metal. Spain had her Zaragoza, as we had our Bunker Hill; but when King Ferdinand resumed his throne he found no tools of his tyranny more subservient than the rural population, such as had defended Zaragoza. The true metal, to which alone the stamp can give permanent currency, is that courage which is the representative of long years of the assiduous practice of the homelier virtues of good citizenship. If Bunker Hill had represented only brute courage, or "war to the knife," the British Ministry might have found it a real victory, or some American usurper might have made it a stepping-stone to a despotism: the secret of the battle was in the fact that Miles Standish, and the Winthrops, and Thomas Hooker, and all the host of unnamed worthies of New England history for a hundred and fifty years, stood behind the breastworks, and made certain of permanent results in spite of temporary defeat. The interest of such an event is not in the mere pugilist's wonder that embattled farmers should withstand regular soldiers, but in the struggle of good citizenship, with its inevitable results, against the prizes and incentives offered by a privileged class.

It may be or may not be that the exercise of the simple civic virtues in the present is a preparation for some future Bunker Hill; but he must be strangely blind who cannot see the approach of enemies as fatal to the Republic and as easily visible as the long line of red-coats which landed at Charlestown on that June morning of 1775. Here is the professional politician, who buys votes and corrupts citizenship at its fountain-head; the venal politician, to whom office is valuable only for its opportunities of marketing his own vote; the "ring"-leader, who exploits the taxing-power and leaves behind him a broad track of speculation and debt; the demagogue, who makes political and personal profit out of religious and race differences; the machine politician, who appropriates his share of the civil service while he cants about the people's right to the offices; the man who thinks it an act of tyranny to impose limits or checks upon his right to tempt his neighbors to drink; the corporate tyranny which insists on having only helpless workmen to deal with, or the "labor" tyranny which hounds, cripples, or murders the helpless individual—every grade of civic offenders, from the petty larcenist up or down, to the imported scoundrel who prepares dynamite bombs for the police. More terrible than an army with banners, more insidious and aggressive than the assaulting line at Bunker Hill, these modern foes of the Republic are to be met and overcome, not by "centennial" celebrations, but by just those civic virtues which gave possibility to the great events of the past.

The power of the Republic in the present is great, but it is an error to believe that it was not fully foreseen a hundred years since. Franklin and others amused their leisure with mathematical calculations of the increase of population, which time has shown to have been singularly correct. President Stiles of Yale College, who, in a sermon of 1760, on the conquest of Canada, had predicted the development of "a Provincial Confederacy," and perhaps the growth of an "imperial dominion" out of the Confederacy, went further into the future in his election sermon of 1783. "It is probable that within a century from our independence the sun will shine on fifty millions of inhabitants in the United States. This will be a great, a very great nation, nearly equal to half Europe. And if the present rate of increase should be rather diminished in some of the other settlements, yet an accelerated multiplication will attend our general propagation, and overspread the whole territory westward for ages." But the preacher saw the attendant dangers with equal clearness. He warned posterity, as well as his hearers, that there was need of "vigilance against corruption in purchasing elections and in designations to office in the legislatures and Congress, instituting such efficacious provisions against corruption as shall preclude the possibility of its rising to any great height before it shall be controlled and corrected. Although, in every political administration, the appointment to office will ever be considerably influenced by the sinister, private,

personal motives either of interest or friendship, yet the safety of the state requires that this should not go too far." If a preacher's forecast made such a warning necessary then, how much more must be added now from our bitter experience? How necessary such words of solemn and prophetic admonition as those spoken by Bishop Potter at St. Paul's on the chief day of the centennial celebration—in the presence of one President and two ex-Presidents.

We saw, thirteen years ago, the scene of enthusiasm when the dawning of Independence Day commemorated the origin of the festival just a hundred years before. We may easily imagine the intense excitement which would characterize it this year if armed and alien enemies stood in military array within the boundaries of the Republic. And yet there has never been a time in our country's history when the elements of reverence for the past and anxiety for the present and the future were more necessary than in the celebration of this first Independence Day of the Constitution's second century. There are many subjects which deserve the most serious reflection of any American who aspires to good citizenship. It is high time for him to awake out of slumber and disappoint the hopes of the intestine foes of all good citizens. He can no longer afford to believe that all the voters of the opposite party are rogues; that he is serving his country when he uses his citizenship for the mere purpose of circumventing them; that he is under any obligation to transfer to local elections the issues and passions which are appropriate only to national elections; or that in general every man whom he finds labeled with his party title becomes thereby a Heaven-ordained leader, to be trusted implicitly and followed unshrinkingly: these are the familiar tricks and devices by which self-seeking politicians of all parties have kept the good people of these States divided and neutralized, taking to themselves the objects of their own desire. To repudiate such influences may seem an easy task, but human nature makes it one of the most difficult of human experience. To meet it with success, there is need of all the resources to be drawn from the training of the past and the feeling of responsibility for the future; and for such considerations there have been few Independence Days more appropriate than that of 1889, when the political passions of the past have cooled and the strong winds of coming struggles are yet at a distance. The thoughts appropriate to the day may be less exciting than usual this year, but it cannot be said that they are less important.

The Summer Exodus, and what it Testifies.

THE contrast between the past and the present of American life will hardly find a more striking embodiment than in the changes in the mode of passing the summer. Within the memory of many of us, a complete change of residence during the hot months was a luxury confined to comparatively few. Country people never thought of it; and it was believed that in the cities the first subterfuge of an ambitious family was to close the front of the house and to live in the back rooms, if so be that they could thus persuade the world of their neighborhood that they too had taken part in the annual flitting. If city children were sent for the summer to the grand-paternal farm, they were fortunate

beyond their fellows. Now the case is changed past recognition. Social conditions seem to be ordered to meet a general summer exodus. Summer hotels are everywhere. They form an almost continuous line along the coast of New England and the Middle States; one mountain region after another has succumbed to their invasion; the lakes of the interior have begun to prove most attractive watering-places; and the rising tide of summer travel has begun to cut new channels for itself—along the Pacific coast, on the Gulf of Mexico, and in the great pine woods and the hill territory of the South. The summer cottage has been elastic enough to meet the needs of purses of every grade: it ranges from that which is almost a palace in its extent and equipment or the wide-stretching club-park, with its reserved rights of shooting or fishing, to the economical boarding-place or the Adirondack cabin. Poor indeed is the family that cannot contrive by the exercise of forethought and thrift to secure some brief summer's outing, for the bread-winner or for all the members of the family; and when the inability seems to exist, it is more often a certain incompatibility between the family resources and the family desires. The development has even gone further, and many who cannot afford such a relaxation contrive a substitute by transferring their scene of work to summer resorts, or have it furnished for them by "fresh-air funds."

Much of this change in the habits of the people has undoubtedly been due to the increasing tendency to a city life. However great the attractions of the city may be, man retains something of the nature of Antæus, and needs an occasional renewal of direct contact with mother earth to keep him in full vigor. When the proportion of those who are habitually confined to an urban life has increased from one-thirtieth to one-third it is natural that there should be a correspondingly increased pressure for summer relaxation and for accommodations to supply it. Even this explanation, however, is by no means adequate. It would account for the increased stream of Americans who wish to leave the cities during the summer, but not for their ability to indulge the desire. The fact that school-teachers, who naturally long for a summer outing, are many times more numerous than they were fifty years ago, will not tell us why that sorely underpaid class of workers, for whom there was no provision then, has now a store of vacation resorts from which to choose.

The subject may have much more than a merely curious interest. Mr. Henry George and his disciples have strenuously asserted that the rewards of labor are both actually and comparatively less than they were fifty years ago, and others have as strenuously contradicted them. It is impossible, unfortunately, to array any undoubted or fairly indubitable testimony on either side. Those who labored and were paid for their labor fifty years ago are most of them dead, and can tell us nothing about the matter. Those who are still alive are by no means the same persons that they were fifty years ago; they cannot compare the two periods fairly and tell us whether the intervening time has given them more or less for their work. Figures are incorrigible liars. They leave out of view all sorts of conditions, which materially change their size and weight. A table of comparative wages may tell us in plain figures the workman's different rates of wages at two different periods, while it tells nothing of the varia-

tions in the price of flour or meat, or in rent or clothing, all of which the workman would find to be very serious limitations on the real purchasing power of his money wages. Even when we get figures for these latter elements they profit us little. The average price of flour for a particular year may be a high one, but this may be due either to continuous high prices throughout the year, or to an abnormally high price for some months, in which the workman has felt it very little by reason of his ability to provide substitutes for flour at that time. No mere wage statistics, moreover, will tell us whether the workman, under the wages current for either point of time, had work enough for all the year around, or for but a part of the year. Again, the price of board or the total cost of living may have remained the same, while improvements in transportation have added to the table beef and mutton from the West, fish from the Pacific coast, and canned goods from all parts of the country or of the world, thus enabling the same money, or the same wages, to furnish that prime necessity for man, a varied diet. Countless parallel reasons have led men to impeach the validity of almost every collocation of figures, and fair-minded men, while admitting the figures as conclusive upon their own judgment, have often shrunk from any attempt to impose them upon the judgment of others. The figures do seem to show that Mr. George is utterly wrong, and that the condition of the workingman has improved greatly during the past half-century. Every new collocation of figures which brings out the same result strengthens the mathematical probability of that conclusion, and yet we can hardly say that the inherent weakness of figures has so far been overcome that the case is decided.

Under such circumstances, the summer exodus may contain indications which are more trustworthy and of more real weight than any mere figures can be. A column of wage statistics may, out of willfulness, inattention, or pure ignorance in the compiler, omit elements which are essential to any complete or just conclusion; but no such imperfection can be attributed to such a social fact as that which we are considering. The summer exodus is the mathematical result of a composition of all the forces which bear on the question: it omits no consideration which is essential to the conclusion; it assigns to each its comparative importance with an accuracy which no human compilation of figures can hope to reach; and its summing-up may be of the greatest service in showing us whether the progress of the past fifty years has really been accompanied by any relative increase of poverty. If the summer exodus has grown only as the country has grown; if it is confined to the same social classes to which it was confined in 1839; if the numbers who take part in it have increased only in proportion to the increase of those classes; still more, if there has been any relative falling-off in number — then we may as well admit that there is the strongest of indications that our progress has not done much for poverty. If, on the other hand, we find that the numbers of those who can now indulge in the summer's outing have grown far beyond the mere numerical increase of population; that the annual movement has penetrated further downward to social strata which could not have thought of it a half-century ago — then we may surely take the whole development as a fair indication that progress has done something to take the edge from

poverty, unless we are to take it that the people are obstinately bent nowadays on taking vacations which they cannot really afford. It is from this point of view that such social phenomena are most worthy of study, as well as most easy of apprehension. There are not many who cannot make some contribution to the discussion; and the greater the amount of light which is poured upon it the greater is the likelihood of a just and permanent decision.

Outdoor Sports.

THERE comes to the American people, with the hot weather, the season in which outdoor sports seem to reign supreme. Boat-races and baseball matches follow one another in bewildering succession. The newspapers reek with championships and gossip about champions and would-be champions. You shall find the spectators at a single game of baseball outnumbering the entire population of such a city as Boston a hundred years ago. Schoolboys are no longer the only ones who are thought to suffer such amusements to come between them and their work; an equal interest in outdoor sports is attributed to judges and lawyers, editors and reporters, merchants and clerks; and it is even said that our Saturday half-holidays are in many cases due less to interest in the health of subordinates than to the desire of principals to witness some outdoor athletic contest. At any rate, it should be understood that lack of interest in open-air amusements is no longer to be included among the faults of the American people.

We may grant at once all that is claimed for the new development by its professed admirers. It will doubtless exert a strong influence against the intrusion of weak lungs, hearts, and livers into our pulpits, editorial and court rooms, and other scenes of professional work. It will make those who take active part in it more prompt to think and decide in emergencies. It will check the feverish eagerness of Americans in their pursuit of work for the sake of work. And the increasing number of those who are able to take part in it is merely another fact in evidence of the greater comfort of modern life and of our people's stronger leaning towards healthy amusements as a break in the monotony of unvarying work.

All this and more might be granted without making out an impregnable case for the modern development of athletics. It is not enough to prove the objects good, even with a likelihood of attaining them; it is often more important to attend to the correctness of the methods employed, for they may be such as to bring with them new evils which more than counterbalance all the good that has been attained. The amusements of a people are not at all beneath the attention of a sound social philosophy; they are often symptomatic of tendencies which cannot yet be seen in any other way, as the real nature of men comes out most clearly in their moments of relaxation. When the Roman noble went into the barracks of the gladiators and bet his sestercies upon their chances in the morrow's contest, the evil omen of the scene was not in the mere brutality of the sport, but in the disappearance of all that had once made up the Roman idea. No matter whether the sport in question was cruel or refined, the men and women whose souls were

absorbed in it were no longer of that breed which had brought the civilized earth under control of the Roman Peace. When the Byzantine mob went into ecstasies of excitement over the alternate victories of the blue or the green drivers in the circus there were none of the cruelties which marked the outdoor sports of Rome; but the pettiness of mind which found satisfaction in such relaxations was echoed in the bombast and conceit of Byzantine historians, and in the cowardice of the Byzantine emperors, who trembled behind their strong walls as successive deluges of barbarians, crusaders, and Mohammedans swept around them.

The relaxation of mind and body which is found in outdoor sports is by no means the most important circumstance connected with them: they are much more important as representatives of, or centers of influence in, the growth of the people. Viewed from this standpoint it is a serious question how far the modern athletic régime is a social benefit or a social injury. The development of a people is seen nowhere more clearly than in their ability to distinguish means from ends, and this is nowhere more true than in this matter of amusements. One may be glad to see a people turn work into play from time to time, from a conscious longing for relaxation, and yet see nothing admirable in an interest which makes the amusement an end in itself, and not a means to something better. Our newspapers give columns of expensive dispatches detailing the foreign "triumphs" of two American baseball nines, while they have no longer space or

readers for more than a meager summary of the debates in Congress. Crowds surround the bulletin-boards to watch the reflected glories of a boat-race, while the demands of business are so imperative that they cannot spend an hour twice in a twelvemonth in keeping alive their membership and influence in their party's primary association. If we are to gauge the popular interest in outdoor sports and in any more serious occupation by their respective shares of the Sunday newspapers, what is to be thought of the mental and moral standards of our people?

The whole question is one on which no appeal is possible except to the individual consciousness and conscience. A man should be able to tell, in his own case, whether his interest in outdoor sports is for their own sake or as a means to a higher and better end; whether he is a grown-up child, "pleased with a rattle, tickled with a straw," or a hard-working man, who feels the need of decreasing the strain upon his energies from time to time in order to keep them in full efficiency. His ability to consider his own case impartially will test his ability to estimate the general influence of outdoor amusements as we have them. These amusements are of no importance whatever in themselves; they are of the greatest importance as indications of a general drift, and it is a most serious question, on which every man ought to have an opinion, whether they are now indicative of greater comfort or of popular degeneracy, of higher standards of living or of lower standards of work.

OPEN LETTERS.

Indians, and Indians.

MR. REMINGTON'S descriptions of the Apaches and Comanches in this number of *THE CENTURY* have all the vividness of an impressionist, and are undoubtedly faithful as impressions. There is a tendency, however, among the people at large to accept a brief impression for a complete portraiture, and so to form general ideas out of a few details entirely inadequate for such a purpose. There are Indians and Indians, and he who should form his general impression of the Indian from a glimpse of the savagery of individual Apaches would find it necessary to discard his work and begin anew in the presence of the peaceful and skillful Zuni. It is true that the determination of methods of practical dealing with the Indians must depend somewhat on their character, but if the whole mass of Indians were as bad as individuals are sometimes represented to be the duty of dealing justly with them in all relations would still remain untouched. Whether or no the Indian of to-day is an attractive person to us is a small matter; the supreme matter is that he shall have no ground for a charge of injustice against us. No characterization of the Indian can be in any measure adequate which does not exhibit the various types found among the different tribes, the degrees of civilization reached, and the varying grades of material advancement represented by individuals and communities. Those who have studied the question on the

ground are agreed that while the army view, the view of the frontiersman, and the view of the philanthropist are each true in individual cases, none of them contains the whole truth. The Indian character is as varied as the character of the white man who sits in judgment upon him. Reversing the usual process, the Indian might base his impression of the whites on the indifference and somewhat scornful protection which the army man offers him, or the undisguised greed and unscrupulousness of the frontiersman who covets his lands, or the sometimes unpractical temper of the philanthropist whose whole desire is to serve him. All these types exist, and yet neither of them represents the great body of whites.

What is known as the Indian Question has made great and substantial progress during the last ten years—progress not only in the development of public opinion favorable to an award of an exact justice, but in knowledge of the real character and capacity of the Indian himself. No one who has any real knowledge of the matter ever thinks of the Indian to-day as controlled by any single passion or as represented by any single type of character. He recognizes that in dealing with them we are dealing with a body of people who differ among themselves as widely as the people of any other race. Moreover, what can be done with the Indian is no longer a matter of speculation. Much has been done in education, in agriculture, in social organization, and in diffusion of the spirit, occupations, and

habits of civilized men. The present stage is no longer experimental. So much has already been done, and, in the main, done successfully, that what still remains to be done is to complete and expand the operation of methods, instrumentalities, and laws already in operation.

The results at Hampton and Carlisle have settled the question of the capacity of the Indian for education. During the last decade Hampton alone has trained with more or less thoroughness more than three hundred students, who have been under its culture from a few months to five or six years. The record of these students has been carefully preserved, and that record shows that the great majority, in the face of almost insurmountable obstacles, are exercising a wide and beneficial influence on the communities through which they are scattered, and are doing faithfully and successfully the work of pioneers in the civilization of their people. As teachers, farmers, clerks, interpreters, scouts, and cattle-raisers they have attained, all things considered, an average success quite as high as that which would have attended the labors of an equal number of whites. The record of Carlisle's school would undoubtedly make as favorable a showing as the record of Hampton.

But the great and substantial gain which has been made in the discussion of the Indian question is the clear perception that the doing of justice does not depend on the character of those to whom it is awarded; that it is an absolute obligation independent of all such considerations. The long and terrible story of injustice to the Indians has at last borne its fruits in an awakened public conscience. The appealing pathos of such a story as "Ramona" has undoubtedly reached many who would have turned away indifferent from a bare recital of facts, but if the typical Indian were Geronimo rather than Ramona our duty to him would not be the less evident or the less imperative. It is the perception of this long-neglected duty which has not only banded together individuals to secure the redress of the wrongs inflicted upon the Indian, but which has at last produced something like a coherent system of measures looking to a permanent adjustment of the relations of the two races. The breaking up of the reservation system, the allotment of land in severalty, the conferring of the privileges and protection of citizenship, the extension of the civil and military laws over the reservations, the organization of an educational commission looking to the establishment of public school education, are all consistent features of a general movement which shall incorporate into the law of the land the aroused sentiment of its citizens.

Hamilton Wright Mabie.

Industrial Education for the Negro: Is it a "Craze"?

MOST friends of the negro in the North as well as in the South agree that industrial training should go hand in hand with his moral and mental culture. That is, they think that there should be for men such a drill at least in the elementary principles and processes of farming and the most common handicrafts, and for women in cooking, sewing, domestic economy, nursing and the care of children, that they may be better able both to earn and to save money, to secure homes of their own, and to make them worthy of that sacred name.

But while there is this nearly universal agreement as to the need of training of this sort, and disagreement merely as to matters of detail and method, there are a few earnest friends of the colored man — whose long, arduous, and efficient labors in his behalf entitle their opinions to great weight — who are afraid of this movement, and speak of it as a "craze." They think that the outcome of it is almost certain to be a less extended and thorough mental and moral culture. And as some of them are in positions where their opinions must have great power to shape or modify some of the most important of the organizations and institutions whose special object is negro education, it seems as if a statement of the reasons for their opinion, and the considerations which lead many of the benevolent to disagree with them, would be timely.

One of these reasons is that it is very hard to get enough money to give the ordinary scholastic education, the equipment for which is not so costly as that for industrial training. Will not the effort to give this more expensive culture diminish the amount available for the other?

It is urged, further, that the proposed change implies too great a concession to the widely prevailing opinion that the negro is, and in the nature of the case must be, better fitted for manual than for mental labor.

They argue also that the new departure tends to foster materialistic notions of the value of education, the main object of which should be the ennoblement of the worker rather than the production of more cotton, rice, sugar, coal, iron, or lumber. It is a materialistic age at best, and the tendencies in that direction are especially strong in the South at present; and even were the object no higher than the increase of the negro's value as a factor in the production and distribution of commodities, a widely known writer contends that, since dexterity is largely a result of mental rather than muscular training, any scheme that contemplates less of the higher education for the sake of increased production will in the end defeat itself.

Then again, the surprising success in some schools, and notably in one, in mastering the more advanced branches is profoundly affecting the opinions of many of the most influential people in the South as to the capacity of the negro; and to do anything which would make the work in these high-grade schools less extensive or less thorough will push him and his friends off this hard-won vantage-ground.

Still further, we are exhorted to remember that leaders qualified to hold their own in the sharp competitions of professional life are a great, if not the greatest, need of the colored race in this country. Over wide areas most of their clergy are illiterate, immoral, self-seeking, bitter sectarians, and the most determined opponents of every kind of improvement. So, too, the lack of lawyers, editors, and physicians of sufficiently broad and thorough training to be able to defend their weaker brethren against designing or incapable advisers is a very discouraging feature of the situation. The negroes do not as a rule seek the leadership or counsel of competent and honest whites in matters of religion or of business; hence the greater need of well-qualified men of their own race.

These are strong points. What can be said against them without aiding those who disbelieve in advanced education for colored people? Some of these are warm

friends of the negro, and some, it is to be feared, are not anxious that he should have more education than just enough to keep him from voting on the side of anarchy and to make him more efficient as a hewer of wood and a drawer of water. But is it not possible to unite industrial training with thorough and wide mental and moral culture? In advocating it need we strengthen the hands of the excellent people who oppose the high-school and college work, on the ground that it is better to give some book learning to the many rather than a good deal to only a few? There are a considerable number of those who believe in providing the most advanced scholastic education for those colored people who will push on to gain it who are firmly convinced that the movement for industrial education may be a help rather than a hindrance to the higher school work. What can be said in support of their position?

First. Only a small number graduate in the thorough college courses of the institutions that provide such advantages, and most leave them before they are qualified to pass the examinations for first-grade certificates as teachers. Hence they cannot hope for positions in the graded schools, which are kept open eight or nine months in a year. They must take those which afford them employment for only two or three months. What are they to do during the remaining nine or ten months? If they had the industrial education now given in some schools they might support themselves in the same communities where they teach, acquiring decent homes of their own, which would be a much needed example and incentive to all about them. The lack of anything worthy to be called home is the most appalling obstacle to the elevation of the negro. If these higher schools should furnish this industrial training, as some of them are beginning to do, nine-tenths, or, in many cases nineteen-twentieths, of the pupils who never finish even the grammar-school course might be put in the way of living for the rest of their lives like human beings instead of like beasts.

Second. The industrial training need not diminish, but may be made rather to increase the funds available for school work. Many will give to schools that afford this training who will not give to the schools that do not afford it. Many will give for this who will give nothing for school work. Besides, a large item of the expense of most of the existing schools is for "student's aid." In an institution which gives industrial training the students can earn much if not all of this aid. This saves their self-respect, avoids the danger of pauperizing them, and enables a thousand dollars given for such aid to be used over and over.

Third. In many cases students could stay and get a more thorough mental training if such work were furnished. There need not be such a small percentage of graduates from the normal, scientific, and collegiate courses as the catalogues show.

Fourth. Such work gives an entirely new idea of the dignity of labor. It was one of the greatest evils of slavery that manual labor was considered degrading. This was especially mischievous in its effects on the poor whites. The South is only slowly coming to believe that one who works for a living can be qualified for good society. In many of the industrial schools already established students are beginning to take pride in their command of tools, in their well planned and executed mechanical work, and in the thorough, clean

tillage, the enlarged and varied products, and the improved stock and buildings of the farms attached to these schools.

Fifth. Two or three hours a day of manual labor leave abundant time for all the study which is consistent with mental alertness and vigor. Quality is of far higher importance in mental work than quantity. It is of comparatively little moment that a certain number of facts and rules find lodgment in the mind for a time—usually a short time. The main thing is that the student acquires the power and the habit of incisive, sustained, and honest thinking. Six or eight hours of sharp attention is as much as should be required of any young person in one day. Some public schools require all lessons to be learned at home; but it is hard to see how such schools can produce anything but a lax and flabby habit of mind, or else injure the health. Just as much severe, intense study—and no other should be tolerated—can be done in a day by one who works two or three hours as by one who does not. Work that demands care and skill is really more of a relaxation than that which calls for nothing but brute force, because it is more interesting.

Sixth. The ability to plan or build a church, a school-house, or a dwelling, or to carry on a farm as it should be carried on, gives a man's opinion about purely professional matters greater weight in all struggling communities. A teacher, minister, or physician could hardly have, aside from his mental and moral qualities, a more effective passport to the confidence and respect of colored people.

Industrial education is in the air, and is sure to be tried extensively. Ought not those who have so long and so successfully fought the battle for purely school work to take a leading place in shaping policy under the new departure? Who can keep it from becoming too materialistic so well or so surely as they?

S. W. POWELL.

Charles Thomson, Secretary of Continental Congress.

IN THE CENTURY MAGAZINE for April is a very interesting article by Clarence Winthrop Bowen on "The Inauguration of Washington." On page 813 Mr. Bowen says: "In 1774, when he [Charles Thomson] was elected Secretary of the Continental Congress, — which office he held for fifteen consecutive years, — he had just married a young woman of fortune, *who was the aunt of President William Henry Harrison, and the great-great-aunt of President Benjamin Harrison.*" The marriage referred to took place September 4, 1774, at "Harriton," in Merion Township, then in Philadelphia, but now in Montgomery County, Pennsylvania. The lady whom he married was Hannah Harrison, daughter of Richard Harrison, a Friend who originally came from Maryland and married Hannah Norris, a daughter of Isaac Norris and granddaughter of Governor Thomas Lloyd. Richard Harrison died March 2, 1747, and left to survive him his widow and four children, namely, *Thomas Harrison, Mary*, who died unmarried, *Samuel*, and *Hannah*, who married Charles Thomson. As neither of Mr. Harrison's sons was named Benjamin, it is very apparent that Mr. Bowen has made a mistake. John Adams, in his diary of the occurrences of a few days previous to the meeting of Congress,

says, speaking of a visit to the house of Thomas Mifflin: "Here we had much conversation with Mr. Charles Thomson, who is, it seems, about marrying a lady, a relation of Mr. Dickinson's, with £5000 sterling. This Charles Thomson is the Sam Adams of Philadelphia." In a foot-note to his article Mr. Bowen says, "*Thomson was the father-in-law of Elbridge Gerry.*" This also is an error. Mr. Thomson was twice married. His first wife was a daughter of Charles Mather of Chester County, by whom he had two children, who died in their infancy. By his second wife *he had no children*, and hence it is very clear that he was *not* the father-in-law of Elbridge Gerry. Mr. Gerry's wife was a Miss Ann Thompson, daughter of James Thompson of New York City, a man of great prominence in his day, and on his mother's side connected with some of the oldest families in New York. For details of this statement I refer Mr. Bowen to the "Memoirs of Elbridge Gerry," by James T. Austin, p. 502.

Mr. Bowen, however, is not the only person who has fallen into error about Charles Thomson. In Drake's "Dictionary of American Biography," in a sketch of Gerry, Mr. Drake says: "He married Ann, daughter of Charles Thomson, Secretary of Congress," and adds that she died at New Haven, March 17, 1849, aged eighty-six years. In "Appleton's Cyclopædia of American Biography," a very valuable work, it is stated that Charles Thomson "had just come to Philadelphia in September, 1774, with his bride, a sister of Benjamin Harrison, the signer."

PHILADELPHIA.

Horatio Gates Jones.

Imperial Federation.

IN the April number of THE CENTURY MAGAZINE Charles H. Lugin of Fredericton, New Brunswick, writes: "I do not recall the name of a prominent public man who favors the project [of Imperial Federation]; while several may be named . . . who have put themselves on record against it."

Will you allow me to correct this statement by referring to the latest list of the council of the Imperial Federation League in Canada, which I inclose, and which contains the names of two ministers of the Dominion, twelve senators, including the speaker, more than fifty M. P.'s of the Dominion, the Roman Catholic archbishop of Halifax, the Anglican bishop of Nova Scotia, four lieutenant-governors, and many well-known names in all branches of public life.

Mr. Lugin also states that "A few branches of the Federation League have been established in the Dominion." The facts are these:

A year ago branches were in existence in Montreal, Ingersoll, Victoria, B. C., Halifax, Peterboro, Ottawa, and Toronto. Since then branches have been organized in Brantford, Port Arthur, St. Thomas, Orillia, Lindsay, and county of Victoria; St. John, N. B.; Chatham, Ontario; Pictou, N. S.; Wiarton, Belleville, and Kingston; and there are in course of formation, branches at Woodstock, Picton, Cookstown, Barrie, Calgary; Yarmouth, N. S.; St. Mary's, Vancouver, B. C.; Winnipeg, Paisley, Brampton, and Hamilton.

Arthur H. Loring,
Secretary Imperial Federation League.

LONDON, ENGLAND.

Salmon P. Chase's Training for Finance.

IN a recent number of THE CENTURY the biographers of Mr. Lincoln, speaking of Mr. Chase, say:

Without any special previous experience, without any other preparation for his exacting task than great natural abilities, unswerving integrity and fidelity, and unwearied industry, he grappled with the difficulties of the situation in a manner which won him the plaudits of the civilized world and will forever enshrine his name in the memory of his fellow-citizens.

The statement above, italicized by me, is perhaps not strictly correct. It is true that Mr. Chase was primarily a lawyer, yet it is also true that he was a trained financier. So early as 1834 he was appointed solicitor at Cincinnati of the old United States Bank.

In that year the Lafayette Bank of Cincinnati was established. I have before me as I write the original minutes of the Board of Directors of that bank for the first ten years of its existence. From these I find that Mr. Chase was one of the first Board of Directors, and continued a director for nearly ten years. In addition to this, he was made Secretary of the Board at its first meeting and solicitor of the bank. The latter office he held also for nearly ten years. At the time of this election he was but twenty-six years of age. I have looked carefully through the minutes, and they disclose the fact that he was in constant attendance at the meetings of the Board, and took a controlling direction in the affairs of the bank. He was constantly placed at the head of the most important committees, such as that of preparing the by-laws.

It also appears from the minutes that he gave minute attention to the business, and was severely exacting. The resolutions in his handwriting, which I inclose, evidence this.¹

At the time he took so prominent a part in the affairs of this bank, while so young a man, his associates numbered among them some of the most famous men of that city of that day—Josiah Lawrence, the president, Judge Este, Neff, Jones, and others. This bank became a leading bank of the city, and now, transformed into a national bank, maintains its original high character. Here, as elsewhere, his work is enduring. Thus for ten years, in the formative period of his life, from twenty-six to thirty-six years of age, he had the double training of a bank director and solicitor of the bank—and this in one of the chief cities of the country.

As a bank lawyer, he ranked first in his profession.

Before he became a member of Mr. Lincoln's Cabinet he had been for six years United States senator. While excluded by the pro-slavery majority from the

¹ The resolutions are as follows: "*Resolved*, 1. That in no case shall any mortgage upon real estate be received as security for any loan or discount, unless the applicant for such loan or discount shall have furnished a complete abstract of the material parts of the title papers of such real estate, and also of all adverse claims, legal and equitable, to such real estate, to the solicitor whose duty it shall be carefully to examine such abstract and to furnish to the President his written opinion thereon, which opinion, together with the abstract, shall be lodged with the cashier. 2. That in all cases where any real estate, received as security for any loan or discount, shall be released from the operation of any mortgage before the debt secured thereby shall have been fully paid, the attendant expenses shall be paid by the applicant for such release. 3. No discount or loan shall be granted to facilitate the payment of any debt on which suit has been commenced or judgment rendered unless the applicant for such loan or discount shall pay the costs of such suit or judgment, including attorney's fees."

committees, because he "belonged to no healthy political organization," it was yet his duty to consider the finances of the nation; and where duty called him to act it was his habit thoroughly to inform himself. He had also been for four years Governor of Ohio, with a general supervision of the finances of that great State. During this time occurred the famous defalcation of Breslin, the State Treasurer. Mr. Chase, as governor, at once took possession of the treasury, and with a master's hand brought order out of chaos, and so satisfactorily to the State that what seemed at first to be a blemish to his administration redounded to its honor. So it would seem that he had had that special training which fitted him for his mighty task. When he met the great bankers of New York he met them not as a stranger, but as one of them, initiated into the mysteries of their craft. It was well. Mr. Chase's achievement was not the flash of genius that bewilders, but the natural result of trained powers.

Allow me a word in another relation. The extracts from the diary and letters of Chase given in this history of Mr. Lincoln are not pleasant reading. But the picture has its relief. They were written chiefly in the weary, waiting year—1861–62. The most effective pages of this history are, perhaps, those relating to McClellan. The grouping of the facts presents a progressive climax that is simply crushing—but is it not reactionary? Is not the emotion it excites one of painful pity for McClellan and something akin to indignation that those in power should have borne so long with him? Remember that Chase was present and saw all—saw the grand army of the Union wasting away in hopeless inactivity; saw it again, led to battle in a desultory way, defeated piecemeal by a foe inferior in numbers; saw it when victorious retreating from its vanquished enemy; meanwhile saw the debt of the nation piling up mountain high, threatening a financial abyss that would engulf all.

The situation was without precedent. No other nation could have borne those loans. For many months Mr. Chase was in daily apprehension of a catastrophe, blasting alike his country and himself. The responsibility was his. Others spent; "he smote the rock"; and yet he was ignored! He felt himself neglected, and chafed as the strong man bound. Perhaps it would have been better had he suffered in silence; and yet perhaps complaint brought relief.

Born to command, a courtier he could not be.

A letter he wrote me of date August 29, 1862, portrays his feelings during the McClellan régime. I close with this extract from it:

Since the coming of General Halleck, I have known no more of the progress of the war than any outsider. I mean so far as influencing it goes. My recommendations had been, before he came in, generally disregarded, and since have been seldom ventured. I did, in one or two conversations, insist on the removal of General McClellan, and the substitution of a more vigorous and energetic and able leader; on the clearing out of the Mississippi; and the expulsion of the rebels from East Tennessee—all which might have been done. But though heard, I was not heeded. I hope for the best. Those who reject my counsels ought to know more than I do. At all events little is now left for me, except to administer as well as I may under existing circumstances the complicated and difficult concerns of my own department.

Retaliation in Missouri.

THERE are errors in the April installment of the "Life of Lincoln" relative to the part taken by me in the execution of ten rebel guerrillas at Palmyra, Missouri, in October, 1862, in retaliation for the abduction and murder of a Union citizen of that town. With the opinion of Messrs. Nicolay and Hay on what they term "a punishment tenfold as severe as that demanded by the Mosaic law" I need not concern myself. The statement that my action was under the authority of the State of Missouri is an error. The letter of General Curtis quoted to sustain that statement appears (according to a foot-note on page 860 of Vol. XXII. of the "Official Records") never to have been sent; or, if sent, he was afterwards ashamed of its misstatements, for he forwarded to Washington a copy of a letter taking entirely different ground for refusing to treat with the rebel authorities in their investigation of the execution.

The fact is that while I was at the time a brigadier-general of Missouri State troops, I held a commission as colonel of the 2d Missouri Cavalry, a regiment of State militia mustered into the United States service. As such I had been assigned, June 4, 1862, by the department commander, General Schofield, to command the district of North-east Missouri (see Vol. XIII., page 417, of the "Official Records"), and instructed by him to "take the field in person and exterminate the rebel bands" infesting that section. General Schofield expressly enjoined (see Vol. XIII., page 467, of the "Official Records"): "Do not be too moderate in the measure of severity dealt out to them. Carry out General Orders No. 18 and No. 3 thoroughly."

General Order No. 18 (see Vol. XIII., page 402, "Official Records") states that:

Rebel officers and men are returning to their homes, passing stealthily through our lines and endeavoring again to stir up insurrection in various portions of the State where peace has long prevailed, and there still remain among the disaffected who never belonged to the rebel army a few who avail themselves of every opportunity to murder Union soldiers and destroy the property of citizens. . . . The utmost vigilance and energy are enjoined upon all troops of the State in hunting down and destroying these robbers and assassins. When caught in arms engaged in their unlawful warfare they will be shot down upon the spot. All good citizens who desire to live in peace are required to give their assistance to the military authorities in detecting and bringing to punishment the outlaws who infest this State, and those who shelter and give them protection. Those who fail to do, their duty in this matter will be regarded and treated as abettors of the criminals.

It will thus be seen that I was acting directly under Federal authority as an officer of the United States Army and in accordance with my official instructions as such. Moreover, the ten guerrillas executed (not one of whom but had committed murder under circumstances of atrocity) were selected from twenty-two who had previously been formally tried by a United States military commission and sentenced to death, so that their death was but hastened by the act of retaliation, the remaining twelve of the twenty-two convicted being soon afterwards shot in pursuance of their sentence by the officers in command at Macon City and Mexico, Mo. Nor was there unseemly haste in thus carrying out the sentence already pronounced against these unfortunate men. Public notice was given that the ten men would be shot unless within ten days the

abducted Union citizen (Andrew Allsman, seventy years of age and a non-combatant) was returned unharmed to his family. During that period of ten days, my ranking officer, General Lewis Merrill of the regular army, and General Curtis, who had succeeded General Schofield in command of the district of Missouri, September 26, 1862, were fully advised of my action. In a letter to me dated January 22, 1880, referring to an attack on me in the United States Senate relative to this matter, General Merrill wrote as follows:

No notice appears to have been taken of the other executions, and no reflections were ever made that I know of on either General Curtis or myself, though equally responsible with you, and indeed having the greater responsibility, in that we were your superior officers and could have stopped your action had duty allowed it. Both General Curtis and myself had to listen to many heart-rending appeals to take this action, and both uniformly refused. The event showed it would have been weakness and failure of duty to have listened, for the executions practically ended all guerilla operations in North Missouri, and restored peace to the community to such an extent at least that it was possible thereafter to commit to the civil authorities the trial and punishment of most of the crime which was thereafter perpetrated. Before this the civil authorities were utterly powerless. You have long suffered from falsehood and misapprehension in this matter, and it gives me great pleasure to do what I can to right you, as I know no more tender-hearted soldier than yourself ever lived, and no more painful duty could have been imposed upon you than that involved in the execution of these criminals; but I also know that you never permitted personal pain to swerve you from the plain line and demand of duty, however stern and hard it should be.

Such an investigation of this affair as President Lincoln made before appointing me a brigadier-general (November, 1863) will convince any unbiased inquirer that my action sprang from neither "mistaken zeal" nor "uncurbed passion," as my present critics infer, but from an imperative sense of duty. Since the issue of the April CENTURY an interview with General Merrill has appeared in the St. Louis "Globe-Democrat" (April 2), in which he relates that he was summoned by telegraph to report to the President, and immediately repairing to Washington, ignorant of the reason for the summons, appeared before President Lincoln at a time when the members of the Cabinet were seated about him. General Merrill then proceeds as follows:

"I was ordered to report to you, Mr. President," I said, after being presented.

"Yes, General. . . . I want to inquire about that shooting in Missouri."

"I can give you a written report in a few minutes that will explain all," I said.

"I don't want anything in writing, General. I want you to tell me the story."

I told it to him as I have to you, with this addition: "I telegraphed you a number of times asking your approval of the order and asking you, Mr. President, to issue the order yourself, but I asked in vain; and as it was a necessity, I took the responsibility. It was my duty, and I have never felt a twinge of conscience that suggested I did other than right to my trust."

The President came up, laid his hand on my shoulder, and said: "Remember, young man, there are some things which should be done which it would not do for superiors to order done."

By his manner I inferred that had he ordered me to do what it was essential for me to do, political complications would have arisen which would have been troublesome. He evidently meant that he justified my course himself, but preferred not saying so, and left me to understand that my judgment was trusted, and to be exercised by me in emergency.

Having thus the indorsement of both the officers who were my immediate superiors, the implied approval of President Lincoln (whose too tender heart forbade ordering retaliation even for the Fort Pillow massacre), and cherishing, as I do, the firm conviction that my action was the means of saving the lives and property of hundreds of loyal men and women, I feel that my act was the performance of a public duty.

John McNeil,

Late Brevet Major-General, U. S. Vols.

ST. LOUIS.

Governor Seymour during the Draft Riots.

In the April CENTURY, the authors of the "Life of Lincoln" have fallen into a mistake as to the conduct of Governor Seymour during the draft riots, which should be corrected. I saw the audience in the City Hall Park which Governor Seymour addressed on the occasion referred to at page 929. It was not a crowd of rioters. He did not address the rioters at all. The people whom he there addressed were a multitude of persons naturally attracted to the City Hall by the news that the governor of the State, whose arrival was anxiously expected, had actually come. He used in speaking to the multitude the expression that he and Mr. Everett commonly employed in addressing an audience — "My friends." There was no mention in the speech that the draft justified the riots, and I know that the governor used the whole authority which the law gave him to suppress the riots. Nor can it be truly said that he did all he could to embarrass the Government, or to rouse the people against it. On the contrary, he was thanked by the Secretary of War for his active and energetic coöperation in forwarding troops to meet the Confederate forces. Indeed, one embarrassment during the riots was that the city had been completely stripped of uniformed militia, who had been sent forward by Governor Seymour to meet the invading enemy.

NEW YORK.

Everett P. Wheeler.

The "Life of Lincoln" — a Correction.

ON page 927 of the April CENTURY the authors of the "Life of Lincoln" speak of Brevet Brigadier-General Alexander S. Diven, one of the provost-marshal generals of New York, as a "War Democrat." Mr. Ausburn Towner writes by way of correction to say that General Diven "was, originally, a 'Free-soil Democrat,' one of that faction of the old Democratic party that, uniting with the 'Free-soil Whigs,' formed the Republican party. He was a member of the State Senate of New York in 1858-59, having been elected such as a Republican and by Republicans, and therefore was one of those who composed the first Republican Senate of that State. He was elected as a Republican and by the Republicans of his district, then the 27th (the Elmira district), to the 37th Congress, 1861-62, leaving his seat to help organize the 107th Regiment, which he commanded until he was appointed to the position named in the 'History.' He can hardly, with truth, be classed as a 'War Democrat,' unless you so class Secretary Chase or any other Republican leader who had been a Democrat."

One Reason of the Inefficiency of Women's Work.

By subordinating self-improvement to her various domestic and social duties a woman not infrequently defeats her own end: the sum-total of her usefulness in these very directions is less than it might be if she gave some time each day to intellectual culture. We are standing on the solid platform of practical usefulness and are not considering the delights of knowledge for its own sake; for all of charity is not bread and butter, and all of motherhood is not mending. Many a mother, by an excess of devotion to her little son, unfits herself to be a mother to the same boy when he goes to college; for he needs sympathy as much in his higher studies as he did in his blocks and his marbles. The wisest mother will not merely see that her child is fed, and clothed, and instructed, and made good and happy for the time being. She will be careful to keep as far as possible on a level with his intellectual stature, so that his mental attitude towards her may not change with his physical — so that the man may feel, as did the baby, that his mother is not only the best, but the wisest, of women.

Honest Dick Steele's reference to Lady Elizabeth Hastings, that "to love her was a liberal education," is oftener quoted than deserved; and yet this is the friendship which every woman of intelligence and will can give to her husband and to her children. Surely an intelligent woman needs only to appreciate the value of such an equipment in order to feel that time spent in gaining it is not wasted — that it affords a sufficient reason for taking one hour at least out of twenty-four from the other duties of life, however absorbing they may be.

The actual knowledge which comes of intellectual work is of great value, but this is not all. It is not the mere facts gained, but the mental discipline acquired, which give to the habit of study its highest justification, its chief value as a sort of mental gymnastics.

The idea is notorious among men that women cannot do business, cannot carry on a connected line of thought, cannot follow and appreciate an extended argument. Like most generalizations, this admits of large exceptions, but it is in the main true. We all know, for example, how impossible it is to converse with some women. They interrupt us in the middle of what we consider an interesting and valuable train of thought, and run off on a side-track, without the slightest appreciation of the discourtesy of which they are guilty or of the fact that our conversation was making logical approach towards some definite point. Their own remarks are never directed by any other than the "word suggestion" method: one thing "reminds" them of another indefinitely, and they become confused in a hopeless labyrinth of parentheses, without attempting to extricate themselves, and without even being conscious that they are lost. The same method is followed in their actions as in their thought processes.

We do not attempt to say how much of this is owing to a native lack of logical power; but we are convinced that it is largely due either to defective early training or else to long-continued intellectual stagnation after school-days are over — probably to both. A woman's occupation, it is true, consists largely in heterogeneous details; she is subject to constant interruptions; she

is at the beck and call of her husband and children and of the world in general; she is sometimes imposed upon and tyrannized over, often without realizing the extent of the humiliation; and she is seldom brave enough to be willing to seem disobliging. The result of all this is that, to a certain extent, she loses her individuality. In short, she becomes deficient in sense of proportion and in power of analysis.

When the situation is thus viewed it becomes a little difficult to say whether intellectual stagnation should be treated as cause or as effect. Certainly the character of one's occupation has a strong reflex influence upon the character of one's thoughts, and it cannot be denied that the same degree of system is impossible in a woman's work as in a man's. However, our object is not to cavil with fate, but to consider what are the best methods of procedure under existing circumstances; and from this point of view intellectual stagnation appears as the cause of much that is defective in the work of women.

The laws of habit and of exercise hold good of the mind as well as of the body. The hands perform most easily familiar actions; the mind, kept alert by constant exercise, is ready for any emergency. If we keep our minds wide awake by constantly studying and doing genuine *thinking* in some definite direction; if we learn to analyze the various elements of a subject and see their true relative importance; if we learn to weigh and balance arguments with nice discrimination; if we keep at our command, by constant practice, the power of concentrating our thoughts — these healthy mental habits will have a wholesome influence upon everything that we do. When a thousand different claims are made upon our time and attention the habit of analysis will stand us in good stead, and we shall have the strength of mind to do the most important things, and to leave the others undone, instead of helplessly attending to whatever important item happens to be brought to our notice first. When hard problems must be solved and difficult questions answered, the habit of reflection and quick decision will be found simply invaluable. When the distractions of the kitchen, the nursery, and the street make life one vast hubbub, the habit of concentrating thought and fixing attention will make it possible to form and keep in mind fixed purposes, and to make intelligent efforts towards carrying them out. In short, an active mind is as necessary an equipment for every-day life as a strong body, and a proper early education is not sufficient to keep either the mind or the body in healthy condition. They both need vigorous and habitual exercise if the power for work is to be kept at its maximum. Moreover, if the opportunity for healthy development does not lie in the course of a person's ordinary occupation, that is just the case in which it must be sought. A field-laborer needs no gymnasium, but a sedentary man does; a professional student will naturally have an active mind, but a wife and mother, whose affections are occupied more than her intellect, needs to set up a sort of home gymnasium for intellectual culture, and to practice in it faithfully.

It is not without a keen appreciation of the inherent difficulties of the case that these suggestions are made. Probably no class of people meet more obstacles in matching practice to theory than the women of whom we speak, but it is none the less necessary that their

theories should be sound. The inherent difficulties of the case make it only the more necessary to have a sure footing and a true aim.

Subjects and methods and times for study must always vary with individual cases; several good suggestions have been given in former numbers of *THE CENTURY*. Our design is simply to suggest the proper mental attitude in the matter. If a woman considers an hour of aggressive, absorbing intellectual work as much an essential of a symmetrical day as sleep, or food, or exercise,—if her ultimate object in the study is increased power for actual work,—she will be much more likely to study than if she regards intellectual occupation as either a useless effort or a selfish indulgence. Of course there are crises in life when study must be suspended, just as proper rest and exercise are dispensed with under special pressure, and there are probably some cases in which it is actually impossible; but this does not alter the fact that it is well to be in the habit of sleeping and of exercising, and, we would add, of studying.

Mary A. Johnson.

The Decline of the Editorial.

It has been urged with pertinacity that the editorial leader should be signed by the writer, and unresponsive pity has been called upon to rise in behalf of the man whose talents find no recognition in the anonymity of the daily press. For my part, I know of nothing more unfortunate than would be such a change in custom, and I sincerely hope the desire for change, for the unusual, will not lead to its adoption generally. The potency of the editorial "we" has suffered enough in the last dozen years without this final blow, and that it has retained its power at all has been due to the willingness of great minds to sacrifice the reputation for the advantages of the freedom of the anonymous form. The decadence of newspaper influence would follow the change almost inevitably, and the fault would be the writer's, not the reader's. An appeal to all who use their pens as bread-winners would, I think, bring a response that the sense of responsibility is not less when the writer is unidentified, while a broader view is commonly taken and more courage shown in the expression of opinions which may provoke dispute, yet may, none the less, be eternally true. The tendency of the individual is to avoid quarrel, and the avoidance of quarrels is the gravest of newspaper blunders. To arouse some antagonisms is almost as necessary as to make friendships, in a progressive journal.

Journalists should need no warning, however, against the use of the first person, singular, in view of the decline of the editorial which most of them are aware of, though not so many will admit it. If Mr. Matthew Arnold had not spoken, one might appeal to the average citizen for confirmation of the declaration that the editorial has, in fact, declined. By this let it not be supposed that the leader is not so able (to use a favorite newspaper word) as in the earlier days, for a comparison of the editorial page of to-day with the page of twenty years ago shows no falling off, but rather a gain in method and matter. It is simply that the editorial is not read with the attention once given it, that it is now merely one department of the newspaper, receiving the consideration of the subscriber if

his horse-car journey happens to be long enough. Of course a good deal of this neglect has been due to the increased size of the more prosperous papers and the vast extension of the field they cover. The news columns are so much more interesting than they used to be! But there have been other causes at work, and the great increase of personalism—the word is used in a broad sense—is to blame for the loss of respect for the purely editorial utterance. The "managing editor," the executive officer of the newspaper, is the really responsible party. How dare an editorial writer advance an original opinion on a subject of national importance when the chief executive on the other side of the partition has received "specials" from Washington and every State capital giving the views of men of all shades of opinion on the issue involved, many of them speaking with an authority which readers will accept as conclusive? Why venture to discuss the prospects of European war, when Bismarck's opinions, construed by Salisbury, may be had for money paid to maintain a social lion as correspondent in London? The editor of the metropolitan journal is driven to discuss phases instead of the subject-matter, or, perhaps, devotes himself to praise of the enterprise that has obtained the important expression found in our news columns of this date! The editorial writer has, alas! not even the title of "editor" in some cases, and the conductor of more than one powerful journal to-day never puts pen to paper.

That the editorial page may soon disappear altogether is a dreadful possibility; and if it is to be committed to the care of the elegant essayist, writing over his own signature, there will remain no reason for its existence in its present form. The pressure for space in every great daily is severe, and it now requires a stern front to hold the three or four columns sacred for editorial utterances. Give the news editor his opportunity and he will abolish the essayist without a qualm of conscience.

Yet one cannot see the approaching doom of a department in journalism so powerful as this without an effort to avert it. A force so potential as the daily newspaper should be something more than the mirror of events which the executive forces of journalism are making it. Let them pursue their glorious career undisturbed and hire the Prince of Wales for special society correspondence, or the Pope for theological discussion, if they can; but let the editorial "we" remain. The leader writer must, however, give in this daily work a cause for his existence, and that can be found only by some change in method.

Far be it from me to suggest aught to the learned and "able" writers of the editorial page in the great cities, yet there have been occasions when an editorial expression of opinion might have been of tremendous value, backed by that mysterious anonymity of which I have spoken. Some readers, I know, looked in vain for such an editorial discussion of the longshoremen's strike not long ago that would have shown real knowledge of the matter and an opinion based upon that knowledge. The instance is, perhaps, hardly a fair one, but there should be, it seems to me, a more thorough study of current public agitations by editorial writers who now avoid them, or, worse yet, slur them over with vague generalities. No so-called "expert" opinion could take the place of the editorial discussion so

founded. And, to follow the suggestion to its logical conclusion, the information for the editorial discussion may often be best obtained by doing the reporter's work, while the use of the reporter as an editorial writer upon events which he has described in the news columns is to be recommended upon occasion, and has been tried with no small success. A learned judge once said to me that he had no faith in the conclusions of a court where the judges did n't travel a circuit, and I have also noticed that this same shrewd observer always uses the nominative plural in referring to any judicial act of his own. The "we" had its advantages in jurisprudence as in newspapers.

NEWARK, N. J.

W. T. Hunt.

Confiscation no Remedy.

IN his book Henry George clamors boldly for the confiscation of the land; for its seizure by the state without compensation to the owner. But of late, in his paper and speeches, he would reach this confiscation indirectly, by imposing upon land the whole weight of taxation. How would this operate, for example, in Ohio? In that State the land now, it may be, bears one-third of the taxes; the improvements and personal property the other two-thirds. To place all upon the land would increase its burden threefold and proportionally decrease its value, and to this extent confiscate it. Much of the land would not be worth the tax and would be given up. Thus as to this the confiscation would be complete. Mr. George sees all this and would make the change gradually. But here the first step would tell; the future would be discounted and the confiscation would immediately take place. Does any one believe that the landed interest, the farmers of Ohio, would submit to this? Could it be enforced except at the expense of a war in comparison with which the late conflict were a tame thing?

Hence, whatever its theoretic merits may be, George's plan is outside of practical politics. It is simply impossible. The cities could not force it upon the country. Therefore, with all his excellent intentions,—and I freely concede these,—Henry George is a disturbing force, an incubus upon the labor cause. He arrays the farming interest against it; he distracts its council, paralyzes its action, sows distrust and suspicion abroad. He is indeed the unwitting ally of the monopolist.

His generalization rests upon too narrow a basis: he speaks from a personal experience. His education in California vividly impressed upon him the evils of land monopoly and land speculation. He rushed to the conclusion that these things are the authors of all our social woes. He forgets that the body politic, like the natural body, is a very complex affair, and that no one specific will reach all its ills. Indeed, monopoly of any species of property is an evil; of food, for instance, even a greater evil than of land. The great monopolists, plutocrats, ignore land and escape taxation. What care they where the nominal ownership is, if they gather the fruit? They really view with complacency George's land taxation theory: it will relieve them of the little taxes they now pay.

The remedy is restraint, pruning, regulation, not

confiscation. Let all property bear the taxation that its protection entails. Let there be, as in France, income and succession taxes to prune the overgrown; regulation of and restraint upon corporations; a limitation of land ownership. These are the lines for the labor movement.

The business world tends to congestion of the brain—grows vertiginous, apoplectic. Here a little depletion is good.

The labor conventions spread themselves too much, entangle themselves in outside and doubtful matters. "One war at a time," said Mr. Lincoln.

CINCINNATI, O.

W. M. Dickson.

General Sheridan and his Troops.

THE admirable and graphic description of "The Western Soldier," in *THE CENTURY* for May, will interest every reader who served in the Western military departments; but all will not agree with the statement that the men "would have liked Sheridan more if he had been less severe."

Previous to being ordered East, General Sheridan commanded a division of the Fourth Corps, Army of the Cumberland, and as such made himself exceedingly popular with his men. The dash and enthusiasm he possessed made him peculiarly suited to handle Western men. They soon learned that when he exacted a difficult service there would be no undue exposure unless a definite result was reasonably certain. Thoughtfulness of his men's comfort was shown in little things. Those who were with General Buell's army during the Perryville campaign will call to mind the dusty "pikes" of Kentucky during that memorable pursuit of Bragg. Many of the troops were raw recruits under the 600,000 call of July and August, 1862; and beneath the weight of a newly made soldier's knapsack the art of war was learned under depressing conditions. At Perryville some heard the "szip" of bullets not many weeks after their enlistment. The season was dry, and water exceedingly scarce; while the dust from broken limestone was not soothing to throat, nose, and eyes.

It was the custom of general officers to make their headquarters, in the evening, at houses near the camps of their respective commands, and to start, next morning, after the army was in motion. If they wished to get to the head of the column, "open order" was the word, while officers, staff, orderlies, and body-guard galloped by, leaving us in the cloud raised by clattering hoofs. I call to mind General Sheridan's habit under like circumstances. Instead of putting his men to such discomfort, he went leisurely round them, through the fields, giving words of cheer and encouragement to the boys as he passed along.

No, General Sheridan was not severe with his men, in the sense of being arrogant towards them, or ill-treating them. And those who served under him in the West will always cherish his memory, so that the picture of "Little Phil" on his big black horse will not soon fade from their minds.

NEW HAMPTON, IA. Co. I, 24th Wis. Vol. Infantry.

BRIC-À-BRAC.

A Song of the Road.

COME, comrades, since the way is long
Let 's 'liven it by tune and song,
And greeting give to all we pass;
To white-of-head, to light-of-head,
To matron grave and laughing lass.

Hurrah for lane and by-way,
For distant path and nigh way,
For friends we greet, for foes we meet,
Along the world's broad highway!

'T is morning-break: lithe limbs are strong;
Who dreams of crime and guilt and wrong?
Yon youngling and his violet eyes?
Nay, light-of-mind and love-so-blind
Are wisdom-proof and folly wise.

Hurrah for lane and by-way,
For distant path and nigh way,
For friends we greet, for foes we meet,
Along the world's broad highway!

'T is noontide: let us spend an hour
Dream drinking ere we lose the power,
And all our pleasures disappears,
Since slight-of-heart and blight-of-heart
Have sworn the goblet smacks of tears.

Hurrah for lane and by-way,
For distant path and nigh way,
For friends we greet, for foes we meet,
Along the world's broad highway!

'T is night and low: foul thieves have mobbed
The weak ones here and left them robbed
Of hope, and faith, and love, and rest;
But sure-of-soul and pure-of-soul
Still fold their treasures to their breast.

Hurrah for lane and by-way,
For distant path and nigh way,
For every one whose journey's done,
Who's gained the distant sky-way!

Julie M. Lippmann.

Just Bloomed.

COME, Marie, take your feathered hat,
And shoulder-cape, and piquant muff,
Some repartees, a laugh, a glance,
And in your sleeve a sly rebuff,—
Come, Marie, come!

Come dancing down the stairs, and call
Some trite remark that sounds divine;
Be saucy at your mother's care
About your wraps; my aid decline
About your glove.

I know not why a foolish girl
Should seem so wise — to be so sweet;
Nor why, without a glimpse of soul,
You are a creature quite complete,
And somewhat rare.

Let me but gaze upon your cheek,
And catch the fervor of your eye,
And note the dimple at your lip
When I declare that I shall die
Without your love!

Rose Hawthorne Lathrop.

A Purpose.

It is good to have a purpose;
I approve of it, of course;
All the people who have purposes
I cordially indorse;
But there's one especial purpose
Which has struck me with much force.

It is not my own, this purpose —
It is very far indeed
From a personal possession,
Or I surely should not need
To make mention of it sadly,
Or to give it any heed.

'T is a sort of general purpose,
Owned by several witnesses;
'T is no doubt a lofty purpose,
But the mystery is this:
That, full often as I've heard of it,
I don't know what it is!

I have only seen its shadow
On the wrong side of the screen
Which veils it from the public;
Now, what may this shadow mean?
'T is — "Not suited to the purpose
Of the ——— Magazine."

Margaret Vandegrift.

At the Door.

It was just for a moment Rose stopped at the door,
In the dim twilight,
And I halted and stammered, and said no more
Than just — "Good-night."

Yet now I can think of a host of things
That I meant to say;
And the words come as fast as if they had wings,
When she is away.

For I think her charming, but how can she know
What I think aright,
When the best I can do is to stammer so,
And say — "Good-night"?

Walter Learned.

A Flag of Truce.

NAY, you have frowned enow,
Unkneit that threatening brow,
Put wrath away,
Now
While you may.

Life is too bare of bliss
That we our share should miss,
So make amends,
Kiss
And be friends.

G. Preston.

The Reason.

WITH proudly lifted head,
With joy the Rose blushed red;
While the Lily, drooping near,
Let fall the dewy tear:
Julia the Rose had kissed,
The Lily's beauty missed.

George Birdseye.

THE STREAM OF PLEASURE.

WRITTEN AND ILLUSTRATED BY JOSEPH AND ELIZABETH ROBINS PENNELL.

UNIVERSITY BARGES, OXFORD.

EVERY Englishman has done the Thames, and the time to do it, since everything in England must be done in its season, is the summer.

Oxford is the starting-point. The few track the shy Thames's shore "above the locks, above the boating throng"; the many come downward with the flood. Once we decided upon the course of the many we were urged to change it for that of the few. But we found that above the locks, which begin near Oxford, are dams,—or "weirs," as they are called on

the Thames,—not easy to pass; and we also learned that it is the boating throng which has made the Thames the rival of any water-way in the world and given it a character all its own.

On Wednesday, the 1st of August, we drove to Salter's landing-place, though it was pouring. It had been raining more or less steadily for two months, so there seemed no reason to wait for clear weather. Hitherto we had looked upon Oxford only as the university town, but now we came to know it as the Mecca of all river tourists. Were its colleges to disappear one by one, were Ruskin to be forgotten, so long as Salter's boat-house stands by Folly Bridge it will be the trysting-place for the oarsmen of England.

Our boat, which was new, had not yet been launched, but was still at the builder's. It was a pair-oared skiff, but shorter and broader than those generally seen on the Thames—"a family boat," an old river man called it with contempt. Its great feature was the green waterproof canvas cover which stretched over three iron hoops and converted it for all practical purposes into a small, a very small, house-boat. By a complicated arrangement of strings the canvas could be rolled up and fastened on top so as, theoretically, not to interfere with our view of the river banks on bright days; or it could be let down to cover the entire boat from stern to bow—an umbrella by day, a whole hotel by night.

Salter seemed surprised to see us; why, I do not know, for two or three parties started down the river before us. In one boat a girl in a bright pink mackintosh sat in the stern under an umbrella. The men in their clinging wet flannels looked as if they had just been taking headers in the stream. In the midst of a weak and damp hurrah from one ancient boatman, the *Rover* was at last pushed off its trestles, and, with a vigorous shove, sent clear across the Thames. There was no baptism with champagne; only the everlasting rain was poured

Copyright, 1889, by THE CENTURY CO. All rights reserved.

upon it. On the landing-place we waited under our umbrellas. Two or three of Salter's men staid to see us crawl into the long, green tunnel and to give us a parting push. They probably regretted their bargain when they saw us come to a dead stop in mid-stream and swing round with the wind. I had never steered, J—— had scarcely ever rowed a boat. We thought there was a laugh on shore, and we were quite sure we heard some one say:

"If you're going down the Thames in that boat you'd better use the right sculls."

The river, after the long-continued rains, was very high. For two persons who knew nothing about boats and could not swim, the Thames journey with such a stream running was not promising. Somehow we got down to Iffley Lock, where we could hear the noise of the water tumbling over the dam, and could see the strong current of the mill-way sweeping in a swift rushing funnel ready to carry us with it. We were glad to find the lock gates open, so that there was no occasion to hang on to the muddy banks. J—— put his sculls in deep, giving strong but uncertain dabs, and pulled them out with a jerk: I cannot call his frantic efforts of those first days sculling. But the lock-keeper, as in the time of Tom Brown, was equal to the occasion. He came out, smoking his pipe with enviable indifference, seized our bow with his long boathook and pulled us into the lock. The great upper gates were slowly closed, he opened the lower sluices, and the water began to fall. At this point is run one of the dangers to be remembered on the river journey. You must not lose control of your boat, but you must be on the lookout to prevent bow or stern catching in the slippery beams or posts found in some locks, especially in old ones. If the boat were so caught, the water, rising or falling, would turn it over at once. It is very easy to upset in a lock, though there is no necessity to do so; it is as difficult to get out again. The fact that we never had trouble proves that with ordinary common sense and a little bit of prudence the danger is avoided.

While the water ran out the lock-keeper came and gave us our ticket. The Thames lock ticket is a curious literary production. It admits you through, by, or over the lock or weir for threepence. That is, I suppose, you can go through the lock in Christian fashion, drown under the weir, push and pull over the roller if there is one, or drag your boat round by the shore; but whether you come out dead or alive, for any of these privileges the Thames Conservancy will have its threepence.

The minute you get through Iffley Lock you see to its right Iffley Mill. It is only an old whitewashed, brown-roofed mill with a few poplars and near tumbling water, but the composition is the finest you will find between Oxford and London. We spent the afternoon there, dry under our cover, while J—— made his drawing and I read "Thyrsis" to him, and the rain pattered on the canvas. On the other

IFFLEY MILL.

side of the lock were three dripping tents; at their doors sat half a dozen wretched men. We vowed that unless every inn on the river were crowded we would not sleep out that night; for before we started we had talked a great deal of beautiful nights to be spent upon the river, when we would go to bed with the swans and rise up with the larks, cook our breakfast under the willows, and wash our dishes and ourselves in quiet, clean pools. Salter had supplied us with an ingenious stove, with kettles and frying-pans fitting into each other like the pieces of a Chinese puzzle, a lantern, cups and saucers and plates, forks and knives and spoons, a can of alcohol. He had even offered us a mattress large enough for a double bedstead. But as it was clear that if it went we must stay, we had decided to sleep on our rugs.

In the late afternoon we paddled slowly away, meeting no one, but seeing at every turn a picture to whose beauty nothing was wanting but sunlight; by Rose Island, where a dreary boatman waited in vain for us to come ashore, and by Sandford lasher, where we remembered Tom Brown, and left all the river between it and our boat. A lasher, which we had never understood, we found to be merely a place above the lock where the overflow of water falls to a lower level. The entire Thames, from London to its source, is a series of locks and lashers, which help to produce a uniform current.

Just beyond was Sandford; from the river but an old church, a picturesque inn, a big barn, a mill, and a lock. When the inn came out of the rain we determined to stay in it, even before we saw how bright and fresh it was inside; and though we had made just three miles, we had the house to ourselves. The landlady was as blue as we were, telling

ABINGDON.

us no one had staid with her for a month; and we wondered if we should have to pay to make up for the crowd that had not come. For we had been warned that riverside inns are expensive; and this is, in a measure, true, since in the tiniest village inn you pay hotel prices—that is, about two or three dollars a day. You can camp for one-third of this. But then the inns are always as comfortable as tents are uncomfortable. We had also been warned that these inns were so crowded that a room must be secured a week beforehand. Probably in a good season this would be the case; but the summer of 1888 was so exceptionally wet that comparatively no one was in the upper reaches of the Thames.

The unexpected is always happening in English weather. We woke in the morning to find the sun shining in through the little leaded windows of our low-ceilinged room. We came down to an excellent breakfast, and soon got away after paying a moderate bill. Passing through Sandford Lock seemed an easy matter now that our green cover was caught up by its many strings. It hung, however, between the loops in tantalizing folds, an ugly blot in the scenery, a hindrance to my steering. We were all the morning—so often did we stop by the way—making the mile and a half to Nuneham, the place of the Harcourts, where there is a very ugly house which only shows for a minute, and a beautiful hill which grows wooded as you wind with the river towards it, and get nearer and nearer until you come to the pretty cottages at its foot. All afternoon we drifted slowly downstream or lay for hours among the reeds by the banks, watching the sail-boats hurrying before the wind, the canoes paddling slowly after, the camping parties with tents piled high in the stern, the occasional great barges gaudily painted and trailed by slow horses, the small boats towed for pleasure, and the swans which, in the most crowded and loneliest reaches, are ever at hand to group themselves into picturesque foregrounds. In the stillness we could hear far voices and even the sharpening of a scythe on shore, or the plashing of oars and the grinding of rowlocks long before the boats came in sight. And then a shrill whistle and a train rushing across the meadowland would remind us that this great quiet of the Thames is within easy reach of the noise of London.

BRIDGE AT ABINGDON.

Not long after Abingdon spire showed itself in the flat landscape, we pulled into Abingdon Lock, where there is a fall of several feet. Beyond the lock the channel is narrow and, owing to the deep fall, the stream is swift. It carried us quietly and quickly on, until all at once, as we watched the growth of the spire and the lovely arrangement of the town on the quaint old bridge, we were startled by the shouts of men on both banks. As we looked to find the cause of their excitement we crashed, broadside on, against a stone wall that juts out into the river and divides it suddenly into two rapid streams, which pass out of sight under the low arches of the bridge. Had not our boat been a broad-beamed, family tub, it would have turned us out; that the men on the banks expected this was evident from the way they rushed round with boathooks and life-preservers. But as there is nothing about the strong current in the many guidebooks and maps and charts of the Thames, we could not be prepared for what is unquestionably one of the few really dangerous places in the river.

SAILING.

How could we think of sleeping in our boat when the proprietor of the Nag's Head, who seemed certain he had saved us from a watery grave, literally dragged us into his inn? We had nothing to regret. We left the boat for another very old and rambling house, another good little dinner. Instead of being alone, as at Sandford, men in flannels like ourselves were in the coffee-room, at the bar, and in the garden. Every time we looked out on

WITTENHAM CLUMP, FROM DAY'S LOCK.

the river, from the inn windows or from the bridge, we saw a passing pleasure boat.

Abingdon is very picturesque, with its old gabled houses, its town hall by Inigo Jones, its abbey gateway and St. Helen's Church, whose graveyard is bounded by quaint old almshouses and whose spire is a landmark for the Thames traveler. But were I to begin to describe the endless beauty that lies near the Thames, and just hidden from it, I should never get back to the river again.

When we were ready to leave Abingdon, late the next day, our first care was to stow away the three hoops and the green cover at the bottom of our boat. Our next was to find out something about the current from the landlord. He told us there was no use of our attempting to go down the back way, and we were nervous about again passing and this time rounding the stone wall. It was in anything but a pleasant frame of mind we started, the landlord looking after us with evident uneasiness. J—— pulled slowly, apparently with tremendous effort, up above the island, which we cleared so successfully that we ran into the opposite mud bank. Here we made believe we had stopped to look at the view and J—— to smoke a pipe. As we pulled off again there came a moment of breathless suspense, and then the boat began to gather headway. The current here was so strong that earlier in the day it had taken all the available loafers of the town to pull a steam tug upstream against it. Now it caught us, and the first thing we knew we were on the other side of the bridge. It was only here at Abingdon we met with even the suggestion of an accident, so that in the simple tale of our voyage no one need look for Haggardian descriptions of shipwreck.

After the bridge it was easy going. By the time we had passed Culham Lock we began to take heart again, and actually braved the current of a mill-race in order to explore a little back-water. For one of the great charms of the Thames is the number of its "sedged tributaries,"—back-waters they are called,—which sometimes lead to and from mills and then are nothing but mill-streams, and sometimes are really the main river, which is left by the boats as they pass up the cut to the lock. But the most beautiful are those which seem to tire of running with the current, and turn from it to rest where lilies blow round long islands, or where cattle graze in quiet meadows.

It was near Clifton Lock we first saw Wittenham Clump, a hill with a group of trees on top, which is after this for many miles forever cropping up in the most unexpected places, now before you, now behind, giving a good idea of the many windings of the river. We had come too into the region of the tall clipped elms, which from here to London are one of the most beautiful, if familiar, features of the Thames.

There was no sleeping in the boat that night, for we expected two friends—a publisher and a parson—to meet us at the Barley Mow, a little roadside inn on the other side of the river from Clifton Hampden. It is a favorite stopping-place with river men, and the two days we spent there we never went into its low-paneled parlor without finding some one eating lunch or tea or dinner; on the road to the river flowed a never-ceasing stream of men in flannels and women in serges; at the landing-place, where the pretty girl was in charge, boats were always coming in and going out, and once in the midst of them we saw the *Minnehaha* and the *Hiawatha*, two real canoes.

On the other side of the bridge, almost under the shadow of the little church on the cliff, was a punt. Inside it were three chairs, and on the three chairs sat three solemn men fishing. They never stirred, except when one, still holding fast to his line with his left hand, with his right lifted a great brown jug from the bottom of the boat, drank long and deep and handed it to the next, and so it passed to the third. The sun shone, the rain fell, the shadows grew longer and longer and the jug lighter and lighter, but whenever I passed there they still sat.

THE BARLEY MOW.

All the near elm-lined roads and willowed back-waters lead to pretty villages — to Long Wittenham, which deserves its adjective with its one street straggling far on each side its old cross; to Little Wittenham, only a group of tiny houses just at the foot of Wittenham Clump; and to Dorchester, with its huge abbey, of all perhaps best worth a visit. But the beauty of Clifton Hampden is that which will not let itself be told; and he will never know it who does not feel the charm of peaceful country when the sunset burns into the water and the elms are black against the glory of the west, and little thatched cottages disappear into the darkness of the foliage—the charm of long walks through hedged-in lanes as the red fades into the gray twilight and a lone nightingale sings from the near hedge, and far church bells ring softly across the sleeping meadows.

Sunday afternoon we came home from church at Dorchester, just at the hour when kettles were boiling in every boat. On the river every one makes afternoon tea, just as every one wears flannels, and so of course we felt we must make it with the rest. We pulled up a little back-water and landed with our stove among the willows. The publisher went to the near lock for water, the parson filled the spirit-lamp, the trouble was great and the tea was bad. This was the only time during our month on the river that the stove was disturbed. From that time forward it rested from its labors in the box in which Salter had packed it.

When we left the Barley Mow on Monday morning, heavy rain was followed by soft showers and grayness. But it was bank holiday, and holiday makers in great numbers were on the river. Steam launches tossed us on their waves and washed the banks on each side. River fiends, they are popularly called, for in these narrow upper reaches, whenever they pass, the angler is aroused from contemplation, the camper interrupted in his dish-washing, the idler disturbed in his drifting, and sometimes the artist and his easel upset, and all for people who turn their backs on the beauty of the river and play "nap" and drink beer or champagne, as they might in the nearest public-house at home.

But the great business of the day was eating and drinking. The thin blue smoke of camp-fires rose above the reeds. In small boats kettles sung and hampers were unpacked. In the launches the cloth was never removed. We were but humans like the rest. After Shillingford, where the arches of the bridge framed in the river with its low island and the far blue hills, and where, near the Swan, 'Arry and 'Arriet were romping, or Phyllis sporting with Amaryllis in the shade, as the parson had it, Benson, a few red roofs straggling landward from a gray pinnacled church tower, came in sight, and to Benson we walked for lunch.

Our resting-place for the night was Wallingford, a town with much history and little to show for it. When we pulled ashore it was raining, and of course out of the question to sleep in the boat. We went instead to the gabled George, where we found a great crowd. It was the day on which the Galloway races, whatever they may be, had been held, and local excitement ran high. We ate our supper in company with a party of flanneled record makers who were in fine spirits because they had sculled twenty miles since morning. "Not bad for a first day out, by Jove, you know!"

"Twenty miles," said J—, not in the least impressed; "why, we may have come only eight by the map, but it was full twenty and a half by the parson's steering."

Later, when the landlady came in for orders, they called for beer for breakfast, but we asked for jam. "Jam by all means," said J—; "we're training to make our four miles a day," which was our average. After this they would have nothing to do with us, but drank whisky and wrote letters at one end of the table, while at the other we studied the visitors' book, and learned how many distinguished people, including our friend Mr. William Black, had been at the George before us.

Next morning the parson and the publisher took an early train to London, and we were again a crew of two. The champions we left over their beer and breakfast. But already, while we loaded our boat, campers sailed swiftly past and under the bridge, and punts leisurely hugged the opposite shore.

The punt is to the Thames what the gondola is to the canals of Venice. Wherever you go you see the long, straight boat with its passengers luxuriously outstretched on the cushions

"LOCK! LOCK!"

STREATLEY.

he can hope for ease and grace: first, that in which he abandons the pole and remains helpless in the punt; secondly, that in which, for reasons he will afterwards explain, he leaves the punt and clings to the inextricable pole; and thirdly, that of fearful suspense when he has not yet decided whether to cling to the pole or the punt.

By the shores beyond Wallingford here and there house-boats were moored. The typical Thames house-boat is so big and clumsy, with such a retinue of smaller boats, sometimes even with a kitchen attached, that it is not so easily moved as the big hotels we used to see wandering on wheels through the streets of Atlantic City. Indeed, because of the trouble of moving, it often remains stationary summer after summer. One we caught in the very act of being poled downstream; another we saw just after it had finished an enterprising journey; the rest looked as if nothing would tempt them from their moorings. They do not add much picturesqueness to the river. A square wooden box set on a scow is not and can not be made a thing of beauty. At Henley regatta the flat top always becomes gay with flowers and Japanese umbrellas and prettily dressed women, so that there color makes up in a measure for ugliness of form. But on many house-boats we passed that day from Wallingford buckets and brooms and life-preservers were the only visible armaments.

The inns, by the way, were a pleasant contrast. Nothing could be prettier than the little Beetle and Wedge, red and gabled, with a big landing-place almost at the front door; or the Swan at Streatley, with its tiny lawn where the afternoon tea-table was set, as in every other riverside garden we had passed above and below Cleve Lock.

It would have been foolish indeed to put up for the night under our canvas when in Streatley a whole cottage was at our disposal once we could find it. We rang up the postmistress, whose door was shut while she drank tea like the rest of the world. She directed us to a little brick cottage with jasmine over the door where lived a Mrs. Tidbury; and Mrs. Tidbury, armed with a key big enough to open all Streatley, led the way almost to the top of the hilly road, to a cottage with deep thatched roof and a gable where an angel, his golden wings outstretched, his hands folded, kept watch. *Nisi Dominus Frustra* was the legend, beaten in brass-headed nails, on the door which opened from the front garden into a low room with great rafters across the ceiling, and a huge fireplace, where every morning of our stay we saw our bacon broiled and our bread toasted. There were jugs and jars on the carved mantelshelf; volumes of Balzac and Turgeneff, Walt Whitman and George Eliot, Carlyle

in the stern, the punter walking from the bow and pushing on his long pole. To enjoy his work he must know not only the eddies and currents of the stream, but something of the river bed as well. For this reason it is not easy to pole in unknown waters. Countless as were the punts we saw, I do not remember one laden as if for a trip. The heaviest freight was a lunch-basket. As often as not a girl was poling, and I never ceased wondering how work that looked so easy could be so difficult to learn as punters declare it. But these are the three situations, I am told, which the beginner at the pole must brave and conquer before

HOUSE-BOAT OFF READING.

PANGBOURN.

SONNING BRIDGE.

village streets and the old bridge which joins them have been done to death; of Streatley Mill we have had our fill; Goring Church, with the deep red roof and gray Norman tower, so beautiful from the river, is almost as familiar in modern English art as the solitary cavalier once was in English fiction. The campers who pitch their tents on the reeded islands are armed with cameras, and on the decks of house-boats easels are set up. But

In Streatley you
Should mount the hill and see the view
And gaze and wonder, if you'd do
Its merits most completely.

It was the hour of sunset when we mounted and looked down on the valley, spread out like a map below, the river winding through it, a path of light between the open fields, a cold, dark shadow under the wooded banks. May the lazy minstrel another time wait to smoke and weave his lazy lay until he has climbed the hill, and then he will sing of something besides the Swan at Streatley!

The day we left the hot August sun had come at last. It was warm and close in the village, warm and fresh on the water. The *Golden Grasshopper*, the famous yellow and white house-boat of the last Henley regatta, had just anchored near the Swan, and its proprietor was tacking up awnings and renewing his flower frieze, which sadly needed the attention, but he monopolized the energy of the river. Boats lay at rest under the railway bridge below Streatley and under the trees of Hart's Woods. Anglers dozed in the sun.

O, Pangbourn is pleasant in sweet summer time,

with its old wooden bridge to Whitchurch over the river, and the lock with delicate birches

THE BULL AT SONNING.

and Thackeray, on the book-shelves; photographs from Florentine pictures on the walls; brass pots hanging from the rafters. A narrow flight of wooden steps led up to a bedroom with walls sloping under the thatch. Mrs. Tidbury gave the big key into our keeping; in the morning I bought meat from the butcher in Goring, and coaxed a cross old man into selling me green pease and berries from his own garden. We were at home, as we were bidden to be by the friend whose pleasure it is to share with others those good things which are his worldly portion.

“And Streatley and Goring are worthy of rhyme,” and of paint too, according to Mr. Leslie. The pretty

IN A LOCK.

on its island, and the mill and the weir and the gables and red roofs and tall elms. In all Thames villages the elements of picturesqueness are the same; in each they come together with new beauty. We had scarce left Pangbourn before we passed Hardwick House, red, gabled, and Elizabethan, and the more impressive because, as a rule, the big private houses on the Thames are ugly. And not far beyond was Mapledurham Mill, a fair rival to Iffley, and on the other side of the lock Mapledurham House, of whose beauty every one tells you. But you cannot see it from the river, and its owner will not let you land. His

SHIPLAKE.

From here to Caversham is the stupid stretch of which guide and other books give fair warning. But at the hour of sunset the ugliest country is glorified, and nowhere is the river really ugly. The "Dictionary of the Thames" for 1888 recommended as "snug and unpretentious" the White Hart Inn on the left bank by Caversham Bridge. Accordingly to the left bank we drew up, but behold! we found a large hotel, a steam launch bringing in its passengers, waiters in dress-coats, a remarkably good supper, and a very attentive Signor Bona to add the pleasure of an Italian kitchen to the clean comfort of the English inn.

The town of Reading,

'Mong other things so widely known
For biscuits, seeds, and sauce,

seldom has a good word said for it by those who write from the river point of view. And yet the stream of the Thames makes glad the city with its railways and big brick factories and tall chimneys, and it becomes, in its own way, as picturesque, though not as characteristic of the upper Thames, as the little villages and the old deserted market towns. It is not, however, the ideal place for a house-boat, and for this reason, I suppose, we found two or three within hearing of the ever-passing trains and within sight of the chimneys and the smoke. From them canoes were carrying young men and their luggage to the convenient station; in the small boats at their bows young ladies were lounging; in the sterns white-capped maids were busy with brooms and buckets.

Even if the much-abused banks, where the river the "cleere Kennet overtakes," were unattractive, it is not far to Holme Park and the shady riverside walk known as the Thames Parade, beyond which is Sonning Lock —

That's famed
For roses and for bees,

and for the lock-keeper who cared for them until his death, some three years ago, and whose poem called "Summer Recreations" is perhaps the simplest description ever written of the journey from Oxford to Windsor. Close to the lock is the village, "set on fair and commodious ground," with roses and sweet jasmine growing over every cottage door. It was at the cheery White Hart the lazy minstrel lunched

Off cuts of cold beef and a prime Cheddar cheese
And a tankard of bitter at Sonning.

WARGRAVE.

We too might have had our tankard in its pretty garden, but there was no room for us; and so we walked from the river through the churchyard to the Bull, low and gabled, running round two sides of a square, with the third shut in by the churchyard wall and a row of limes. It would be a figure of speech, however, to say we staid at the Bull, where we ate our meals and paid our bill. But our rooms were

AT WARGRAVE.

PUNT FISHING.

publisher and the parson thought the barmaid quite the nicest. But, to counterbalance these attractions, the weather was vile. All Sunday drenching mist fell. But, somehow, time did not hang very heavy. As we stood at the door we heard the famous church bells which a century ago carried off a two-handled silver cup for the "superior style in which they rang two hundred and eight bob-major," and for this we would much sooner have the word of the guidebook than hear for ourselves the way really beautiful bells can be misused in England. We sat in the church porch and listened to the hymns of the congregation. We walked to the bridge where men and women watched for clear weather, while on the near island campers pathetically huddled together under the trees. But just in the hour before dark the mist rose and the clouds rolled away to give fair promise for the morrow.

A gale was blowing but no rain fell when we pulled—for to-day there was no easy drifting—to Wargrave. The poplars looked cold and bare, the willows showed all their silver, and at Shiplake Lock, as J—— and the parson to the best of their ability gave the familiar Thames cry of "Lock! Lock!" and we waited for the gates to open, the wind swung our boat clear round, and it took a deal of manœuvring with the boathook to bring the bow in position again. A young man from a near tent ran up to play lock-keeper,—the favorite amusement of campers in the intervals between eating and cooking,—and hardly had we passed through when, a certain proof of the beauty of Wargrave, we suddenly saw Mr. Alfred Parsons sailing home from his work to the George and Dragon.

Wargrave bears an air of propriety, as befits the last resting-place of the creator of "Sandford and Merton." Carriages with liveried footmen roll by on the village street, upon which new Queen Anne houses open their doors. The artistic respectability of the George and Dragon is vouched for by its painted sign, the not very wonderful work of two R. A's. On each side the inn lawns slope down from private houses, and boats lie moored along the shore. And, as if to show they are not common folk, the boating men of Wargrave go so far as to make themselves ugly and wear a little soldier cap stuck on one side of their heads.

But little of the time we gave to Wargrave was spent in the village. We explored instead the

ANGEL AT HENLEY.

HENLEY.

Loddon slow, with verdant alders crowned, and the many near back-waters, with that indifference to the sign "Private water" which Mr. Leslie in "Our River" recommends. Indeed, no one seems to heed it. I have heard men read aloud "Private water," and add at once, "Oh, that's all right. Come on!" In Patrick Stream, as the only man who ever really painted English landscape told us, there are Corots at every step, and what more need we say? In Bolney back-water the trees meet above your head and in the water below, with here and there a glimpse beyond the willows of lovely poplars and old farmhouses and "wide meadows which the sunshine fills." Reeds and lilies and long trailing water plants in places choke the stream, so that sculls are put away for the paddle. May and

MEDMENHAM ABBEY.

meadowland opposite, where villagers played cricket after their day's work.

From Wargrave, past the colony of house-boats within easy distance of Shiplake station, at the foot of a shady lane, where, if you land, a man suddenly appears and claims a penny (for what I hardly know); past Bolney with its ugly big house and pretty islands where the swans rest at noontide; past the ferry where the lazy minstrel sat and sang "Hey down derry!" until the young lady came to his rescue; past Park Place with its grotesque boat-house, niched and statued; through Marsh Lock, at whose gates during regatta week boats crowd and push and jostle, just as people do at the pit doors of a popular theater — 't is a short three-miles' journey to the Angel at Henley.

Henley seemed quiet by comparison with the July day when we came down from London and found the river a mass of boats and brilliant colors, and the banks crowded with people, and Gargantuan lunches spread at the Lion and the Angel and the Catherine Wheel. But that was during regatta week, when Englishmen masquerade in gay attire and Englishwomen become "symphonies in frills and lace," and together picnic in house-boats, launches, row-boats, canoes, punts, dinghies, and every kind of boat invented by man. It is true that now and then the course is cleared and a race rowed:

But if you find a luncheon nigh —
A mayonnaise, a toothsome pie —
You 'll soon forget about the race.

But whatever life there was at Henley we saw from the Angel. Across the way was the "finely toned, picturesque, sunshiny Lion," where Shenstone wrote his famous lines, too often quoted to be quoted again, and where the coach starts for Windsor. The pretty bow-window of our coffee-room opened upon the river, and, gray as were the three days, we waited in vain to see Henley in sunshine: pleasure parties were always starting from the landing-place, boats never stopped passing, swans floated by in threes, while boys forever hung over the open balustrade of the old gray bridge, where, now and then, we could see the long boats on Salter's van as it crept Oxford-ward.

A strong wind was blowing and there was quite a sea on when, late one afternoon, we pulled away from the Angel, under the bridge, down the regatta reach, wide and desolate without its July crowds; by the island with its little classic temple and its poplars set against a background of low hills — the starting-point of the race; past many houses, among others that of the Hon. W. H. Smith, an improvement on the usual Thames-side house; and then, like the "countless Thames toilers, now coming, now going," we took our pink ticket at Hambledon Lock, where there is a red lock-house covered with creepers, close to a great weir and a mill-stream, a white mill, and a little village full of yellow gables and big deserted barns, with grass growing on their old roofs and weeds choking their neglected yards.

We landed just below the lock, determined to make a record. For I fancy never before

BISHAM ABBEY.

has any one on the Thames journey succeeded in making but nine miles in a week! We put up at a brand-new, very ugly, but comfortable brick Flower Pot, where there was a landlord who had much to say about art and the Royal Academy. For Royal Academicians often lunch with him and Royal Academy pictures have been painted under the very shadow of his house, as well they might, for all the near country was as pretty as the inn was ugly. Elms, the loveliest in the whole length and breadth of England, met overhead in the narrow lanes, bordered the fields "with poppies all on fire," and shut in the old-fashioned gardens full of weary sunflowers waiting to count the steps of the sun that would not shine. Here and there through the elms we caught a glimpse of the river, and in the distance the tower of Medmenham Abbey.

We dropped down to the abbey towards noon the next day, just as the first picnic party was landing in the near meadows. For this place, where for centuries men worked in silence and knew not pleasure, is now but a popular picnicking ground. We too have lunched at Medmenham. We had been but a few weeks in England then, and I remember how we wondered at the energy of the young girls in fresh muslins who unpacked the hampers, laid the cloths, and washed the dishes; and how we thought nothing could be prettier than the old abbey, turned into a farmhouse, with its cloisters and ivy-grown ruined tower. That was four years ago, and in the interval we have seen much of England's loveliness. Now we were not so much impressed, though the abbey makes a pleasant enough picture with its gray, ivied arches and red roof and tall chimneys, and the beautiful trees on each side. Even the tower, if it be but a sham ruin, is effective.

At Lady Place, but little more than a mile below, men came together to save their country from the Stuarts. But in a boat under a blue sky, drifting past hay-scented meadows, sightseeing loses its charm, and it was a relief to be told by the lock-keeper that some of the family were now at home and so the gates of Lady Place were closed against the public. There was nothing to see anyway; just a few tablets stuck in the walls, and a cellar where a conspiracy went on once—he could n't exactly say just when.

"O, Bisham banks are fresh and fair"; and Bisham Abbey stands where it cannot be hid from the river, and you need not leave your boat to see the old gray walls and gables or the weather-worn Norman tower of Bisham Church, past which Shelley so often drifted in his boat as he dreamed his dreams of justice.

Great Marlow was a disappointment. Only the street which leads to the river, where the ferry was of old, shows a few picturesque gabled houses. Gravel was heaped on the shores, where the girls stand in Fred Walker's picture, and instead of the ferry-boat, pleasure punts and canoes and skiffs lay beyond. The town was poor in Shelley's time. Now, to the outsider, it looks fairly well-to-do.

If you wake up early enough in "dear old Marlow town" you will see walking riverward all the men in flannels you yesterday met in boats, each with a towel over his arm. They are on their way "to headers take at early dawn." And presently, if it be Sunday morning, after the breakfast hour the procession reforms and divides, one half in top hats and conspicuous prayer books, the other still in flannels and carrying hampers instead of towels. For Sunday is the river day on the stretch between Marlow and Maidenhead.

When we came downstairs in the morning, an Oxford friend had just arrived to take a pair of sculls for the day, and it was in fine style we made our start. Dickens in his "Dictionary of the Thames" advises caution in passing Marlow Weir. Though, as a rule, he is as nervous as Taunt is easy-going, his nervousness here is not without reason. The weir, less protected than many, stretches to your right as you go towards Marlow Lock, and the angler-haunted current by the mill is on your left and you must keep straight in the middle, or what is the result? You go over, as so many have already gone, and, once over, you never come out again. But still, on the Thames, with moderate care there is no occasion for accidents so long as daylight lasts, for at every weir is the sign "Danger!" big enough to be read long before you come to it. After dark, however, even those who know the river best are not safe.

"And Quarry woods are green"; and at the foot of low hills, yellowing with the late harvest, is Bourne-End, a group of red roofs and a long line of poplars, and next Cookham

BISHAM CHURCH.

IN A THAMES LOCK.

church tower comes in sight. Under its shadow Fred Walker lies buried near the river he loved in life. Within the church a tablet is set up in his honor in the west wall, and a laurel wreath hangs beneath. But over his grave only a gray stone, like those one sees in all English country graveyards, is erected to his memory, and that of his mother and brother.

At the Ferry Hotel at Cookham we unpacked our boat and ceased to be travelers, to become, with the many on the water, pleasure-seekers of a day. Anglers no longer slept on the banks, but were alert to order us out of their way if we drew too near. In every house-boat, in every steam launch, was a gay party. Along the beautiful stretch between Marlow and Cookham, beneath the steep wooded slopes of Cliefden,—where here and there the cedars and beeches leave a space to show the great house of the Duke of Westminster rising far above, its gray façade in fine perspective against the sky,—up the near back-waters winding between sedge and willow, one to a mill, another to a row of eel-bucks, the name of the smaller boats was legion. Among them was every possible kind of row-boat, and there were punts, some with one some with two at the pole, dinghies, sail-boats, even a gondola and two sandolas, and canoes with single paddle, canoes with double paddles, and one at least with an entire family on their knees paddling as if from the wilds of America or Africa. On the Thames it seems as if no man is too old, no child too young, to take a paddle, a pole, or a scull. In one boat you find a gray-haired grandfather perhaps, in the next a little girl in short frocks and big sun-bonnet.

The locks were more crowded than usual, and on

CLIEFDEN.

RAINBOW ON THE THAMES.

their banks men waited with baskets of fruit and flowers. In one we sunk to the bottom to the music of the "Brav' Général," and the musicians, when there was no escape, let down the lock-keeper's long boathook with a bag at the end for pennies.

But it was outside Boulter's Lock, on the way back to Cookham, that we found the greatest crowd. There was such a mass of boats one might have thought all

The men who haunt the waters,
Broad of breast and brown of hue,
All of Beauty's youngest daughters,
Perched in punt or crank canoe,

were waiting to pass through together. But presently the lock-keeper called out, "Keep back! There are a lot of boats coming!" and the lock gates slowly opened and out they came, pell-mell, pushing, paddling, poling, steaming, and there was great scrambling, and bumping, and meeting of friends, and cries of "How are you?" "Come to dinner at eight," "Look out where you 're going!" and brandishing of boathooks, and glaring of eyes, and savage shoutings, and frantic handshakings, and scrunching of boats, and scratching of paint, and somehow we all made our way into the lock as best we could, the lock-keeper helping the slower boats with his long boathook and fitting all in until there was not space for one to capsize if it would. But indeed in a crowded lock if you cannot manage your own boat some one else will manage it for you; and, for that matter, when there is no crowd you meet men whose only use of a boathook is to dig it into your boat as you are quietly making your way out. Both banks were lined with people looking on, for Boulter's Lock on Sunday afternoon is one of the sights of the Thames.

When the upper gates opened there was again pushing and scrambling, and it was not until we were out of the long cut and under the Cliefden heights that we could pull with care. The boats kept passing long after we had got back to Cookham and while we lingered in the hotel garden. Almost the last were the sandolas and the gondola, and as we watched them, with the white figures of the men at the oar outlined against the pale sky and bending in slow, rhythmic motion, we understood why these boats are so much more picturesque than the

RUNNYMEDE.

punt, the action of the gondolier so much finer than that of the punter. The entire figure rises above the boat, and there is no pause in the rhythm of the motion. In a punt the man at the pole, except in the upper reaches near Oxford, stands not above but in the boat; and fine as is his action when he draws the pole from the water and plunges it in again, the interval when he pushes on it or walks with it is not so graceful. To know the punt at its very best you should see it in a race, when the action of the punter is as continuous as that of the gondolier.

Gradually the launches began to hang out their lights, the row of house-boats opposite Cookham Church lighted their lamps and Japanese lanterns, making a bright illumination in one corner, and "when the evening mist clothed the riverside with poetry as with a veil" "all sensible people" turned their backs upon it and went in to dinner.

After Cookham there is history enough to be learned from the guidebook for those who care for it: scandalous as you pass under

Cliefden's proud alcove,
The bower of wanton Shrewsbury and of love;

stirring about Maidenhead, where the conspiracy of Harley bore some of its good fruit; mainly ecclesiastical at Bray, where lived the famous Vicar, who never faltered in his faith unless the times required it:

And this is the law that I'll maintain
Until my dying day, sir,
That whatsoever king shall reign
Still I'll be the Vicar of Bray, sir.

He showed his good taste. The village is as charming when you first see from the river the long lines of poplars and the church tower overlooking a row of eel-bucks as when you wander through the streets to the old brick almshouse with the quaintly clipped trees in front and the statue of the founder over the door. For the first time in our river experience there was not a room to be had in the village. At least so the landlady of the George on the river bank told us, while she struggled with her h's. She advised us to try the H-h-hind's H-h-head in the village. We did, but with no success. Now was the time to unfold our canvas and put up in our own hotel. Instead, we dropped downstream in search of an inn where we would not have to make our own beds and do our own cooking.

Between Bray and Boveney Locks is the swiftest stream on the river, and we saw only one boat being towed, and another sculled with apparently hard work up past Monkey Island, where the Duke of Marlborough's painted monkeys, which give the island its name, are said still to climb the walls of his pleasure house.

The river flowed in long reaches and curves between shores where there was little to note. But as we passed Queen's Island we saw, gradually coming into view on the horizon, the great gray mass of Windsor Castle. We lost sight of it when, with a turn of the stream, we came to Surly, where the Eton boys end their famous 4th of June, and to little Boveney Church, shut in by a square of trees much as a Normandy farm is inclosed. Just before the lock the castle was again in front of us, nearer now and more massive. But hardly had we seen it when it went behind the trees. Below the lock dozens of boats and many swans with them were on the water; not the crowd we had left at Maidenhead, however. Men sculled in stiff hats and shirt-sleeves. Parties were being pulled instead of pulling themselves. Soldiers, their little caps still stuck on their heads, but their elegance taken off with their coats, tumbled about in old tubs: once in the midst of them a crew of eight, spick and span as if for a parade and coached by an officer, passed in a long racing-boat.

The banks, where fishermen sat, grew higher and more commonplace; one or two little back-waters

THAMES EEL-BUCKS.

quietly joined the main stream. A long railway embankment stretched across the plain. The river carried us under a great archway, and just before us Windsor towered, grand and impressive, from its hill looking down upon river and town. The veil of soft smoke over the roofs at its foot seemed to lift it far above them, a symbol of that gulf fixed between royalty and the people.

Rain began to fall as we drew up to a hotel on the Eton side, just opposite to where the castle "stands on tiptoe to behold the fair and goodly Thames."

In the town we could forget the river, so seldom did we see the river uniform, so often did we meet tourists with red Baedekers. In the hotel we could as easily forget the town, for here we overlooked the water and the passing boats. Even when it was so dark that we could no longer see them, we could hear the whistle of the steam launches, the dipping in time of many sculls, and the cries of coxswains.

The morning we left Windsor was brilliant with sunshine. Near Romney Lock the red walls and gray chapel of Eton came in sight, and when we looked back it was to see a corner of Windsor Castle framed in by the trees that line the narrow cut. Beyond the lock were the beautiful Eton playing-fields, where crowds meet on the 4th of June; and next Datchet and Datchet Mead, where Falstaff was thrown for foul clothes into the river; and Windsor Park, where the sun went under the clouds and down came the rain in torrents. At the first drop all the boats disappeared. The minute before a girl had been poling downstream at our very side. Now she had gone as mysteriously as the Vanishing Lady. We, not understanding the trick, kept calmly on our way and were none the worse for our ducking. And when the sun shone again the boats all reappeared as suddenly. One cannot tell in words how the river, with the first bit of sunshine, like the Venetian lagoons, becomes filled with life.

ETON FROM THE RIVER.

At Old Windsor the weir seemed to us much the most dangerous we had come to, and the lock by far the most dilapidated. After we left the

lock we passed the yellow bow-windowed Bells of Ousely, an inn famous I hardly know for what, its sign hanging from one of the wide-branching elms that overshadow it; and Magna Charta Island, where the barons claimed the rights which they have kept all for themselves ever since, and where two or three pleasure parties were picnicking, and a private house stands on the spot so sacred to English liberty; opposite, those who to-day are its defenders were playing at making a pontoon-bridge, and the field was dotted with red coats and white tents. Below was Runnymede, a broad meadow at the foot of a beautiful hillside, where the great fight was fought.

At Bell Weir Lock the gates were closed. Too many barges had crowded in from the lower side, and the last had to back out, an operation which took much time and more talk. A boat-load of campers pulled up while we waited.

"Back water, Stroke!" cried the man at the bow, who had a glass screwed in one eye. "Easy now! Bring her in! Look out where you're going!" And with his glass fixed upon Stroke, he quite forgot to look out where he was going himself, and bang went the bow into a post and over he tumbled into a heap of tents and bags at the bottom of the boat. When he got up the glass was still there, as it apparently had been for several weeks, for we had seen the party going upstream when we were at Sonning. They had probably been to the top of the Thames and were on their way back, but they had not yet learned to manage a boat. When the gates at last opened Stroke saw some young ladies on shore, and at once put his pipe in his mouth and his hands into the pockets of his blue and black blazer, and struck an attitude, and Bow gave orders in vain. The boat swung from one side of the lock to the other and still he posed. However, we had the worst of it in coming out. For in trying to clear the waiting barge we ran aground and stuck there ignominiously, while

all the boats that had been behind us in the lock went by. But it was not much work to push off again, and almost at once we were in Staines.

The town is thought to be the rival of Reading in ugliness, an eyesore on the Thames. We minded this but little, for we spent the evening sitting at a table in the garden of the Pack Horse, watching the never-ceasing procession of boats—the punt with the two small boys come to meet their father after his day in London; the racing punts; the long, black canoe, either the *Minnehaha* or the *Hiarwatha* (we were too far to see its name); the picnic parties coming home with empty hampers; the sail-boats; the ferry punt, where now and then an energetic man in flannels took the pole from the ferryman and sent the punt zigzagging through the water, but somehow, and in the course of time, always got to the other side. And if an ugly railway bridge crossed the river just here, we could look under it to the still busier ferry, where the punt, crossing every minute, was so crowded with gay dresses and flannels that one might have thought all Staines had been for an outing. The sun set behind the dense trees on the opposite bank, its light shining between their trunks and the dark reflections; moonlight lay on the water, and still we sat there. We could understand our landlord when he told us that, though he had traveled far and wide, there was no place he cared for as he did for Staines. Like his wife and the pile of trunks at the head of the stairs, he had an unmistakable theatrical look. Later he went into the bar and played the violin, and people gathered about the tables while he gave now a Czardas, now the last London Music Hall song. The evening was the liveliest we spent upon the river.

A fine Scotch mist fell the next morning. Of the first part of the day's voyage there was not much to remember but gray banks, a gray river, and an occasional fishing-punt with umbrellas in a row. In our depression we forgot when we passed Laleham that the village has become a place of pilgrimage. Matthew Arnold lies buried in its churchyard, and perhaps he, who hated the parade of death, would rather have the traveler pass his grave without heeding it than stop to drop a sentimental tear.

ROLLERS AT MOULSEY.

At Chertsey the mist rose and our spirits with it. We had arrived just in time for the Chertsey regatta, and when presently the sun struggled through the clouds, as if by magic the river was crowded with boats. The races were not worth seeing. The men sculled in their vests, poled in their suspenders. Punts at the start got so hopelessly entangled that spectators roared with laughter. But there was an attempt to do the thing as at Henley. Between the races, canoes and punts and skiffs went up and down the racecourse, and the

people in the two house-boats received their friends and tea was made. Among the lookers-on, at least, costumes were correct.

From the river, Chertsey was so pretty and gay, we did not go into the town, which Dickens says is dull and quiet, even to hunt for the humble nest where Cowley

'Scaped all the toils that life molest,
And its superfluous joys,

or the near mansion where Fox raised his turnips.

We neared Shepperton Lock as the sun was going down. Just below the long straggling village of Weybridge was hidden round a corner of the river at the mouth of the Wey. Close by another little stream and a canal join the Thames, and their waters meet in the weir pool, which was a broad sheet of light when we first saw it. At the landing-place of the Lincoln Arms lay the usual mass of boats, but almost all were marked with monograms repeated on every scull and paddle, and on the road above carriages with liveried footmen waited.

The little river Wey runs to Guildford and still farther through the fair county of Surrey, and on its banks, not far from Weybridge, lived the rollicking, frolicking, jolly old monks whose legend is said to drive away sentiment as suddenly as a north wind scatters sea-fog. But after all, if you turned from the Thames to explore every stream rich in story and in beauty, you would never get down to London. Besides, on the Wey there are locks every hour or less, and at almost all you must be your own lock-keeper and carry your tools with you, and there are those who say the pleasure is not worth the work.

From Weybridge to Walton is the neighborhood abounding with memories of olden time,

where Mr. Leland once went gipsying. First there is Shepperton, with its little Gothic church and many anglers, on your left; and then Halliford, a quaint old street facing the river, where we found an impudent young man sailing the *Shuttlecock*, as if the *Shuttlecock* were not the special property of the lazy minstrel; and next Cowey Stakes, where Cæsar is said to have crossed; and Walton with its relics of scolds and gallants and astrologers. For if there is a picture at every turn of the Thames, there is a story as well; and if you are not too lazy, you read it in your guidebook and are much edified thereby, but you go no further to prove it true.

The cut to Sunbury Lock, with its unpollarded willows and deep reflections, is like a bit of a French canal. At the lock there is one of the slides found only in the most crowded parts of the river. On them boats are pulled up an inclined plane over rollers and then let down another into the water above or below, as the case may be, and this in one-fifth of the time it takes to go through a lock, nor is there any long waiting for water to be let out or in.

And next came Hampton, where a large barge with red sail furled showed we were nearing London, and close by Garrick's Villa with its Temple of Shakspeare, and on the opposite shore Moulsey Hurst, where the costermongers' races are run in the month when gorse is in bloom, and where I was first introduced by the great Rye Leland to Mattie Cooper, the old gipsy whose name is an authority among scholars. And here the river divides into two streams to run round islands, which stretch, one after another, almost to Moulsey, so that as you pass down on either side the river seems no wider than it was many miles away at Oxford.

At Moulsey Lock on Saturday afternoon and on Sunday you find everything that goes to make a regatta but the races. It is the headquarters of that carnival on the river which begins with June, is at its height in midsummer, and ends only with October. Not even in the July fêtes on the Grand Canal in Venice is there livelier movement, more graceful grouping, or brighter color. There may be gayer voices and louder laughter, for the English take their pleasure quietly. But I do not believe, the world over, men in their every-day amusements can show a more beautiful pageant. The Venetian fêtes can be seen only once each summer. But though for that of the Thames you must go to Henley regatta, every week Boulter's or Moulsey Lock makes a no less brilliant picture. And, as Mr. Leland has said, "It is very strange to see this tendency of the age to unfold itself in new festival forms, when those who believe that there can never be any poetry or picturing in life but in the past are wailing over the banishing of Maypoles and all English sports."

It was still early Saturday afternoon when we reached Moulsey. At once we unloaded our boat and secured a room at the Castle Inn, close to the bridge and opposite that

Structure of majestic frame
Which from the neighboring Hampton takes its name.

The rest of the day and all the next we gave to the river between Hampton and the Court. In the lock the water never rose nor fell without carrying with it as many boats as could find a place upon its surface. At the slide, where there are two rollers for the boats going up and two for those coming down, there were always parties embarking and disembarking, men in flannels pulling and pushing canoes and skiffs. Far along the long cut boats were always waiting for the lock gates to open. And on the gates, and on both banks, and above the slide, sat rows of lookers-on, as if at a play; and the beautiful rich green of the trees, the white and colored dresses, the really pretty women and the strong, athletic men, all with their

reflections in the water, made a picture ever to be remembered. On the road were ragged men and boys, with ropes and horses, offering to "tow you up to Sunbury, Shepperton, Weybridge, Windsor," and still raggeder children chattering in Romany and turning somersaults for pennies. If we pulled up to Hampton it was to see the broad reach there "overspread with shoals of laboring oars," or with a fleet of sailing boats tacking from side to side — dangerous, it seemed to us, as the much hated steam launches. Below the weir were the anglers' punts. And up the little Mole, which "digs through earth the Thames to win," the luncheon cloth

HAMPTON COURT.

was spread and the tea-kettle sung under the willows. Through the long Sunday afternoon the numbers of boats and people never lessened, though the scene was ever varying. And when the sun sunk below Moulsey Hurst there was still the same crowd in the lock, there were still the rows of figures sitting on the banks, the men and horses on the road, the stray cyclist riding towards Thames Ditton—all now, however, but so many silhouettes cut out against the strong light.

Close by Moulsey Lock is Hampton Court, with its park and gardens, its galleries and courts, its bad pictures and fine tapestries, its fountains and terraces. What good American who has been in England does not love this most beautiful of English palaces? But of all those who come to it Sunday after Sunday, there is scarcely one who knows that within a ten-minutes' walk is another sight no less beautiful in its way—very different, but far more characteristic of the England of to-day.

At Moulsey we felt that our journey had really come to an end; but everybody who does the Thames is sure to go as far as the last lock at Teddington, and so for Teddington we set out early on Monday morning. There is no very fine view of Hampton Court from the river. One little corner crowned with many twisted and fluted chimney pots rises almost from the banks, and the wall of the park follows the towpath for a mile or more. On our left we passed Thames Ditton, where, in the Swan Inn, Theodore Hook, who to an abler bard singing of sweet Eden's blissful bowers would "Ditto say for Ditton," is as often quoted as is Shenstone at the Lion at Henley; and Kingston, with its pretty church tower, where the great coal barges of the lower Thames lay by the banks and a back-water we explored degenerated into a sewer; and then we were at Teddington with its group of tall poplars, where there is a large lock for the barges and steam tugs, and a smaller one and a slide as well for pleasure boats, and where the familiar smoky smell that always lingers over the Thames at Westminster or London Bridge greeted us.

The tide was going out or coming in,—it was so low we hardly knew which,—and on each side the river now were mud banks. But it was still early, and we decided to pull down and leave our boat at Richmond. After Teddington it was ho! for Twickenham Ferry, and the village of eighteenth-century memories. From the river we saw the villa where Pope patched up his constitution and his grotto, and the mansion where the princes of the house of Orleans lived in banishment. And in front of us from Richmond Hill, where Turner painted and many poets have sung, The Star and Garter, a certain dignity lent to it by the beautiful height upon which it stands and the knowledge that you will be bankrupt if you stop there, overlooked the Thames's "silver winding way."

In places the shores were as pastoral as in the upper narrow reaches, but again we came to the mud banks. From every landing-place men cried, "Keep your boat, sir?"—for Salter has agents on the river whose business it is to take care of boats left by river travelers until his van calls to carry them back to Oxford. Everybody expected us to stop; something of that great noise of London which has been likened to the roaring of the loom of Time seemed to reach us. We had left the Stream of Pleasure and were now on the river that runs through the world of work, as the big barges and the steam tugs told us. At Richmond we pulled up to shore for the last time, and intrusted the *Rover*, now with a good deal of its paint scratched off and bearing marks of long travels and good service, to the waiting boatman.

AFTERNOON AT A RANCH.

PICTURES OF THE FAR WEST.—IX.

HOUSES in the West, in accordance with their owners' tendencies, are showy, imaginative, practical, reminiscent, or shiftless; though there is a sort of building, *in transitu*, which may indicate economy and good judgment.

Such a dwelling stood in the midst of the sage-brush common, on the outskirts of a frontier town where we once lived, facing the foothills which were the seat of a military post. It was first a wall tent, set up a few feet from the ground on a foundation of boards. Here, in the course of the summer, a child was born. It occurred to us that some of the comforts needed at such a time might be wanting in this Ishmaelitish household, as we supposed it to be. But we were told by the daughter of a neighbor, who knew, through her mother's good offices, more of the family than we, that they were people of means—stock-raisers looking about them, like the tribe of Reuben in the land of Jazer and of Gilead, in search of good grazing valleys where the winters were not severe.

A few months later we saw the mother, bearing her babe in her arms, walking, after sunset, bareheaded, along the paths of the common. She looked a woman to be the mother of pioneers—the gipsy-like tan of her long journeys showing on her cheeks through the paleness of recent maternity. To have thought of her as an object of charity seemed ridiculous.

They continued to look about them all the rest of the summer, driving their stock up into the hills in the morning, and down to the ditches to water at evening. In the autumn a cabin was added to the tent, the rear of the one opening into the door of the other; wagon-sheets drawn over the wagon-body, close by, enlarged their winter accommodations. All these arrangements had a thoroughly competent and experienced look. In the spring we went away ourselves and saw no more of our nomadic neighbors on the common.

In every Western town which has known a period of prosperity there will be a few houses built by persons who have had the means to proclaim their taste. "Oh that mine enemy would build him a house!" one might reflect looking upon some of these monuments. But with regard to our neighbor's house, as well as his management in most other respects,

the point of view is personal, and where one lightly scoffs in passing another may pause and respectfully admire.

"He jests at scars that never felt a wound." He that has never disappointed himself with results of his own planning may laugh at his neighbor's follies in bricks, or boards, or stone. If there lives a man that, having had the license money gives to clothe his caprice, finds himself entirely satisfied, let him not obtrude the fact. There is something offensive in our neighbor's complacency with the fine shell of his own making. We will grant him whatever God gave him as his portion in other particulars, but he must be modest about his house. We forgive him if his chimney smokes—we love him as a brother if he is generous enough to confess to one fundamental regret concerning the whole!

Besides the houses that celebrated their owners' success, there are the modest homes built in this far land in fond remembrance of the cherished ideals of home, wherever home may be. The white paint; the neat door-yard fence; the little fruit trees close to the house; the old-fashioned flowers, tended in beds and borders and fed by foreign irrigation instead of the pleasant showers of home—all have a wistful look. Yet this may be the fancy of some homesick passer-by; another may see only the look of contented achievement. No more than this was expected or desired. Here ambition ceases, and the householder would not exchange the new home of his own making for the soundest inheritance, of equal value, at home.

The imaginative builder in the West, as in the East, frequently "slips up" in practice; but it will be he that first catches the spirit of the landscape and makes its poetry of suggestion his own. The people of certain races build with an unconscious truth to the nature around them which is like an instinct; or perhaps it is part of that providence which is said to attend upon the lame and the lazy. They are crippled by their poverty; they have the temperament that can wait. They cannot afford to "haul" expensive lumber or pay for carpenters to aid them in their experiment; so they scrape up the mud around them, make it into adobes and wait for them to dry, and pile them up in the simplest way, which proves to be the best. They build long and low because it is less trouble than to build high; for the same reason, perhaps, they do

DRAWN BY MARY HALLOCK FOOTE.

AFTERNOON AT A RANCH.

ENGRAVED BY H. DAVIDSON.

not cut up their wall space into windows. The result is the architecture of simplicity and rest; and it goes very well with a country that pauses, for miles, in a trance of sky and mountain and plain, and forgets to put in the details.

The practical builders are as successful as the lazy builders, for they build with the same directness. The ranch buildings of the West, like the old Eastern farm-houses, are good in this way. There is no nonsense about them. If the buildings belong to a show ranch there will be ample opportunity for the exercise of a trained intelligence in the adaptation of historic styles that were inspired by similar sites and conditions.

The houses of these great desert landscapes should convey the idea of monotonous and con-

centrated living. Sun and wind beleaguered fortresses, they should never look as if they cared in the least what an outsider thought of their appearance. They should wrap themselves in silence and blind-walled indifference, as a bathless, breakfastless Mexican smokes his cigarette against a sunny wall of a morning, wrapped to the ears in his dingy serape. It is not presumed to offer this somewhat squalid suggestion to the ranch gentry, but to their humble neighbors of the railroad outpost, the cattle-feeding station, and the engineers' camp, who have winters as well as summers to provide for.

It may be added that the best houses in the West, those best worth describing, like the best people, are not the ones that are typical.

* * *

THE POISON OF SERPENTS.

Y first encounter with a venomous serpent occurred when I was but a lad and had been wading the waters of the Clarion, in McKean County, Pennsylvania. Heavily laden with a noble string of trout, I set foot on a slippery bank to leave the stream on my homeward way when my guide suddenly caught me by the shoulder and jerked me back so violently that I fell in the shallow water. As I struggled to my feet in alarm, the old lumberman pointed quietly to a "hurrah's nest"¹ half-way up the slope — on it was coiled a large rattlesnake. But for the man's quickness I should have been struck in the face or the throat. We soon killed the snake, and as I sat on the bank, thoughtfully examining the fangs of this skillful apothecary that knew the use of hypodermatic injections so long before we took the hint, I felt the awakening of an interest in the strange poison I had so nearly tested on my own person. Few men of my age and occupation have been more in the woods than I, yet only once since this adventure have I seen a crotalus in my many wanderings in the Eastern States. I found a small "rattler" dead on the road near Cape May Court House, New Jersey: a cynical friend settled my doubts as to what had killed it by suggesting that it might have bitten a Jerseyman.

This heroic animal, which never flees, which warns of danger all who come too near, has nearly gone from our woods and plains. As a cause of death it hardly figures in the census; and even in Florida its mortal foe, the hog, is

making such ruthless war upon it that before long a snake is likely to become as rare as the viper is to-day in English forests.

In the West, on the sage deserts, I have seen the ground-rattlesnake in large numbers. No one dreads it much, and bites are rare. Deaths from our Eastern or our North-western snakes are also very infrequent, nor were fatal accidents of this nature ever very common anywhere in North America. For this there were several reasons: our poisonous snakes are not excessively numerous, their poison is much less active than that of the cobra and the Bungarus of India or the vipers of Guadeloupe, and during a large part of the year they bury themselves to escape cold. Our troops must in war have trampled heedlessly through countless miles of swamp and woods, and yet there is no return among our war statistics of a single case of death from snake bite.

Compare this with the terrible account Fayrer gives us of the loss of human life from snake poison in India, where dislike of the hog and superstitious reverence for the cobra combine to make the management of this question difficult. Very imperfect returns, excluding Central India, gave in 1869 the deaths from snake bite as 11,416 for a population of 120,972,263, and subsequent and fuller statistics place this vast mortality still higher. Little has been done by the Indian Government to lessen the constantly recurrent annual loss of life. Rewards for cobra heads proved of slight use, and no continuous or systematic means have been used to enable the able staff of army or civil surgeons to study the subject of snake bites as it should long since have been studied.

Some years went by before I was able to

¹ A mass of leaves left by a freshet in the crotch of the divergent branches of a bush.

gratify my never quite forgotten desire to know more of this interesting poison. One day, however, a man offered me a small lot of snakes, and just then I learned of a supposed antidote invented, it was said, by the famous French herpetologist, Bibron. In fact he never did invent an antidote, and how the queer mixture of iodine and corrosive sublimate got his authoritative name is still a mystery. I began in 1859 to study the matter, and soon found that the antidote was worthless, and that no one knew much about snake venoms. Not quite a hundred years previous Fontana wrote on the poison of vipers an immortal work, and nearly another century before him there were written two quaint books,

life by pupils of the Government schools, are here grouped so as to show at a glance all the typical Indian poisonous serpents.

Twenty-four years after my first essay, the Smithsonian published¹ the results of another four years of additional work on the problems which had interested me in my early life. Much of what I did in 1859 to 1862 needed no reëxamination, but new questions had arisen, and novel and accurate methods were now at our disposal. Moreover, I had been haunted for a year or more by the idea that serpent poisons might not be simple but complex, not one thing but a mixture of two or more, and that this might explain the causes of the difference be-

TYPICAL INDIAN POISONOUS SERPENTS. (FROM A PAINTING BY ANNODA PROSACT BAGCHEE.)

1, *Ophiophagus Elaps*; 2-7, inclusive, Varieties of Cobra; 8, *Trimesurus Carinatus*, coiled around No. 1; 9, *Daboia Russellii*; 10, *Bungarus Fasciatus*; 11, *Bungarus Cornutus*; 12, *Echis Carinata*; one unknown.

one by Redi, 1664, and one by Charas, 1673. Both of these little volumes are still worth reading. Charas's belief in the value of volatile salt of the ashes of calcined vipers as a remedy for viper bite is an instructive exhibition of a form of medical illiocy not without modern illustrations.

My own researches were carried on in the intervals of a life of great occupation, and were published in 1862 by the Smithsonian Institution. About 1872, unaided by Government, in a climate where heat makes all labor difficult, and at a cost in the way of money and mortal risks which few can comprehend, an Indian surgeon, now Sir Joseph Fayrer, created on this subject a vast mass of material knowledge which without reward he gave to the Government of India. The illustration on this page was meant for a frontispiece to his splendid volume, but was for some reason unused and came to me as a gift from Fayrer. The snakes, drawn from

tween rattlesnake and cobra bites, and possibly give the clue to methods of successful treatment. When a maggot like this gets into the brain of a man accustomed to want to know why, it breeds a variety of troublesome pleasures. In my case it drove me once more to the laboratory, and caused me to seek the skillful aid of Dr. Edward T. Reichert, now Professor of Physiology in the University of Pennsylvania. Together we solved many perplexing problems. As some of these have for the general reader an unusual interest, I purpose to restate here a few of our results, since our large Smithsonian memoir is not likely to come before many of the readers of THE CENTURY.

It has occurred to me that in telling my story it might be well to show in popular shape how the work was done, as well as its results. To make it clearer, I must first explain the

¹ "Researches on Serpent Poisons," by S. Weir Mitchell, M. D., and Prof. E. T. Reichert.

GILA MONSTERS — POISONOUS LIZARDS.

mechanism which enables the serpent to use its poison.

We have in America as venomous serpents the several species of rattlesnake, the water moccasin, the copperhead, and the beautiful coral snake, the little elaps of Florida, too small with us to be dangerous to man.

India is preëminently the home of the poisonous snakes, of which there are no fewer than fifteen genera. The cobra is most abundant, but the *Ophiophagus elaps* is the most dreaded, and attains at times the length of fourteen feet. Unlike the cobra and the crotalus, this serpent is viciously aggressive, and will pursue a man with activity.

Among the vipers the daboya is entitled to rank as a poisoner close to the cobra, and the crotalidæ are represented by a number of snakes which are somewhat less effective slayers than the cobra. While these genera are too sufficiently abundant on land, the Indian seas also abound in species belonging to the family of hydrophidæ. These serpents are agile and dangerous, but as yet no one seems to have made any examination of their venom, nor directly experimented to learn anything of its relative hurtfulness. Poisonous water-snakes are found in abundance on the shores of South America, and used to be

thrown up in numbers into the paddle-wheel covers of the old side-wheel steamers. I never had the good luck to get a living specimen.

The centipede and the scorpion rank high in the popular mind as poisoners, but they are gentle apothecaries compared to the serpent.

We are in America the privileged possessors of the only other animal at all approaching the poisonous snakes in lethal vigor: it is a lizard, the Gila monster (*Heloderma suspectum*) of Arizona. This strange creature is the only poisonous lizard known. I have heard of but one death in man from its bite, and for a long while it was looked upon by all except the Indian as harmless. Sluggish, inert, well armored with a tough, defensive skin, a feeder on birds' eggs and on insects, it is most difficult to induce this good-humored and most hideous reptile to bite at all. When once it takes hold, no bulldog could be more tenacious. The odor of its poisonous saliva is exactly like that of magnolia buds. Its bite causes no local injury, and its venom is a deadly heart poison.

All of the great family of thanatophidæ have substantially the same mechanical arrangements for injecting their venom. When not in action the two hollow teeth known as fangs lie pointing backwards, wrapt in a loose

RATTLESNAKE COILED TO STRIKE.

cloak-like cover, a fold of the soft skin of the interior of the upper jaw. At the base of each of these fang teeth is an opening connected with a tube running backwards under the eye to an almond-shaped gland which forms the poison. This body continuously manufactures venom, and holds in its cavity a supply for use. Over the gland runs a strong muscle,

which is ordinarily employed to close the mouth by lifting the lower jaw, to which it is made fast. A little circular muscle around a part of the duct keeps it shut and prevents waste of venom.

Let us observe what happens when the rattlesnake means mischief. He throws himself into a spiral, and about one-third of his length, carrying the head, rises from the coil and stands upright. The attitude is fine and warlike, and artists who attempt to portray it always fail. He does not pursue, he waits. Little animals he scorns unless he is hungry, so that the mouse or the toad he leaves for days unnoticed in his cage. Larger or noisy creatures alarm him. Then his head and neck are thrown far back, his mouth is opened very wide, the fang held firmly erect, and with an abrupt swiftness, for which his ordinary motions prepare one but little, he strikes once and is back on guard again, vigilant and brave. The blow is a stab, and is given by throwing the head forward while the half-coils below it are straightened out to lengthen the neck and give power to the motions which drive the fangs into the opponent's flesh; as they enter, the temporal muscle closes the lower jaw on the part struck, and thus forces the sharp fang deeper in. It is a thrust aided by a bite. At this moment the poison duct is opened by the

A SNAKE STAFF.

relaxation of the muscle which surrounds it, and the same muscle which shuts the jaw squeezes the gland, and drives its venom through the duct and hollow fang into the bitten part.

In so complicated a series of acts there is often failure. The tooth strikes on tough skin and doubles back or fails to enter, or the serpent misjudges distance and falls short and may squirt the venom four or five feet in the

off a snake's head and then pinch its tail, the stump of the neck returns and with some accuracy hits the hand of the experimenter — if he has the nerve to hold on. Few men have. I have not. A little Irishman who took care of my laboratory astonished me by coolly sustaining this test. He did it by closing his eyes and so shutting out for a moment the too suggestive view of the returning stump. Snakes have always seemed to me averse to

RATTLESNAKE STRIKING FROM THE UNFOLDING COIL.

air, doing no harm. I had a curious experience of this kind in which a snake eight feet six inches long threw a teaspoonful or more of poison athwart my forehead. It missed my eyes by an inch or two. I have had many near escapes, but this was the grimmest of all. An inch lower would have cost me my sight and probably my life.

A snake will turn and strike from any posture, but the coil is the attitude always assumed when possible. The coil acts as an anchor and enables the animal to shake its fangs loose from the wound. A snake can rarely strike beyond half his length. If both fangs enter, the hurt is doubly dangerous, because the dose of venom is doubled. At times a fang is left in the flesh, but this does not trouble the serpent's powers as a poisoner, since numberless teeth lie ready to become firmly fixed in its place, and both fangs are never lost together. The nervous mechanism which controls the act of striking seems to be in the spinal cord, for if we cut

striking, and they have been on the whole much maligned.

Any cool, quiet person moving slowly and steadily may pick up and handle gently most venomous serpents. I fancy, however, that the vipers and the copperhead are uncertain pets. Mr. Thomson, the snake keeper at the Philadelphia Zoölogical, handles his serpents with impunity; but one day having dropped some little moccasins a few days old down his sleeve while he carried their mamma in his hand, one of the babies bit him and made an ugly wound. At present the snake staff is used to handle snakes.

I saw one October, in Tangiers, what I had long desired to observe — a snake charmer. Most of his snakes were harmless; but he refused, with well-acted horror, to permit me to take hold of them. He had also two large brown vipers; these he handled with care, but I saw at once that they were kept exhausted of their venom by having been daily teased

RATTLESNAKE IN COIL.

into biting on a bundle of rags tied to a stick. They were too tired to be dangerous. I have often seen snakes in this state. After three or four fruitless acts of instinctive use of their venom

they give up, and seem to become indifferent to approaches, and even to rough handling.

When a man or an animal is bitten by a rattlesnake, death may take place in a few minutes.

RATTLESNAKE SURPRISED.

It has followed in man within a minute, but unless the dose given be enormous, or by chance enters a vein, this is very unlikely. The bite is, however, popularly believed to be mortal, and therefore every case of recovery gives credit to some remedy, for it is a maxim with physicians that the incurable and the easily relievable maladies are those which have most remedies assigned to them.

Usually the animal struck gives a cry, and very soon becomes dull and languid. The heart, at first enfeebled, soon recovers, the respirations become slower and weaker and more weak, paralysis seizes the hind legs, the chest becomes motionless, and at last death follows, usually without convulsions. Observe how little this tells us. Mere outward observation gives us but slight explanatory help. If the animal should chance to survive over a half-hour, the part bitten swells, darkens, and within a few hours the whole limb may be soaked to the bone with blood, which has somehow gotten out of the vessels and remained fluid in place of clotting. What is at first local by and by becomes general, and soon the blood everywhere ceases to have power to coagulate. Then leakages of the vital fluid occur from the gums or into the walls of the heart, the lungs, brain, and intestines, and give rise to a puzzling variety of symptoms, according to the nature of the

organ thus disordered. These phenomena make the second stage of poisoning, and with them there is, in finally fatal cases, a continuous and increasing damage to the nerve centers that keep us alive by energizing the muscles which move the chest walls and so give rise to the filling and emptying of the lungs.

When a physiologist speaks of a nerve center he means by this a group of minute nerve cells, and such a group he is apt to call a ganglion, labeling it with the name of the distant organ or the function to which it gives energy. Much alike in appearance, one ganglion keeps the chest in motion, one influences the heart, one regulates the temperature of the body. When we throw into the circulation a poison, it comes into contact with all of these numerous governing centers; but it does not trouble all of them alike. It has, as a rule, a fatal affection for one only, or far more for one than for another. Why venom should, as if by choice, almost instantly enfeeble the ganglia which keep us breathing, none can say. By and by it also in turn disturbs other groups of nerve cells, but its deadliest influence falls on the respiratory mechanism. The nerve cells thus attacked undergo no visible change; yet some mysterious alteration is present. Probably they lose power to give out their waste products and to re-absorb from the blood the material needful to sustain their local life and activity. At

all events the evil done is grave, and when the dose of venom is large, death becomes certain, the animal bitten perishing by slow suffocation.

The deadly apothecary does not succumb to his own drugs. I have over and over injected under the skin of a rattlesnake its own venom or that of a moccasin, or of another crotalus; but in no case have I seen a death

are more dreaded. With us the rattlesnake leads for capacity to kill, and the copperhead and the moccasin come in order after him. The popular verdict puts the copperhead above the crotalus, but it is wrong, as the above classification rests on careful comparisons of the relative poisoning power of these snakes.

The popular notion of the immunity of some animals has little foundation. Cold-blooded

result. Why should this be? Other and non-venomous snakes die readily of venom poisoning. The many noxious compounds man carries in his liver, gastric glands, or thyroid gland are fatal if they enter the blood in large amount. There is, indeed, scarcely an organ of his body which is not a possible source of poison to him, the sole question being as to his constant competency to rid himself of the fractional doses ever passing into and out of his blood and to secure himself against certain products which are not meant at any time to pass out of the issues of certain organs of the body into the hurrying currents of the circulation.

But to all creatures save itself the venomous serpent is noxious in varying degrees. Certainly the cobra surpasses as a poisoner all of our American snakes. In India other serpents

creatures die slowly from snake bite, and the hog escapes only because he does not get seriously bitten. His bristles, tough skin, and clever mode of attack save him. Little pigs are often bitten and die like other creatures. We have never been able to poison plants with snake venom.

Practically speaking, there is something more to be said as to the question of relative toxicity. The size of the serpent, the time which has elapsed since it has bitten, determine also the extent of the damage it can do. A snake which has lately bitten two or three times is ill provided with poison, but captive snakes long undisturbed are apt to inflict fatal wounds.

The serpents used in our recent research were brought chiefly from Florida by the potent aid of the Smithsonian Institution, and the

dried venom of the cobra was procured from India through the assistance of her Majesty's Indian Government, and more largely by the private aid of Vincent Richards, Esq. The living snakes reached us in coffee-bags secured by strings, the sacks having been placed in a perforated box. When they came we opened the case, undid the strings and tumbled the poisoners into a box some five feet deep. There they lived very well if provided with water; and coiled in corners, or piled in numbers one on another, they lay sluggish and inert until danger threatened. There were half a dozen of these snake cages in our laboratory and at times they contained a hundred snakes, each genus or species having its own box. If disturbed, the rattlers were apt to start a chorus which was somewhat appalling to strangers.

When we desire to collect venom, we use the snake loop. With it a serpent is caught by the neck and lifted up to the top of the box. The lip of a saucer is then slipped into the snake's mouth. Angry at this liberty, it lifts its fangs, which catch on the inner edge of the saucer, against which the serpent bites furiously again and again. As it does so a thin yellow fluid squirts out of the perforation near to the needle-like end of the fangs. We slacken the loop, let the snake fall into a box cage, and seize a second, and a third, until we have all the venom we desire. It is innocent-looking enough. In water a drop of it sinks, whitening as it falls. It has no smell and no taste. A boiling heat clots it as it does white of egg, for, like that body, it is albuminous in its nature. If we dry it with care there is the same resemblance to egg albumen in its shining, yellow scales. Once desiccated it keeps well, as it does also in glycerine or in alcohol.

When I first studied this strange poison I thought of it as a single albuminous body. As such it had always been regarded since it had been proved by Prince Bonaparte to belong to the albumens. When once I chanced to think that venom might be a complex fluid, holding in solution more than one poison, reasons for such a belief multiplied, and so excited my interest that, in 1882, with Professor Reichert's aid, I began to put my theory to the sharp test of experiment.

To prove in the outside laboratory what the inside mental laboratory has comfortably settled is not always easy, and many months of careful research were required before the answer came to us. I will try to make clear our methods and results. When a little of the venom is placed in sufficient water it dissolves readily. If now we heat the solution a coagulation takes place, just such as happens when white of egg hardens on boiling. If by means of a filter we separate this substance clotted by

heat, it is found to be innocuous. The clear fluid which passes through the filter is, however, poisonous, but does not cause much *local* effect. As a whole the poison has been damaged by heat, presumably because one or more of its ingredients had been injured by heat. The next step is to learn if the substance made solid and inert by boiling cannot be separated in some other way and in such a form as will leave it also poisonous.

All soluble substances are divisible into two classes, one of which will pass through an animal membrane into a current of pure water and one of which will not. Those which can so pass are said to be dialysable, and the filter is known as a dialyser, and the process is called dialysis. We dissolve some of the poison in water and put it in an inverted funnel, the wide mouth of which, being covered with a thin animal membrane, is placed in distilled water. Under these circumstances the water goes through the membrane and dilutes the fluid above it and certain substances pass out to the water.

The matter which thus finds its way out to the water is said to be dialysable. When examined it proves to be poisonous—to be uncoagulable by heat, and to be the same as the matter left unaltered when we boil the diluted poison for a few moments. This substance resembles the albuminous matter which is formed when gastric juice digests white of egg; and as the material so obtained is called peptone, we named our product which passed through the dialyser to water *venom peptone*.

As the thinner water enters the dialyser and the peptone goes out, within the vessel there falls down a white substance, which is easily redissolved if we add a little common salt. It falls out of solution because the salts belonging to venom and which keep the white matter dissolved are, like all saline substances, dialysable and pass out along with the peptone. This white precipitate has certain likenesses to the albuminous bodies known as globulin, and of which there are several kinds in our bodies. That which thus falls out of the solution of venom we named *venom globulin*. It was to be had also in a simpler way. When we add plenty of pure water to clear fresh venom the water added makes the whole fluid relatively less salt and a white matter falls down. When this is separated and examined it proves to be the same as that left within the dialyser. Other matters of like nature but less important are found in some snake venoms, but essentially all examined by us contained at least two albuminous matters.

Mix these two in pure water with a little common salt and you practically reconstruct

WATER MOCCASIN.

a venom—the other ingredients are of less moment.

If we put *venom peptone* under the skin of a living animal it behaves much as boiled venom does. The local injury it causes is at first slight. Little or no blood oozes forth, but, if the animal survive, in an hour or two a watery swelling is seen, the tissues soften as if they were melted or dissolved, a horribly swift putrefaction occurs, and the tissues near and far swarm with the little rod-like bodies known as bacteria, which are the essential accompaniment and cause of putrefaction. Meanwhile the breath-sustaining centers become weak, and cease to respond by rhythmical effluxes of energy to the various excitations which stimulate the muscles so as to cause them to move the chest. The animal dies from failure to breathe. Internal bleeding is rare and slight, nor are the changes in the blood at all remarkable.

Venom peptone is present in cobra poison, and

in that of the rattlesnake. In the Indian serpent it constitutes, however, nearly the whole of the toxic albumen present, there being but two per cent. of the other element in question. The *venom peptone* of the cobra is also a far more active agent than the substance which corresponds to it in the venom of our crotalus, although chemically we can see but little difference between the two; since *venom peptone* passes with ease through membranes, and hence is rapidly absorbed, cobra poison may not always be swallowed with impunity, whereas it is possible to feed a pigeon on crotalus venom day after day and see it live unhurt.

While rattlesnake venom owes a part of its activity to *venom peptone*, its peculiar virulence and destructiveness belong chiefly to *venom globulin*, of which it has relatively nearly twenty-five per cent.—fifteen times as much as in cobra. *Venom globulin*, like the peptone poison, at first and briefly enfeebles the heart, but next attacks the respiratory centers, and finally

paralyzes the spinal ganglia. When separated and redissolved in a weak and saline solution with water it is a most potent poison; and besides its influence on the centers which sustain life, it has, soon or late, distinctive effects on almost all the tissues which somewhat resemble the changes seen in certain maladies, such as yellow fever; yet that which in them exacts days is brought about from globulin poisoning within an hour or less. At the spot where we inject globulin the vessels give way and pour out blood which cannot clot, and this change by and by occurs here and there throughout any or every organ of the body, so that at last the blood becomes what physicians call diffuent, and may remain until it decays, free from the clots usually seen in the healthy fluids when drawn and allowed to stand.

Thus it is that, because the cobra has little *venom globulin* and the rattlesnake much, the local appearances of the bite in either are readily recognizable. Then, also, as the Indian snake has much *venom peptone* and our serpent little, the former kills more surely and sooner, and does not cause the blood to stay fluid, so that in most cases the general phenomena would also enable us to say which snake had bitten. Certain other Indian snakes give us symptoms like those caused by the bite of our crotalidæ, and probably will be found to resemble them in the composition of their venoms. While we can thus separate and analyze the influence of the two poisons found so far in all venoms examined by us, neither alone occasions the tremendous and perfect effects seen when both are combined by mischievous nature in a suitable solution. Nor, indeed, is the poison ever quite so effective after it has been once dried and redissolved for experimental use.

There are vegetable poisons which possess power to destroy life by enfeebling the respiratory nerve centers; but we know of no poison save snake venom which has the ability to ruin in a few minutes the capacity of the lesser vessels to keep the moving blood within their guarding walls. Our every function—nay, life itself—depends on the blood being so restrained. If by accident a drop or two of normal blood escape from a small vessel, instantly the blood clots and tends to cork up the tiny tear through which it came. Venom not only seems to rot the vessels, but it also makes the blood fluid, and so facilitates the hemorrhages of which it is the primary cause. To study this singular process of destruction closely a small animal was so completely etherized as to cease to feel pain, and a loop of its intestinal cover called the peritoneum was examined with the microscope. The spectacle of the blood globules driven swiftly through transparent capillaries,

the smallest of vessels, is a constant source of wonder to him who sees it. *Venom peptone* in solution disturbs this local flood stream but little. *Venom globulin* exhibits its effects with difficulty, and solutions of dry venom cause but slight and tardy results. If, however, we touch the thin membrane with *fresh* rattlesnake poison, in a few minutes the delicate little cells, which are like a thatch on the inside of the capillary vessels, seem to be roughened, and become less transparent. Then, abruptly, here and there a drop of blood oozes out. Presently the fanlike expansion of the minute vessels we are watching begins to look like a bunch of red grapes, as these tiny blood points increase in size and number, until at last the whole field of view is covered with escaped blood. It is then a question of time as to how long it will be before the same disintegration of vessels, and the same loss of power in the blood to clot, occur in hundreds of places remote from the spot first poisoned.

If after poisoning an animal we examine the blood cells at intervals, we find that they very early lose their usual flat, disklike aspect, and become smaller and round. They also acquire for a time a singular stickiness and elasticity, so that they adhere in masses, and when compressed spindle out, and then run together anew when we cease to subject them to pressure.

The power of venoms to hasten and favor putrescence must have something to do with the symptoms which occur when death takes place after a long interval, as a day or two, or when slow recovery occurs. This tendency is an indirect effect. If we sterilize venom,—that is, subject it to dry heat until all germs are destroyed,—and leave it then in contact with sterilized soup guarded from the germs afloat in the air, no putrefaction ensues; but if to this sterilized broth we add venom not so deprived of bacterial germs, putrefaction is hastened at a rate never seen under other circumstances.

Now, as bacteria are always present in fresh venom, enough enter a wound to account for the fact that animals envenomed swarm within an hour or two with the organisms which cause putrefaction. Their rate of increase is inconceivably great, and seems to be favored by the poison, which provides them with some mysterious conditions of growth. Thus it is that the blood, the nervous centers, the vessels, are all in turn attacked by these fearfully destructive poisons, and that at last putrescent changes may be added to the causes of a multiform group of perplexing phenomena.

The general reader will ask what good has come out of these clearer views as to the mechanism of this poisoning. Our own labors and the brilliant work of Fayrer, Lauder-Brun-

ton, Wall, and Vincent Richards have certainly brought us somewhat more plainly to understand that which happens. What gain is there for man? As yet there is little, except that, while a few years ago we were merely groping for remedies, to-day we are in a position to know with some definiteness what we want and what we do not want.

Let us see what the actual present gain is. If we mix any venom with a strong enough solution of potassa or soda we destroy its power to kill. A solution of iodine or perchloride of iron has a like, but a lesser capacity, and so also has bromohydric acid; but by far the best of all, as was first shown by Lacerda, is permanganate of potash. If this agent be injected at once or soon through a hollow needle into the fang wound, wherever it touches the venom it destroys it. It also acts in like destructive fashion on the tissues; but, relatively speaking, this is a small matter. If at once we can cut off the circulation by a ligature and thus delay absorption and then use permanganate freely, we certainly lessen the chances of death; yet, as the bites occur usually when men are far from such help, it is but too often a futile aid, although it has certainly saved many lives. The first effect of venom is to lessen suddenly the pressure under which the blood is kept while in the vessels. Death from this cause must be rare, as it is active for so short a time. Any alcoholic stimulus would at this period be useful; but, despite the popular creed, it is now pretty sure that many men have been killed by the alcohol given to relieve them from the effects of snake bite, and it is a matter of record that men dead drunk with whisky and then bitten have died of the bite. For the consequences to the blood and to the nerve centers which follow an injection of venom there is, so far as I am aware, no antidote; but as to this I do not at all despair, and see clearly that our way to find relief is not by stupid trials of this sort and that, but by competently learning what we have to do. Moreover, we are in a position at present to say what not to do, and there is a large measure of gain in being able to dismiss to the limbo of the useless a host of so-called antidotes.

Venom is an albuminous complex substance,

and although in its effects so unlike the albumens which make our tissues and circulate in the blood, it is yet so like these in composition that whatever alters it destructively is pretty sure to affect them in like fashion. Hence the agents which do good locally at some cost to the tissues are worse than valueless when sent after the venom into the circulating blood. Yet, possibly, we may hope to find remedies which will stimulate and excite the vital organs which venom enfeebls. In this direction lie our hopes of further help. Anything which delays the fatal effect of the poison is also a vast advantage in treatment, because there are agencies at work which seem to be active in renewing the blood and repairing the damage done to the tissues, so that recoveries are sometimes remarkably abrupt. It is possible that free bleeding followed by transfusion of healthy blood may prove efficient.

I am often asked what I would do if bitten while far from help. If the wound be at the tip of a finger, I should like to get rid of the part by some such prompt auto-surgical means as a knife or a possible hot iron affords. Failing these, or while seeking help, it is wise to quarantine the poison by two ligatures drawn tight enough to stop all circulation. The heart weakness is made worse by emotion, and at this time a man may need stimulus to enable him to walk home. As soon as possible some one should thoroughly infiltrate the seat of the bite with permanganate or other of the agents above mentioned. By working and kneading the tissues the venom and the antidote may be made to come into contact, and the former be so far destroyed. At this time it becomes needful to relax the ligatures to escape gangrene. This relaxation of course lets some venom into the blood-round, but in a few moments it is possible again to tighten the ligatures, and again to inject the local antidote. If the dose of venom be large and the distance from help great, except the knife or cautery little is to be done that is of value. But it is well to bear in mind that in this country a bite in the extremities rarely causes death. I have known of nine dogs having been bitten by as many snakes and of these dogs but two died. In India there would have been probably nine dead dogs.

S. Weir Mitchell.

THE BIBLE IN TENNYSON.

IT is safe to say that there is no other book which has had so great an influence upon the literature of the world as the Bible. And it is almost as safe—at least with no greater danger than that of starting an instructive discussion—to say that there is no other literature which has felt this influence so deeply or shown it so clearly as the English.

The cause of this latter fact is not far to seek. It may be, as a discontented French critic suggests, that it is partly due to the in-born and incorrigible tendency of the Anglo-Saxon mind to drag religion and morality into everything. But certainly this tendency would never have taken such a distinctly biblical form had it not been for the beauty and vigor of our common English version of the Scriptures. These qualities were felt by the people even before they were praised by the critics. Apart from all religious prepossessions, men and women and children were fascinated by the native power and grace of the book. The English Bible was popular, in the broadest sense, long before it was recognized as one of our noblest classics. It has colored the talk of the household and the street, as well as molded the language of scholars. It has been something more than “a well of English undefiled”; it has become a part of the spiritual atmosphere. We hear the echoes of its speech everywhere, and the music of its familiar phrases haunts all the fields and groves of our fine literature.

It is not only to the theologians and the sermon makers that we look for biblical allusions and quotations. We often find the very best and most vivid of them in writers professedly secular. Poets like Shakspere, Milton, and Wordsworth; novelists like Scott, and romancers like Hawthorne; essayists like Bacon, Steele, and Addison; critics of life, unsystematic philosophers, like Carlyle and Ruskin—all draw upon the Bible as a treasury of illustrations, and use it as a book equally familiar to themselves and to their readers. It is impossible to put too high a value upon such a universal volume, even as a purely literary possession. It forms a bond of sympathy between the most cultivated and the simplest of the people. The same book lies upon the desk of the scholar and in the cupboard of the peasant. If you touch upon one of its narratives, every

one knows what you mean. If you allude to one of its characters or scenes, your readers' memory supplies an instant picture to illuminate your point. And so long as its words are studied by little children at their mother's knees and recognized by high critics as the model of pure English, we may be sure that neither the jargon of science nor the slang of ignorance will be able to create a shibboleth to divide the people of our common race. There will be a medium of communication in the language and imagery of the English Bible.

This much, by way of introduction, I have felt it necessary to say, in order to mark the spirit and purpose of this essay. For the poet whose works we are to study is at once one of the most scholarly and one of the most widely popular of English writers. At least one cause of his popularity is that there is so much of the Bible in Tennyson. How much, few even of his most ardent lovers begin to understand.

I do not know that the attempt has ever been made before to collect and collate all the scriptural allusions and quotations in his works, and to trace the golden threads which he has woven from that source into the woof of his poetry. The delight of “fresh woods and pastures new”—so rare in this over-explored age—has thus been mine. But I do not mean to let this delight misguide me into the error of trying to crowd all my gathered treasures into a single article. There are nearly three hundred direct references to the Bible in the poems of Tennyson; and simply to give a list of them might tax the patience of the gentlest magazine reader so heavily that it would vanish clean out of existence. It will be more prudent merely to offer, first, a few examples of scriptural quotation, and then a few specimens of scriptural illustration, and then to trace a few of the lines of thought and feeling in which Tennyson shows most clearly the influence of the Bible.

I.

ON the table at which I am writing lies the first publication which bears the name of Alfred Tennyson—a thin pamphlet in faded gray paper, containing the “*Prolusiones Academicæ*,” recited at the University of Cambridge in 1829. Among them is one with the title, “*Timbuctoo: A Poem* which obtained the Chancellor's Medal, etc. By A. Tennyson, of Trinity College.”

On the eleventh page, in a passage describ-

ing the spirit of poetry which fills the branches of the "great vine of Fable," we find these lines:

There is no mightier Spirit than I to sway
The heart of man; and teach him to attain
By shadowing forth the Unattainable;
And step by step to scale that mighty stair
Whose landing-place is wrapt about with clouds
Of glory of heaven.

And at the bottom of the page stands this footnote: "Be ye perfect, even as your Father in heaven is perfect."

This is the earliest biblical allusion which we can identify in the writings of Tennyson. Even the most superficial glance will detect its beauty and power. There are few who have not felt the lofty attraction of the teachings of Christ, in which the ideal of holiness shines so far above our reach, while we are continually impelled to climb towards it. Especially these very words about perfection, which he spoke in the Sermon on the Mount (Matt. v. 48), have often lifted us upward just because they point our aspirations to a goal so high that it seems inaccessible. The young poet who sets a jewel like this in his earliest work shows not only that he has understood the moral sublimity of the doctrine of Christ, but also that he has rightly conceived the mission of noble poetry—to idealize and elevate human life. Once and again in his later writings we see the same picture of the soul rising step by step

To higher things,

and catch a glimpse of those vast altar-stairs

That slope through darkness up to God.

In the poem entitled "Isabel"—one of the best in the slender volume of 1830—there is a line which reminds us that Tennyson must have known his New Testament in the original language. He says that all the fairest forms of nature are types of the noble woman whom he is describing—

And thou of God in thy great charity.

No one who was not familiar with the Greek of St. Paul and St. John would have been bold enough to speak of the "charity of God." It is a phrase which throws a golden light upon the thirteenth chapter of the first epistle to the Corinthians and brings the human love into harmony and unison with the divine.

"The May Queen" is a poem which has sung itself into the hearts of the people everywhere. The tenderness of its sentiment and the exquisite cadence of its music have made it beloved in spite of its many faults. Yet I suppose that the majority of readers have read it again and again without recognizing

that one of its most melodious verses is a nearly direct quotation from the third chapter of Job:

And the wicked cease from troubling, and the weary are at rest.

This is one of the instances—by no means rare—in which the translators of our English Bible have fallen unconsciously into the rhythm of the most perfect poetry; and it is perhaps the best illustration of Tennyson's felicitous use of the words of the Scriptures.

But there are others, hardly less perfect, in the wonderful sermon which the rector in "Aylmer's Field" delivers after the death of Edith and Leolin. It is a mosaic of Bible language, most curiously wrought, and fused into one living whole by the heat of an intense sorrow. How like a heavy, dull refrain of prophetic grief and indignation recurs that dreadful text:

Your house is left unto you desolate!

The solemn associations of the words lend the force of a superhuman and unimpassioned wrath to the preacher's language, and the passage stands as a monumental denunciation of the social wants that sin against the strength of youth.

Enoch Arden's parting words to his wife contain some beautiful fragments of Scripture embedded in the verse:

Cast all your cares on God; that anchor holds.¹
Is he not yonder in those uttermost
Parts of the morning? If I flee to these²
Can I go from him? and the sea is his,
The sea is his: he made it.³

The "Idylls of the King" are full of delicate and suggestive allusions to the Bible. Take, for instance, the lines from "The Holy Grail":

For when the Lord of all things made himself
Naked of glory for his mortal change.

Here is a commentary, most illuminative, on the sixth and seventh verses of the second chapter of Philipians. Or again, in the same Idyll, where the hermit says to Sir Percivale, after his unsuccessful quest,

Thou hast not lost thyself to save thyself,

we are reminded of the words of Christ telling us the secret of all victory in spiritual things: "He that loseth his life . . . shall find it."

In "The Coming of Arthur," while the trumpet blows and the city seems on fire with sunlight dazzling on cloth of gold, the long procession of knights passes before the king, singing its great song of allegiance. The Idyll

¹ 1 Peter, v. 7; Heb. vi. 19.

² Psalm cxxxix. 9.

³ Psalm xciv. 5.

is full of warrior's pride and delight of battle, clanging battle-ax and flashing brand—a true song for the heavy fighters of the days of chivalry. But it has also a higher touch, a strain of spiritual grandeur, which, although it may have no justification in an historical picture of the Round Table, yet serves to lift these knights of the poet's imagination into an ideal realm and set them marching as ghostly heroes of faith and loyalty through all ages.

The king will follow Christ, and we the king.

Compare this line with the words of St. Paul: "Be ye followers of me, even as I also am of Christ." They teach us that the lasting devotion of men is rendered not to the human, but to the divine, in their heroes. He who would lead others must first learn to follow One who is higher than himself. Without faith it is not only impossible to please God, but also impossible to rule men. King Arthur is the ideal of one who has heard a secret word of promise and seen a vision of more than earthly glory, by virtue of which he becomes the leader and master of his knights, able to inspire their hopes and unite their aspirations and bind their service to himself.

And now turn to one of the last poems which Tennyson has given us—"Locksley Hall Sixty Years After." Sad enough is its lament for broken dreams, dark with the gloom of declining years, when the grasshopper has become a burden, and desire has failed, and the weary heart has grown afraid of that which is high; but at the close the old man rises again to the sacred strain:

Follow you the Star that lights a desert pathway,
yours or mine.

Forward, till you see the highest Human Nature
is divine.

Follow Light, and do the Right—for man can
half-control his doom—

Till you find the deathless Angel seated in the vacant
tomb.

II.

WHEN we come to speak of the biblical scenes and characters to which Tennyson refers, we find so many that the difficulty is to choose. He has recognized the fact that an allusion wins half its power from its connection with the reader's memory and previous thought. In order to be forcible and effective it must be at least so familiar as to awaken a train of associations. An allusion to something which is entirely strange and unknown may make an author appear more learned, but it does not make him seem more delightful. Curiosity may be a good atmosphere for the man of science to speak in, but the poet requires a sympathetic medium. He should endeavor to

touch the first notes of well-known airs, and then memory will supply the accompaniment to enrich his music. This is what Tennyson has done, with the instinct of genius, in his references to the stories and personages of the Bible.

His favorite allusion is to Eden and the mystical story of Adam and Eve. This occurs again and again, in "The Day Dream," "Maud," "In Memoriam," "The Gardener's Daughter," "The Princess," "Milton," "Geraint and Enid," and "Lady Clara Vere de Vere." The last instance is perhaps the most interesting, on account of a double change which has been made in the form of the allusion. In the edition of 1832, the first in which the poem appeared, the self-assertive peasant who refuses to become a lover says to the lady of high degree:

Trust me, Clara Vere de Vere,
From yon blue heavens above us bent
The gardener Adam and his wife
Smile at the claims of long descent.

In later editions this was altered to "The grand old gardener and his wife." But in this form the reference was open to misunderstanding. I remember a charming young woman who once told me that she had always thought the lines referred to some particularly pious old man who had formerly taken care of Lady Clara's flower-beds, and who now smiled from heaven at the foolish pride of his mistress. So perhaps it is just as well that Tennyson restored the line, in 1873, to its original form, and gave us "the gardener Adam" again, to remind us of the quaint distich—

When Adam dolve and Eve span,
Who was then the gentleman?

The story of Jephtha's daughter is another of the Old Testament narratives for which the poet seems to have a predilection. It is told with great beauty and freedom in "A Dream of Fair Women"; "Aylmer's Field" touches upon it; and it recurs again in "The Flight."

In "The Princess" we find the Queen of Sheba, Vashti, Miriam, Jael, Lot's wife, Jonah's gourd, and the Tower of Babel. And, if your copy of the Bible has the Apocrypha in it, you may add the story of Judith and Holofernes.

Esther appears in "Geraint and Enid," and Rahab in "Queen Mary." In "Godiva" we read of the Earl's heart

As rough as Esau's hand;

and in "Locksley Hall" we see the picture of the earth standing

At gaze like Joshua's moon in Ajalon.

The sonnet to "Bonaparte" recalls to our memory

Those whom Gideon schooled with briers.

In "The Palace of Art" we behold the handwriting on the wall at Belshazzar's Feast.

It would be impossible even to enumerate Tennyson's allusions to the life of Christ, from the visit of the Magi, which appears in "Morte d'Arthur" and "The Holy Grail," down to the lines in "Balin and Balan" which tell of

That same spear
Wherewith the Roman pierced the side of Christ.

But to my mind the most beautiful of all the references to the New Testament is the passage in "In Memoriam" which describes the reunion of Mary and Lazarus after his return from the grave. With what a human interest does the poet clothe the familiar story! How reverently and yet with what natural and simple pathos does he touch upon the more intimate relations of the three persons who are the chief actors. The question which has come a thousand times to every one who has lost a dear friend,—the question whether love survives in the other world, whether those who have gone before miss those who are left behind and have any knowledge of their grief,—this is the suggestion which brings the story home to us and makes it seem real and living.

When Lazarus left his charnel-cave,
And home to Mary's house returned,
Was this demanded—if he yearned
To hear her weeping by his grave?

"Where wert thou, brother, those four days?"
There lives no record of reply,
Which telling what it is to die
Had surely added praise to praise.

From every house the neighbors met,
The streets were filled with joyful sound,
A solemn gladness even crowned
The purple brows of Olivet.

Behold a man raised up by Christ!
The rest remaineth unrevealed;
He told it not; or something sealed
The lips of that Evangelist.

Then follows that marvelous description of Mary—a passage which has always seemed to me to prove the superiority of poetry, as an art, over painting and sculpture. For surely neither marble nor canvas has ever contained such a beautiful figure of devotion as that which breathes in these verses:

Her eyes are homes of silent prayer,
Nor other thought her mind admits
But, he was dead, and there he sits,
And He that brought him back is there.

Then one deep love doth supersede
All other, when her ardent gaze
Roves from the living brother's face
And rests upon the Life indeed.

All subtle thought, all curious fears,
Borne down by gladness so complete,
She bows, she bathes the Saviour's feet
With costly spikenard and with tears.

Thrice blest whose lives are faithful prayers,
Whose loves in higher love endure;
What souls possess themselves so pure,
Or is there blessedness like theirs?

It does not seem possible that the changing fashions of poetic art should ever make verses like these seem less exquisite, or that time should ever outwear the sweet and simple power of this conception of religion. There is no passage in literature which expresses more grandly the mystery of death, or shows more attractively the happiness of an unquestioning personal faith in Him who, alone of men, has solved it and knows the answer. I cannot bear to add anything to it by way of comment, except perhaps these words of Emerson: "Of immortality, the soul, when well employed, is incurious. It is so well, that it is sure it will be well. It asks no questions of the Supreme Being."

The poem of "Rizpah," which was first published in the volume of "Ballads," in 1880, is an illustration of dramatic paraphrase from the Bible (2 Sam. xxi. 8-10). The story of the Hebrew mother watching beside the dead bodies of her sons whom the Gibeonites had hanged upon the hill, and defending them night and day for six months from the wild beasts and birds of prey, is transformed into the story of an English mother, whose son has been executed for robbery and hung in chains upon the gibbet. She is driven wild by her grief; hears her boy's voice wailing through the wind, "O mother, come out to me"; creeps through the rain and the darkness to the place where the chains are creaking and groaning with their burden; gropes and gathers all that is left of what was once her child, and carries him home to bury him beside the churchyard wall. And then for her theft she breaks out in a passion of defense. It is a mother's love justifying itself against a cruel law. Those poor fragments which the wind and the rain had spared were hers by a right divine,—bone of her bone; she had nursed and cradled her baby, and all that was left belonged to her; justice had no claim which could stand against hers.

Theirs? O no! they are mine—not theirs—they
had moved in my side.

A famous writer has said of this passage: "Nothing more piteous, more passionate, more adorable for intensity of beauty, was ever before this wrought by human cunning into the likeness of such words as words are powerless to praise."

III.

IN trying to estimate the general influence of the Bible upon the thought and feeling of Tennyson we have a more delicate and difficult task. For the teachings of Christianity have become a part of the moral atmosphere of the age; and it is hard for us to tell just what any man would have been without them, or just how far they have made him what he is, while we are looking at him through the very same medium in which we ourselves are breathing. If we could get out of ourselves, if we could divest ourselves of all those views of God and duty and human life which we have learned so early that they seem to us natural and inevitable, we might perhaps be able to arrive at a more exact discrimination. But this would be to sacrifice a position of vital sympathy for one of critical judgment. The loss would be greater than the gain. It is just as well for the critic to recognize that he is hardly able to

Sit as God holding no form of creed,
But contemplating all.

Tennyson himself has described the mental paralysis, the spiritual distress, which follow that attempt. A critic ought to be free from prejudices, but surely not even for sake of liberty should he make himself naked of convictions. To float on wings above the earth will give one a bird's-eye view; but for a man's-eye view we must have a standing-place on the earth. And after all the latter may be quite as true, even though it is not absolutely colorless.

The effect of Christianity upon the poetry of Tennyson may be felt, first of all, in its general moral quality. By this it is not meant that he is always or often preaching, or drawing pictures

To point a moral, or adorn a tale.

Didactic art sometimes misses its own end by being too instructive. We find in Tennyson's poems many narratives of action and descriptions of character which are simply left to speak for themselves and teach their own lessons. In this they are like the histories in the Book of Judges or the Books of the Kings. The writer takes it for granted that the reader has a heart and a conscience. Compare in this respect the perfect simplicity of the domestic idyl of "Dora" with the Book of Ruth.

But at the same time the poet can hardly help revealing, more by tone and accent than by definite words, his moral sympathies. Tennyson always speaks from the side of virtue, and not of that new and strange virtue which some of our later poets have exalted, and

which, when it is stripped of its fine garments, turns out to be nothing else than the unrestrained indulgence of every natural impulse, but rather of that old-fashioned virtue whose laws are

Self-reverence, self-knowledge, self-control,

and which finds its highest embodiment in the morality of the New Testament. Read, for example, his poems which deal directly with the subject of marriage: "The Miller's Daughter," "Isabel," "Lady Clare," "The Lord of Burleigh," "Locksley Hall," "Love and Duty," "The Wreck," "Aylmer's Field," "Enoch Arden," the latter part of "The Princess," and many different passages of the "Idylls." From whatever side he approaches the subject, whether he is painting with delicate, felicitous touches the happiness of truly wedded hearts, or denouncing the sins of avarice and pride which corrupt the modern marriage-mart of society, or tracing the secret evil which poisoned the court of Arthur and shamed the golden head of Guinevere, his ideal is always the perfect union of two lives in one, "which is commended of St. Paul to be honorable among all men." To him woman seems loveliest when she has

The laws of marriage characted in gold
Upon the blanch'd tablets of her heart;

and man noblest when he devotes his strength to some high and generous end, following it with absolute loyalty, and recognizing that

Man's word is God in man.

The theology of Tennyson has been accused in some quarters of a pantheistic tendency; and it cannot be denied that there are expressions in his poems which seem to look in that direction, or at least to look decidedly away from the conception of the universe as a vast machine and its Maker as a supernatural machinist who has constructed the big watch and left it to run on by itself until it wears out. But surely this latter view, which fairly puts God out of the world, is not the view of the Bible. The New Testament teaches us, undoubtedly, to distinguish between him and his works, but it also teaches that he is in his works, or rather that all his works are in him. "In him," says St. Paul, "we live, and move, and have our being." Light is his garment. Life is his breath.

God is law, say the wise; O Soul, and let us rejoice,
For if He thunder by law the thunder is yet His voice.

But if I wished to prove, against those who doubted, Tennyson's belief in a living, spiritual God, immanent in the universe, yet not con-

fused with it, I should turn to his doctrine of prayer. There are many places in his poems where prayer is not explained, but simply justified, as the highest activity of the human soul and a real bond between God and man. In these very lines on "The Higher Pantheism," from which I have just quoted, there is a verse which can be interpreted only as the description of a personal intercourse between the divine and the human:

Speak to Him thou for He hears, and Spirit with
Spirit can meet —
Closer is He than breathing, and nearer than hands
and feet.

Of Enoch Arden, in the dreadful loneliness of that rich island where he was cast away, it is said that

Had not his poor heart
Spoken with That, which being everywhere
Lets none, who speaks with Him, seem all alone,
Surely the man had died of solitude.

When he comes back, after the weary years of absence, to find his wife wedded to another and his home no longer his, it is by prayer that he obtains strength to keep his generous resolve to be silent and to bear the burden of his secret to the lonely end.

Edith, in the drama of "Harold," when her last hope breaks and the shadow of gloom begins to darken over her, cries:

No help but prayer,
A breath that fleets beyond this iron world,
And touches Him that made it.

King Arthur, bidding farewell to the last of his faithful knights, says to him:

Pray for my soul. More things are wrought by prayer
Than this world dreams of. Wherefore, let thy voice
Rise like a fountain for me night and day.
For what are men better than sheep or goats
That nourish a blind life within the brain,
If, knowing God, they lift not hands of prayer
Both for themselves and those who call them friend?
For so the whole round earth is every way
Bound by gold chains about the feet of God.

But lest any one should say that these passages are merely dramatic, and that they do not express the personal faith of the poet, turn to the solemn invocation in which he has struck the keynote of his greatest and most personal poem:

Strong Son of God, immortal Love.

It is the poet's own prayer. No man could have written it save one who believed that God is Love, and that Love is incarnate in the person of Jesus Christ.

Next to the question of the reality of God comes the problem of human life and destiny. And this has a twofold aspect. First, in re-

gard to the present world, is man moving upward or downward; is good stronger than evil, or evil stronger than good; is life worth living, or is it a cheat and a failure? Secondly, in regard to the future, is there any hope of personal continuance beyond death? To both of these inquiries Tennyson gives an answer which is in harmony with the teachings of the Bible.

He finds the same difficulties in the continual conflict between good and evil which are expressed in Job and Ecclesiastes. Indeed, so high an authority as Professor E. H. Plumptre has said that "the most suggestive of all commentaries" on the latter book are Tennyson's poems "The Vision of Sin," "The Palace of Art," and "The Two Voices." In the last of these he draws out in the form of a dialogue the strife between hope and despair in the breast of a man who has grown weary of life and yet is not ready to embrace death. For, after all, the sum of the reasons which the first voice urges in favor of suicide is that nothing is worth very much, no man is of any real value to the world, *il n'y a pas d'homme nécessaire*, no effort produces any lasting result, all things are moving round and round in a tedious circle, — vanity of vanities, — if you are tired why not depart from the play? The tempted man — tempted to yield to the devil's own philosophy of pessimism — uses all arguments to combat the enemy, but in vain, or at least with only half-success, until at last the night is worn away; he flings open his window and looks out upon the Sabbath morn.

The sweet church bells began to peal.

On to God's house the people prest:
Passing the place where each must rest,
Each entered like a welcome guest.

One walked between his wife and child,
With measured footfall firm and mild,
And now and then he gravely smiled.

The prudent partner of his blood
Leaned on him, faithful, gentle, good,
Wearing the rose of womanhood.

And in their double love secure,
The little maiden walked demure,
Pacing with downward eyelids pure.

These three made unity so sweet
My frozen heart began to beat,
Remembering its ancient heat.

I blest them, and they wandered on:
I spoke, but answer came there none:
The dull and bitter voice was gone.

And then comes another voice whispering of a secret hope, and bidding the soul "Re-

joice! rejoice!" If we hear in the first part of the poem the echo of the saddest book of the Old Testament, do we not hear also in the last part the tones of Him who said: "Let not your heart be troubled: . . . in my Father's house are many mansions: if it were not so, I would have told you"?

There are many places in the poems of Tennyson where he speaks with bitterness of the falsehood and evil that are in the world, the corruptions of society, the downward tendencies in human nature. He is in no sense a rose-water optimist. But he is in the truest sense a meliorist. He doubts not that

Through the ages one increasing purpose runs,
And the thoughts of men are widened with the process
of the suns.

He believes that good

Will be the final goal of ill.

He rests his faith upon the uplifting power of Christianity:

But I count the gray barbarian lower than the Christian child.

He hears the bells at midnight tolling the death of the old year, and he calls them to

Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.

In regard to the life beyond the grave, he asserts with new force and beauty the old faith in a personal immortality. The dim conception of an unconscious survival through the influence of our thoughts and deeds, which George Eliot has expressed in her poem of "The Choir Invisible," Tennyson finds

Is faith as vague as all unsweet:
Eternal form shall still divide
The eternal soul from all beside;
And I shall know him when we meet.

The Christian doctrine of a personal recognition of friends in the other world has never been more distinctly uttered than in these words. It is not, indeed, supported by any metaphysical arguments; nor are we concerned thus to justify it. Our only purpose now is to show — and after these verses who can doubt it? — that the poet has kept the faith which he learned in his father's house and at his mother's side.

On many other points I fain would touch, but must forbear. There is one more, however, on which the orthodoxy of the poet has been questioned, and by some critics positively denied. It is said that he has accepted the teachings of Universalism. A phrase from "In Memoriam,"—

The larger hope,—

VOL. XXXVIII.—68.

has been made a watch-word by those who defend the doctrine of a second probation, and a sign to be spoken against by those who reject it. Into this controversy I have no desire to enter. Nor is it necessary; for, whatever the poet's expectation may be, there is not a line in all his works that contradicts or questions the teachings of Christ, nor even a line that runs beyond the limit of human thought into the mysteries of the unknown and the unknowable. The wages of sin is death; the wages of virtue is to go on and not to die. This is the truth which he teaches on higher authority than his own. "The rest," as Hamlet says, "is silence." But what is the universal end of all these conflicts, these struggles, these probations? What the final result of this strife between sin and virtue? What the consummation of oppugnancies and interworkings? The poet looks onward through the mists and sees only God —

That God, which ever lives and loves,
One God, one law, one element,
And one far-off divine event,
To which the whole creation moves.

And if any one shall ask what this far-off divine event will be, we may answer in the words of St. Paul:

"For he must reign, till he hath put all his enemies under his feet. The last enemy that shall be abolished is death. For, He put all things in subjection under his feet. But when he saith, All things are put in subjection, it is evident that he is excepted who did subject all things unto him. And when all things have been subjected unto him, then shall the Son also himself be subjected to him that did subject all things unto him, *that God may be all in all.*"

AND NOW, as we bring to a close this brief study of a subject which I trust has proved larger than it promised at first to those who had never looked into it, what are our conclusions? Or, if this word seem too exact and formal, what are our impressions in regard to the relations between Tennyson and the Bible?

It seems to me that we cannot help seeing that the poet owes a large debt to the Christian Scriptures, not only for their formative influence upon his mind and for the purely literary material in the way of illustrations and allusions which they have given him, but also, and more particularly, for the creation of a moral atmosphere, a medium of thought and feeling, in which he can speak freely and with assurance of sympathy to a very wide circle of readers. He does not need to be always explaining and defining. There is much that is taken for granted, much that goes without saying. What a world of unspoken convictions lies behind such poems

as "Dora," and "Enoch Arden." Their beauty is not in themselves alone, but in the air that breathes around them, in the light that falls upon them from the faith of centuries. Christianity is something more than a system of doctrines; it is a life, a tone, a spirit, a great current of memories, beliefs, and hopes flowing through millions of hearts. And he who launches his words upon this current finds that they are carried with a strength beyond his own, and freighted oftentimes with a meaning which he himself has not fully understood as it flashed through him.

But, on the other hand, we cannot help seeing that the Bible gains a wider influence and a new power over men as it flows through the poet's mind upon the world. Its narratives and its teachings clothe themselves in modern forms of speech and find entrance into many places which otherwise were closed against them. I do not mean by this that poetry is better than the Bible, but only that poetry lends wings to Christian truth. People who would not read a sermon will read a poem. And though its moral and religious teachings may be indirect, though they may proceed by silent assumption rather than by formal assertion, they

exercise an influence which is perhaps the more powerful because it is unconscious. The Bible is in continual danger of being desiccated by an exhaustive—and exhausting—scientific treatment. When it comes to be regarded chiefly as a compendium of exact statements of metaphysical doctrine, the day of its life will be over, and it will be ready for a place in the museum of antiquities. It must be a power in literature if it is to be a force in society. For literature, as a wise critic has defined it, is just "the best that has been thought and said in the world." And if this is true, literature is certain, not only to direct culture, but also to mold conduct.

Is it possible then for wise and earnest men to look with indifference upon the course of what is often called, with a slighting accent, mere *belles lettres*? We might as well be careless about the air we breathe or the water we drink. Malaria is no less fatal than pestilence. The chief peril which threatens the permanence of Christian faith and morals is none other than the malaria of modern letters—an atmosphere of dull, heavy, faithless materialism. Into this narcotic air the poetry of Tennyson blows like a pure wind from a loftier and serener height.

Henry van Dyke.

STATE CRIMINALS AT THE KARA MINES.

IN the morning after my first visit to the political convicts of the free command I called again at the little cabin of the Armfeldts, taking Mr. Frost with me. Major Potulof (Po'-too-loff) was expected back from Ust Kara (Oost Kah-rah') that night, and I knew his return would put a stop to my operations. It was important, therefore, that I should make the best possible use of the twelve or fourteen hours of freedom that still remained to me. I did not expect to be able to conceal from the authorities, for any great length of time, my intercourse with the political convicts. I was well aware that it must, sooner or later, be discovered, and all that I hoped to do was to get as much information as possible before the inevitable interference should come. There was some risk, of course, in visiting the houses of the free command openly by daylight; but we could not afford to waste any time in inaction, and I had promised Miss Armfeldt that I would return early that forenoon if not prevented by some unforeseen complication or embarrassment.

A brisk walk of fifteen or twenty minutes

brought us to our destination, and we were admitted to the house by Miss Armfeldt herself. In the searching light of a clear, cold, winter morning, the little cabin, with its white-washed log walls, plank floor, and curtainless windows, looked even more bare and cheerless than it had seemed to me when I first saw it. Its poverty-stricken appearance, moreover, was emphasized, rather than relieved, by the presence, in the middle of the room, of a large, rudely fashioned easel, upon which stood an unframed oil painting. There seemed to me something strangely incongruous in this association of art with penal servitude, this blending of luxury with extreme destitution, and as I returned Miss Armfeldt's greeting I could not help looking inquiringly at the picture and then at her, as if to ask, "How did you ever happen to bring an oil painting to the mines of Kara?" She understood my unspoken query, and, turning the easel half around so that I could see the picture, said: "I have been trying to make a portrait of my mother. She thinks that she must go back to Russia this year on account of her other children. Of course I shall never see her again,—she is too old and feeble to make another journey to

Eastern Siberia,—and I want something to recall her face to me when she has gone out of my life. I know that it is a bad portrait, and I am almost ashamed to show it to you; but I wish to ask your help. I have only a few colors, I cannot get any more, and perhaps Mr. Frost may be able to suggest some way of using my scanty materials to better advantage."

I looked at the wretched, almost ghastly, portrait in silence, but with a heart full of the deepest sympathy and pity. It bore a recognizable resemblance to the original, and showed some signs of artistic talent and training; but the canvas was of the coarsest and most unsuitable quality; the colors were raw and crude; and it was apparent, at a glance, that the artist had vainly struggled with insuperable difficulties growing out of a scanty and defective equipment. With the few tubes of raw color at her command she had found it impossible to imitate the delicate tints of living flesh, and the result of her loving labor was a portrait that Mr. Frost evidently regarded with despair, and that seemed to me to be little more than a ghastly caricature. It was pitiful to see how hard the daughter had tried, with wholly inadequate means of execution, to make for herself a likeness of the mother whom she was so soon to lose, and it was even more pitiful to think that before the close of another year the daughter would be left alone at the mines with this coarse, staring, deathlike portrait as her only consolation. I looked at the picture for a moment in silence, unable to think of any comment that would not seem cold or unsympathetic. Its defects were glaring, but I could not bring myself to criticize a work of love executed under such circumstances and in the face of such disheartening difficulties. Leaving Mr. Frost to examine Miss Armfeldt's scanty stock of brushes and colors, I turned to Mrs. Armfeldt and asked her how she had summoned up resolution enough, at her age, to undertake such a tremendous journey as that from St. Petersburg to the mines of Kara.

"I could not help coming," she said simply. "God knows what they were doing to people here. Nathalie was beaten by soldiers with the butt-ends of guns. Others were starving themselves to death. I could get only vague and alarming reports in St. Petersburg, and so

I came here to see for myself. I could not bear to think of Nathalie living alone in the midst of such horrors."

"When did these things happen?" I inquired.

"In 1882 and 1883," she replied. "In May, 1882, eight prisoners made their escape, and after that the life of all the political convicts was made so hard that they finally declared a hunger strike and starved themselves thirteen days."

While Mrs. Armfeldt and I were talking Victor Castiurin (Kass-tyoo'rin), Madame Kolenkina (Ko-len'kin-ah), and two or three other political convicts entered the room, Miss Armfeldt brought out the samovar and gave us all tea, and the conversation became general. I should be glad, if I had the requisite space, to give the readers of *THE CENTURY* the same vivid and detailed account of life in the Kara prisons that was given me at Miss Armfeldt's house that day; but six or eight hours' conversation cannot be put into a single magazine article, and I must content myself, for the present, with a brief narrative of my personal experience, and a short outline sketch of the life of political convicts at the mines of Kara between the years 1880 and 1885.

I made my last call at the house of the Armfeldts on the afternoon of November 7, just twenty-four hours after I first entered it. I was well aware that the return of Major Potulof that night would put a stop to my visits, and that, in all probability, I should never see these unfortunate people again; while they, knowing that this was their last opportunity to talk with one who was going back to the civilized world and would meet their relatives and friends, clung to me with an eagerness that was almost pathetic. I promised the Armfeldts that I would call upon Count Leo Tolstoi and describe to him their life and circumstances,¹ left my address with them so that they might communicate with me should they ever have an opportunity to write, and took letters from them to their relatives in European Russia. It may perhaps seem to the reader that in carrying letters to and from political convicts in Siberia I ran an unnecessary and unjustifiable risk, inasmuch as the act was a penal offense, and if discovered would probably have led to our arrest, to the confiscation of all our papers,

¹ I kept this promise, and told Count Tolstoi all that he seemed to care to hear with regard to the Armfeldts' situation. He manifested, however, a disinclination to listen to accounts of suffering among the political convicts in Eastern Siberia; would not read manuscripts that I brought expressly to show him; and said distinctly that while he felt sorry for many of the politicals, he could not help them, and was not at all in sympathy with their methods. They had resorted, he said, to violence, and they must expect to

suffer from violence. I was told in Moscow that when Madame Uspenskaya (Oo-spen'ska-ya), wife of one of the political convicts at Kara, went to Count Tolstoi to solicit a contribution of money to be used in ameliorating, as far as possible, the condition of politicals at the mines, she met with a decided refusal. The Count was not willing, apparently, to show even a benevolent and charitable sympathy with men and women whose actions he wholly disapproved.

and, at the very least, to our immediate expulsion from the Empire under guard. I fully appreciated the danger, but, nevertheless, I could not refuse to take such letters. If you were a political convict at the mines, and had a wife or a mother in European Russia to whom you had not been allowed to write for years, and if I, an American traveler, should come to you and ask you to put yourself in my power and run the risk of recommittal to prison and leg-fetters by telling me all that I wanted to know, and if I should then refuse to carry a letter to your mother or your wife, you would think that I must be either very cowardly or very hard-hearted. I could not refuse to do it. If they were willing to run the risk of writing such letters, I was willing to run the risk of carrying them. I always consented, and sometimes volunteered to take them, although I was perfectly well aware that they would cause me many anxious hours.

Just before dark I bade the Armfeldts and the other members of the free command goodbye, telling them that I should try to see them once more, but that I feared it would be impossible. Major Potulof did not return until midnight, and I did not see him until the next morning. We met for the first time at breakfast. He greeted me courteously, but formally, omitting the customary handshake, and I felt at once a change in the social atmosphere. After bidding me good-morning, he sat for ten or fifteen minutes looking moodily into his tea-cup without speaking a word. I had anticipated this situation and had decided upon a course of action. I felt sincere regard for Major Potulof, he had treated us very kindly, I understood perfectly that I had placed him in an awkward and unpleasant position, and I intended to deal with him frankly and honestly. I therefore broke the silence by saying that, during his absence, I had made the acquaintance of the political convicts of the free command.

"Yes," he said, without raising his eyes from his tea-cup, "I heard so; and," he continued, after a moment's pause, "it is my duty to say to you that you have acted very rashly."

"Why?" I inquired.

"Because," he replied, "the Government looks with great suspicion upon foreigners who secretly make the acquaintance of the political convicts. It is not allowed, and you will get yourself into serious trouble."

"But," I said, "no one has ever told me that it was not allowed. I can hardly be supposed, as a foreigner, to know that I have no right to speak to people who are practically at liberty, and whom I am liable to meet any day in the village street. The members of the

free command are not in prison; they are walking about the settlement in freedom. Everybody else can talk to them; why cannot I?"

"I received a telegram," he said gravely, "from Governor Barabash" (the governor of the territory of the Trans-Baikal in which the mines of Kara are situated), "saying that you were not to be allowed to see the political prison, and, of course, it was the governor's intention that you should not see the political convicts."

"You did not tell me so," I replied. "If you had told me that you had received such a telegram from the governor, it would have had great weight with me. I cannot remember that you ever intimated to me that I could not visit the members of the free command."

"I did not know that you were thinking of such a thing," he rejoined. "You said nothing about it. However," he continued, after a moment's pause, "it is Captain Nikolin's affair; he has the politicals in charge. All that I have to do is to warn you that you are acting imprudently and running a great risk."

I then explained to Major Potulof frankly why I had said nothing to him about my intentions, and why I had taken advantage of his absence to carry them into effect. If I had said to him beforehand that I wished or intended to see the political convicts, he would have been obliged either to approve or to disapprove. If he had disapproved, I, as his guest, should have been in honor bound to respect his wishes and authority; while, if he had approved, he would have incurred a responsibility for my illegal action that I did not wish to throw upon him. I admitted knowledge of the fact that my intercourse with the politicals would not have been permitted if it had been foreseen, and told him that my only reasons for making their acquaintance secretly in the way I had were first, to avoid interference, and secondly, to relieve him as far as possible from any suspicion of complicity. "Nobody now," I said, "can accuse you of having had anything to do with it. You were not here, and it is perfectly evident that I waited for the opportunity that your absence gave me." My explanation seemed to mollify him a little, and his old cordial manner gradually returned; but he warned me again that secret intercourse with political convicts, if I continued it, would almost certainly get me into trouble.

An hour or two after breakfast I was surprised and a little startled by the sudden re-appearance of Captain Nikolin, the gendarme commandant of the political prison. He desired to see Major Potulof on business, and they were closeted together for half or three-

quarters of an hour in the major's writing-room. I was, at the time, in another part of the house trying to write up my notes; but Mr. Frost was at work upon a crayon portrait of the major's children in the drawing-room, off which the writing-room opened. At the first opportunity after Captain Nikolin's departure Mr. Frost came to me in some anxiety and whispered to me that he had accidentally overheard a part of the conversation between Captain Nikolin and Major Potulof in the writing-room and that it indicated trouble. It related to my intercourse with the political convicts, and turned upon the question of searching our baggage and examining my papers and note-books. As Mr. Frost understood it, Captain Nikolin insisted that such an investigation was proper and necessary, while Major Potulof defended us, deprecated the proposed search, and tried to convince the gendarme officer that it would be injudicious to create such a scandal as an examination of our baggage would cause. The discussion closed with the significant remark from Nikolin that if the search were not made in Kara it certainly would be made somewhere else. Mr. Frost seemed to be much alarmed, and I was not a little troubled myself. I did not so much fear a search,—at least while we remained in Major Potulof's house,—but what I did fear was being put upon my word of honor by Major Potulof himself as to the question whether I had any letters from the political convicts. I thought it extremely probable that he would come to me at the first opportunity and say to me good-humoredly, "George Ivanovich, Captain Nikolin has discovered your relations with the political convicts; he knows that you spent with them the greater part of one night, and he thinks that you may have letters from them. He came here this morning with a proposition to search your baggage. Of course, as you are my guests, I defended you and succeeded in putting him off; but I think under the circumstances it is only fair you should assure me, on your word of honor, that you have no such letters."

In such an exigency as that I should have to do one of two things — either lie outright, upon my word of honor, to the man in whose house I was a guest, or else betray people who had trusted me, and for whom I had already come to feel sincere sympathy and affection. Either alternative was intolerable — unthinkable — and yet I must decide upon some course of action at once. The danger was imminent, and I could not bring myself to face either of the alternatives upon which I should be forced if put upon my word of honor. I might perhaps have had courage enough to run the risk, so far as my own papers were concerned, but I

knew that the letters in my possession, if discovered, would send Miss Armfeldt and all the other writers back into prison; would leave poor, feeble Mrs. Armfeldt alone in a penal settlement with a new sorrow; and would lead to a careful examination of all my papers, and thus bring misfortune upon scores of exiles and officers in other parts of Siberia who had furnished me with documentary materials. All the rest of that day I was in a fever of anxiety and irresolution. I kept, so far as possible, out of Major Potulof's way; gave him no opportunity to speak to me alone; went to bed early on plea of a headache; and spent a wretched and sleepless night trying to decide upon a course of action. I thought of about a dozen different methods of concealing the letters, but concealment would not meet the emergency. If put upon my word of honor I should have to admit that I had them, or else lie in the most cowardly and treacherous way. I did not dare to mail them, since all the mail matter from the house passed through Major Potulof's hands, and by giving them to him I might precipitate the very inquiries I wished to avoid. At last, just before daybreak, I decided to destroy them. I had no opportunity, of course, to consult the writers, but I felt sure that they would approve my action if they could know all the circumstances. It was very hard to destroy letters upon which those unfortunate people had hung so many hopes,—letters that I knew would have such priceless value to fathers, mothers, sisters, and brothers in Russia,—but there was nothing else to be done. The risk of keeping them had become too great to be justifiable.

As soon as I had come to a decision, I was confronted by the question, "How are the letters to be destroyed?" Since the discovery of my secret relations with the political convicts I had been more closely watched than ever. My room had no door that could be closed, but was separated from the hall, and from Major Potulof's sitting-room, merely by a light portière. Its large curtainless window was almost on a level with the ground, and an armed sentry, who stood night and day at the front entrance of the house, could see through it. If I tore the letters into small bits, they might be found and pieced together. If I burned them, the odor of the burning paper would be at once diffused through the house; and, besides that, I was likely to be caught in the act, either by the sentry, or by Major Potulof himself, who, on one pretext or another, was constantly coming into my room without knock or announcement. There happened to be in the room a large brick oven, and about half an hour after I got up that morning a soldier came in to make a fire in it. The thought at once

occurred to me that by watching for a favorable opportunity, when Major Potulof was talking with Mr. Frost in the sitting-room and the sentry was out of sight, I could throw the letters unobserved into this fire. As I walked out into the hall to see that the coast was clear there, I noiselessly unlatched the iron door of the oven and threw it ajar. Then returning and assuring myself that the sentry was not in a position to look through the window, I tossed the letters quickly into the oven upon a mass of glowing coals. Five minutes later there was not a trace of them left. I then erased or put into cipher many of the names of persons in my note-books and prepared myself, as well as I could, for a search.

There were two things in my personal experience at the mines of Kara that I now particularly regret, and one of them is the burning of these letters. I did not see the political convicts again, I had no opportunity to explain to them the circumstances under which I acted, and explanations, even if I could make them, are now, in many cases, too late. Miss Nathalie Armfeldt died of prison consumption at the mines in less than a year after I bade her good-bye, and the letters from her that I destroyed were perhaps the last that she had an opportunity to write. I was not put upon my word of honor, I was not searched, and I might have carried those letters safely to their destination, as I afterward carried many others.

The other unfortunate thing in my Kara experience was my failure to see Dr. Edward Veimar, one of the most distinguished political convicts in the free command, who at the time of our visit was dying of prison consumption. He was a surgeon, about thirty-five years of age, and resided, before his exile, in a large house on the Nevski Prospekt near the Admiralty Place in St. Petersburg. He was a man of wealth and high social position, and was at one time a personal friend of Her Majesty, the present Tsaritsa. He was in charge of her field hospital throughout the Russo-Turkish war of 1877-78; was made a cavalier of the order of St. Anne for distinguished services in that campaign; received three or four crosses of honor for gallantry on the field of battle; and was greatly beloved by General Gourko, with whom he made the passage of the Balkans. He was condemned as a revolutionist upon the flimsiest possible circumstantial evidence, and, after a year's imprisonment in one of the casemates of the Petropavlovski¹ fortress, was sent to the mines of Kara. At the time of

his trial, the London "Times," in a column editorial upon his case, said:

Our correspondent at St. Petersburg, in a dispatch we publish this morning, telegraphs the sentences passed yesterday on the prisoners charged with participation in the Nihilist conspiracy. Western observers can see in these state trials at St. Petersburg nothing but a shameful travesty of justice. The whole of these proceedings are an example of the way in which any one can govern by the aid of a state of siege. Military justice has had, as a rule, the merit of being sharp and sudden, but the military justice of the Russian courts has been as cruel in its dilatoriness as grossly illogical in its method and terribly severe in its sentences. . . . Among the accused who were condemned yesterday, Dr. Weimar was in every way a man of whom his country seemed to have reason to be proud. He is in personal bearing a gallant gentleman. As a physician he has devoted his time and skill to the service of his suffering countrymen. He is (or was till yesterday, for to-day he is a drudge in the deadly mines) decorated with Russian and Roumanian orders, and with the medal for the Turkish war. He was with the troops who crossed the Balkans under Gourko—a splendid feat of arms. The charges against this gentleman, the way in which the case was got up and pressed, would seem exaggerated in the wildest burlesque. The humors of injustice were never carried so far, if we may trust the reports of the trial, by Bunyan's *Mr. Justice Hate-good* or Rabelais's *Grippeminaud*. . . . Witnesses were brought forward to speak to the character of Dr. Weimar. Their testimony was a shower of praises, both as to his moral character and his bravery in war. This was inconvenient for the prosecution. Supposing the charges against Dr. Weimar true, it would appear that an exemplary citizen so despaired of the condition of his country that he conspired with miscreants like Solovioff and aided other dastardly assassins. It might have been surmised that the prosecution would bring evidence to damage the character of the accused, or at least to show that the praise heaped on him was undeserved. Nothing of the sort. The prosecutor said, "Gentlemen, I could have produced a series of witnesses whose testimony would have been quite the reverse. Unfortunately, all of them are absent." A military court could hardly avoid taking the word of the presiding general, but the whole proceeding, the whole conception of testimony and justice, are only to be paralleled in the burlesque trial witnessed by Alice in Mr. Carroll's fairy tale. . . . No case could bear more direct evidence to the terrible condition of Russian society and Russian justice. Either a man who seems to have been an exemplary citizen in other respects was driven by despotism into secret and dastardly treason, or Dr. Weimar is falsely condemned and unjustly punished. In either alternative, if the reports of his trial are correct, that trial was a scandal even to military law.

The Crown Princess Dagmar (now the Empress), whose hospital Dr. Veimar had managed during the Russo-Turkish war, took a deep personal interest in him, and was a firm believer in his innocence; but even she could

¹ Used as an adjective, the word has the *i*. The Russians use the word thus, "Petropavlovski fortress," "fortress of Petropavlovsk"—in one case with the *i*, and in the other without.

not save him. When she came to the throne, however, as Empress, in 1881, she sent Colonel Nord to the mines of Kara to see Dr. Veimar and offer him his freedom upon condition that he give his word of honor not to engage in any activity hostile to the Government. Dr. Veimar replied that he would not so bind himself while he was in ignorance of the state of affairs under the new Tsar (Alexander III.). If the Government would allow him to return to St. Petersburg, on parole or under guard, and see what the condition of Russia then was, he would give them a definite answer to their proposition; that is, he would accept freedom upon the terms offered, or he would go back to the mines. He would not, however, bind himself to anything until he had had an opportunity to ascertain how Russia was then being governed. Colonel Nord had a number of interviews with him, and tried in every way to shake his resolution, but without avail.

When Mr. Frost and I reached the mines of Kara, Dr. Veimar had been released from prison on a ticket of leave, but was dying of consumption brought on by the intolerable conditions of Siberian prison life. The political convicts wished and proposed to take me to see him the night that I was at Miss Armfeldt's house, but they represented him as very weak, hardly able to speak aloud, and likely at any moment to die; and after I saw the effect that my sudden appearance produced upon Miss Armfeldt and the other politicals who were comparatively well, I shrunk from inflicting upon a dying man, at midnight, such a shock of surprise and excitement. I had occasion afterward bitterly to regret my lack of resolution. Dr. Veimar died before I had another opportunity to see him, and six months afterward, when I returned to St. Petersburg on my way home from Siberia, I received a call from a cultivated and attractive young woman to whom, at the time of his banishment, he was engaged. She had heard that I was in Kara when her betrothed died, and she had come to me hoping that I had brought her a letter, or at least some farewell message from him. She was making preparations, in November of the previous year, to undertake a journey of four thousand miles alone, in order to join him at the mines and marry him, when she

received a telegram from Captain Nikolin briefly announcing his death. Although more than six months had elapsed since that time, she had heard nothing else. Neither Dr. Veimar before his death, nor his convict friends after his death, had been permitted to write to her, and upon me she had hung her last hopes. How hard it was for me to tell her that I *might* have seen him—that I *might* have brought her, from his death-bed, one last assurance of love and remembrance, but that I had not done so, the reader can perhaps imagine. I have had some sad things to do in my life, but I think this was the saddest duty that ever was laid upon me.

I afterward spent a whole evening with her at her house. She related to me the story of Dr. Veimar's heroic and self-sacrificing life, read me letters that he had written to her from battlefields in Bulgaria, and finally, with a face streaming with tears, brought out and showed to me the most sacred and precious relic of him that she had—a piece of needlework that he had made in his cell at the mines, and had succeeded in smuggling through to her as a present and token of remembrance and love. It was a strip of coarse cloth, such as that used for convict shirts, about three inches wide and nearly fifty feet in length, embroidered from end to end in tasteful geometrical patterns with the coarsest and cheapest kind of colored linen thread.

"Mr. Kennan," she said to me, trying in vain to choke down her sobs, "imagine the thoughts that have been sewn into that piece of embroidery!"

We remained at the mines of Kara four or five days after our last visit to the house of the Armfeldts, but as we were constantly under close surveillance, we could accomplish nothing. All that there is left for me to do, therefore, is to throw into systematic form the information that I obtained there, and to give, in this and the following paper, a few chapters from the long and terrible history of the Kara penal establishment.¹

The Russian Government began sending state criminals to the mines of Kara in small numbers as early as 1873, but it did not make a regular practice of so doing until 1879. Most of the politicals condemned to penal ser-

¹ Nearly all the statements made in the following pages have been carefully verified, and most of them rest upon unimpeachable official testimony. There may be trifling errors in some of the details, but, in the main, the story of which this is one chapter can be proved, even in a Russian court of justice. The facts with regard to Colonel Kononovich (Kon-on-o'-vitch) and his connection with the Kara prisons and mines were obtained partly from political convicts and partly from officials in Kara, Chita (Chee'tah), Irkutsk, and St. Petersburg. The letter in which Kononovitch resigned

his position as governor of the Kara penal establishment is still on file in the Ministry of the Interior, and all the circumstances of his retirement are known, not only to the political convicts, but to many of the officials with whom I have talked. I regret that I am restrained by prudential and other considerations from citing my authorities. I could greatly strengthen my case by showing—as I might show—that I obtained my information from persons fully competent to furnish it, and persons whose positions were a sufficient guarantee of impartiality.

itude before the latter date were held either in the "convict section" of the Petropavlovski fortress at St. Petersburg, or in the solitary-confinement cells of the Central Convict Prison at Kharkoff. As the revolutionary movement, however, grew more and more serious and widespread, and the prisons of European Russia became more and more crowded with political offenders, the Minister of the Interior began to transfer the worst class of hard-labor state criminals to the mines of Kara, where they were imprisoned in buildings intended originally for common felons.¹ In December, 1880, there were about fifty political convicts in the Kara prisons, while nine men who had finished their term of probation were living outside the prison walls in little huts and cabins of their own. Most of the male prisoners were forced to go with the common felons to the gold placers; but as the hours of labor were not unreasonably long, they regarded it as a pleasure and a privilege, rather than a hardship, to get out of the foul atmosphere of their prison cells and work six or eight hours a day in the sunshine and the open air.

The officer in command of the Kara penal establishment at that time was Colonel Kononovich, a highly educated, humane, and sympathetic man, who is still remembered by many a state criminal in Eastern Siberia with gratitude and respect. He was not a revolutionist, nor was he in sympathy with revolution; but he recognized the fact that many of the political convicts were refined and cultivated men and women, who had been exasperated and frenzied by injustice and oppression, and that although their methods might be ill-judged and mistaken, their motives, at least, were disinterested and patriotic. He treated them, therefore, with kindness and consideration, and lightened so far as possible for every one of them the heavy burden of life. There were

in the Kara prisons at that time several state criminals who, by order of the gendarmerie and as a disciplinary punishment, had been chained to wheelbarrows.² Colonel Kononovich could not bear to see men of high character and education subjected to so degrading and humiliating a punishment; and although he could not free them from it without authority from St. Petersburg, he gave directions that they should be released from their wheelbarrows whenever he made a visit of inspection to the prison, so that at least he should not be compelled to see them in that situation. The humane disposition and sensitiveness to human suffering of which this is an illustration characterized all the dealings of Colonel Kononovich with the political convicts; and so long as he was permitted to treat them with reasonable kindness and consideration he did so treat them, because he recognized the fact that their life was hard enough at best. Late in the year 1880, however, the Minister of the Interior began to issue a series of orders intended, apparently, to restrict the privileges of the state criminals and render their punishment more severe. They were forbidden, in the first place, to have any written communication whatever with their relatives. To such of them as had wives, children, fathers, or mothers in European Russia this of itself was a terrible as well as an unjustifiable privation. Then they were forbidden to work in the gold placers, and were thus deprived of the only opportunity they had to see the outside world, to breathe pure, fresh air, and to strengthen and invigorate their bodies with exercise. Finally, about the middle of December, 1880, the governor received an order to abolish the free command, send all its members back into prison, half shave their heads, and put them again into chains and leg-fetters.³ Colonel Kononovich regarded this order as unneces-

¹ The political prison was not in existence at that time, and the state criminals were distributed among the common-criminal prisons, where they occupied what were called the "secret" or solitary-confinement cells. At a somewhat later period an old detached building in Middle Kara was set apart for their accommodation, and most of them lived together there in a single large kamera. They were treated in general like common convicts, were required to work every day in the gold placers, and at the expiration of their term of probation were released from confinement and enrolled in the free command.

² This is a punishment still authorized by law, and one still inflicted upon convicts who are serving out life sentences. The prisoner is fastened to a small miner's wheelbarrow by a chain, attached generally to the middle link of his leg-fetter. This chain is long enough to give him some freedom of movement, but he cannot walk for exercise, nor cross his cell, without trundling his wheelbarrow before him. Even when he lies down to sleep, the wheelbarrow remains attached to his feet. Four politicals have been chained to wheelbarrows at Kara, namely: Popeko, Berezniuk, Fomi-

chef, and Shchedrin. The last of them was not released until 1884. Whether or not any have been thus punished since that time I do not know.

³ All of these orders were issued while the liberal Loris Melikof was Minister of the Interior, and I have never been able to get any explanation of the inconsistency between his general policy towards the Liberal party and his treatment of condemned state criminals. Some of the officials whom I questioned in Siberia said without hesitation it was the minister's intention to make the life of the political convicts harder; while others thought that he acted without full information and upon the assumption that modern politicals were no more deserving of sympathy than were the Decembrists of 1825. The Decembrist conspirators — although high nobles — were harshly treated, therefore Nihilists should be harshly treated. Many of the political exiles whom I met in Siberia regarded Melikof's professions of sympathy with the liberal and reforming party as insincere and hypocritical; but my own impression is that he acted in this case upon somebody's advice, without giving the matter much thought or consideration.

DR. VEIMAR.

sarily and even brutally severe, and tried in every way to have it rescinded or modified. His efforts, however, were unavailing, and on the 28th of December he called the members of the free command together, read the order to them, told them that he had failed to obtain any modification of it, and said that he would, on his own personal responsibility, allow them three days more of freedom in which to settle up their domestic affairs. On the morning of January 1, 1881, they must report at the prison. To all the members of the free command this order was a terrible blow. For two years they had been living in comparative freedom in their own little cabins, many of them with their wives and children, who had made a journey of five thousand miles across Siberia in order to join them. At three days' warning they were to be separated from their families, sent back into prison, and put again into chains and leg-fetters. Some of them were

leaving their wives and children alone and unprotected in a penal settlement, some of them were broken in health and could not expect to live long in the close confinement of a prison *kamera*, and all of them looked forward with dread to the chains, leg-fetters, foul air, vermin, and miseries innumerable of prison life.

In the free command was living at this time a young lawyer, thirty-three years of age, named Eugene Semyonofski (*Sem-yon'of-skee*). He was the son of a well-known surgeon in Kiev, and had been condemned to penal servitude for having been connected in some way with the "underground" revolutionary journal "*Onward*." He was a man of high character and unusual ability, had had a university training, and at the time of his arrest was practicing law in St. Petersburg. After four or five years of penal servitude at the mines his health gave way, and in 1879 he was

released from prison and enrolled in the free command. At the last meeting of the political convicts and their wives, on New Year's Eve, it was noticed that Semyonofski seemed to be greatly depressed, and that when they parted he bade his comrades good-bye with unusual manifestations of emotion and affection. About 2 o'clock that morning Mr. Charushin (Charoo'shin), a political convict in whose little cabin Semyonofski was living, was awakened by the report of a pistol, and rushing into the room of Semyonofski found that the latter had shot himself through the head. He was still living, but he did not recover consciousness, and died in about an hour. On the table lay a letter addressed to his father, with a note to Charushin asking him to forward it, if possible, to its destination. The letter was as follows:

MINES OF KARA,

Night of December 31, January 1, 1880-1.

MY DEAR FATHER: I write you just after my return from watching the old year out and the new year in with all my comrades. We met, this new year, under melancholy and disheartening circumstances. You have probably received a letter from the wife of one of my comrades, whom I requested to inform you that we had been forbidden thenceforth to write letters to any one—even our parents. Senseless and inhuman as that prohibition was, there awaited us something much worse—something that I knew nothing about when that letter was written. Ten days or so after we received notice of the order forbidding us to write letters, we were informed that we were all to be returned to prison and confined in chains and leg-fetters. There are nine men of us, namely: Shishko, Charushin, Kviatkovski, Uspenski, Soyuzof, Bogdanof, Terentief, Tevtul, and I; and we have all been living about two years in comparative freedom outside the prison. We expected something of this kind from the very day that we heard of the order of Boris Melikof prohibiting our correspondence; because there was in that order a paragraph which led us to fear that we should not be left in peace. Tomorrow we are to go back to prison. But for the faith that Colonel Kononovich has in us we should have been arrested and imprisoned as soon as the order was received; but he trusted us and gave us a few days in which to settle up our affairs. We have availed ourselves of this respite to meet together, for the last time in freedom, to watch the old year out and the new year in. I shall avail myself of it for yet another purpose. I do not know whether the carrying out of that purpose will, or will not, be a betrayal of the confidence that Colonel Kononovich has reposed in us; but even if I knew that it would be such a betrayal I should still carry out my purpose.

It may be that some one who reads the words "they are going back to prison" will compare us to sheep, submissively presenting their throats to the knife of the butcher; but such a comparison would be a grievously mistaken one. The only means of escape from such a situation as ours is in flight—and how and whither could we fly, in a temperature of thirty-five degrees below zero, and without any

previous preparation for such an undertaking? The reason why no preparations have been made you know, if you received the letter that I wrote you last August.

My own personal determination was to attempt an escape if the order for our return to prison should come in the spring, when it would be possible to escape, and to do it, not on the spur of the moment, but after serious preparation. It has not, however, happened so. In the mean time I feel that my physical strength is failing day by day. I know that my weakness must soon have its effect upon my mental powers, and that I am threatened with the danger of becoming a complete imbecile—and all this while I am living outside the prison. The question arises, what would become of me *in* prison? My whole life rests on the hope of returning some time to Russia and serving, with all my soul, the cause of right and justice to which I long ago devoted myself; but how can that cause be served by a man who is mentally and physically wrecked? When the hope of rendering such service is taken away from me, what is there left? Personal self-justification? But before the moment comes for anything like complete satisfaction of that desire, they can put me ten times to the torture. I have, therefore, come to the conclusion that there is no longer anything to live for—that I have earned the right, at last, to put an end to sufferings that have become aimless and useless. I have long been tired—deathly tired—of life; and only the thought of home has restrained me, hitherto, from self-destruction. I know that I am about to cause terrible grief, Sasha,¹ to you, and to all who love me; but is not your love great enough to forgive the suicide of a man tortured to the last extremity? Understand that, for God's sake! I have been literally tortured to death during these last years. For the sake of all that you hold dear, I beseech you to forgive me! You must know that my last thoughts are of you—that if I had a little more strength I would live out my life, if only to save you from further suffering; but my strength is exhausted. There is nothing left for me to do but to go insane or die; and the latter alternative is, after all, better than the former.

Good-bye forever, my dear, kind, well-remembered father and friend! Good-bye, Sasha, and you my younger brother, whom I know so little. Remember that it is better to die, even as I die, than to live without being able to feel one's self a man of principle and honor.

Once more, good-bye! Do not think ill of your unhappy son and brother, who, even in his unhappiness, finds consolation.

EUGENE.

All that was mortal of Eugene Semyonofski now lies in the political convicts' burying-ground on a lonely hill known as "The Convict's Head" in Eastern Siberia. The unpainted wooden cross that marks his grave will soon decay, and then nothing will remain to show where lie the ashes of a man whose brilliant talents, high standards of duty, and intense moral earnestness might have made him an

¹ "Sasha" was Semyonofski's brother Alexander.

MME. KAVALÉFSKAYA.

honor to his country and an invaluable worker in the cause of freedom and humanity.

Of course Colonel Kononovich was greatly shocked by Semyonofski's suicide, but this was only the beginning of the series of tragedies that resulted from an enforcement of the Government's orders concerning the treatment of the political convicts.

Very soon after Semyonofski's suicide, Mr. Rodin, another political convict, poisoned himself to death by drinking water in which he had soaked the heads of matches; Mr. Uspenski (Oo-spen'skee) hanged himself in the bath-house; and Madame Kavaléfskaya, sister of

one of the best known political economists in Russia,¹ went insane, shrieked constantly, broke the windows of her cell, and was so violent that it became necessary to confine her in a strait-jacket.

Colonel Kononovich was too warm-hearted and sympathetic a man not to be profoundly moved by such terrible evidences of human misery. He determined to resign his position as governor of the Kara penal establishment, whatever might be the consequences; and in pursuance of this determination he wrote to the Governor-General of Eastern Siberia and to the Minister of the Interior a very frank and bold letter, in which he said that he regarded the late instructions of the Government concerning the treatment of the political convicts as not only impolitic but cruel. If they wanted an officer who would treat the politicals in

OLD MILL NEAR KARA.

pected to act as governor of the Kara prisons and mines, and I doubt whether such a man can hold any position whatever in the Government service."

"Very well," replied Kononovich, "then I will get out of it."

Soon after his arrival in St. Petersburg, Colonel Kononovich had an interview with Mr. Durnovo (Door'no-vo), Assistant Minister of the Interior, in the course of which he said to the latter, "I did not relax any necessary discipline at Kara, nor did I violate or neglect to enforce any law. If you want to have good order among the political convicts at the mines, and to have your Government respected, you will have to send there men with convictions like mine. That I had no selfish aims in view you can understand from the fact that the course I pursued was dangerous to me. You have probably received not a few accusations made against me by other officers. I am not afraid of accusations, nor of opposition, but I do fear my own conscience, and I am not willing to do anything that would lose me its approval. The Government, by its orders, made it impossible for me to serve as governor of the Kara prisons and at the same time keep an approving conscience, and I therefore asked to be relieved. If I should be ordered there again I would act in precisely the same way."

The subsequent history of the Kara penal establishment, which I shall give in a later article, must have made Mr. Durnovo think many times of these brave, frank words.

I have not been able to speak favorably of

accordance with the spirit of such instructions, they had best send a hangman there. He, himself, was not a hangman; he could not enforce such orders without doing violence to all his feelings, and he must therefore ask to be relieved of his command. The resignation was accepted, and in the summer of 1881 Colonel Kononovich left the mines of Kara, and some time afterwards returned to St. Petersburg. As he passed through Irkutsk he had an interview with Governor-General Anuchin (An-noo'chin), in the course of which the latter said to him, rather coldly and contemptuously, "Of course, Colonel Kononovich, a man holding such views as you do could not be ex-

many Siberian prisons, nor to praise many Siberian officials; but it affords me pleasure to say that of Colonel Kononovich I heard little that was not good. Political convicts, honest officers, and good citizens everywhere united in declaring that he was a humane, sympathetic, and warm-hearted man, as well as a fearless, intelligent, and absolutely incorruptible official. Nearly all the improvement that has been made in the Kara penal establishment within the past quarter of a century was made during Colonel Kononovich's term of service as governor. In view of these facts

continued suffering and ill-treatment on the road, this young man was as wild, suspicious, and savage as a trapped wolf. He seemed to regard all the world as his enemies, and glared at every officer as if he expected a blow, was half afraid of it, but was prepared to die fighting. Colonel Kononovich received him courteously and kindly; sent the wife of one of the political exiles to him with clean fresh underclothing; attended generally to his physical needs, and finally said to him, "Remember that nobody here will insult you or ill-treat you." The young convict was greatly surprised

THE POLITICAL PRISON AND CAPTAIN NIKOLÍN'S HOUSE. (A SKETCH FROM MEMORY.)

I regret to have to say that he was virtually driven out of Siberia by the worst and most corrupt class of Russian bureaucratic officials. He was called "weak" and "sentimental"; he was accused of being a "socialist"; he was said to be in sympathy with the views of the political convicts; and the *ispravnik* of Nerchinsk openly boasted, in the official club of that city, that he would yet "send Colonel Kononovich to the province of Yakutsk with a yellow diamond on his back." How ready even high officers of the Siberian administration were to entertain the most trivial charges against him may be inferred from the following anecdote. During the last year of his service at Kara there came to the mines a political convict, hardly out of his teens, named Bibikof (Bee'bee-koff). As a consequence of long-

by such a reception, and in a letter that he subsequently wrote to a friend in European Russia he said, "I am glad to know, from the little acquaintance I have had with Kononovich, that a Russian colonel is not necessarily a beast." This letter fell into the hands of the police in European Russia, was forwarded through the Ministry of the Interior to General Ilyashevich (Ill-yah-shay'vitch), the governor of the Trans-Baikal, and was sent by that officer to Colonel Kononovich with a request for an "explanation." It seemed to be regarded as documentary evidence that the governor of the Kara prisons was on suspiciously friendly terms with the political convicts. Kononovich paid no attention to the communication. Some months later he happened to visit Chita on business, and Gov-

ernor Ilyashevich, in the course of a conversation about other matters, said to him, "By the way, Colonel Kononovich, you have never answered a letter that I wrote you asking for an explanation of something said about you in a letter from one of the political convicts in your command. Did you receive it?"

"Yes," replied Kononovich, "I received it; but what kind of answer did you look for? What explanation could I give? Did you expect me to excuse myself because somebody regarded me as a human being and not a beast?"

— or, in other words, releasing, for two or three hundred rubles *per capita*, young men who had been legally drawn as conscripts and who should render military service. He undertook to bring the corrupt officials to justice; but they had strong and highly placed friends in Irkutsk, they trumped up a set of counter charges, packed the investigating commission with their own associates, and came very near sending Colonel Kononovich to the province of Yakutsk "with a yellow diamond on his back," in fulfillment of the *ispravnik's* boast. Fortu-

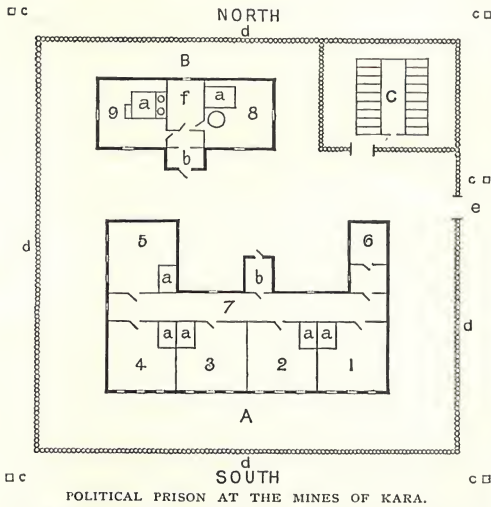

INTERIOR OF A KAMERA IN THE POLITICAL PRISON.

Was I to say that the writer of the letter was mistaken in supposing me to be a human being — that in reality I was a beast, and that I had never given him or anybody else reason to suppose that a Russian colonel could be a human being?"

This presentation of the case rather confused the governor, who said that the demand for an explanation had been written by his assistant, that it had been stupidly expressed, and that after all the matter was not of much consequence. He then dropped the subject.

After resigning his position at the mines of Kara, Colonel Kononovich, who was a Cossack officer, went to Nerchinsk, where he took command of the Cossack forces of the Trans-Baikal. He soon discovered that a small knot of officers, including the *ispravnik*, were engaged in selling immunity from conscription

nately Kononovich had influential friends in St. Petersburg. He telegraphed to them and to the Minister of the Interior, and finally succeeded in securing the appointment of another commission, in having the *ispravnik* and some of his confederates thrown into prison, and in obtaining documentary evidence of their guilt. The conspirators then caused his house to be set on fire in the middle of a cold winter night, and nearly burned him alive with all his family. He escaped in his night-clothing, and, as soon as he had gotten his wife and children out, rushed back to try to save the papers in the pending case against the *ispravnik*, but it was too late. He was driven out by smoke and flames, and most of the proofs were destroyed. Colonel Kononovich then "shook his hand" against Siberia — to use a Russian expression — and went to St. Petersburg. He did not

A, Main Prison building; B, Kitchen and Bath-house; C, Small Solitary-confinement cells, not now used; 1, 2, 3, 4, Large Kamera or cells designated respectively by the prisoners as "Academia," "Dvorianka," "Yakutka," and "Kharchofka"; 5, Kamera used as a prison hospital, or lazaret; 6, Water-closet; 7, Main Corridor; 8, Bath-room; 9, Kitchen; a, Ovens; b, Entry-ways; c, Sentry-boxes; d, Stockade around prison buildings; e, Gate to prison yard; f, Bath-house dressing-room.

want to live any longer, he said, in a country where an honest man could not do his duty without running the risk of being burned alive. In St. Petersburg he was given another position, as representative on the general staff of the Cossack forces of the Trans-Baikal, and he lived there quietly until the summer of 1888, when he was promoted to the rank of general and appointed to command the largest and most important penal establishment in Siberia; namely, that on the island of Saghalien (Sagha-leen'). This appointment is in the highest degree creditable to the Russian Government, and, taken in connection with the erection of the new prison in Verkhni Udinsk, it furnishes a gratifying proof that the Tsar is not wholly indifferent to the sufferings of Siberian exiles and convicts. As long as General Kononovich remains in command of the Saghalien prisons and mines there is every reason to believe that they will be intelligently, honestly, and humanely managed.

Almost the last work that Kononovich accomplished at the mines of Kara was the erection of the new political prison near the Lower Diggings. Captain Nikolin would not allow me to inspect this building, nor would he allow Mr. Frost to photograph it; but from convicts who had been confined in it I obtained the plan on this page and the picture on page 534, and from memory Mr. Frost drew the sketch on

page 533. In general type it differs little from the common-criminal prisons, but it is larger, better lighted, and more spacious than the latter, and is, in all respects, a more comfortable place of abode. It contains four kameras, exclusive of the hospital, or lazaret, and in each of them there are three windows, a large table, a brick oven, and sleeping-platform accommodations for about twenty-five men. There are no beds, except in the lazaret, and all the bed-clothing that the prisoners have was purchased with their own money. Originally the palisade did not entirely inclose the building, and the prisoners could look out of their front windows across the Kara valley; but Governor-General Anuchin, on the occasion of one of his rare visits to the mines, disapproved of this arrangement, remarked cynically that "A prison is not a palace," and ordered that the stockade of high, closely set logs be so extended as to cut off the view from the windows, and completely shut in the building. It is hard to see in this order anything but a deliberate intention on the part of a cruel official to make the life of the political convicts as miserable and intolerable as possible. Every common-criminal prison in Kara, without exception, has windows that overlook the settlement or the valley; and every burglar and murderer in the whole penal establishment can see from his cell something of the outside world. The political convicts, however, in the opinion of the Governor-General, had no right to live in a "palace" from which they could see the green trees, the glimmer of the sunshine on the water, and the tender purple of the distant hills at sunset or at dawn. They must be shut up in a tight box; the fresh invigorating breeze from the mountains must be prevented from entering their grated windows; and the sight of a human being not clothed in a turnkey's uniform must never gladden their weary, homesick eyes. I have wished many times that his Excellency Governor-General Anuchin might be shut up for one year in the political prison at the mines of Kara; that he might look out for 365 days upon the weather-beaten logs of a high stockade; that he might lie for 365 nights on a bare sleeping-platform infested with vermin; and that he might breathe, night and day, for 52 consecutive weeks, the air of a close kamera, saturated with the poisonous stench of an uncovered excrement-bucket. *Then* he might say to himself, with a more vivid realization of its meaning, "A prison is not a palace."

ARTIST WANDERINGS AMONG THE CHEYENNES.

WRITTEN AND ILLUSTRATED BY FREDERIC REMINGTON.

A CHEYENNE.

AFTER a hard pull we came to a beautiful creek heavily timbered with post-oak, black-jack, and pecan trees. Taking our well-worn ponies from the pole we fed and curried them, hoping that by careful nursing they might be gotten through to Fort Reno. I wasted some anxiety on myself as I discovered that my cowboy driver unrolled from a greasy newspaper the provisions which he had assured me before starting was a matter which had been attended to. It was "poor picking" enough, and I did not enjoy

and coax him along. The road was heavy with sand and we lost a parallel trail made by the passage of the Eighth Cavalry some weeks before. We hoped to discover the "breaks"¹ of the South Canadian River before darkness set in; but the land rose steadily away in front, and we realized that something must be done. At last coming suddenly upon a group of miserable pole cabins, we saw two Cad-does reclining on a framework of poles. I conceived the idea of hiring one of these to guide us through in the darkness. The wretches refused to understand us, talk English, sign language, or what we would. But after a hard bargain one saddled his pony and consented to lead the way through the darkness. On we traveled, our valuable guide riding so far ahead that we could not see him, and at last we came suddenly in sight of the bright surface of the

THE SIGN LANGUAGE.

my after-dinner smoke when I realized that the situation was complicated by the fact that we had eaten everything for dinner and were then miles from Reno, with a pair of played-out ponies.

Hooking up again, we started on. On a little hill one jaded beast "set back in the breeching" and we dismounted to push the wagon

South Canadian. The sun was fast sinking, and by the time we had crossed the wide sand-bars and the shallow water of the river bottom a great red gleam was all that remained on the western horizon. About a mile to the left flickered the camp-fires about a group of lodges

AN ARAPAHO SCOUT.

with great interest. With graceful gestures they made the signs and seemed immediately and fully to comprehend each other. As the old Arapaho's face cut dark against the sunset I thought it the finest Indian profile I had ever seen. He was arrayed in the full wild Indian costume of these latter days, with leggings, beaded moccasins, and a sheet wrapped about his waist and thighs. The Caddo, on the contrary, was a progressive man. His hair was cropped in Cossack style; he wore a hat, boots, and a great "slicker," or cowboy's oil-skin coat. For the space of half an hour they thus interested each other. We speculated on the meaning of the signs, and could often follow them; but they abbreviated so much and did it all so fast that we missed the full meaning of their conversation. Among other things the Caddo told the Arapaho who we were, and also made arrangements to meet him at the same place at about 10 o'clock on the following day.

Darkness now set in, and as we plunged into the timber after the disappearing form of our guide I could not see my companions on the seat beside me. I think horses can make out things better than men can under circumstances like these; and as the land lay flat before us, I had none of the fears which one who journeys in the mountains often feels.

The patter of horses' hoofs in the darkness behind us was followed by a hailing cry in the guttural tone of an Indian. I could just make out a mounted man with a led horse beside the wagon, and we exchanged inquiries in English and found him to be an acquaint-

of Arapahoes. We fed our team and then ourselves crunched kernels of "horse-trough corn" which were extracted from the feed box. Our

Caddo sat on his horse while we lay stretched on the grassy bank above the sand flats. A dark-skinned old Arapaho rode up, and our Caddo saluted him. They began to converse in the sign language as they sat on their ponies, and we watched them

ance of the morning, in the person of a young Cheyenne scout from Fort Reno who had been down to buy a horse of a Caddo. He had lived at the Carlisle school, and although he had been back in the tribe long enough to let his hair grow, he had not yet forgotten all his English. As he was going through to the post, we dismissed our Caddo and followed him.

Far ahead in the gloom could be seen two of the post lights, and we were encouraged. The little ponies traveled faster and with more spirit in the night, as indeed do all horses. The lights did not come nearer, but kept at the indefinite distance peculiar to lights on a dark night. We plunged into holes, and the old wagon pitched and tipped in a style which insured keeping its sleepy occupants awake. But there is an end to all things, and our tedious trail brought us into Fort Reno at last. A sleepy boy with a lamp came to the door of the post-trader's and wanted to know if I was trying to break the house down, which was a natural conclusion on his part, as sundry dents in a certain door of the place will bear witness to this day.

On the following morning I appeared at the headquarters office, credentials in hand. A smart, well-gotten up "non-com." gave me a chair and discreetly kept an eye on the articles of value in the room, for the hard usage of my recent travels had so worn and soiled my clothing that I was more picturesque than assuring in appearance. The colonel came soon, and he too eyed me with suspicious glances until he made out that I was not a Texas horse thief nor an Oklahoma boomer.

After finding that I desired to see his protégés of the prairie, he sent for the interpreter, Mr. Ben. Clark, and said, "Seek no farther; here is the best Cheyenne in the country."

Mr. Clark I found to be all that the colonel had recommended, except that he did not look like a Cheyenne, being a perfect type of the frontier scout, only lacking the long hair, which to his

BEN. CLARK, INTERPRETER.

practical mind a white man did not seem to require. A pair of mules and a buckboard were provided at the quartermaster's corral, and Mr. Clark and I started on a tour of observation.

We met many Cheyennes riding to some place or another. They were almost invariably tall men with fine Indian features. They wore the hair caught by braids very low on the shoulders, making a black mass about the ears, which at a distance is not unlike the aspect of an Apache. All the Indians now use light "cow-saddles," and ride with the long stirrups peculiar to Western Americans, instead

back, although I have never heard any one with enough temerity to question his ability. I always like to dwell on this subject of riding, and I have an admiration for a really good rider which is altogether beyond his deserts in the light of philosophy. In the Eastern States the European riding-master has proselyted to such an extent that it is rather a fashionable fad to question the utility of the Western method. When we consider that for generations these races of men who ride on the plains and in the Rocky Mountains have been literally bred on a horse's back, it seems reasonable to suppose they ought to be riders; and when

A CHEYENNE CAMP.

of "trees" of their own construction with the short stirrup of the old days. In summer, instead of a blanket, a white sheet is generally worn, which becomes dirty and assumes a very mellow tone of color. Under the saddle the bright blue or red Government cloth blanket is worn, and the sheet is caught around the waist, giving the appearance of Zouave trousers. The variety of shapes which an Indian can produce with a blanket, the great difference in wearing it, and the grace and naturalism of its adjustment, are subjects one never tires of watching. The only criticism of the riding of modern Indians one can make is the incessant thumping of the horse's ribs, as though using a spur. Outside of the far South-west, I have never seen Indians use spurs. With the awkward old "trees" formerly made by the Indians, and with the abnormally short stirrup, an Indian was anything but graceful on horse-

one sees an Indian or a cowboy riding up precipices where no horses ought to be made to go, or assuming on horseback some of the grotesque positions they at times affect, one needs no assurance that they do ride splendidly.

As we rattled along in the buckboard, Mr. Clark proved very interesting. For thirty odd years he has been in contact with the Cheyennes. He speaks the language fluently, and has discovered in a trip to the far North that the Crees use almost identically the same tongue. Originally the Cheyennes came from the far North, and they are Algonquin in origin. Though their legend of the famous "medicine arrow" is not a recent discovery, I cannot forbear to give it here.

A long time ago, perhaps about the year 1640, the Cheyennes were fighting a race of men who had guns. The fighting was in the vicinity of the Devil's Lake country, and

the Cheyennes had been repeatedly worsted in combat and were in dire distress. A young Horatius of the tribe determined to sacrifice himself for the common weal, and so wandered away. After a time he met an old man, a mythical personage, who took pity on him. Together they entered a great cave, and the old man gave him various articles of "medicine" to choose from, and the young man selected the "medicine arrows." After the old man had performed the proper incantations, the hero went forth with his potent fetish and rejoined the tribe. The people regained courage, and in the fight which soon followed they conquered and obtained guns for the first time. Ever since the tribe has kept the medicine arrows, and they are now in the Indian Territory in the possession of the southern Cheyennes. Years ago the Pawnees captured the arrows and in ransom got vast numbers of ponies, although they never gave back all of the arrows, and the Cheyennes attribute all their hard experiences of later days to this loss. Once a year, and oftener should a situation demand it, the ceremony of the arrows takes place. No one has ever witnessed it except the initiated priests.

The tribal traditions are not known thoroughly by all, and of late years only a very few old men can tell perfectly the tribal stories. Why this is so no one seems to know, unless the Indians have seen and heard so much through the white men that their faith is shaken.

Our buckboard drew gradually nearer the camp of the Cheyennes. A great level prairie of waving green was dotted with the brown toned white canvas lodges, and standing near them were brush "ramadas," or sheds, and also wagons. For about ten years they have owned wagons, and now seldom use the *travaux*. In little groups all over the plain were scattered pony herds, and about the camp could be seen forms wearing bright blankets or wrapped in ghostlike cotton sheets. Little columns of blue smoke rose here and there, and gathered in front of one lodge was squatted a group of men. A young squaw dressed in a bright calico gown stood near a ramada and banded words with the interpreter while I sketched. Presently she was informed that I had made her picture, when she ran off, laughing at what she considered an unbecoming trick on the part of her entertainer. The women of this tribe are the only squaws I have ever met, except in some of the tribes of the northern plains, who have any claim to be considered good looking. Indeed, some of them are quite as I imagine Pocahontas, Minnehaha, and the rest of the heroines of the race appeared. The female names are conventional, and have been

borne by the women ever since the oldest man can remember. Some of them have the pleasant sound which we occasionally find in the Indian tongues: "Mut-say-yo," "Wau-hi-yo," "Mokka-is," "Jok-ko-ko-me-yo," for instance, are examples; and with the soft guttural of their Indian pronunciation I found them charming. As we entered the camp all the elements which make that sort of scene interesting were about. A medicine-man was at work over a sick fellow. We watched him through the opening of a lodge and our sympathies were not aroused, as the patient was a young buck who seemed in no need of them. A group of young men were preparing for a clan dance. Two young fellows lay stretched on the grass in graceful attitudes. They were what we call "chums." Children were playing with dogs; women were beading moccasins; a group of men lay under a wagon playing monte; a very old man, who was quite naked, tottered up to our vehicle and talked with Mr. Clark. His name was Bull Bear, and he was a strange object with his many wrinkles, gray hair, and toothless jaws.

From a passing horseman I procured an old "buck saddle" made of elk horn. They are now very rare. Indian saddlery is interesting, as all the tribes had a different model, and the women used one differing from that of the men.

We dismounted at the lodge of Whirlwind, a fine old type who now enjoys the prestige of head chief. He was dignified and reserved, and greeted us cordially as he invited us to a seat under the ramada. He refused a cigar, as will nearly all Indians, and produced his own cigarettes.

Through the interpreter we were enabled to converse freely. I have a suspicion that the old man had an impression that I was in some way connected with the Government. All Indians somehow divide the white race into three parts. One is either a soldier, a Texas cowboy, or a "big chief from Washington," which latter distinction I enjoyed. I explained that I was not a "big chief," but an artist, the significance of which he did not grasp. He was requested to put on his plumage, and I then proceeded to make a drawing of him. He looked it over in a coldly critical way, grunted several times, and seemed more mystified than ever; but I do not think I diminished in his estimation. In his younger days Whirlwind had been a war chief; but he traveled to Washington and there saw the power and numbers of the white man. He advised for peace after that, and did not take the war-path in the last great outbreak. His people were defeated, as he said they would be, and confidence in his judgment was restored. I asked him all sorts of questions to draw on

his reminiscences of the old Indian life before the conquest, all of which were answered gravely and without boasting. It was on his statesmanlike mind, however, to make clear to me the condition of his people, and I heard him through. Though not versed in the science of government, I was interested in the old man's talk. He had just returned from a conference of the tribes which had been held in the Cherokee country, and was full of the importance of the conclusions there evolved. The Indians all fear that they will lose their land, and the council advised all Indians to do nothing which would interfere with their tenure of the land now held by them. He told with pride of the speech he made while there and of the admiration with which he was regarded as he stood, dressed in the garb of the wild Indian, with his tomahawk in hand. However, he is a very progressive man, and explained that while he was too old to give up the methods of life which he had always observed, yet his son would be as the civilized Cherokees are. The son was squatted near,

and have failed, and are now very properly discouraged. Stock-raising is the natural industry of the country, and that is the proper pursuit of these people. They are only now recovering by natural increase from the reverses which they suffered in their last outbreak. It is hard for them to start cattle herds, as their ration is insufficient, and one scarcely can expect a hungry man to herd cattle when he needs the beef to appease his hunger. Nevertheless, some men have respectable herds and can afford to kill an animal occasionally without taking the stock cattle. In this particular they display wonderful forbearance, and were they properly rationed for a time and given stock cattle, there is not a doubt but in time they would become self-supporting. The present scheme of taking a few boys and girls away from the camps to put them in school where they are taught English, morals, and trades has nothing reprehensible about it, except that it is absolutely of no consequence so far as solving the Indian problem is concerned. The few boys return to the camps with their English,

their school clothes, and their short hair. They know a trade also, but have no opportunity to be employed in it. They loaf about the forts for a time with nothing to do, and the white men talk pigeon English to them and the wild Indians sneer at them. Their virtues are unappreciated, and, as a natural consequence, the thou-

sands of years of barbarism which is bred in their nature overcome the three little seasons of school training. They go to the camps, go back to the blanket, let their hair grow, and forget their English.

In a year one cannot tell a school-boy from any other little savage, and in the whole proceeding I see nothing at all strange.

The camp will not rise to the school-boy, and so Mahomet goes to the mountain. If it comes to pass that the white race desires to aid these Indians to become a part of our social system instead of slowly crushing them out of it, there is only one way to do it. The so-called Indian problem is no problem at all in reality, only that it has been made one by a long succession of acts which were masterly in their imbecility and were fostered by political avarice. The sentiment of this nation is in favor of no longer regarding the aborigines of this country as a conquered race; and except

J. FREDERIC REMINGTON—

CHEYENNE AGENCY.

and I believed his statement, as the boy was large of stature and bright of mind, having enjoyed some three years' schooling at a place which I have now forgotten. He wore white men's clothes and had just been discharged from the corps of scouts at Reno. When I asked the boy why he did not plow and sow and reap, he simply shrugged his shoulders at my ignorance, which, in justice to myself, I must explain was only a leading question, for I know that corn cannot be raised on this reservation with sufficient regularity to warrant the attempt. The rainfall is not enough; and where white men despair, I, for one, do not expect wild Indians to continue. They have tried it

AN AGENCY POLICEMAN.

that the great body of our citizens are apathetic of things so remote as these wards of the Government, the people who have the administration of their destinies would be called to account. No one not directly interested ever questioned that the Indian Department should have been attached to the War Department; but that is too patent a fact to discuss. Now the Indian affairs are in so hopeless a state of dry-rot that practical men, in political or in military circles, hesitate to attempt the rôle of reformers. The views which I have on the subject are not original, but are very old and very well understood by all men who live in the Indian countries. They are current among army officers who have spent their whole lives on the Indian frontier of the far West, but are not often spoken, because all men realize the impotency of any attempt to overcome the active work of certain political circles backed by public apathy and a lot of theoretical Indian regenerators. If anything is done to relieve the condition of the Indian tribes it must be a scheme which begins at the bottom and takes the "whole outfit," as a Western man would

say, in its scope. If these measures of relief are at all tardy, before we realize it the wild Indian tribes will be, as some writer has said, "loafers and outcasts, contending with the dogs for kitchen scraps in Western villages." They have all raised stock successfully when not interfered with or not forced by insufficient rations to eat up their stock cattle to appease their hunger, and I have never heard that Indians were not made of soldier stuff. A great many Western garrisons have their corps of Indian scouts. In every case they prove efficient. They are naturally the finest irregular cavalry on the face of this globe, and with an organization similar to the Russian Cossacks they would do the United States great good and become themselves gradually civilized. An irregular cavalry is every year a more and more important branch of the service. Any good cavalry officer, I believe, could take a command of Indians and ride around the world without having a piece of bacon, or a cartridge, or a horse issued by his Government. So far as effective police work in the West is concerned, the corps of Indian scouts do nearly all of that

THE BRANDING CHUTE AT THE BEEF ISSUE.

service now. They all like to be enlisted in the service, universally obey orders, and are never disloyal. But nothing will be done; so why continue this?

For hours we sat in the ramada of the old chief and conversed, and when we started to go I was much impressed by the discovery that the old Indian knew more about Indians, Indian policy, and the tendencies and impulses of the white men concerning his race than any other person I had ever met.

The glories of the reign of an Indian chief-tain are past. As his people become more and more dependent on the Government his prestige wanes. For instance, at the time of our visit to this camp the people were at logger-heads regarding the locality where the great annual Sun Dance, or, more literally, "The Big Medicine," should be held. The men of the camp that I visited wanted it at one place, and those of the "upper camp" wanted it at another. The chief could not arrange the matter, and so the solution of the difficulty was placed in the hands of the agent.

The Cheyenne agency buildings are situated about a mile and a half from Fort Sill. The great brick building is imposing. A group of stores and little white dwelling-houses sur-

round it, giving much the effect of a New England village. Wagons, saddled ponies, and Indians are generally disposed about the vicinity and give life to the scene. Fifteen native policemen in the employ of the agency do the work and take care of the place. They are uniformed in cadet gray, and with their beaded white moccasins and their revolvers are neat and soldierly looking. A son of old Bent, the famous frontiersman, and an educated Indian do the clerical work, so that the agent is about the only white man in the place. The goods which are issued to the Indians have changed greatly in character as their needs have become more civilized. The hatchets and similar articles of the old traders are not given out, on the ground that they are barbarous. Gay colored clothes still seem to suit the esthetic sense of the people, and the general effect of a body of modern Indians is exceeding brilliant. Arabs could not surpass them in this respect.

They receive flour, sugar, and coffee at the great agency building, but the beef is issued from a corral situated out on the plain at some distance away. The distribution is a very thrilling sight, and I made arrangements to see it by procuring a cavalry horse from Colonel Wade at the fort and by following the ambu-

lance containing an army officer who was detailed as inspector. We left the post in the early morning, and the driver "poured his lash into the mules" until they scurried along at a speed which kept the old troop-horse at a neat pace.

The heavy dew was on the grass, and clouds lay in great rolls across the sky, obscuring the sun. From the direction of the target range the "stump" of the Springfields came to our ears, showing that the soldiers were hard at their devotions. In twos, and threes, and groups, and crowds, came Indians, converg-

be given out. With loud cries the cowboys in the corral forced the steers into the chute, and crowding and clashing they came through into the scales. The gate of the scales was opened and a half-dozen frightened steers crowded down the chute and packed themselves in an unyielding mass at the other end. A tall Arapaho policeman seized a branding-iron, and mounting the platform of the chute poised his iron and with a quick motion forced it on the back of the living beast. With a wild but useless plunge and a loud bellow of pain the steer shrunk from the hot contact; but

WAITING FOR THE BEEF ISSUE.

ing on the beef corral. The corral is a great ragged fence made of an assortment of boards, poles, scantling, planks, old wagons, and attached to this is a little house near which the weighing scales are placed. The crowd collected in a great mass near the gate and branding-chute. A fire was burning, and the cattle contractors (cowboys) were heating their branding-irons to mark the "I. D." on the cattle distributed, so that any Indian having subsequently a hide in his possession would be enabled to satisfy roving cattle inspectors that they were not to be suspected of killing stock.

The agent came to the corral and together with the army officer inspected the cattle to

it was all over, and a long black "I. D." disfigured the surface of the skin.

Opposite the branding-chute were drawn up thirty young bucks on their ponies, with their rifles and revolvers in hand. The agent shouted the Indian names from his book, and a very engaging lot of cognomens they were. A policeman on the platform designated a particular steer which was to be the property of each man as his name was called. The Indian came forward and marked his steer by reaching over the fence and cutting off an ear with a sharp knife, by severing the tail, or by tying some old rag to some part of the animal. The cold-blooded mutilation was perfectly shocking, and I turned away in sickened disgust. After all

STEER-HUNTING.

had been marked, the terrified brutes found the gate at the end of the chute suddenly opened by the police guard; but before this had been done a frantic steer had put his head half through the gate, and in order to force him back a red-hot branding-iron was pushed into his face, burning it horribly. The worst was over; the gates flew wide, and the maddened brutes poured forth, charging swiftly away in a wild impulse to escape the vicinity of the crowd of humanity. The young bucks in the group broke away, and each one, singling out his steer, followed at top speed, with rifle or six-shooter in hand. I desired to see the whole proceeding, and mounting my cavalry horse followed two young savages who seemed to have a steer possessed of unusual speed. The lieutenant had previously told me that the shooting at the steers was often wild and reckless, and advised me to look sharp or I might have to "pack a bullet." Puffs of smoke and the "pop! pop!" of the guns came from all over the plain. Now a steer would drop, stricken by some lucky shot. It was buffalo-hunting over again, and was evidently greatly enjoyed by the young men. My two fellows headed their steer up the hill on the right, and when they had gotten him far enough away they "turned loose," as we say. My old cavalry horse began to exhibit a lively interest in the smell of gunpowder, and plunged away until he had me up and in front of the steer and the Indians, who rode on each side. They blazed away at the steer's head, and I could hear a misdirected bullet "sing" by uncomfortably near. Seeing me in front, the steer

dodged off to one side, and the young fellow who was in his way, by a very clever piece of horsemanship, avoided being run over. The whole affair demonstrated to me that the Indian boys could not handle the revolver well, for they shot a dozen rounds before they killed the poor beast. Under their philosophic outward calm I thought I could see that they were not proud of the exhibition they had made. After the killing, the squaws followed the wagons and proceeded to cut up the meat. After it had been divided among themselves, by some arrangement which they seemed to understand, they cut it into very thin pieces and started back to their camps.

Peace and contentment reign while the beef holds out, which is not long, as the ration is insufficient. This is purposely so, as it is expected that the Indians will seek to increase a scant food supply by raising corn. It does not have that effect, however. By selling ponies, which they have in great numbers, they manage to get money; but the financial future of the Cheyennes is not flattering.

Enlistment in the scouting corps at Reno is a method of obtaining employment much sought after by the young men. The camp is on a hill opposite the post, where the white teepees are arranged in a long line. A wall tent at the end is occupied by two soldiers who do the clerical work. The scouts wear the uniform of the United States army, and some of them are strikingly handsome in the garb. They are lithe and naturally "well set up," as the soldiers phrase it. They perform all the duties of sol-

diers; but at some of the irksome tasks, like standing sentry, they do not come out strong. They are not often used for that purpose, however, it being found that Indians do not appreciate military forms and ceremonies.

Having seen all that I desired, I procured passage in the stage to a station on the Santa

Fe Railroad. In the far distance the train came rushing up the track, and as it stopped I boarded it. As I settled back in the soft cushions of the sleeping-car I looked at my dirty clothes and did not blame the negro porter for regarding me with the haughty spirit of his class.

Frederic Remington.

SOMETHING WRONG.

OLD, old Earth! what have *you* to do
With a June in your heart ever fresh and new?
The poets sing, as of very truth,
That June dwells alone in the heart of youth,
And here you are in your eons, Earth,
With as sweet a June as you had at birth.

And God! He is ages and ages older!
And the love of age is paler, colder —
The poets sing, as of very truth —
Than the love that springs in the heart of youth;
So he cannot love, if the songs run true,
As he did when he shaped and fashioned you,
Yet here you are, with your June as fair
As the first that gladdened our parent pair!

Ah! there 's something wrong with the poets' song,
Or the hearts that to God and his earth belong.

Julia G. Skinner.

ACROSS THE FIELDS TO ANNE.

From Stratford-on-Avon a lane runs westward through the fields a mile to the little village of Shottery, in which is the cottage of Anne Hathaway, Shakspeare's sweetheart and wife.

HOW often in the summer-tide,
His graver business set aside,
Has stripling Will, the thoughtful-eyed,
As to the pipe of Pan
Stepped blithesomely with lover's pride
Across the fields to Anne!

It must have been a merry mile,
This summer stroll by hedge and stile,
With sweet foreknowledge all the while
How sure the pathway ran
To dear delights of kiss and smile,
Across the fields to Anne.

The silly sheep that graze to-day,
I wot, they let him go his way,
Nor once looked up, as who should say:
"It is a seemly man."
For many lads went wooing aye
Across the fields to Anne.

The oaks, they have a wiser look;
Mayhap they whispered to the brook:
"The world by him shall yet be shook,
It is in nature's plan;
Though now he fleets like any rook
Across the fields to Anne."

And I am sure, that on some hour
Coquetting soft 'twixt sun and shower,
He stooped and broke a daisy-flower
With heart of tiny span,
And bore it as a lover's dower
Across the fields to Anne.

While from her cottage garden-bed
She plucked a jasmine's goodlihedde,
To scent his jerkin's brown instead;
Now since that love began,
What luckier swain than he who sped
Across the fields to Anne?

The winding path whereon I pace,
The hedgerows green, the summer's grace,
Are still before me face to face;
Methinks I almost can
Turn poet and join the singing race
Across the fields to Anne!

Richard E. Burton.

ABRAHAM LINCOLN: A HISTORY.¹

THE CHICAGO SURRENDER—CONSPIRACIES IN THE NORTH— LINCOLN AND THE CHURCHES.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE CHICAGO SURRENDER.

THE Democratic managers had called the National Convention of their party to meet on the Fourth of July, 1864, but after the nomination of Frémont at Cleveland and of Lincoln at Baltimore it was thought prudent to postpone it to a later date, in the hope that something in the chapter of accidents might arise to the advantage of the opposition. It appeared for awhile as if this manœuvre were to be successful. As a vessel shows its finest sailing qualities against a head wind, so the best political work is always done in the face of severe opposition; and as the Republican party had as yet no enemy before it, the canvass, during its first months, seemed stricken with languor and apathy. The military situation was far from satisfactory. The terrible fighting in the Wilderness, succeeded by Grant's flank movement to the left, and the culmination of the campaign in the horrible slaughter at Cold Harbor, had profoundly shocked and depressed the country. The movement upon Petersburg, so far without decisive results, had contributed little of hope or encouragement; the campaign of Sherman in Georgia gave as yet no positive assurance of the brilliant result it afterwards attained; the Confederate raid into Maryland and Pennsylvania, in July, was the cause of great annoyance and exasperation.

This untoward state of things in the field of military operations found its exact counterpart in the political campaign. Several circumstances contributed to divide and discourage the Administration party. The resignation of Mr. Chase, on the last day of June, had seemed, to not a few leading Republicans at the North, as a presage of disintegration in the Government; Mr. Greeley's mission to Niagara Falls, in spite of the wise and resolute attitude taken by the President in relation to peace negotiations, had unsettled and troubled the minds of many. The Democratic party, not having as yet appointed a candidate nor formulated a platform, were free to devote all their leisure

to attacks upon the Administration; and the political fusillade continued with great energy through the summer months. The Republicans were everywhere on the defensive, having no objective point of attack in the opposite lines. The rebel emissaries in Canada, being in thorough concert with the leading peace men of the North, redoubled their efforts to disturb the public tranquillity, and not without success. Mr. Davis says of this period:

Political developments at the North favored the adoption of some action that might influence popular sentiment in the hostile section. The aspect of the peace party was quite encouraging, and it seemed that the real issue to be decided in the Presidential election in that year was the continuance or cessation of the war.²

There is a remarkable concurrence between this view of Mr. Davis and that of Mr. Lincoln in a letter to a friend which we have quoted in another place. Referring to the emissaries at Niagara Falls and their interest in the Chicago convention, and also to the expressions used by the Confederate authorities in their conversation with Jaquess, Mr. Lincoln said, "The Presidential contest is between a Union and a Disunion candidate, disunion certainly following the success of the latter!"³

Mr. Thompson, in his report of the operations of the rebel commission in Canada, claims that the results of the Niagara Falls conference were the source of such encouragement to the peace party as to lead them to give up their half-formed project of insurrection in the North-west in the hope of defeating Lincoln at the polls. In the midst of these discouraging circumstances the manifesto of Wade and Davis came to add its depressing influence to the general gloom. It seemed for a time as if this action of two of the most prominent Republicans in either house of Congress would result in a serious defection from the Republican party, though in the end the effect of the demonstration proved inconsiderable.

General McClellan had before this time become the acknowledged leader of the Democratic party in the North. It is true he was

² Davis, "Rise and Fall of the Confederate States," Vol. II., p. 611.

³ Lincoln to Wakeman, July 25, 1864. Unpublished MS.

not the favorite candidate of the Democracy in most of the Western States, but in the powerful States of the seaboard, and especially in the large cities, he was the only person indicated by popular consent among the opposition as the antagonist of Lincoln in the Presidential canvass. His attitude was therefore a matter of grave preoccupation, not only to most of the leading Republicans, but even to the President himself. There have been, in the last twenty years, many conflicting stories in regard to the overtures made to him during this summer; but, so far as can be ascertained, they were all the voluntary acts of over-anxious friends of the President, and made without his knowledge or consent. As early as the month of June, 1863, Mr. Thurlow Weed conceived the idea that it would be of great advantage to the Union cause if General McClellan would take a prominent part in a great war meeting to be held in New York. With the knowledge and approval of the President he approached the general with this purpose; he even suggested to him that the result might be the organization of a movement to make him the Union candidate for the Presidency. We learn from Mr. Weed that General McClellan at first gave a favorable hearing to the proposition, but at the last moment withdrew his consent to preside at the meeting in a letter in which he said: "I am clear in the conviction that the policy governing the conduct of the war should be one looking not only to military success, but also to ultimate reunion, and that it should consequently be such as to preserve the rights of all Union-loving citizens, wherever they may be, as far as compatible with military necessity."¹ The chance of identifying himself with the Union party thus passed away; later in the season he came out in favor of the candidates of the peace faction in Pennsylvania.

An attempt made in July, 1864, by Mr. Francis P. Blair, the elder, to induce McClellan to withdraw from the canvass caused a great deal of gossip at the time, and led to such misstatements and exaggerations that Mr. Blair afterwards published a full and detailed account of his action.² This venerable gentleman, sharing in the apprehension entertained by many as to the divisions and consequent weakness of the Union party, went to New York in the latter part of July "to make an effort at conciliation." "I went on this errand," said Mr. Blair, "without consulting the President, without giving him, directly or indirectly, the slightest intimation of my object, and, of course, without his authority. I apprised no one but my son." He first called upon the leading

editors of the city. Mr. Bryant, though discontented with the Administration, considered Mr. Lincoln, with all his abatements, the only man who could be relied upon for the defense of the Union. Mr. Greeley assured Mr. Blair that "his best efforts would not be wanting to secure the peace of the country through the reflection of the President"; Mr. Bennett of the "Herald" gave his ultimatum in a "raucous Scotch accent"—"Tell him to restore McClellan to the army and he will carry the election by default." Through Mr. S. L. M. Barlow, Mr. Blair had a long and intimate conversation with General McClellan. He began by stating distinctly to him that he had not come from Mr. Lincoln; that he had no authority or even consent from him to make representations or overtures of any sort. He then urged him, with the privilege of age and long friendship, to have nothing to do with the Chicago convention, saying that if he accepted their nomination he would be defeated. He pictured to him the dismal fate that awaits defeated candidates; he urged him to make himself the inspiring center and representative of the loyal Democrats of the North by writing a letter to Lincoln asking to be restored to service in the army, declaring at the same time that he did not seek it with a view to recommend himself to the Presidential nomination. "In case the President should refuse this request," said Mr. Blair, "he would then be responsible for the consequences." General McClellan received this well-meant advice in his customary manner. It is altogether probable that he did not believe a word of Mr. Blair's opening statement that this overture was without the approval or privity of the President. It no doubt seemed to him a political trick to induce him to decline the nomination of which he was already certain. He listened with his habitual courtesy and answered with his habitual indecision. He disclaimed any desire for the Presidential candidacy; he thanked Mr. Blair for his friendly suggestions; he said he would give them deep consideration; that he was called to the country to see a sick child and regretted that he could not talk with him again. Mr. Blair came back from his useless mission and repeated to Mr. Lincoln what he had done, adding that he thought it probable that General McClellan would write to him. The President "neither expressed approval nor disapprobation," says Mr. Blair in his letter, "but his manner was as courteous and kind as General McClellan's had been."

The political situation grew darker throughout the summer. At last, towards the end of August, the general gloom and depression

¹ T. W. Barnes, "The Life of Thurlow Weed," Vol. II., p. 429.

² Letter of F. P. Blair, dated Oct. 5, 1864, in the "National Intelligencer."

enveloped the President himself. The Democrats had not yet selected their candidate nor opened their campaign. As in the field of theology there is no militant virtue unless there is an active evil to oppose, so in that of politics a party without an organized opposition appears to drop to pieces by its own weight. To use Mr. Lincoln's words: "At this period we had no adversary and seemed to have no friends." For a moment he despaired of the success of the Union party in the coming election. He was not alone in this impression. It was shared by his leading friends and counselors. So experienced and astute a politician as Mr. Thurlow Weed wrote on the 22d of August:

When, ten days since, I told Mr. Lincoln that his reelection was an impossibility, I also told him that the information would soon come to him through other channels. It has doubtless ere this reached him. At any rate nobody here doubts it, nor do I see anybody from other States who authorizes the slightest hope of success. Mr. Raymond, who has just left me, says that unless some prompt and bold step be taken all is lost. The people are wild for peace. They are told that the President will only listen to terms of peace on condition that slavery be abandoned. . . . Mr. Raymond thinks that commissioners should be immediately sent to Richmond offering to treat for peace on the basis of Union. That something should be done and promptly done to give the Administration a chance for its life is certain.¹

Mr. Lincoln's action in this conjuncture was most original and characteristic. Feeling that the campaign was going against him, he made up his mind deliberately as to the course he should pursue, and unwilling to leave his resolution to the chances of the changed mood which might follow in the natural exasperation of defeat, he resolved to lay down for himself the course of action demanded by his present conviction of duty. He wrote on the 23d of August the following memorandum:

This morning, as for several days past, it seems exceedingly probable that this Administration will not be reelected. Then it will be my duty to so coöperate with the President-elect as to save the Union between the election and the inauguration;

¹ Weed to Seward, August 22. MS.

² Copied from the MS.

³ We copy from the MS. diary of one of the President's secretaries under date of November 11, 1864, the following passage relating to this incident: "At the meeting of the Cabinet to-day the President took out a paper from his desk and said: 'Gentlemen, do you remember last summer I asked you all to sign your names to the back of a paper of which I did not show you the inside? This is it. Now, Mr. Hay, see if you can open this without tearing it.' He had pasted it up in so singular a style that it required some cutting to get it open. He then read this memorandum [given in the text above]. The President said: 'You will remember that this was written at the time, six days before the Chicago nominating convention, when as yet we had no adversary and seemed to have no friends. I then solemnly resolved on the course of action indicated in

as he will have secured his election on such ground that he cannot possibly save it afterwards."²

He then folded and pasted the sheet in such manner that its contents could not be read, and as the Cabinet came together he handed this paper to each member successively, requesting them to write their names across the back of it. In this peculiar fashion he pledged himself and the Administration to accept loyally the anticipated verdict of the people against him, and to do the utmost to save the Union in the brief remainder of his term of office. He gave no intimation to any member of the Cabinet of the nature of the paper they had signed until after his triumphant reelection.³

The Democratic convention was finally called to meet in Chicago on the 29th of August. Much was expected from the strength and the audacity which the peace party in the North-west had recently displayed, and the day of the meeting of the convention was actually chosen by rebel emissaries in Canada and their agents in the Western States for an outbreak which should effect that revolution in the North-west which was the vague and chimerical dream that had been so long cherished and caressed in Richmond and Toronto.

About the time of the adjournment of Congress the Democratic members of that body issued an address to their party, which, when read after twenty-five years, shows how blinded by partisan passion these intelligent and well-meaning gentlemen, neither better nor worse in most respects than the rest of their fellow-citizens, had become. They charged in effect that there were only two classes of people supporting the Government—those who were making money out of the war, and the Radical abolitionists; and they called upon the indefinite abstraction which they named "the country" to throw out of office the administration of a Government under favor of which these two classes of men "nestle in power and gratify their unholy greed and their detestable passions." The party of the Union—that is to say, the majority of the people of the country—is

this paper. I resolved in case of the election of General McClellan, being certain that he would be the candidate, that I would see him and talk matters over with him. I would say, "General, the election has demonstrated that you are stronger, have more influence with the American people, than I. Now let us together, you with your influence and I with all the executive power of the Government, try to save the country. You raise as many troops as you possibly can for this final trial, and I will devote all my energies to assist and finish the war."

"Seward said, 'And the general would have answered you, "Yes, yes"; and the next day when you saw him again and pressed these views upon him he would have said, "Yes, yes," and so on forever, and would have done nothing at all.'

"At least," said Lincoln, 'I should have done my duty and have stood clear before my own conscience.'

called in this address "a nightmare of corruption and fanaticism which is pressing out its very existence." The most remarkable feature of this singular document is its assumption that the people who were trying to save the Union and to reëstablish its authority were influenced only by sentimental doctrines and the wild passions of fury and vengeance. "We do not decry theory," these congressmen gravely said; "but we assert that statesmanship is concerned mainly in the domain of the practical, and that in the present imperfect condition of human affairs it is obliged to modify general ideas and adapt them to existing conditions." They called upon the country to sustain this calm and philosophic view of the functions of statesmanship, "to bring the sound elements of society to the surface," to "purge the body politic of its unhealthy elements," and to substitute in places of public trust "just and broad-minded, pure and liberal men, in the place of radicals and corruptionists." This being done, they promised the millennium.

The Democratic National Convention came together at the time appointed, but it is by no means sure that any real and permanent advantage had been gained by the delay. The scheme of the American Knights to inaugurate on that day their counter-revolution had, by the usual treachery of some of its members, been discovered and guarded against by a strong show of force in the city of Chicago, and its execution was postponed until the day of the November election. No great approach to harmony, on the subject of peace or war, had been made in the two months of observation and skirmishing which the managers had allowed themselves. The only manner in which the peace men and the war Democrats could arrive at an agreement was by mutual deception. The war Democrats, led by the delegation from New York, were working for a military candidate; and the peace Democrats, under the redoubtable leadership of Mr. Vallandigham, who had returned from Canada and was allowed to remain at large by the half-contemptuous and half-calculated lenity of the Government he defied, bent all their energies to a clear statement of their principles in the platform.

Mr. August Belmont, a German by birth and the representative of the Rothschilds' banking-house, called the delegates to order, informing them that the future of the Republic rested in their hands. "Four years of misrule," he said, "by a sectional, fanatical, and corrupt party have brought our country to the very verge of ruin." He gravely stated, expecting it to be believed, and apparently believing it himself, that the "results of such a calamity as the reëlection of Mr. Lincoln must be the

utter disintegration of our whole political and social system amidst bloodshed and anarchy." This German banker promised the convention that the American people would rush to the support of their candidate and platform, "provided you will offer to their suffrage a tried patriot." This vague reference to McClellan was greeted with applause from the Eastern delegates. Mr. Belmont said: "We are here, not as war Democrats nor as peace Democrats, but as citizens of the great Republic"; and he named as temporary chairman Mr. William Bigler, formerly governor of Pennsylvania. Mr. Bigler made a brief speech charging upon the Republicans all the woes of the country, and saying that "the men now in authority, because of the feud which they have so long maintained with violent and unwise men of the South, and because of a blind fanaticism about an institution of some of the States in relation to which they have no duties to perform and no responsibilities to bear, are rendered incapable of adopting the proper means to rescue our country from its present lamentable condition."

The usual committees were appointed, and Mr. Vallandigham was presented by his State delegation as a member of the committee on platform. Several resolutions were offered in open convention—one by Washington Hunt of New York suggesting a convention of the States; one by Mr. Price of Missouri for a demonstration in favor of the freedom and purity of the elective franchise; and one by Mr. Long of Ohio, a furious advocate of peace, who had attained the honor of censure by the Congress of the United States, suggested that a committee proceed forthwith to Washington to demand of Mr. Lincoln the suspension of the draft until after the election.

Governor Seymour of New York was chosen permanent chairman of the convention. He made a long and eloquent speech full of abstract devotion to the Union and of denunciation of all the measures that had hitherto been taken to save it. "This Administration," he said, "cannot save this Union if it would. It has, by its proclamations, by vindictive legislation, by displays of hate and passion, placed obstacles in its own pathway which it cannot overcome, and has hampered its own freedom of action by unconstitutional acts." But Mr. Seymour did not mourn as one without hope. He continued: "If the Administration cannot save this Union, we can. Mr. Lincoln values many things above the Union; we put it first of all. He thinks a proclamation worth more than peace; we think the blood of our people more precious than the edicts of the President. . . . We demand no conditions for the restoration of our Union. We are shackled

with no hates, no prejudices, no passions." And so,—as he imagined,—without prejudices, without hatred, and without passion, he went on denouncing his Government and the majority of his fellow-citizens with eloquent fury to the end of his speech. His address was greeted at its close with loud applause, not unmingled with calls on the part of the peace men for Vallandigham. He did not respond at that moment, but the most weighty utterance of the convention was his, nevertheless—the second resolution of the platform, reported by the chairman, Mr. Guthrie of Kentucky. There had been on the organization of the committee a contest between Guthrie and Vallandigham for the chairmanship. "Through the artifices of Cassidy, Tilden, and other New York politicians,"¹ Mr. Guthrie of Kentucky received twelve votes to eight for Vallandigham; but whatever managers may accomplish, the strongest man with the strongest force behind him generally has his way, and when the committee got to work Vallandigham carried too many guns for Guthrie. He wrote, to use his own words,

the material resolution of the Chicago platform, and carried it through the sub-committee and the general committee in spite of the most desperate and persistent opposition on the part of Cassidy and his friends, Mr. Cassidy himself in an adjoining room laboring to defeat it.

This Vallandigham resolution is the only one in the platform worth quoting. All the rest was a string of mere commonplaces declaring devotion to the Union, denouncing interference of the military in elections, enumerating the illegal and arbitrary acts of the Government, expressing the sympathy of the convention with soldiers and sailors and prisoners of war. But the resolution written by Mr. Vallandigham and by him forced upon his party—

Resolved, That this convention does explicitly declare, as the sense of the American people, that after four years of failure to restore the Union by the experiment of war, during which, under the pretense of a military necessity, or war power higher than the Constitution, the Constitution itself has been disregarded in every part, and public liberty and private right alike trodden down and the material prosperity of the country essentially impaired, justice, humanity, liberty, and the public welfare demand that immediate efforts be made for a cessation of hostilities, with a view to an ultimate convention of the States, or other peaceable means, to the end that at the earliest practicable moment peace may be restored on the basis of the Federal Union of the States.

It is altogether probable that this distinct proposition of surrender to the Confederates

¹ Letter of Vallandigham to the New York "News," Oct. 22, 1864.

might have been modified or defeated in full convention if the war Democrats had had the courage of their convictions; but they were so intent upon the nomination of McClellan that they considered the question of platform as of secondary importance, and these fatal resolutions were therefore adopted without debate, and the convention passed to the nomination of candidates. General McClellan was nominated by Mr. Stockton of New Jersey, followed by S. S. Cox of Ohio; Mr. Saulsbury of Delaware nominated Mr. Powell of Kentucky, who with compliments declined; Mr. Stuart, in behalf of the peace faction from Ohio, nominated Mr. Seymour of Connecticut; and Mr. Wickliffe of Kentucky raised the specter of the old-fashioned Democracy in the convention by nominating ex-President Pierce in a speech more amusing than effective. McClellan received 174 votes, but before the result was declared the vote was raised upon revision to 202; Seymour received a little more than one-tenth of that number. Mr. Vallandigham, who had taken possession of the convention through his platform, now adopted the candidate also, and put the seal of his sinister approval upon General McClellan by moving that his nomination be made unanimous, which was done with great cheering. Mr. Wickliffe, the comic old man of the convention, then offered a resolution that General McClellan, immediately after his inauguration in March next, should "open Abraham Lincoln's prison doors and let the captives free." Mr. Guthrie and Mr. Pendleton were the principal names mentioned in the first ballot for Vice-President, but on the second New York changed from Guthrie to Pendleton, and, all the other candidates being withdrawn, he was nominated, unanimously. Pendleton came to the stand and briefly addressed the convention, accepting the nomination and promising to continue "faithful to those principles which lay at the very bottom of the organization of the Democratic party." The convention did not adjourn as usual *sine die*. On the motion of Mr. Wickliffe, who said that "the delegates from the West were of the opinion that circumstances might occur between now and the 4th of March next which would make it proper for the Democracy of the country to meet in convention again," the convention resolved to "remain as organized, subject to be called at any time and place that the Executive National Committee shall designate." The motives of this action were not avowed. It was taken as a significant warning that the leaders of the Democratic party held themselves ready for any extraordinary measures which the exigencies of the time might provoke or invite.

The New Yorkers had, however, the last

word. Mr. Seymour, as Chairman of the Convention, was chairman of the committee to inform McClellan of his nomination, and before he wrote the letter Atlanta had fallen, the tide had turned, and the winds of popular opinion, which had seemed stagnant throughout the midsummer, now began to blow favorably to the national cause. The committee, in their letter dated a week after the convention adjourned, said :

Be assured that those for whom we speak were animated with the most earnest, devoted, prayerful desire for the salvation of the American Union, and preservation of the Constitution of the United States, and that the accomplishment of these objects was the guiding and impelling motive in every mind ; and we may be permitted to add that their purpose to maintain the Union is manifested in their selection, as their candidate, of one whose life has been devoted to its cause, while it is their earnest hope and confident belief that your election will restore to our country Union, Peace, and Constitutional Liberty.

The general answered on the same date.¹ He also felt with the New York politicians that the poison of death was in the platform of the convention ; that if he accepted it pure and simple the campaign was hopeless ; his only possible chance for success was in his war record ; his position as a candidate on a platform of dishonorable peace was no less desperate than ridiculous. He, therefore, in his letter of acceptance renewed his assurances of devotion to the Union, the Constitution, the laws, and the flag of his country.

The reëstablishment of the Union [he said] in all its integrity is, and must continue to be, the indispensable condition in any settlement. So soon as it is clear, or even probable, that our present adversaries are ready for peace, upon the basis of the Union, we should exhaust all the resources of statesmanship practiced by civilized nations and taught by the traditions of the American people, consistent with the honor and interests of the country, to secure such peace, reëstablish the Union, and guarantee for the future the constitutional rights of every State. The Union is the one condition of peace. We ask no more. Let me add, what I doubt not was, although unexpressed, the sentiment of the convention, as it is of the people they represent, that when any one State is willing to return to the Union it should be received at once, with a full guarantee of all its constitutional rights. . . . But the Union must be preserved at all hazards. I could not look in the face of my gallant comrades of the army and navy, who have survived so many bloody battles, and tell them that their labors and the sacrifice of so many of our slain and wounded brethren had been in vain, that we had abandoned that Union for which we have so often periled our lives. A vast majority of our people, whether in the army and navy or at home, would, as I would, hail with un-

bounded joy the permanent restoration of peace, on the basis of the Union under the Constitution without the effusion of another drop of blood. But no peace can be permanent without union.

Having thus absolutely repudiated the platform upon which he was nominated, he coolly concluded, "Believing that the views here expressed are those of the convention and the people you represent, I accept the nomination."

Upon this contradictory body of doctrine McClellan began his campaign. The platform of the convention was the law, his letter was the gospel, and the orators of the party might reconcile the two according to their sympathies or their ingenuity. The Ohio wing had no hesitation in taking its stand. "The Chicago platform," said Mr. Vallandigham, speaking from the same platform with Mr. Pendleton on the 17th of September, "enunciated its policy and principles by authority and was binding upon every Democrat, and by them the Democratic Administration must and should be governed. It was the only authorized exposition of the Democratic creed, and he repudiated all others." And a week afterwards² he went still further and specifically contradicted General McClellan.

The two principal points in his letter of acceptance to which I object were brought before the committee. The one containing the threat of future war was unanimously rejected. The other, to the effect that until the States and people of the South had returned to the Union we would not exhaust these arts of statesmanship, as they are called, received but three votes in that committee, though presented almost in the very words of the letter itself.

CONSPIRACIES IN THE NORTH.

OPPOSITION to the Government by constitutional means was not enough to gratify the vehement and resentful feelings of those Democrats in the North whose zeal for slavery seemed completely to have destroyed in their hearts every impulse of patriotism. They were ready to do the work of the Southern Confederacy in the North, and were alone prevented by their fear of the law. To evade the restraints of justice and the sharp measures of the military administration, they formed throughout the country secret associations for the purpose of resisting the laws, of embarrassing in every way the action of the Government, of communicating information to the rebels in arms, and in many cases of inflicting serious damage on the lives and property of the Unionists. They adopted various names in different parts of the country, but the designation adopted by the society having the largest number of lodges in the different States was the "Knights of the Golden Circle." As fast as one name was discovered and pub-

¹ Sept. 8, 1864.

² At Sidney, Ohio, Sept. 24.

lished it was cast aside and another adopted, and the same organization with the same membership appeared successively under the name we have mentioned and that of "The Order of American Knights," "The Order of the Star," and the "Sons of Liberty." These secret organizations possessed a singular charm to uneducated men, independent of their political sympathies; and this attraction, combined with the fact that they could not in plain daylight inflict any injury upon the Government, drove many thousands of the lower class of Democrats into these furtive lodges. It is impossible to ascertain, with any degree of exactness, the numbers of those who became affiliated with the orders. The numbers claimed by the adepts vary widely. A million was not infrequently the membership of which they boasted. Mr. Vallandigham asserted, in a public speech, that the organized body numbered half a million. Judge Holt, in his official report, accepted this aggregate as being something near the truth. The heaviest force was in Illinois and in Indiana; in Ohio they were also very numerous, and in the border States of Kentucky and Missouri. Their organization was entirely military; the State lodges were commanded by major-generals, the congressional districts by brigadiers, the counties by colonels, and the townships by captains. They drilled as much as was possible under the limitations of secrecy; they made large purchases of arms. General Carrington estimated that 30,000 guns and revolvers were brought into Indiana alone, and the adherents of the order in the State of Illinois were also fully armed. In the month of March, 1864, it was estimated that the entire armed force of the order capable of being mobilized for active service was 340,000 men.¹ It is altogether probable that this estimate was greatly exaggerated; and even if so large a number had been initiated into the order, their lack of drill, discipline, and moral character rendered them incapable at any time of acting as an army. The order was large enough at least to offer the fullest hospitality to detectives and to Union men who volunteered to join with the purpose of reporting what they could to the authorities; so that the Government was speedily put in possession of the entire scheme of organization, with the names of the prominent officers of the order and written copies of their constitutions, oaths, and books of ritual. The constitutions of secret societies are generally valuable only as illustrations of human stupidity, and these were no exception to the rule. Their declaration of principles begins with this lucid proposition: "All men are endowed by the Creator with certain rights; equal

as far as there is equality in the capacity for the appreciation, enjoyment, and exercise of those rights." The institution of slavery receives the approval of this band of midnight traitors in the following muddled and brutal sentences:

In the divine economy no individual of the human race must be permitted to encumber the earth, to mar its aspects of transcendent beauty, nor to impede the progress of the physical or intellectual man, neither in himself nor in the race to which he belongs. Hence a people . . . whom neither the divinity within them nor the inspirations of divine and beautiful nature around them can impel to virtuous action and progress onward and upward, should be subjected to a just and humane servitude and tutelage to the superior race until they shall be able to appreciate the benefits and advantages of civilization.

They also declare in favor of something they imagine to be the theory of State rights, and also the duty of the people to expel their rulers from the Government by force of arms when they see good reason. "This is not revolution," they say, "but solely the assertion of State rights." Had they been content to meet in their lodges at stated times and bewilder themselves by such rhetoric as this there would have been no harm done; but there is plenty of evidence that the measures they adopted to bring what they called their principles into action were of positive injury to the national welfare. One of their chief objects was the exciting of discontent in the army and the encouraging of desertion; members of the order enlisted with the express purpose of inciting soldiers to desert with them; money and citizens' clothing were furnished them for this purpose; lawyers were hired to advise soldiers on leave not to go back and to promise them the requisite defense in the courts if they got into trouble by desertion. The adjutant-general of Indiana, in his report for 1863, says that the number of deserters and absentees returned to the army through the post of Indianapolis alone, during the last month of 1862, was about 2600. The squads of soldiers sent to arrest deserters were frequently attacked in rural districts by these organized bodies; the most violent resistance was made to the enrollment and the draft. Several enrolling officers were shot in Indiana and in Illinois; about sixty persons were tried and convicted in Indiana for conspiracy to resist the draft.² A constant system of communication with the rebels in arms was kept up across the border; arms, ammunition, and, in some instances, recruits, were sent to aid the Confederates; secret murders and assassinations were not unknown; the plan of establishing a North-western Confederacy in hostility to the East and in alliance with the Southern Confederacy was the favor-

¹ Report of Judge-Advocate General Holt.

² *Ibid.*

ite dream of the malignant and narrow minds controlling the order. The Government wisely took little notice of the proceedings of this organization. It was constantly informed of its general plans and purposes; the Grand Secretary of the order in Missouri made a full confession of his connection with it. In August a large number of copies of the ritual of the order of American Knights were seized in the office of D. W. Voorhees, a prominent Democratic member of Congress at Terre Haute.¹ A private soldier in the Union army, named Stidger, had himself initiated into the order, and with infinite skill and success rose to a high position in it, becoming Grand Secretary for the State of Kentucky. Thus thoroughly informed of the composition and the purposes of the society, the Government was constantly able to guard against any serious disturbances of the public peace; and whenever the arrest of any of the ringleaders was determined upon, the evidence for their conviction was always overwhelming.

The fullest light was thrown upon the organization and plans of these treasonable orders by the trials of certain conspirators in Indiana in the autumn of 1864. We will make no reference to the testimony of Government detectives who joined the conspiracy with the purpose of revealing its secrets. It is sufficient to quote the unwilling and unquestionably truthful statements of members of the order, brought into court by subpoena. William Clayton,² a farmer of Warren County, Illinois, testified that he was initiated a member of the order of American Knights "at a congregation formed in the timber"; he took a long and bombastic oath, the only significant part of which was the pledge to take up arms if required, in the cause of the oppressed against usurpers waging war against a people endeavoring to establish a government for themselves in accordance with the eternal principles of truth; this, he testified, bound him to assist the South in its struggle for independence. He said he understood the purpose of the order was primarily to beat the Republicans at the polls, and that force of arms was to be resorted to in case of necessity; that they contemplated a rebel invasion in support of these objects; that the understanding was that in case the rebels came into Illinois, they and the brethren of this organization were to shake hands and be friends; that they were to give aid and assistance to the invaders; that death was the penalty for divulging the secrets of the order. Other members testified that they took an oath providing that in case of treachery

they were to be drawn and quartered, their mangled remains to be cast out at the four gates. When these dwellers in prairie villages were asked what they meant by "the four gates," they said they did not know. Clayton further said their objects were "to resist the conscription or anything else that pushed them too hard."³ Another farmer said he joined "because he had been a Democrat all his life"; another, that he "went in out of curiosity"—and this was doubtless a motive with many. In communities where there is little to interest an idle mind these secret mummeries possess a singular attraction. The grips, the passwords, the emblems, formed a great part of whatever temptation the order offered to the rural conspirators. Their favorite cognizance was the oak; not on account of any civic association, but because the word was formed of the initials of the name, "Order of American Knights." Their grand hailing cry of distress was "Oak-houn," the last syllable taken from the name of the South Carolina statesman whose principles they imagined they were putting in operation.

By far the most important witness for the Government was Horace Heffren, a lawyer of Salem, Indiana, a man high in the councils of the order. He was indicted for treasonable practices, and concluded to make a clean breast of it.⁴ He gave an apparently truthful account; detailed the scheme for forming a North-western Confederacy, or, if that failed, for joining the Southern army; the State Government of Indiana was to be seized, Governor Morton was to be held for a hostage or killed. He confirmed the story of the general uprising which was to have taken place on the 16th of August in conjunction with a rebel raid from Cumberland Gap, the great feature of which was the liberation of the Confederate prisoners in Illinois, Ohio, and Indiana. But when the time came the rebels did not, and the conspirators lacked heart for the fight. Vallandigham, the supreme head of the order, was too far away for intelligent and efficient direction. The whole conspiracy was shabby and puerile, although it included many editors and politicians of local standing. They were not all cravens; some of them stood up stoutly before the military commission and defended the cause of the South. "I assert," said one, "that the South has been fighting for their rights as defined in the Dred Scott decision."⁵ But there was very little display of heroism when the time of trial arrived. There was much that was ignoble and sordid; a scramble for the salaried places, a rush to handle the money provided for arms; one man intriguing for a place on the staff "because he had a sore leg"; a cloud of small politicians, who hardly knew whether

they were members or not; "they had heard a ritual read, but paid little attention to it"; they were anxious to be members if the scheme succeeded, and to avoid the law if it failed.

The President's attitude in regard to this organization was one of good-humored contempt rather than anything else. Most of the officers commanding departments, however, regarded the machinations of these dark-lantern knights as a matter of the deepest import. Governor Morton was greatly disquieted by their work in his State, and sent a telegram to the President in January, 1863,¹ expressing his fear that the legislature, when it met, would pass a joint resolution to acknowledge the Southern Confederacy and urge the North-west to dissolve all constitutional relation with the New England States. But when the legislature came together, although it evinced a hearty good-will in giving the governor all the worry and annoyance possible, it took no such overt step of treason as he feared.

Their action was, indeed, sufficiently violent and contumacious. The House of Representatives insolently returned his message to him and passed a resolution accepting in its stead that of the Democratic governor of New York. Measures were introduced to take the military power of the State away from the governor and to confer it upon the Democratic State officers. To defeat these unconstitutional proceedings the Republicans adopted the equally irregular course of abandoning the legislature and leaving it without a quorum; in consequence of which no appropriation bills were passed, and the governor had to appeal to the people of the State for means to carry on the government. These were furnished in part by the voluntary offerings of banks, private corporations, and individuals; but needing a quarter of a million dollars for an emergency, he came to Washington and obtained it from the General Government, by virtue of a statute of July 31, 1861, which set aside two millions for the purchase of munitions of war to be used in States in rebellion or "in which rebellion is or may be threatened." In view of the revolutionary attitude of the legislature, and the known treasonable organization and purposes of the Sons of Liberty, the Secretary of War decided that Indiana was so "threatened," and made Governor Morton a disbursing officer to the amount of 250,000 dollars. It is related that Morton remarked, as he took the warrant, "If the cause failed, they would be called heavily to account for this"; to which Stanton replied, "If the cause fails, I do not wish to live."²

³ Rosecrans to Lincoln, June 22, 1864. MS.

General Rosecrans, commanding in Missouri, was thrown into something like panic by the doings of the Knights, and Governor Yates of Illinois shared fully in his trepidation. In June, 1864, the governor and the general joined in an earnest demand that the President should order Colonel Sanderson, of Rosecrans's staff, to Washington for a personal interview upon matters of overwhelming importance. The President was unwilling that either Rosecrans or his subordinate should come to Washington upon this errand, under the temptation to magnify his office by alarming reports. He therefore concluded to send one of his own private secretaries to St. Louis to see precisely what were the facts which had thrown the general commanding into such a state of consternation. Rosecrans then repeated the entire story of the organization of the order of American Knights and the Golden Circle, facts which were already well known to the President and the Secretary of War; but the immediate cause of his excitement was the expected return of Vallandigham, which, he said, was in accordance with the resolution adopted by the order at the convocation held in Windsor, Canada. General Rosecrans thought that his return would be the signal for the rising of the Knights throughout the North-west, and for serious public disorders.

The President, on receiving his secretary's report, declined to order Sanderson to Washington; and in reference to Rosecrans's strict injunctions of secrecy he said that a secret confided on the one side to half a million Democrats, and on the other to five governors and their staffs, was hardly worth keeping. He said the Northern section of the conspiracy merited no special attention, being about an equal mixture of puerility and malice.

General Rosecrans, after he was convinced that the President would not overrule the Secretary of War by ordering Colonel Sanderson to Washington, concluded at last to send his voluminous report in manuscript, accompanying it with the following letter, which we copy as giving in few words the results of his researches:³

Since Major Hay's departure, bearing my letter about the secret conspiracy we have been tracing out, we have added much information of its Southern connexions, operations, uses, and intentions.

We have also found a new element in its workings under the name of McClellan minute men.

The evident extent and anti-national purposes of this great conspiracy compel me to urge the consideration of what ought to be done to anticipate its workings and prevent the mischief it is capable of producing again upon your attention.

Therefore, I have sent the report of Colonel Sanderson with the details of evidence covering a thousand pages of foolscap, by himself, to be carried or forwarded to you by safe hands.

That report and its accompanying papers show,

1. That there exists an oath-bound secret society, under various names but forming one brotherhood both in the rebel and loyal States, the objects of which are the overthrow of the existing national Government and the dismemberment of this nation.

2. That the secret oaths bind these conspirators to revolution and all its consequences of murder, arson, pillage, and an untold train of crimes, including assassination and perjury, under the penalty of death to the disobedient or recusant.

3. That they intend to operate in conjunction with rebel movements this summer to revolutionize the loyal States, if they can.

4. That Vallandigham is the Supreme Commander of the Northern wing of this society, and General Price, of the rebel army, the Supreme Commander of the Southern wing of the organization. And that Vallandigham's return was a part of the programme well understood both North and South, by which the revolution they propose was to be inaugurated.

5. That this association is now and has been the principal agency by which spying and supplying rebels with means of war are carried on, between the loyal and rebel States, and that even some of our officers are engaged in it.

6. That they claim to have 25,000 members in Missouri, 140,000 in Illinois, 100,000 in Indiana, 80,000 in Ohio, 70,000 in Kentucky, and that they are extending through New York, New Jersey, Pennsylvania, Delaware, and Maryland.

Besides such prominent and general facts, the names of members, mode of operating, and other details appear fully, showing what a formidable power and what agencies for mischief we have to deal with.

With this synopsis of the report it is respectfully submitted with the single remark—that whatever orders you may deem best to give, it must be obvious to your Excellency that leading conspirators like Chas. L. Hunt and Dr. Shore of St. Louis, arrested for being implicated in the association, cannot be released without serious hazard to the public welfare and safety.

From first to last these organizations were singularly lacking in energy and initiative. The only substantial harm they did was in encouraging desertions and embarrassing and resisting the officers concerned in the enrollment and the draft. The toleration with which the President regarded them, and the immunity which he allowed them in their passive treason, arose from the fact that he never could be made to believe that there was as much crime as folly in their acts and purposes. Senator McDonald reports that the President once said to him when he was asking the pardon of some of these conspirators condemned by military commission, "Nothing can make me believe that one hundred thousand Indiana Democrats are disloyal." They were sufficiently disloyal to take all manner of oaths against the Government; to be ready in their secret councils to declare they were ready to shed the last drop

of their blood to abolish it; to express their ardent sympathy with its enemies and their detestation of its officers and supporters. But this was the limit of their criminal courage. Shedding the last drop of one's blood is a comparatively easy sacrifice—it is shedding the first drop that costs; and these rural Catalines were never quite ready to risk their skins for their so-called principles. All the attempts against the public peace in the free States and on the Northern border proceeded not from the resident conspirators, but from desperate Southern emissaries and their aiders and abettors in the British provinces, and even these rarely rose above the level of ordinary arson and highway robbery.

The case of the *Chesapeake* was one of the most noteworthy of these incidents. Two Canadians named Braine and Parr resolved, in the latter part of 1863, to start on a privateering enterprise on their own account. Parr, though born in Canada, had lived for several years in Tennessee; and Braine, who had been arrested and confined in Fort Warren, had been released from that prison on his claim, presented by the British minister, that he was a British subject. Their sole pretension to Confederate nationality was the possession of commissions in the Confederate navy prepared *ad hoc*. They enlisted a dozen men, all British subjects, and purchased in New York the arms and equipment they required for their enterprise, and took passage on board the United States merchant steamer *Chesapeake*, which left New York on the 5th of December, bound for Portland, Maine. On the morning of the 8th they assaulted the officers and crew of the *Chesapeake*, capturing her after a struggle of only a few minutes' duration, killing one and wounding two of her officers.¹ They took the *Chesapeake* into the Bay of Fundy and there delivered her into the hands of a man calling himself Captain Parker of the Confederate navy, who afterwards turned out to be an Englishman whose name was Vernon Locke, and who had come out in a pilot boat to meet her. Feeling now secure in the possession of her new nationality, she went to Sambro Harbor, Nova Scotia, to receive the fuel and supplies necessary to enable her to prosecute her voyage to the Confederate States. While she lay there, the United States gun-boat *Ella* and *Annie* entered the harbor; and, says Mr. Benjamin, whose righteous indignation was evidently aroused by the proceedings, "with that habitual contempt of the territorial sovereignty of Great Britain and of her neutral rights which characterizes our enemies," recaptured the prize and left the British port with the

¹ Benjamin to Holcombe, Feb. 15, 1864. MS. Confederate Archives.

purpose of taking the *Chesapeake* to the United States; but meeting on the way a superior officer of the United States navy, the captain of the *Ella and Annie* was ordered by him to return to Halifax to restore the *Chesapeake* to the jurisdiction of Great Britain. This was done, and the few pirates who had been captured in the *Chesapeake* were delivered up. The case was taken at once into the courts and was promptly and properly decided, so far as the vessel was concerned, by her delivery to her rightful owners; but before this decision was made known at Richmond, the Confederate Government, seeing in the case a possibility of profit to their cause, dispatched to Halifax Professor J. P. Holcombe, said to be the most accomplished international lawyer in the Confederacy, to take charge of the case. During the professor's transit, however, by way of Wilmington and Bermuda, the case had come to its natural close, and on arriving at Halifax he found his occupation gone. He was compelled to report to the department that every man concerned in the capture of the *Chesapeake*, with the single exception of the Canadian-Tennessean just mentioned, was a British subject.¹ He also found that the captors had been guilty of stealing and peddling the cargo and pocketing the proceeds, and that the antecedents of the so-called Confederate officers involved were most disreputable. He seemed greatly disappointed to find that this gang of murderers and thieves were not high-minded and honorable gentlemen, and therefore concluded to make no demand upon the British authorities for the restitution of the stolen ship. He remained for some time in Halifax enjoying the hospitality of the colonial sympathizers with the South, and then proceeded to join the other secession emissaries in Canada who were engaged in equally congenial enterprises.

The principal agent of the Confederates in Canada was Jacob Thompson, late Secretary of the Interior in the administration of Buchanan, whose dishonorable administration of that important office has already been mentioned. He had sunk into appropriate insignificance, even among his own associates, after the war began; had been captured by General Grant on the Mississippi River in a ridiculous attempt at playing the spy under a flag of truce,² and, after being released with contemptuous forbearance, had gone to Canada, under instructions from the rebel Government, to do what damage he could in connection with the refugees and escaped prisoners who fringed the Northern frontier during the last two years of the war. He immediately placed himself in communication with the disloyal Democrats of the Northern States, and through them and a band of refugees who at once gathered about

him in Canada for employment began a series of operations which, for their folly no less than their malignity, would be incredible if they were not recorded in the report which Thompson himself, with amazing moral obtuseness, wrote of his mission on the 3d of December, 1864.³ He states that immediately on his arrival in Canada he put himself in communication with the leading spirits of the Sons of Liberty. He was received among them with cordiality, and the greatest confidence was extended to him. They became convinced, during the summer of 1864, that their efforts to defeat the election of Mr. Lincoln were hopeless. "Lincoln had the power," he said, "and would certainly reflect himself," and there was no hope but in force. The belief was entertained and freely expressed that by a bold, vigorous, and concerted movement the three great North-western States of Illinois, Indiana, and Ohio could be seized and held. This would naturally involve the accession of Missouri and Kentucky to the Confederacy, and this, in sixty days, would end the war. It was resolved to hold a series of peace meetings in Illinois for the purpose of preparing the public mind for such a revolt. The first of these meetings was to be held at Peoria, and "to make it a success," says Thompson, "I agreed that so much money as was necessary would be furnished by me." It was held, and was decidedly successful. But he pretends that the Niagara Falls conference and Lincoln's letter, "To whom it may concern," shook the country to such an extent that the leading politicians conceived the idea that Lincoln might be beaten at the ballot box on such an issue. "The nerves of the leaders," he says, "thereupon began to relax." The seizure of arms at Indianapolis, the arrests of leading supporters at Louisville, the unsympathetic attitude of Mr. McDonald, the Democratic candidate for governor of Indiana, all tended to discourage the ringleaders; and the day fixed for the revolt, which was to have been the 16th of August, passed by with no demonstration. "The necessity of pandering to the military feeling which resulted in the nomination of McClellan totally demoralized," says Thompson, "the Sons of Liberty."

Convinced that there was nothing to be expected from the coöperation of Northern Democrats, Thompson fell back once more upon his gang of escaped prisoners and other loose fish in Canada. The next scheme adopted by him was ingenious and audacious and not without possibilities of success. He determined to cap-

³ Thompson to Benjamin, Dec. 3, 1864. MS. Confederate Archives.

ture the war steamer *Michigan*, plying on Lake Erie, and with her to liberate the rebel prisoners on Johnson's Island; the prisoners were then to march upon Cleveland, attacking that town by land and by water, and thence march through Ohio to gain Virginia. A man named Cole, formerly one of Forrest's troopers, was sent round the lakes as a deck passenger to inform himself thoroughly of the approaches to the harbors, the depositories of coal, the stations and habits of the *Michigan*. He performed his duty with energy and efficiency and with great satisfaction and amusement to himself. He invented an oil corporation of which he was president and board of directors, opened an office in Buffalo, and used a good deal of Thompson's money in making the acquaintance of the officers of the *Michigan*. The 19th of September was the day fixed for the attempt upon the *Michigan*, Cole having contrived to have himself invited to dine with the officers of the vessel on that day. A Virginian named John Yates Beall was assigned the more difficult and dangerous part of the enterprise. He, with twenty-five Confederates, took passage from Sandwich, in Canada, on board the *Philo Parsons*, an unarmed merchant vessel plying between Detroit and Sandusky; they were all armed with revolvers, and had no trouble in taking possession of the steamer and robbing the clerk of what money he had. They soon afterwards fell in with another unarmed steamer, the *Island Queen*, scuttled her, and then steered for Sandusky Bay to join Cole and the boats he had prepared in an attack upon the *Michigan*. But the plan miscarried. The military, aware of Cole's intentions, had captured him; and Beall, missing the signals which had been agreed upon, did not dare to proceed in the enterprise alone. He therefore returned to Sandwich, and his crew scattered through Canada. Beall was not content with the failure of this enterprise, and later in the season, in the middle of December, he was caught in the State of New York near the Suspension Bridge in an attempt to throw a passenger train from the West off the railroad track for the purpose of robbing the express company.¹ This was the third attempt which he had made to accomplish this purpose. He was in citizen's dress, engaged in an act of simple murder and robbery, yet he imagined that the fact that he had a Confederate commission in his pocket would secure him against punishment in case of capture. He was tried by court martial and sentenced to death. Mr. Jefferson Davis took the same view of the talismanic character of the Confederate commission upon which Beall had relied, and issued a manifesto assuming

the responsibility of the act and declaring that it was done by his authority. There was great clamor in regard to the case, and many people of all parties pleaded with Mr. Lincoln to commute the sentence of Beall. A petition in this cause was signed by most of the Democratic members of the House of Representatives and by many Republicans. But the Judge-Advocate General reported that "Beall, convicted upon indubitable proof as a spy, guerrillero, outlaw, and would-be murderer of hundreds of innocent persons traveling in supposed security upon one of our great thoroughfares, fully deserved to die a felon's death, and the summary enforcement of that penalty was a duty which government owed to society."

Loath as Mr. Lincoln was at all times to approve a capital sentence, he felt that in this case he could not permit himself to yield to the promptings of his kindly heart. He sent a private message to General Dix, saying he would be glad if he would allow Beall a respite of a few days to prepare himself for death, but positively declined to interfere with the sentence, and Beall was hung in the latter part of February. The Virginia Senate made his case their own, and recommended, by resolutions of the 3d of March, the adoption of such steps as might be necessary in retaliation for the offense committed by the authorities of the United States.

Under Thompson's orders the large prison camps in the North had been thoroughly examined with a view of effecting the release of the Confederate prisoners confined in them. But the attempts at different places were given up for one reason or another, and it was resolved to concentrate all the efforts of the conspirators upon Camp Douglas at Chicago. A large number of rebels and their sympathizers were gathered together in that city, and the plan for taking the prison camp with its ten thousand Confederate prisoners was matured, and was to have been put into execution on the night of election day, taking advantage of the excitement and the crowds of people in the streets to surprise the camp, release and arm the prisoners of war, cut the telegraph wires, burn the railway stations, and seize the banks and stores containing arms and ammunition. It was hoped that this would excite a simultaneous rising of the Sons of Liberty throughout the State, and result in the release of the Confederate prisoners in other camps. But the plot, as usual, was betrayed by repentant rebels who were in the most secret councils of the conspirators. Shortly after midnight on the 7th of November, Colonel Sweet, commanding Camp Douglas, trapped in their various hiding-places and took prisoners all the leaders of the contemplated attack, among them Morgan's ad-

¹ General Orders No. 17, Feb. 21, 1865. Case of J. Y. Beall.

jutant-general, St. Leger Grenfell, Colonel Marmaduke, a brother of the rebel general, the commanding officer of the Sons of Liberty in the State, and several other officers of the rebel army who were escaped prisoners. In one house they found two cartloads of revolvers loaded and capped, two hundred stands of muskets loaded, and a large amount of ammunition.¹

Mr. Thompson hesitated at nothing which he thought might injure the people of the United States. Any villain who approached him with a project of murder and arson was sure of a kindly reception. "Soon after I reached Canada," he says, "a Mr. Minor Major visited me and represented himself as an accredited agent from the Confederate States to destroy steamboats on the Mississippi River, and that his operations were suspended for want of means. I advanced to him \$2000 in Federal currency, and soon afterwards several boats were burned at St. Louis, involving an immense loss of property to the enemy. . . . Money has been advanced to a Mr. Churchill of Cincinnati to organize a corps for the purpose of incendiarism in that city. I consider him a true man; and although as yet he has effected but little, I am in constant expectation of hearing of effective work in that quarter." Another miscreant of the same type, named Colonel Martin, who brought an unsigned letter from Jefferson Davis to Thompson, expressed a wish to organize a corps to burn New York City. "He was allowed to do so," says Mr. Thompson, "and a most daring attempt has been made to fire that city, but their reliance on the Greek fire has proved a misfortune. It cannot be depended on as an agent in such work. I have no faith whatever in it, and no attempt shall hereafter be made under my general directions with any such material." A party of eight persons, mostly escaped prisoners, were sent to New York to destroy that city by fire. One of them named Kennedy was captured, tried, and hung. Before his execution he confessed that he had set fire to four places: Barnum's Museum, Lovejoy's Hotel, Tammany Hotel, and the New England House; "the others," he said, with a certain sense of wrong, "only started fires where each was lodging, and then ran off. Had they all done as I did, we would have had thirty-two fires and played a huge joke on the fire department." This stupid tool of baser men escaped to Canada; but relying, as Beall did, on his commission as a captain in the Confederate army, he started once more for the Confederacy by way of Detroit, and was arrested by detectives in the railway station. He had taken on a new name and a new

character; and in his trial, among the evidence he brought forward which he thought would insure his immunity, was a pledge given to the transportation agent in Canada to return with all due diligence to the Confederacy. Even after his sentence he had no realization of the crime he had committed. He wrote to the President arguing, as a matter of law, that death was too severe a penalty for arson, and suggesting that there was no need of punishing him as an example, since the execution of Beall had already served that purpose.

If Mr. Thompson is to be believed it would appear that his adherents in Canada were not altogether under discipline, and that they sometimes took the opportunity to indulge in occasional burglaries and murders on their own account. He said in his official report that he knew nothing of the St. Albans affair until after it was over. This was a crime of unusual atrocity, and bade fair, for the moment, to involve the most serious consequences. A party of Confederate thieves, some twenty or thirty strong, came over the border from Canada on the 19th of October, and entering the village of St. Albans in Vermont, they robbed the banks of some fifty thousand dollars, accompanying this crime with entirely uncalled for cruelty, firing upon the unarmed citizens, killing one man and wounding three; they also burned one of the hotels in the place. The *razzia* was over in less than an hour, and the band, who had stolen horses enough in the vicinity to mount them all, immediately returned to Canada. It seemed at first as if the Canadian authorities intended to arrest the criminals and hold them for punishment, and Mr. Seward, two days afterwards, expressed his gratification to the British legation at Washington for this prompt and apparently satisfactory proceeding. As it turned out, however, he spoke too quickly, for Judge Coursol discharged the criminals from custody and restored to them the money they had stolen. As soon as this intelligence reached New York, General Dix, outraged beyond endurance by the iniquity of the act, without consultation with the Government issued an order directing all military commanders on the frontier in case of further acts of depredation and murder to shoot down the murderers, or the persons acting under commissions from the rebel authorities at Richmond; and further instructing them that if it should be necessary, with a view to their capture, to cross the border between the United States and Canada, to pursue them wherever they might take refuge, and on no account to surrender them to the local authorities, but to send them to the headquarters of the Department of the East for trial and punishment by martial law. The

¹ Colonel Sweet's report to General Cook, Nov. 7, 1864.

President, who felt no less keenly than General Dix the wrong and outrage committed by these rebel murderers and the Canadian authorities who seemed to be protecting them, nevertheless declined to allow any subordinate to embroil the country with a foreign nation in this way;¹ and in spite of General Dix's vehement defense of what he called "the right of hot pursuit," the President required him to revoke the instructions quoted. The British Government directed Lord Monck, the Governor-General of Canada, to be guided by the decision of the proper legal authorities in the provinces whether persons in custody ought or ought not to be delivered up under the treaty of extradition, saying that in case the decision should have been that they ought to be delivered, the Government would approve Lord Monck's acting on this decision; and in case of the contrary decision, the Government suggested that they should be put upon trial on the charge of misprision and violation of the royal prerogative by levying war from her Majesty's dominions against a friendly power. The criminals whom Judge Coursol had released were again captured; the Canadian Parliament reproved the action of Coursol and suspended him from office. The prisoners having been again arrested, the matter was heard before Mr. Justice Smith of Montreal, who again discharged them, on the ground that Young, the ringleader of the party, bore a commission in the Confederate army;² that Mr. Clement C. Clay, an associate of Thompson's as Confederate commissioner, was aware of Young's purpose and gave him a check for four hundred dollars for his expenses. "The attack on St. Albans," he said, "must therefore be regarded as a hostile expedition, undertaken and carried out under the authority of the so-called Confederate States by one of the officers of their army." The prisoners, he held, had not acquired any domicile in Canada nor lost their national character by their residence there. The Government of Canada was not satisfied with this pettifogging plea and again arrested the prisoners; but the war having now come to an end, the case was languidly prosecuted and the criminals received no punishment. The Canadian authorities, however, desiring to maintain amicable relations with the United States and to do substantial justice in the case in spite of the courts, refunded the fifty thousand dollars stolen by the raiders, and an attempt

was made in the provincial legislature to pass a law which should prevent the setting on foot of such unlawful expeditions from Canadian soil in the future.

LINCOLN AND THE CHURCHES.

IN a conflict which was founded upon the quickened moral sense of the people it was not strange that the Government received the most earnest support from the churches. From one end of the loyal States to the other all the religious organizations, with few exceptions, moved by the double forces of patriotism and religion, ranged themselves upon the side of the Government against the rebellion. A large number of pulpits in the North had already taken their places as tribunes for the defense of popular freedom, and it was from them that, at the menace of war, the first cry of danger and of defiance rang out. Those ministers who had for years been denouncing the encroachments of slavery did not wait for any organized action on the part of their colleagues, but proclaimed at once in a thousand varying tones that peace was "a blessing worth fighting for." The more conservative churches were but little in the rear of the more advanced. Those who had counseled moderation and patience with the South on account of the divided responsibility for slavery which rested on both halves of the nation speedily felt the sense of release from the obligations of brotherhood when the South had repudiated and renounced them, and rallied to the support of the insulted flag with an earnestness not less ardent, and more steadily trustworthy, than that of the original antislavery clergy. As the war went on, and as every stage of it gave a clearer presage of the coming destruction of slavery, the deliverances of the churches became every day more and more decided in favor of the national cause and the downfall of human bondage. To detail the thousand ways in which the churches testified their support of the national cause, to give even an abstract of the countless expressions of loyalty which came from the different religious bodies of the country, would occupy many volumes; we can only refer briefly to a few of the more important utterances of some of the great religious societies.

In all the church conventions which met after the President's preliminary proclamation of the 22d of September, 1862, that act of liber-

1 This order of General Dix gave great satisfaction at Richmond. An official of the Confederate War Department entered in his diary December 19: "General Dix orders his military subordinates to pursue any rebel raiders even into Canada and bring them over. So light may come from that quarter. A war with England would be our peace."

2 There is an entry in "A Rebel War Clerk's Diary,"

December 15, which would indicate that Young's commission was spurious or prepared after the fact: "A letter from G. N. Sanders . . . asks copies of orders, to be certified by Secretary of War, commanding the raid into Vermont, the burning, pillaging, etc., to save Lieutenant Young's life. I doubt if such written orders are in existence—but no matter."

ation was greeted with the heartiest expressions of approval and support. The Baptist Convention of New York declared that "While we see with the profoundest sorrow thousands of husbands, fathers, brothers, and sons falling on the battlefield, considering the interests to be preserved and transmitted to future generations we cannot regard the sacrifice of treasure and of life too much for the object to be secured." They denounced "human slavery as the procuring cause of the rebellion now raging among us"; they declared that "the spirit of the age, the safety of the country, and the laws of God require its entire removal." The American Baptist Missionary Union had, in the spring of 1862, adopted with unanimity resolutions characterizing "the war now waged by the National Government to put down the unprovoked and wicked rebellion that has risen against us, and to establish anew the reign of order and of law, as a most righteous and holy one, sanctioned alike by God and all right-thinking men"; expressing their opinion that "the principal cause and origin of this attempt to destroy the Government has been the institution of slavery," and that a safe, solid, and lasting peace could not be expected short of its complete overthrow. The next year they declared that the developments of the past year had only tended to deepen their conviction of these truths, which they solemnly reiterated and affirmed. They referred to the "fatal and suicidal blows" inflicted upon slavery by the slaveholders' rebellion, and said that "for thus overruling what appeared at first to be a terrible national calamity, to the production of results so unexpected and glorious, their gratitude and adoration are due to that wonderful God who still maketh the wrath of men to praise him, while the remainder of wrath he restrains." They approved the President's proclamation and the acts of Congress abolishing slavery in the District of Columbia and the Territories, and hailed the dawn of that glorious day when "liberty shall be proclaimed throughout all the land unto all the inhabitants thereof." In severe and dignified language they expressed their gratitude for whatever measure of sympathy they had received from abroad, but at the same time declared that the United States asked no assistance from other nations, and would brook no intervention or interference. In October, 1864, at a meeting of the American Board of Foreign Missions, in Worcester, Massachusetts, the venerable Albert Barnes was granted leave to introduce, without reference to a committee, a series of resolutions expressing the hearty sympathy of the Board in the efforts to suppress the rebellion; hoping for the deliverance of the world from the oppression of slavery; and

gratefully acknowledging "the divine interposition in the success which has attended the arms of the nation as an indication that we shall again be one people, united under one glorious Constitution, united in our efforts to spread the Gospel around the world." These resolutions were adopted unanimously with great enthusiasm, the audience rising to their feet and singing the national anthem.

The State conferences of the Congregational churches passed similar resolutions from time to time. As a specimen of all we give an abstract of the resolutions of the Conference of Massachusetts in 1864. "The chief hope of rebellion is in the sympathy and distraction of a divided North, and the surest and shortest way to peace is not to recall our armies and to relax our grasp upon the enemy, but to present a united and loyal front and an unconquerable determination to prosecute the war till the power of the Government meets no longer armed resistance." They disclaim any feeling of despondency or of impatience, "believing that God is on our side," and interpret hopefully the divine delays which have "led to more and more radical and precious resolutions and deliverances," and assert roundly and with undaunted courage that "there can be no effectual reëstablishment of the national authority by any negotiation which confesses the inability of the Government to subdue rebellion by force of arms and proposes terms of peace to rebels still flying the flag of defiance."

It was not only in New England that the Congregational churches maintained this stern and patriotic attitude. The General Association of New York, New Jersey, and Pennsylvania came boldly forward in the autumn of 1864, and, discarding all pretenses of non-partisanship or neutrality, declared for the reëlection of Mr. Lincoln in these unqualified words:

As the momentous issues of this long and deadly contest are approaching their solution in a combined struggle in the field and at the polls, we will sustain with our votes the brave and noble men who are defending our liberties with their lives, and will animate our fellow-citizens by every consideration of religious hope and duty, of devotion to country and to liberty, to make the decision of the people on the 8th of November final and fatal to the hopes of traitors in arms and conspirators in political councils. Our hopes for the preservation of our liberties as a nation, and for the complete emancipation of the African race in the South, depend, under God, upon sustaining the Government in upholding the integrity of the Union throughout all the trials and doubts of the war, and in that policy which looks to the abandonment of slavery as the condition of permanent union and peace.

The German Reformed Synod passed ear-

nest resolutions urging upon their clergy and laity to continue to labor and pray for the success of the Government in its efforts to suppress the rebellion, and to restore peace and union. These resolutions were reiterated from year to year in every State where this church had an organization in existence. The Lutheran General Synod which met at York in 1864 passed resolutions denouncing slavery, setting forth "the necessity of its forcible suppression, the righteousness of the war which is waged by the Government of the United States for the maintenance of the national life, and the duty of every Christian to support it by the whole weight of his influence, his prayers, and his efforts." The Moravian Synod also denounced slavery and considered an earnest support of the Constitution and the laws a religious duty, and expressed its willingness "to render all the aid in its power to subdue unrighteous rebellion, and extend the rightful authority of the Government over every portion of our country."

One of the most weighty utterances of any religious organization during the war was that of the General Assembly of the Presbyterian Church of the United States, which met at Columbus, Ohio, in the spring of 1862. Important as was this deliverance from the sanction which it carried, as the utterance of one of the most considerable religious organizations in the country, it was no less significant as the work of the Rev. R. J. Breckinridge of Kentucky, who held a position second to none in the border States in character, in political influence, and in social connections. This remarkable paper began with the praise of peace, but, in striking contrast to the many craven pleas based upon this theme during the war, it threw the blame of the violation of peace upon the disloyal and traitorous attempt to overthrow the National Government by military force.

This whole treason [the report continues], rebellion, anarchy, fraud, and violence, is utterly contrary to the dictates of natural religion and morality, and is plainly condemned by the revealed will of God. It is the clear and solemn duty of the National Government to preserve, at whatever cost, the National Union and Constitution, to maintain the laws in their supremacy, to crush force by force, and to restore the reign of public order and peace to the entire nation by whatever lawful means are necessary thereunto. And it is the bounden duty of the people who compose this great nation, each one in his several place and degree, to uphold the Federal Government and every State Government and all persons in authority, whether civil or military, in all their lawful and proper acts, unto the end hereinbefore set forth.

The report denounces treason, rebellion, and anarchy as sinful, and gravely deprecates the

conduct of the Southern synods in encouraging them. The concluding section says:

We record our gratitude to God for the prevailing unity of sentiment and general internal peace which have characterized the Church in the States that have not revolted, embracing a great majority of ministers, congregations, and people under our care. It may still be called with emphasis a loyal, orthodox, and pious church, and all its acts and works indicate its right to a title so noble. Let a spirit of quietness, of mutual forbearance, and of ready obedience to authority, both civil and ecclesiastical, illustrate the loyalty, the orthodoxy, and the piety of the Church. . . . In the name and by the authority of the Lord Jesus we earnestly exhort all who love God or fear his wrath to turn a deaf ear to all counsels and suggestions that lead toward a reaction favorable to disloyalty, schism, or disturbance, either in the Church or in the country. In all these respects we must give account to God in that great day, and it is in view of our own dread responsibility to the Judge of quick and dead that we now make this deliverance.

This austere and unqualified declaration of loyalty, this denunciation of a treason which was at that hour lifting a defiant and almost triumphant head through a great part of the Union, was adopted by a majority which, under the circumstances, is surprising. Two hundred and six ministers and ruling elders voted for it; only twenty voted against it; less than one in ten failed to rise to that height of moral and political duty. The keynote thus early set governed this powerful Church throughout the war. Its General Assembly, meeting at Newark, New Jersey, in 1864, adopted a long and most energetic report, declaring that

the time has at length come, in the providence of God, when it is his will that every vestige of human slavery among us should be effaced, and that every Christian man should address himself with industry and earnestness to his appropriate part in the performance of this great duty. . . . Under the influence of the most incomprehensible infatuation of wickedness, those who are most deeply interested in the perpetuation of slavery have taken away every motive for its further toleration.

An attempt was made at the meeting of the Synod of New York to censure this action of the General Assembly of the Church, but it was voted down by a majority of six to one. The General Assembly of the United Presbyterian Church passed equally strong and uncompromising resolutions:

Believing it to be a duty especially incumbent on the Church to let her light shine, we trust that all the preachers of the Gospel, of every denomination, will hear and obey God's voice, now calling upon them louder than ever before to open their mouth in behalf of the dumb.

The Reformed Presbyterian Church, commonly called the "Scotch Covenanters," ad-

dressed the President by committee in 1862, beginning with the proud boast that "this Church, true to its high lineage and ancient spirit, does not hold within its pale a single secessionist or sympathizer with rebellion in these United States." They congratulated him upon the antislavery measures of the Government and urged him,

by every consideration drawn from the Word of God and the present condition of our bleeding country, not to be moved from the path of duty on which he has so auspiciously entered, either by the threats or blandishments of the enemies of human progress, nor the fears of timid friends.

Two years later they met and declared that—

It is the duty of the Church of Christ to encourage and sustain the Government of the country in all that they do for the honor of God, the freedom of the enslaved, the mitigation of the inevitable evils of war, and the preservation, at all hazards, of the national life, integrity, and power.

The New School Presbyterians also lifted their voice with equal energy and clearness against the rebellion and in favor of the Government. At their General Assembly each year during the war they adopted resolutions of the most uncompromising loyalty, and on several occasions addressed the President personally with messages full of ardent devotion and high encouragement. They said:

Since the day of your inauguration, the thousands of our membership have followed you with unceasing prayer, besieging the throne of grace in your behalf. . . . When we look at the history of your administration hitherto, and at the wonderful way in which the people have been led under your guidance, we glorify God in you.¹

A year later² they embodied their sentiments of loyalty to the Union and opposition to slavery in a forcible series of resolutions, which were brought to Washington and presented to the President by a committee of which Mr. John A. Foote, a brother of the admiral, was chairman. The President replied:

It has been my happiness to receive testimonies of a similar nature from, I believe, all denominations of Christians. . . . This to me is most gratifying, because from the beginning I saw that the issues of our great struggle depended on the divine interposition and favor. . . . As a pilot, I have used my best exertions to keep afloat our Ship of

State, and shall be glad to resign my trust at the appointed time to another pilot more skillful and successful than I may prove. In every case and at all hazards, the Government must be perpetuated. Relying as I do upon the Almighty Power, and encouraged as I am by these resolutions which you have just read, with the support which I receive from Christian men, I shall not hesitate to use all the means at my control to secure the termination of this rebellion, and will hope for success.

Of the firm and loyal attitude of the Protestant Episcopal Church this resolution of the Convention of the Diocese of Pennsylvania may serve as an example:

We hereby declare our unfaltering allegiance to the Government of the United States, and we pledge it our willing devotion and service; and as a body of Christians we will pray that, in God's own time and way, this rebellion may be put down; that oppression and slavery in all its forms may be done away; that freedom of body and mind, political and religious, may everywhere prevail; that the emancipated negroes, whom God in his providence is committing to our care, may be the objects of our liberal and Christian regard and instruction; that war may soon cease throughout all our borders, and that our now lacerated country may again be so united that from the lakes on the North to the gulf on the South, and from the Atlantic to the Pacific, there shall be one Union, one Government, one flag, one Constitution, the whole culminating in that higher glory which shall make this nation Emmanuel's land—a mountain of holiness and a dwelling-place of righteousness.

No church was more ready or powerful in its support of the Government than the widespread Methodist Episcopal Church. From the beginning it took ground firmly and unanimously for the national cause; the Western armies especially were filled with the young and vigorous fighting men of that connection. To a committee of the General Conference of 1864, the President said:

Nobly sustained as the Government has been by all the churches, I would utter nothing which might in the least appear invidious against any. Yet, without this, it may fairly be said that the Methodist Episcopal Church, not less devoted than the best, is, by its greatest numbers, the most important of all. It is no fault in others that the Methodist Church sends more soldiers to the field, more nurses to the hospitals, and more prayers to heaven than any other. God bless the Methodist Church. Bless all the churches, and blessed be God, who in this our great trial giveth us the churches.³

eloquently for the union of the country. Ames, as patriotic as wise, has not hesitated to lend his aid to our unfortunate prisoners in Richmond and to give his sons to the army. James has found no narrow field for his philanthropic heart in the labors of the Christian Commission. All our church papers and periodicals have given an uncompromising, zealous, persistent support to the Government, and have thrown the whole weight of their influence, intelligent as it was potent, on the side of the Union.⁴

¹ Cincinnati, May 22, 1862. McPherson, "History of the Rebellion," p. 469.

² Philadelphia, May 27, 1863.

³ In an address delivered by Dr. J. P. Newman in New Orleans, March 23, 1864, he makes this well-founded claim: "The Methodist Church has been unanimous and zealous in the defense of the Union. Her bishops, her ministers, and her laity have nobly responded to the call of their country in this hour of her peril. The voice of Simpson has been heard pleading

These energetic expressions of loyalty were not confined to the Protestant churches alone. Archbishop Hughes in New York gave his great personal and ecclesiastical influence to the support of the Government, and Archbishop Purcell of Cincinnati took occasion, in recommending the observance of Thanksgiving Day, 1864, to his people, to urge upon them the cause of the country.

We confess [he says] that it has greatly pained us to hear that certain rash, irreverent, and thoughtless men of our communion have denounced and abused the Government, the Administration, and their abettors. Now God commands us to bless, and curse not. And when bad men cursed the supporters of the Government, did they not reflect that they cursed the more than hundreds of thousands of Catholic voters and Catholic soldiers of our army who defend that Government in the field? Did they not reflect that its downfall would be hailed with acclamation by our own hereditary oppressors across the ocean? Did they reflect that if political salvation is ever to reach a far-distant and beloved island, it must come to it from these United States which they would sever?

"The Administration did not commence this war," the archbishop said, and went on in his address to contrast the conduct of the National Government with that of the rebellion.

It is time [he said, in conclusion] that all should rally around the powers which the Apostle commanded us to obey, and thus, presenting an undivided front to the enemy, reestablish the Union, without which there can be no panacea, present or prospective, for the ills we suffer.

The Society of Friends occupied a peculiar relation to the war. By the two leading tenets of their religion they were drawn in different ways; they were intensely opposed both to slavery and to war. While, therefore, they were ready to favor every act of Mr. Lincoln's administration which promised to abridge the power and shorten the duration of slavery, they were placed in a cruel dilemma when called upon to take part in the only measures by which the country could be preserved, and the predominance of a government based upon slavery prevented. The result was as might readily be imagined. Human nature asserted itself in the midst of that serious and tranquil communion as everywhere else, and the Friends acted each according to his individual bent. In the words of the address of the Yearly Meeting of 1864:

Many of our young men, overcome by the spirit of war, rushed into the conflict where some of them found an early death, some purchased their release from the draft by the payment of money; others remained steadfast to their faith in the hour of trial, thereby subjecting themselves to the penalty for desertion.

Those who entered the army illustrated in their plain speech and quiet courage the virtues of their lineage no less than those who, refusing to bear arms, bore uncomplainingly all that the law could inflict upon them by way of punishment for their contumacy. But the Society, as a body, remained outwardly true to both articles of its creed and protested constantly against both slavery and the war which it caused. The Yearly Meeting of 1862 greeted with hearty approval the abolition of slavery in the District of Columbia, while praying that the effusion of blood might be stayed; and that of 1864, while "appreciating the difficulties that surround those upon whom rests the responsibility of guiding the nation through the awful perils of civil war," and declining to "enter into judgment with those who differed" from them, still persisted in their dignified petition to the President and to Congress that they might not be compelled to offend their own consciences by complying with the law requiring military service.

Mr. Lincoln's attitude in relation to this question was especially delicate. Himself of Quaker ancestry, he felt a peculiar sympathy with their scruples, and yet he could not legally relieve them from their liabilities, and he clearly perceived the impolicy of recommending to Congress any specific measure of relief. He heard and answered their addresses with the greatest patience and respect, and intervened with his prerogative on occasions of peculiar hardship. We owe to these complications two or three letters, which strikingly exhibit his quick sympathies, his keen sense of justice, and his profound religious feeling. To the Quakers of Iowa, who had sent him an address through Senator Harlan, he wrote:

It is most cheering and encouraging for me to know that in the efforts which I have made, and am making, for the restoration of a righteous peace to our country, I am upheld and sustained by the good wishes and prayers of God's people. No one is more deeply than myself aware that without his favor our highest wisdom is but as foolishness, and that our most strenuous efforts would avail nothing in the shadow of his displeasure. It seems to me that if there be one subject upon which all good men may entirely agree, it is in imploring the gracious favor of the God of nations upon the struggle our people are making for the preservation of their precious birthright of civil and religious liberty.¹

To the Quakers of Rhode Island, in answer to a letter, he said:

Engaged as I am, in a great war, I fear it will be difficult for the world to understand how fully I appreciate the principles of peace inculcated in this letter and everywhere by the Society of Friends.²

¹ Lincoln to Iowa Quakers, Jan. 5, 1862. Unpub. MS.

² Letter to Dr. S. B. Toby, March 19, 1862. Lincoln, Unpublished MS.

But one of the most significant of the President's letters, in which he expresses with less than his usual reserve his idea of the moral and religious bearings of the great conflict, was written to Mrs. Gurney, the wife of the eminent English preacher of the Society of Friends, in the autumn of 1864. It shows in a singularly touching and instructive way how the ancestral faith of the Quaker survived in this son of a pioneer, commander-in-chief of a million of men engaged in one of the most destructive wars of modern times :

MY ESTEEMED FRIEND : I have not forgotten — probably never shall forget — the very impressive occasion when yourself and friends visited me on a Sabbath forenoon, two years ago ; nor has your kind letter, written nearly a year later, ever been forgotten. In all, it has been your purpose to strengthen my reliance on God. I am much indebted to the good Christian people of this country for their constant prayers and consolations, and to no one of them more than to yourself. The purposes of the Almighty are perfect, and must prevail, though we erring mortals may fail to accurately perceive them in advance. We hoped for a happy termination of this terrible war long before this ; but God knows best, and has ruled otherwise. We shall yet acknowledge his wisdom, and our own error therein. Meanwhile we must work earnestly in the best lights he gives us, trusting that so working still conduces to the great ends he ordains. Surely he intends some great good to follow this mighty convulsion, which no mortal could make, and no mortal could stay. Your people, the Friends, have had, and are having, a very great trial. On principle and faith, opposed to both war and oppression, they can only practically oppose oppression by war. In this hard dilemma, some have chosen one horn, and some the other. For those appealing to me on conscientious grounds, I have done, and shall do, the best I could and can, in my own conscience, under my oath to the law. That you believe this I doubt not, and believing it I shall still receive for our country and myself your earnest prayers to our Father in heaven.

Your sincere friend,

A. LINCOLN.

The most important agencies through which the mingled patriotism and religion of the country lent their assistance to the armies of the Union were the Sanitary Commissions and the Christian Commission. The former collected and disbursed not less than \$5,000,000 in cash and \$9,000,000 in supplies for the benefit of the armies in the field and the sick and wounded in the hospitals, while the Christian Commission raised some \$4,500,000, not only for this purpose, but also to extend to the soldiers the benefits and consolations of religion in cases where the overworked army chaplains found the complete fulfillment of these offices beyond their powers. The Sanitary Fairs throughout the country were remarkable exhibitions of the patriotism and philanthropy of the people. They were carried on to a great

extent by the women of the country, and the quickening of the national spirit by these concerted efforts was of more importance to the Union cause than even the vast sums of money which were produced ; though these were unprecedented in the annals of charity. The fair at New York realized \$1,300,000, nearly all of which was clear profit. On every great battlefield of the war, even before the thunder of the artillery was silenced, the trains of these great organizations were upon the field and their members were engaged caring for the wounded, bearing away the sick, praying with the dying, and receiving their last messages ; while in every village of the North gentle and patriotic women were constantly employed making ready the stores of luxuries and delicacies dispensed by charitable agents at the front.

In the work of these beneficent agencies the President took a profound interest. He frequently consulted with Dr. Bellows and Mr. Stuart as to the best means of carrying on their work. Being requested to preside at a meeting of the Christian Commission held in Washington on the 22d of February, 1863, he wrote :

While for reasons that I deem sufficient I must decline to preside, I cannot withhold my approval of the meeting and its worthy objects. Whatever shall be, sincerely and in God's name, devised for the good of the soldiers and seamen in their hard spheres of duty can hardly fail to be blessed. And whatever shall tend to turn our thoughts from the unreasoning and uncharitable passions, prejudices, and jealousies incident to a great national trouble such as ours, and to fix them on the vast and long-enduring consequences, for weal or for woe, which are to result from the struggle, and especially to strengthen our reliance on the Supreme Being for the final triumph of the right, cannot but be well for us all. The birthday of Washington and the Christian Sabbath coinciding this year, and suggesting together the highest interests of this life and of that to come, is most propitious for the meeting proposed.

The cause of the rebellion was adopted and carried on by the churches in the South, if not with more zeal and determination, at least with greater vehemence at the beginning than was shown by the religious organizations of the North. Even before the war began the State Convention of Baptists in Alabama¹ made haste to rush into secession, saying that " the Union had failed in important particulars to answer the purpose for which it was created," and that they held themselves " subject to the call of proper authority in defense of the sovereignty of Alabama, and of her right as a sovereignty to withdraw from the Union." Several of the Presbyterian Synods of the South went headlong into the rebellion before the close of the

¹ November, 1860.

year 1860, and others followed their example in the autumn meeting of 1861. They formed their General Assembly of the Southern Confederacy on the 4th of December of that year. Even before the inauguration of Mr. Lincoln the Protestant Episcopal Convention of several States formally withdrew from the Union, and that fiery soldier-priest Leonidas Polk, Bishop of Louisiana, commanded the clergy to shift their public prayers from the President of the United States to that of the Confederate States, and announced in a pastoral letter that "Our separation from our brethren of the Protestant Episcopal Church of the United States has been effected because we must follow our nationality. . . . Our relations to each other hereafter will be the relations we now both hold to the men of our mother church in England." Unable to restrain his ardor within the limits of the church militant, he exchanged his crozier for a sword and died by a cannon shot on the Georgia hills.

At the session of the first General Council of the Protestant Episcopal Church at Augusta an address was adopted congratulating the Church in the Confederate States upon the unity which existed in its councils, upon its promise of growth and expansion, and upon the fact that the leading minds of the new republic were of their own communion; they called upon the Church to make strenuous efforts in behalf of the slaves of the South, and gently advocated such an arrangement of their peculiar institution as not to violate the right of marriage among the blacks. "Hitherto," they say, "we have been hindered by the pressure of Abolitionists; now that we have thrown off from us that hateful and infidel pestilence, we should prove to the world that we are faithful to our trust, and the Church should lead the hosts of the Lord in this work of justice and mercy." Feeble efforts in this direction were made by churches in other communions in the South, but strong opposition was at once developed. In the Transylvania Presbytery it was argued that "Though the matter presented was one of undoubted grievance, involving a sin which ought to be purged away, yet, to prevent agitation in the Church at such a time of intense political strife, there must be no intermeddling," and a resolution in favor of the solemnization of matrimony among slaves was

laid upon the table, nearly every member of the Presbytery voting against it.¹

The Methodist Church in the South had separated from their brethren in the North fifteen years before the war on the question of slavery, and a portion of their clergy and laity when the war broke out naturally engaged in it with their accustomed zeal; but they were by no means unanimous, even within the seceding States, and the organization was virtually wrecked by the war.²

As the national authority began to be reëstablished throughout the States in rebellion, not the least embarrassing of the questions which generals in command were called upon to decide was that of the treatment of churches whose pastors were openly or covertly disloyal to the Union. There was no general plan adopted by the Government for such cases; in fact, it was impossible to formulate a policy which should meet so vast a variety of circumstances as presented themselves in the different regions of the South. The Board of Missions of the Methodist Church sent down some of their ablest ministers, with general authority to take charge of abandoned churches, and to establish in them their interrupted worship. The mission boards of other denominations took similar action, and the Secretary of War³ gave general orders to the officers commanding the different departments to permit ministers of the gospel bearing the commission of these mission boards to exercise the functions of their office and to give them all the aid, countenance, and support which might be practicable. But before and after these orders there was much clashing between the military and the ecclesiastical authorities, which had its rise generally in the individual temperaments of the respective generals and priests. There was an instance in one place where a young officer rose in his pew and requested an Episcopal minister to read the prayer for the President of the United States, which he had omitted. Upon the minister's refusal the soldier advanced to the pulpit and led the preacher, loudly protesting, to the door, and then quietly returning to the altar himself read the prayer—not much, it is to be feared, to the edification of the congregation. General Butler arrested a clergyman in Norfolk, and placed him at hard labor on the public works for disloyalty

¹ McPherson, "History of the Rebellion," p. 548.

² At a convention of loyal ministers and laymen of the Methodist Episcopal Church held at Knoxville, August, 1864, it was resolved that the loyal members of the conference have a just claim to all the church property; that they really constitute the Southern Methodist Episcopal Church, within the bounds of the Holston Conference; that they propose, at the earliest day practicable, to transfer the same to the Methodist Episcopal Church in the United States; and

that the ministers be instructed to propose to their congregations to unite *en masse* with that church. Their report states "that there are in the bounds of the Holston Conference 120 preachers known to be loyal, and 40 others supposed to be true to the Union; and it is thought, therefore, that the work of reconstruction will be easily accomplished." [McPherson, "History of the Rebellion," p. 546.]

³ March 10, 1864. McPherson, "History of the Rebellion," p. 522.

in belief and action; but the President reversed this sentence and changed it to one of exclusion from the Union lines.¹ The Catholic Bishop of Natchez having refused to read the prescribed form of prayer for the President, and having protested in an able and temperate paper against the orders of the commanding general in this regard, the latter ordered him to be expelled from the Union lines, although the order was almost immediately rescinded. General Rosecrans issued an order² in Missouri requiring the members of religious convocations to give satisfactory evidence of their loyalty to the Government of the United States as a condition precedent to their assemblage and protection. In answer to the protestations which naturally resulted from this mandate he replied that it was given at the request of many loyal church members, both lay and clerical; that if he should permit all bodies claiming to be religious to meet without question, a convocation of Price's army, under the garb of religion, might assemble with impunity and plot treason. He claimed that there was no hardship in compelling the members of such assemblages to establish their loyalty by oath and certificate, and insisted that his order, while providing against public danger, really protected the purity and the freedom of religion.

In the course of these controversies between secessionist ministers and commanding generals an incident occurred which deserves a moment's notice, as it led to a clear and vigorous statement from Mr. Lincoln of his attitude in regard to these matters. During the year 1862 a somewhat bitter discussion arose between the Rev. Dr. McPheeters of the Vine Street Church in St. Louis and some of his congregation in regard to his supposed sympathies with the rebellion. Looking back upon the controversy from this distance of time it seems that rather hard measure was dealt to the parson; for although, from all the circumstances of the case, there appears little doubt that his feelings were strongly enlisted in the cause of the rebellion, he behaved with so much discretion that the principal offenses charged against him by his zealous parishioners were that he once baptized a small rebel by the name of Sterling Price, and that he would not declare himself in favor of the Union. The difference in his church grew continually more flagrant and was entertained by interminable letters and statements on both sides, until at last the provost-marshal intervened, ordering the arrest of Dr. McPheeters, excluding him from his pulpit, and taking the control of his church out of the hands of its trustees. This action gave rise to extended comment, not

only in Missouri, but throughout the Union. The President, being informed of it, wrote³ to General Curtis disapproving the act of the provost-marshal, saying, in a terse and vigorous phrase, which immediately obtained wide currency, "The United States Government must not, as by this order, undertake to run the churches. When an individual in a church, or out of it, becomes dangerous to the public interest he must be checked; but let the churches, as such, take care of themselves." But even this peremptory and unmistakable command did not put an end to the discussion. Taking the hands of the government away from the preacher did not quench the dissensions in the church, nor restore the pastor to the position which he occupied before the war; and almost a year later some of the friends of Dr. McPheeters considered it necessary and proper to ask the intervention of the President to restore to him all his ecclesiastical privileges in addition to the civil rights which they admitted he already enjoyed. This the President, in a letter⁴ of equal clearness and vigor, refused to do. "I have never interfered," he said, "nor thought of interfering, as to who shall, or shall not, preach in any church; nor have I knowingly or believingly tolerated any one else to so interfere by my authority"; but he continues, "If, after all, what is now sought is to have me put Dr. McPheeters back over the heads of a majority of his own congregation, that too will be declined. I will not have control of any church on any side." The case finally ended by the exclusion of Dr. McPheeters from his pulpit by the order of the presbytery having ecclesiastical authority in the case.

In this wise and salutary abstention from any interference with the churches, which was dictated by his own convictions as well as enjoined by the Constitution, the President did not always have the support of his subordinates. He had not only, as we have seen, to administer occasional rebukes to his over-zealous generals, but even in his own Cabinet he was sometimes compelled to overrule a disposition to abuse of authority in things spiritual. Several weeks after he had so clearly expressed himself in the McPheeters case, he found, to his amazement, that the Secretary of War had been giving orders virtually placing the army in certain places at the disposition of a Methodist bishop for the enforcement of his ecclesiastical decrees. He addressed to Mr. Stanton a note of measured censure,⁵ which was followed by an order from the War Department explaining and modifying the more objectionable features of the

¹ Report of Judge-Advocate General, April 30, 1864.

² March 7, 1864. ³ Jan. 2, 1863. ⁴ Dec. 22, 1863.

⁵ "After having made these declarations in good faith and in writing, you can conceive of my embar-

former document. The Secretary explained that his action had no other intention than to furnish "a means of rallying the Methodist people in favor of the Union, in localities where the rebellion had disorganized and scattered them."¹ This explanation was not entirely satisfactory to the President, but he thought best to make no further public reference to the matter. Scarcely was this affair disposed of when a complaint was received from Memphis of some interference by the military with a church edifice there. Mr. Lincoln made upon the paper this peremptory indorsement: "If the military have military need of the church building, let them keep it; otherwise, let them get out of it, and leave it and its owners alone, except for the causes that justify the arrest of any one."² Two months later the President, hearing of further complications in the case, made still another order, which even at the risk of wearying the reader we will give, from his own manuscript, as illustrating not only his conscientious desire that justice should be done, but also the exasperating obstacles he was continually compelled to surmount, in those troubled times, to accomplish, with all the vast powers at his disposition, this reasonable desire.

I am now told that the military were not in possession of the building; and yet that in pretended execution of the above they, the military, put one set of men out of and another set into the building. This, if true, is most extraordinary. I say again, if there be no military need for the building, leave it alone, neither putting any one in or out of it, except on finding some one preaching or practicing treason, in which case lay hands upon him, just as if he were doing the same thing in any other building, or in the streets or highways.³

He at last made himself understood and his orders respected; yet so widespread was the tendency of generals to meddle with matters beyond their jurisdiction, that it took three years of such vehement injunctions as these to teach them to keep their hands away from the clergy and the churches.

Lincoln had a profound respect for every form of sincere religious belief. He steadily refused to show favor to any particular denomination of Christians; and when General Grant issued an unjust and injurious order against the Jews, expelling them from his department, the President ordered it to be revoked the moment it was brought to his notice.⁴

He was a man of profound and intense religious feeling. We have no purpose of at-

rassment at now having brought to me what purported to be a formal order of the War Department, bearing date November 30, 1863, giving Bishop Ames control and possession of all the Methodist churches in certain Southern military departments whose pastors have not been appointed by a loyal bishop or bishops, and ordering the military to aid him against any resistance

tempting to formulate his creed; we question if he himself ever did so. There have been swift witnesses who, judging from expressions uttered in his callow youth, have called him an atheist, and others who, with the most laudable intentions, have remembered improbable conversations which they bring forward to prove at once his orthodoxy and their own intimacy with him. But leaving aside these apocryphal evidences, we have only to look at his authentic public and private utterances to see how deep and strong in all the latter part of his life was the current of his religious thought and emotion. He continually invited and appreciated, at their highest value, the prayers of good people. The pressure of the tremendous problems by which he was surrounded; the awful moral significance of the conflict in which he was the chief combatant; the overwhelming sense of personal responsibility, which never left him for an hour—all contributed to produce, in a temperament naturally serious and predisposed to a spiritual view of life and conduct, a sense of reverent acceptance of the guidance of a Superior Power. From that morning when, standing amid the falling snowflakes on the railway car at Springfield, he asked the prayers of his neighbors in those touching phrases whose echo rose that night in invocations from thousands of family altars, to that memorable hour when on the steps of the Capitol he humbled himself before his Creator in the sublime words of the second inaugural, there is not an expression known to have come from his lips or his pen but proves that he held himself answerable in every act of his career to a more august tribunal than any on earth. The fact that he was not a communicant of any church, and that he was singularly reserved in regard to his personal religious life, gives only the greater force to these striking proofs of his profound reverence and faith.

In final substantiation of this assertion, we subjoin two papers from the hand of the President, one official and the other private, which bear within themselves the imprint of a sincere devotion and a steadfast reliance upon the power and benignity of an overruling Providence. The first is an order which he issued on the 16th of November, 1864, on the observance of Sunday:

The President, Commander-in-Chief of the Army and Navy, desires and enjoins the orderly observ-

which may be made to his taking such possession and control. What is to be done about it?" [Lincoln to Stanton, MS., Feb. 11, 1864.]

¹ Lincoln to Hogan, Feb. 13, 1864.

² Lincoln MS., March 4, 1864.

³ Lincoln MS., May 13, 1864.

⁴ War Records, Vol. XVII., pp. 424, 530.

ance of the Sabbath by the officers and men in the military and naval service. The importance for man and beast of the prescribed weekly rest, the sacred rights of Christian soldiers and sailors, a becoming deference to the best sentiment of Christian people, and a due regard for the Divine will, demand that Sunday labor in the Army and Navy be reduced to the measure of strict necessity. The discipline and character of the national forces should not suffer, nor the cause they defend be imperiled, by the profanation of the day or name of the Most High. "At this time of public distress [adopting the words of Washington in 1776] men may find enough to do in the service of their God and their country without abandoning themselves to vice and immorality." The first General Order issued by the Father of his Country after the Declaration of Independence indicated the spirit in which our institutions were founded and should ever be defended. "The General hopes and trusts that every officer and man will endeavor to live and act as becomes a Christian soldier, defending the dearest rights and liberties of his country."¹

The date of this remarkable order leaves no possibility for the insinuation that it sprang from any political purpose or intention. Mr. Lincoln had just been reëlected by an overwhelming majority; his party was everywhere triumphant; his own personal popularity was unbounded; there was no temptation to hypocrisy or deceit. There is no explanation of the order except that it was the offspring of sincere conviction. But if it may be said that this was, after all, an exoteric utterance, spring-

¹ General McDowell used to tell a story which illustrates Mr. Lincoln's Sabbatarian feeling. The President had ordered a movement which required dispatch, and in his anxiety rode to McDowell's headquarters to inquire how soon he could start. "On Monday morning," said McDowell; "or, by pushing things, perhaps Sunday afternoon." Lincoln, after a moment's thought, said, "McDowell, get a good ready and start Monday." [Herman Haupt, MS. Memoirs.]

ing from those relations of religion and good government which the wisest rulers have always recognized in their intercourse with the people, we will give one other document, of which nothing of the sort can be said. It is a paper which Mr. Lincoln wrote in September, 1862, while his mind was burdened with the weightiest question of his life, the weightiest with which this century has had to grapple. Wearied with all the considerations of law and of expediency with which he had been struggling for two years, he retired within himself and tried to bring some order into his thoughts by rising above the wrangling of men and of parties, and pondering the relations of human government to the Divine. In this frame of mind, absolutely detached from any earthly considerations, he wrote this meditation. It has never been published. It was not written to be seen of men. It was penned in the awful sincerity of a perfectly honest soul trying to bring itself into closer communion with its Maker.

The will of God prevails. In great contests each party claims to act in accordance with the will of God. Both *may* be and one *must* be wrong. God cannot be *for* and *against* the same thing at the same time. In the present civil war it is quite possible that God's purpose is something different from the purpose of either party; and yet the human instrumentalities, working just as they do, are of the best adaptation to effect his purpose. I am almost ready to say that this is probably true; that God wills this contest, and wills that it shall not end yet. By his mere great power on the minds of the now contestants, he could have either *saved* or *destroyed* the Union without a human contest. Yet the contest began. And having begun, he could give the final victory to either side any day. Yet the contest proceeds.

TO A PAINTER. (J. A. B.)

POET, whose golden songs in silence sung
 Thrill from the canvas to the hearts of men,—
 Sweet harmonies that speak without a tongue,
 Melodious numbers writ without a pen,—
 The great gods gifted thee and hold thee dear;
 Placed in thy hand the torch which genius lit,
 Touched thee with genial sunshine, and good cheer,
 And swift heat lightnings of a charming wit
 Whose shafts are ever harmless, though so bright;
 Gave thee of all life's blessings this, the best,—
 The true love of thy kind,—for thy delight.
 So be thou happy, poet-painter blest,
 Whose gentle eyes look out, all unaware,
 Beneath the brow of Keats, soft-crowned with shadowy hair.

Celia Thaxter.

WITH ENGRAVINGS BY THE AUTHOR.

FROM a friend and fellow-craftsman, who was the owner and inventor of a camping-car, a small company of wood-engravers had received invitations to a novel camping-out excursion. Hungering for the woods and fields we hurried away, each by himself, as opportunity offered, to seek the unknown regions of Hockanum, near Northampton, Massachusetts.

Night had come before I reached Northampton, and as no one met me at the station, I went no farther that night. But I took the road again at an early hour the next morning, and rode through a mysterious land where the fog hid all but the gray roadway under the feet of our horse, whose head and ears, almost lost in the fog, stretched outward in the distance in an alarming manner.

For fully two miles we sped on across a level sandy road without seeing a solitary object, animate or inanimate, until we came at last to a clump of trees close to the narrow roadway, and then, with a sudden dip down a sandy bank, I found myself on the shore of the Connecticut River. Before me was a rickety-looking gang-plank reaching from the sand to a flat-bottomed and open scow. This was Hockanum ferry. By the roadside and in reach from the carriage was a tin horn, or trumpet, hanging upon a stake, like an extinguisher upon a candle, and a blast upon this instrument is regarded as a peremptory summons by the ferryman.

The ferryman and his assistant soon appeared, and we pushed out upon the mysterious waste. I could see nothing beyond the gray and steam-

ing water, and was glad when we grounded upon the sand. From the ferry it was but a short walk up to the tavern.

Standing for a moment hesitatingly upon the piazza, after repeated knocking at the open doorway, which brought no response, and straining my eyes at the fog beyond, I saw coming out of the dimness the outline of a barn and, taking shape gradually, the ponderous and portly form of a man, who was engaged in greasing the axles of a wagon. The fog so narrowed and circumscribed the visible world that what remained was of immense importance to me, and the presence of mine host, whom I found this man to be, was hailed with pleasure. He explained that my friends were in camp upon the mountain right above us, and he pointed over his shoulder up towards the omnipresent screen of the fog, shutting out mountain and the blue heavens beyond. But he said he was going to the camp soon, and we made our way to the house, where I found a surprisingly good breakfast awaiting me.

After our pleasant repast Edwards was ready to go to the camp, and we went to the doorway. Walking out upon the piazza, another and an entirely different world was before me. I could hardly believe my eyes. Such a revelation—light, brilliancy, sweetness, everywhere. Out of a moving, vapory atmosphere rushed swiftly as a swallow's flight bits of blue sky and fragments of mountain.

The cozy old hotel, sitting calmly and peacefully by the highway, with its well-worn drive to the hospitable entrance; the heavy and

comfortable arm-chairs upon the piazza; the curious watering-trough under an apple tree on the opposite side of the road; the fields stretching away up the slope; and, finally, off towards the East, the thin gray silhouette of Mount Holyoke—all made a beautiful picture. The sun was still behind Holyoke, and its rays reached only a portion of the mountain and the foothills. A point where

lily gracefully raised its golden chalice, opening to catch the early sunbeams.

Nearer the wheelway and upon the outer edges of the public road, where the plowshare never disputes their right to the soil, grew a perfect tangle of wild-flowers, a "ribbon border" which no landscape gardener could match in beauty with all the choice plants which the floriculturists can supply. There rose

THE LILY POND.

the sun touched into life every treetop, and the still fleeing remnants of vapor gave motion, grace, and beauty to every object over which their trembling shadows passed, was a group of trees which came down or projected below the main line of the forest. Silvered by the light in which they were bathed, they seemed to rush joyously out from the dimness of the mist, if not with hand-clapping and laughter, yet with rustle of leaves and song of bird.

Then I thought of Kingsley somewhere up there in his car. I knew he could tell me all about the mysteries of those woods, and I sprang with eagerness into the wagon beside my portly landlord and we were away.

For a few hundred yards we kept the main road through the dewy and fragrant meadow, which stretched away in soft undulations of verdure, flicked and bespangled with myriads of white daisies, to the calm blue river beyond. In gorgeous raiment, the beautiful orange field-

the beautiful milkweed, with great balls of pink bloom, overgrown and fantastically wreathed about with the tendrils of the wild morning-glory, whose pinkish white flowers modestly greeted the light, and there Johns-wort, meadow rue, and, queen of all, the purple Eupatorium, blessed the wayfarer with a smile; and woven among this mazy tangle in countless and astonishing numbers were the delicate and fragile spider-webs, later in the day invisible, but now, when countless drops of dew were strung like pearls upon their silken threads, adding to this charming wealth of beauty the last touch of delicacy and refinement. Countless bees were busy among the blossoms, and dainty humming-birds fearlessly thrust their long and slender tongues into the honeyed depths of the yellow lily as we passed. Turning sharply into a well-worn byway or lane we left the meadow-land and began the ascent of the foothills.

At the angle of the roads I saw supported upon the top of a post a small oblong box

with an odd-shaped opening upon the perpendicular side to admit the hand. From its shape, when seen at a distance, it suggested a shrine. In answer to my queries, Mr. Edwards told me that it was a letter-box. There is no post-office in Hockanum, and similar boxes are posted at different points about the place. Whenever the inhabitants go to Hadley or Northampton they consider it their duty to get the Hockanum mail, and on their way home to sort and distribute it to these wayside post-offices. From this point the delivery of the mail becomes very complex and hazardous. Every one who happens along stops to examine the mail and takes along anything "going up his way."

"There it is," said my guide at last, with a sweeping and ponderous gesture; and, sure enough, just up there in the edge of the wood was what seemed a veritable gipsy camp. We continued our way through many wrenchings and twistings of the buggy, over stones and unevennesses which threatened momentarily to upset us. At last we were at the camp. The picturesque car was drawn up amid huge fragments of trap-rock overarched by lordly chestnut trees, interspersed with dark and somber pines.

Here we found Kingsley,—hospitable, cordial, enthusiastic Kingsley,—who had slept the sleep of the just all through that early morning entirely unconscious of wood nymphs or fog.

There stretching out before us lay the beautiful Connecticut, winding its calm and peaceful way towards the sea, with its border of farm-lots distinctly marked in different shades of green and yellow. At the south was Mount Tom, at the north were Sugar-Loaf and Toby, with a ridge of blue hills beyond Northampton binding them together. Old Hadley, Hatfield, and Northampton, with their white painted spires pointing heavenward, lay below us. There was no longer any mystery about the valley, for the sun had sought out every nook and corner, and its hidden secrets stood revealed.

The car was a wonder to me at first, with its snug and well-contrived accommodations for painting or for engraving on wood, and its careful provision for the exigencies of life in camp.

I shall always remember the experience of those happy days, which brought me much nearer to the heart of nature than I had ever been before, and gave a new and sharper edge to my desire to convey to others—not as a mere interpreter, but at first hand, through the medium of my craft—some of the impressions which it was my pleasure to receive from the environments of that place. When the company was fully gathered about our camp-fire at night there was everything that could be

A HOCKANUM WILD-FLOWER.

desired for good-fellowship and friendly and healthful criticism.

At that hour we always related the experiences of the day. Sometimes one of our number would read to us, and while the stars looked down upon our company, and the lights in the farmhouses shone out here and there in the valley below, and the sheen lay upon the river, we welcomed Fra Lippo Lippi, and involuntarily made room for him upon the chestnut log beside us.

One day my wandering footsteps led me to a black, unpainted house standing upon a hillside apart from the highway and somewhat hidden by a gnarly and unkept orchard growth, its own somber hue tending to make it invisible against the dark gray of the mountain beyond. There was a small barn a few paces in the rear, with bare earth about the doorway, a few chickens and a garden patch, and a somewhat uncared-for and forlorn-looking cow grazing in the lot. This was the habitation of the "old residenter." In front of the door stood a wheelbarrow loaded with fresh-cut grass from the roadside, with which the cow's poor picking in the meager home lot was to be eked out; and by it, with bent back and his hands upon his hips in attitude of rheumatic repose, stood the old residenter. He was friendly and courteous enough, but there was a dullness in his manner which I think I understood, for I knew that he had been ambitious in his younger days—had staked all his little wealth in a scheme for making money, and had failed, and was now poor as well as old. It is a simple story and the amount of money involved was comparatively small, but it had been raked together and saved up with much care and hardship and was his all.

THE OLD RESIDENTER.

I tried to draw him out, but he seemed not inclined to talk much except in answer to my questions. He told me that he could remember when wild turkeys were plenty about the mountain, and spoke of the building-bee when the neighbors assembled to aid in the first house-building venture. I asked him if there were many of them there that day, and he replied, "Quite a bunch on 'em."

Upon the wall in his little lonesome cottage was a rude pine shingle with a drawing upon it in red chalk. The old man was proud of the notice I took of this rude picture, and with great pride he told me that a little grandson did it, and related how "the little fellah sat down and took the chalk and drewed it right out of his head." To his mind this was ample evidence of genius,

and he was convinced that the lad's father had made a mistake in making a farmer of the boy, as "he ought to have made *pickers* for a livin'."

I had some difficulty in persuading the old man to wear his cap while posing for me. He thought his "best hat" would be "more scrumptious," and he shuffled off to bring it, in spite of my explanation that I wanted him in his every-day attire. He brought in a very ancient black derby hat with a high crown and flat rim, and about three sizes too small for him. It perched upon the top of his head in a comical fashion, and to me this attempt to look dressed up in his picture was really pathetic.

I have also the pleasure of introducing Aunt Drusilla, a charming old lady of Hockanum, who has seen the snows of more than eighty winters come and go and has had in her life much of hardship and care. She has always lived in this farming community, limited in this world's comforts and knowing nothing of its luxuries—rearing children and ending in widowhood, and yet carrying this weight of years in calmness and peace. Gentle, refined, and lady-like in her manner; tender-hearted, with a ready tear of sympathy; and yet with light-heartedness, always ready to laugh when laughter is in order—a serene old age. There is one odd thing about Aunt Drusilla: she is very, very

of medicine, and said he could cure paralysis. His own life for the last score of years was the best proof of his skill in the treatment of heart disease and various other ailments, for Dr. ——— had told him just twenty years before that he could not live the year out, as his heart, his spine, his liver, and his kidneys were affected, not to mention his spleen.

He was a good deal of a moralist; but, judging from some of his reminiscences, he had taken up the cause of morality rather late in life. He was a great temperance reformer and lost no opportunity to drop a good temperance lesson, and we freely overlooked his occasional visits to the hotel for a glass of "tonic bitters" which the precarious state of his health rendered necessary, and which his strong temperance views forbade others to indulge in. The tobacco habit was his one acknowledged weakness. But he wished he had never touched it; it had been a curse to that valley; for as soon as the farmers began to raise it they had grown extravagant and reckless with their money, and the weed had sapped the life out of the soil. He discoursed upon the sharp and pithy letters which he was wont to write to such of the local papers as did not find his caustic utterances of truth too strong food for them. When I asked him to pose for me he declined, saying he had no money; but when

IN THE GRAVEYARD AT HATFIELD.

deaf, and yet she can hear music, while harsher and more discordant sounds are inaudible.

One morning there came toiling slowly up the steep ascent, with bent back and with one hand upon his hip and the other grasping a stout stick, the form of an old man. He accosted us with much civility and examined our sketches with intelligent interest. He was decidedly garrulous. He had seen something of the world—had been to the war in the capacity of a hospital nurse, and in the same capacity had served in the Northampton lunatic asylum, and on account of his superior trustworthiness had been the custodian of the key to Dr. ———'s wine cellar.

He laid claim to a considerable knowledge

told that I would pay him instead of asking pay he consented, and while he sat and smoked the despised tobacco he entertained me with bits of savory gossip, each incident related pointing a moral. He quoted with great fluency, in support of his theories of religion, politics, morality, and temperance, such great authorities as Theodore Parker, Henry Ward Beecher, and Wendell Phillips, and drew upon Holy Writ with great volubility. In spite of his vagaries I enjoyed the Professor, as they call him, and I hope he will successfully cope with his physical disabilities for many years to come.

One day, as I sat in the old cemetery at Hatfield sketching the gravestones, an old man with a long white beard came and mowed

the scanty and coarse grass which grew among the graves. He was a silent and picturesque figure swinging his scythe, reminding me of the dread Reaper "reaping among the wheat." I desired him to pose for me, but he said he was "too busy." Later in the day he came with Uncle Moses to gather the harvest which "God's acre" had yielded, Uncle Moses furnishing a horse and a hay-rack for the purpose. The headstones, some of which were very old,

and turn abruptly to the right into the road. My heart stood still as Uncle Moses, from his elevated perch on top of the load, chirruped to his horse and went with a rush over the bank. The wagon swayed and gave a dangerous lurch as it turned into the highway, and for a second two of the wheels left the ground, the loose hay at the sides and on the top of the load bounded upwards, and so did Uncle Moses for a second; but they came down in the right

AUNT DRUSILLA.

were scattered at irregular intervals about the ground, sometimes very near together and sometimes quite widely separated, and it was interesting to watch these two old men as they calculated the space through which to drive and the possibility of turning around in order to get out again. The mower went ahead and reported the prospect, but always in a guarded manner, as if not wishing to take the responsibility. Uncle Moses, of course, was on the hay in the cart, and used his head independently as to turning this way or that, and with many soothing words to Dolly.

The cart was successfully worked around among the headstones, but the most difficult feat was to come, for in getting out of the yard it was necessary to plunge down a bank

place, and I drew a long breath of relief when Uncle Moses was once more safely outside that cemetery.

As a result of the happy days passed in the engravers' camp, and under the helpful influence of mutual sympathy and aims, we decided to form ourselves into a little clique, or guild, with a device or sign manual to mark our original work; and it seemed a happy thought when Kingsley proposed the woodpecker. The woodpecker was over our heads in a chestnut tree engraving upon the wood his own designs, and his presence in camp was looked upon as a good omen. It was decided hereafter to place his likeness with the initials O. W. W. ("Original Workers on Wood") on our original cuts, and it is hoped that our work in this

UNCLE MOSES.

direction shall represent the precious qualities which *ought* to flow from the direct and untrammelled expression of one's own chosen and best-loved themes.

For my own part I have tried to introduce, to such as may care to know them, some of the old and fast-disappearing types of a sturdy race who have lived untrammelled by the mandates of fashion, and who have preserved their independent and original character, both in its inward being and its outward expression. I have done this work without one moment of careless or flippant thoughtlessness; and while I am deeply conscious of the faults of technique, I hope I have atoned for them in some measure by the earnest purpose which has actuated me in the delineation of these faces. The unaffected beauty of the young girl, whose beaming face I can liken only to the

daisies and wild-flowers of her native soil, reminds me of little country maids with whom I used to trudge merrily to school in summer and winter—those glorious New Hampshire winters, when with the snow waist-deep upon the ground, and hiding out of sight the old stone walls, I used to draw the little sleds uphill, and think them never so light as when their fair owners were seated upon them. Not one wrinkle upon the faces of these time-worn veterans has been traced by me without increasing my respect for my rude New England forefathers, for I see in them that which reminds me of dear old friends and neighbors of my boyhood days; and if in these faulty attempts at delineation of character I can awaken in others a corresponding respect for "Old Hayseed," as we sometimes hear him thoughtlessly called, this work will not have been done in vain.

Frank French.

ORIGINALITY IN WOOD-ENGRAVING.

WITH ENGRAVINGS BY THE AUTHOR.

THE revival of interest in American wood-engraving during the last twenty years has brought about much discussion in regard to its position among the graphic arts. We are told, upon the best authority, what qualities are inherent in the wood, what is suitable in subject and drawing, and what is legitimate and illegitimate in technique. We are also gravely assured that a neglect of these well-defined lines of expression leads to a decadence of all that is truly beautiful in the art. There is an assumption that what has been best in the past must be the authority for the future, no matter what conditions arise to revolutionize and widen the sphere of its usefulness. We are also instructed that the province of wood-engraving should be confined to reproduction, or the interpreting of artistic thought at second hand, and any departure from the beaten track should be regarded as a temerity punishable with stripes rather than encouraged with approval. All of the traditions and habits inherent in the profession are reverently promulgated, and all of the textures necessary for the printing of fifty years ago are tenaciously insisted upon. All this in spite of the fact that modern machinery has made a new era in the printing of illustrations, as complete of its kind as that incident to the conditions of present warfare in contrast with the old methods of the past—in spite of the fact that in the best of Turkey boxwood we have a material capable of the most exquisite finish, and responsive to any texture or instrument known to the engraver. It is capable of holding its sharpness and delicacy, down to the finest touch, through a limited edition on a hand-press, just the same as an etching or a steel plate. And yet such is the power of habit and tradition that it would be exceedingly difficult to have publicly acknowledged what would be freely admitted in private—that the fine Japan proof is fully equal in quality to that of a high-class etching. Seemingly the first proofs from the wood-engraving should settle its position among the graphic arts, just as the best prints settle the rank of the etching or the steel-engraving. On the contrary, the enormous edition from an electro-plate of the engraving fixes its position and relegates it to the realm of the commonplace.

To illustrate more fully how the purpose or aim of a given work dominates the result, we have only to consider and put in sharp con-

trast two methods of treatment—the one for the etcher and the other for the engraver.

The etcher is encouraged in every possible way to put his personality into the handling of his subject, whether it be an original or a reproduction from another artist. Every inducement is made to have him assume the position of an artist; at least in the sense of being master of the color scheme of his black and white reproduction. Fullness of modeling or exactness of detail is not expected; but only the suggested abbreviation, dashed with a personality that distinguishes his work from that of another man. Even the dominating of the printer, while inking his plate so that each impression shall be unlike another, is regarded as a merit and paid for accordingly.

This artistic atmosphere and treatment is supposed to bring something unique and rare, and undoubtedly does bring to each representative impression the best impulse of the moment. It would seem that such methods would destroy all faithfulness in reproductive work; yet, on the contrary, if the artist loves his copy, it is the only way to reproduce its quality. The personal friends of an etcher and his market combine to make him a law unto himself in his method of producing a result.

Without claiming for the wood-engraver such entire consideration, there is much in the plan which recommends itself if we are to have artistic results. There is an assumption in the beginning that we are dealing with a highly imaginative organization, capable of being attracted in some special direction of art, and able to reproduce it through training already established. In the past, and to a great extent in the present, a contrary environment is the lot of a wood-engraver. It is assumed in the beginning that he has not the feeling and imagination of an artist, although he may habitually produce better quality than his copies call for. He is hedged in by mechanical influences that sap the enthusiasm and deaden the ambition; he is harassed till, like a fox chased by the hounds, he would fain give up the merit of his own production and escape to a burrow of peaceful oblivion. And all this because the result must stand the strain of thousands of impressions and because the end is purely commercial, no matter how highly artistic the beginning. These conditions can be changed only when the public recognize and value the engraver's first proofs and the putting of his position on a par with that

OLD MAPLE TREE AT WHATELY GLEN.

of the etcher — this view of the case to be taken upon the supposition that the engraver has the will power to dominate his own plate, using his copy as an inspiration. If, on the contrary, mechanical exactness is the purpose, then all departments concerned in the matter can fall into line with the precision of parade, and a result may be counted upon with ease and certainty. Many artists are looking for such a millennium, when the engraver shall become an electric machine controlled by a button, and themselves produced as in a mirror — forgetting that they themselves would not make an exact copy of their own work, even the same size as the original.

Through such influences art departments are obliged to constitute themselves into halls of judgment, with the elusive and ever-changing standards of the artist on the one hand and the needs of the printer and the pockets of the publisher on the other. It is small credit to those most interested if the whole matter does not take refuge in a process that shall grind with delightful monotony and uniformity all coming to its mill, and with a great saving of conscience and responsibility. If the pages of the great publications should sparkle with the variety and change of such a system, a like machine might be used with profit on the paintings and etchings gathered at exhibitions. It would only be necessary to decide upon a standard, and then bring all work to its measure of perfection.

Many artists may justly feel that they are better reproduced by mechanical means than by engraving. This may be true if they can make the textures necessary entirely themselves; if not, they are dependent on a monotonous texture that is entirely mechanical, thus antagonizing one of the most important principles of their daily teaching and practice — that is, that "nature does not repeat herself, and no one given surface of a picture should be like another." Thus, how can a harmony, made up of many notes, be best produced by a machine having only one note or texture? The result can only be a shadow of the original — a mere lifeless corpse.

This cannot be entirely true of the engraver's work, no matter how poor, because his personality is bound to show itself in some shape, giving change and variety in contrast with that of another. He cannot get rid of his method any more than of his handwriting. It is a part of himself, and in it is the very element needed for the vitality of an engraving. Indeed, the feelings and ambitions of prominent engravers for personal expression should be exactly the same as those which govern painters and workers in all departments of creative art. And also, each important en-

graver is pretty sure to become a specialist, strong in certain directions while weak in others, just the same as his brethren of the brush and pencil.

Much confusion arises in the inquiring mind concerning this matter, because of the disagreements of professional criticism. The narrowest comments come from where we have the right to expect the broadest and most helpful judgments, so that, unconsciously, and with entire honesty, the engraver's own technique and manner become the yardstick with which to measure everybody else. The only true position for the outsider to take is to regard every prominent engraver as a specialist and judge him upon his own ground. Even then, comparatively speaking, every man's life is made up largely of failures. Only a very few examples reach the high-water mark that gives character to an artist's reputation.

Of course a large share of illustrations used in connection with relief printing have only a matter-of-fact purpose. Many artists also lean to the scientific phase of their art, requiring, with perfect reason, a more colorless medium than the specialist engraver can give. Here mechanical exactness is the better expression. If, however, the demand is in the direction of color, textures, and values, or in the line of tone harmonies, where no part is an exact repetition of another, then the mechanical rendition will destroy the whole sentiment of the picture. It may be scientifically exact and yet have nothing in common with the original. Artists of such subjects cannot possibly find infallibility in reproduction, even if they controlled every stage of the work themselves, because it is not a matter of reason and formula, but of feeling and impulse. Some of the most important work of this kind assumes many phases while in the hands of the engraver. The copy may be a painting that undergoes many changes while the engraving is progressing. When finished, the two results are sure to be unlike in the scientific sense of the term, and yet so near together in quality that the artist may feel himself better rendered than were possible by any other means. It is a species of legerdemain in which present results are only stepping-stones to higher excellence. There is no accepting of standards at a given time, either in exactness of form or in harmony of color. If the engraver is to accomplish anything here he must work in the same spirit as the artist, or not at all. He must mount the steed of his own technique, unfettered by leash or rein, and chase a leader, perhaps mighty in creative force, yet as fickle as the wind. There is no exact classification of the results till long after the actors are dead — either for the artist or for the engraver. Never-

EDWARD KINGSLEY

MORNING FROM THE SHADOW OF MOUNT HOLYOKE.

theless, here is the germ of originality for wood-engraving; and if the engraver loves his subject, he will put life and vitality into his production, no matter what may be his method of producing it.

The foregoing naturally leads to the consideration of the engraver as an original worker on wood, both as to the conception of his subject and its execution. Here again the habits and training of his profession and the custom of his patrons tend to force him to continue in the safe routine of copying an established artistic reputation. It requires some daring for an engraver of small means to produce an engraving that he can call entirely his own, because of the uncertainty of its market. He knows very well that its success is more a question of reputation than of merit, and the matter is discussed and settled by his patrons long before his work begins, leading naturally to the conclusion that copying is the only field for wood-engraving.

It is true the old method of drawing upon the wood has become somewhat obsolete, and photography has brought almost every kind of artistic expression to the proper size of the wood block, which convenience the engraver can use for his own work as well as for that of another. Yet habit and want of time often turn the best of conveniences into a snare. Many paintings are reproduced upon the false values of the photograph, without a careful study of the original at all, and of course an engraver can bring a poor result from exactly the same causes. Every inducement seems to come forward for the earliest and simplest way of reaching a result, and the temper of the American people reaches out for the best art by buying it outright, or inventing a method of producing it quickly and cheaply; anything rather than the plodding industry that builds a life work upon character and experience; anything rather than allow the human element to grow and ripen, to settle its own destiny when life is done. Artist friends criticize and say, "Why do you so?" to the efforts of the original engraver, and then commit the same faults in their own work with impunity. If an engraver succeeds in producing a result equal to the ordinary engraving by the professional artist and his engraver, immediately his work is a challenge and his standard is moved up. He must draw like a Meissonier as well as be a great colorist. Of course if reputation and method are forgotten the result can be judged upon its merits, relegating the whole question to ordinary art standards.

This opens the controversy upon what is good and what is worthless in art, a matter which has never been settled, and never will be while the world stands.

There can be found only a few salient points for the artist or the engraver to settle upon. There is no question but that a perfect engraving should combine perfect drawing, harmonious color, and the best of technique with the graver. Yet this can never be, except in theory, while human nature remains what it is; and, indeed, there is no sensible reason why it should be expected. When the greatest reputations in the world of art are analyzed we find that perfection in all directions is but a popular fancy. True, a great mind will seize the essentials and express itself so as to be understood and remembered; while it is equally true that a small mind will spend its whole force over the grammar of its language, and after all have nothing worthy of expression. To illustrate this idea we have but to call to mind a few names of totally different characteristics in the long line of great reputations in the world of art.

In spite of volumes of eulogy, Turner did not draw in the sense that Meissonier would attach to the term; neither did the great Barbizon school of French painters paint to satisfy the technical standards of their own schools of art. They simply had the power to select from nature the qualities they loved best, the technical power to express themselves in harmony with their own feelings, and to express themselves so that future listeners should make no mistake as to the message sent or the personality of the expression. The greatest reputations have been born independent of existing schools of training and thought; nay, to a large extent they have arisen in spite of them.

Perhaps it is not necessary that the engraver follow the painter in all his methods of drawing, sketching, and painting, yet it may be the best way. Many spend as much time with the brush as with the graver. The essential point is to be at home with what one has to say, either by painting or by engraving upon the spot. It is perfectly feasible to engrave under the shadow of the trees in pleasant summer weather, but it does not follow that a winter scene must be produced while the artist is freezing to death in a snow bank.

The writer of this article has found it necessary to leave the city and spend a part of his time in his childhood home for rest and inspiration, and this time has mainly been spent in painting for use in engraving afterward.

Away up the Connecticut Valley, beyond Mount Tom and Mount Holyoke, in a little basin surrounded by hills, nestles the quiet village of Old Hadley—old in the sense of having a history in the beginning of the nation, and connecting directly with the mother country through a Puritan ancestry; and old in the sense of preserving intact much of the tradition

A WINTER IDYL.

and appearance of two hundred years ago. Here are the same houses where the regicides found a refuge, and in sight are the same forest-covered hills where the Indians lurked in ambush, and to this day in going up and down the broad streets can be seen traces of the quaint manners of the Puritan forefathers.

At this moment from a front window can be seen one of the fairest scenes upon which the sun ever shone. It is midwinter, and the ground and trees are covered with freshly fallen snow. A wide street lined with scattered cottages and trees makes up the foreground. In the middle distance the meadows stretch away level as a floor across the Connecticut River to the foothills of Mount Holyoke. The long, cold, blue mountain range rises like a walled precipice sheer from the valley, its rocky sides partly clothed with somber evergreen forests. In the streets of the town the graceful elm is found at its best, drooping under its

burden of clinging white. Each sidewalk shows a double column, rearing their magnificent plumes to the sky. The air is soft, and a faint haze is stealing along the surface of the snow. For an hour not a human being appears; only now and then a faint bit of curling smoke rises above a roof to show that life is within. Over all the setting sun is sending its yellow light, making exact counterparts of the trees in long blue shadows across the street. The eastern sky at the horizon is heavy with purple clouds, and just above is a clear sky of a most delicate green, deepening to a blue-black at the zenith. In the midst of the clear space rides the full moon, faintly emerging and touching the green with a silver rim. She is only waiting for the golden sunlight to weaken in order to show her power. Every house, tree-trunk, and hillock in front gleams like gold, while on the shadow side the roofs and treetops are flooded with silver light. Each luminary is

OLD HADLEY STREET.

throwing out side by side color harmonies of indescribable beauty.

Almost in a moment the scene changes. The sun drops its light, a cloud drifts across the moon, the wind rises and shakes the whiteness from the trees, and sends the drifts scurrying against the window panes. All is darkness and gloom. This is New England in winter.

In the warmer season the picture changes. The spring loosens the ice-bound rivulets, and they flood the valleys with water till the lowlands are a vast lake. Then the buds begin to swell, and by the time the waters have abated, the long meadows are tremulous in the most delicate greens and olives. Billow upon billow arises to meet the eye till lost in the distant blue of the hills. All nature is dancing in the glad sunshine and bowing to the gentle breezes. The song birds are filling the air with music, and the meadow carpets are strewn with brilliant colored flowers.

But it is an autumn picture from the shadow of Mount Holyoke that enchains the imagination, and the experience is held in fond remembrance for many a long year afterward. From early dawn till nearly noon the northern slope of the mountain is in deep shadow, while the valley below is bathed in sunshine. The ground may be white with frost, the air chilly, and

the climb up the jagged rocks toilsome, but when a comfortable outlook is reached the discomfort is forgotten as the gorgeous panorama unfolds itself. A long serpentine wreath of fog may be rising from the bosom of the Connecticut, hiding the distant towns and villages. Puffs of steam and smoke are shooting up through the vapor, showing the beginning of day at the mills. Perhaps a breeze, like an invisible tongue, will thrust aside the fog for a moment and disclose a portion of the cold, steel-like surface of the river, or it may uncover the brow of Mount Tom and let the sunlight in. All up and down the ragged eastern slope the golden light plays, unable to loosen the cold grip of the fog at the base. So we have a mountain hanging in mid-air like a jewel. Soon the all-powerful sun asserts himself, and in faintly rosy tints the spires and roofs of Northampton begin to flash out from the mists against a background of purple hills, with a crown of fleecy clouds overhead. Presently the sun and wind together drive the flying mists down the valley, and far away we can discern the shadow line of the mountain upon which we stand creeping nearer and nearer. Within its limit at our feet the frost rests upon the landscape like a shroud; beyond the line in the warmth and sunshine the

most gorgeous coloring is springing into life. Far away the river is merrily coming down the valley, flashing like a silver thread, and by its side are trooping serried armies of brilliant trees. Gold and crimson maples spring into life one after another out of the shadows, till the foothills are reached, when the more somber forest trees take their places.

But the impression on the mind, as the eye sweeps away to the north for twenty miles, is as if all the armies of the earth were out in the splendor of holiday parade. Only it is so very peaceful — so peaceful that hours pass unnoticed by the unconscious observer. The sun wheels on its course, the mountain reverses

its shadow, a path of streaming light dips into the river below,—is gone,—twinkling stars come out, and the dream is over.

The relation of such impressions to engraving on wood may not appear at first, but one engraver, at least, thinks he cannot engrave well without such experiences. And if other engravers become of like mind and love the Connecticut Valley, it is no assumption for them to find expression through the channel of their own profession. Each one will find material to build according to his liking, and the public in choosing from the results will, in the main, deal with it upon the same principle.

Elbridge Kingsley.

PAINTER-ENGRAVING.

WITH ENGRAVINGS BY THE AUTHOR.

ALL the arts are but the means for expressing thought, and that art is most valuable which interposes fewest obstacles between the thought and its ultimate expression, and receives most readily and retains longest the impress of individuality.

In the more fundamental arts, sculpture, music, and painting of fixed pictures, these attributes do not change greatly; but in the multiplying arts, where the final result is influenced by intermediate operations, their possibilities may be vastly augmented and their value greatly increased by refinements in those operations, so that an art which under certain conditions could not be made available for the ready fixing of refined thought may, when those conditions are improved, become very valuable for such use.

Among the graphic arts none has so long held its position or has had so wide an influence as relief engraving, remaining the same in principle since the first line was cut, nearly two thousand years ago. The development of its possibilities has been coincident with improvements in printing, but the direction of its use has been largely influenced by its adaptability to definite representation in small size, and the consequent convenience in the distribution of its results. During this century it has gained steadily in public estimation and extended use, until, at the present day, it is called upon in supplement to descriptive writing not only to represent the landscapes, archi-

ture, costumes, and customs of every country, but to give a comprehensive idea of the world's work in science, applied arts, and industries, invention, manufacture, transportation, and communication: this it does so successfully that there seems little in the natural or economic life of the universe that cannot be clearly pictured on the page which may be held in the hand of the fireside reader. Its value as a means of distributing information is well known and appreciated, but its artistic possibilities have not been so carefully studied and are not so well understood.

An art which has done so much and has done it so well may reasonably be looked to to do much more; because what it has accomplished in representing numberless forms, textures, and qualities in the widely varying subjects of descriptive illustration indicates its susceptibility to mental control; and if this susceptibility is sufficiently delicate, and it does not oppose too serious obstacles in manipulation, it is valuable as a means of artistic expression.

The reason that it has not been heretofore made use of for this purpose, except in isolated instances, may be found in the fact that the influencing adjuncts of paper-making and printing had not been sufficiently perfected and brought into harmony to make such work possible; and for the want of these favorable conditions neither the public nor the workers in the art have recognized its possibilities.

After the improvements in paper-making and printing referred to, the chief of these has been the reproductive engraving of paintings. In this work the attempt has been made —

and in many instances very successfully—not only to represent the composition, tones, and values of a picture, but to give also an unmistakable impression of the painter's individuality.

Such work is a much subtler test of the possibilities of an art than any of the tasks of descriptive illustration, and the success of relief engraving in it indicates its adaptability to still better uses, or that it would be equally and

in any case where real sympathy is lacking, the operation of trying to establish it can never be a pleasant one: the artistic temperament rebels at it; and to turn from it towards original work which occupies other faculties, and has the delight of personal discovery, is only a natural result, and is in line with the best development of the art.

But such a turning, in these days of high standards of execution in specialties, requires

THE WATER NYMPH.

perhaps more readily responsive under the more direct influence of thought in the doing of work at first hand.

The best, or ideal, results in reproductive engraving can be achieved only when the painter and the engraver are thoroughly in sympathy. As no one engraver can be thus in sympathy with many artists, differing greatly as they do in character and temperament, it follows that the best reproductive work of any one engraver must be very limited in quantity unless he can by cultivation and some degree of self-abrogation establish such a bond. Cultivation may bring just appreciation and respect for work, but such reproductive work requires the engraver to feel more than this: he must bend his own likings to those of the painter, endeavor to see from his point of view, and feel his enthusiasms; and just in proportion as he is able to do this cordially and completely, and also to adapt his own technique to his assumed character, will be his success or his lack of it. Some can do this more readily than others, but

some courage, because of the possibility of a loss in execution through lack of concentration. Concentration of effort within narrow limits surely favors the greatest accomplishment of work in quantity and in quality so far as workmanship in technique goes, but breadth of cultivation just as surely favors the best accomplishment in all things where vigorous mental comprehension and delicate apprehension in the use of means influence most the expression of thought.

As it is more difficult always to know what treatment will most adequately express thought than it is to acquire skill in workmanship, it follows that to acquire a knowledge of more than one method of work and to make use of it is not always a scattering of energies; inasmuch as what is lost in mere skill of workmanship is gained through a broadening of the mental horizon and the acquiring of a more refined insight. Nor does it follow that there is necessarily a real loss in technique in the use of one means by acquiring another, for the

manipulation of mediums incident to one method of work always furnishes suggestions for management in another, which makes technique in either the readier servant of thought, and consequently more valuable than if it had gained in finish of workmanship.

This truth should not be lost sight of in estimating the true value of technique in painter-engraving, because an exhibition of the engraver's skill as a workman may rightly be subordinated to his desires as an artist, whenever, by so doing, a gain may be made of directness in expressing his thought. It is by reason of a gain in directness, which is the desideratum in all the arts, that painter-engravers find ground to stand on.

Engraving, in common with all branches of the art of picture-making, interposes so many obstacles between the thought and its ultimate expression that at best the thought itself is more or less warped, changed, and made to conform to the means of expression. But in original work the influence is as direct as it can ever be. The hand is controlled by the brain which originates the thought, and makes every touch under its influence; and such touches are more vital and have more value than any others can have.

Men who wish the encouragement of example in doing original work will find it in the careers of the few who have placed their names highest on the list of engravers during the past three centuries, for they were original workers, or painter-engravers. And while the circumstances which controlled them are very different from those which control engravers of the present day, it is worth while to study the men and their work, and, if possible, understand why it is better than that of other men; for it goes without saying, or ought to, that an artist has but one point to consider—always how to make his work better; because if it can only be good enough, all other problems solve themselves.

In the study of the abler painter-engravers it is very difficult to analyze and differentiate their work justly; that is, to know what portion of credit should be given to them as artists and what as engravers. To take an example: Dürer and Rembrandt—if, for the sake of study, Rembrandt may be classed with the engravers in his graphic work—represent very widely different extremes in mental habits and technical methods. Much credit is given Dürer as an engraver which should be given him as an artist. To do his engraving would be not at all a difficult task to a modern engraver, while no engraver of the present day, and perhaps no artist, could equal his sturdy drawing.

On the other hand, Rembrandt was inimitable in his touch and management of line as an engraver. His mastery of treatment was so

great, that in considering his work it is impossible to separate the skill of the touch itself from the thought which inspired the picture, or to imagine what his work would be if divorced from the extreme mental control and skill of hand which enabled him to express his ideas so charmingly. No photographic, mechanical, or other reproductive work whatsoever could have reproduced his paintings and given them the same value, or anything like it, which his own graphic work has; and if Rembrandt is to be shown in graphic work at all, nothing could induce one to give up what Rembrandt did in it himself.

In their use of the graphic arts probably Rembrandt and Dürer were alike influenced by a desire to distribute their work more widely than they could do by painting; but their choice of methods of work was fixed by their mental characteristics and by the different possibilities in etching and relief engraving at that time.

Dürer understood the vigorous qualities of the wood or relief engraving, but had not compassed its possibilities of refinement; nor could they have been compassed until improvements in printing had made it possible to show slight differences of tone and texture. Rembrandt delighted in atmosphere and in strong light and shade, or full chiaroscuro, and could secure those qualities with the needle and plate, but the limitations of printing made it impossible to secure these in relief engraving in his day—if, indeed, it had been thought of. The method of printing from the etched plate remains much the same as in Rembrandt's time, but in the printing from the relief plate and in the consequent development and refinement in its engraving, there has been a vast change since his time or the time of Dürer. It is now quite possible to print relief engravings done in full chiaroscuro, to represent almost any conceivable texture, and with any degree of refinement reasonable for a picture in black and white.

If the possibilities of the art at the present day, or in the very near future, could have been developed in Rembrandt's time, they would have delighted him, and made engraving as available for his purposes as it was for Dürer's. These developments place relief engraving among the arts which can be used as a means of artistic expression by men of very varied temperaments, and opens for it, owing to its peculiar characteristics, a wide field not occupied by any other art.

In considering relief engraving as a means of artistic expression the science of the art becomes of great importance: wherein it differs from other methods of picture-making in this can, perhaps, best be ascertained by comparison.

London
o w

NIGHT MOTHS.

The painter uses infinitesimal particles of color, which, for convenience, are manipulated in water or oil as a vehicle. These particles, which are too minute to be distinguished individually by the eye, can with the brush be agglomerated in masses, or spread in films of any thinness. The painter has no thought for each particle of color, but only for the effect on

the eye of multitudes of them combined, or in juxtaposition. In practice it is possible to modify effects by glazing, or superimposing films of color over previous painting, to mass painting over painting, or to scrape away first paintings and repaint entirely, so that, with these possibilities of change in mind, the painter in oil works freely and without trepidation.

In the graphic arts there is no method which makes use of granulations so minute as to be indistinguishable to the eye, excepting photogravure. The similarity in size of the particles of color and the granules of ink would make it seem possible that photogravure is akin to painting, but for this reason it is not: multitudes of particles of varied and harmonious color have a charm for the eye which multitudes of granules of ink of one color have not; and where only one color is to be used some charm of treatment must be substituted for the lacking charm of color, if an equal degree of interest is maintained.

In relief engraving there are but two values to work with, absolute black and absolute white. A white touch remains always a white touch without modification, and all effects, textures, tones, and values are secured by shaping and arranging those white touches or lines and the black spaces between them. Every touch retains its shape as first made and its relation to every other touch with the utmost obstinacy, so that the engraver has but one shot; he must either by acquired knowledge or by intuition know what relation each touch made will bear to all of its fellows and what influence it will have on them, and secure his tones, values, and textures the first time, for no radical change can be made.

The engraver therefore works under much greater nervous strain than the painter, and it would at first seem that an art compelling such

precision could never respond readily to artistic impulses. Analogy will perhaps serve to show how it may. In music, where every note is an arbitrary quantity, it is possible so to combine and arrange them with regard to their relations and the influence of one note upon another as to delight the senses by endless variety and gradation of impression; just so it is possible to combine and arrange touches in white and black, understanding their relations and influences upon one another, as to represent all textures and gradations, and secure harmony and that variety in treatment which gives the charm of endless suggestion.

Owing to the long-continued use of relief engraving for the purposes of cheaper illustration, with all the concomitant unhappy influences of poor printing and of paper ill suited to the requirements of the plates, the public have fixed for it a standing lower than etching or than some of the other graphic arts. Even engravers themselves have been slow to take advantage of all possibilities of hand printing and to study the adaptability of various kinds of papers for proofs of different subjects, as is done in the printing of etchings; but already this is changing. The importation of the peculiar and very beautiful Japanese papers which can be used in hand printing, made by hand from the fiber of the mulberry tree, gives the opportunity for new and very charming effects in proofs from relief plates. The value of these is beginning to be recognized, and the art dealers already have in their portfolios proofs from a few plates, done by American and French engravers. The qualities of these proofs are being studied by connoisseurs; and when the possibilities of the art are recognized by the engravers and by the public, relief engraving will take its rightful place as one of the most comprehensive, vital, and interesting of the graphic arts.

W. B. Closson.

THE NEW SCHOOL OF ENGRAVING.

WITH AN ENGRAVING BY THE AUTHOR.

KINGSLEY'S car, the center of so much that is promising in the future of wood-engraving in this country, is in Whately Glen, near the old mill, Kingsley and I having lingered on into October to catch some of the autumn glory.

It is inclement and cold. The wind has as much to do, perhaps, with our selection of subjects as good taste has. Yet, when the sun breaks through the clouds and warms awhile the steep hillside, there is a shrillness added to

the whistle of the wind very like the "frying" of the cicada—a very small fry, proportioned to the supply of heat; and, near by, three times to-day have I heard the tree-toad croak, blue-birds in abundance, and the goldfinch with her young "Che-dink, che-dink," all day long.

It is some compensation that we have acquired a sensuous liking for wetness and the feeling of cold. Then the S——s, who own the place, mother and sons, do what they can to make our lot endurable, and at the week's end the daughter of the house rides up from

Hadley, bringing news of the world and an evening of pure delight to us car-dwellers.

This evening, while we have talked liberally of all masters, we have read Emerson's essay "Art," and "Wood Notes," and, from Browning, "Saul."

We cannot sleep now for winged thoughts which pervade our narrow dwelling-place.

school of the great English engravers, John Thompson, Williams, Orrin Smith, John Jackson, and last but not greatest, W. J. Linton.

I had learned very little of engraving before I learned that this last great name had an especial cult which embraced nearly all the engravers in America. His "Infant Hercules" (I believe), after Reynolds, and his "Virgin

AUTUMN HILLSIDE.

We talk, in our little way, on lofty themes, and grow warm with the sense of nature's close and personal relationship to us. We open the door and look out into the night. The hoarfrost sparkles like diamonds on the tangle of brown weeds and the interlacing boughs, refracting the rays of the great, round moon we do not see. Far across the lake-like pond, the crystal clearness of whose waters we know, the maples burn in orange and crimson flame, and Indian Hill rounds his great bare bosom up against the sky. We nature-lovers of the block and burin resent the charge of being mere poachers in the domain of poetry and art.

It is nearly forty years since, with hopeful elation, I left scenes similar to these to go to the far-off town to learn the art of wood-engraving. I found, 't is true, little to encourage lofty aspirations in the work then given me to do. But there was a beacon star in the

and Child," after a cartoon by Raphael, and later "The Haunted House," hung in every engraving office in the land. Linton was the center and soul of whatever was progressive in wood-engraving then. He meant art to us, and the lines he cut were, in lieu of nature, our wonder and our study. Each newlylanded English engraver was pestered with questions concerning the tools he used and his manner of working. According as rumor fixed either, we changed our own implements or methods.

But little was ascertained, however, until one of our own artists, who stood very high among the craft, visited England. On his return we were told many things of artists whose names were household words with us, but nothing so delightful and surprising as of Linton, who, he said, had been very courteous to him, and had shown him many helpful things about his drawing.

It cannot be realized now what an effect that candid admission, by one of the "superior beings" himself, had upon an engraver. The idea came naturally then that Linton's distinctive merit was not a matter of tools, but of art culture.

Soon after the great man himself came and made his home among us. We have seen his "Lake Country," the illustrations to Bryant's "Flood of Years," and his paintings at the Academy,—of which institution he was made a member,—and we know he was an artist. He worked with his graver, using just the same kind of intelligence that he used when working with his brush. His bitterest opponent in

the so-called "new school of engravers" most heartily would desire, I know, that he were now a young man leading in the present advance of the art he has done so much to establish.

Those who have learned his lesson know that the study of drawing, painting, modeling, or whatever brings skill to the hand and quickness to the perception, is the best way to study engraving. Let art be your master. Then live by flowery banks of rivers, in the bowers of the wood-god, in the starry realm of poesy, or in this wheeled temple sacred to the woodpecker, and be sure even the engraver's work will show the world something of these blest abodes.

John P. Davis.

THE PETER-BIRD.

WHEN summer's birds are bringing
Their clear, concerted singing,
Singing gladder, gladder, gladder in their glees;
When finches and the thrushes
Make vocal all the bushes,
And the lark his note of morning welcome
frees —

I hear no meter sweeter
Than "Peter-Peter-Peter,"
That the Peter-bird is singing in my trees.

How good to lie and listen,
Where brooks in summer glisten,
As they ripple, ripple, ripple to the seas;
Where faintly in the pebbles
They play their pretty trebles
In the plaintive, sad and tender minor keys;
But they can play no meter
Like "Peter-Peter-Peter,"
That the Peter-bird is singing in my trees.

When softly at the nooning
I hear the clover crooning,
Of its nectar, nectar, nectar, and the
bees;
When corn a-field is drying,
And fading blades are flying
With a floating pennon-rustle in the breeze,
Oh sweet it is, but sweeter
Is "Peter-Peter-Peter,"
That the Peter-bird is singing in my trees.

When summer's joy is over
And bees have robbed the clover,
Leaving odor, only odor, to appease;
When red autumnal juices
Make music in their sluices
As the fruity currents gurggle from their lees;
The wine-tide sings not sweeter
Than "Peter-Peter-Peter,"
That the Peter-bird is singing in my trees.

Henry Thompson Stanton.

BROOK SONG.

BROOK, would thou couldst flow
With a music all thine own —
Thy babble of music alone —
Not a word of the Long Ago
In thy brawling down below,
Not a sigh of the wind by thee —
The wind in the willow tree!

Or, Brook, if thou couldst go,
As once, in the prime of May,
For a whole long holiday,
When the cowslips down below —
And the violets — watched thy flow,
With the babble of two by thee,
And the wind in the willow tree!

O Brook, if thou couldst so
Make a living music and sing
Of a faded, bygone Spring,
And down by the violets flow
With that babble of Long Ago,
I would listen forever to thee
And the wind in the willow tree.

James Herbert Morse.

THE "HAUNTED HOUSE" IN ROYAL STREET.

BY GEORGE W. CABLE,

Author of "The Grandissimes," "Bonaventure," etc.

I.

AS IT STANDS NOW.

WHEN you and — make that much-talked-of visit to New Orleans, by all means see early whatever evidences of progress and aggrandizement her hospitable citizens wish to show you; New Orleans belongs to the living present, and has serious practical relations with these United States and this great living world and age. And yet I want the first morning walk that you two take together and alone to be in the old French Quarter. Go down Royal street.

You shall not have taken many steps in it when, far down on the right-hand side, where the narrow street almost shuts its converging lines together in the distance, there will begin to rise above the extravagant confusion of intervening roofs and to stand out against the dazzling sky a square, latticed remnant of a belvedere. You can see that the house it surmounts is a large, solid, rectangular pile, and that it stands directly on the street at what residents call the "upper, river corner," though the river is several squares away on the right. There are fifty people in this old rue Royale who can tell you their wild versions of this house's strange true story against any one who can do this present writer the honor to point out the former residence of 'Sieur George, Madame Délicieuse, or Dr. Mossy, or the unrecognizably restored dwelling of Madame Delphine.

I fancy you already there. The neighborhood is very still. The streets are almost empty of life, and the cleanness of their stone pavements is largely the cleanness of disuse. The house you are looking at is of brick, covered with stucco, which somebody may be lime-washing white, or painting yellow or brown, while I am saying it is gray. An uncovered balcony as wide as the sidewalk makes a deep arcade around its two street sides. The last time I saw it, it was for rent, and looked as if it had been so for a long time; but that proves nothing. Every one of its big window-

shutters was closed, and by the very intensity of their rusty silence spoke a hostile impenetrability. Just now it is occupied.

They say that Louis Philippe, afterwards king of the French, once slept in one of its chambers. That would have been in 1798; but in 1798 they were not building such tall buildings as this in New Orleans — did not believe the soil would uphold them. As late as 1806, when 'Sieur George's house, upon the St. Peter street corner, was begun, people shook their heads; and this house is taller than 'Sieur George's. I should like to know if the rumor is true. Lafayette, too, they say, occupied the same room. Maybe so. That would have been in 1824-25. But we know he had elegant apartments, fitted up for him at the city's charge, in the old Cabildo. Still —

It was, they say, in those, its bright, early days, the property of the Pontalbas, a noble Franco-Spanish family; and I have mentioned these points, which have no close bearing upon our present story, mainly to clear the field of all mere they-says, and leave the ground for what we know to be authenticated fact, however strange.

The entrance, under the balcony, is in Royal street. Within a deep, white portal, the walls and ceiling of which are covered with ornamentations, two or three steps, shut off from the sidewalk by a pair of great gates of open, ornamental iron-work with gilded tops, rise to the white door. This also is loaded with a raised work of urns and flowers, birds and fonts, and Phœbus in his chariot. Inside, from a marble floor, an iron-railed, winding stair ("said the spider to the fly") leads to the drawing-rooms on the floor even with the balcony. These are very large. The various doors that let into them, and the folding door between them, have carved panels. A deep frieze covered with raised work — white angels with palm branches and folded wings, stars, and wreaths — runs all around, interrupted only by high, wide windows that let out between fluted Corinthian pilasters upon the broad open balcony. The lofty ceilings, too, are beautiful with raised garlandry.

Measure one of the windows — eight feet across. Each of its shutters is four feet wide.

Look at those old crystal chandeliers. And already here is something uncanny—at the bottom of one of these rooms, a little door in the wall. It is barely a woman's height, yet big hinges jut out from the jamb, and when you open it and look in you see only a small dark place without steps or anything to let you down to its floor below, a leap of several feet. It is hardly noteworthy; only neither you nor — can make out what it ever was for.

The house is very still. As you stand a moment in the middle of the drawing-room looking at each other you hear the walls and floors saying those soft nothings to one another that they so often say when left to themselves. While you are looking straight at one of the large doors that lead into the hall its lock gives a whispered click and the door slowly swings open. No cat, no draft, you and——exchange a silent smile and rather like the mystery; but do you know? That is an old trick of those doors, and has made many an emotional girl smile less instead of more; although I doubt not any carpenter could explain it.

I assume, you see, that you visit the house when it is vacant. It is only at such times that you are likely to get in. A friend wrote me lately: "Miss——and I tried to get permission to see the interior. Madame said the landlord had requested her not to allow visitors; that over three hundred had called last winter, and had been refused for that reason. I thought of the three thousand who would call if they knew its story." Another writes: "The landlord's orders are positive that no photographer of any kind shall come into his house."

The house has three stories and an attic. The windows farthest from the street are masked by long, green latticed balconies or "galleries," one to each story, which communicate with one another by staircases behind the lattices and partly overhang a small, damp, paved court which is quite hidden from outer view save from one or two neighboring windows. On your right as you look down into this court a long, narrow wing stands out at right angles from the main house, four stories high, with the latticed galleries continuing along the entire length of each floor. It bounds this court on the southern side. Each story is a row of small square rooms, and each room has a single high window in the southern wall and a single door on the hither side opening upon the latticed gallery of that floor. Wings of that sort were once very common in New Orleans in the residences of the rich; they were the house's slave quarters. But certainly some of the features you see here never were common—locks seven inches across; several windows without sashes, but with sturdy iron gratings and solid iron shutters. On the fourth floor

the doorway communicating with the main house is entirely closed twice over, by *two pairs* of batten shutters held in on the side of the main house by iron hooks eighteen inches long, two to each shutter. And yet it was through this doorway that the ghosts—figuratively speaking, of course, for we are dealing with plain fact and history—got into this house.

Will you go to the belvedere? I went there once. Unless the cramped stair that reaches it has been repaired you will find it something rickety. The newspapers, writing fifty-five years ago in the heat and haste of the moment, must have erred as to heavy pieces of furniture being carried up this last cramped flight of steps to be cast out of the windows into the street far below. Besides, the third-story windows are high enough for the most thorough smashing of anything dropped from them for that purpose.

The attic is cut up into little closets. Lying in one of them close up under the roof maybe you will still find, as I did, all the big iron keys of those big iron locks down-stairs. The day I stepped up into this belvedere it was shaking visibly in a squall of wind. An electric storm was coming out of the north and west. Yet overhead the sun still shone vehemently through the rolling white clouds. It was grand to watch these. They were sailing majestically hither and thither southward across the blue, leaning now this way and now that like a fleet of great ships of the line manœuvring for position against the dark northern enemy's already flashing and thundering onset. I was much above any neighboring roof. Far to the south and south-west the newer New Orleans spread away over the flat land. North-eastward, but near at hand, were the masts of ships and steamers, with glimpses here and there of the water, and farther away the open breadth of the great yellow river sweeping around Slaughterhouse Point under an air heavy with the falling black smoke and white steam of hurrying tugs. Closer by, there was a strange confusion of roofs, trees, walls, vines, tiled roofs, brown and pink, and stuccoed walls, pink, white, yellow, red, and every sort of gray. The old convent of the Ursulines stood in the midst, and against it the old chapel of St. Mary with a great sycamore on one side and a willow on the other. Almost under me I noticed some of the semicircular arches of rotten red brick that were once a part of the Spanish barracks. In the north the "Old Third" (third city district) lay, as though I looked down upon it from a cliff—a tempestuous gray sea of slate roofs dotted with tossing green tree-tops. Beyond it, not far away, the deep green, ragged line of cypress swamp half encircled it and gleamed weirdly under a sky packed with

dark clouds that flashed and growled and boomed and growled again. You could see rain falling from one cloud over Lake Pontchartrain; the strong gale brought the sweet smell of it. Westward, yonder, you may still descry the old calaboose just peeping over the tops of some lofty trees; and that bunch a little at the left is Congo Square; but the *old* old calaboose—the one to which this house was once strangely related—is hiding behind the cathedral here on the south. The street that crosses Royal here and makes the corner on which the house stands is Hospital street; and yonder, westward, where it bends a little to the right and runs away so bright, clean, and empty between two long lines of groves and flower gardens, it is the old Bayou Road to the lake. It was down that road that the mistress of this house fled in her carriage from its door with the howling mob at her heels. Before you descend from the belvedere turn and note how the roof drops away in eight different slopes; and think—from whichever one of these slopes it was—of the little fluttering, befrocked lump of terrified childhood that leaped from there and fell clean to the paved yard below. A last word while we are still here: there are other reasons—one, at least, besides tragedy and crime—that make people believe this place is haunted. This particular spot is hardly one where a person would prefer to see a ghost, even if one knew it was but an optical illusion; but one evening, some years ago, when a bright moon was mounting high and swinging well around to the south, a young girl who lived near by and who had a proper skepticism for the marvels of the gossips passed this house. She was approaching it from an opposite sidewalk, when, glancing up at this belvedere outlined so loftily on the night sky, she saw with startling clearness, although pale and misty in the deep shadow of the cupola,—“It made me shudder,” she says, “until I reasoned the matter out,”—a single, silent, motionless object; the figure of a woman leaning against its lattice. By careful scrutiny she made it out to be only a sorcery of moonbeams that fell aslant from the farther side through the skylight of the belvedere’s roof and sifted through the lattice. Would that there were no more reality to the story before us.

II.

MADAME LALAURIE.

ON the 30th of August, 1831, before Octave de Armas, notary, one E. Soniat Dufossat sold this property to a Madame Lalaurie. She may have dwelt in the house earlier than this, but here is where its tragic history begins. Madame Lalaurie was still a beautiful and most

attractive lady, although bearing the name of a third husband. Her surname had been first McCarty,—a genuine Spanish-Creole name, although of Irish origin, of course,—then Lopez, or maybe first Lopez and then McCarty, and then Blanque. She had two daughters, the elder, at least, the issue of her first marriage.

The house is known to this day as Madame Blanque’s house,—which, you notice, it never was,—so distinctly was she the notable figure in the household. Her husband was younger than she. There is strong sign of his lesser importance in the fact that he was sometimes, and only sometimes, called doctor—Dr. Louis Lalaurie. The graces and graciousness of their accomplished and entertaining mother quite outshone his step-daughters as well as him. To the frequent and numerous guests at her sumptuous board these young girls seemed comparatively unanimated, if not actually unhappy. Not so with their mother. To do her full share in the upper circles of good society, to dispense the pleasures of drawing-room and dining-room with generous frequency and captivating amiability, was the eager pursuit of a lady who nevertheless kept the management of her money affairs, real estate, and slaves mainly in her own hands. Of slaves she had ten, and housed most of them in the tall narrow wing that we have already noticed.

We need not recount again the state of society about her at that time. The description of it given by the young German duke whom we quoted without date in the story of “Salome Müller” belongs exactly to this period. Grymes stood at the top and front of things. John Slidell was already shining beside him. They were co-members of the Elkin Club, then in its glory. It was trying energetically to see what incredible quantities of Madeira it could drink. Judge Mazereau was “*avocat-général*” and was being lampooned by the imbecile wit of the singers and dancers of the calinda in Congo Square. The tree-planted levee was still populous on summer evenings with promenaders and loungers. The quadroon caste was in its dying splendor, still threatening the moral destruction of private society, and hated—as only woman can hate enemies of the hearthstone—by the proud, fair ladies of the Creole pure-blood, among whom Madame Lalaurie shone brilliantly. Her elegant house, filled with “furniture of the most costly description,”—says the “New Orleans Bee” of a date which we shall come to,—stood central in the swirl of “downtown” gaiety, public and private. From Royal into Hospital street, across Circus street—rue de la Cirque—that was a good way to get into Bayou Road, white, almost as snow, with its smooth, silent pavement of powdered

shells. This road followed the slow, clear meanderings of Bayou St. Jean, from red-roofed and embowered suburb St. Jean to the lake, the swamp of giant, grizzly bearded cypresses hugging it all the way, and the whole five miles teeming with gay, swift carriages, some filled with smokers, others with ladies and children, the finest equipage of all being, as you may recollect, that of John Fitz Miller. He was at that very time master of Salome Müller, the pure white slave, and of "several others fairer than Salome." He belongs in the present story only here in this landscape, and here not as a typical, but only as an easily possible, slaveholder. For that matter, Madame Lalaurie, let it be plainly understood, was only another possibility, not a type. The moral of the two stories—if you care to consider it—is the same: a public practice is answerable for whatever can happen easier with it than without it, no matter whether it must, or only may, happen. However, morals can wait: a regular feature of that bright afternoon throng was Madame Lalaurie's coach with the ever-so-pleasant Madame Lalaurie inside and her sleek black coachman on the box.

"Think," some friend would say, as he returned her courteous bow—"think of casting upon that woman the suspicion of starving and maltreating her own house-servants! Look at that driver; his skin shines with good keeping. The truth is those jealous Americans"—

There was intense jealousy between the Americans and the Creoles. The Americans were just beginning in public matters to hold the odds. In private society the Creoles still held power, but it was slipping from them even there. Madame Lalaurie was a Creole. Whether Louisiana or St. Domingo born was no matter; she should not be criticized by American envy! Nor would the Creoles themselves go nosing into the secretest privacy of her house.

"Why, look you, it is her common practice, even before her guests, to leave some wine in her glass and hand it, with some word of kindness, to the slave waiting at her back. Thin and hollow-chested—the slaves? Yes, to be sure; but how about your rich uncle, or my dear old mother; are they not hollow-chested? Well!"

But this kind of logic did not satisfy everybody, not even every Creole; and particularly not all her neighbors. The common populace too had unflattering beliefs.

"Do you see this splendid house? Do you see those attic windows? There are slaves up there confined in chains and darkness and kept at the point of starvation."

A Creole gentleman, M. Montreuil, who seems to have been a neighbor, made several attempts to bring the matter to light, but in

vain. But rumors and suspicious indications grew so rank that at length a prominent citizen, an "American" lawyer, who had a young Creole studying law in his office, ventured to send him to the house to point out to Madame Lalaurie certain laws of the State. For instance there was Article XX. of the old Black Code: "Slaves who shall not be properly fed, clad, and provided for by their masters, may give information thereof to the attorney-general,"—*no laughing in court!*—"or the Superior Council, or to all the other officers of justice of an inferior jurisdiction, and may put the written exposition of their wrongs into their hands; upon which information, and even ex officio, should the information come from another quarter, the attorney-general shall prosecute said masters," etc. But the young law student on making his visit was captivated by the sweetness of the lady whom he had been sent to warn against committing unlawful misdemeanors, and withdrew filled with indignation against any one who could suspect her of the slightest unkindness to the humblest living thing. And yet the public ear was soon to be shocked by the indisputable fact of a sudden, violent, horrible death on those premises, of which the amiable and captivating Madame Lalaurie was the direct and responsible cause.

III.

A TERRIBLE REVELATION.

THE house that joined Madame Lalaurie's premises on the eastern side had a staircase window that looked down into her little courtyard. One day all by chance the lady of that adjoining house was going up those stairs just when the keen scream of a terrified child resounded from the next yard. She sprung to the window, and, looking down, saw a little negro girl about eight years old run wildly across the yard and into the house with Madame Lalaurie, a cowhide whip in her hand, following swiftly and close upon her.

They disappeared; but by glimpses through the dark lattices and by the sound of the tumult, the lady knew that the child was flying up stairway after stairway, from gallery to gallery, hard pressed by her furious mistress. Soon she heard them rise into the belvedere and the next instant they darted out upon the roof. Down into its valleys and up over its ridges the little fugitive slid and scrambled. She reached the sheer edge, the lady at the window hid her face in her hands, there came a dull, jarring thud in the paved court beneath, and the lady, looking down, saw the child lifted from the ground and borne out of sight, limp, silent, dead.

She kept her place at the window. Hours passed, the day waned, darkness settled down.

Then she saw a torch brought, a shallow hole was dug,—as it seemed to her; but in fact a condemned well of slight depth, a mere pit, was uncovered,—and the little broken form was buried. She informed the officers of justice. From what came to light at a later season, it is hard to think that in this earlier case the investigation was more than superficial. Yet an investigation was made, and some legal action was taken against Madame Lalaurie for cruelty to her slaves. 'They were taken from her and—liberated? Ah! no. They were sold by the sheriff, bid in by her relatives, and by them sold back to her. Let us believe that this is what occurred, or at least was shammed; for unless we do we must accept the implication of a newspaper statement of two or three years afterwards, and the confident impression of an aged Creole gentleman and notary still living who was an eye-witness to much of this story, that all Madame Lalaurie ever suffered for this part of her hideous misdeeds was a fine. Lawyers will doubtless remind us that Madame Lalaurie was not legally chargeable with the child's death. The lady at the window was not the only witness who might have been brought. A woman still living, who after the civil war was for years a domestic in this "haunted house," says her husband, now long dead, then a lad, was passing the place when the child ran out on the roof, and he saw her scrambling about on it seeking to escape. But he did not see the catastrophe that followed. No one saw more than what the law knows as assault; and the child was a slave.

Miss Martineau, in her short account of the matter, which she heard in New Orleans and from eye-witnesses only a few years after it had occurred, conjectures that Madame Lalaurie's object in buying back these slaves was simply to renew her cruelties upon them. But a much easier, and even kinder, guess would be that they knew things about her that had not been and must not be told, if she could possibly prevent it. A high temper, let us say, had led her into a slough of misdoing to a depth beyond all her expectation, and the only way out was on the farther side.

Yet bring to bear all the generous conjecture one can, and still the fact stands that she did starve, whip, and otherwise torture these poor victims. She even mistreated her daughter for conveying to them food which she had withheld. Was she not insane? One would hope so; but we cannot hurry to believe just what is most comfortable or kindest. That would be itself a kind of "emotional insanity." If she was insane, how about her husband? For Miss Martineau, who was told that he was no party to her crimes, was misinformed;

he was as deep in the same mire as passive complicity could carry him. If she was insane her insanity stopped abruptly at her plump, well-fed coachman. He was her spy against all others. And if she was insane, then why did not her frequent guests at table suspect it?

All that society knew was that she had carried her domestic discipline to excess, had paid dearly for it, and no doubt was desisting and would henceforth desist from that kind of thing. Enough allowance can hardly be made in our day for the delicacy society felt about prying into one of its own gentleman or lady member's treatment of his or her own servants. Who was going to begin such an inquiry—John Fitz Miller?

And so time passed, and the beautiful and ever sweet and charming Madame Lalaurie—whether sane or insane we leave to the doctors, except Dr. Lalaurie—continued to drive daily, yearly, on the gay Bayou Road, to manage her business affairs, and to gather bright groups around her tempting board, without their suspicion that she kept her cook in the kitchen by means of a twenty-four-foot chain fastened to her person and to the wall or floor.

And yet let this be said to the people's credit, that public suspicion and indignation steadily grew. But they were still only growing when one day, the 10th of April, 1834, the aged cook,—she was seventy,—chained as she was, purposely set the house on fire. It is only tradition that, having in a dream the night before seen the drawing-room window curtains on fire, she seized the happy thought and made the dream a reality. But it is in the printed record of the day that she confessed the deed to the mayor of the city.

The desperate stratagem succeeds. The alarm of fire spreads to the street and a hundred men rush in, while a crowd throngs the streets. "Those who rush in are of all classes and colors," says "The Courier" of next day; but "No, no!" says a survivor of to-day who was there and took part; "we would n't have allowed that!" But some are neighbors, some friends, some strangers. One is M. Montreuil, the gentleman who has so long been watching his chance to bring the law upon the house and its mistress. Young D——, a notary's clerk, is another. And another is Judge Canonge—Aha! And there are others of good and well-known name!

The fire has got a good start; the kitchen is in flames; the upper stories are filling with smoke. Strangers run to the place whence it all comes and fall to fighting the fire. Friends rally to the aid of Monsieur and Madame Lalaurie. The pretty lady has not lost one wit—is at her very best. Her husband is as passive as ever.

"This way," she cries; "this way! Take this—go, now, and hurry back, if you please. This way!" And in a moment they are busy carrying out, and to places of safety, plate, jewels, robes, and the lighter and costlier pieces of furniture. "This way, please, gentlemen; that is only the servants' quarters."

The servants' quarters—but where are the servants?

Madame's answers are witty but evasive. "Never mind them now—save the valuables!"

Somebody touches Judge Canonge—"Those servants are chained and locked up and liable to perish."

"Where?"

"In the garret rooms."

He hurries towards them but fails to reach them, and returns, driven back and nearly suffocated by the smoke. He looks around him—this is no sketch of the fancy; we have his deposition sworn before a magistrate next day—and sees some friends of the family. He speaks to them:

"I am told"—so and so—"can it be? Will you speak to Monsieur or to Madame?" But the friends repulse him coldly.

He turns and makes fresh inquiries of others. He notices two gentlemen near him whom he knows. One is Montreuil. "Here, Montreuil, and you, Fernandez, will you go to the garret and search? I am blind and half smothered." Another—he thinks it was Felix Lefebre—goes in another direction, most likely towards the double door between the attics of the house and wing. Montreuil and Fernandez come back saying they have searched thoroughly and found nothing. Madame Lalaurie begs them, with all her sweetness, to come other ways and consider other things. But here is Lefebre. He cries, "I have found some of them! I have broken some bars, but the doors are locked!"

Judge Canonge hastens through the smoke. They reach the spot.

"Break the doors down!" Down come the doors. The room they push into is a "den." They bring out two negroes. One has a large heavy iron collar at the neck and heavy irons on her feet. The fire is subdued now, they say, but the search goes on. Here is M. Guillotte; he has found another victim in another room. They push aside a mosquito-net and see a negro woman, aged, helpless, and with a deep wound in the head.

Some of the young men lift her and carry her out.

Judge Canonge confronts Doctor Lalaurie again:

"Are there slaves still in your garret, Monsieur?" And the doctor "replies with insulting

tone that 'There are persons who would do much better by remaining at home than visiting others to dictate to them laws in the quality of officious friends.'"

The search went on. The victims were led or carried out. The sight that met the public eye made the crowd literally groan with horror and shout with indignation. "We saw," wrote the editor of the "Advertiser" next day, "one of these miserable beings. The sight was so horrible that we could scarce look upon it. The most savage heart could not have witnessed the spectacle unmoved. He had a large hole in his head; his body from head to foot was covered with scars and filled with worms! The sight inspired us with so much horror that even at the moment of writing this article we shudder from its effects. Those who have seen the others represent them to be in a similar condition." One after another, seven dark human forms were brought forth, gaunt and wild-eyed with famine and loaded with irons, having been found chained and tied in attitudes in which they had been kept so long that they were crippled for life.

It must have been in the first rush of the inside throng to follow these sufferers into the open air and sunlight that the quick-witted Madame Lalaurie clapped to the doors of her house with only herself and her daughters—possibly the coachman also—inside, and nothing but locks and bars to defend her from the rage of the populace. The streets under her windows—Royal street here, Hospital yonder—and the yard were thronged. Something by and by put some one in mind to look for buried bodies. There had been nine slaves besides the coachman; where were the other two? A little digging brought their skeletons to light—an adult's out of the soil, and the little child's out of the "condemned well"; there they lay. But the living seven—the indiscreet crowd brought them food and drink in fatal abundance, and before the day was done two more were dead. The others were tenderly carried—shall we say it?—to prison!—to the calaboose! Thither "at least two thousand people" flocked that day to see, if they might, these wretched sufferers.

A quiet fell upon the scene of the morning's fire. The household and its near friends busied themselves in getting back the jewelry, plate, furniture, and the like, the idle crowd looking on in apathy and trusting, it may be, to see arrests made. But the restoration was finished and the house remained close barred; no arrest was made. As for Dr. Lalaurie, he does not appear in this scene. Then the crowd, along in the afternoon, began to grow again; then to show anger and by and by to hoot and groan, and cry for satisfaction.

IV.

THE LADY'S FLIGHT.

THE old Bayou Road saw a strange sight that afternoon. Down at its farther end lay a little settlement of fishermen and Spanish moss gatherers, pot-hunters, and shrimpers, around a custom-house station, a lighthouse, and a little fort. There the people who drove out in carriages were in the habit of alighting and taking the cool air of the lake, and sipping lemonades, wines, and ices before they turned homeward again along the crowded way that they had come. In after years the place fell into utter neglect. The customs station was removed, the fort was dismantled, the gay carriage people drove on the "New Shell Road" and its tributaries, Bienville and Canal streets, Washington and Carrollton avenues, and sipped and smoked in the twilights and starlights of Carrollton Gardens and the "New Lake End." The older haunt, once so bright with fashionable pleasure-making, was left to the sole illumination of "St. John Light" and the mongrel life of a bunch of cabins branded Crabtown, and became, in popular superstition at least, the yearly rendezvous of the voodooes. Then all at once in latter days it bloomed out in electrical, horticultural, festal, pyrotechnical splendor as "Spanish Fort," and the carriages all came rolling back.

So, whenever you and — visit Spanish Fort and stroll along the bayou's edge on the fort side, and watch the broad schooners glide out through the bayou's mouth and into the open water, you may say: "Somewhere just along this bank, within the few paces between here and yonder, must be where *that* schooner lay, moored and ready to sail for Mandeville the afternoon that Madame Lalaurie, fleeing from the mob," etc.

For on that afternoon, when the people surrounded the house, crying for vengeance, she never lost, it seems, her cunning. She and her sleek black coachman took counsel together, and his plan of escape was adopted. The early afternoon dinner-hour of those times came and passed and the crowd still filled the street, but as yet had done nothing. Presently, right in the midst of the throng, her carriage came to the door according to its well-known daily habit at that hour, and at the same moment the charming Madame Lalaurie, in all her pretty manners and sweetness of mien, stepped quickly across the sidewalk and entered the vehicle.

The crowd was taken all aback. When it gathered its wits the coach-door had shut and the horses were starting. Then her audacity was understood.

"She is getting away!" was the cry, and

the multitude rushed upon her. "Seize the horses!" they shouted, and dashed at the bits and reins. The black driver gave the word to his beasts, and with his coach whip lashed the faces of those who sprung forward. The horses reared and plunged, the harness held, and the equipage was off. The crowd went with it.

"Turn the coach over!" they cry, and attempt it, but fail. "Drag her out!"

They try to do it, again and again, but in vain; away it rattles! Away it flashes! down Hospital street, past Bourbon, Dauphine, Burgundy, and the Rampart, with the crowd following, yelling, but fast growing thin and thinner.

"Stop her! Stop her! Stop that carriage! Stop that *carriage*!"

In vain! On it spins! Out upon the Bayou Road come the pattering hoofs and humming wheels—not wildly driven, but just at their most telling speed—into the whole whirling retinue of fashionable New Orleans out for its afternoon airing. Past this equipage; past that one; past half a dozen; a dozen; a score! Their inmates sit chatting in every sort of mood over the day's sensation, when—what is this? A rush from behind, a whirl of white dust, and—"As I live, there she goes now, on her regular drive! What scandalous speed! and—see here! they are after her!" Past fifty gigs and coaches; past a hundred; around this long bend in the road; around that one. Good-bye, pursuers! Never a chance to cut her off, the swamp forever on the right, the bayou on the left; she is getting away, getting away! the crowd is miles behind!

The lake is reached. The road ends. What next? The coach dashes up to the bayou's edge and stops. Why just here? Ah! because just here so near the bayou's mouth a schooner lies against the bank. Is Dr. Lalaurie's hand in this? The coachman parleys a moment with the schooner-master and hands him down a purse of gold. The coach-door is opened, the lady alights, and is presently on the vessel's deck. The lines are cast off, the great sails go up, the few lookers-on are there without reference to her and offer no interruption; a little pushing with poles lets the wind—just suppose there had been none!—fill the canvas, and first slowly and silently, and then swiftly and with a grateful creaking of cordage and spars, the vessel glides out past the lighthouse, through the narrow opening, and stands away towards the northern horizon, below which, some thirty miles away, lies the little watering-place of Mandeville with roads leading as far away northward as one may choose to fly. Madame Lalaurie is gone!

The brave coachman—one cannot help admiring the villain's intrepidity—turned and

drove back towards the city. What his plan was is not further known. No wonder if he thought he could lash and dash through the same mob again. But he mistook. He had not reached town again when the crowd met him. This time they were more successful. They stopped the horses—killed them. What they did with the driver is not told; but one can guess. They broke the carriage into bits. Then they returned to the house.

They reached it about 8 o'clock in the evening. The two daughters had just escaped by a window. The whole house was locked and barred; "hermetically sealed," says "L'Abeille" of the next morning. The human tempest fell upon it, and "in a few minutes," says "The Courier," "the doors and windows were broken open, the crowd rushed in, and the work of destruction began." In a single hour everything movable disappeared or perished. The place was rifled of jewelry and plate; china was smashed; the very stair-balusters were pulled piece from piece; hangings, bedding, and table linen were tossed into the streets; and the elegant furniture, bedsteads, wardrobes, buffets, tables, chairs, pictures, "pianos," says the newspaper, were taken with pains to the third-story windows, hurled out and broken—"smashed into a thousand pieces"—upon the ground below. The very basements were emptied, and the floors, wainscots, and iron balconies damaged as far as at the moment they could be. The sudden southern nightfall descended, and torches danced in the streets and through the ruined house. The débris was gathered into hot bonfires, feather-beds were cut open, and the pavements covered with a thick snow of feathers. The night wore on, but the mob persisted. They mounted and battered the roof; they defaced the inner walls. Morning found them still at their senseless mischief, and they were "in the act of pulling down the walls when the sheriff and several citizens interfered and put an end to their work."

It was proposed to go at once to the houses of others long suspected of like cruelties to their slaves. But against this the highest gentility of the city alertly and diligently opposed themselves. Not at all because of sympathy with such cruelties. The single reason has its parallel in our own day. It was the fear that the negroes would be thereby encouraged to seek by violence those rights which their masters thought it not expedient to give them. The movement was suppressed, and the odious parties were merely warned that they were watched.

Madame Lalaurie, we know by notarial records, was in Mandeville ten days after, when she executed a power of attorney in favor of

her New Orleans business agent, in which act she was "authorized and assisted by her husband, Louis Lalaurie." So he disappears.

His wife made her way to Mobile—some say to the North—and thence to Paris. Being recognized and confronted there, she again fled. The rest of her story is tradition, but comes very directly. A domestic in a Creole family that knew Madame Lalaurie—and slave women used to enjoy great confidence and familiarity in the Creole households at times—tells that one day a letter from France to one of the family informed them that Madame Lalaurie, while spending a season at Pau, had engaged with a party of fashionable people in a boar-hunt, and somehow meeting the boar while apart from her companions had been set upon by the infuriated beast, and too quickly for any one to come to her rescue had been torn and killed. If this occurred after 1836 or 1837 it has no disagreement with Harriet Martineau's account, that at the latter date Madame Lalaurie was supposed to be still "skulking about some French province under a false name."

The house remained untouched for at least three years, "ornamented with various writings expressive of indignation and just punishment." The volume of "L'Abeille" containing this account seems to have been abstracted from the city archives. It was in the last week of April or the first week of May, 1836, that Miss Martineau saw the house. It "stands," she wrote about a year later, "and is meant to stand, in its ruined state. It was the strange sight of its gaping windows and empty walls, in the midst of a busy street, which excited my wonder, and was the cause of my being told the story the first time. I gathered other particulars afterwards from eye-witnesses."

So the place came to be looked upon as haunted. In March, 1837, Madame Lalaurie's agent sold the house to a man who held it but a little over three months and then sold it at the same price that he had paid—only fourteen thousand dollars. The notary who made the earlier act of sale must have found it interesting. He was one of those who had helped find and carry out Madame Lalaurie's victims. It did not change hands again for twenty-five years. And then—in what state of repair I know not—it was sold at an advance equal to a yearly increase of but six-sevenths of one per cent. on the purchase price of the gaping ruin sold in 1837. There is a certain poetry in notarial records. But we will not delve for it now. Idle talk of strange sights and sounds crowded out of notice any true history the house may have had in those twenty-five years, or until war had destroyed that slavery to whose horrid possibilities the gloomy pile, even when restored and renovated, stood a ghost-

ridden monument. Yet, as we shall see, its days of dark romance were by no means ended.

V.

A NEW USE.

THE era of political reconstruction came. The victorious national power decreed that they who had once been master and slave should enter into political partnership on terms of civil equality. The slaves grasped the boon; but the masters, trained for generations in the conviction that public safety and private purity were possible only by the subjection of the black race under the white, loathed civil equality as but another name for private companionship, and spurned, as dishonor and destruction in one, the restoration of their sovereignty at the price of political copartnership with the groveling race they had bought and sold and subjected easily to the leash and lash.

What followed took every one by surprise. The negro came at once into a larger share of power than it was ever intended he should or expected he would attain. His master, related to him long and only under the imagined necessities of plantation government, vowed the issue must and should be, not How shall the two races share public self-government in prosperous amity? but, Which race shall exclusively rule the other, race by race?

The necessities of national authority tipped the scale, and the powers of legislation and government and the spoils of office tumbled, all together, into the freedman's ragged lap. Thereupon there fell upon New Orleans, never well governed at the best, a volcanic shower of corruption and misrule.

And yet when history's calm summing-up and final judgment comes, there must this be pointed out, which was very hard to see through the dust and smoke of those days: that while plunder and fraud ran riot, yet no serious attempt was ever made by the freedman or his allies to establish any un-American principle of government, and for nothing else was he more fiercely, bloodily opposed than for measures approved by the world's best thought and in full harmony with the national scheme of order. We shall see now what these things have to do with our strange true story.

In New Orleans the American public school system, which recognized free public instruction as a profitable investment of the public funds for the common public safety, had already long been established. The negro adopted and enlarged it. He recognized the fact that the relation of pupils in the public schools is as distinctly a public and not a private relation as that of the sidewalk, the market, the public park, or the street-car. But recognizing also the

impracticabilities of place and time, he established separate schools for whites and blacks. In one instance, however, owing mainly to smallness of numbers, it seemed more feasible to allow a common enjoyment of the civil right of public instruction without separation by race than to maintain two separate schools, one at least of which would be very feeble for lack of numbers. Now, it being so decided, of all the buildings in all New Orleans which one was chosen for this experiment but the "haunted house" in Royal Street!

I shall never forget the day—although marked by no startling incident—when I sat in its lofty drawing-rooms and heard its classes in their annual examination. It was June, and the teachers and pupils were clad in recognition of the special occasion and in the light fabrics fitted to the season. The rooms were adorned with wreaths, garlands, and bouquets. Among the scholars many faces were beautiful, and all were fresh and young. Much Gallic blood asserted itself in complexion and feature, generally of undoubted, unadulterated "Caucasian" purity, but sometimes of visible and now and then of preponderating African tincture. Only two or three, unless I have forgotten, were of pure negro blood. There, in the rooms that had once resounded with the screams of Madame Lalaure's little slave fleeing to her death, and with the hootings and maledictions of the enraged mob, was being tried the experiment of a common enjoyment of public benefits by the daughters of two widely divergent races, without the enforcement of private social companionship.

From such enforcement the school was as free as any school is or ought to be. The daily discipline did not require any two pupils to be social, but only every one to be civil, and civil to all. These pages are written, however, to tell a strange true story, and not to plead one cause or another. Whatever the story itself pleads, let it plead. Outside the "haunted house," far and near, the whole community was divided into two fiercely hostile parties, often at actual war with each other, the one striving to maintain government upon a co-citizenship regardless of race in all public relations, the other sworn to make race the supreme, sufficient, inexorable condition of supremacy on the one part and subjection on the other. Yet for all this the school prospered.

Nevertheless, it suffered much internal unrest. Many a word was spoken that struck like a club, many a smile stung like a whip-lash, many a glance stabbed like a knife; even in the midst of recitations a wounded one would sometimes break into sobs or silent tears while the aggressor crimsoned and palpitated with the proud indignation of the master caste. The

teachers met all such by-play with prompt, impartial repression and concentration upon the appointed duties of the hour.

Sometimes another thing restored order. Few indeed of the pupils, of whatever racial purity or preponderance, but held more or less in awe the ghostly traditions of the house; and at times it chanced to be just in the midst of one of these ebullitions of scorn, grief, and resentful tears that noiselessly and majestically the great doors of the reception rooms, untouched by visible hands, would slowly swing open, and the hushed girls would call to mind Madame Lalaurie.

Not all who bore the tincture of the despised race suffered alike. Some were fierce and sturdy, and played a savage tit-for-tat. Some were insensible. A few bore themselves inflexibly by dint of sheer nerve; while many, generally much more white than black, quivered and winced continually under the contumely that fell, they felt, with peculiar injustice and cruelty upon them.

Odd things happened from time to time to remind one of the house's early history. One day a deep hidden well that no one had suspected the existence of was found in the basement of the main house. Another time — But we must be brief.

So matters went on for years. But at length there was a sudden and violent change.

VI.

EVICCTIONS.

THE "Radical" party in Louisiana, gorged with private spoils and loathed and hated by the all but unbroken ranks of well-to-do society, though it held a *creed* as righteous and reasonable as any political party ever held, was going to pieces by the sheer weakness of its own political corruption. It was made mainly of the poor and weak elements of the people. Had it been ever so pure it could not have made headway against the strongest ranks of society concentrating against it with revolutionary intent, when deserted by the power which had called it to responsibility and — Come! this history of a house must not run into the history of a government. It is a fact in our story, however, that in the "Conservative" party there sprang up the "White League," purposing to wrest the State government from the "Radicals" by force of arms.

On the 14th of September, 1874, the White League met and defeated the Metropolitan Police in a hot and bloody engagement of infantry and artillery on the broad steamboat landing in the very middle of New Orleans. But the Federal authority interfered. The "Radical" government resumed control. But the White League survived and grew in power.

In November elections were held, and the State legislature was found to be Republican by a majority of only two.

One bright, spring-like day in December, such as a northern March might give in its best mood, the school had gathered in the "haunted house" as usual, but the hour of duty had not yet struck. Two teachers sat in an upper classroom talking over the history of the house. The older of the two had lately heard of an odd new incident connected with it, and was telling of it. A distinguished foreign visitor, she said, guest at a dinner-party in the city the previous season, turned unexpectedly to his hostess, the talk being of quaint old New Orleans houses, and asked how to find "the house where that celebrated tyrant had lived who was driven from the city by a mob for maltreating her slaves." The rest of the company sat aghast, while the hostess silenced him by the severe coldness with which she replied that she "knew nothing about it." One of Madame Lalaurie's daughters was sitting there, a guest at the table.

When the teacher's story was told her companion made no comment. She had noticed a singular sound that was increasing in volume. It was out-of-doors — seemed far away; but it was drawing nearer. She started up, for she recognized it now as a clamor of human voices, and remembered that the iron gates had not yet been locked for the day. They hurried to the window, looked down, and saw the narrow street full from wall to wall for a hundred yards with men coming towards them. The front of the crowd had already reached the place and was turning towards the iron gates.

The two women went quickly to the hall, and, looking down the spiral staircase to the marble pavement of the entrance three stories below, saw the men swarming in through the wide gateway and doorway by dozens. While they still leaned over the balustrade, Marguerite, one of their pupils, a blue-eyed blonde girl of lovely complexion, with red, voluptuous lips, and beautiful hair held by a carved shell comb, came and bent over the balustrade with them. Suddenly her comb slipped from its hold, flashed downward, and striking the marble pavement flew into pieces at the feet of the men who were about to ascend. Several of them looked quickly up.

"It was my mother's comb!" said Marguerite, turned ashy pale, and sunk down into hysterics. The two teachers carried her to a remote room, the bed-chamber of the janitress, and then obeyed an order of the principal calling her associates to the second floor. A band of men were coming up the winding stair with measured, military tread towards the landing, where the principal, with her assistants gathered around her, stood to confront them.

She was young, beautiful, and of calm temper. Her skin, says one who was present, was of dazzling clearness, her abundant hair was golden auburn, and in happy hours her eyes were as "soft as velvet." But when the leader of the band of men reached the stair-landing, threw his coat open, and showed the badge of the White League, her face had blanched and hardened to marble, and her eyes darkened to black as they glowed with indignation.

"We have come," said the White Leaguer, "to remove the colored pupils. You will call your school to order." To which the principal replied:

"You will permit me first to confer with my corps of associates." He was a trifle disconcerted.

"Oh, certainly."

The teachers gathered in the principal's private room. Some were dumb, one broke into tears, another pleaded devotion to the principal, and one was just advising that the *onus* of all action be thrown upon the intruders, when the door was pushed open and the White Leaguer said:

"Ladies, we are waiting. Assemble the school; we are going to clean it out."

The pupils, many of them trembling, weeping, and terrified, were with difficulty brought to order in the assembly room. This place had once been Madame Lalaurie's dining-hall. A frieze of angels ran round its four walls, and, oddly, for some special past occasion, a legend in crimson and gold on the western side bore the words, "The Eye of God is on us."

"Gentlemen, the school is assembled," said the principal.

"Call the roll," was the reply, "and we will challenge each name."

It was done. As each name was called its young bearer rose and confronted her inquisitors. And the inquisitors began to blunder. Accusations of the fatal taint were met with denials and withdrawn with apologies. Sometimes it was truth, and sometimes pure arrogance and falsehood, that triumphed over these champions of instinctive racial antagonism. One dark girl shot up haughtily at the call of her name—

"I am of Indian blood, and can prove it!"

"You will not be disturbed."

"Coralie —," the principal next called. A thin girl of mixed blood and freckled face rose and said:

"My mother is white."

"Step aside!" commanded the White Leaguer.

"But by the law the color follows the mother, and so I am white."

"Step aside!" cried the man, in a fury. (In truth there was no such law.)

"Octavie —."

A pretty, Oriental looking girl rises, silent, pale, but self-controlled.

"Are you colored?"

"Yes; I am colored." She moves aside.

"Marie O——."

A girl very fair, but with crinkling hair and other signs of negro extraction, stands up and says:

"I am the sister of the Hon. —," naming a high Democratic official, "and I shall not leave this school."

"You may remain; your case will be investigated."

"Eugénie —."

A modest girl, visibly of mixed race, rises, weeping silently.

"Step aside."

"Marcelline V——."

A bold-eyed girl of much African blood stands up and answers:

"I am not colored! We are Spanish, and *my brother will call on you and prove it.*" She is allowed to stay.

At length the roll-call is done. "Now, madam, you will dismiss these pupils that we have set aside, at once. We will go down and wait to see that they come out." The men tramped out of the room, went down-stairs, and rejoined the impatient crowd that was clamoring in the street.

Then followed a wild scene within the old house. Restraint was lost. Terror ruled. The girls who had been ordered into the street sobbed and shrieked and begged:

"Oh, save us! We cannot go out there; the mob will kill us! What shall we do?"

One girl of grand and noble air, as dark and handsome as an East Indian princess, and standing first in her class for scholarship, threw herself at her teacher's feet, crying, "Have pity on me, Miss —!"

"My poor Léontine," replied the teacher, "what can I do? There are good 'colored' schools in the city; would it not have been wiser for your father to send you to one of them?"

But the girl rose up and answered:

"Must I go to school with my own servants to escape an unmerited disdain?" And the teacher was silent, while the confusion increased.

"The shame of it will kill me!" cried gentle Eugénie L——. And thereupon, at last, a teacher, commonly one of the sternest in discipline, exclaimed:

"If Eugénie goes, Marcelline shall go, if I have to put her out myself! Spanish, indeed! And Eugénie a pearl by the side of her!"

Just then Eugénie's father came. He had forced his way through the press in the street, and now stood bidding his child have courage and return with him the way he had come.

"Tie your veil close, Eugénie," said the teacher, "and they will not know you." And so they went, the father and the daughter. She was the first girl. They went alone. None followed. This roused the crowd to noisy anger.

"Why don't the rest come?" it howled. But the teachers tried in vain to inspire the panic-stricken girls with courage to face the mob, and were in despair, when a school official arrived, and with calm and confident authority bade the expelled girls gather in ranks and follow him through the crowd. So they went out through the iron gates, the great leaves of which closed after them with a rasping of their key and shooting of their bolts, while a teacher said:

"Come; the reporters will soon be here. Let us go and see after Marguerite."

They found her in the room of the janitress, shut in and fast asleep.

"Do you think," one asked of the janitress, "that mere fright and the loss of that comb made this strong girl ill?"

"No. I think she must have guessed those men's errand, and her eye met the eye of some one who knew her."

"But what of that?"

"She is 'colored.'"

"Impossible!"

"I tell you, yes!"

"Why, I thought her as pure German as her name."

"No, the mixture is there; though the only trace of it is on her lips. Her mother — she is dead now — was a beautiful quadroon. A German sea-captain loved her. The law stood between them. He opened a vein in his arm, forced in some of her blood, went to court, swore he had African blood, got his license, and married her. Marguerite is engaged to be married to a white man, a gentleman who does not know this. It was like life and death, so to speak, for her not to let those men turn her out of here."

The teacher turned away, pondering.

The eviction did not, at that time, hold good. The political struggle went on, fierce and bitter. The "Radical" government was doomed, but not dead. A few weeks after the scene just described the evicted girls were reinstated. A

long term of suspense followed. The new year became the old and went out. Twice this happened. In 1877 there were two governors and two governments in Louisiana. In sight from the belvedere of the "haunted house," eight squares away up Royal street, in the State House, the *de facto* government was shut up under close military siege by the *de jure* government, and the Girls' High School in Madame Lalaurie's old house, continuing faithfully their daily sessions, knew with as little certainty to which of the two they belonged as though New Orleans had been some Italian city of the fifteenth century. But to guess the White League, was not far from right, and in April the Radical government expired.

A Democratic school-board came in. June brought Commencement day, and some of the same girls who had been evicted in 1874 were graduated by the new Board in 1877. During the summer the schools and school-laws were overhauled, and in September or October the high school was removed to another place, where each pupil suspected of mixed blood was examined officially behind closed doors and only those who could prove white or *Indian* ancestry were allowed to stay. A "colored" high school was opened in Madame Lalaurie's house with a few pupils. It lasted one session, maybe two, and then perished.

In 1882 the "haunted house" had become a Conservatory of Music. Chamber concerts were frequent in Madame Lalaurie's old dining-hall. On a certain sweet evening in the spring of that year there sat among those who had gathered to hear the haunted place filled with a deluge of sweet sounds one who had been a teacher there when the house had been, as some one — Conservative or Radical, who can tell which? — said on the spot, "for the second time purged of its iniquities." The scene was "much changed," says the auditor; but the ghosts were all there, walking on the waves of harmony. And thickest and fastest they trooped in and out when a passionate song thrilled the air with the promise that

Some day — some day
Eyes clearer grown the truth may see.

G. W. Cable.

HOW MAN'S MESSENGER OUTRAN THE MOON.

IT came about on this wise—rather complexly.

Sun and moon, types and wires,—astronomy, journalism, and telegraphy,—all were concerned in

the contest.

But first, how can any one be certain that the moon really moves at all? We see her in the nocturnal sky, apparently at rest relatively to the stars about her, all seeming to drift together towards the west. After watching for an hour or two, it becomes evident that she has moved easterly among these stars; but the motion cannot be seen in the sky—only the result of it is evidenced in a change of her place.

A few rough observations suffice to show that the moon moves over her own breadth in about sixty minutes; and, as we know that her diameter is about one-quarter that of the earth, it follows that the moon's actual motion in her circumterrestrial path is in the neighborhood of two thousand miles in each hour of time. This velocity is somewhat greater than that of projectiles from the best rifled guns; but these can often be seen throughout their whole flight. Evidently the moon's motion, also, is not too great to be seen. And it can be seen if all conditions favor the observer.

Averaging a period of some decades, there are in three years two opportunities when this spectacle may be seen: they occur only at such times as the moon passes between the earth and the sun and causes a total solar eclipse. But even then it is not strictly correct to say that the moon can be seen traveling through space.

At the time of such an eclipse, however, the moon's dark shadow sweeps over the earth with nearly the same velocity as the moon herself travels; and it is this swiftly flying shadow which the alert observer may see.¹

This imposing spectacle has frequently been beheld, but rarely unless from an elevation commanding a vast extent. Often, however, expert observers fail to see the almost tangible

shadow, even when specially on the lookout for it.

Not strange is it, therefore, that different eyes report so impressive a phenomenon differently. To some the shadow seen in the distance resembled a dark storm upon the horizon. Some saw the shadow "visible in the air"; one speaks of its "gliding swiftly up over the heavens"; while another likens its passage to the "lifting of a dark curtain."

Those who have taken pains to note its color do not generally call it black, but deep violet, or dark brown. One describes it as a "wall of fog," another as a "vaporous shadow," a third says it was "like neither shadow nor vapor," while no less careful observers than Winnecke and Lady Airy speak of the shadow as "appearing like smoke."

From their stations high above the valley of the Ebro, over which it swept, members of the Himalaya Expedition of 1860 had exceptional opportunities for watching the approach and recession of the shadow. Many observers saw it. "When the critical moment was at hand," says one, "the darkness, sweeping over a landscape twenty or thirty miles in extent and advancing right at me, was in the highest degree sublime and imposing." Then and on other occasions it was very distinctly seen.

So much for the appearance of the shadow; but more interesting here is its speed.

While observers generally remark the "frightful velocity" with which it travels, President Hill of Harvard, in Illinois in 1869, found the transit of the shadow much slower, and more majestic and beautiful than he had been led to expect. "A sweeping upward and eastward of a dense violet shadow," are his words.

General Abbot, ascending Mount Ætna in 1870, wrote: "At an elevation of 7500 feet I was overtaken by the shadow, which swept with great rapidity over us, darkening the gloom to an awe-inspiring degree."

One of the best opportunities in more recent years for witnessing this spectacle fell to the lot of a small party of observers who clambered to the summit of Mount Santa Lucia in California in 1880. The track of the eclipse that year was similar to that of last January, only lying farther to the south; and the shadow

¹ While the shadow is sweeping easterly across the globe, the earth itself by turning on its axis carries along the observer in the same direction; so that at the equator the velocity of the shadow relative to the observer may be reduced a half.

swept in from the Pacific Ocean, trailing over this mountain, which is nearly 6000 feet high and only a few miles from the coast. The skies were clear, and there could be no mistake. Among the astronomers were Professor Frisby of Washington and Professor Davidson of San Francisco. From this elevated spot all the observers saw the shadow advancing over the ocean as a dark brown area on its surface. However, it had not, says Professor Davidson, "the density and impressiveness of the shadow I saw in Alaska in 1869, coming down the valley of the Chilkah, when it was visible on the flanks of the mountains and against the snow gorges."

Can man's fleet messenger, the telegraph, outstrip this rushing shadow? And will any advantage result if it can?

Evidently the odds are largely in favor of the electric messenger, as the actual speed is many thousand-fold greater than the motion of the moon. But while the moon moves steadily onward, telegraphic dispatches are often subject to sundry and irregular detentions; so that there may well be doubt as to which may outstrip the other when both are matched together on the racecourse of space, as it were. If the telegraph can win the race, many possible benefits appear on slight consideration.

These trails of the lunar shadow across the terrestrial landscape are usually more than a hundred miles broad, and their length often exceeds five thousand miles.

It is apparent that the eclipse cannot be total at the same time everywhere along this track; as the moon journeys eastward, its shadow following it, the eclipse may be total near the west end of the trail more than two hours (world time) before it becomes total near the eastern extremity.

If the astronomers near both ends of the shadow-track are in telegraphic communication, these may become moments of supreme significance.

An important observation, a discovery possibly, may be made by an observer whom the shadow first meets; it may be months, perhaps years, before another eclipse will happen with all conditions favorable for the verification of that discovery. But if the telegraph is called in as an adjunct, new light may be available at once, and without waiting for another eclipse. By telegraphing the nature of the observation eastward to a fellow-observer, the discovery may be confirmed forthwith, or the observation, if doubtful, may be rejected.

More than a decade has elapsed since I first brought this novel project to the notice of astronomers. This was during the eclipse of

1878, when the moon's shadow swept southeasterly across Wyoming and Texas. Professor Newcomb observed the eclipse in the former Territory, and my own station was in the latter State. Intra-Mercurian planets were then favorite search-objects, and we had concluded an arrangement with the telegraph company to forward any message from the northern station to the southern one with all possible dispatch. But no opportunity appeared for the practical test on this occasion.

Four years later a case not wholly supposititious arose. The astronomers who went to Egypt in 1882, to observe the total eclipse in May of that year, took a photograph of the region surrounding the sun. To their great surprise, on developing the negative, a faint comet made its appearance alongside the corona. This object had never been seen before, nor has it ever been seen since; consequently nothing is known of the size and figure of its orbit, or of its position, or whether the comet will ever return to the sun again or not.

But it is easy to see how the telegraph may render important service on a similar occasion in the future. By telegraphing eastward to an astronomer where to find it, an observation of the comet two or three hours later may readily furnish data sufficient to indicate where to look for the stranger as it recedes from the sun. Subsequent observations thus may enable the astronomer to determine all the elements of its orbit with precision.

Any one acquainted with the conditions of this duplex problem of astronomy and telegraphy will at once recognize the practicability of the project of telegraphing ahead of the moon; and this was demonstrated upon occasion of the total eclipse on New Year's Day.

The engraving gives a glimpse of celestial perspective, so conventionalized as to come within page limits. Here are the sun and its corona, the moon and the earth. On the latter the artist has rolled back the cloud curtain to give all observers a clear view of the eclipse.

The track of total eclipse is shown as a darkened area crossing the Pacific Ocean, and curving northward from California to Manitoba.

To lessen the artist's difficulties, and to heighten the pictorial effect, our engraving shows sun and moon standing nearly over that region of the earth where the eclipse was visible. Had it been possible to represent these bodies correctly, the line joining the centers of the sun and moon would have been a tangent to the earth's surface at that point in the British Possessions where the eclipse-trail ends. This line thus becomes less and less inclined to totality-path as the end of it is approached;

consequently the apparent velocity of the shadow is all the time increasing until it leaves the earth. Over the plains of Manitoba its speed was no less than five times that of a rifle-shot.

The curvature of the eclipse-track is partly due to the curved surface on which it is projected, and partly to the earth's axial turning as the lunar shadow sweeps over it.

As shown in the engraving, the total eclipse was visible in the eastern part of California, the shadow having just passed over the point occupied by the Harvard University Observatory party. This point was Willows, California, and the artist has represented it in direct telegraphic connection with New York.

Here was located the most complete collection of photographic apparatus ever brought to bear upon a solar eclipse: cameras for photographing the corona on every scale, from the largest to the smallest, spectroscopes for a thorough analysis of the coronal light, photometers for measuring its intensity, a large telescope for photographing all the stars in the neighborhood of the sun, so as to detect the suspected Intra-Mercurian planet, together with a great variety of accessory apparatus.

The immediate reporting of the eclipse observations at Willows and elsewhere was a matter of great scientific interest to astronomers in both hemispheres. It could not, however, be successfully accomplished without very careful pre-arrangement with the observers themselves; and the enterprise of the "New York Herald" was accordingly invoked in executing the plans which I had elaborated.

First, a complete list of the instruments of every observer, and the work he purposed to do with them, must be prepared. Weather probabilities were everywhere very unsatisfactory, there was a possibility of all degrees of success or failure. Accordingly the problem was to arrange for each station a cipher code, which should include, as minutely as possible, all the likely combinations of instruments, weather, and results on eclipse-day.

About one hundred words were found sufficient to embrace the complete cipher. A part of the code for Willows is given here:

<i>Africa.</i>	Perfectly clear throughout the whole eclipse.
<i>Alaska.</i>	Perfectly clear during totality.
<i>Belgium.</i>	Clear sky for the partial phases, but cloudy for totality.
<i>Bolivia.</i>	Entirely cloudy throughout the whole eclipse.
<i>Brazil.</i>	Observed all the contacts.
<i>Bremen.</i>	Observed three of the contacts.
<i>Ceylon.</i>	Made observations on the shadow-bands.
<i>Chili.</i>	Observed lines of the reversing layer visually.
<i>China.</i>	The corona showed great detail.
<i>Cork.</i>	Obtained 40-50 negatives during totality.

Corsica. Obtained 50-60 negatives during totality.
Crimea. Obtained 60-70 negatives during totality.
Cuba. Observed a comet.

And so on through a great variety of detail, not the least of which was the capability of the cipher to indicate with sufficient accuracy the position of any Intra-Mercurian planet which the photographs might disclose.

Between twenty and thirty codes had been prepared on a like plan for as many stations, and the observers were instructed to report the results of their work in cipher at the earliest available moment, employing the ordinary telegraphic facilities.

In rehearsing the programme it occurred to me that in receiving so many cipher dispatches great delays were at least possible; and that through no fault of the telegraph company. In only a single way could the arrangements be improved: were a special wire available in direct circuit from New York to the eclipse-stations in turn, our chances of success would surely be bettered, not only in gathering the eclipse reports, but also in proving the practicability of telegraphing ahead of the moon.

I outlined my plans to the Western Union Telegraph Company, and asked for the use of a special wire to the more important eclipse-stations, for the purpose of immediate and rapid communication of the observations. To this request the general manager of the company acceded very heartily.

A New York-San Francisco wire was placed at my disposal, and a loop, as the telegrapher calls it, or branch wire, was let across Broadway from the Western Union building to the editorial rooms of the "Herald."

From San Francisco every California station was within easy telegraphic reach, and our wire thus extended by direct circuit to each eclipse-station in turn. From the editorial rooms of the "Herald" I was in immediate communication with the observers at any eclipse-station which I chose to call.

As previously intimated, I had arranged with the Harvard astronomers at Willows to receive their message first and with the utmost dispatch, purposing to test the practicability of outstripping the moon in its motion through space.

Shortly before five o'clock in the afternoon the dispatches began to come in. Of course we have to allow for a slight delay in reporting, owing to the fact that the observers at the various stations were some rods distant from the local telegraph office, and that it would take a few minutes after the eclipse was over to prepare the suitable message from the cipher code.

On the astronomer's table were a large map and a chronometer. The latter indicated exact

THE TRACK OF THE ECLIPSE JANUARY 1, 1889. SHADED ELLIPSES SHOW POSITION OF SHADOW CONE AT INTERVALS OF FIVE MINUTES, GREENWICH TIME.

Greenwich time, and the former showed the correct position of the moon's shadow at the beginning of every minute by the chronometer. In this way it was possible for me to follow readily the precise phase of the eclipse at every station. About the rooms and accessible for immediate use were arranged the cipher codes pertaining to the several stations, and other papers necessary in preparing the reports for the press.

In a sketch here reproduced from the map is shown the eclipse-track, with the position of the moon's shadow at intervals of five minutes of Greenwich time. Also the same map shows the location of many of the observers who had been requested to send their reports for publication in the "Herald."

The eclipse was to become total at Willows about 9h. 48m. Greenwich time.¹ Our direct wire had been fully tested an hour before.

At about 9h. 30m. the operator there was called up and asked the state of the weather. He replied that it was already getting quite dark, that the sky was perfectly clear towards the south-west, and that there was no cloud anywhere near the sun. We therefore (in New York, 3000 miles away) knew what capital opportunities awaited the Harvard astronomers, even before they had themselves made the observations.

The moon's shadow then lay out on the Pacific Ocean. Rapidly it rushed along, the total phase came on at Willows, the sun's corona flashed out for nearly two minutes and then disappeared. Totality was over at 9h.

¹ This was 4h. 48m. Eastern standard time, and 1h. 48m. Pacific time.

² The curvature of the earth reduces the absolute time of transit of the shadow between two widely separated places nearly a half.

50m. and the shadow swept swiftly eastward, affording other astronomers a brief glimpse of the sun's surroundings.

After a short interval, Mr. Pickering, the chief of the Harvard party, had come to the telegraph office at Willows and had begun to send a dispatch announcing the general success of the entire expedition. The first three words of the cipher dispatch—*Alaska, China, Corsica*—came hurriedly over the line, then the circuit of our wire was lost!

Meanwhile the moon was getting a long way the start in the race—the eclipse was already total in Idaho.

The break in our long line was soon located somewhere between Utah and California, but more than half an hour elapsed before the circuit was reëstablished and the remainder of the dispatch could be received.

The lunar shadow had meantime advanced over Montana and Dakota and had left the earth entirely, sweeping off again into space. But I was still hopeful that the telegraph might win the race. Had New York been located in the eclipse-path as well as Willows, and both stations symmetrically placed, the total eclipse would have become visible at New York about an hour and a quarter after the shadow had left California.²

Thus there was time to spare. Having recovered our wire, Mr. Pickering's message was completed at 10h. 36m., and the stenographer's notes were written out and dispatched to the composing-room six minutes later.

The "copy" was quickly put in type, a proof was pulled, and at 10h. 50m. it was placed in my hands, exactly an hour after the observations had been made at a station nearly 3000 miles away.

THE LUNAR SHADOW.

Had the moon's shadow been advancing from California towards New York, there was still a margin of several minutes before the eclipse could become total at the latter place.

a unique piece of news-gathering, and withal skies everywhere propitious—these are conditions never before met, and which only the rarest of fortune can completely fulfill.

David P. Todd.

SECURITY.

I KNOW a flower that never need feel dread
Of being picked: the fairest flower of May,
It fears henceforth no stranger's dangerous tread.
Why? Oh, because I picked it yesterday.

A. W. R.

In point of fact, while the proof-sheet of the first message was being read the lunar shadow would have been loitering among the Alleghanies.

Man's messenger had thus outrun the moon.

The telegraphic reports of the observations at the other stations were gradually gathered in and put in type, and the forms of the "Herald" were ready for the stereotyper at the proper time, some two hours after midnight.

At 3 o'clock A. M. the European mails closed, and the pouches put on board the *Aller* carried the usual copies for the foreign circulation. Within twenty-four hours after the observations of the eclipse were made by the astronomers near the Pacific coast the results of their work had been telegraphed to the Atlantic sea-board, collated and printed, and the papers were well out on their journey to European readers.

An eclipse-track covering an extensive region accessible by telegraph, costly and delicate instruments and a multitude of trained observers, liberal officials willing to afford every facility of a vast telegraph system, enterprising journalists ready to undertake

THE OLD BASCOM PLACE.

BY JOEL CHANDLER HARRIS,

Author of "Days and Nights with Uncle Remus," "Free Joe," etc.

JOE-BOB GRISSOM.

I.

NE Saturday afternoon in the spring of 1876, as Farmer Joe-Bob Grissom was on his way to Hillsborough for the purpose of hearing the news and having an evening's chat with his town acquaintances,—as was his invariable custom at the close of the week,—he saw, as he passed the old Bascom Place, an old gentleman and a young lady walking slowly along the road. The old gentleman was tall and thin, and had silvery white hair. He wore a high-crowned, wide-brimmed felt hat, and his clothes, though neat, were too glossy to be new. The young lady was just developing into womanhood. She

had a striking face and figure. Her eyes were large and brilliantly black; her hair, escaping from under her straw hat with its scarlet ribbons, fell in dusky masses to her waist.

The two walked slowly, and occasionally they paused while the old gentleman pointed in various directions with his cane, as though impressing on the mind of his companion the whereabouts of certain interesting landmarks. They were followed at a little distance by a negro who carried across his arm a light wrap, which seemed to be a part of the outfit of the young lady.

As Farmer Joe-Bob Grissom passed the two, he bowed and tipped his hat by way of salutation. The old gentleman raised his hat and bowed with great courtliness, and the young lady nodded her head and smiled pleasantly at him. Farmer Joe-Bob was old enough to be grizzly, but the smile stirred him. It seemed to be a direct challenge to his memory. Where had he seen the young lady before? Where had he met the old gentleman? He was puzzled to such an extent that he paid no attention to the negro man, who touched his hat and bowed politely as the farmer passed—a fact that made the negro wonder a little; for day in and day out he had known Mr. Joe-Bob Grissom nearly forty years, and never before had that worthy citizen failed to respond with a cordial "Howdy" when the negro took off his hat.

Farmer Joe-Bob Grissom walked on towards town, which was not far, and the old gentleman and the young lady walked slowly along the hedge of Cherokee roses that ran around the old Bascom Place, while the negro followed at a respectful distance. Once they paused, and the old gentleman rubbed his eyes with a hand that trembled a little.

"Why, darling!" he exclaimed in a tone of mingled grief and astonishment, "they have cut it down."

"Cut what down, father?"

"Why, the weeping-willow. Don't you remember it, daughter? It stood in the middle of the field yonder. It was a noble tree. Well, well, well! What next, I wonder?"

"How could I remember it, father? I was only three years old when—"

"Yes, yes," the old gentleman interrupted. "Of course you could n't remember. The

BOLLING BASCOM OF BASCOM PLACE.

place has been so changed that I seem to have forgotten it myself. It has been turned topsyturvy; it has been ruined—ruined!”

He leaned on his cane and, with quivering lips and moist eyes, looked through the green perspective of the park, and over the fertile fields and meadows.

“Ruined!” exclaimed the young lady. “How can you say so, father? I never saw a more beautiful place. It would make a lovely picture.”

“And they have ruined the house, too. The whole roof has been changed.” The old man pulled his hat down over his eyes, his hand trembling more than ever. “Let us turn back, Mildred,” he said after a while. “The sight of all this frets and worries me more than I thought it would.”

“They say,” said the daughter, “that the gentleman who owns the place has made a good deal of money.”

“Yes,” replied the father, “I suppose so—I suppose so. Yes, so I have heard. A great many people are making money now who never made it before—a great many.”

“I wish they would tell us the secret,” said the young lady, laughing a little.

“There is no secret about it,” said the old gentleman; “none whatever. To make money you must be mean and niggardly yourself, and then employ others to be mean and niggardly for you.”

“Oh, it is not always so, father,” the young girl exclaimed.

“It *was* not always so, my daughter. There *was* a time when one could make money and remain a gentleman; but that was many years ago.”

The young lady was apparently not anxious to continue the argument, for she lightly turned the conversation into a more agreeable channel; and so the two, still followed by the

negro, made their way through the shaded streets of the town.

That evening, when Mr. Joe-Bob Grissom, after making some little purchases about town, went to the hotel, which he persisted in calling a tavern, he found Major Jimmy Bass engaged in a hot political discussion with a crowd which included a number of the townspeople, as well as a sprinkling of commercial travelers. Major Jimmy was one of the ancient and venerable landmarks of that region. He had once been an active politician, and had been engaged in political discussion for forty years or more. Old and fat as he was, he knew how to talk, and nothing pleased him more than to get hold of a stranger when a crowd of sympathetic fellow-citizens, young and old, was present to applaud the points he made.

Whenever Mr. Joe-Bob Grissom appeared in the veranda of the hotel he made it a point to shake hands with every person present, friend and stranger alike. His politeness was a trifle elaborate, but it was genuine.

"Why, howdy, Joe-Bob, howdy!" exclaimed Major Bass with effusion. "You seem to turn up at the right time, like the spangled man in the circus. I'm glad you've come, an' ef I 'd 'a' had my way you 'd 'a' come sooner, bekaze you 're jest a little too late fer to see me slap the argyments onto some of these here travelin' drummers. They are gone now," the major continued, with a sweeping gesture of his right arm. "They are gone, but I wisht mightily you 'd 'a' been here. New things is mortal nice, I know; but when these new-issue chaps set up to outtalk men that 's old enough to be their granddaddy, it does me a sight of good fer to see 'em took down a peg er two."

As soon as he could get in a word edgewise, farmer Joe-Bob Grissom attempted to turn the conversation in a direction calculated to satisfy his curiosity.

"Major," he said in his deliberate way, "what 's this I see out yonder at the old Bascom Place?"

"The Lord only knows, Joe-Bob. What might be the complexion, er yet the character, of it?"

"Well," said Mr. Grissom, "as I was makin' to 'rds town a little while ago, I seen some folks that don't look like they b'long 'roun' here. One of 'em was a old man, an' t' other one was a young gal, an' a nigger man was a-follerin' of 'em up—an', ef I make no mistakes, the nigger man was your old Jess. I did n't look close at the nigger, but arter I 'd passed him it come to me that it wa' n't nobody on the topside of the roun' worl' but Jess."

"Why, bless your life an' soul, man!" exclaimed Major Bass, giving farmer Joe-Bob a neighborly nudge, "don't you know who

them folks was? Well, well! Where 's your mind? Why, that was old Briscoe Bascom an' his daughter."

"I say it!" exclaimed farmer Joe-Bob, hitching his chair closer to the major.

"Yes, sir," said the major, "that 's who it was. Why, where on earth have you been? The old judge drapped in on the town some weeks ago, an' he 's been here ever sence. He 's been here long enough fer the gal to make up a school. Lord, Lord! What a big swing the world 's in! High on one side, high on t' other, an' the old cat a-dyin' in the middle! Why, bless your heart, Joe-Bob! I 've seed the time when ef old Judge Briscoe Bascom jest so much as bowed to me I 'd feel proud fer a week. An' now look at 'im! Ef I knowed I 'd be took off wi' the dropsy the nex' minute, I would n't swap places wi' the poor old creetur."

"But what is old Jess a-doin' doggin' 'long arter 'em thataway?" inquired Mr. Grissom, knitting his shaggy eyebrows.

"That 's what pesters me," exclaimed the major. "Ef niggers was ree-sponsible fer what they done, it would be wuss than what it is. Now you take Jesse: you need n't er tell me that nigger ain't got sence; yit what does he do? You seen 'im wi' your own eyes. Why, sir," continued the major, growing more emphatic, "I bought that nigger from Judge Bascom's cousin when he wa' n't nothin' but a youngster, an' I took him home an' raised him up right in the house,—yes, sir, right in the house,—an' he 's been a-hangin' 'roun' me off an' on, gittin' his vittles, his clozes, an' his lodgin'. Yit, look at him now! I wisht I may die dead ef that nigger did n't hitch onto old Judge Bascom the minute he landed in town. Yes, sir! I 'm a-tellin' you no lie. It 's a clean, naked fact. That nigger quit me an' went an' took up wi' the old judge."

"Well," said Mr. Grissom, stroking his unshorn face, "you know what the sayin' is: Niggers 'll be niggers even ef you whitewashed 'em twice a week."

"Yes," remarked the major thoughtfully; "I hope to goodness they 've got souls, but I misdoubt it. Lord, yes, I misdoubt it mightly."

II.

As Major Jimmy Bass used to say, the years cut many queer capers as they go by. The major in his own proper person had not only witnessed, but had been the victim, of these queer capers. Hillsborough was a very small place indeed, and, for that very reason perhaps, it was more sensitive to changes in the way of progress and decay than many larger and more ambitious towns.

However this may have been, it is certain that the town, assisted by the major, had noted the queer capers the years had cut in the neighborhood of the old Bascom Place. This attitude on the part of Hillsborough—including, of course, Major Jimmy Bass—may be accounted for partly by the fact that the old place had once been the pride and delight of the town, and partly by the fact that the provincial eye and mind are nervously alert to whatever happens within range of their observation.

Before and during the war the Bascom Place was part and parcel of a magnificent estate. The domain was so extensive and so well managed that it was noted far and wide. Its boundary lines inclosed more than four thousand acres of forests and cultivated fields. This immense body of land was known as the old Bascom Place.

Bolling Bascom, its first owner, went to Georgia not long after the close of the Revolution, with a large number of Virginians who proposed to establish a colony in what was then the far South. The colony settled in Wilkes County; but Bolling Bascom, more adventurous than the rest, pushed on into middle Georgia, crossed the Oconee, and built him a home, and such was his taste, his energy, and his thrift, that the results thereof may be seen and admired in Hillsborough to this day.

But the man, like so many of his fellow-citizens then and thereafter, was land-hungry. He bought and bought until he had acquired the immense domain, which, by some special interposition of fate or of circumstance, is still intact. Meantime he had built him a house which was in keeping with the extent and richness of his landed possessions. It was planned in the old colonial style, but its massive proportions were relieved by the tall red chimneys and the long and gracefully fashioned colonnade that gave both strength and beauty to the spacious piazza which ran, and still runs, the whole length of the house.

When Bolling Bascom died, in 1830, aged seventy years, as the faded inscription on the storm-beaten tablet in the churchyard shows, he left his son, Briscoe Bascom, to own and manage the vast estate. This son was thirty years old, and it was said of him that he inherited the gentle qualities of his mother rather than the fiery energy and ambition of his father.

Bolling Bascom was neither vicious nor reckless, but he was a thorough man of the world. He was, in short, a typical Virginian gentleman, who for his own purposes had settled in Georgia.

Whatever the cause of his emigration, it is

certain that Georgia gained a good citizen. It was said of him that he was a little too fond of a fiddle, but with all his faults—with all his love for horse-racing and fox-hunting—he found time to be kind to his neighbors, generous to his friends, and the active leader of every movement calculated to benefit the State or the people; and it may be remarked, in passing, that he also found time to look after his own affairs.

Naturally, he was prominent in politics. He represented his county in the legislature, was at one time a candidate for governor, and was altogether a man who had the love and the confidence of his neighbors. He gave his son the benefit of the best education the country afforded, and made the tour of Europe with him, going over the ground that he himself had gone over in his young days.

But his European trip, undertaken when he was an old man, was too much for him. He was seized with an illness on his return voyage, and, although he lived long enough to reach home, he never recovered. In a few years his wife died; and his son, with little or no experience in such matters,—since his time had been taken up by the schools and colleges,—was left to manage the estate as best he could.

It was the desire of Bolling Bascom that his son should study law and make that profession a stepping-stone to a political career. He had been ambitious himself, and he hoped his son would also be ambitious. Besides, was not politics the most respectable of all the professions? This was certainly the view in Bolling Bascom's day and time, and much might be said to support it. Of all the professions, politics opened up the one career best calculated to tickle the fancy of the rich young men.

To govern, to control, to make laws, to look after the welfare of the people, to make great speeches, to become statesmen—these were the ideas that filled the minds of ambitious men in Bolling Bascom's time, and for years thereafter. And why not? There were the examples of Jefferson, Madison, Monroe, Randolph, Hamilton, Webster, Calhoun, and the Adamses of Massachusetts. What better could a young man do than to follow in the footsteps of these illustrious citizens?

It may be supposed, therefore, that Bolling Bascom had mapped out a tremendous career for his son and heir. No doubt, as he sat dozing on his piazza in the long summer afternoons near the close of his life, he fancied he could hear the voice of his boy in the halls of legislation, or hear the wild shouts of the multitude that greeted his efforts on the stump in the heat and fury of a campaign. But it was not to be. The stormy politics of that period had no charms for Briscoe Bascom. He was

a student, and he preferred his books to the companionship of the crowd.

He possessed both courage and sociability in the highest degree, but he was naturally indolent, and he was proud—too indolent to find pleasure in the whirling confusion of active politics, and too proud to go about his county or his State in the attitude of soliciting the suffrages of his fellow-citizens. That he would have made his mark in politics is certain, for he made it at the bar, where success is much more dearly bought. He finally became judge of the superior court, at a time when the judges of the circuit courts met annually and formed a court of appeals. His decisions in this appellate court attracted attention all over the country, and are still referred to in the legal literature of to-day as models of their kind.

And yet all that Briscoe Bascom accomplished at the bar and on the bench was the result of intuition rather than of industry. Indolence sat enthroned in his nature, patient but vigilant. When he retired from the bench, he gave up the law altogether. He might have reclaimed his large practice, but he preferred the ease and quiet of his home.

He was an old man before he married—old enough, that is to say, to marry a woman many years his junior. His wife had been reared in an atmosphere of extravagance; and although she was a young woman of gentle breeding and of the best intentions, it is certain that she did not go to the Bascom Place as its mistress for the purpose of stinting or economizing. She simply gave no thought to the future. But she was so bright and beautiful, so gentle and unaffected in speech and manner, so gracious and so winsome in all directions, that it seemed nothing more than natural and right that her every whim and wish should be gratified.

Judge Bascom was indulgent and more than indulgent. He applauded his wife's extravagance and followed her example. Before many years he began to reap some of the fruits thereof, and they were exceeding bitter to the taste. The longest purse that ever was made has a bottom to it, unless, indeed, it be lined with Franklin's maxims.

The Judge was forty-eight years old when he married, and even before the beginning of the war he found his financial affairs in an uncomfortable condition. The Bascom Place was intact, but the pocket-book of its master was in a state bordering on collapse.

The slow but sure approach to the inevitable need not be described here. It is familiar to all people in all lands and times. In the case of Judge Bascom, however, the war was in the nature of a breathing-spell. It brought

with it an era of extravagance that overshadowed everything that had been dreamed of theretofore. During the first two years there was money enough for everybody and to spare. It was manufactured in Richmond in great stacks. General Robert Toombs, who was an interested observer, has aptly described the facility with which the Confederacy supplied itself with money. "A dozen negroes," said he, "printed money on the hand-presses all day to supply the Government, and then they worked until nine o'clock at night printing money enough to pay themselves off."

Under these circumstances, Judge Bascom and his charming wife could be as extravagant or as economical as they pleased without attracting the attention of their neighbors or their creditors. Nobody had time to think or care about such small matters. The war-fever was at its height, and nothing else occupied the attention of the people. The situation was so favorable, indeed, that Judge Bascom began to redeem his fortune—in Confederate money. He had land enough and negroes a plenty, and so he saved his money by storing it away; and he was so successful in this business that when the war closed it is said that he had a wagon-load of Confederate notes and shin-plaster packed in trunks and chests.

The crash came when General Sherman went marching through Hillsborough. The Bascom Place, being the largest and the richest plantation in that neighborhood, suffered the worst. Every horse, every mule, every living thing with hide and hoof, was driven off by the Federals; and a majority of the negroes went along with the army. It was often said of Judge Bascom that "he had so many negroes he did n't know them when he met them in the big road"; and this was probably true. His negroes knew him, and knew that he was a kind master in many respects, but they had no personal affection for him. They were such strangers to the Judge that they never felt justified in complaining to him even when the overseers ill-treated them. Consequently, when Sherman went marching along, the great majority of them bundled up their little effects and followed after the army. They had nothing to bind them to the old place. The house servants and a few negroes, in whom the Judge took a personal interest, remained, but all the rest went away.

Then, in a few months, came the news of the surrender, bringing with it a species of paralysis or stupefaction from which the people were long in recovering—so long, indeed, that some of them died in despair, while others lingered on the stage, watching, with dim eyes and trembling limbs, half-hopefully and half-fretfully, the representatives of a new genera-

tion trying to build up the waste places. There was nothing left for Judge Bascom to do but to take his place among the spectators. He would have returned to his law practice, but the people had well-nigh forgotten that he had ever been a lawyer; moreover, the sheriffs were busier in those days than the lawyers. He had the incentive,—for the poverty of those days was pinching,—but he lacked the energy and the strength necessary to begin life anew. He and hundreds like him were practically helpless. Ordinarily experience is easily learned when necessity is the teacher, but it was too late for necessity to teach Judge Bascom anything. During all his life he had never known what want was. He had never had occasion to acquire tact, business judgment, or economy. Inheriting a vast estate, he had no need to practice thrift or to become familiar with the shifty methods whereby business men fight their way through the world. Of all such matters he was entirely ignorant.

To add to his anxiety, a girl had been born to him late in life, his first and only child. In his confusion and perplexity he was prepared to regard the little stranger as merely a new and dreadful responsibility, but it was not long before his daughter was a source of great comfort to him. Yet, as the negroes said, she was not a "luck-child"; and bad as the Judge's financial condition was, it grew steadily worse.

Briefly, the world had drifted past him and his contemporaries and left them stranded. Under the circumstances, what was he to do? It is true he had a magnificent plantation, but this merely added to his poverty. Negro labor was demoralized, and the overseer class had practically disappeared. He would have sold a part of his landed estate; indeed, so pressing were his needs that he would have sold everything except the house which his father had built, and where he himself was born,—that he would not have parted with for all the riches in the world,—but there was nobody to buy. The Judge's neighbors and his friends, with the exception of those who had accustomed themselves to seizing all contingencies by the throat and wresting tribute from them, were in as severe a strait as he was; and to make matters worse, the political affairs of the State were in the most appalling condition. It was the period of reconstruction—a scheme that paralyzed all whom it failed to corrupt.

Finally the Judge's wife took matters in her own hand. She had relatives in Atlanta, and she prevailed on him to go to that lively and picturesque town. He closed his house, being unable to rent it, and became a citizen of the thrifty city. He found himself in a new atmosphere. The north Georgia crackers, the East

Tennesseans,—having dropped their "yous" and "we-uns,"—and the Yankees had joined hands in building up and pushing Atlanta forward. Business was more important than politics; and the rush and whirl of men and things were enough to make a mere spectator dizzy. Judge Bascom found himself more helpless than ever; but through the influence of his wife's brother he was appointed to a small clerkship in one of the State departments, and—"Humiliation of humiliations!" his friends exclaimed—he promptly accepted it, and became a part of what was known as the "carpet-bag" government. The appointment was in the nature of a godsend, but the Judge found himself ostracized. His friends and acquaintances refused to return his salutation as he met them on the street. To a proud and sensitive man this was the bitterness of death, but Judge Bascom stuck to his desk and made no complaint.

By some means or other, no doubt through the influence of Mrs. Bascom, the Judge's brother-in-law, a thrifty and not over-scrupulous man, obtained a power of attorney, and sold the Bascom Place, house and all, to a gentleman from western New York who was anxious to settle in middle Georgia. Just how much of the purchase-money went into the Judge's hands it is impossible to say, but it is known that he fell into a terrible rage when he was told that the house had been sold along with the place. He denounced the sale as a swindle, and declared that as he had been born in the house he would die there, and not all the powers of earth could prevent him.

But the money that he received was a substantial thing as far as it went. Gradually he found himself surrounded by various comforts that he had sadly missed, and in time he became somewhat reconciled to the sale, though he never gave up the idea that he would one day be able to buy the old place back and live there again. The idea haunted him day and night.

After the downfall of the carpet-bag administration a better feeling took possession of the people and politicians, and it was not long before Judge Bascom found congenial work in codifying the laws of the State, which had been in a somewhat confused and tangled condition since the war. Meanwhile his daughter Mildred was growing up, developing remarkable beauty as well as strength of mind. At a very early age she began to "take the responsibility," as the Judge put it, of managing the household affairs, and she continued to manage them even while going to school. At school she won the hearts of teachers and pupils, not less by her aptitude in her books than by her beauty and engaging manners.

But in spite of the young girl's management—in spite of the example she set by her economy—the Judge and his wife continued to grow poorer and poorer. Neither of them knew the value of a dollar, and the money that had been received from the sale of the Bascom Place was finally exhausted. About this time Mrs. Bascom died, and the Judge was so prostrated by his bereavement that it was months before he recovered. When he did recover he had lost all interest in his work of codification, but it was so nearly completed and was so admirably done that the legislature voted him extra pay. This modest sum the daughter took charge of, and when her father was well enough she proposed that they return to Hillsborough, where they could take a small house, and where she could give music lessons and teach a primary school. It need not be said that the Judge gave an eager assent to the proposition.

III.

As Mr. Joe-Bob Grissom passed the Bascom Place on his way home, after gathering from Major Jimmy Bass all the news and gossip of the town, he heard Mr. Francis Underwood, the owner of the Place, walking up and down the piazza, singing. Mr. Underwood appeared to be in a cheerful mood, and he had a right to be. He was young,—not more than thirty,—full of life, and the world was going on very well with him. Mr. Grissom paused a moment and listened; then he made up his mind to go in and have a chat with the young man. He opened the gate and went up the avenue under the cedars and Lombardy poplars. A little distance from the house he was stopped by a large mastiff. The great dog made no attempt to attack him, but majestically barred the way.

"Squire," yelled Joe-Bob, "ef you 'll call off your dog, I 'll turn right 'roun' an' go home an' never bother you no more."

"Is that you, Joe-Bob?" exclaimed Mr. Underwood. "Well, come right on. The dog won't trouble you."

The dog thereupon turned around and went up the avenue to the house and into the porch, where he stretched himself out at full length, Joe-Bob following along at a discreet distance.

"Come in," said Underwood, heartily; "I 'm glad to see you. Take this large rocking-chair; you will find it more comfortable than the smaller one."

Mr. Grissom sat down and looked cautiously around to see where the dog was.

"I did come, Squire," he said, "to see you on some kinder business, but that dratted dog has done skeered it clean out'n me."

"Prince is a faithful watcher," said Underwood, "but he never troubles any one who is coming straight to the house. Do you, old fellow?" The dog rapped an answer on the floor with his tail.

"Well," said Joe-Bob, "I 'd as lief be tore up into giblets, mighty nigh, as to have my sev'm senses skeered out'n me. What I 'm afeared of now," he went on, "is that that dog will jump over the fence some day an' ketch old Judge Bascom whilst he 's a-pirootin' 'roun' here a-lookin' at the old Place. An' ef he don't ketch the Judge, it 's more 'n likely he 'll ketch the Judge's gal. I seen both of 'em this very evenin' whilst I was a-goin' down town."

"Was that the Judge?" exclaimed young Mr. Underwood, with some show of interest; "and was the lady his daughter? I heard they had returned."

"That was jest percisely who it was," said Joe-Bob with emphasis. "It wa' n't nobody else under the shinin' sun."

"Well," said Mr. Underwood, "I have seen them walking by several times. It is natural they should be interested in the Place. The old gentleman was born here?"

"Yes," said Joe-Bob, "an' the gal too. They tell me," he went on, "that the old Judge an' his gal have seed a many ups an' downs. I reckon they er boun' fer to feel lonesome when they come by an' look at the prop'ty that use' to be theirn. I hear tell that the old Judge is gwine to try an' see ef he can't git it back."

Francis Underwood said nothing, but sat gazing out into the moonlight as if in deep thought.

"I thinks, says I," continued Joe-Bob, "that the old Judge 'll have to be lots pearter'n he looks to be ef he gits ahead of Squire Underwood."

The "Squire" continued to gaze reflectively down the dim perspective of cedars and Lombardy poplars. Finally he said:

"Have a cigar, old man. These are good ones."

Joe-Bob took the cigar and lighted it, handling it very gingerly.

"I ain't a-denyin' but what they are good, Squire, but somehow er nuther me an' these here fine seegyars don't gee," said Joe-Bob, as he puffed away. "They 're purty toler'ble nice, but jest about the time I git in the notion of smokin' they 're done burnt up, an' then ef you ain't got sev'm er eight more, it makes you feel mighty lonesome. Now I 'll smoke this 'n', an' it 'll sorter put my teeth on edge fer my pipe, an' when I git home I 'll set up an' have a right nice time."

"And so you think," said Underwood,

speaking as if he had not heard Joe-Bob's remarks about the cigar—"and so you think Judge Bascom has come to buy the old Place."

"No, no!" said Joe-Bob, with a quick deprecatory gesture. "Oh, no, Squire! not by no means! No, no! I never said them words. What I did say was that it 's been talked up an' down that the old Judge is a-gwine to try to git his prop'ty back. That 's what old Major Jimmy Bass said he heard, an' I thinks, says I, he 'll have to be monst'us peart ef he gits ahead of Squire Underwood. That 's what I said to myself, an' then I ast old Major Jimmy, says I, what the Judge would do wi' the prop'ty arter he got it, an' Major Jimmy, he ups an' says, says he, that the old Judge would sell it back to Frank Underwood, says he."

The young man threw back his head and laughed heartily, not less at the comical earnestness of Joe-Bob Grissom than at the gossip of Major Jimmy Bass.

"It seems, then, that we are going to have lively times around here," said Underwood, by way of comment.

"Yes, sree," exclaimed Joe-Bob; "that 's what Major Jimmy Bass allowed. Do you reckon, Squire," he continued, lowering his voice as though the matter was one to be approached cautiously—"do you reckon, Squire, they could slip in on you an' trip you up wi' one of 'em writs of arousalment or one of 'em bills of injectment?"

"Not unless they catch me asleep," replied Underwood, still laughing. "We get up very early in the morning on this Place."

"Well," said Joe-Bob Grissom, "I ain't much of a lawyer myself, an' so I thought I 'd jest drap in an' tell you the kind of talk what they've been a-rumorin' 'roun'. But I 'll tell you what you kin do, Squire. Ef the wust comes to the wust, you kin make the old Judge an' the gal take you along wi' the Place. Now them would be my politics."

With that Joe-Bob gave young Underwood a nudge in the short ribs, and chuckled to such an extent that he nearly strangled himself with cigar smoke.

"I think I would have the best of the bargain," said the young man.

"Now you would! you reely would!" exclaimed Joe-Bob in all seriousness. "I can't tell you the time when I ever seen a likelier gal than that one wi' the Judge this evenin'. As we say down here in Georgia, she 's the top of the pot an' the pot a-b'ilin'. I tell you that right pine-blank."

After a little, Mr. Grissom rose to go. When Mr. Underwood urged him to sit longer, he pointed to the sword and belt of Orion hanging low in the south-west.

"The ell an' yard are a-makin' the'r disap-

pearance," he said; "an' ef I stay out much longer, my old 'oman 'll think I 've been a-settin' up by a jug somewheres. Now ef you 'll jest hold your dog, Squire, I 'll go out as peaceful as a lamb."

"Why, I was just going to propose to send him down to the big gate with you," said young Underwood. "He 'll see you safely out."

"No, no, Squire!" exclaimed Joe-Bob, holding up both hands. "Now don't do the like of that. I don't like too much perliteness in folks, an' I know right well I could n't abide it in a dog. No, Squire; you jest hold on to the creetur' wi' both hands, an' I 'll find my way out. Jest ketch him by the forefoot. I 've heard tell before now that ef you 'll hold a dog by his forefoot he can't git loose, an' nuther kin he bite you."

Long after Mr. Joe-Bob Grissom had gone home young Francis Underwood sat in his piazza smoking and thinking. He had a good deal to think about, too, for he was perhaps the busiest and the thriftiest person that Hillsborough had ever seen. He had a dairy farm stocked with the choicest strains of Jersey cattle, and he shipped hundreds of pounds of golden butter all over the country every week in the year; he bred Percheron horses for farm-work and trotting horses for the road; he had a flourishing farm on which he raised, in addition to his own supplies, a hundred or more bales of cotton every year; he had a steam saw-mill and cotton-gin; he was a contractor and builder; and he was also an active partner in the largest store in Hillsborough. Moreover he took a lively interest in the affairs of the town. His energy and his progressive ideas seemed to be contagious, for in a few years the sleepy old town had made tremendous strides, and everything appeared to move forward with an air of business—such is the force of a genial and robust example.

There is no doubt that young Underwood was somewhat coolly received when he first made his appearance in Hillsborough. He was a New Yorker and therefore a Yankee; and some of the older people, who were still grieving over the dire results of the war, as old people have a right to do, made no concealment of their prejudices. Their grief was too bitter to be lightly disposed of. Perhaps the young man appreciated this fact, for his sympathies were wonderfully quick and true. At any rate, he carried himself as buoyantly and as genially in the face of prejudice as he did afterwards in the face of friendship.

The truth is, prejudice could not stand before him. He had that magnetic personality which is a more precious possession than fame or fortune. There was something attractive even in his restless energy; he had that hearti-

ness of manner and graciousness of disposition that are so rare among men; and, withal, a spirit of independence that charmed the sturdy-minded people with whom he cast his lot. It was not long before the younger generation began to seek Mr. Underwood out, and after this the social ice, so to speak, thawed quickly.

In short, young Underwood, by reason of a strong and an attractive individuality, became a very prominent citizen of Hillsborough. He found time, in the midst of his own business enterprises, to look after the interests of the town and the county. One of his first movements was to organize an agricultural society which held its meeting four times a year in different parts of the county. It was purely a local and native suggestion, however, that made it incumbent on the people of the neighborhood where the society met to grace the occasion with a feast in the shape of a barbecue. The first result of the agricultural society — which still exists, and which has had a wonderful influence on the farmers of middle Georgia — was a county fair, of which Mr. Underwood was the leading spirit. It may be said, indeed, that his energy and his money made the fair possible. And it was a success. Young Underwood not only had canvassed the county, but he had “worked it up in the newspapers,” as the phrase goes, and it tickled the older citizens immensely to see the dailies in the big cities of Atlanta, Macon, and Savannah going into rhetorical raptures over their fair.

As a matter of fact Francis Underwood, charged with the fiery energy of a modern American, found it a much easier matter to establish himself in the good graces of the people of Hillsborough and the surrounding country than did Judge Bascom when he returned to his old home with his lovely daughter. Politically speaking, he had committed the unpardonable sin when he accepted office under what was known as the carpet-bag government. It was an easy matter — thus the argument ran — to forgive and respect an enemy, but it was hardly possible to forgive a man who had proved false to his people and all their traditions — who had, in fact, “sold his birthright for a mess of pottage,” to quote the luminous language employed by Colonel Bolivar Blasingame in discussing the return of Judge Bascom. It is due to Colonel Blasingame to say that he did not allude to the sale of the Bascom Place, but to the fact that Judge Bascom had drawn a salary from the State treas-

ury while the Republicans were in power in Georgia.

This was pretty much the temper of the older people of Hillsborough even in 1876. They had no bitter prejudices against the old Judge; they were even tolerant and kindly; but they made it plain to him that he was regarded in a new light, and from a new standpoint. He was made to feel that his old place among them must remain vacant; that the old intimacies were not to be renewed. But this was the price that Judge Bascom was willing to pay for the privilege of spending his last days within sight of the old homestead. He made no complaints, nor did he signify by word or sign, even to his daughter, that everything was not as it used to be.

As for the daughter, she was in blissful ignorance of the situation. She was a stranger among strangers, and so was not affected by the lack of sociability on the part of the townspeople — if, indeed, there was any lack so far as she was concerned. The privations she endured in common with her father were not only sufficient to correct all notions of vanity or self-conceit, but they had given her a large experience of life; they had broadened her views and enlarged her sympathies, so that with no sacrifice of the qualities of womanly modesty and gentleness she had grown to be self-reliant. She attracted all who came within range of her sweet influence, and it was not long before she had broken down all the barriers that prejudice against her father might have placed in her way. She established a primary school, and what with her duties there and with her music class she soon had as much as she could do, and her income from these sources was sufficient to support herself and her father in a modest way; but it was not sufficient to carry out her father's plans, and this fact distressed her no little.

Sometimes Judge Bascom, sitting in the narrow veranda of the little house they occupied, would suddenly arouse himself, as if from a doze, and exclaim:

“We must save money, daughter; we must save money and buy the old Place back. It is ours. We must have it; we must save money.” And sometimes, in the middle of the night, he would go to his daughter's bedside, stroke her hair, and say in a whisper:

“We are not saving enough money, daughter; we must save more. We must buy the old Place back. We must save it from ruin.”

Joel Chandler Harris.

FRA ANGELICO (1387-1455).

(FRA GIOVANNI DA FIESOLE.)

(ITALIAN OLD MASTERS.)

THE name of Fra Angelico stands with a large portion of the art-loving public as the synonym of the highest attainment in religious art which the world has ever seen. And while in a certain sense I am not disposed to contest this judgment, though I believe it not to be founded on strictly artistic standards, it is necessary to give Fra Angelico his true place in the series of great painters the final result of whose united teachings we perceive only in the beginning of the sixteenth century. In imaginative power and in dramatic feeling he never approaches Giotto, Orcagna, Gentile da Fabriano, or even Spinello, of his own school: he is also inferior to Duccio and Lorenzetti of the Siennese; while in color he has a constant straining in the pitch which wearies the eye, but is, without doubt, the result of that ecstatic temperament to which he owes the peculiar gifts which separate him by a wide space from all his predecessors and contemporaries. I cannot resist the conviction that in Fra Angelico the ordinary action of the imagination was superseded by the most complete visionary subjectivity, and that what he painted was what he saw in the spirit. The seraphic glow, the unearthly serenity of his assemblages and the fixedness of the new type of beauty which he introduces, the rapture of his "Paradise" and the tameness of his "Inferno," the constant tension of his faculties, and the very monotony of his conceptions, are to my mind the evidence of a state of exaltation in which the visions of his ecstasy became the subjects of his art. And in the height of this exaltation and in the intensity of his vision are the compensations for the narrowness of his range and the feebleness of his grasp of ordinary human nature. I have no doubt that convent life and its morbid seclusion deepened greatly the groove in which he ran, and I think that a proof of it is in the larger naturalism which his work took on when he went to Orvieto, where with his pupil Benozzo, whose artistic nature was totally unlike his own, he painted the most vigorous and robust frescos we have by him. And this breath of a more vigorous life, which to his morbidly sensitive spirit must have been a stimulant too powerful to be long endured,

was possibly the reason for his abandonment of his work with his contract unfulfilled, and for his subsequent withdrawal from the work assigned to him at Prato, referred to farther on. The epithet "Angelic" was probably due to the belief that he was in communion with the angelic world; and that he himself had the fullest persuasion that his work was inspired is clear from his habit of never retouching a line once made, under the conviction that it was so ordered of God—a habit noticed by Vasari in the quotation given on page 620. The world for which he worked was hardly capable of finding the motive for the epithet in the artistic qualities of the painter, but it would naturally come from the persuasion of his being inspired and habitually in the presence of angels.

His long residence in Rome subsequently would not militate against the theory of this morbid sensitiveness, for he was of such devotional temper that residence in Rome was the next thing to being in heaven itself, and the opportunities for monastic seclusion were as complete as in Florence. We owe to this conviction of the inspiration of his work one of his most precious technical qualities—the certainty of his touch and the purity of his lines; but in other technical attainments he does not seem to have advanced materially beyond the Giottoesques, of whom he was the last to observe the doctrines in their purity, and he is inferior even to Orcagna, his immediate father in art, in knowledge of light and shade and perspective, in which term the painters of that epoch included not merely linear, but relief and aerial perspective. The pure subjectivity of his vision is seen in the "Last Judgment,"—from which Mr. Cole has engraved one of the most exquisite portions,—where we see the blessed, all of one type; if they had been painted from the model, one would say that one model had served for all the heads. This was the flaming up into unexampled brilliancy and purity of the ecstatic school of art which began with Giotto—the flaming up of the sacred candle in the socket before it goes out.

Fra Angelico was born near the castle of Vicchio, not far from Vespignano, the birthplace of Giotto, and at the age of twenty entered the order of Dominicans, being received into the

THE "CHRIST ENTHRONED" AT ORVIETO. (FRA ANGELICO.)

new convent at Fiesole; but as the monastery was not yet fit for occupation, he was sent *ad interim* by the blessed Lorenzo da Ripafratta, master of the novices, to Cortona, where with his brother, who entered into the monastic life at the same time, he was under religious instruction, and took the vows in 1408. As the record of his reception into the convent refers to him as already a painter of some reputation and having done noteworthy work, it is most probable that he had previously received such instruction as he had in art.

As all the work which Fra Angelico did in Cortona, with the exception of the lunette in fresco over the door of the church of St. Dominic, is of his earlier style, it is likely that the ten years between the time of his taking the vows and his return to the convent at Fiesole in 1418 were passed at Cortona, the single work above excepted probably having been done about 1438, on one of his journeys to Rome, those being the only occasions on which he was away from his monastery.¹

During the occupation of Cortona by the French,² the frescos in the convent of St. Dominic, probably the first that Fra Angelico painted, were destroyed. Besides the lunette already mentioned as having been executed at a later period, and which remains over the door, the church possessed an altar-piece representing the Madonna and Child surrounded by angels; also a panel with the Annunciation, with scenes, in the predella, from the life of the Virgin, which was transferred to the church of the Gesù. In the same church is a gradino painted by Fra Angelico in his earliest style, with scenes from the life of St. Dominic, originally in the church of that saint, and, according to Cavalcaselle, showing the influence of the art of the Florentine school most markedly, confirming the opinion that the painter had begun his studies before his novitiate.

After his return to Fiesole, Fra Angelico lived there absorbed in his art and existing for it alone, for the state of the outer world was such that no spiritually minded man could endure it. Schisms and feuds within the Church, wars and invasions and civic discord without, the Renaissance already undermining the traditions of the art of Giotto and the purists—all these must have made the ecstatic of Fiesole content with the silence and seclusion of his convent. We know nothing of the details of his life at this time. Of the pictures executed during it we know the "Annunciation" of St. Alexander of Brescia (1432), and the tabernaculum painted for the corporation of flax merchants (1433),

where the painter represented the Virgin and Child surrounded by twelve angels of exquisite beauty playing on various instruments. On the sides of the doors are saints, and on the predella are the Adoration of the Magi, St. Peter preaching, with St. Mark taking notes of his sermon, and the persecutors of the latter in a storm at sea.

In the refectory of his monastery he painted a life-sized Crucifixion, the Virgin and St. John at the sides and St. Dominic kneeling at the foot of the cross, which he embraces. In the chapter-house of the convent is a Madonna and Child much damaged by restoration, and the altar-piece of the chapel represents a Virgin and Child enthroned and surrounded by various saints. The predella belonging to it, according to Cavalcaselle one of the most happy productions of the artist, is in the National Gallery, London. The "Coronation of the Virgin," now in the Louvre, was formerly in St. Dominic.

It is probable that during this period Fra Angelico executed the thirty-five little pictures for the doors of the cupboard belonging to the sacristy of the Santissima Annunziata at Florence, now in the Academy of Florence. They were ordered by Piero de' Medici, and illustrate several scenes from the life of the Saviour and from the Last Judgment.

The next noted date in the life of Fra Angelico is that of 1436, when the monastery of St. Mark in Florence was given to the Dominicans by Pope Eugene IV., and Fra Angelico left his cell at Fiesole to live in Florence. Cosimo de' Medici had the monastery rebuilt, the church restored, and the library added; the church being finished in 1441, the monastery in 1443. Before the architects had finished their work, Fra Angelico had begun the altar-piece for the choir—a Madonna and Child with two angels at the sides, St. Mark, St. John the Evangelist, and St. Stephen on her right; St. Dominic, St. Francis, and St. Peter on the left with Sts. Cosimo and Damiano before her—doubtless as a sign of gratitude to Cosimo de' Medici, who had used his influence with the Pope to obtain the concession of St. Mark for the Dominicans. This picture, in a bad state of preservation, is now in the Academy, the predella having been taken to pieces and the parts scattered abroad, many of them being lost so that it is impossible of reconstruction.

Vasari says that Nicholas V. wished to make Fra Angelico archbishop of Florence and that he humbly refused, saying that he was not capable of governing; but the story is incredible, for the archbishopric of Florence was not vacant

¹ Lord Lindsay ("Christian Art," Vol. II., p. 224) says that "Fra Angelico seems to have resided in most of the Dominican establishments between Florence and Rome." There does not seem to be any ground for this

conclusion, unless he means to say that the artist divided his life between Rome and Florence.

² During the wars of the French republic, 1789-1805.

during the papacy of Nicholas. If the offer was ever made it could have been only by Eugene IV., who came to Florence in 1442 to consecrate the church of St. Mark; and as he took up his abode in the monastery, he must have made the acquaintance of the painter.¹

Indeed, when Eugene died, in 1447, Fra Angelico, then at work in Rome, seems not to have been sure of the favor of his successor, and offered to work at the Cathedral of Orvieto, erected not very long before to commemorate the last authentic miracle, that of the Corpus Domini, which is said to have occurred in 1263, and was still the wonder of the faithful. In this cathedral the best art of Christendom was then being lavished in a manner known nowhere else out of the papal city. On the 14th of June the contract was signed by which Fra Angelico bound himself to go to Orvieto to paint the new chapel, with his pupil Benozzo Gozzoli and two assistants, Giovanni d'Antonio and Giacomo da Poli. He was to receive two hundred gold ducats a year, his pupil having seven a month, and each assistant three, with twenty lire a month for board and lodging, a sufficiency of bread and wine, and all the requisites for their painting.

By the 28th of September two compartments of the ceiling were finished, one representing Christ as Judge, surrounded by angels, and the other the "Praiseworthy Company of the Prophets." Having done these, and leaving designs enough to decorate half the chapel, Fra Angelico returned to Rome, probably summoned there by the new pope, and in January of 1450 he was back in Fiesole, where he must have been still in 1451, for in that year we find that the rectors of the commune of Prato sent a messenger to the archbishop of Florence urging him to send Fra Angelico to paint the greater chapel. Their petition was granted, and on the 29th of March the famous painter was conducted to Prato; but for some reason or other he refused the undertaking and returned on the 1st of April to Fiesole, and shortly afterwards went to Rome. Here he was commissioned by the pope to paint the chapel in the Vatican which still bears the name of Nicholas V.

Fra Angelico never again left Rome, but died there, at the age of sixty-eight. He was buried in the church of Sta. Maria Sopra Minerva, and a marble monument was erected

¹ Lord Lindsay's "Christian Art" (new edition) adopts Vasari's version of the call of the painter to Rome, but the dates still do not justify his conclusions. As to the bishopric, it was, at the date of the death of the Pope Eugene, occupied by St. Antonino. Besides, the visit to Orvieto was a break in Fra Angelico's work at Rome, which would not have taken place if it had been Nicholas who called him to Rome.

to him, bearing the following inscription, said to have been composed by Nicholas V.:

HIC JACET VEN. PICTOR
FR. JO. DE FLOR. ORD. P.
M
CCCC
L
V

Non mihi sit laudi, quod eram velut alter Apelles,
Sed quod lucra tuis omnia, Christe, dabam:
Altera nam terris opera extant, altera coelo;
Urbs me Joannem flos tulit Etruriae.

Vasari gives the following description of the character of Fra Angelico:

This father, truly angelic, spent all his life in the service of God and for the good of the world and his neighbor. In truth, the great and extraordinary powers possessed by Fra Giovanni could not have existed except in a man of most holy life. . . . He was a man of simplicity and most holy in his ways, and an instance of his piety is that one morning the Pope Nicholas V. having bidden him to dinner, he was unwilling to eat meat without the license of the Superior, not making account of the authority of the Pontiff. He withheld himself from all worldly deeds, and living purely and holily he was such a friend to the poor that I think his soul is now in heaven. He worked continually at his pictures and would never treat any but sacred subjects. He might have been a rich man, but he cared not to boast, and used to say that true riches consisted in being content with little. He might have had command over many but would not, saying that there was less trouble and risk in obeying than in commanding. It was in his power to gain preferment, both from the monks and from the outer world, but he cared not for it, declaring that he sought no other dignity than to escape hell and gain paradise. He was most gentle and sober, and living chastely freed himself from the snares of the world; and he was wont to say that whoever followed art had need of peace and to live without distracting thoughts, and that he who does work that concerns Christ must live continually with Christ. He was never known to get angry with the monks: if any one desired work from him he would say that he would obtain the consent of the Prior to it, and then would not fail to fulfill the request. In fact, this father, who cannot be sufficiently praised, was in all his works and conversation most humble and modest, and in his painting dexterous and conscientious, and the saints of his painting have more the air and resemblance of saints than those of any other painter. It was his habit not to retouch or correct his painting, but to leave it as it came the first time, through the belief that God willed it so. He never painted a Crucifixion that the tears did not bathe his cheeks, so that we recognize in the faces and attitude of his figures the goodness of his sincere and profound devotion to the Christian religion.

That Fra Angelico was highly appreciated by his contemporaries is shown both by the appellations which they bestowed upon him of "Angelico" and "Beato," and by the respect with which he is mentioned by two poets of

DETAIL FROM THE "LAST JUDGMENT," BY FRA ANGELICO.

(IN THE ACADEMY OF FINE ARTS, FLORENCE.)

his day, Padre Maestro Domenico and Giovanni Sanzio da Urbino, the father of Raphael.

The most renowned of Fra Angelico's disciples was Benozzo Gozzoli, whose work was even sometimes mistaken for that of his master. Strozzi was probably also a pupil of the Dominican friar, and may have assisted in executing the frescos in St. Mark's. Judging by his style, Andrea di Firenze also may have been a disciple.

After Fra Angelico there is no one who could justify a claim to any ecstatic inspiration, and his successors, though borrowing in technical processes from him, had no sympathy with his temper and led directly to the naturalism which culminated in Raphael, which was characteristic of the Renaissance, and was visible in the frank abandonment of the artistic

conventions born of the union of the ascetic Christianity of the early Church with the formality of the esthetic paganism of the declining empire, stereotyped by the Byzantines, and again called to a temporary significance by Giotto.

Henceforward we shall find the art of Christianity becoming gradually less rhapsodic and finding its sustenance more in the larger and healthier inspirations of the bodily vision. Fra Angelico is not the last of the painters of the religious temper, but simply the last of the ecstasies. The change was a part of the great movement which had already begun in other provinces less dependent on the Church, but with which painting was to keep pace as best it might — *haud passibus æquis*.

W. J. Stillman.

NOTES BY TIMOTHY COLE, ENGRAVER.

FRA ANGELICO'S chief works are his frescos in the Cathedral of Orvieto. These would of themselves repay a pilgrimage to that romantic city. They are in the chapel of the Madonna di San Brizio, (Capella Nuovo) in the right transept of the church, and are comprised in two of the three triangular arched spandrels of the ceiling immediately over the great window of the chapel. They contain the Saviour seated in glory with angels, saints, and prophets, intended for the upper part of the "Christ Enthroned." The third compartment, which is to the right, is the work of his pupil, Benozzo Gozzoli. The remaining part of the "Christ Enthroned" is the masterpiece of Luca Signorelli, and occupies the rest of the wall space of the chapel. The figure of Christ seated in glory upon a cloud encircled by a rainbow upon a ground of gold, which glows in the light of the window beneath, is the first object to seize the attention upon entering the chapel. The dignity and solemn majesty of his person impress one mightily. The figure is colossal, and is robed in an outer garment of blue of a light, fresh tint, the deep shadows of the folds being of a strong, rich tone. The folds fall in graceful lines about and below the feet; the part of the garment turned down and falling from the shoulder over the lap reveals the lining, which is of a dark, soft tone of yellow of a shade of ocher or old gold. The inner garment is of a soft shade of maroon, the trimming round the sleeve, neck, and belt are of gold, as well as the belt of the globe of the universe — the globe itself being blue. The hair, falling in curls upon the shoulders, is of a soft brown color, as well as the beard, which is parted in the middle and is softly shaded into the warm, brownish color of the face. The expression of the countenance is marvelously subtle. Christ is still the loving Saviour; his visage is darkened with sorrow more than wrath as he raises his right hand in condemnation of the wicked. This right hand appears to me wonderfully full of tender feeling. The likeness of Fra Angelico standing by the side of Luca Signorelli is painted by the latter in his fresco of "The Overthrow of the Antichrist," which is on the left wall of this chapel as one faces the

"Christ Enthroned." His sweet face and gentle bearing, with eyes humbly cast towards the ground, are finely contrasted with the noble lineaments of Signorelli, who looks straight at you with a kind and generous air.

Fra Angelico's fresco of the Annunciation in the Museum of San Marco (formerly the Monastery of San Marco) is upon the wall immediately facing the entrance to the corridor of the upper floor. It measures seven feet four inches high by nine feet nine inches long, and the figures are a little more than half the size of life. The scene takes place beneath an arched arcade, such as is seen in the cloister of the museum, and the little room back of the Virgin is a duplicate of one of the cells of the upper floor with its one little window. Here in the picture the light falls softly in, forming a very beautiful little bit. Without is a garden dotted with flowers, and separated from the wood behind by a picketed board fence, in which not only is every nail-head visible, but even the graining of the wood put in with childlike simplicity. The Virgin has seated herself in quiet contemplation, when the messenger of the Lord suddenly appears before her, his wings still extended like a dove just alighted from the sky. He gazes steadfastly into the Virgin's face, and the look of mutual interest is singularly impressive, as well as the expression of humility and devout awe in the face of the Virgin. I wish I could have engraved the fresco of the "Coronation of the Virgin" in one of the cells as an illustration of the divine sweetness of Fra Angelico's Madonnas. They are beings of unearthly beauty, and words fail to convey any idea of their ineffable loveliness and purity. His angels, too, are creatures of another sphere, and purer types have not yet been conceived in art. The drawing in the hands of his angels and Madonnas is most exquisite — charming in tender yet subtle simplicity of outline.

San Marco is indeed a museum of Fra Angelico's work, as every one of the cells contains one of his frescos. The coloring of these is very fine. The delicate freshness and coolness of the tints blend softly and harmoniously together — simple, pure colors,

THE "ANNUNCIATION," BY FRA ANGELICO.

laid in sometimes with fine pencilings. In the "Crucifixion" in the cloister the shaven face of St. Dominic at the foot of the cross is treated so finely and delicately that the attempt is made to show each separate shaven hair by minutely fine dots. In this fresco is displayed all this painter's knowledge of the technic of his art. The wings of his angels are enlivened with tints of green, yellow, violet, etc., contrasted harmoniously. There are forty frescos in the cells, all the cells except five having a fresco in each. These are painted on the same side as the window, so they are

poorly lighted, though the light reflected from the surrounding walls on sunny days brings them out clear and distinct. Among the most beautiful of the series are the following: Cell No. 1, "Noli me Tangere"; No. 3, "Annunciation" (the angel is standing, and the Virgin is kneeling on her footstool); No. 4, "The Crucifixion"; No. 6, "The Transfiguration"; No. 7, "The Mocking and Crowning with Thorns"; No. 8, "The Resurrection"; No. 9 (Fra Angelico's own cell), "The Coronation of the Virgin"; No. 34, "The Agony in the Garden."

A POSITIVE ROMANCE.

MY friend Hammond is a bachelor and lives in chambers in New York. Whenever we meet on my occasional visits to the city he insists on my spending the night with him. On one of these occasions we had been at the opera during the evening and had witnessed an ovation to a beautiful and famous singer. We had been stirred by the enthusiasm of the audience, and on our walk home fell to discussing a theme suggested by the scene; namely, the tendency of man to assume a worshipful attitude towards woman, and the reason for it. Was it merely a phase of the passional relation between the sexes, or had it some deeper and more mysterious significance?

When I mentioned the former idea Hammond demanded why this tendency was not reciprocal between the sexes. As a matter of fact, while women showed endless devotion and fondness for men, their feeling was without the strain of adoration. Particular men's qualities of mind or heart might excite the enthusiastic admiration of women, but such admiration was for cause, and in no way confounded with the worshipful reverence which it was man's instinct to extend to woman as woman, with secondary reference to her qualities as a particular person. No fact in the relations of men and women, he declared, was more striking than this contrast in their mutual attitudes. It was the feminine, not the masculine, ideal which supplied the inspiration of art and the aroma of literature, which was found enshrined in the customs and common speech of mankind. To this I replied that man, being the dominant sex, had imposed his worship on the race as a conquering nation, its gods on the conquered. He, not woman, had been the creator of the art, the literature, and the language which were dedicated to her. Had woman been the dominant sex the reverse might have happened, and man been obliged to stand upon a pedestal and be worshipped.

Hammond laughed, but declared that I was all wrong. Man's tendency to worship woman, while naturally blending with his passional attraction towards her, did not spring from the instinct of sex, but from the instinct of race—a far deeper and generally unrecognized impulse. Even though woman should become some day the dominant sex, man need suffer no apprehension of being worshipped. His modesty would be respected.

Some time later, when we had cozily established ourselves before a sea-coal fire in Hammond's quarters, with divers creature comforts at hand for one of our usual symposiums, the subject came up again; and under conditions so favorable to discursiveness our talk took a wide range.

"By the way," said I, apropos of some remark he had made, "talking about the adoration of woman, did not that crack-brained Frenchman, Auguste Comte, propose something of the sort as a feature of his 'Religion of Humanity'?"

Hammond nodded.

"I wonder," I said, "whether that feature of his scheme was ever actually practiced by his followers. I should like to get a chance to ask a Positivist about that, if indeed there are any in America."

Hammond smoked in silence for some time, and finally said, quietly, "Possibly I might tell you something about it myself."

"Hello!" I exclaimed. "How long since you have been a Positivist?"

"About twenty-five years," was the matter-of-fact reply.

"A Positivist of twenty-five years' standing," I ejaculated, "and never told of it. Why have you hid your light under a bushel all this while?"

"I said that it was twenty-five years since I had been a Positivist," replied Hammond; "as long, in fact, as it is since I have been a sophomore. Both experiences belonged to the same year of my college course, and, perhaps you may infer, to the same stage of intellectual

développement. For about six months at that time I was as ardent a convert, I fancy, as the Religion of Humanity ever had."

"I thought you had told me all about yourself long ago," I said. "How is it that you have kept so mum about this experience? I should fancy it must have been a decidedly odd one."

"It was a very odd one," replied Hammond—"the strangest passage, on the whole, I think, in my life. I have never spoken of it, because it is one of those emotional experiences which no man likes to relate unless he is sure of being understood. To tell it to most men would be casting pearls before swine. I have always meant to tell you when a suitable opportunity came up."

"You know," he said, when I had signified my eagerness to hear, "that I graduated at Leroy College. It was a little one-horse institution, but blue as a whetstone in its orthodoxy; and with my father, who was a clergyman of a very strait sect and staid views, that fact covered a multitude of shortcomings. I was nineteen when I entered, and consequently twenty when at the beginning of sophomore year I came under the charge of Professor Regnier. He was a Frenchman, but spoke English with perfect ease and precision and a very slight accent. At the time I knew him he was probably sixty. His hair was quite gray, but his mustache and imperial were still dark. It was rumored among the students that he had left his native land for political reasons, having played for too high stakes at the national game of revolution. True or not, the report naturally heightened the interest which his personality had for us.

"He made it his business to know personally all the students in his classes; and as it is not easy for a man of sixty, especially if he is also their teacher, to become really acquainted with students of twenty, the fact may be taken as evidence of his unusual tact. He was, I think, the most fascinating man I ever saw. His insight into character was like magic, his manners were charming, and his Gallic vivacity made him seem like a boy. Gradually, while still remaining to the rest of the students a genial and friendly instructor, he singled out a smaller circle of particular intimates. Of these I was one, and I believe the most trusted.

"Of course we boys were immensely flattered by the partiality of such a man; but equally, of course, the pursuit of his own pleasure could scarcely have been the motive which impelled him to seek our companionship. It was, in fact, a motive as unselfish as that of the missionary who leaves the comforts and refinements of civilization and exiles himself among savages that he may win them to his faith. He had been a personal friend and disciple of Auguste

Comte, then but lately dead, and on coming to America had sought his present employment, not merely as a means of livelihood, but equally for the opportunity it offered for propagating the new gospel among young men. Do you know much about what Positivism is?"

I confessed that I knew next to nothing—scarcely more than that there was such a thing.

"I shall not bore you with an account of it," resumed Hammond, "further than to say that it is a scheme for the perfection of the human race. It rejects as idle all theories of superhuman intelligences, and declares the supreme object of the individual love and devotion should be humanity. The rational demonstration of the truth of this system is sought in the course of history, which is claimed to prove Positivism the finality of social evolution. You will find anything else you want to know about it in the books. I dare say you will not be converted; but if you were nineteen instead of twice that, with Hippolyte Regnier to indoctrinate you, I fancy the result would be about what it was in my case.

"His personal influence over us, and the intoxicating flattery implied in being seriously reasoned with on themes so lofty by a man whom we so greatly admired, would have gone far, no doubt, to commend to us any form of opinions he might have taught; but there were not lacking other reasons to account for his success in converting us. As for Comte's dogmatic denial of superhuman existence, and his fanciful schemes of new society, we were too young and crude to realize how unphilosophic was the former, how impossible and undesirable was the latter. While accepting them as facts of a new creed, they meant little to us, nor did Regnier much insist upon them. What most he did insist on was the ethical side of Positivism—the idea of the essential unity of the individual with the immortal race of man, and his obvious duty to forget self in its service. What could be better adapted to affect generous and impassioned boys than an appeal like this? The magnificent audacity of it, the assumption of man's essential nobleness, the contemptuous refusal to make any terms with selfishness, captivated our imaginations. I know now indeed that this enthusiasm of humanity, this passion of self-abnegation, which I thought a new religion, was the heart of the old religions. In its new-fangled disguise the truth and virtue of the doctrine were still operative, and the emotional crisis through which I passed I found was as essentially religious as it was in form unorthodox.

"At the end of sophomore year there were a half-dozen very positive young Positivists in our class. The pride of intellect which we felt in our new enlightenment was intoxicating. To

be able to look down from a serene height, with compassion frequently tempered by contempt, upon the rest of the world still groping in the mists of childish superstition, was prodigiously to the taste of youths of eighteen and twenty. How, to be sure, we did turn up our noses at the homely teachings in the college chapel on Sundays. Well do I remember attending my father's church when at home on vacation, and endeavoring to assume the mental attitude of a curious traveler in a Buddhist temple. Together with the intellectual vanity which it fostered, our new faith was commended to us by its flavor of the secret, the hazardous, and the forbidden. We were delightfully conscious of being concerned in a species of conspiracy which if it came to light would convulse the college and the community, have us expelled, and cause no end of scandal to the public.

"But the more I took my new faith in earnest and tried to make of it the religion it claimed to be, I was troubled by a lack that seemed to be inherent. Humanity, the object of our devotion, was but an abstraction, a rhetorical expression for a mass of individuals. To these individuals I might indeed render affection, service, compassion, tenderness, self-sacrifice; but their number and pettiness forbade me the glow of adoration with which service was touched in religions which offered a personified object of adoration. When finally I confided these troubles to Regnier I expected to be rebuked; but on the contrary, and to my great discomfiture, he embraced me effusively after the Gallic manner. He said that he had been waiting for the time when in the course of my development I should become conscious of the need I had confessed before explaining to me the provision made for it by Positivism.

"To start with, he put in, as a sort of special plea for Positivism, that it was not singular among religions in recognizing as the object of devotion an abstraction, the mode of the existence of which was a mystery. As a solace to their votaries and an aid to their faith nearly all religions recognized sacred emblems; not indeed to be confounded in clear minds with the original object of devotion, but worthy of reverence in its place, as its special representative and reminder. In precisely this sense the sacred emblem of humanity was woman.

"Of course, Positivism claiming to be a creed of demonstration, not of faith, Regnier did not ask me to receive this proposition as his mere statement, but proceeded to establish its reasonableness by logic. I am going to give you what I remember of his argument, because I believe still, as I did when I heard it, that it is the only philosophical explanation of the

instinctive reverence of man for woman which we have been talking about to-night. It was given to me, of course, as a doctrine peculiar to Positivism; but I don't know of any form of religious belief inconsistent with the recognition of the sacred quality of womanhood on the grounds given by Regnier. Indeed, I am by no means sure whether the doctrine as I received it is orthodox Positivism at all. I have reason to think that Regnier was quite too original a character for a very good interpreter, and should be interested to know how far his ideas were his own and how far his master's.

"First he pointed out to me as matter of fact that there was no more striking feature of the modern and humane as compared with the ancient and barbaric world than the constantly growing tendency of the most civilized races to apotheosize womanhood. The virgin ideal had been set up by the larger part of Christendom as the object of divine honors. The age of chivalry had translated for all time the language of love into that of worship. Art had personified under the feminine form every noble and affecting ideal of the race, till now it was in the name of woman that man's better part adjoined his baser in every sort of strife towards the divine. Is it alleged that it is man's passion for woman that has moved him thus in a sort to deify the sex? Passion is no teacher of reverence. Moreover, it is as the race outgrows the dominion of passion that it recognizes the worshipfulness of woman. The gross and sensual recognize in her no element of sacredness. It is the clear soul of the boy, the poet, and the seer which is most surely aware of it. Equally vain is it to seek the explanation in any general superiority of woman to man, either moral or mental. Her qualities are indeed in engaging contrast with his, but on the whole no such superiority has ever been maintained. How, then, were we to account for a phenomenon so great in its proportions that either it indicates a world-wide madness infecting the noblest nations while sparing the basest, or else must be the outcome of some profound monition of nature, which in proportion as man's upward evolution progresses he becomes capable of apprehending? Why this impassioned exaltation by him of his tender companion? What is the secret spring that makes her the ceaseless fountain of lofty inspiration she is to him? What is the hint of divinity in her gentle mien that brings him to his knees? Who is this goddess veiled in woman whom men instinctively reverence yet cannot name?

"The adoration of woman, which may almost be called the natural religion of the modern man, springs from his recognition, instinctive

when not conscious, that she is in an express sense, as he is not, the type, the representative, and the symbol of the race from which he springs, of that immortal and mystical life in which the secret of his own is hid. She is this by virtue, not of her personal qualities, but of the mother-sex, which, overbearing in part her individuality, consecrates her to the interests of the race and makes her the channel of those irresistible attractions by which humanity exists and men are made to serve it. As compared with woman's peculiar identification with the race, man's relation to it is an exterior one. By his constitution he is above all an individual, and that is the natural line of his development. The love of woman is the centripetal attraction which in due time brings him back from the individual tangent to blend him again with mankind. In returning to woman he returns to humanity. All that there is in man's sentiment for woman which is higher than passion and larger than personal tenderness—all, that is to say, which makes his love for her the grand passion which in noble hearts it is—is the fact that under this form his passion for the race finds expression. Mysterious ties, subtending consciousness, bind him, though seemingly separate, to the mighty life of humanity, his greater self, and these are the chords which, when 'Love took up the harp of life . . . passed in music out of sight.' In woman humanity is enshrined and made concrete for the homage of man. This is the mighty indwelling which causes her to suggest something more august than herself, and invests her with an impersonal majesty commanding reverence.

"You may imagine with what power such a doctrine as this, set forth by an enthusiast like Regnier, appealed to the mind of an impassioned boy of twenty, as yet pure as a girl, but long vaguely stirred by the master passion of our nature. The other tenets of the Religion of Humanity had been impressed upon me by argument, but at the mere statement of this my heart responded *O Dea Certe!*

"Subsequently in response to my questioning Regnier explained to me how the master had recommended his disciples to give practical effect to the cult of womanhood. I must remember that it was nothing new and nothing peculiar to Positivism for men to adore women to the point even of idolatry. Lovers constantly were doing it. But in these cases the worshippers did not look beyond the personality of the idol. Possibly no doubt some dim apprehension of the true grounds of woman's worshipfulness might mingle with the lover's sentiment, but it was very far from being the clear and distinct sense necessary to redeem his homage from the charge of extravagance. On the other hand the spirit in which women received

the homage men rendered them was usually as mistaken as that in which it was offered. Either on the one hand from an impulse of personal modesty they deprecated it, or on the other hand they accepted it as a gratification to their personal vanity. In either case they equally misapprehended their true and valid title to worship, which, while personal qualities might enhance or partially obscure it, was itself in root more than personal, and consisted in the martyr and mother sex which so peculiarly sacrificed and consecrated them to the interests of humanity as to draw to them the homage and loyalty of all men who loved their race. It had been the counsel of his master, Regnier said, that while his disciples should hold all women in exalted reverence, they should peculiarly address this general sentiment to some particular woman, who, being of the same faith, should be able to accept it worthily and without self-exaltation in the spirit in which it was offered.

"Of course the reflection was obvious that in the existing conditions of the Positivist propaganda in America it would be impossible to find a woman capable of understanding, much less of accepting, such a relation, and, therefore, that to me the cult which I had been taught must remain entirely theoretical. Homage from men which did not insure to the titillation of the vanity would seem to women, as usually educated, equally incomprehensible and unprofitable.

"It was in recognition of this situation that Regnier ended by making a proposition which testified more strongly than anything else could have done, both to the enthusiasm and sincerity with which he himself held the faith he preached, and to his confidence in my own equal singleness of heart. He had never before spoken of his personal history or home life. Several times I had spent the evening at his house, but on these occasions I had seen only himself. Certain womanly belongings, however, which I had noticed, and the sound of a piano once or twice, had suggested that the house might not be without a feminine presence. The professor now told me that long ago in France for a few short blissful years he had been the husband of the sweetest of women. She had left behind a daughter, the sole companion of his life and the apple of his eye. She lived in complete seclusion, rarely even leaving the house. He did not desire her to make acquaintances in this country, nor indeed was she able to speak a word of any language but her own. There was no question of my making her acquaintance in the ordinary sense, or even of meeting her a second time, but if I desired to testify my new appreciation of the sacred quality of womanhood, it was possible

that she might consent to receive my homage in the name of her sex. He could not be sure what she would say, but he would speak with her about it.

"The following day a note from him requesting that I should call at his house that evening intimated that he had succeeded in carrying his point. When I called at the time set he told me that he had found it more difficult than he had anticipated to gain his daughter's consent to see me. She had been very reluctant to assume the attitude required of her, and only her respect for his wishes and the good of the cause, and the assurance he had given her of the entire ingenuousness of my own motive, had induced her finally to yield. After some talk as to the significance of the interview before me, which I was too much agitated to comprehend, he bade me follow him.

"As may readily be supposed, my fancy, from the moment Regnier had suggested this interview, had been exceedingly busy with conjectures as to the sort of scene it would prove, and especially as to the personality of her who was to be the central figure. Except his intimation that the interview would be necessarily without interchange of speech and presumably brief, scarcely more probably than a confrontation, he had told me nothing. Of course, however, my fancies had not failed to take some form. I think I had a general expectation of finding myself in the presence of a beautiful woman, statuesquely shaped and posed. I imagine that I rather expected her to be enthroned or standing upon some sort of dais, and I am sure that I should not have been surprised had there been some artificial arrangement of lights as in a theater to add effectiveness to the figure.

"I followed Regnier through several rooms without raising my eyes. Presently he paused and said, 'My daughter.'

"Thrilling with the premonition of a vision of imperious or melting loveliness which should compel my homage by its mere aspect, I raised my eyes to find myself facing a plain-featured, plainly dressed young woman, not ill looking certainly, but destitute of a single trait striking enough to have won a second glance from me had I met her on the street.

"Her father need not have told me of her reluctance to assume the part his wishes had imposed upon her. For the fraction of an instant only, a pair of black eyes had met mine, and then she had bent her face as low as she could. The downcast head, the burning cheeks, the quick heaving of the breast, the pendent arms, with tensely interlacing fingers and palms turned downward, all told the story of a shy and sensitive girl submitting from a sense of duty to a painful ordeal.

"The sudden and complete wreck of all my preconceptions as to her appearance, as well as the accessories of the scene, left me for a few moments fairly dazed. Not only were my highly wrought expectations as to the present interview brought to humiliating discomfiture, but the influence of the disillusionment instantly retroacted with the effect of making the entire noble and romantic cult which had led up to this unlucky confrontation seem a mere farrago of extravagant and baseless sentiment. What on earth had Regnier been thinking of to plan deliberately a situation calculated to turn a cherished sentiment into ridicule? If he had seriously thought his daughter capable of supporting the rôle he had assigned her, had there ever been a like case of parental fatuity?

"But even as I indignantly asked myself this question I saw a great light, and recognized that the trouble was neither with Regnier's fatuity nor with his daughter's lack of charms, but with myself, and a most unworthy misconception into which I had fallen as to the whole object and purport of this interview. What had the beauty or the lack of beauty of this girl to do with the present occasion? I was not here to render homage to her for the beauty of her sex, but for its perpetual consecration and everlasting martyrdom to my race. The revulsion of feeling which followed the recognition of the grossness of the mistake I had made had no doubt the effect of greatly intensifying my emotions. I was overcome with contrition for the unworthiness with which I had stood before this girl who had so trusted to my magnanimity, appraising her like a sensualist when I should have been on my knees before her. A reaction of compunctious loyalty made my very heartstrings ache. I saw now how well it had been for a weak-minded fool like myself that she had not chanced to be beautiful or even pretty, for then I should have cheated myself of all that distinguished this solemn meeting from the merest lover's antics. I won in that moment an impression of the tawdriness of mere beauty which I have never gotten over. It seemed to me then, and more or less has ever since, that the beauty of women is a sort of veil which hides from superficial eyes the true adorableness of womanhood.

"Unable longer to resist the magnetism of my gaze, her eyes rose slowly to mine. At their first meeting her face became crimson; but as she did not avert her eyes, and continued to look into mine, the flush paled swiftly from her face, and with it all the other evidences of her embarrassment passed as quickly away, leaving her bearing wholly changed. It was plain that through my eyes, which in that moment must have been truly windows of my soul, she had read my inmost thoughts, and

had perceived how altogether impertinent to their quality self-consciousness on her part would be. As with a gaze growing ever more serene and steadfast she continued to read my thoughts, her face changed, and from the look of a shy and timid maiden it gradually took on that of a conscious goddess. Then, as still she read on, there came another change. The soft black eyes grew softer and yet softer and then slowly filled with tears till they were like brimming vases. She did not smile, but her brows and lips assumed a look of benignant sweetness indescribable.

"In that moment no supernatural aureole would have added sacredness to that head, or myth of heavenly origin have made that figure seem more adorable. With right good will I sank upon my knees. She reached forth her hand to me and I pressed my lips to it. I lifted up the hem of her dress and kissed it. There was a rustle of garments. I looked up, and she was gone.

"I suppose immediately after that I must

have left the house. I only know that the dawn found me miles out of town, walking aimlessly about and talking to myself."

Hammond poured himself a glass of wine, drunk it slowly, and then fell into a profound reverie, apparently forgetful of my presence.

"Is that all?" I asked at last. "Did you not see her again?"

"No," he answered, "I never saw her again. Probably, as her father had intimated, he did not intend that I should. But circumstances also prevented. The very next day there was an explosion in college. There had been a Judas among my fellow-disciples and the faculty had been informed of the Positivist propaganda going on under their noses. I was suspended for six months. When I returned to college, Regnier had disappeared. He had of course been promptly dismissed, and it was rumored that he had gone back to France. He had left no trace, and I never heard of him again or of his daughter. I don't even know the name of the woman I worshiped."

Edward Bellamy.

A SONG OF THE WOODLAND SPIRIT.

CHEERED by the beauty of the scene, I rose
 With life renewed, close drawing to my heart
 A sense of comfort from the great gray trees
 Which stood in solemn friendliness about me,
 And from the arching sky, which like love's face
 Looked through the woven branches, whence the leaves,
 Frail, gentle messengers, came slowly floating;
 And with them, ever and anon, the sound
 Of muffled music on the soft air drifted —

A slow and haunting strain of melody,
 Which waked the longing thought of home. Alas,
 How heavily that thought struck through the silence!
 I, that am lonelier than the cloud's swift shadow
 Which speeds unmarked across the mountain vale,
 Dreamed of that semblance which the heart must build
 Somewhere, in fancy, to fill out the place
 Of what is lost, or in despairing perish.

Stayed by the mystical, faint chords inviting,
 I waited hearkening, while the woodland spirit,
 In some deep labyrinthine covert hid,
 Sent forth a rhythmic chant of measured words;
 Which were but words such as the listening soul
 Hears in the myriad rustlings of the forest,
 And in the limpid lappings of the stream.

Albeit a pleasing power they had, outborne
 Upon the urging waves of that strange music —
 Which faileth here, that rougher speech must mar
 The flow of that consolatory song —
 A song of summer in the happy wood.

In sacred and solacing shelter and shade ; in the solitudes silent and sylvan ;
 In songs of the sun in the shimmering leaves and the silvery sheen of the water ;
 In dripping of dews and the whisper of wandering winds and the fragrance of flowers ;
 In bloom-bended branches, that burthen the balmy and bountiful breasts of the summer ;
 In unwithered wilderness ways, where the wrongs and the wars of the world cannot enter —
 There waiteth the spirit of peace and of rest for the sorrowing soul that returneth.

Like Beauty and Strength, from their slumbers arising, refreshed for their love and embracing,
 So rise the fair towers that stand by the flame-figured gates of that slumbering city.
 There, far from the fretting, the favoring forest hath fashioned a kingdom enchanting,
 With answering arches and aisles that are filled with the gloom and glory of ages,
 And columns that carry the uncounted years, as a crown of content and rejoicing,
 Uplifting the great swaying world of leaves to the warm breathing wonder of heaven.

O light-loving battlements, walls, leafy-bannered, assailed by the gleams of the morning !
 The bright, level spears of the sun strike and glance through the emerald shields of the branches,
 The trumpet is blown at the door of the tent, but the lips of the trumpeter smileth,
 And they that awake from their slumber and dreaming come forth, with a song, from the portals.
 O beautiful battle, that blesses and kindles to life by the friendly assaulting !
 O happy green streets of the city besieged by the sun and the strength of his loving !

Therein the young year riseth up from her couch, which is spiced from the pine and the cedar ;
 Fresh-robed, as an orchard in bloom, she appears, with the fragrance of dawn in her tresses,
 Advancing with comely and confident steps, for she loveth the lord of the summer.
 Her eyes have a light like the light from a fountain wherein the sky's image lies broken,
 Her voice hath the sound of the music of waters, that lave the starred banks of the meadows,
 And lightly she sighs, like the breeze that caresses the soft, silken leaves of the willows.

There love maketh gracious the laboring patience of nature's renewing forever :
 The bursting of fettering frosts, and the waking from rigid and riveted slumbers ;
 The storms, and the rioting rush of the rains though the hills that reëcho with laughter,
 The flashing of rays in the wide-dripping courts, the miraculous birth of the flowers —
 That race which springs up from the fresh woodland loam, with the glory of God in their faces ;
 Divine and unchanged in their dateless descent, while the kingdoms of earth come and vanish.

O nameless, unspeakable triumph and glory, of strength that is loving and gentle ;
 Secure, indestructible beauty and righteousness robed in the purple unfading ;
 Bright-crowned, with the gems of the dew and enthroned in a circle of life-giving splendors !
 O blessed and shadowless land of repose, which the dream of the summer enfoldeth !
 The light shall not fade from thy green-bladed slopes, and the charm of the trees is immortal ;
 Unsullied, undimmed, as the light of the stars, in the fields of the silence eternal.

In sacred and solacing shelter and shade ; in the solitudes silent and sylvan ;
 In songs of the sun in the shimmering leaves and the silvery sheen of the water ;
 In bloom-bended branches that burthen the balmy and bountiful breasts of the summer ;
 In dripping of dews and the whisper of wandering winds and the fragrance of flowers ;
 In unwithered ways in the wilds, where the wars and the wrongs of the world are forgotten —
 There waiteth the spirit of peace and of rest for the sorrowing soul that returneth.

Slow, slow, and faint the moving music grew,
 And ceased at last upon the morning air.
 I could have wept, so sweet it seemed, indeed,
 If one might find forgetfulness and rest —
 Might turn away from fretting, and be free
 From torturing thoughts and loneliness, and grief
 For songs unsung, and pain of lost endeavor ;
 Safe wrapped in dreams and in the summer shade,
 Safe from the killing anguish in the heart,
 Soothed by the murmur in the summer leaves,

A SONG OF THE WOODLAND SPIRIT.

Stayed near the gentle trouble of some stream,
Which woos unceasingly the flowering shores,
There to lie down amidst the soft warm grass
Unvexed to rest, forever — satisfied.

Well pleasing, now, was that consoling song,
Well pleasing to recall the summer forest,
Now that the leaves were golden and the trees —
As though within them dwelt far-seeing souls
That cannot find content in passing joys —
Shook off impatiently their shining robes,
Disdaining to be decked in mocking glories.

And well it seemed now, hearking of that song,
If one might bide, like that enraptured spirit,
To revel undisturbed in nature's beauty,
And never dread love's hunger in the heart.

Sweet seemed the picture of that happy land.
And there to dwell — so ran my musing thoughts —
With one I love to love me, evermore,
Then should no heaven, devised of gods or men,
Tempt me away from my soul's paradise.

But lacking love, life lacketh everything.
Though it were set in everlasting beauty,
Amidst a realm, unfading as the sun,
Girt with resplendent glories, and enthroned
Upon the gathered riches of the world,
With angels clad in light for servitors,
All would be nothing. In the midst of all,
From the calm center of all circling fancies,
The changeless image of unruffled truth,
Like some pale specter of lost happiness,
Would rise amidst the glittering pomp and say :
“ Fade, vain and curséd semblances unreal ;
Where love bides not, the soul of life hath fled.
Unloved to live, is not to live at all.”

Then to gray ashes would the fabric turn :
The vaulted grandeur changed to dreariness
Should hedge the wretched soul, as in a prison,
Gloomed like the soundless corridors of death.

Away, away, with mocking words, forever !
The level sword of truth sheers through the net
Of woven phrases, staying the keen point
On one unalterable, fixed decree.
Man must be blest in all, else is his life
A mimic play, which eagerly he watches,
Still courting blindness to the imperfection.

Recalling all the loveliness of nature —
The friendly fields, the streams, the whispering wood —
I questioned deeply of my conscious heart :
Quick came the answer, and I turned away,
Once more the endless conflict to renew,
To battle — and to dream of happy days.

Robert Burns Wilson.

TOPICS OF THE TIME.

The Lessons of Summer Travel.

EVERY summer gives new reason for wonder in the elaborate preparations which look to making the way of the summer tourist easy. The magnificent hotels which await him in every direction, the river and ocean steamers, the long trains of vestibuled cars, seem to riot in conveniences which make travel a luxury; and every year brings some new feature into the class of things which are almost necessities. The tourist whose great-grandfather was used only to short excursions in the family chaise, with occasional stops at a wayside inn, must now have his fast train, with accommodations for every need or whim; he must eat, drink, sleep, dress, be shaved, and enjoy library and writing facilities at the rate of forty miles an hour. And it is at least doubtful, withal, whether the modern tourist really pays very much more for his luxurious progress than his great-grandfather did for his summer jaunt. The expenditure of a comparatively small additional sum nowadays makes the tourist free of a great travelers' association, whose membership, however shifting, may be relied upon with safety, so that the corporations which make summer travel their peculiar care may furnish luxury at the lowest rates. They are preparing for tens and hundreds of thousands; they may therefore give each of these a share in larger preparations than a prince could formerly have expected.

But the question remains, How are such preparations possible? Is everything to be accounted for by the twin facts that there are a great many more people in the country, and that there is a great deal more wealth with which to provide for them? Many observers seem to think so; they argue as if passenger corporations were more benevolent than they used to be, or as if the people had become "more luxurious." The former proposition is hardly thinkable. The latter is begging the question. Our people, any people, would be even more "luxurious" if they dared to be; and the real question is as to the influences which have already brought them thus far upon the road. One may find many such influences, but he may be interested in tracing the connection of many phases of this progress with the apparently unrelated phenomenon of the steady decrease in the rate of interest. Indeed, if he begins to follow out this one influence through all its ramifications, it will carry him far beyond his starting-point of mere summer travel, and he will be almost ready to conclude that there is no human being who has not a personal stake in the still greater possible changes from the same cause.

The manner in which the rate of interest falls as the civilization and security of a country increase has been a familiar fact since there has been any economic discussion. Successive periods are marked by "waves" of lower interest. Seven per cent. was once not remarkable in our Eastern States; but period after period has seen the upper limit fall to six, to five, and even to four per cent. And such rates as these are for loans

which are in the nature of investments, in which he who loans the money is able to stipulate for somewhat higher rates because he is surrendering control of his capital for three or six months, or for a longer time. The more notable cases are those in the nature of "call" loans, in which the lender retains some control over his capital, and the borrower gets lower rates in consideration of his agreement to repay on demand. It is not very long since money could be borrowed in this way in New York City for one per cent.; that is, a borrower, by paying a little less than \$3 per day, could command the use of \$100,000 and obtain from it what profit he could make. If such a rate is abnormally low and temporary, it will at least serve to point the general lesson more sharply.

The most evident effect is the increased opportunities which are thus given in our times to individual ability. For the same amount of interest the individual can every year command a larger and still larger amount of working capital. Like the law of gravitation, this one principle is at work everywhere in the modern world, and under countless different forms; its peculiar interest for us is that our own country is the first theater of action on which it has operated at the same time on a people of great individual ability and on a country of boundless natural wealth, and the full consequences of such a conjunction are still beyond human speculation. We can only say that it accounts for the increased standard of private fortunes, without the implication of ideas of monopoly or extortion, or any other variations of Proudhon's theme that "property is robbery." It has given us our enormous modern productive establishments, with their saving of waste, their decrease of price, their increased purchasing power for everybody's money, and the consequent ability of everybody who will to devote an increasing part of his income to pleasure or to profit. It is ready to meet the demands of commerce by furnishing money for cutting through isthmuses, tunneling mountains, and spanning continents with rows of rails; and it is as ready to make every provision so that not even a crumpled rose-leaf shall mar the delights of summer travel. The observer who is content with attributing such phenomena to mere increase of population or of wealth will miss many a cross-light which the conditions of travel might shed upon graver questions, and in particular the force of that fall of interest which every year causes enterprises which once were impossibilities to fall into the categories of possibilities, of probabilities, of undertakings, of accomplished facts. It is, perhaps, the mysterious force with which Lytton armed his "Coming Race"—greater than that, indeed, in that there are no conceivable limits to its development.

This is not a case, moreover, in which there is any hazard in arguing from generals to particulars, from the great to the ordinary affairs of human life. If the change of conditions enables the great corporation to provide for its passengers with double lavishness at

the same annual cost, it is as ready to be the faithful servant of even the poorest, if he is willing to make use of it. It may not be able to raise him from the ranks of the hired servants to independence, but it will afford him the opportunity to make that or even a greater change in his personal position. It will enable him to build and own his house for less than he once paid for rent. It will set the wits of rich men at work for his benefit, as they endeavor to contrive ways in which he and others like him may safely borrow capital from them for such uses, at rates which, however low for the borrowers, are higher than the lenders can easily obtain elsewhere. It fulfills Richard Hooker's description of law: "All things in heaven and earth do her homage, the very least as feeling her care, and the greatest as not exempted from her power."

There are darker shades, it is true, to the picture. There is no means of confining the weapon of the coming race to hands that are always worthy or judicious. The increasing facility for obtaining the use of capital, together with man's inability to resist temptation, makes speculation every year faster and more furious, as it enables the speculator, by further borrowing, to postpone the final crash until it cannot but drag down numberless others with him. It gives possibility and shape to the "trusts" and other combinations of capital which are designed in any way to coerce the actions of other men; this is the force which gives them their opportunities for phenomenal profit or bankruptcy. And yet it is just this fall of interest and these combinations of capital which have made it possible to offer the higher salaries and wages of modern life: there was once a pretty general equality among salaries, while individual merit may now be gauged more accurately by its market price. The same force works thus beneficently in such cases, and is at the same time working to decrease the purchasing power of the estates of widows and orphans, to cripple the energies and efficiency of endowed institutions, and to compel the father of a family to work far harder and longer to accumulate a fortune whose interest shall be sufficient for the support of those who are dependent upon him. And yet who is to say that the law is blind, heartless, or cruel? From its operation there is no escape, either in innocence or in insignificance; but there is a remedy for it, that he who is affected by it should turn manfully upon it and convert it into an instrument for his own and the world's good.

Tipping.

WITHIN the memory of many of us the practice of giving small sums of money to servants was so uncommon in this country as to be accounted altogether a foreign custom. If the recipient of such an attention happened to be a full-blooded American, the chances were that his response would be marked by anything but a sense of gratitude; and the servant of foreign birth, if he had been in this country long enough to breathe in the inspiration of its environment, was apt to look at the incident from an equally American standpoint. There is little need that any one, in the height of this summer season, should take the trouble to point out in detail the changes which mark the present system. There is no longer an American sentiment on the subject. As employers drift into the policy of estimating

and relying upon tips as a partial substitute for their wage-list, there is no longer any place in the service for him who will not be tipped. Two of the three parties in interest, the employer and the guest, have conspired to get rid of the servant of the old school, and therefore it is that the third party, the servant, whether native or foreign-born, is much condemned to have an itching palm.

The most evident injury of the new system is on its social side, in the feeling of insecurity and injustice which it has brought into a large part of our social life. The born American never used to have any of the grudges against his richer neighbor in which so much of the revolutionary feeling of other countries has its roots. He saw nothing unnatural in the notion that consumers should be graduated into classes according to their ability and willingness to pay, and that each class should get what it paid for. If his neighbor, who paid twice or thrice as much as he, got hotel accommodations which were proportionately better than his, he had no feeling of personal wrong; he enjoyed his own contentedly, in the devout belief that the time was coming when he should be able to pay for and enjoy that which would be more to his liking. His confidence in his own future made him a believer that, even in such a matter as hotel privileges, he could ask in the long run no better test than open competition and the market price. The tipping system has changed his whole position. The grades of accommodations are no longer fixed by competition alone, but surreptitiously and by corrupting the servants. The ordinary guest must still pay the rates which are proper for his own scale of accommodation, but in addition to that he must now compete with his richer neighbor in tipping the servants, or else he will not get even the accommodations for which he pays. In other words, he must pay higher rates in order that his richer neighbor may perpetuate a system under which he may decrease his rates by bargaining in part with the servants instead of with the employers. Is it wonderful that the new system brings about a chronic discontent which used to be unknown?

The corruptible servant can and will sell his services below their real value, for he is selling that which does not really belong to him, but to his employer, or to the guest whom he is neglecting because of a refusal to tip: whatever the price he gets, it is so much clear gain to him. So the larcenous servant can afford to sell napkins or tea-spoons much below their market price. So the negro laborer at the South can afford to sell to the cross-roads storekeeper the stolen cotton or the farm products at a lower price than the lawful owner could have accepted. Public opinion makes the position of the "fence" or the collusive storekeeper unpleasant; why should it deal any more tenderly with the man who tips? The only point in his favor is that he is ignorant of the full extent of his evil work; and to balance this is the fact that he is willing, for the sake of present ease, not only to bribe a servant to appropriate to him what belongs to neither of them, but to compel employers to recognize this as a system of licensed spoliation, and to drive other guests into doing even as he does.

There is, moreover, a political side to the evil which is generally overlooked. The Romans held that it was beneath the dignity of a free man to take money in

return for personal services; and the Roman law of contracts was very seriously modified by the persistence of the idea down to the latest times. Circumstances seem to show that there was some truth in the notion; and yet we must have personal service, and it must be paid for, in default of slavery—the infinitely worse alternative which governed the ancient world. So long as the employer stood between guest and servant, taking the guest's money and therewith paying the servant, the connection between guest and servant was so indirect as to obviate many of the evils which the Roman instinctively feared, and the somewhat aggressive independence of the American servant did the rest. The system of tipping, bringing in a direct but surreptitious money connection between guest and servant, cannot but result in a steady degeneration of the servant's moral fiber. It gives the servant a mercenary mode of thought which is unhappily too familiar to most men to need much specification here. The worst of all results is that it corrupts the servant's whole conception of duty: duty is no longer something to which he is bound, but something which some one else is bound to bribe him to do. When such a conception of duty is daily borne in upon the heart and practice of a circle of servants, which is steadily extending from the employees of hotels to those of railroads, steamboats, and every conceivable variety of personal service, and when all these men are not only servants but voters, how can it be expected that we shall leave a man a virile conception of his duty as a voter while we corrupt him as a servant? He will not bring you a glass of water at a hotel table, or handle your luggage on a steamer, without an extra gratuity; why should he vote even the ticket of his own party unless he is tipped for his trouble? How far is democratic government compatible with the tip system?

It is said that there is no remedy. There is none which will take effect without effort, but sincere and persistent effort could find a remedy. Some of our clubs have found already that the social evil of tipping, the sense of insecurity and inequality which it introduces among the members, is not "clubbable." They therefore pay the servants honest wages, and make the offer of any further tip or gratuity an offense against the club. Let us extend the club feeling and find in it the remedy. It was in the hotels that the evil began its vicious course, and in them the remedy must find its beginning. It would not be a difficult matter for a hotel to announce in its advertisements, in its offices, and on its bills of fare, that its servants are paid full wages, that any of them accepting tips will be dismissed at the end of the week, and that the guest is requested not to tempt the servant by offering him gratuities. Only a few cases of vigorous enforcement of these notices would be needed. The results would be profitable to the employers, and pleasant to those guests who

do not tip, and to those who are coerced into tipping. They would of course be unpleasant to those few who wish to tip; but these are just the social pests who underlie the whole system and who deserve no consideration.

We know of at least one hotel where the non-tipping plan was tried, we believe, with success.

The Washington Memorial Arch.

THEY were not mistaken who believed that the celebration in New York of the centenary of Washington's inauguration would not only stimulate the patriotism of the nation and of the city, but would increase, especially, the sense and pride of citizenship on the part of the inhabitants of the city itself. The most conspicuous and gratifying evidence of this has been given in the movement looking to the erection in permanent form, at Washington Square, of the temporary centennial arch designed by Stanford White. There has seldom been seen in New York a movement of the kind sustained so well by public opinion. The manner in which the various artistic, literary, and social organizations have responded to the suggestion is quite unprecedented in our history. Of course one reason for this is the fact that the public were not called upon to subscribe to an unknown object. They were assured by the very circumstances of the case that the monument would be a fit and beautiful one; that in its purity, simplicity, and majesty it would recall the character of the first President; that the form of the memorial would not be the dubious outcome of an anonymous competition. One reason, we say, that the scheme has not flashed in the pan is that the intelligence of the community stamped the monument at once with its approval. But another reason is that the "centennial" had helped to make the city "feel itself."

There never was a time when so many public-spirited citizens were determined that New York should offer something more to the eye of the visitor than a rushing stream of humanity, "something more" for the contemplation of the rest of the world "than a swift-running mill which grinds the grists of fortune." The city's private architecture has improved strikingly during the past ten years. It has acquired a few notable statues and more are being added to the number. But the Washington Memorial Arch will be the first piece of purely decorative public architecture, of first-class importance, erected in New York. It will not only greatly add to the beauty and to the interest of the city, but is sure to be the beginning of a system of arches and public gateways at appropriate places throughout the metropolis.

The more beautiful the city, and the stronger its appeal to the eye and to the heart of its inhabitants, the more apt will these be to see to it that our local government is not a reproach among the nations of the earth.

OPEN LETTERS.

Union Veterans and their Pensions.

THERE are two national associations, having organized support throughout the North and West, which are engaged in advocating a service pension for every Union survivor of the civil war, and the Grand Army of the Republic, the largest and the strongest society of veterans, has an extensive machinery at work agitating for the support of pension measures both at the polls and at Washington. It is true that this machinery of the Grand Army is not strictly representative, but the State and national conventions of the order, made up of delegates elected annually, are in the habit of discussing and voting upon measures which are expected to be presented to Congress by a committee acting under authority of the whole body.¹ Some of the measures indorsed by the Grand Army in the past have become laws. The Dependent Pension Bill, which was vetoed in 1887, originated in the pension committee representing the National Encampment.

With a view to presenting the pension question as it stands, both as regards the allowances drawn at this time and the additional allowances to be asked for in the near future, I give below an abstract of the provisions already made for survivors of the service, and also the provisions of the bills proposed, and an approximate of the cost of these new measures.

According to the report for 1888 of the Commissioner of Pensions, there were then on the rolls 326,835 survivors of the war of 1861-65, 217,580 of the number receiving allowances not exceeding \$8 a month.² The 109,255 reported as receiving an excess of \$8 a month include nearly all of the officers drawing invalid pensions (some of them are on the roll at a lower rate), and all of the enlisted men having extra disability, such as the loss of limbs, or eyesight, or hearing, or the equivalents. Out of the 217,580 reported at \$8 or less, there are 32,007 at \$2 or less, 103,556 at \$4 or less, and 153,177 at \$6 or less. Only 64,403 of the 217,580 in this class, and mainly those technically known as the fully disabled, receive over \$6 a month, and the remaining 153,177 are on at an average of \$3.50 a month. Since \$8 was deemed a fair rate to support a dependent veteran in the simple times of the first half of the century, when that rate was fixed, the present allowance as it comes to individuals in the large class here considered is not much more than a pittance. The aggregate annual value of the entire list at \$8 and under, as it stood in 1888, is about \$13,888,000.

The following table of ratings and of the number pensioned at each rate shows how the allowance is distributed among invalid survivors (war of 1861-65) on the rolls June 30, 1888:

¹ The National Pension Committee of the Grand Army is appointed by the Commander-in-Chief, who is elected annually. The committee serves one year.

² Eight dollars a month is the total for the rank of an enlisted man whose disability, with respect to the part affected, incapacitates for manual labor. This rate was established in 1878, and has not been increased except for special disabilities.

Rates of Monthly Allowance according to Rank for Injuries incurred in Service amounting to Total Disability.

Rank of lieutenant-colonel	\$30.00
" " major	25.00
" " captain	20.00
" " first lieutenant	17.00
" " second "	15.00
" " cadets, etc	10.00
Privates and non-commissioned officers (except warrant officers in the navy)	8.00

Rates established by Law according to Disability.

Loss of both hands or feet	72.00
Total disability in both hands	50.00
Total disability in both feet	31.25
Loss of sight of both eyes	72.00
Loss of one hand and one foot	36.00
Loss of a hand or foot	30.00
Any disability equivalent to loss of hand or foot	24.00
Amputation at or above elbow or knee, or total disability of the arm or leg	36.00

Amputation at or near hip or shoulder joint.....	\$45.00
Inability to perform manual labor.....	30.00
Disability requiring regular attendance by another person.....	50.00
Total deafness.....	30.00

The rates for other disabilities are fixed by the Commissioner of Pensions.

The law assumes that these beneficiaries received permanent injuries incident to service during the war, or, if the injury be not permanent, that the allowance is suspended whenever the effects of the injury disappear. There is justification for this enormous pension list of survivors, in the record of casualties and diseases. There were over 250,000 wounds treated in hospitals, and in all about 6,000,000 cases of wounds and diseases. Aside from the dead on the field over 200,000 cases proved fatal.

Any reduction of this invalid list, which aggregated in 1888 an annual value of over \$37,000,000, must be made by scaling the allowances of one or both of the two classes which I have distinguished, namely: the numerous class, which includes nearly all of the enlisted men, and where the average is \$5.31+ a month, and the aggregate annual value is not quite \$14,000,000 for over 217,000 beneficiaries, or the class where the average is greater and the number of pensioners less, the beneficiaries being 109,255, the annual value about \$24,182,000, and the average \$18.42+ a month. This higher class of pensioners, however, includes nearly all of the disabled officers, and all of the enlisted men who are severely maimed.

Assuming that these pensions will remain as they are during the lifetime of the beneficiaries, what other classes of survivors, who are deserving, are unprovided for?

First. Those who by reason of the hardships of service and old age combined are not able to labor, and who have no case under the invalid laws.

Second. Those who are disabled by reason of injuries received in service, and who cannot prove their claims.

Third. Those who have become disabled since the war, and whose faithful services entitle them to the gratitude of the nation.

The number of these cannot be computed, but doubtless there are many thousands. Every Grand Army post has some cases of the kind on its relief list. The average age of survivors is about fifty years, and there must be a large number who have passed the age of activity. Very many who received permanent injuries in service, but were young and hopeful when the war closed, did not make application and secure evidence while the proper witnesses could be obtained, and cannot at this date prove their invalid claims. Still others had no well-defined disease when they were discharged, but have become disabled since and are now in want, and have no case under present laws.

It was to benefit, ostensibly, the three classes not now on the list that the Dependent Pension Bill, which failed to become a law, was framed by the Grand Army committee. Immediately after the veto the committee prepared a modified bill called a Disability Bill, providing for veterans as follows:

SEC. 2. That all persons who served three months or more in the military or naval service of the United States during the late war of the rebellion, and who have been honorably discharged therefrom, and who are now or

who may hereafter be suffering from mental or physical disability, not the result of their own vicious habits, which totally incapacitates them for the performance of manual labor, shall, upon making due proof of the fact according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States, and be entitled to receive twelve dollars per month; and such pension shall commence from the date of the filing of the application in the Pension Office, after the passage of this act, upon proof that the disability then existed, and shall continue during the existence of the same in the degree herein specified: *Provided*, That persons who are now receiving pensions under existing laws, or whose claims are pending in the Pension Office, may, by application to the Commissioner of Pensions, in such form as he may prescribe, receive the benefits of this act; and nothing herein contained shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general or special act: *Provided, however*, That no person shall receive more than one pension for the same period: *And provided further*, That rank in the service shall not be considered in applications filed thereunder.

This section was left unchanged in a bill passed by the Senate at the last session. Meanwhile there had been introduced in both houses a bill known as the Per Diem Service Pension Bill (given in full, below), a measure which its advocates declared would benefit the three classes considered above, as being unprovided for, and the House committee of the last Congress reported the Grand Army Disability Bill, with Section 2 changed to provide as follows:

A pension at the rate per month of one cent for each day's service in the military or naval service of the United States during any of the wars in which the United States have been engaged, and all persons who have served as aforesaid, and have been honorably discharged as aforesaid, and are now sixty-two years of age, shall also be entitled, etc.

Further provision grants the same pension to all who attain the age of sixty-two. In this bill the three classes above considered are recognized as deserving, but the rate to be allowed is graded according to length of service. The bill was not voted upon.

During the discussion of the Dependent Bill before and after the veto, a measure, known as the Lovering, or Eight Dollar Service Pension Bill, providing eight dollars a month to every survivor who had served sixty days or more, was brought before Congress.

This bill would benefit the deserving classes to the extent of eight dollars a month; but as it makes only a slight distinction with regard to length of service, several rated service pension bills were discussed by the veterans, and finally the Per Diem Bill was formulated. It was introduced early in the session of 1887-88, and is as follows:

A Bill to grant Pensions for Service in the Army, Navy, and Marine Corps of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Secretary of the Interior is hereby authorized and directed to place on the pension roll of the United States the names of all persons specified in the following section, upon making due proof that they performed the service specified in said section.

SEC. 2. That persons entitled as beneficiaries under the preceding sections are as follows: Any officer or enlisted man who shall have served in the army, navy, or marine corps of the United States, including regulars and volunteers, subsequent to the fourth day of March, 1861, and prior to the first day of July, 1866.

SEC. 3. That the rate of pension for such service shall be at the rate per month of one cent for each day's

service rendered in the said army, navy, or marine corps of the United States.¹

SEC. 4. That the period of service shall be computed from the date of muster into the United States service to the date of discharge, but no pension shall be granted under this act or on account of any person who deserted prior to July 1, 1865, until he shall have obtained a discharge from the service from which he deserted, and no discharge which was given to any person by reason of reenlistment as a veteran volunteer, or to enable him to accept a promotion, shall be deemed a discharge from the services within the meaning of this act.

SEC. 5. That pension under this act shall be at the rate specified in section three, and shall be paid to the persons entitled thereto for the term of their lives from and after the passage of this bill.

SEC. 6. This bill is intended as a service pension bill, and is intended as an addition to all invalid pensions which have been or may hereafter be granted for disability.

The three bills, the Dependent or Disability Bill, the Eight Dollar Bill, and the Per Diem Bill, were before Congress when the national encampment of the Grand Army (Columbus, Ohio, 1888) was again called upon to meet the question. The committee on pensions reiterated the claims of the Disability Bill, and finally a resolution was adopted almost unanimously favoring a service pension of eight dollars a month for every survivor who served sixty days or more, and an additional amount of one cent a month for each day's service exceeding eight hundred.

The bill has not yet been presented, but the Grand Army committee has been active in pushing the Disability Bill. However, the resolution of the encampment is an approval of the principle of service pensions, and is in harmony with the action of many of the State departments of the order.

Upon the question of service pensions, the veterans in and out of the Grand Army are divided as to the following points: *First.* Shall the pension begin at once, or at sixty-two years of age? *Second.* Shall it be rated according to length of service, or be uniform? *Third.* Shall it be in addition to the invalid pension allowance in cases already on the roll? *Fourth.* Shall it continue to the widows or other dependent heirs?

The number of survivors is estimated, in the departments at Washington, at about 1,350,000. It is asserted by the Per Diem Service Pension Association that the average term of service is about one year, and that the Per Diem Bill would allow an average pension of \$3.65 a month. If 1,000,000 survivors called for the allowance, the cost would be less than \$50,000,000 a year. The Eight Dollar Bill would cost \$96,000,000 a year if 1,000,000 men should receive it. The Grand Army Service Pension Bill would cost, on the same basis, \$96,000,000 a year, and an additional sum to every veteran who served over 800 days; that is, for three years' service, or 1095 days, \$10.95 a month; for four years, or 1460 days, \$14.60 a month; and at that rate for all terms of service of over 800 days.²

For more than twenty years the Grand Army of the Republic throughout the Union has engaged in a vast and peculiar system of relief to needy comrades, and

the veterans have original knowledge which should make them competent advocates and judges in claims made on the ground of service. But with this knowledge and influence there is also responsibility, and it is to be hoped that the pension measures presented on behalf of the order will be based wholly upon justice for all concerned,—the interests of the country as well as that of the soldiers,—and not upon the mere fact of approval by an accidental majority in the ranks of the veterans.

George L. Kilmer.

"The Use of Oil to Still the Waves."

I HAVE just read with much interest the article in the March number of THE CENTURY on "The Use of Oil to Still the Waves." It so happens that lately a large ship laden with petroleum was run into by a steamer off the Owers lightship which carried away a part of her cutwater and made a huge hole in her bows. It was blowing pretty fresh from the southwest at the time, and there was a good sea on. The casks began to roll out through the hole in the bows of the *Vandalia* of New Brunswick, and the vessel to settle down forward. The crew took to the boats and abandoned her, and she drifted up channel and finally grounded off Hove, about three hundred yards from shore. Two thousand or more casks of petroleum drifted to land, and I was curious to see what effect the oil had upon the waves. To my surprise, I came to the conclusion that the effect was almost entirely negative; and I made the remark to some friends that, whatever effect other kinds of oil may have, petroleum is evidently of no use. I now find that this experience is in strict accordance with the statement of Lieutenant Beehler, "that mineral oil is not suitable, especially if refined." The cargo of the *Vandalia* consisted, I presume, of refined oil, for on observing some flow from a cask, the head of which was started, it was evidently a very limpid and perfectly clear oil, having a faint bluish tinge very similar to that observable in fluorescent liquids. Several of the casks were stove in and came to shore empty of their contents, so that a large quantity of oil had mingled with the sea water. To such an extent was this the case that the sea along the length of the shore for two miles or more presented a thin milk-and-water appearance. It appeared to me, so far as I could judge, that the heavy sea churned the oil up into minute globules, which were dispersed throughout the water and so rendered it turbid. I quite satisfied myself that the oil did not spread out into a continuous film over the surface of the water, but broke up into little patches. The surface motion of the sea seemed unappreciably affected. It broke over the bows of the *Vandalia*, and came up in heavy breakers upon the beach, but there seemed much less foam than is usually created when the big rollers break.

Hove, SUSSEX, ENGLAND.

¹ Two years is a fair term of service in a long war, and \$8 is the full pension established. But a soldier's service is not recorded in full years; it is from the day of actual enlistment to that of discharge. Therefore a rate of one cent a day, which would give \$7.30 for a two-years' term, would give a proportionate sum for any length of service.

² The total disbursement for pensions for the fiscal year ending June 30, 1888, was \$78,775,861.92, and nearly one-third of the amount was used in payment of arrears on new claims. The

annual value of all the pensions on the roll was \$56,797,220.92, and out of this \$18,648,373.50 was for pensions to the widows and other dependents of three wars, and the survivors of 1812 and the Mexican War. On the basis of the amount on the rolls for 1888 the estimates for the Per Diem Bill would increase the annual value of all pensions to something over \$100,000,000, the Eight Dollar Bill would swell it to over \$150,000,000, and the Grand Army Service Pension measure to a still higher sum.

BRIC-À-BRAC.

A Fence-Corner Oration.

OMHOO, I hyah 'bout Ark'nsaw befo',
 An' all dat lan' out Wes',
 But heah ole Peter hoed es row,
 An' hit 's mighty nigh time ter res'.
 I knows de white folks roun' erbout,
 An' de ole uns all knows me:
 When hard-time comes dey he'ps me out,
 Des same as I warn' free.
 An' I hyah 'bout dat five dollers er day,
 An' nuth'n' 't all ter do
 But ter shovel dirt on er railroad track
 An' eat when yer all git frough.
 I seen some niggers be'n out deir
 Come er-hustlin' back ergin,
 An' I hatter gi' um meat an' bread
 Ter he'p full out dey skin.
 Dey said dat rations pow'ful skearce,
 De hen roos' mighty high,
 An' 'possum des 'bout as hard ter ketch
 When he go rackin' by.
 T'ings way off yonner look mighty fine,
 But des you git up close,
 Gwineter see sup'n' else dat 'll mek yer want
 Butt yer head ergin er pos'.
 An' 'bout de time yer tu'n eroun' good,
 An' see how fur yer come,
 Some t'ings gwineter look mighty fine
 Erway 'long back to'rds home.
Dis lan' ain't what hit used ter be —
 Nobody ain' 'sputin' dat:
 But hit 'll talk back ter de hoe,
 An' keep de chillun fat;
 An' sometime guano ain' gwine stick,
 Don't keer wher' yer got um,
 But when hit wash down off de hill,
 Deir 's big corn grows en de bottum.
 An' ef de crik git out an' wash
 Guano plum on down,
 Hit gethers some erway 'long up,
 An' sots hit on mer groun'.
 Yes, sah, I learned er heap er sense
 Sence freedom tunned me out,
 An' sho 's yer born, Boss, hit 's all right;
 De Lord knows what he 's 'bout!
 When cotton short, de corn hit 's tall,
 An' when de hog meat 's high,
 I puts ner morgidge on ole mule,
 An' he wuk hit out bimeby.
 But yer can't learn dese young niggers sense,
 Dey got ter learn dese'f.
 'T ain' what goes in meks white folks rich,
 Hit 's what sticks ter de she'f;
 An' some niggers ain' gwine settle down,
 Don't cyah where dey be:
 Dey c'n all put out fer Ark'nsaw,
 But dey don't trabbl' 'long wid me!
 Ole Mars'er buried out yonner by de plums,
 An' ole Miss, she deir too,
 An' my ole 'ooman ain' ve'y fur off,
 An' my las' littl' gal, Sally Lou.
 Don't mek no diffunce whar some folks put,
 When dey race es all be'n run,
 But somehow I ain' wantter stray too fur
 'Fo' my las' day's work git dun.
 Some er dese times, an' mebb'y 'fo' yer know,
 Gwineter hyah dey Gaboul horn
 An' gwineter be er-stirrin' ev'ywhar en de lan',

An' er heap er folks skeered, sho 's yer born:
 Heap er folks what tort deysel' mighty good
 Gwineter trimble en de traces an' balk,
 An I wantter be whar I c'n sorter step eroun'
 An' hyah ole Miss when she talk.
 She mighty good 'ooman, ole Miss was,—
 Ev'ybody roun' heah knowed dat,—
 An' what she says es gospel law,
 I don't keer whar she at.
 Ef she lean fum de chariot er-rollin' frough de gate
 An' ses, "Sen' my nigger in ter me,"
 De angeul gwineter lif' es hat ter her,
 An' I ain' gwineter tell 'im I 'm free.

Harry Stillwell Edwards.

The Sensitive Visitor.

THE night was bitter: Pride and I
 Sat gazing on it through the pane:
 Who can this gallant horseman be
 That at our casement draweth rein?

We turn our faces, Pride and I;
 And yet the pleading and the pain
 Of that one look — nay, out of sight,
 He 's passed into the night and rain.

Who could the bold intruder be?
 Alas! to-day 't is but too plain:
 His name was Opportunity —
 He never came to us again.

Orelia Key Bell.

Forgotten Books.

OF books I sing, but not of those
Which any Book Collector knows,—
The priceless, rare editions, not,
But volumes which the World forgot
And with them those who wrote, as well,
Before they had a chance to sell:
Ephemerals that find themselves
With the Immortals on my shelves.
I name no names, for if I should
None would recall them now, nor could
A word of mine bring any one
Out of its long Oblivion.
The ink on many fly-leaves still
Looks quite as fresh as when the quill
On each inscribed an author's name,
And signed his title there to Fame
Without one solitary fear
About its being proven clear.
One has its pages still uncut,
Clean, kept ironically shut
By him whose name therein is penned
Above: *From his devoted friend.*
And not infrequently I come
Across the imprint of a thumb,
Or in the paragraphs I find
A pleasing sentence underlined,
Or neatly on the margin set
A compliment in epithet:
Each one of these, I 'm satisfied,
Was read before its author died.

But there is one among them all,
Morocco bound, gilt-edged, and small,
Filled with the amatory rhymes
Of ante-Tennysonian times,
Stiff in their phraseology
And rather rough in melody.
'T is *Dedicated unto Her*
By Her Unworthy Worshipper.
And just below is written, "*These*
Many and pleasing Melodies,
Dear Wm. writ in '98,
& unto Me did Dedicate."
This one was read and read again,
And annotated by her pen:
And this fulfilled the Author's hopes,
Repaid the toil of all his tropes,
And had, at least his span of life,
One constant reader in his wife.

Frank Dempster Sherman.

To Mistress Rose.

A ROSE by any other name?
Nay, that could hardly be—
No other name, my Flower of June,
Could *be* the name for thee.

Dear darling of the summer-time
And love-child of the sun—
Whether by thy sweet breath beguiled,
Or by thy thorns undone,

I know thee for the Queen of flowers,
And toast thee by thy name:
"Here 's to the sweet young loveliness
That sets our hearts aflame!"

Louise Chandler Moulton.

An Unpublished Song by Thomas Moore.

YET, ere we met, I was a lover
Of many a bright and beaming face;
Ere one of folly's whims was over,
Another quick supplied its place.

But though I 've bent the knee to many,
And felt my bosom throb the while,
Trust me, I never felt for any
Half what was taught me by thy smile.

Then, dearest, think not that I love thee
The less for having loved before.
Trust me, if others' charms could move me,
Thine, dearest, must, oh how much more!

I 'm like that youth we read in story
Who worshiped many a brilliant star,
Until the pure moon's brighter glory
Rose to his sight more lovely far.

Since then by woodland streams and mountain
She was his sole and only dream;
His heart was likened to a fountain,
The faithful mirror of her beam.

Thus do thy brighter beauties move me,
And though I loved the stars before,
Be thou my moon! Henceforth I 'll love thee—
I cannot tell thee how much more.

Two Loves.

I WONDER if a certain lane
So happily is faring
As when my first love, Ellen Jane,
There took her daily airing.

My lollipops I shared with her,
And, daintiest of misses,
For every sweet, without demur,
She paid me off in kisses.

My latest love is Eleanor,
The Jane is quite derided,
And though I still divide with her,
My pay is undecided.

Sometimes when sweets and flowers most rare
I on her shrine am showering,
Her smiles with sunshine fill the air,
But ah! too oft she 's lowering.

No matter how I strive and woo,
No more for me such bliss is
To see her—as she used to do—
Put up her mouth for kisses.

Sweet Eleanor, though grown are we,
My love brings more of pain
Than when your summers numbered three
And you were Ellen Jane.

Cora Stuart Wheeler.

Constancy.

INCONSTANT? No, dear, nought I 've done,—
Such crime would not become one.
Constant is not to love but one,
But always to love some one.
At least admit, dear, I am true—
Constant to love, if not to you.

George Birdseye.

WINGED BOTANISTS.

AMONG my earliest memories associated with nature, and one that will always vividly linger, is that interesting spectacle of a winter butterfly hovering about the farm-yard of my New England home. It was the middle of January, one of those balmy days of respite from the north wind. The patches of thawing drifts lay like mimic glaciers amid their melting areas on the barn and barrack roofs, slowly stealing down the shingle or hovering in impending avalanche at the dripping eaves. High on the ridgepole of the barn my butterfly first disclosed itself, now fluttering against the sky, now alighting with expanded, gently moving wings, sipping at the steamy edge of the snow or sailing across its white field.

In this "lone butterfly" of the winter sun, as Wilson is pleased to call him, we have a representative of a small family of beautiful insects for which the cold has no terrors—the Angle-wings, boreal butter-

flies, the hardy Alpine species of our Lepidoptera, if I may so speak, for these insects are Alpine in a larger sense than that of mere hardihood. While most of our common butterflies are peculiar to our continent, these winter survivors—the Milbert's butterfly, the Atlanta, the Comma, the White J, and the Progne, hibernating in crevices and crannies during the coldest periods, and taking the slightest hint of genial moderation to lend their animated being to the dormant landscape—are in truth cosmopolitan types, the Painted Lady being common in northern Europe; the Atlanta in Europe, Africa, and the East Indies; while the Antiopa, the prominent member of the group, is an almost world-wide denizen, at home in arctic snows, omnipresent from Alaska to Brazil, and from Lapland to northern Africa.

It was doubtless the spell of one of these butterflies that crystallized the arctic simile of Wordsworth:

. . . little butterfly, indeed
I know not if you sleep or feed.
How motionless!—not frozen seas
More motionless!

Look at these remarkable bordering jagged aiguilles, in this Comma butterfly, for instance, this verdant zone traversing beneath the peaks, these merging veins like mimic glacial streams, and this isolated patch of silver, like the tiny lingering remnant of an avalanche in a vast field of striate granite, for the likeness to scratched granite is singularly manifest. All these wondrous hieroglyphs are here apparent to the inward eye, though only revealed to

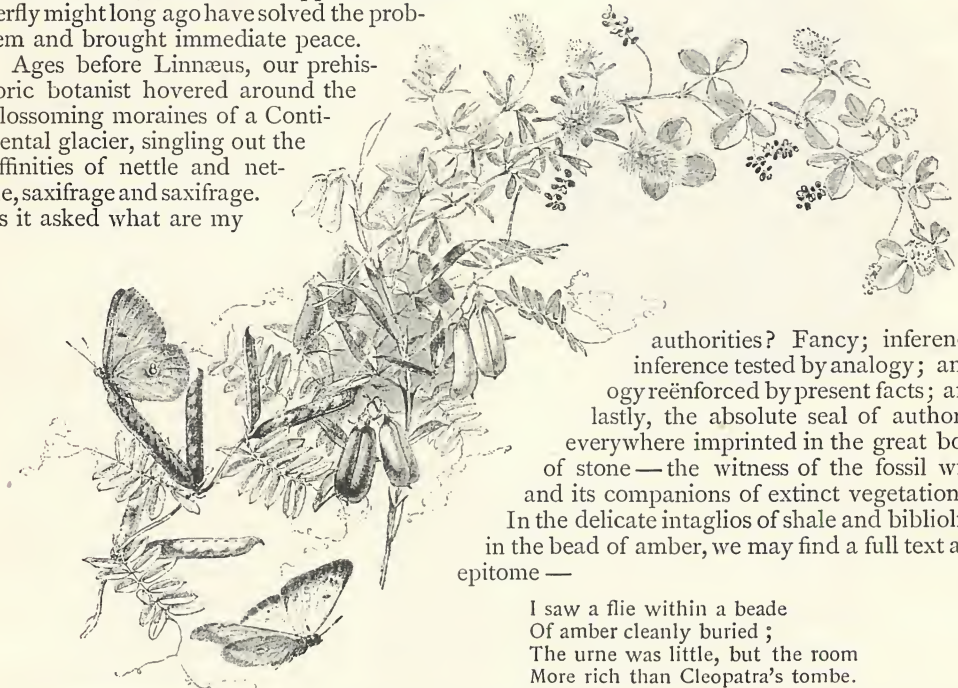

Copyright, 1889, by THE CENTURY CO. All rights reserved.

mine, as though in a mirror, from this storied wing of a butterfly, the "Comma," captured by my own hand on the ice midway in the Mer de Glace of Switzerland. "Every object rightly seen unlocks a new faculty of soul," says Emerson. Shall I ever again look upon the folded wings of the Progne or Faunus butterfly without a consciousness that I now see "through and beyond" where before I had only looked upon its scales?

It has long been my intention to collect my observations touching the strange intuitive botanical instinct possessed by a large number of insects, notably of the lepidopterous tribe, which, with the exception of the bees, are the most intimately associated with the floral kingdom. For the butterfly,—the "idle butterfly" of the poet, the universal type of *dolce far niente*,—under the guide of enlightened science, now rebukes the heedless estimate of the past, proving its buoyant rounds to have been directed by a divine purpose concerned in the perpetuation of many of the very flowers which have served the bard merely as a pretty background to its quivering poise. As the lover and companion of flowers, then, the butterfly is thus a botanist *par excellence*, and, as an ally of the Infinite, a botanist divine. And in the scientific classification of species the butterfly has proved a prehistoric antecedent to the fathers of botany, and an oracle not sufficiently regarded in later times.

Botanical history is full of learned dissensions among the wise-heads upon the botanical affinities of this or that non-committal plant, whether it should be placed here or there among the natural orders. How many a martyr blossom has served but as a shuttlecock in the learned *mêlée*, tossed back and forth for years ere it found its final rest among its congenial kindred, while a mere appeal to the butterfly might long ago have solved the problem and brought immediate peace.

Ages before Linnæus, our prehistoric botanist hovered around the blossoming moraines of a Continental glacier, singling out the affinities of nettle and nettle, saxifrage and saxifrage. Is it asked what are my

VETCH, RATTLE-BOX, PUSS CLOVER, AND BLACK MEDIC.

authorities? Fancy; inference; inference tested by analogy; analogy reënforced by present facts; and, lastly, the absolute seal of authority everywhere imprinted in the great book of stone—the witness of the fossil wing and its companions of extinct vegetation. In the delicate intaglios of shale and bibliolite, in the bead of amber, we may find a full text and epitome —

I saw a flie within a beade
Of amber cleanly buried ;
The urne was little, but the room
More rich than Cleopatra's tombe.

In further reënforcement bearing upon the functions and antiquity of my botanists, Macmillan records having seen several butterflies of the Apollo species at home eight thousand feet above the sea. Another traveler observed a butterfly hovering high above him while on the summit of Mont Blanc. I myself saw several butterflies reveling among Alpine flowers at an elevation of six thousand feet, to say nothing of the occasional wanderers which I observed floating far above me about the crags. Willis chronicles the discovery of numerous specimens in glacial ice fourteen thousand feet in altitude. Moreover, on the summit of Flégère, six thousand feet, I found a large moth which had just emerged from its chrysalis, affording conclusive proof that its entire existence in the caterpillar state had been spent in this Alpine clime.

In the "least willow" alone is furnished a fitting indorsement to the claim of antiquity, and also a complete refutation of the common belief concerning the absence of insect life on the loftiest Alpen summits; as this little omnipresent herbaceous willow, barely three

inches high, often indeed not more than an inch, still with its ambitious show of honey-baited blossoms, *is absolutely dependent upon insect visits for its perpetuation*, the pollen-bearing flowers being on separate plants from those which produce the seed. Müller observed a small moth acting as sponsor to these hardy blossoms.

Deep in the damp woods of late summer we often find a constant presence flitting above the succulent herbage. Observe its rounds carefully. Here is

ALPINE COWSLIP, MOUNTAIN GENTIAN, SOLDANELLA, ALPINE
RANUNCULUS, ALPINE RHODODENDRON.

WILD CARROT.

a thick undergrowth of spikenard, ferns, bedstraw, colt's-foot, rue, bidens, ampelopsis, aster, wood-nettle, horse-balm, sunflower, and an attendant host of plants. Our butterfly is now sunning its damask feathers on the topmost leaf of yonder wood-nettle, now creeping around its edge, and revealed only by the translucent shadow responding to the gentle fanning motion of the wings. In another moment we catch the fiery gleam in a sunbeam as the sylph again soars above the herbage to settle among the tall sunny leaves beyond; these also are nettles. Now it floats above our heads and alights upon the pale green plant at our elbow, and what is this? It is a wood-nettle. And thus it flits by the hour, draping the underwood in ethereal festoons from every nettle spray among the copse.

A closer scrutiny of these plants will throw a little light upon this discriminating flight. The leaves are seen to be partly devoured, and an occasional one appears to droop with an unnatural attitude, a position readily explained when we discover the angular pitch caused by the severing of the three prominent veins close to the stem, the edges of the leaf being also drawn together below. Upon plucking one of these leaves, and looking beneath, we discover the curious recluse, at once explaining the artful tented leaf and the presence of the butterfly—the gray spotted and spiny caterpillar of the Comma Angle-wing, so named from a bright silvery character on the under side of the lower wings.

To be sure it may be said that the nettle is not a particularly difficult plant to distinguish. Indeed, old Culpeper, the herbalist, assures us of the fact that "It may be found even in the darkest night by simply feeling for it." But such hap-hazard botany is not the necessary resource of our butterfly. The discrimination of a nettle, botanically considered, requires a much deeper insight. How is this insight possessed by the Comma? Let us see. Yonder on the stone wall a clambering hop-vine would seem to afford a tempting sporting-ground for a small brood of red butterflies. On nearer approach they prove to be the Comma joined by a few near relatives equally interesting. Here and there our careful search discloses a tented leaf precisely similar to those already described, while beneath we may discover the same spiny tenant. Continual search reveals a number of similar spiny caterpillars, though variously variegated, and perhaps a gilded chrysalis or two among the stems in the crevices between the stones. Suppose we now transfer them all, perhaps a hundred or more specimens, to our box and await the transformation from those pendent nymphs which soon will begem the interior. After the lapse of a fortnight, upon opening the lid the former sleepy hollow seems to have blossomed with painted wings. Here shall we find our Comma by the dozens, and very likely also counterparts of all the bright tribe which fluttered above the vine upon the wall—Semicolon and White J. A bright orange butterfly is now seen sunning itself upon the young elm tree near by. We capture the insect with our net and find it identical with the Semicolon in

our box, while examination of the elm leaves reveals not only the suggestive empty chrysalis shell, but several thorny caterpillars beneath those well-known tented leaves.

If we care to continue our investigation among the herbage, we may discover these same caterpillars upon the little clearweed in the dank shade of the orchard, a succulent plant hardly a foot high, the very opposite to a nettle in its glossy smoothness; and also on the pellitory, a companion weed. Upon all of these plants, in addition to the various nettles, I have found the insects, and once on the hemp. I have also seen their deserted tents on the paper-mulberry, an exotic tree, only sparingly cultivated, but a careful search has failed to disclose the caterpillar on any other plants. Other authorities include the sugar-berry tree. Here, then, we have the following summary and complete list of plants which the butterfly has selected as the repository of her eggs: wood-nettle, great stinging nettle, and all other nettles, false nettle, all the elms, clearweed, pellitory, hemp, paper-mulberry, and sugar-berry tree. What light does our botany throw upon this list? Turning to "wood-nettle" we are referred to "*Urticaceæ*," or the "nettle family," wherein are disclosed all of the above species of plants, which actually complete the list of genera and nearly all the native species of the order.

An equally remarkable fidelity to a single group of vegetation is seen in the example of our beautiful black Swallow-tail butterfly — the papilio of the umbelworts, or Parsley family.

In the early summer we may find upon the garden fennel or parsley the beautifully marked caterpillar of this species — bright apple-green, with circling bands of sable velvet studded with golden yellow buttons. The caterpillar is easily recognized anywhere, and its habitat is wide. Let us examine its bill of fare. The plants commonly attributed to this species are parsley, fennel, carrot, and celery. Harris found them also on poison-hemlock, *cicuta*, dill, caraway, and anise, to which list I can append the further additions from observation: wild carrot, sanicle, with its tenacious burrs in the woods, angelica, archangelica, cow parsnip, and lovage. All of these will be found to follow in their natural sequence in the classification of our botanics, under the order *umbelliferae*.

This strange fidelity of the Asterias to a single order of plants I had noted even in boyhood, and had welcomed my butterfly as an infallible aid in my botanical study. But one day my confidence was shattered by the discovery of a number of caterpillars feeding upon a creeping, round-leaved plant growing by the edge of the brook — a prostrate succulent herb, seemingly devoid of flowers, quite distinct from all the other food plants, and new to me. I simply noted it as an exception, and lowered my butterfly a peg in my esteem. Not until years later, in the more serious pursuit of botanical study, did I discover what a rare lesson in botany the Asterias had wasted upon me; that the little unknown plant was in truth a distinct umbelwort like the rest — the water-pennywort. In the lead of the little white butterfly of our gardens (*Pieris oleracea*) we may be introduced to an entirely new tribe of vegetation; for whether among the yellow mustard fields of Holland or the pepper-grass of the New England roadside, the cruciferous plants are to them the cream and spice of all creation.

What lover of the country will not own his tribute to the omnipresent little yellow butterfly, companion of our September fields, its folded wings like a tiny rudder of gold taking the helm of all the wind-blown goldenrods of the roadsides; whose bright bevvies rim the borders of every mud-puddle, rising from their obscurity to swarm in mazy tangle about your carriage as you pass? Honey sippers and tipplers, they now would seem to fulfill the impeachment of the "idle revelers" of the poet; but such inference is unjust, for though now content in the sweets of aster, solidago, and other autumn blossoms, these are but their recess flowers. Their previous and most busy attention has already been bestowed upon another widely different class of plants. This *Philodice* butterfly is one of our most accomplished botanical authorities — a botanist who knows beans, in very truth; for where is the genus of the bean tribe of vegetation that it has skipped in the choice of foster-plants for that future offspring? — Lima beans, scarlet runners, peas, sweet peas, wild beans, indigo, red clover, hop clover, white clover, puss clover, medic, medicago, lucern, melilot, rattle-box, vetch, and many more, all of the leguminous or bean tribe. (See page 644.)

Here is a near European relative of this same butterfly which feeds upon "Coronilla and broom and other diadelphous plants," and another allied species that feeds upon *Cytisus*, all of which our botany of course includes under *Leguminosæ*. It is interesting to note further that certain

WILD CARROT, CARAWAY, WATER-PENNYWORT.

individuals in this same butterfly tribe, *Colias*, exotic species in the heart of Brazil, continue the list among the tropical Leguminosæ; all of which proves the close affinity between the animated winged genus *Colias* and the "winged" corollas of the pea-blossomed flowers.

There are many other insects for which the pea family possesses special attraction. There is the tiny pea-weevil, a representative of a tribe of beetles whose early existence is spent within the ripening seeds—doubtless a common ingredient in our appetizing dish of "green peas." This diminutive insect, indicated in the illustration on page 652, probes the pod shortly after the withering of the blossom and lays its eggs therein. The young immediately penetrate the peas and there fulfill their existence, emerging in the following spring as perfect beetles.

In the same illustration may be seen a singular rolled leaf upon a hazel branch, and concerning which I will quote a page from my notes of years ago:

"Those small rolled brown packets upon the hazels again! Shall I ever solve them! Precious goods done up in small parcels, but by what insect and how? This mysterious bundle committed to the hazel has been a poser to me all my life, I never yet having been able to discover the artist

at his work, for artist he is indeed. I found to-day a number of the prize packages freshly done up, the folded leaf yet green, though half severed by the teeth of the insect, and hanging pendent from the stem. A tiny yellow egg had been deposited at the tip of the leaf,—as shown by analysis of

unrolling,—and the leaf then folded in halves at mid-vein, then rolled from tip upward to stem, and retained in its compact coil by some touch of jugglery which I have not been able to divine, as no gluten nor web of silk can be found. Just try and roll up one of these packages yourself, and without recourse to your accustomed string leave it thus closely and firmly intact. No

web, no gum, no stitch, but much of the know how. Whoever the clerk who does up these packages he has a long head, and has kept his secret from me very securely."

Since the writing of the above, though not yet any more enlightened as to the author of this hocus-pocus bundle, I have several times observed a suspicious-looking brown beetle nosing among its folds, and in his strange make-up fully realizing the unconscious prophecy of the "long head," for the insect is one of the weevils, which are noted for their extensive frontal development.

From Maine to Mexico another small noctuid known as the Cotton moth is found, its chosen haunt being indicated by its name. "Its food plant in the North has not yet been discovered," says a prominent entomologist. Look to your hollyhocks, altheas, and mallows, my scientific friend, for here you will certainly find the recluse in congenial company. Here is the little gourd expert, a tiny moth that shows no evidence of inherited dyspepsia, though its broods devour indiscriminately the leaves and green fruit of cucumber, water-melon, gourd, musk-melon, pumpkin, squash, and wild star-cucumbers, all of course in the same botanical family.

BUSH-CLOVER, WILD BEAN.

Then there is that great green Sphinx caterpillar, which is the pest of the tobacco grower and the fine prize of the small boy entomologist, and whose loud-humming, long-tongued moth hovers about our twilight honeysuckles—one of the largest of its kind. It is hardly necessary to mention that this is the same voracious feeder which we find upon tomato and potato plants as well as occasionally upon the red-berried nightshade, ground cherry, and apple of Peru—all included in the *Solanum* family.

Once when a boy I found a voracious sphinx upon "pusley" and reared it to the moth—the white-lined sphinx. The following year I found the same caterpillar on the flowering portulaca in the garden, and I have no doubt he is also as fond of the "spring beauty" as are the poets if we could only chance to observe it, for the Purslane family embraces all these plants.

The botanical acumen of the sphinx extends to various other plant tribes. The sphinx *Kalmia* knows not only the mountain laurel but many other heathworts, notably whortleberry, azalea, cranberry. The Oleander sphinx finds the oleander flavor in the creeping blue-flowered periwinkle or "myrtle" of our gardens. Another black and yellow individual, whose name I do not know, is true to the madder family. Another takes the pine, spruce, and hemlock in its exclusively coniferous diet.

There is a beautiful moth known as the rosy *Dryocampa*. I have found its black-horned caterpillars on sugar maples, silver and red maples, and one day discovered it also on the box-elder. How did this little moth know that this ash-leaved bough of spring was only a maple in masquerade? Who but a skilled botanist could ever have identified it but for its winged seeds? What the *Dryocampa* does for the maples the *Thisbe* butterfly does for the "arrow-woods," and the *Phaeton* and *Lavinia* butterflies for the figworts. The white snowball of our shrubberies is a favorite haunt of the former insect, but it finds the nanny-berry bush an equally attractive *Viburnum*, while the painted-cup, snake-head, and toad-flax form the principal choice of the last two insects, which preside over the family *Scrophulariaceæ*. Among the more modest wild flowers we find the same revelation. The violets have a whole brood of faithful dependents. The handsome silver-spotted *Aphrodite* butterfly knows that the tall yellow violet of the woods is only a less conspicuous cousin to the blue "bird-foot" species, and that the pansy is but a vain descendant of the wild "Johnny jumper" of past ages which the progenitor of all the aphrodites sought for the care of its offspring.

The great *Composite* have many experts, likewise the oak, pink, *polygonum*, mint, and *ranunculus* families. The "Copper" butterfly knows that the acid sorrel is a relative of the curled dock. There are many disciples of the Rose; keen senses that discover it in the apple, cherry, plum, hawthorn, bramble, cinquefoil, spirea, and strawberry. The Apple tree moth is an example, never intrusting that waterproof cirlet of eggs to any tree outside of this family, most commonly contenting herself with the apple and the wild cherry. (See page 652.)

I might indefinitely prolong the list of testimonials to this divine plan of association between the insect and the plant; and while it is not a necessary assumption, inasmuch as "we have no experience in the creation of worlds," it would seem a perfectly justifiable inference that each species of butterfly and moth was originally created with a special affinity for some congenial order of plants. From this postulate it would then appear that this power of nice distinction has de-

HOP-VINE.

teriorated in many insects, through either the degraded instinct of the parent or the less fastidious appetite in the caterpillar offspring. I will append a few instances, some of which indeed will be found interesting and instructive.

In the examples of the large *Crecropia*, *Polyphemus*, *Prometheus*, and *Luna* moths, as well as in a number of butterflies, it is true that the power of discernment seems to have been lost, the selections of food plants extending into various families; though even here it must be remembered that we are taking a thousand insects as a unit, there being a strong probability that any one individual parent may yet be found true to a particular botanical affinity to which its brood is intrusted, the various peculiarities being, as it were, the hereditary result of some confusion of Babel in the remote past. The *Saturnia io* belies the great show of "bull's eyes" upon its wings, being blindly indiscriminate. But what do we find in the instance of the Monarch or *Archippus* butterfly, the protégé of the milkweeds? Its black and yellow banded caterpillar is found on all the six species of New England *Asclepias* if we look with sufficient patience, though chiefly upon the common silkweed. It is a faithful nursling of this lactescent tribe. On one occasion, however, I found it thriving on the dogbane, a similarly milky-juiced plant. But what is the fiat of the human botanical judges? The dogbane is not included in the milkweeds, though it immediately precedes them in the botanical sequence, and certain affinities are readily traceable between the two orders,

both plants having milky sap, opposite, entire leaves, long pods, silky seeds, and other more intricate resemblances. Moreover, looking a little further into the subject, we find that, while now separated in classification, the earlier botanists had included the plant with the milkweeds, from which it was withdrawn only after much scholarly discussion. Clearly the antecedent classification of the butterfly should have been respected at the hands of the learned disputants: the dogbane was linked with the milkweed eons before the world knew a human botanist. When the writer's botany appears, this priority of *Danaus Archippus*, Ph. D., D. D., F. B. S., etc., will be duly recognized.

I have never seen this caterpillar on the closely allied periwinkle, but would almost expect to find it there, even as I once observed the butterfly suggestively hovering about a vine of *Hoya*, or wax-plant, a cultivated exotic trained about a porch, but which is a true asclepiad. A somewhat parallel instance of botanical priority is to be seen in the *Parnassius Apollo* butterfly, the beautiful sylph of the Swiss Alps; member of a boreal tribe rarely found below an elevation of 1500 feet; lover of the mountains, as its name implies; and one of which, pictured at the right of my Alpine design, I observed among the Alpine cowslips on the summit of Righi Culm. The food plant of this insect, according to the authorities, is confined to the saxifrages, a tribe of plants comprising a large number of Alpine species. I learn also that the caterpillars are some-species of *sedum*,—a stone-crop,—two separated in the botanies, though following Gray's sequence; and research further drolled originally traced between these two orders. whether *Apollo* gave

ceptions — both in the Rue family — have a somewhat interesting significance taken in connection with the insect next considered. The ailantus silk-worm, introduced into this country from China about twenty years ago, and now very common in certain regions, for years was not known to swerve in its allegiance to its own companion, "tree of heaven," from which it is named, and which had long been introduced here. On the basis of the facts already set forth does any one doubt that if its favorite food plant were suddenly exterminated there would be a winged stampede, as it were, to the prickly ash and the hop-tree, our only two native allies to the ailantus? But what are the singular facts? The moth, I am told by careful observers, has quite recently proved fickle to its original diet, and yet ignores the kindred plants. As a naturalized foreigner, under new conditions, it has concluded to "do as the Romans do," and out of compliment takes the lead of its closest insect ally, our Prometheus moth, the favorite selections of which are the sassafras and its relative the spice-wood, upon both of which the ailantus caterpillar is now occasionally found. There certainly seems to be some occult affinity between these two orders of plants, *Lauraceæ* and Rue, which the botanists have not discovered.

Here among the Alpen peaks of our country we may learn a lesson from antiquity in the example of, if not the most beautiful, certainly in many respects the most interesting, of butterflies. Much has been written concerning this strange lover of the cold. I will quote a recent reference of Grant Allen: "On and near the summit of Mount Washington a small community of butterflies belonging to an old glacial and arctic species still lingers over a very small area where it has held its own for the 80,000 years that have elapsed since the termination of the great ice age. The actual summit of the mountain rises to a height of 6293 feet, and the butterflies do not range lower than the 5000 feet line. . . .

Again, from Mount Washington to Long's Peak in Colorado the distance amounts to 1800 miles, while from the White Mountains to Hopedale in Labrador, where the same butterflies first appear, makes a bee-line of fully a thousand miles. In the intervening districts there are no insects of the same species. Hence we must conclude that a few butterflies left behind in the retreating main guard of their race on that one New Hampshire peak have gone on for thousands and thousands of years producing eggs, and growing from caterpillars into full-fledged insects without once ef-

fecting a cross with the remainder of their congeners among the snows of the Rocky Mountains or in the chilly plains of sub-arctic America. So far as they themselves know, they are the only representatives of their kind now remaining on the whole earth — left behind like

the ark on Ararat amid the helpless ruins of an antediluvian world." For 200,000 years, according to geological data, these boreal broods must have wooed the frozen seas. Driven southward by the overwhelming ice, companions of the verdant fringe of the vast glacier and following in its retreat, they were at length beguiled by remnant ice fields lodged in the great gulfs of the Presidential range, and at last stranded among the furrowed peaks.

For years this butterfly—in the foreground of my Alpine design—was supposed to be confined to Mount Washington; but, as mentioned above, it has disclosed itself on other distant summits. It is also credited to Mount Monadnock, and I think revealed itself to me on the peak of Mount Lafayette, though decoying me beyond the limits of prudence, and thus defeating capture or even perfect identification.

Who shall question that through the ages, as now, this mountain sprite has been true to the sedges upon which its broods are found, even as it is still alike, in the color of its wings, to the everlasting rock among which it hibernates?

W. Hamilton Gibson.

MASACCIO (TOMMASO DI SER GIOVANNI GUIDI).

1402-1428-9.

(ITALIAN OLD MASTERS.)

IT is difficult to separate with absolute certainty, in the revival, or rather transformation, of art with which the name of Masaccio is connected, the part which belongs to him from that which is due to his master Masolino; for that there

was a certain common quality is evident from the disputes which have arisen over the share taken by each in the works ascribed to them. There is a curious parallel between Masaccio and Raphael in this relation to their masters, in the important positions they hold in the history of art, and in their early deaths. The especial contribution of Masolino to the art of Masaccio appears to be the frank study of the nude and a direct reference to nature for the details of his figures; or, to use the words of Cavalcaselle, "he [Masolino] was equally careless of the traditional garb of time-honored scriptural figures; and his personages are dressed in vast caps and turbans, coats and tight-fitting clothes, spoiling by their overweight or inelegant cut the effect of the finely studied heads, the delicate hands and feet, which he so carefully imitated from nature." But this in general means that, possibly from a lack of ideal power, Masolino fell back on nature to an extent that before him was unknown, and by the sharpness of his innovation unsettled the authority of the artistic traditions which had from the days of Giotto largely

guided and still more largely limited the direction of art. Henceforward the tendency of the progress of art is towards the predominance of the purely artistic element over the subject—a change which, when we come to translate it in terms of modern art philosophy, is of enormous import. It means the gradual elimination of the purely devotional aim of the painter, the gradual introduction of his personality, and the study of art for art's sake. The purely ecstatic form of art was to disappear with Fra Angelico,¹ who carried it to the height which always leads to reaction and neglect—a neglect partly due to the reaction and partly to the failure of his imitators to satisfy the sentiment awakened by the master.

Masaccio was born in 1402. He was the son of Ser Giovanni di Simone Guidi, and at the age of nineteen was enrolled in the guild of *speziali*, which now would be called that of the apothecaries; the business of the *speziali* being to prepare the prescriptions of the physician and hypothetically to compose the colors of which the artist was to make use, as in those days the color-man did not exist. Masaccio registered in the guild of painters in 1424.

His chief work was the decoration in fresco of the Brancacci Chapel in the Church of the Carmine at Florence; and its importance in the history of art may be judged from the fact that at one and the same time Michael Angelo, Raphael, and Leonardo da Vinci were engaged in studying these frescos, which indeed have been the study of artists of all succeeding generations. The only other probable work of Masaccio's, and the earliest, is in a little chapel in S. Clemente at Rome, and consists of a series

¹ Fra Angelico did not die till thirty years after Masaccio. The date of Masolino's death is not known; but it was not much later than that of Masaccio.

of frescos devoted mainly to the history of St. Catherine of Alexandria. Here one sees at once the break with the art of preceding generations. "The Crucifixion," which occupies the wall opposite the entrance, is a vast, scattered composition with a distinct impress of an effort to represent an imaginative realization of the event as it occurred. The motive is so evidently due to the naturalistic tendency of Masolino that it is not surprising that this and the other pictures in the chapel have been attributed to the master instead of to the pupil; but the technical grounds for assigning them to Masaccio are too strong to permit us to

throw Vasari's testimony overboard, and in the details of some of the compositions there are certain coincidences with Masaccio's work in the Brancacci Chapel which are too clear to leave much doubt that the two chapels were painted by the same artist.¹

The fainting Virgin in the group at the foot of the cross, afterwards imitated by Perugino, is in distinct violation of the orthodox traditions of the Crucifixion; for it is not admitted by the Roman Catholic Church that the Virgin fainted, as she is supposed to bear the full weight of the misery that had fallen on her, while her insensibility would have been a partial and

¹ The relation of Masaccio to his master Masolino is so intimate, and so much controversy exists concerning the identification of their work, that we give place to the following paragraphs from Dr. J. P. Richter's notes on Vasari (London: George Bell & Sons, 1885). Dr. Richter says of Vasari's sketch of Masolino: "The description of this great artist's long career is very short and certainly incomplete. Late researches have brought to light valuable information concerning events of Masolino's life, of which Vasari seems to have been unaware; and, what is still more important, the discovery of two extensive wall-decorations, authenticated by the artist's signature, now enable us to study closely the style of this artist's works, which have very often been confounded with those of his far-famed pupil Masaccio."

"Many of the details of Masolino's life can now be proved to be unfounded, but this does not in the least invalidate the writer's general statements about the artist's career, of which he appears to us to speak with more justice than many writers on art, even at the present day, feel inclined to admit. According to the views of Messrs. Crowe and Cavalcaselle, the merits of this painter would come to very little when compared with his defects. According to their theory, Masolino had no share in the execution of the celebrated wall-paintings of the Brancacci Chapel in the Church of the Carmine at Florence; and the apparent discrepancies of style, which have always been noticed by those art-students who have studied the wall-paintings in question on the spot, are to be explained as varieties of style in one and the same artist, Masaccio. Instead of producing any proofs of this somewhat vague hypothesis, they repeatedly point to the difference of Raphael's manner, when under the influence of Perugino, and when working independently. (See Italian edition, 'Storia della Pittura in Italia.' Firenze: 1883. Vol. II., pp. 261, 282, 292, 303.) But we may safely say that such a comparison is not to the point, inasmuch as there is no evidence to show that the quite exceptional and peculiar deviations, to which Raphael's art was subjected for some short period, are likely to have been foreshadowed in the case of Masaccio. According to Messrs. Crowe and Cavalcaselle, Masolino was incapable of producing such fine and grand paintings as have heretofore borne his name, and we believe, on good grounds, supported by the testimony not only of Vasari, but also of so early a writer as Albertini in his 'Notes on the Statues and Pictures at Florence,' published in 1510. In this work the following passage occurs: 'The [fresco-work in the] chapel of the Brancacci is half by his [Masaccio's] hand, half by the hand of Masolino, with the exception of the "Crucifixion of St. Peter," which is by Filippo [Filippino Lippi].' And here we feel justified in saying that if the testimony of tradition in art history is worth anything, it must be in this instance. Vasari says of the famous wall-paintings in the Brancacci Chapel, that 'all the most celebrated

sculptors and painters since Masaccio's day' have been studying there. He goes on to give a long list of names of such painters, including Michelangelo and other personal friends of his. (See Vol. I., p. 411.) Therefore the tradition about the authorship of that highly esteemed monument must have been uninterrupted. Again, the interest by which three generations of great painters had been led to take the fresco-paintings of the Brancacci Chapel as the best models for their own studies must have been too lively to admit of such serious blunders as the said theory would involve. However, if we were to admit for a moment that Masolino's collaboration at the Brancacci Chapel was not sufficiently evident, it would be vain to enter into a discussion upon the subject, if there were no other monuments of Masolino's style than those described by Vasari, for all the works by his hand enumerated by the biographer have perished since, with the exception of the Brancacci Chapel. Even here only two pictures can at present be identified with his descriptions.

"But some forty years ago, when the whitewash was taken off the wall of the collegiate church at Castiglione d'Olona, in the province of Como, between Varese and Milan, it was found that the choir was covered by fresco paintings exhibiting the signature, 'Masolinus de Florentia Pinsit.' The following subjects are here represented, the figures being nearly life-size: 'The Nativity of Christ,' 'The Annunciation,' 'The Coronation of the Virgin,' 'The Marriage of the Virgin,' and 'The Adoration of the Magi.' All these compositions are placed in triangles above the spectator's head. On the perpendicular walls we find representations of the 'Entombment of the Virgin.' The two large pictures at the sides have been described as representing scenes of the life of St. Laurentius; however, in the opinion of the present writer, they illustrate the life and martyrdom of St. Stephen. This church was founded in 1422 by the Cardinal Branda, of Castiglione. The date of its completion may be conjectured from the inscription on a fine high-relief on the portal giving the year 1428. The sepulchral monument of the cardinal in the choir bears the date 1443. He, no doubt, was Masolino's employer not only in Castiglione, but most probably also at Rome, as will be seen in the notes to Vasari's 'Life of Masaccio.' Close to the collegiate church is the small baptistery, which is entirely covered by fresco-paintings by Masolino, representing scenes from the life and martyrdom of St. John the Baptist. On the ceiling are busts of the Fathers of the Church and of prophets. Here occurs the date 1435. If these figures can be relied upon as correct (the writing is apparently of a later date, but it may only be a subsequent restoration of the original), it would follow that the pictures in the baptistery were about seven years later than the decoration of the collegiate church. A close study of these imposing and very impressive pictures enables us to state positively that the characteristics of style are here precisely the same as in the

A DETAIL FROM THE FRESCO OF "THE TRIBUTE MONEY," BY MASACCIO.
(IN THE CHURCH OF S. MARIA DEL CARMINE, FLORENCE.)

temporary relief. But the dramatic sense was stronger in the artist than the tradition of the Church. The composition on the whole is a wide departure from the treatment of previous times.

The left wall of the chapel is devoted to the life of St. Catherine of Alexandria. In the first fresco she is disputing with the doctors, while Maxentius sits listening. Above is a subject representing St. Catherine refusing to worship an idol, many richly dressed persons looking on. Then come the conversion and martyrdom of the empress in one picture, in the former of which the saint is shown, looking out of her prison window, teaching the empress her doctrine, while in the latter is represented the decapitation of the convert. In another double subject are shown the attempt to tear the saint on the wheel and the intervention of the angel, who with his sword shatters the wheels between which the saint stands, the assistants fleeing in terror; the last shows the martyrdom of the saint, who kneels with folded hands awaiting the headsmen's stroke while a file of men-at-arms keep back the crowd and an angel waits to carry off the soul of the martyr, and three others on a distant mountain-top bury her body. The four frescos on the opposite wall do not seem to me to justify their attribution, and I must consider them later and by another hand. Vasari tells us that Masaccio, among other pictures executed in Rome, painted one in a chapel of Sta. Maria Maggiore in which the Madonna accompanied by four saints, "so well executed as to seem in relief," presides over the tracing of the foundation of the church by Pope Liberius, under the likeness of Martin V., while the Emperor Sigismund is looking on. Cavalcaselle is disposed to recognize this picture in one in the gallery at Naples, which represents the pope in his pontifical vestments surrounded by cardinals and clergy, tracing the plan in the snow, while a richly but not regally dressed person, who may be Sigismund, is looking on surrounded by young men and women.

pictures in the Brancacci Chapel at Florence, which have always been given to the same artist."

In his notes on Vasari's sketch of Masaccio, Dr. Richter gives the following opinion in regard to the Roman work which Mr. Stillman follows Vasari in attributing to Masaccio: "There is no consistency whatever in the statement that the wall-paintings at San Clemente, Rome, were by Giotto. This is an hypothesis which sound criticism will feel bound to reject as preposterous. Vasari ascribes them to Masaccio, and Messrs. Crowe and Cavalcaselle in their 'History of Painting' accept this attribution. They do not deny the apparent divergency of style in these paintings when compared with well-authenticated works of Masaccio, but they believe these can be reconciled by the hypothesis that the fresco-paintings of San Clemente are very early works of Masaccio (Italian edition, 1883, Vol. II., p. 281). However, in the opinion of the present writer the existing difficul-

In the sky are half-figures of the Virgin and Christ.

Masaccio left Rome for Florence in 1420-21; and as Masolino, who seems to have been originally charged with the decoration of the Brancacci Chapel in the Carmine, had gone to Hungary, Masaccio was intrusted with the work. When he returned to Rome is not exactly known; but his poverty in Florence—a poverty which even the accession to power of his friend Giovanni di Bicci dei Medici did not relieve—probably sent him back, never to return. The scheduling of the property and incomes of the citizens instituted by Giovanni in 1427 shows that Masaccio lived with his younger brother Giovanni, and that though he earned six soldi a day he was in debt to the amount of one hundred and two lire and four soldi to one of his fellow-painters, six florins to another creditor, and had pledged his valuables at the pawnshop. Niccolo di Ser Lapo in his income-return of 1427 says that Masaccio owed him 200 lire, and in 1430 there was still 68 lire of it due, and that he had no hope of ever getting it, as Masaccio had gone to Rome and died there and his brother Giovanni declined the responsibility for the debt. In the census-return of 1429 Masaccio is set down as being twenty-five years old, but his name is then crossed out, with the annotation, "Died at Rome"; but no record or tradition tells how.

In the long record of the contrast of fortune to which the children of genius are victims there is none more pitiful than this of Masaccio. Columbus giving a new world to Castile and Leon and coming home in chains is more startling because more conspicuous, but Masaccio opening the future of art to glories unseen before him and then vanishing in poverty, unable to pay the debts he had incurred for the material of his art, and dying in his youth with his powers in their first freshness, is far more pathetic. Raphael died young, but he had come to his old age in art, while the eagle eyes of young Masaccio were seeking fields for new

ties cannot be overcome by this new suggestion. After a careful study of the works of Masolino at Castiglione and at Florence, and of those by Masaccio at Florence, it appears to him impossible to deny that the frescos at San Clemente are by the hand of Masolino, and not of Masaccio, and this explanation is by no means a new one. Rumohr has already expressed a doubt that they are by Masaccio ('Ital. Forschungen,' II., p. 250). A. von Zahn has claimed them for Masolino ('Jahrbücher der Kunstwissenschaft,' II., p. 155). See also Woltmann and Woermann ('Geschichte der Malerei,' II., pp. 139, 140). Vasari tells us that the frescos were ordered by the cardinal of San Clemente. It is a striking coincidence that between the years 1411 and 1420, when we may expect that these paintings were executed, the cardinalate of San Clemente was in the hands of Branda of Castiglione, of whom we know that he was Masolino's patron." —EDITOR.

triumphs, and closed just as those of his followers were opening to what he pointed out.

That the authorship of the frescos of S. Clemente should be attributed, as they are by Burckhardt and Zahn, to Masolino is, as I have said, not surprising, for the extreme naïveté of most of them may easily be attributed to the immature art instead of to the immature artist; but the technical analysis to which Cavalcaselle and others have subjected them leaves no reasonable question in the matter. The execution of them is timid in comparison with that of the work in the Brancacci Chapel; but this is precisely what we might expect, and that there should be something reminding us of the master is not more surprising than that some of Raphael's earlier pictures should be attributed to Perugino. The figure of the executioner in the "Martyrdom of St. Catherine" is like a prophecy of Raphael, while the treatment of the mystic portion of the picture is still in the feeling of the Giottoesques, and the angel waiting in the sky on a rosy cloud for the soul of the saint to come up is quite in the vein of the protomaster, Giotto. The four heads in the lower left-hand corner of "The Crucifixion" are distinctly in the direction of that individuality of type due to the painter's selection of the people of his own day as models for the historic personages he supposes in his work. It is as if the artist had begun to realize that the men around him might be much such as the men he had to deal with in his story. There is evidence, not of realism in his method of working, but of healthy imagination in the calling up of his material; and he tells his stories with the same freedom that Giotto enjoyed. He gives us in the same picture, in all the spirit of orthodox art, St. Catherine standing between the wheels, ready for the torture, and the wheels flying into pieces and crushing the torturers; but in the scene of the decapitation, quite in the vein of modern art, there are some curious spectators beyond the line of guards trying to thrust themselves through to see the execution, while the body of the saint has fallen to the ground in the first instant of death, and the executioner is sheathing his sword.

I may as well point out here the meaning I shall attach to the puzzling words "realism" and "naturalism," because we must now take cognizance of the matters they imply, Masaccio being the first of the painters with whom we have to deal who showed a distinct recognition of the every-day world as a mine of his art. Fra Angelico has the variety of type which the ends of art require for the distinguishing of his sacred personages, and at all times and naturally the images of memory must have mixed in the texture of the dreams even of ecstasies like

him; but the types are, to my mind, the types of dreams, or, as in Giotto, of pure imagination. In Masaccio, and the men who follow, the ecstatic disappears, and we are in a world whose images may not be real and capable of a realistic rendering, but clearly are drawn from the natural world in contradistinction to the supernatural or conventional and symbolical, and in which, without coming down to the servitude of the model or of rigid portraiture, the standards are those of what they saw about them. The study of these forms in the succeeding generations of painters was closer and closer, or, as it seems to me, tending continually more to the direct use of the model, which becomes absolute only in the school of Bologna; but beyond the free and noble naturalism which was only inspired by nature and retained the freedom of art there is the internal evidence of a growing tendency to realism, in which not the spirit but the very letter of the art was taken slavishly from the actual and material world. It is in this sense that I say that Masaccio was the first naturalistic painter. The ecstatic is henceforward impossible, and we see more and more the evidence of the hints of art being taken from what has been within the apprehension of all who had eyes to see.

But the art of Masaccio is still ideal and contains the germs of the highest development of the schools of Central Italy—the mastery of composition of many figures which came to its fullest in Raphael, and in some cases in his cartoons even to the overbloom of artifice. Take, for instance, the "Resuscitation of the Young Man," from the Brancacci Chapel, "The Tribute Money," or the "St. Peter Baptizing," and compare them even with the composition of Giotto, and we become at once aware that a new element has been introduced into art—harmony of line and balance of masses fixing the character of the work. And in this Masaccio is an innovator, for he is the first who made this the motive of his art, and he did it with a naïveté and a consequent power which we do not find to the same degree in the later men. The woe-stricken Adam and Eve in the "Expulsion from Paradise," in the Brancacci Chapel, are of a simpler type, and in this simplicity show more clearly the dramatic power of the artist. In both types of his work we see that art was taking on an independent existence and was being studied for its own charms, and no longer merely as the accompaniment of devotion or the vehicle of a story. It is long after this before Religion and Art are dissevered, but from this time they have existences independent more and more of each other.

W. J. Stillman.

NOTES BY T. COLE, ENGRAVER.

PLAN OF THE FRESCOS OF THE BRANCACCI CHAPEL IN THE CHURCH OF STA. MARIA DEL CARMINE, FLORENCE.

1. The Expulsion from Paradise. *Masaccio*.—2. Peter in Prison visited by Paul. *Filippino Lippi*.—3. The Tribute Money. *Masaccio*.—4. Peter accepts the Challenge to Simon Magus and raises the Dead Youth to Life. Partly by *Masaccio* and partly by *Filippino Lippi*.—5. The Preaching of Peter. *Masaccio*.—6. The Sick and Deformed cured by the Shadow of Peter (Acts v. 15. Here accompanied by John). *Masaccio*.—7. Peter Baptizing. *Masaccio*.—8. Peter and John distributing Alms (sometimes called the Ananias; a dead figure lies at the feet of the Apostles). *Masaccio*.—9. Healing of the Cripple at the Beautiful Gate, and Cure of Petronilla. *Masolino*.—10. Peter and Paul accused before Nero, and Martyrdom of Peter. *Filippino Lippi*.—11. The Fall of Adam and Eve. *Masolino*.—12. Liberation of Peter from Prison by the Angel. *Filippino Lippi*. (See Cugler's "Italian Schools," by Layard, Vol. I., p. 143.)

MASACCIO'S fresco of "The Tribute Money" (No. 3 of the plan), from which the detail of the head of Christ with three of the Apostles is taken, measures eight feet high by eighteen feet four inches long. This also is the size of the three corresponding pictures, Nos. 4, 9, and 10. The frescos at the sides of the altar are five feet wide, and those on the pilasters, which project six inches from the wall, are three feet wide. They are separated from each other by a narrow framework, six inches wide, painted with the pictures, in imitation of a cornice resting on pilasters at each end of each fresco. In the large pictures different moments of the same event, or different subjects, are presented in the same picture. For instance, in "The Tribute Money" Christ stands in the midst of his disciples. The tax-gatherer, with his back to the spectator, in the immediate foreground, is presenting his hand for the tribute (the hand and part of the shoulder only are shown in the detail); while Christ commands Peter, who is not shown in the detail, to get the necessary money from the mouth of the

fish. This is the principal event of the picture and is disposed in the center, taking up half of the space, the figures being nearly life-size. To the left, in the background, Peter is seen down by the waterside in the act of taking the coin from the mouth of the fish. The action is finely expressed as he crouches down, with his weight chiefly on one leg, the other being extended. To the right of the central group Peter is represented paying the tribute to the officer; broad, simple architecture rises behind the two figures. The landscape is noble. A stretch of mountain scenery and sky, with a few trees receding in perspective, and a river to the left, forms the background to Christ and his disciples.

The coloring is of soft, warm, gray tints, fine in quality. A quiet, subtle richness of tone characterizes the draperies of various shades of color, all blending together harmoniously and delightfully in a low and tender key. It is impossible by words to give any idea of such coloring. It is simply indescribable. One cannot mix words up, as he can pigments, with intelligible results, and so, for instance, be able to set forth the tone of red in the drapery of Christ, or the overrobe of blue so pleasant to look upon, and as soothing to the imagination as to the eye. To glance up at the abominable modern ceiling of the chapel gives one a shock like the unexpected blare of a brass instrument close to the ear.

The figures throughout have a quiet, dignified bearing; the attitude of Christ is magnificent. The eye falls naturally upon him at once, taking in the broad play of light from the outstretched arm, while the air of commanding dignity, and the beauty of the neck, barer than those of the others, aid in distinguishing him. But one needs to mount a step-ladder and get nearer to the picture to appreciate at their full value the moral strength and manly beauty of Christ's countenance, his nobility and strong personality, and the subtlety of the expression of authority in his face. The other heads, too, are admirable, and grouped finely together, in graceful and easy composition. The various planes of light falling upon them according to their several degrees of distances are well managed. In looking at them attentively and seeking to enter into the scene, one naturally feels with Vasari, who, speaking of this fresco as remarkable above the others, says: "The attention given by the Apostles to what is taking place as they stand around their Master awaiting his determination is expressed with so much truth, and their various attitudes and gestures are so full of animation, that they seem to be those of living men." There is, moreover, great spirit in the figure of Peter as he looks inquiringly towards Jesus, his right arm following the direction of that of his master, which carries the eye to the second moment of the event.¹

The walls of the chapel are very uneven, being full of waves—a result, no doubt, of age.

¹ An example of Masaccio's influence upon Raphael may be seen by comparison of this figure of Peter with that in the "Liberation of Peter," on the wall of the Stanza d'Eliodoro of the Vatican.—EDITOR.

NAPOLEON IN EXILE.

DESCRIBED IN UNPUBLISHED LETTERS BY BRITISH OFFICERS.

I.

IN the month of June, 1814, the following letter was received from Captain Ussher, R. N., commanding H. M. S. *Undaunted*, on board which ship Napoleon Bonaparte was conveyed to Elba. A copy of this letter was forwarded to the lady to whom the letters of 1815, which follow it, were addressed, and for whom Lieutenant Nelson Mills's journal, on board H. M. S. *Northumberland*, was written. This lady was one of those to whom Napoleon was the object of a hero-worship hardly surviving nowadays. She was also one of the most agreeable and charming of women; and in consequence of this all her connections, chiefly naval and military, took delight in indulging her weaknesses so far as lay in their power. The lady who sends the following letter writes to her:

... "And so, my dear friend, your Enthusiasm is deceased. I fancy it of the phoenix kind, for surely you were under the glowing influence of something very like an Enthusiasm when you last wrote, and I felt so strongly how entirely 'stale, flat,' etc. anything I could write to you must appear, that I vowed a vow never to answer you until I could obtain some intelligence that would interest you."

The beginning and the exact date of Captain Ussher's letter are not forthcoming. It proceeds thus:

... "I need not tell you with what humble gratitude I thank God that this long and sanguinary war has at length terminated, with so much honor to our country. The sacrifices that have been made by us for the good of mankind are unexampled in history. It has fallen to my extraordinary lot to be the gaoler of the instrument of the misery that Europe has so long endured, and I am sure you will believe me, when I say that far from allowing him to think that I bear in mind any animosity towards him, from a recollection of what my country has suffered, I endeavored, by my attentions, to quiet his uneasy mind. It appears to me like a dream when I look back eighteen months and see all Europe prostrate at his feet — and he now absolutely my prisoner. It is a glorious finish to my services, and leaves me nothing more to wish for. As Count Kalm, aid-de-camp to

Prince Schwartzberg, will set off immediately for Paris, and takes charge of my letters, I have only time to tell you that on the 14th of April the white flag was displayed at Marseilles by the inhabitants. Anxious to shake hands with my former enemies, but now my friends, I pushed into the anchorage before the town, but not without some opposition from the military, a battery having opened its fire and struck us. This appeared to me such an act of treachery that I opened my broadside, etc., and in ten minutes silenced the fire. I now saw the inhabitants assembling on the ramparts, waving white handkerchiefs. This determined me at all hazards to enter. Soon after the mayor and the municipality came off, forced by the people to apologize for the act of hostility; and until they were assured that I was satisfied with the apology, the town was quite in a state of insurrection.

"I immediately went on shore with Captain Napier of the *Euryalus*, under my orders, and we were received by upwards of fifty thousand people, who literally carried us off to the town hall, where a speech was made by one of the municipality, after which we were carried to the governor's, and with him and all the authorities went to hear the Te Deum chanted; after which we went in procession round the town amidst shouts of the loudest joy and enthusiasm. Such a mixture of mad joy and melancholy was never before witnessed. I assure you I saw thousands of women with their hands clasped, and extended to Heaven, bewailing the loss of husbands, brothers, sons, but partaking in the general joy of deliverance from a tyranny that cannot be conceived, much less described. When we returned to the governor's the mob assembled round his house. He requested we would drive out in his carriage to satisfy their curiosity, which we did, and arrived at a part of this magnificent city where none but royalty are allowed to enter in a carriage. The mob tore down the iron rails, and we drove in. Our carriage was then stopped and ladies were found begging to be permitted to shake hands with us; and we were soon almost suffocated with kisses. We then made a speech, which was cheered by the loudest huzzas from immense crowds of people. At church, at concerts, the opera, all places were alike, you could hear nothing but 'Vive les Anglais,' 'Vive Louis Dix-huit.' When I entered the opera of an evening they huzzaed

for half an hour. I harangued them and called out, 'Everlasting peace and friendship with our brothers the French.' They called my ideas sublime, and cheered me with the loudest acclamations. What a nation!

"And now for Napoleon. On the 25th Colonel Campbell drove into Marseilles, being commissioned by Lord Castlereagh to attend Napoleon. He said he came by the express wish of Napoleon himself to request I would go round to St. Tropez, where it was intended he should embark, as he did not consider himself safe on board a French frigate. Next day I arrived at St. Tropez, but found that he had altered his route, and was at Fréjus. At one o'clock I arrived, and was introduced to the Russian commissioner, Count Schouvaloff; the Austrian, General Koeller; the Prussian, Count Truchsess; English, Colonel Campbell; and Count Kalm. Soon after my arrival Count Bertrand, his Grand Marshal, informed me that it was the Emperor's wish to see me (he is still acknowledged Emperor, and Sovereign of Elba).

"When I was presented he said that he was once a great enemy to England, but now he was as sincere a friend. He said we were a great and generous nation. He asked me about the wind, weather, distance to Elba, and other nautical questions; he then bowed and retired. He was very dignified—still the Emperor. I received his command to dine with him. There was at table all the commissioners and the Grand Marshal; the conversation was most interesting.

"He laughed when I asked him if he did not issue his Milan decree for the purpose of forcing America to quarrel with us. This he did not deny. He said 'all his plans were on an immense scale,' and would have been finished in four or five years. I have not time to repeat all his interesting conversation.

"That night we embarked all his numerous baggage. In the morning he sent for me. He asked how the wind was, and said he had made up his mind to embark at eight in the evening. At seven o'clock he sent for me, and I remained half an hour alone with him (an immense mob had gathered round his hotel). His sword was on the table, and he appeared very thoughtful; there was a very great noise in the street. I said to him, 'The French mob are the worst I have seen.' He answered, 'They are a fickle people.' He appeared in deep thought; but, recovering himself, rang the bell, and ordering the Grand Marshal to be sent for, he asked if all was ready. Being answered in the affirmative, he turned to me and said in his usual quick way, 'Allons.'

"The stairs were lined at each side with ladies and gentlemen. He stopped a moment,

and said something to the ladies which I could not hear. He walked to his carriage and called for me (not a safe berth); he then called the Austrian commissioner and the Grand Marshal. I sat opposite to him in the carriage, and we drove off. My boats were almost two miles from the town. We were accompanied by an Hungarian regiment of cavalry. It was a delightful moonlight night, the country we passed through a paradise. Then the carriage stopped, the bugle sounded, and the regiment was drawn up.

"An interesting scene now opened—bugles sounding, drums beating, horses neighing, and people of every nation in Europe witnessing the embarkation of this man who had caused so much misery to them all.

"I informed him that the boat was ready, and we walked together to where she was. He was handed into the boat by a nephew of Sir Sidney Smith's, who is my fourth lieutenant—rather an odd coincidence. Lieutenant Smith had been confined in prison for seven or eight years. I introduced him. The Emperor seemed to feel his conscience prick him: he only said, 'Nephew to Sir Sidney Smith; I met him in Egypt.'

"When we got on board he walked round the ship. My people crowded about him, and he said 'for the first time in his life he felt confidence in a mob.' His spirits seemed to revive, and he told me next morning that he had never slept better. Next day he asked me a thousand questions and seemed quite initiated in nautical matters. At breakfast and dinner there was a great deal of conversation. He spoke of the Scheldt expedition. I asked him if he had ever thought we should succeed. He said, 'Never'; and turning a little towards the Austrian commissioner, he said, 'I wrote from Vienna that the expedition was intended against Antwerp.' He told me his motive for annexing Holland to France was for a naval purpose, and that he thought the Zuyder Zee particularly well adapted for exercising his conscripts.

"At breakfast one morning he asked me to bring to a neutral brig that was passing. I said, laughing, that I was astonished his Majesty should give such an order, as it was contrary to his system to denationalize. He turned round and gave me a pretty hard rap, saying, 'Ah, Capitaine!'

"When we were sailing by the Alps he leaned on my arm for half an hour, looking earnestly at them. I said he had once passed them with better fortune. He laughed, and liked the compliment. He told me he had been only once wounded: it was in the knee, and by an English sergeant. He looks uncommonly well and young, and is much changed for the better, being now very stout. He showed me a por-

trait of the king of Rome; he is very like his father. He likewise showed me one of the Empress, which is rather pretty. We had a smart gale when off Corsica: he asked me to anchor at Ajaccio, the place of his birth; but the wind changing made it impossible. In the gale I told him I had more confidence than Cæsar's pilot: the compliment pleased him.

"He dresses very plain, wearing a green coat with the decoration of the Legion of Honor. The portrait of him with the cocked hat and folded arms is the strongest likeness I have seen." . . .

(Here a sheet of the letter appears to be lost, and we find ourselves at Elba.)

II.

CAPTAIN USSHER'S LETTER, CONTINUED.

. . . "GENERAL D'ALHEME, the governor (of Elba), said he would do whatever was agreeable to Bonaparte. At eight in the evening we anchored, and a deputation came off consisting of the governor, generals, prefect, and civil authorities. At daylight next morning Bonaparte was on deck, and remained with various officers, asking questions as to the anchorage, fortifications, etc., etc. At eight he asked me for a boat, as he intended to take a walk on the opposite side of the bay, and asked me to go with him. He wore a great-coat and round hat. Count Bertrand, Colonel Campbell, and Colonel Vincent went with us. When about half way he remarked that he was without a sword, and soon afterwards asked if the peasants of Tuscany were addicted to assassination.

"We walked about two hours, and the peasants, considering us all as Englishmen, cried 'Vive les Anglais.' We returned on board to breakfast, and he afterwards fixed the flag of Elba, and ordered two to be made immediately, that one might be hoisted at one P. M. on the fortifications; and at two P. M. he would disembark with the other. (What a childish vanity!) The flag is a white field with a red band running diagonally through it, with three bees in the band. The bees were in his arms as Emperor of France.

"The boats of the island now began to assemble round the ship, crowded with people, bands of music, etc., and shouting 'Vive l'Empereur.' At two my barge was manned. He desired me to go down first; he then called Baron Koeller, Colonel Campbell, Count Kalm, and Count Bertrand. The yards were manned, and as soon as the barge shoved off a royal salute was fired, and the same by each of the French corvettes. On the beach he was received by the mayor, municipality, and the authorities, civil and military. The

keys were presented on a plate, and the people seemed to receive him with great welcome, and shouts of 'Vive l'Empereur!' We proceeded to the church in procession; thence to the Hôtel de Ville, where all the authorities and principal inhabitants assembled, with each of whom he conversed. After that he mounted his horse, attended by a dozen persons, and visited part of the outworks, and dined at seven o'clock.

"Next morning he was up at four, and from that until ten was on foot visiting the fortifications, storehouses, magazines, etc. At two he mounted his horse, and I rode with him about two leagues into the country, over mountains and precipices, but nothing is impassable to him. He examined the country houses, and stopped at a planter's (wine merchant) and had a cold collation. He helped me to different things, which he never does to any one else. A lady came in and offered him strawberries, which he gave to me. I took an opportunity afterwards of offering him a sprig of laurel, which pleased him much. He asked me here how I liked the wine. I said it was excellent; and he immediately ordered 2000 bottles to be sent on board to the men. In short, his manner is always most agreeable and polite, and it's only when anxious to carry any point that he is passionate.

"Next day we went across the island to a mountain of iron, the richest and finest mine in the world—and, what is remarkable, the revenue arising from it formerly paid his Legion of Honor. We rode through the clouds to it. I never was so fatigued in my life. The mountain is completely of iron, and is blasted with powder in the way that quarries are in England. When broken, the fragments are like pieces of diamond, of all colors. He gave me some beautiful specimens of his collection. If you choose to make the college a present of one, I will send it to you.

"We afterwards went through a labyrinth to a high mountain, upon the summit of which there is a temple erected by the Romans in honor of Jupiter. I suppose he consulted the oracle. At dinner we had a boar's head, and the Emperor with his usual kindness to me helped me to the eye as a great treat. I was hard set what to do. It was rudeness to refuse, but I could not stand it, and sent it away; the very idea spoiled my appetite.

"Elba is a beautiful island, possessing every advantage. The bay of Porto Ferrajo is unrivaled, and the valleys are uncommonly fertile, yielding the finest vegetables of every description, and the mountains are to the summits clothed with vines. In three or four days he visited every part of the island, conceived

all his plans for building palaces, stables, aqueducts, lazarettos, etc. (The latter he begged I would plan.) His constitution is of iron—always up at four, and seldom in bed before eleven. The day the transports arrived with his carriages, horses, and guards he was on his legs from four in the morning until four in the evening, under a hot sun. He then mounted his horse and rode over two or three mountains—returned at eight o'clock, and was not twenty minutes at dinner. He sent for Colonel Campbell and myself. He stopped me for a moment in the library, and hurrying over some magnificent drawings of Egypt, stopped at Cairo, and asked my opinion of it. He then said in his quick way, 'Allons!' and we walked into the garden; and there we walked for three hours, talking of Egypt. I could not help remarking to him that his constitution was of iron in being able to undergo much fatigue—'car il montait à cheval pour se défatiguer.'

"The day that he was on the summit of a mountain that showed him all the island, he turned round laughing and said, 'Ah! mon île est bien petite.' He laughed at the idea of our being caricatured, and said 'the English had a great passion for caricaturing.' I said 'John Bull caricatured and abused people when they deserved it. I shall be caricatured nursing the king of Rome.' He often compliments the nation for generosity and liberality. In talking of Lord Wellington his admiration was unbounded. He said also that our army institutions were perfection, and that the discipline was superior to his. He also complimented my officers, and said they were the finest young men he ever saw, and that the *Undaunted* was a pattern to all other ships. He always wished to have my officers about him: a sergeant of marines, who is a great favorite, always slept in the next room to him, upon a mattress at the door.

"I told him we never thought him serious in his intentions of invading England. He said that he was quite serious: his object was not to conquer England, for he knew that so high-minded a people were not to be conquered by taking their capital; but he expected to throw the country into confusion, and separate Ireland. He said his plans were on the largest scale—that in four or five years he would have had three hundred sail of the line. I asked him how he intended to man them. He said his naval conscription was fully equal to it. I told him we laughed at his naval conscripts, who were more formidable to each other than to us. . . .

"P. S. Tell S. that some one said I was like Bonaparte, but not so well looking. It was a Frenchman, and he thought even with that amendment that he paid me a great compliment."

"I flatter myself," says the lady who forwarded this letter to Mrs. M., "that you will like this cousin of mine for his generous feelings towards a fallen enemy. Besides, he really is a very fine fellow and has done excellent service to his country. His family soon expect an account of his second trip to Elba, with Princess Borghese, and I hope it will afford us some more accounts of Bonaparte—which of course you shall have as soon as I can collect them."

So far as we know, this second letter has not been preserved.

III. 1815.

Mrs. M.'s young cousin Mills, who ministered to her Napoleon fever in the year 1815, appears to have been a good deal Captain Ussher's junior in mind, as well as in rank and age. His part begins with two letters to his cousin.

H. M. S. NORTHUMBERLAND,
August 3rd, 1815.

. . . Till we were on the point of sailing for Plymouth to take Buonaparte on board I did not receive your letter, as there was a mistake in the direction. As to your coming to Portsmouth, even though it should have been practicable, it would have been of no use, as he never came there. We are now under sail, and very likely shall not be able to put this in the post till we arrive at Plymouth, where we take the ex-Emperor on board. The ship is fitted out, and everything in very good order to receive him. We take him out to the island of St. Helena, and from thence we proceed to the Cape of Good Hope, and there we shall take the command. There is the *Romney* fitting out at Chatham, to come out and receive Admiral Cockburn's flag, that the *Northumberland's* ship's company may go home, for they have all been out six or seven years. I shall give you an exact account of everything that is transacted on board relative to Buonaparte, and shall expect answers from you, as it is a very great pleasure to receive letters abroad. . . .

August 5th, 1815, off Torbay.

. . . We are now sailing in company with the *Tonnant*, Admiral Lord Keith, and the *Bellerophon*, on board of which is that once great man, Buonaparte. We are standing in for Torbay, a small port where there is very good anchorage, where I expect we are going to paint the ship for the reception of Buoney and his suite. The *Northumberland* is a remarkably fine ship and sails very fast. Our Admiral Sir George has gone on board the *Bellerophon*; I believe to settle everything previous to

Buonaparte's removal. . . . I shall let you hear plenty in my next. . . .

PRIVATE JOURNAL OF W. NELSON MILLS.

"August 7th, 1815. Came on board General Buonaparte, from H. M. S. *Bellerophon*. He was saluted on the quarter-deck by the marines of the ship under arms, in the same manner as an English general. He was accompanied by his suite, consisting of the following people: General Bertrand (Grand Mareschal du Palais), his wife and three children; Comte de Montholon (General of Division), his wife and one child; General de Gourgon; le Comte de Lascases and his son, who is in the quality of page to the general; and the surgeon of the *Bellerophon*, who accompanies Buonaparte as his private physician; twelve male and two female servants.

"He returned the salute by taking off his hat and bowing to all the officers who were present. He entered into conversation with Captain Beattie of the marines, respecting the length of time he had served, what actions he had been in, and if he had ever been wounded. He replied that he had served many years, had been wounded, and was at the siege of Acre. Napoleon took hold of his left ear, and gently pulling it said, 'Ah, ah! vous êtes un brave homme — brave homme!' He was very much pleased when introduced and shown all through the admiral's cabin, after which he expressed a wish to be likewise introduced to the officers of our ship, which was immediately complied with by the admiral. After inquiring individually their respective duties on board and seeming very much pleased with the discipline and regularity of the ship, they were dismissed. He was dressed in a green uniform coat with red facings, plain gold epaulets, white knee-breeches, shoe-buckles, a high cocked hat with the tricolored cockade; on his left breast was a large silver star, and below that were the three different insignias suspended by three colored ribbons.

"Lord Lowther and Mr. Littleton had accompanied the admiral from Portsmouth to Plymouth. Napoleon, finding Mr. Littleton was a member of Parliament, had a very long conversation with him, and was particularly inquisitive respecting Mr. Whitbread, saying that if he, Mr. Whitbread, had been alive, his case (meaning his own) would have been very different. He wished very much to know what had occasioned him to commit suicide, and if Mr. Littleton knew why he did it, saying it was very singular it should happen just at that time. He then retired into the cabin fitted up for him, which was the admiral's larboard side cabin. Shortly after he went to dinner

with the admiral, the usual number of officers being at table. He eat very hearty, rose up soon, and came out to walk the quarter-deck. He again entered into conversation with Mr. Littleton, by whom he sent a private message to the Prince Regent. He requested the band might play 'Rule Britannia' and 'God save the King,' which was instantly complied with. We then got under weigh and proceeded down Channel. Fresh winds and rainy weather running down Channel, in company with the following ships: *Havannah*, *Bucephalus*, *Ceylon*, *Peruvian*, *Icarus*, *Zenobia*, *Redpole*, *Ferret*, *Zephyr*.

"August the 8th.—Napoleon did not stir out of his cabin till the admiral went to dinner; he then came to table, but retired again almost immediately owing to sea-sickness, it being a very rough day. Almost all his suite were sea-sick also, especially the ladies, Mesdames Bertrand and Montholon. The former is a very amiable and good woman, but the latter is quite the contrary. Fresh winds and rainy weather running down Channel, all the squadron in company.

"August the 9th.—About eleven o'clock Buonaparte came out of his cabin and took a walk on the quarter-deck for about half an hour, conversing alternately with Admiral Cockburn and Sir George Bingham upon the loss of the battle of Waterloo. He imputes it to this cause: in the hurry of equipping his army they were obliged to clothe a great many of the new guards in the uniform of the old; and the former, owing to their impetuosity and rashness during the action, were obliged to give way. The remainder of the army, fancying it was the old guards, gave up all hopes and retreated in the utmost confusion, so that it was impossible to rally them again. . . . After dinner . . . he retired to the admiral's after-cabin to play at cards, of which he is very fond, although he always loses. Moderate winds and fine weather standing out of the Channel, the Lizard Point bearing N. W. by W. five leagues and a half. . . .

"August 11th.—Buonaparte walked the deck in the forenoon, it being a very fine day, attended as usual by his two confidants, Bertrand and Lascases: he takes very little notice of any of the others. The ladies also made their appearance on deck to-day. The midshipmen who were walking on the lee side of the deck attracted his notice, and he immediately crossed the deck to them, asking them if they could speak French, and if they had ever been in France. There was one amongst them who had been in prison at Verdun, and had seen him (Napoleon) when passing through that place at the head of his army to go to Russia. He immediately said, 'C'est un beau

pays,' and walked away, taking one or two of us by the ears. . . . He sat down to his general evening's amusement of cards; he plays piquet and vingt-et-un. Out of sight of land to-day.

"*August 12th.*—Buonaparte did not appear on deck to-day, being unwell. . . . He does not eat his breakfast at the same time the admiral does, but has it by himself in his cabin: it generally consists of fowls, meat, and porter; he never touches tea in the morning. The French officers were all on deck in the afternoon. Fresh breezes and fine weather.

"*August 13th.*—This being Sunday, divine service was performed by the chaplain, but neither Napoleon nor any of his officers were present. He walked the deck from three o'clock till dinner-time, and afterwards for about an hour, conversing very closely with his two confidants, who are always uncovered when in his presence. He seems to exact the same respect and obedience from them now as when an emperor. He takes an amazing large quantity of snuff of a very coarse sort; he keeps it in a large box in the shape of a cheese, and spills two-thirds of what he takes in one pinch. He frequently asks the admiral questions about the ship, such as the particular uses of different ropes; and the duties of individuals he may see passing him. Light winds and fine weather.

"*August 14th.*— . . . Napoleon did not come on deck till after dinner; he entered into conversation with Colonel Sir George Bingham and the admiral upon his intention of invading England, which he says he firmly intended doing, and that the fleet under Villeneuve was to have gone to the island of Martinique to draw our fleet from the Channel. Villeneuve was then to have proceeded up the Channel, where the army, consisting of 20,000 men, were to have embarked; the praams were to have taken 6000 cavalry. He says it was his intention to have landed as near Chatham as possible, and push on directly for London, where he hoped to have carried a revolution in his favor. He knew he should have a great deal to encounter before he could accomplish his design, and that there was no hope of retreating should he not succeed. At six o'clock the ship's company's hammocks are piped down, and Napoleon is always standing with his back against the foremost gun on the quarter-deck, and four or five midshipmen always round him to keep the men from running against him. Light winds and fine weather, but a heavy swell.

"*August 15th.*—This day was the anniversary of the once great Napoleon's birthday. He seemed if anything a little more enlivened and gay than usual. His officers were all dressed and paid him particular attention. At

dinner also the admiral paid him a great many compliments. He walked more to-day than ever, his officers attending him the whole of the time. In the evening he sat down to cards, and for the first time since he came on board won almost every deal, insomuch that the admiral and those with whom he was playing were obliged to send out frequently for more money. Light winds and fine weather, with a heavy cross swell.

"*August 16th.*—Napoleon did not rise until about twelve o'clock to-day: he very frequently takes his breakfast by himself in bed. He did not appear on deck to-day till after dinner, and then walked for an hour. Sir George Bingham was on the lee gangway looking at the squadron, on our lee beam. Napoleon went up to him, and after conversing with him for a few minutes, and taking a pinch or two of snuff, pulled him by his whiskers and walked away to converse with his two confidants against the gun, which seems to be his favorite place when on deck. Two of his servants got intoxicated and became very riotous. He requested they might be punished. They were immediately put in irons.

"*August 17th.*—This morning, having occasion to punish some of the ship's company, the two servants belonging to Napoleon were brought up and made to understand that they were liable to the same punishment if ever they again committed such a fault. Buonaparte walked the deck after dinner as usual, taking quantities of snuff, and very often looking at the other vessels of the squadron through his opera-glass, which is a very handsome one (made in England), and which he always carries in his pocket. He is often very near falling when the ship rolls heavy, being seemingly very weak in his legs, and was only narrowly prevented to-day by Maréchal Bertrand catching him in his arms.

"*August 18th.*—Napoleon as usual appeared on deck after dinner, and entered into conversation with the admiral, to whom he said the following: 'The burning of Moscow was the commencement of my bad fortune.' He says that the war in Russia was the most destructive and dreadful that ever he had witnessed. On his march towards Moscow the whole country around, as far as his eye could observe, appeared like a sea of fire, owing to the towns and villages that were set on fire; which was attributed to his troops; but he gives his word of honor that it was not the case, but they were set on fire by the inhabitants previous to their desertion. He says a great number of his soldiers were burnt to death in attempting to plunder amidst the flames.

"*August 19th.*— . . . Napoleon again resumed his yesterday evening's story. He says he only intended to refresh his troops at Moscow

for a few days, and then to have proceeded forward for Petersburg, where he had his secret emissaries at work learning the minds of the people, and had accounts through the means of them that the people (the Russians) were generally speaking much averse to their present form of government, and many were ready to join him on his approach to the capital; but that the disaster that happened at Moscow had frustrated all his plans and completely turned the scale.

"August 20th.—Napoleon was not very well to-day, as we had rather a fresh breeze and heavy rains, and only walked a short time with the admiral. 'From my first entering into a military capacity,' says Napoleon, 'to the destruction of Moscow, mine had been a series of good fortune and advancement in life without a parallel; and the very reverses which took place at Moscow, in case it had so happened I had been killed, would have been attributed more to my loss than to their real cause.'

"Not being able to get hold of the different conversations which passed between the admiral and Napoleon daily, I shall give you circumstance after circumstance as I could catch it.

"In a question the admiral put to him relative to Captain Wright and the general idea that prevailed in England as to what had occasioned his death, Napoleon seemed much surprised at the anxiety the admiral showed in wishing to know, observing at the same time that he (Napoleon) imagined it was sufficiently made public not to cause on the part of any one the curiosity which the admiral at that time showed, but without any hesitation gave Sir George the following story: An apothecary, landing on the coast of France about that period from an English man-of-war,—which circumstance excited great suspicions on the part of the French Government,—was seized and conveyed to prison, and condemned to die unless he gave such information to them as would be of benefit to the nation. These means taking the effect desired upon the poor wretch under confinement, the fear of death compelled him to reveal the names of several persons, to the number of twenty-three, who were concerned in a conspiracy, together with Pichegru, Georges, and Captain Wright, against the lives of him (Buonaparte) and the other rulers of France. Upon this intelligence every means were used by the police of Paris to find out where these conspirators were secreted, and in the course of a few weeks succeeded so far that the greatest part of them were apprehended. Amongst these so detected was Captain Wright, who, by the order of the Directory, was conveyed to the Temple, to undergo a trial for conspiracy against the state. Accordingly a council was

assembled; but a few days previous to the one appointed for his trial he put an end to himself, and he (Buonaparte) says he should have thought the inferior rank of that officer alone would in the eyes of the world have exempted him from their suspicion."

IV. 1815-16.

LIEUTENANT MILLS'S DIARY FOR MRS. M.,
CONTINUED.

... "DURING the confinement of Ferdinand of Spain in France, after being brought captive from his own country by the French, Buonaparte informed the admiral that one Baron Koltz was employed by our Government on an errand to France with a view to release Ferdinand; . . . but his plans not being laid with that skill which the then pressing circumstances required, he was suspected, as well by his having too great command of money, and a search being made, the Prince Regent's letter to the king of Spain was found in his possession, containing his Royal Highness's willingness to lend him any assistance in his power to procure the release of his Majesty, and that the bearer of the letter had the royal authority to assist him in the undertaking. Having rescued all Koltz's papers, a police officer was sent in disguise, to personate Koltz, to the place where Ferdinand was confined, presenting the letter and stating the authority he had so to act. But all he could say or do, he could not persuade Ferdinand to take any steps in attempting to escape; and Napoleon says that the pusillanimity of Ferdinand was such that he was sure if it had been the smallest risk his cowardly spirit would have deterred him from attempting it. Buonaparte then said as a joke that the above trick was played to try his mettle.

... "In conversing further with this extraordinary personage, the admiral and him came to that part of his life when he had command of the French army in Egypt; and the admiral did not fail to make inquiries respecting the poisoning story, to ascertain if possible the veracity of a report so generally spread and believed in England to the prejudice of Buonaparte. But let it be how it will with those who believe it, the following account came from his own mouth: 'Having possession of Jaffa, with a great part of my army sick of the plague, and hard pushed by Djeddar Pasha's troops, who would enter immediately upon my evacuating the place and murder and torture the sick and wounded that remained there, I judged it more an act of humanity than otherwise to accelerate the death of these poor wretches by giving them opium,—as they were then lingering in the

greatest misery,—which would have freed them from the torments that awaited them. I therefore proposed the above expedient to the medical men of the army, but met with a joint refusal, saying they could not think of doing such a thing, so contrary to the general rules of the profession; but ventured to affirm, if I would hold the place forty-eight hours longer, that the greatest part of the sick, if not all, would have expired. I agreed to the proposal, and maintained the place myself for the first twenty-four hours, and left a strong rear-guard for the occupation of the other twenty-four hours; and at the end of that time I was informed that there were not above two or three alive at the time that Djazzar Pasha's troops entered.'

"Captain Beattie of the marines, now serving on board the *Northumberland*, was in the British service acting against the French in Egypt at that time, and entered Jaffa immediately the French evacuated it. He says that there were but two or three French soldiers in the hospital, and that those were in the very last stage of the disease.

... "The harbor of Cherbourg,' says Buonaparte, in answer to a question put to him by the admiral in relation to the marine of France, 'is, since the improvements I have ordered to be made, one of the finest in France; its repairs cost £2,000,000 sterling. The outer harbor will contain a thousand sail of the line, and the inner one the same number of ships, safe with the wind blowing from any quarter. I was particularly cautious in having it well guarded since its repairs, lest through the inspection of the English they might be tempted to destroy these works which cost me so much money, and which might be easily done by a *coup de main*.'

"Speaking further of France and the navy of that country, viz., the Toulon fleet, he says it was but very indifferently supplied with sailors, and of those the greater part had never been beyond the harbor; but that he thought they must improve by the constant practice of manœuvring. Notwithstanding the damage the fleet sustained for want of men experienced in seamanship, he considered the improvement the men might derive from such a practice as adequate to the loss experienced by the fleet: indeed, he says this plan of his had excited much murmuring on the part of the people; but he did not care, and was determined to preserve, as he well knew that France must have a navy as well as an army for her better preservation. He also said he had determined to have ten frigates at sea; and if the number was made deficient, in case either of loss or capture, he could have others always ready to supply their places: that he would give orders for them to cruise principally in the Channel, as it would then require their great-

est vigilance for their own safety, by sailing about the land than going further to sea; that each ship should have a certain time allotted her for her cruise, and if she was so fortunate as to arrive in a French port, the commander should be immediately promoted. In case the greatest part of this squadron might be captured by the enemy, he considered the harm they would be enabled to do to our trade perfectly adequate to the loss of his ships. On the admiral asking him how he would be enabled to keep this squadron supplied with sailors, as he must naturally expect the greater part would be captured whilst the British had such power on the seas, he replied in answer, the marine department provided for the navy annually 20,000 men. The admiral told him such force might be obtained, but then what would it be? A set of raw, inexperienced landsmen, at least the greater part of them men unqualified to go on board a ship. However he seemed to persist that the plan in time would succeed; so that the admiral left him in his own opinion for the present.

"In further conversation with Napoleon respecting the French navy, he in addition informed Sir George that spars for masts cost the government immense sums to procure them from the Baltic, owing to the expense of conveying them to France. The greatest part were sent overland, as the safer method, and if they had been sent in ships, it was two to one that they would have been captured by the English cruisers. He says he had a great number of spars at Copenhagen at the time the English took possession of it, which the Danish Government had procured for him, and that he greatly feared they would have been taken by the English, but they arrived safely in France in a short time after.

"On crossing the equinoctial line we had a very fine day, and I shall give you an account how Napoleon behaved on the occasion. In the morning we prepared for the usual custom of shaving those who had never crossed the Line before. After those officers who belonged to the ship had undergone the operation—which is performed with an old, rusty, notched iron hoop—it came to the turn of Napoleon and suite. Buonaparte himself did not appear on deck, but begged permission of the admiral to give Neptune and his gang—the people who performed the operation—100 Napoleons in gold, which amounts to £90 sterling; but this the admiral objected to, it being in his opinion too much, but permitted him to give 20 Napoleons as a compensation for not being shaved. Next came General Bertrand with his children to the place where the ceremony was performing. He also presented the men with several Napoleons for himself, his

wife and children. The other French officers came in their turns, and also gave the seamen some money.

"On the evening of the 15th of October, 1815, we landed General Buonaparte on the island of St. Helena. We put him on shore at seven in the evening, and disguised, to prevent the populace from recognizing him, as he detests nothing so much as to be stared at. Coming into the anchorage he was walking the deck, and several times remarked how difficult a place it would be to take if well fortified; shrugging up his shoulders at the same time, apparently at the little hopes he could have of escaping from such a rock. The morning after he landed he rode up into the country with Sir George Bingham and the admiral, to a place called the Bryars, situated at the head of the valley in which the town stands, and about a mile and a half from James Town. He took such a liking to this place that he obtained permission to pitch a tent next to the door of the house, which belongs to a Mr. Balcolm, a merchant of St. Helena, who resides there with his wife and two daughters."

LETTERS FROM W. NELSON MILLS TO MRS. M.

ST. HELENA, Oct. 23rd, 1815.

I could not let slip the first and perhaps the only opportunity I shall have of writing to you from this most horrible place, which if you could see you would suppose all the rocks in the world had gathered together and made themselves into an island. We have put your friend Napoleon on shore; and as nothing very particular occurred during our tedious passage but what I have regularly noted down, and made a complete journal of his proceedings while on board our ship, I shall not give you any particular account of him now. With difficulty I bribed his *premier valet de chambre* to procure about fifty of his hairs. I assure you the captain of the ship did not get so much; certainly *Buoney* has very little hair on his head, and dislikes it to be given away very much. This instant the letter-bag is closing for England with dispatches concerning this very great man. I shall take very great care of my journal and hair for you. . . .

ST. HELENA, Feb. 15th, 1816.

. . . As far as it has lain in my power I have done everything you wished me, and have procured for you a very small lock of the great Napoleon's hair, with the three different colored ribbons which suspended his orders and which he left off a few days ago. To complete the thing properly I have the promise of a pocket handkerchief from his chief *valet de chambre*, and have not forgotten

the journal, in which I have entered all I could lay hold of that he conversed about. I will not send any of the above-mentioned things, for fear of anything happening. . . . You wished me in your last to give an account of Napoleon's suite and his conduct in exile. I shall commence as well as I can.

. . . He was first of all lodged in a house in the town, next to where the main guard is kept, but riding out the next morning, escorted by the admiral and Sir George Bingham, he took up his residence at a house called the Briars. . . . He remained there very quietly until his house at Longwood—the prettiest spot on the island—was ready for his reception. The governor made him a present of a small carriage when he removed to Longwood, in which he rides out almost every afternoon. He is permitted to go three miles every way round his house without attendant; but the sentinels at those places do not permit him to go beyond them without he is accompanied by Captain Poppleton of the 53rd Regiment. Should he attempt to go past them without being so attended he is liable to be shot by them, which he has been perfectly made to understand. His chief amusement is riding on horseback. There are seven very handsome horses brought from the Cape for him, each of which he has named: 1st, *Vizier*; 2nd, *Mamalouke*; 3rd, *l'Arabe*; 4th, *La Solide*; 5th, *La Tranquille*; the other two I have forgotten. He seems perfectly resigned to his fate, and in my opinion—for so great a fall—bears it remarkably well. It is an utter impossibility for him to escape from this, unless anybody favored his intentions. . . . [Here follows a description of Napoleon's suite, much the same as that given in the journal.]

ST. HELENA, April 19th, 1816.

. . . I have, as far as possible, complied with your request, and have, I am glad to say, procured you his handkerchief. It has, as you said, the imperial crown and his initial in the corners. I shall not send it, not only because I expect the *Northumberland* to be in England soon, but for fear of losing it, which I would not do for any consideration, knowing how much you value it. . . . Your friend Napoleon is quite well, and to all appearance bears his fate and exile very well. He has everything he can wish for that money will procure, except his liberty. We see him sometimes, as we have two hundred men constantly going up to Longwood every day, and I belong to that party. I gave you a long detail of this before in my last letter, which I hope has arrived safe. . . .

This letter, apparently, has not been preserved, and Lieutenant Mills's communications end here.

Eleanor C. Price.

POEMS.

LOVE AFTER LIFE.

THOU say'st, dear love, we shall not meet again ;
Nor shall we be beheld of sky and earth :
The morning will not greet us in his mirth :
The glittering shapes of river or of plain,
And hills whence the slow clouds have wandered forth
Shall to our absence add a deeper pain,
And in their glory seem of little worth,
Forms of no moment, futile, weak, and vain.
It is not so : love broken must renew
Its bond with earth and air ; the eternal sea
Shall to its weakness add the strength of storms ;
Love shall not die, but in the falling dew
Discern itself, impart to misery
The holy power of those tremendous forms.

A FOREST RIVER.

DEEP in the sunken silence of the hills,
And gathering light from all that it may see,
A happy river flows. With mirth it fills
The forest dark and with tranquillity ;
Foam-bells upon its breast move quietly ;
And, foaming white, a troop of icy rills
Add to its gladness ; in it the broad sky
Is imaged peacefully with clouds and hills,
And ever and anon it breaks into
A smile of light that glads the forest round ;
And when at eve the blessing of the dew
Descends on waves that flow without a sound,
'T is as a serious face that laughs anew,
But laughs beneath a spell of silence bound.

Langdon Elwyn Mitchell.

UNCALENDARED.

ONLY a year have thou and I been friends,
If time be counted on our calendar ;
Away with that ! What it begins, it ends ;
From all eternity, close souls we were,
And shall be, so God grant ! forevermore,
For two were never faster bound before.

"With God, one day is as a thousand years :"
Oh, Love is mighty, God's most blessed name !
The more that man his Maker's image bears
The more must months and æons be the same.
Love knows not time.— It is eternity,
And not a year, that I count out with thee !

Charlotte Fiske Bates.

AN AMERICAN ARTIST IN JAPAN.

WITH ILLUSTRATIONS BY THE AUTHOR.

THE Japanese very naturally have been severely criticized for sweeping away their old and unique civilization, their distinctive customs and institutions, and substituting for them those of Europe.

As a consequence they have often been unfavorably compared with their more conservative neighbors the Chinese. However, that very policy which China with three hundred millions of inhabitants and an unlimited territory has successfully pursued would have been fatal to Japan. The numerous islands of the mikado's empire, scattered about in the Eastern sea, would have been forever open to attack and plunder by stronger naval powers, and they would have lost their independence had they not realized that this disaster could be averted only by adopting European ways and methods. Constant and unprovoked attacks by united naval forces, and unjust extortion of indemnities on the slightest pretexts, brought the Japanese to the conclusion that they could receive the treatment due a civilized nation only by making a radical change in their customs and adopting the laws, dress, and institutions of the West. They did not do this willingly, they were forced to do it. It was not, as has often been asserted, a mere childlike freak, a desire for novelty and lack of reverence for their ancient institutions. Their very existence depended upon taking this step, and as they have consistently adhered to this policy, the changes have necessarily been wide and sweeping.

The feudal system, resembling that of Europe in the Middle Ages, prevailed in Japan before this great upheaval. The great daimios practically ruled their respective provinces and were surrounded by thousands of brave and devoted clansmen; but when they realized that the old order of things could no longer continue, they bowed to fate and for their country's good obeyed the order of the new central authority. They disarmed and dismissed their followers, left their homes and retired to private life, living on pensions granted them by the Government. Many of them are still living in the peaceful retirement of their homes, in the enjoyment of their gardens and art treasures, surrounded by a few of their old retainers. But they are forgotten by modern Japan, of which in turn they are well-nigh oblivious, and live

only in the recollections of the past. Thus has one of the oldest, most unique, and perfect civilizations abruptly ended and another been substituted, hardly as well suited, it must be confessed, to the wants and natures of the people.

But if this revolution has in many respects been a misfortune to Japan, the world at large has gained, for the benefit we have derived through contact with their art is inestimable.

It was with this wonderful art, and the conditions under which it flourished, that I endeavored to familiarize myself during my three-years' residence in Japan. I was not long in discovering that my knowledge of Japanese art and industries had been confined almost exclusively to the modern articles of trade, which were but poor specimens of that art which I now for the first time learned to know. Not that I wish to pronounce against everything modern in Japan, for there is much produced at present that would be a credit to its art of any period; but good art is always rare, and the few examples of the better kind that have reached us are all but lost in an overwhelming mass of cheap and inferior articles. Many of these objects under the general classification of "bric-à-brac" are unknown and unused by the Japanese, and are manufactured to order for the foreign traders of the treaty ports, who have, through their constant demands for cheaper and ever cheaper work, greatly lowered the standard. They are to a great extent responsible for what is poor and trashy in Japanese art.

In this category may be placed many of the objects most familiar to us; for instance, the common bronze and porcelain ware, gold embroidered screens, dressing gowns, cheap cloisonné and flashy satsuma. Even the familiar brightly colored paper parasol is unknown to the Japanese.

At present there are still living many of the old skilled artisans of the preceding generation, who continue their calling; but they have undergone many privations, for no new wealthy class of patrons have succeeded to the daimios, and they now have only little opportunity to exercise their talents. It is hard to foretell what will be the future of Japanese art when the last of those guiding spirits shall have passed away; for in the confusion of this transition stage of government the young men are not

subjected to the same strict apprenticeship as their predecessors, and it is doubtful whether they will inherit and hand down to their successors the noble art traditions of the past.

I was fortunate enough to arrive in Japan in the early springtime, when both nature and man were to be seen at their best. The bright faces, happy dispositions, and general appearance of contentment I met with everywhere amidst sunny gardens and cheerful homes, and the scrupulous cleanliness of the people and their surroundings, combined at once to make a most delightful impression on my mind. The contrast in coming from a purely commercial community with its prosaic and practical spirit made this seem almost like another world.

I found the people polite, refined, and considerate to one another, while there seemed to be an utter absence, in any form, of that brutality which prevails, more or less, elsewhere; and this fact I found to be true of all classes. It will very naturally be asked, What is the reason, the cause of this general contentment and happiness? This is precisely the question which presented itself to me; and in order to solve this and many other problems, and to gain an understanding and a proper insight into their life and customs, I concluded that it would be absolutely necessary for me to acquire at least a partial knowledge of their language and live the life of the people. Indeed, this entailed no sacrifice of comfort, for a Japanese house is clean, neat, and artistically constructed; in fact, "a thing of beauty," and "a joy" as long as one lives in it. One's neighbors are all that can be desired, and, what is more unusual, servants are honest and efficient.

But there was an obstacle in the way that had first to be overcome. Foreigners residing in Japan are required to live within treaty limits, and my desire to live beyond them did not seem likely to be realized until the following expedient was suggested to me.

There is an exception made to this law in favor of Government employees. A young Japanese friend of mine, Yasumaru by name, explained the case to his father, who was a high official, and he kindly arranged the matter by engaging me nominally as teacher of painting for his children. In this way we managed, between us, to evade the law, a proceeding, however, which I had to admit was not confined to Japan. A neat little Japanese house, surrounded by a pretty garden, was rented by my friend in the vicinity of his home, and I was soon established in these new and quaint surroundings.

Having determined to conform so far as possible to the customs of the country, at my friend's suggestion I sent my servant with a

tray of buckwheat cakes to each of my neighbors. This, he informed me, was *de rigueur* in moving into a new home. In return, my neighbors made a most ceremonious call and expressed unbounded astonishment that a foreigner should be so well versed in Japanese etiquette. I also duly impressed upon my servants the fact that my household was to be managed in the same orderly manner as is expected of them by a Japanese master, and even made a point of conforming to the general custom of removing my shoes at the threshold of my house.

Of course in all these matters I was kept well posted by my young friend, who now came and made his home with me, as his father desired him to take advantage of this opportunity to practice in and increase his knowledge of the English language. Yasumaru, in common with most of the rising generation of his class, had studied English at school. He was of great assistance to me, and during my long residence among the Japanese he invariably proved himself to be a most trusty and faithful friend.

His parents' home was always open to me, and I found his family life most charming. His parents, though themselves feeling too old to change their mode of life and thought, were fully alive to the importance of bringing up their children in the new, the modern, spirit of Japan.

I could not but compare the fond mother of Yasumaru to the maternal hen, of popular illustration, blessed with a brood of ducklings whose ways of life she did not know. Yasumaru had two brothers and four sisters, the latter being named Okiku, Omatzu, Oume, and Oyuki, and their ages ranged from twelve to nineteen years.

It was a source of constant delight to observe the deferential manner they maintained and the respectful form of language they employed towards their parents. These girls were highly accomplished and well educated, speaking English fluently.

In Japan women have always held a higher position than in other Asiatic countries. They go about freely wherever they please, and the seclusion of the Chinese is wholly unknown to them. The schools receive as many girls as boys; and as a result of my observations I can safely say, without idle compliment, that the former are brighter than the latter.

By degrees, and under these favorable conditions for general observation, some of the causes of the people's happy spirit of independence began to be revealed to me. The simplicity of their lives, in which enters no selfish rivalry to outdo one another, accounts in a large measure for this enviable result. Regard-

ing one another very much as belonging to one family, their mode of life is more or less on the same plane, and consequently a spirit of great harmony prevails. A very small income is sufficient to supply the ordinary necessities of life, and everything else is secured with but little effort. Household effects are few and inexpensive; and should everything be destroyed by fire or lost in any way, it is not an irreparable calamity. All can be replaced at a small outlay and life go on as before.

The tenant upon renting a house is put to little expense to furnish it; indeed, he requires absolutely no furniture at all. The clean, finely woven mats which cover the floor serve as table, chair, and bed; and as it is the universal custom to remove the shoes before entering a house, there is no danger of one's bringing with him the dirt from the streets.

His bedding consists of cotton quilts, which are spread out on the floor at night, rolled together in the morning, and stored away in a closet during the day. A few pictures (*kakemono*) and specimens of beautiful script decorate the walls, a few vases contain sprays of flowers, and a number of cushions on the floor complete the furnishing of a room. Yet it does not seem empty or cheerless; for the general arrangement of harmonious colors, the different woods employed in its visible construction, and the beauty of the finished workmanship, make a most harmonious and pleasing combination. Paint is never used to cover the wood, much less to substitute a false grain.

The love of flowers in Japan amounts almost to adoration. They are inseparable from the life, art, and literature of the people, and to deprive the Japanese of them would be to take the sunshine out of their lives. On one occasion I received through my young friend an invitation from his parents to accompany them on a visit to a very celebrated grove of plum trees that were then in full bloom. After an hour's ride in a "jinrikisha," or "kuruma," as these little man-carriages are more commonly called, we arrived at our destination, where great numbers of people were flocking from all points.

Yasumaru's sisters, in common with most of the visitors, were arrayed in their brightest and most beautiful *kimono*s, their mother's dress, however, being of more sober color, for it is considered very unbecoming for an elderly woman to wear anything bright. I don't think I ever observed a deviation from this rule. As we left our jinrikishas and entered the grove, which consisted of old, gnarled, and moss-covered trees, a glorious sight burst upon our view.

The trees were one mass of fragrant white and delicate pink blossoms. Hundreds of

visitors in holiday attire were strolling about under the branches with extreme delight depicted on their countenances. Others again had spread rugs under the trees, where they were served with delicious tea free from the neighboring tea house. The brightly clad children were dancing and frolicking in the shade of the blossoms, and a more perfect picture of sunshine and happiness can hardly be imagined. Innumerable little strips of paper fluttering amidst the blossoms attracted my attention. Miss Okiku informed me that it was the happy custom of the people to give vent to their delight on these occasions by inscribing poetic sentiments, too brief perhaps to be called poems, and hanging them up in the boughs. And sure enough, as I looked about me, I observed several persons with paper and pocket inkstands in hand engaged in composing these little sonnets in praise of the blossoms.

Yasumaru was at some pains to explain to me that these poetic effusions were supposed to be composed on the spot — that the expression, the form of the idea, was derived from the inspiration of the scene; but his father added, with a twinkle in his eye, that many came with their poems already prepared. I was honest enough to confess to the old gentleman that this proceeding was not altogether different from the habit of our after-dinner orators who surprise their friends with impromptu composed, as the French put it, *à loisir*; that is to say, at their ease. Some months later I painted a picture entitled "Spring's Inspiration," in which two young girls are represented walking over the huge stepping-stones through a grove of blossoming plum trees and reading these poems; for, although it is not recorded that the Japanese lover takes this means of praising his Rosalind, none the less do Japanese maidens delight in passing from tree to tree perusing the fluttering inscriptions. The daughter of one of my neighbors, a highly accomplished young lady, kindly consented to write an appropriate poem that could be introduced into my painting. This was, in due time, sent to me with her own translation into English, and a little added note of explanation. Her translation of this note is as follows:¹

"When Mr. Wores will set out to America he asked me to write down a nice poem to his picture which he has painted it in Japan and represents that a pretty girls are standing under a plum blossoms, so I have made the poem and written it here :

¹ Although I feel constrained to ask the reader's charity for the form of this note, it would lose its charm by revision. After all, the question is, How many mistakes would an American girl make under the same circumstances in writing a note in Japanese?

"SPRING'S INSPIRATION."

"O, how lovely the plum blossoms smell,
I must keep the sweet smell into my sleeves.
They will be able to make me happy for the
sorrow which the beautiful and cheerful blossoms
should have gone."

VOL. XXXVIII.—88.

Another of these poems reads in this wise:
"How happy I will be if a gentle breeze
blows and wafts the fragrance of the blossoms
slowly by, and I hope no wild wind will come
to scatter them away."

The plum may be considered the favorite flower of the Japanese, for the snow has hardly disappeared from the ground when its earliest blossoms burst forth and are hailed by the delighted people as the first token of spring, a time to store away their winter garments and substitute for them the lighter ones of spring; for these children of the "Sunrise Land" have no love for cold, cheerless winter, and the early plum blossoms herald but the awakening of nature from her long winter's sleep.

The cherry blossom follows and almost rivals the plum. Great avenues and groves of these trees are planted for the sake of their blossoms only, for these trees bear no fruit. But in this esthetic land, where the sense of sight receives as much consideration as that of taste, these trees in exhibiting themselves once a year in floral attire are considered as having fully performed their duty.

As in plum-blossom time, the people make holiday and amidst the fragrant flowers drink tea made of last year's blossoms that have been dried and kept for that purpose.

This intense love for flowers and plants furnishes but another indication of the general refinement of the people, for it is shared alike by high and low, rich and poor; the poorest being never so poor but that they can, for a copper or two, buy a few sprigs of flowers from the *nannaye*, the street flower seller, who carries his fragrant burden in two large baskets suspended from a pole on his shoulder, setting it down from time to time along the thoroughfare.

As I have said, flowers enter into the life and art of the Japanese to such an extent that the loss of them would be like taking the sun out of their world. But herein they show their consistency by their admiration more for the individual flower and plant, the graceful lines and the color and forms of which give them far more satisfaction than great confused masses of differently colored flowers. Indeed one rarely sees more than a very few sprigs and blossoms arranged together, but the result is almost invariably artistic. This is, however, not left to chance; for the art of flower arrangement is one of the most important branches in the education of young ladies of the upper classes, who devote years of study under proficient masters in acquiring the accomplishment.

Near the entrance to the plum garden we passed a temple, from the veranda of which a priest was feeding a great fluttering and dazzling flock of pigeons which were so tame that without the slightest fear they ate the rice that was held out to them in the open hands of the visitors. Seated before the temple was a man with a large cage filled with little birds, one of which was purchased by Oyuki, the young-

est girl of our party, who, according to a charming custom, threw the little feathered prisoner into the air and gave him his freedom.

We had now spent several hours among the plum blossoms and were preparing to depart when Yasumaru's father suggested that we finish the day in a visit to the theater. "We are rather late," he said. "It is now eleven o'clock and the play commenced at seven in the morning; but you will see enough," he added, "especially as this will be your first visit; and by the time it closes, between ten and eleven o'clock this evening, I am sure you will have had quite enough for a first experience." Our conversation was carried on through the medium of his children; for my knowledge of Japanese was rather limited at that time, and although the old gentleman read English without difficulty, he never attempted to speak it. He had on a former occasion said to me, "When I was a young man the only intercourse we had with the outer world was through the Hollanders, and then it was quite the proper thing for a young man to study the Dutch language, as my sons now study English." He had a very good library of old Dutch books, treating of every possible subject, and, like many others, he had been well posted on much that was going on in the Western world long before the gates of Japan were opened.

After a half-hour's ride through the streets of Tokio we arrived at the theater. The entire front of the building was covered with showy colored pictures of the actors and scenes of the play. But we did not draw up before the crowded entrance, buy our tickets, and elbow our way in, for that would be altogether too undignified a proceeding for a Japanese gentleman and lady. That is all obviated through the medium of the adjoining tea houses, in front of one of which we now descended from our jinrikishas. The host received us with profound and respectful bows as we entered, and after having served tea he was consulted about the seats, location, etc., and a man sent to secure places for us as well as for the servants; for the Japanese treat their servants in many respects much as members of the family. After resting for a few moments, and leaving all our unnecessary luggage behind, we followed the servant across the street to the theater, and were conducted to our boxes. The theater, though roughly constructed, was in general arrangement similar to those in the United States. Instead of chairs or stalls, however, the pit was divided by low partitions into boxes about five feet square, each of which accommodated from four to six persons, who sat on cushions on the floor. The gallery was likewise divided into boxes, and at the highest and extreme end was a space

THE RETURN FROM THE CHERRY GROVE.

separated by strong wooden bars and occupied, as with us, by the "gallery gods."

A raised walk on a level with the stage and running from it through the orchestra or pit extended along each side of the theater, by means of which the actors were enabled to traverse the entire length of the house—a great advantage in representing approaches from a

distance. On each side of the stage were boxes containing the orchestra and the chorus, the latter chanting in doleful tones the plot of the play as it progressed.¹

¹ The Japanese chorus, unlike the Greek, consists of but two or three performers. However, the comparison with the chorus of the Greek tragedians is interesting.

The stage revolves on wooden balls, placed in a well-greased groove, thus enabling a scene to be changed without loss of time or lowering the curtain. A scene, for instance, is represented in which a party of travelers arrive before a tavern. They decide to enter, and as the first passes through the door the stage slowly revolves and brings to view the interior of the house with the traveler entering through the same door. I was agreeably surprised at the effectiveness of the scenery and the make-up of the actors, especially those who impersonated female characters, which, as in Shakspeare's time, are always taken by young men; but so successful in speech as well as in action is this impersonation that it is difficult for a stranger to realize that they are not women. The acting was so expressive that I could almost, without the explanations of my friends, follow and enjoy the plot, which contained many of the usual elements of our own drama—the oppression of virtue and innocence and the final triumph over vice and crime. I have never known an audience so easily moved to tears as were these sympathetic spectators, especially those of the gentler sex, who were at times, almost without exception, weeping over the sad fate of some hero or heroine.

The leading character and chief attraction of the play was an actor named Danjero, the Booth or Irving of Japan, and it required no understanding of the language to appreciate his great art. There was also a ghost, who, like his familiar counterpart in Hamlet, spoke in the conventional hollow, sepulchral tone of voice. This ghost, Yasumaru assured me, was very celebrated; he belonged, in fact, to a famous family of ghosts, the successive members of which had acted in that capacity for many generations.¹

Intermissions take place from time to time, during which servants from the neighboring tea houses bring in great trays filled with all kinds of refreshments, for at these all-day performances the audience take their meals in their boxes. We had both dinner and supper served to us by our host of the tea house, and the servants also appeared with refreshing tea at intervals between the meals.

Long as the play may seem, it passed only too rapidly, and I found my interest increasing to a feverish degree as the end was neared. A young daimio, the hero of the play, had committed a political offense and had been con-

demned to commit *hara-kiri*. Under these circumstances the code of honor of Japan enjoins upon a man the necessity of taking his life with perfect stoicism. In this case the young man showed evidences of a mental struggle. In a mournful soliloquy he expressed his unwillingness to die in the spring of his hopes and in the flower of his youth. Finally, strengthening his resolutions, he gave one last fond glance at a plum tree the blossoms of which overshadowed the door, and entered the fatal room, where, concealed from the view of the audience, he was to disembowel himself.

A few moments passed in silence and then a single blossom from the plum tree slowly fluttered to the ground. This was followed by a second, then by a few more, and then by a shower of blossoms.

"It is ended," said my friend. "Let us go."

An utter absence of sham, a perfect freedom from all affectation, constitutes one of the most admirable qualities of the people. They show no false or veneered front to the world, and their lives and actions are free and natural. The beauty of their homes lies more in the interior finish than in a showy outside, and the most beautiful rooms are generally those facing a garden in the rear. Even in their dress they are consistent, for the lining of their gowns is often of a more expensive and finer material than the outer stuff. However large and valuable a collection of works of art a Japanese gentleman may possess, the invariable severe simplicity prevails in his home. A few of his treasures may adorn his rooms, but the greater number of them—his pictures, bronzes, lacquer, and porcelain—are carefully stored away, each in its separate case, in the *kura*, or storehouse, and one may make many visits to his house before becoming aware of their existence. The few that may be observed about the rooms are occasionally changed for others, and only when the owner is visited by an art-loving friend who understands and can appreciate his treasures are they brought out. He never makes a vulgar display of them, for it is a true and genuine love for the beautiful which prompts him to acquire them; and through his enjoyment of these things he derives far more pleasure out of his life than the restless foreign observer may realize, who is only too apt to consider it uneventful and monotonous.

A Japanese friend once confided to me that

¹ A play in the modern Japanese repertoire is our own "Merchant of Venice," with Portia left out. Some of the features of the adaptation are as follows: The Jew is a money-lender of Tokio. The 3000 ducats become 300 yen. To give character to the trial scene a few male-factors are introduced and sentenced and tortured on the stage. Then comes the *cause célèbre*. The money-

lender flourishes his knife and demands his pound of flesh. The judge sees no way out of the difficulty and declares that the money-lender is entitled to it, when suddenly a door opens and a superior judge enters, supplying the necessary equity. Japanese etiquette would entirely forbid the rôle of Portia in Shakspeare's play.

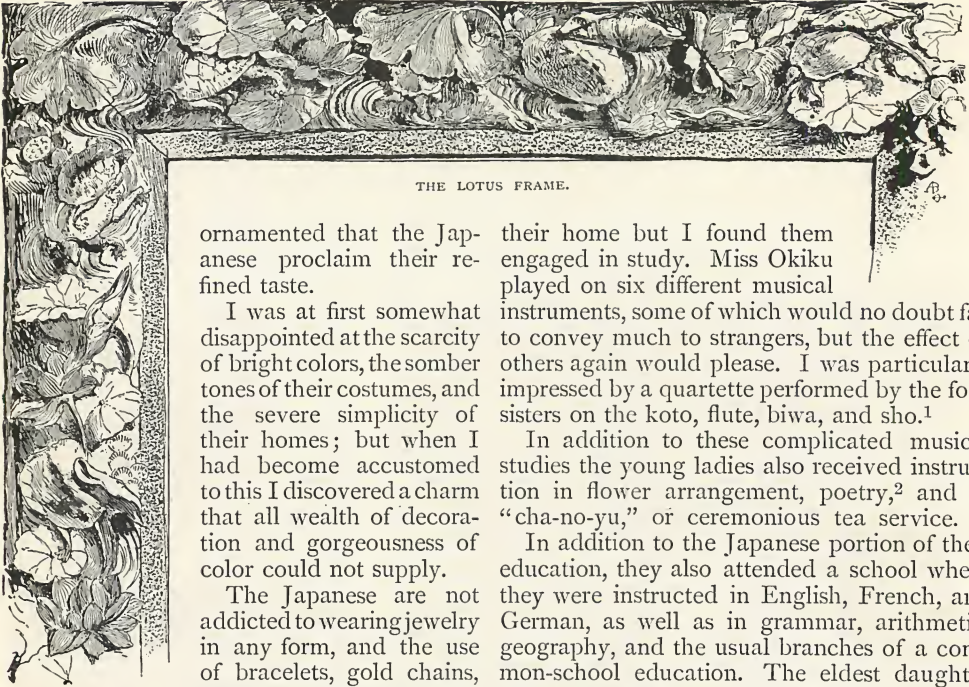

A FLOWER SELLER.

although there was much that he admired in the appointment of our American homes, all this furnishing and decoration confused him. He did not know if he was right, he ventured to say, but it seemed to him that there was too much of everything; in fact, they seemed to him more like curio shops than living-rooms.

In this respect the difference between the Japanese and ourselves lies in the fact that

whatever one may find in their houses, beautiful as it may be, is for use as well as for ornament. Its beauty, in a great degree, lies in its utility, whereas with us half of the objects that decorate our crowded rooms serve no useful purpose.

Although the term "barbaric splendor" is often used in descriptions of Japan, it could not be more wrongly applied, for it is in the very avoidance of all that is gaudy and over-

THE LOTUS FRAME.

ornamented that the Japanese proclaim their refined taste.

I was at first somewhat disappointed at the scarcity of bright colors, the somber tones of their costumes, and the severe simplicity of their homes; but when I had become accustomed to this I discovered a charm that all wealth of decoration and gorgeousness of color could not supply.

The Japanese are not addicted to wearing jewelry in any form, and the use of bracelets, gold chains, rings, and other ornaments,

which can only be regarded as relics of barbarism, they have long since outgrown. Nothing could be more shocking to a Japanese lady than the custom of piercing the ears and suspending rings from them. In their freedom from this custom they perhaps stand alone among nations.

I have often been asked what constituted the Japanese ideal of feminine beauty and how it corresponded to our own. I found that the type most admired is of a slender, ethereal order with oval face, slightly aquiline nose, and light complexion. This represents the aristocratic type, and I could not but concede to many examples of this class a high degree of beauty; but when I ventured to express admiration for another type, the robust, red-cheeked, and well-developed country girl, I could not fail to notice the expression of pain and pity that came over the faces of my friends. Such taste seemed to them perfectly barbarous!

Yasumaru's sisters, whom I mention at all times more as typical examples of their class than as individuals, were well educated in all the branches that go to make up the accomplishments of a Japanese girl. I rarely visited

their home but I found them engaged in study. Miss Okiku played on six different musical instruments, some of which would no doubt fail to convey much to strangers, but the effect of others again would please. I was particularly impressed by a quartette performed by the four sisters on the koto, flute, biwa, and sho.¹

In addition to these complicated musical studies the young ladies also received instruction in flower arrangement, poetry,² and in "cha-no-yu," or ceremonious tea service.

In addition to the Japanese portion of their education, they also attended a school where they were instructed in English, French, and German, as well as in grammar, arithmetic, geography, and the usual branches of a common-school education. The eldest daughter also went to dancing-school, for it is now considered quite as important for a Japanese as for an American girl to learn to waltz. The square dances, however, seem to be the most popular. Of course only the younger generation indulge in this pastime, for with a Japanese of the old school such an undignified performance would be out of question.

Although I entered into my new life in Kanasugimura ("golden cedar village") with great zest, I cannot say that my arrival was regarded with unmixed pleasure by my neighbors. I was the first foreigner who had come to live in the midst of them; and therefore I was the subject for daily discussion in the adjoining tea house of the "Nightingale Spring," so named from the fact that nightingales were said to abound in the vicinity, which had also been a favorite resort of the poets, who loved its peaceful quiet and the beauty of the adjoining park of Uweno.

I was greatly amused at the terror displayed by the little children, who at first fled at my approach. But in a little while they grew more trustful and stood as I passed, gravely bowing their little shaven heads. I invariably found them well behaved and respectful. As

¹ Music-teachers in Japan are invariably blind, the practice of that profession being by general consent restricted to these afflicted people, and no infringement on their rights is tolerated.

² Japan is emphatically the land of poetry, for it is customary to express the most trivial feeling of the day by quoting a verse from some Japanese poet. I asked one of my friends what he should say to a young lady

if he wished to compliment her highly. "Oh," said he, laughing, "we never leave that to chance. We have a verse which exactly suits the occasion. This verse is worthy of the most high-flown period of French gallantry. The maid is informed that her beauty is 'so dazzling that the fishes sink to the bottom of the sea, that the flowers wither at her approach, and the birds fall helplessly at her feet.'"

they are treated with great kindness and consideration by their elders, who never, under any circumstances, resort to corporal punishment, they retain in consequence much self-respect and pride, and resent being treated with patronizing condescension. Nevertheless they are thoroughly childlike, and indulge in all plays and frolics with the same enjoyment as other children. Their sweet and melodious voices attracted my attention as would the

workshops I was surprised at the almost universal ability displayed for drawing in a free, off-hand manner. Almost every artisan could with the greatest facility make a quick effective sketch for any design that might be suggested to him. This facility in rendering forms and designs in flowing lines with brush and ink is undoubtedly owing to the graceful form of their writing, to which years of study are devoted; and this is in itself an art education.

THE KOTO PLAYER.

warbling notes of a bird. This is not purely nature's gift, but more or less the result of training.

I had not long been in Tokio before I became acquainted with a number of native artists, who all expressed the greatest desire to see my pictures, and to have me give opinion on their work. On the other hand I felt the same eagerness to become better acquainted with their art and methods, and to study the conditions under which they had developed into the only purely artistic nation of the world.

With us the artist, whose technical education and taste has been fostered in an artificial atmosphere, is but little understood by his public, and receives little sympathy except from a limited class. But the Japanese artist is in harmony with his public; he is free to follow his natural instinct with the conviction that everything he produces will be understood.

In associating with the people and visiting

This conviction, I may add, is shared by all Chinese and Japanese critics, who assert that painting is but a species of writing. They are taught from childhood to draw the Chinese characters in bold, free, and graceful lines, and beautiful writing is regarded as good drawing. The expression "It is alive" is applied to writing as well as to drawing.

One day, attracted by a bit of wood carving in a carpenter's shop, I entered, with the thought of possibly having a frame carved for a certain picture. But finding the master of the shop, a bright, intelligent-looking old man, engaged with his two sons in constructing some rude tables, I was not inspired with much confidence. But when I told him what I wanted he hastened to assure me that he could execute my order without the slightest difficulty, and displayed such eagerness to undertake the work that I resolved to give him a trial. The design of this frame, I explained to him, was to consist of lotus leaves,

flowers, and turtles, carved in relief. With the assistance of a few rough suggestions with a pencil I made my idea clear to him and he volunteered to make a drawing. The next morning he presented himself with a large and elaborate sketch.

I could hardly believe it possible that such a beautiful work, which embodied in the most artistic manner all I had suggested, could have been executed in so short a time. His ability was therefore no longer to be questioned, and when a few days later I again called at his

covered him intently watching a little turtle which he had fastened to a string, and when he observed a movement that struck his fancy he reproduced it in his work. But this was rather exceptional; for like the painters of Japan he rarely copied nature directly, as her impressions seemed to remain fixed in his mind.

But skillful though he was, there seemed no opportunity for him to display his ability in the proper channels, and he was compelled, in order to earn his daily bread, to devote himself to the most ordinary carpenter's work,

A CANDY SELLER.

shop he was already hard at work on the frame. It was most fascinating to observe its progress. A rough piece of camphor wood, which represented one side of the frame, lay before him. With a few rapid strokes of his brush he indicated the general design, and then, without any further preparation, seized his hammer and chisel and without hesitation boldly hacked away at the wood, making the chips fly in every direction. Before long the unmistakable forms of lotus leaves, flowers, turtles, and water lines, gracefully intermingled, began to appear.

This man, besides possessing the greatest mechanical skill, was thoroughly artistic in temperament. On one of my visits I dis-

After this he carved a number of other frames for me, and each successive one seemed an improvement on the last. I learned that he belonged to an old and celebrated family of wood carvers, and that his ancestors had, three hundred years ago, carved the ornaments of the famous temples of Nikko.

There are many such skillful artisans in Japan who are without employment and who could, did they but receive the proper encouragement, produce work equal to that of any period. I have even met with beggars whom I envied for their artistic ability. On one occasion I noticed a ragged old man seated by the wayside. He had carefully cleared and smoothed the ground before him, over which he had

sprinkled with a sieve a layer of fine dust. By his side were a number of boxes containing sand of different colors. As I stopped before him he plunged his hand into the box of black sand, and letting it run through his closed fists began to form the outlines of a graceful figure on the gray dust. He shaded the lines as gracefully as with a brush, and in a few moments the contour of a well-drawn female figure appeared on the ground before me. He next proceeded to fill in the various shades of the dress and its patterns with the differently colored sands, and almost before I could realize it he had produced a most beautiful effect, and I only regretted that this sand painting could not be preserved and carried away.

I followed the example of the other bystanders and threw him a few small coins, whereupon he brushed away this picture and began another. So it went on, figure after figure, varied occasionally by beautiful script, flowers, and birds, and so long as the money was forthcoming so long the pictures appeared, as though the supply was inexhaustible.

Another artist of this class whom I often met was the street candy seller. He carried his stock on his back, and stopped from time to time to blow his trumpet and make his presence known to the children of the neighborhood. Putting his stand on the ground he stuck a lump of soft candy to the end of a bamboo straw and proceeded to blow all kinds of familiar objects, after the manner of a glass blower. He formed, for instance, a gourd with its hollow stem wound around the straw, then he added a few leaves, a snail or two crawling, most naturally, along the stem, and behold, the work was complete. Thus he created birds, animals, masks, or whatever might be suggested to him by his child patrons, who surrounded him and eagerly bought his productions.

Love of nature tends to make the Japanese great travelers within the limits of their native land. There are a number of well-known views and historical places that have for centuries formed subjects for painter and poet.

To visit these celebrated places is the ambition of every one of high or low degree, the former traveling leisurely, with all comforts, and attended by a retinue of servants, while the latter more generally dons the pilgrim's white habit and with staff in hand wanders from shrine to shrine, thus performing a religious duty and enjoying the natural beauty of the country at the same time. In traveling about the country I constantly had my notice drawn to certain fine views and attractive spots, and almost invariably found that they had been well selected and were worth a visit.

I once accompanied a Japanese gentleman to a celebrated valley, or cañon, near Kioto,

through which flowed a wild and rapid stream. We took a boat and were guided by skillful boatmen down the stream through the rapids. As we floated along, my companion would from time to time utter exclamations of delight and point out some beautiful or historical spot, giving, at the same time, an interesting little description or anecdote relating to it. I therefore very naturally supposed that he had repeatedly visited this place, but on inquiry I learned, to my astonishment, that this was his first visit, and what he recognized and knew was owing to the pictures he had seen and the books and poems he had read since his childhood.

Japan, more than any other country, perhaps, owes much of its general beauty and attractiveness to the hand of man; but so successful is the harmonious combination of man and nature that one at first fails to realize how much each has contributed in forming the character of the country. But there is no conflict between them. Man has made no attempt to supplant or to improve nature, and has been but a loving assistant. Thus has this process gone on for ages and ages, until the people and their surroundings form one harmonious whole.

One day I received an invitation to visit an exhibition of paintings given by one of the leading art societies of Tokio. The day and hour of my visit were fixed so that the members of the society who wished to be present could on this occasion make my acquaintance. The exhibition was held in a temple, situated on a small island in a lake near Uweno Park.

I was warmly welcomed with much ceremonious bowing by a number of the artists who constituted the reception committee. They led me through a series of rooms, the walls of which were hung with a great variety of *kakemonas*, as the roll paintings are called. There were many different schools of painting represented, some of them consisting of most conventional productions, while others again seemed natural and lifelike.

But I felt in looking at these pictures that too many of them represented but occasionally varied efforts to reproduce well-known subjects and effects, the creations, in an inspired moment, of some great master of the past.

After the examination was over, I was conducted to an adjoining tea house, where a collection of representative works of the old masters had been brought together for my especial benefit. These were certainly the finest specimens of Japanese art that I had yet seen, and how they stood out by contrast against the modern ones of the exhibition we had just left! As I passed from one to the other the

HIAKU NEN'S DRAWING.

different styles and schools they represented were explained to me, and the artists were much pleased that I should express admiration for what I saw.

They all evinced the greatest curiosity to know to which of these pictures I would, from my standpoint of art, give the preference; and when, after due deliberation, I made my decision, it was received with a perfect outburst of astonishment. I had, they assured me, selected the masterpieces, the very pictures that they prized most highly. It took them some time to recover from this surprise; but when they did, all barriers of race seemed to have disappeared. We were now but a company of artists, bound together by mutual sympathies and common ideals. I never spent a more delightful afternoon. I was surprised to see how thoroughly cultivated were their art ideas, and

how identical in many respects with those of the best of our artists. They asked me many questions about European art and artists. I had some photographs of pictures with me which I showed them. They seemed pleased, but were astonished when I told them the amount of time which had been required in painting them. They argued that a painter should spend a great deal of time in observing nature, and when he had thought out his picture perfectly in his mind, and was saturated with the subject, then he

should seize his brush and dash off the picture in a few hours or minutes.

It is the spirit more than the substance that the Japanese artist strives to produce. He does not attempt slavishly to reproduce the textures of the trees, rocks, and other objects in a landscape. A mere suggestion of one of nature's moods that serves to bring back to the mind the impression it received is, in his opinion, quite enough, even if expressed in half a dozen strokes of the brush. The graceful and lifelike action of a bird, suggested in a few strokes, is far more commendable in his eyes than the most clever and realistic rendering of its feathery texture.

After several hours agreeably passed in art discussion I was duly elected an honorary member of the institution, and was informed that a full account of the reception would appear in the monthly journal published by the society.

As Japanese art was derived from China directly and indirectly through Corea, so does China owe much of its preservation and continuation to Japan. The Japanese rulers were eager collectors of Chinese paintings, and great numbers have in this manner been preserved and handed down. It is not difficult to secure an old Chinese painting in Japan, whereas it is almost impossible to find any in China. This is also the case with musical instruments; for although nearly all those in Japan were derived from China centuries ago and are still in common use, many of them are no longer known in China. In architecture also the construction is in the main Chinese, but a marvelous transformation has taken place in time. The superior beauty, refinement in color, and form of the details and ornamentation are purely Japanese.

The temples of Japan, as was the Church of Rome in the Middle Ages, were great patrons of art, and are to this day the store-houses and guardians of the most valuable art treasures. Owing, however, to constant thefts and to sales by the priests, the Government a few years ago declared these treasures the property of the state, and officials were sent to the various temples to take inventories of them. Every few years a tour of inspection is made, and the heads of the temples are held strictly responsible for what may be lost. It was only since these investigations have taken place that the Japanese could form any idea how much of this ancient art their country contained.

I had many meetings with artists in various cities, and was always politely received. On one occasion I visited the house of a well-known artist of Kioto named Hiaku Nen, literally Mr. Hundred Years.

Mr. Hundred Years belonged to a very old

family of artists, but this is not unusual in Japan, where many of the artists bear the names and are the direct descendants of those who were founders of great schools of painting four or five centuries ago.¹ During the afternoon several other artists came in, and in the midst of an interesting interchange of ideas the old man suddenly jumped to his feet and clapped his hands, exclaiming, "This is too instructive; my pupils must also receive the benefit of your remarks." Obedient to their master's call, a string of five or six young boys filed noiselessly into the room, and, bowing their heads respectfully to the ground, seated themselves at the farther end of the room and listened attentively to all that was said.

The old man seemed to think that art had of late sadly declined in Japan. He was of the opinion that too many of the young men were striving merely to acquire the "brush stroke facility" of their great predecessors, losing sight, in the meanwhile, of the spirit of their work. They did not seem to realize that these brush strokes were but the means of expressing great ideas. "The result is," he added sadly, "clever brush strokes and nothing more." As I expressed a desire to see some of the work of his young pupils, he ordered ink, brushes, and a large sheet of paper to be brought. Then one after another these little men gravely seated themselves before the paper and in a few moments made a graceful little drawing, each signing his name to the work. Mr. Keinan, also a well-known Kioto artist, who was present, then made a very clever sketch of two swimming ducks, one of them half under water. The others followed his example, and, last of all, the master took the brush and in a few moments sketched a most lifelike crow, seated on a bough and gazing at a persimmon growing overhead. So realistic is the action of the bird that I have often feared he would hop off the bough and leave me; for, as the master rolled the pictures together and kindly presented them to me as a souvenir of my visit, I came into the possession of this masterpiece.

One of these artists afterwards visited me at my studio. Although he seemed pleased with much that he saw, he expressed himself as follows: "I hardly know what to say, this is all so strange and new to me. However, it seems to me," he added rather reluctantly, "that your chief aim is to produce a real effect; in fact, you strive to make your picture look so real as to deceive one into the belief

that he is looking at nature. Now do you think that this can be accomplished with paint? Do you think you can succeed well enough to warrant your making that your chief aim?" And, indeed, I found it to be a very general belief among Japanese artists that European painters strive to produce realistic effects only, and never attempt to express noble thoughts or poetic ideas in their works.

The Japanese artist depends but little on direct sketches or studies from nature, and his work is almost entirely the result of observation. His mind seems to retain, to a wonderful degree, the impressions it receives of color and form. Subordinate details, however, are not so firmly impressed on his mind as to cause him to lose sight of the general effects

A PUPIL'S DRAWING.

of line and color. It is hardly conceivable to the European artist, who is accustomed to make most careful studies direct from nature, that realism can be carried so far with mental

¹ A Botticelli, Raphael, or Titian living among us, the lineal descendant, through successive generations of artists, of an illustrious ancestor, would not possess a more remarkable pedigree than do some of these living painters of Japan. I have seen a collection of pictures, consisting of one or two examples of each successive member of one of these artist families,

covering a period of over four hundred years. It was curious to observe the hereditary variations, artistically speaking, that this family had undergone. In one period generation after generation seemed to deteriorate, then in another a brilliant genius would appear whose works would throw a glamour on the family name.

A JAPANESE GARDEN.

studies only. I once saw an exquisite work in one of the curio shops of Yokohama. It consisted of a figure bound to a cross,—for crucifixion was formerly one of the modes of punishment in Japan,—and for its action and anatomically correct modeling it ranked, in my estimation, as high as anything in the sculptor's art of modern times.¹ I later saw a group by the same artist representing two dancing devils, about three feet in height, at an exhibition in Yokohama, that was quite as masterly in its action and modeling. I greatly desired to know something of the author of these productions, and, if possible, to meet him and to learn something of his mode of work. This, however, I found difficult, as the dealers who monopolized his works were evidently not disposed to reveal his identity. But eventually I succeeded in locating him. About the only information the dealers had volunteered to give me was to the effect that he was a very old man, about ninety years of age, and the works I had seen were probably the last he would ever produce. It was therefore with satisfaction and surprise that I discovered him in his workshop, a bright, intellectual looking young

man of thirty years of age. He was greatly astonished when I told him of the reputation he had acquired through his works in Yokohama, and the prices that were being asked and paid for them. As I supposed, he had been working for mere carpenter's wages, and that accounted for the mystery with which the dealers endeavored to invest him. On the occasion of my visit he was engaged in carving some grotesque masks, and showed me several unfinished figures that convinced me more than ever of his great genius. The action, as well as the details, the hands, the feet, were executed in the most masterly manner. I asked him many questions with regard to his methods, and received the astonishing information that he worked entirely without models and knew nothing of anatomy beyond what his observation of living figures had taught him.²

Much of the grotesque character and exaggerated action that undoubtedly exists in Japanese art, when compared with ours, seems to disappear on better acquaintance, and especially as we become familiar with the people and their impulsive ways. A few years passed under these influences is very apt to change

¹ I believe that my opinion would receive general support were the works of this sculptor placed in a European exhibition.

² With such an example for us it is not unreasonable to suppose that it was under similar conditions that the great works of the Greek sculptors were produced.

many preconceived points of view. The action of figures, for instance, in some of our best figure paintings seems posed and statuesque—greatly lacking in the lifelike and natural action of those of the Japanese. Much of this may be the result of that study of Greek art which forms the foundation of our art as taught in all the great academies, and which ever after tends to blind the student to life in its graceful and natural action.

I was much impressed with the calm and serious religious spirit of many of the large wall-paintings in the old temples. They reminded me strongly, both in spirit and execution, of the Byzantine and pre-Raphaelite paintings in church and cloister. I cannot help thinking, however, that the art of painting in Japan will not, except in a few branches, bear comparison with the best works of the old masters of Europe, and it has never been developed to that degree of perfection or attained the completeness of the best of Western art.

But then the Japanese art of painting cannot, as with us, be treated separately, for with them it is closely connected with all the other arts, which mutually strengthen and complete one another. This harmonious combination of art and industries, taken as a whole, excels anything that Western civilization can produce.

Shortly before my departure from Japan I was prevailed upon to exhibit my pictures at the *Mōgaku*—the Tokio asylum for deaf-mutes and the blind—for the benefit of that institution. Great interest was taken in the affair by both managers and public, and the exhibition was largely attended.¹ Before it formally opened, a private view was held for the members of the mikado's family and officials of high rank. On this occasion Prince Harunomiya, the son of the mikado, a child of six years of age, made a most ceremonious visit, attended by his aides-de-camp and a numerous suite of court officials.

The little fellow had been driven to the building in an English coach and four, with liveried footmen, and he was dressed in an American boy's suit, with the exception of a military cap. As he entered the hall his escort followed respectfully and the director of the institution received him with profound bows, but when I was introduced to him he stepped forward with great self-possession and shook hands with me. He then passed from picture to picture, motioning for me to accompany

him. He gravely examined each picture separately and listened attentively to the director's explanation, giving me from time to time a nod of approval. He bought a number of photographs of the pictures which were on sale for the benefit of the institution, and as he took his departure the director advanced to escort him to his carriage. He turned at the threshold of the door, however, and gravely motioned him back, as if to say, "We will dispense with further ceremony." And he did, for he jumped quickly into his carriage, and touching his cap in military salute, the heir-apparent to the throne of Japan was rapidly driven off.²

The skilled artisan of Japan not only executes but in most cases designs his own work.³ He perfectly understands the capabilities of the materials he employs, be they of wood, bronze, lacquer, or ivory, and he designs his forms to adapt them to the materials used. He does not consider it necessary that the form he plans should be a perfect or accurate reproduction of the object he undertakes to represent, but he does endeavor to give its character, however he may vary the design in conforming to the character of his materials.

In this he is undoubtedly guided more or less by his artistic instinct, which is but an inheritance from generations of artisan forefathers who have bequeathed to him their accumulated knowledge. Thus it is that the Japanese artisan is instinctively artistic, and produces artistic work almost unconsciously by simply following out his natural tastes and inclinations.

With us, whatever the designer produces is planned with the deliberate intention of making what he knows to be considered artistic. It is but what he knows, and not what he feels.

Many of the artists of Kioto, the ancient capital of Japan, continue to a greater degree than those of Tokio to remain true to the art traditions of the old time, and the modern commercial spirit had not yet encroached to such a demoralizing extent upon their work.

This fact was impressed upon me on the occasion of a visit to a celebrated cloisonné maker of the former city, who was renowned for the beautiful form, color, and workmanship of his ware. He received me with the usual courtesy in a home which was exceptionally refined and esthetic. One side faced and opened

¹ The exhibition lasted four days and the price of admission was only 15 *sen*—about 10 cents. The sum netted for the benefit of the asylum, however, was over a thousand dollars.

² The prince's family has reigned in Japan over two thousand five hundred years. I could not help speculating, therefore, as to whether his majestic manners were not, like the skill of the artists, inherited.

Vol. XXXVIII.—90.

³ This was true also of the great gold and silver smiths of Europe. Compare Benvenuto Cellini's account of art and artists of that period. Art historians could obtain a much better insight into the conditions under which the art of Europe during that period flourished by familiarizing themselves with the living art of the workshops of Japan.

on a most charming garden. A little waterfall murmured in one corner and emptied its waters into a deep pool in which great golden carp sluggishly swam about. The garden was inclosed by a high hedge and tall trees that completely shut out the busy world beyond. Although we were in the middle of the city, the illusion of distance was perfect. Here and there the hedge had been cut away just enough to give a glimpse of a distant range of mountains or a picturesque old temple or pagoda. We walked through the garden, crossed a little bridge consisting of one roughly hewn slab of stone which spanned the dry bed of a brook, artificially constructed with water-worn stones so ingeniously placed as to make it seem nature itself. Presently we caught a glimpse of the workshop with its busy workers. All the beauty of this garden was spread out before their eyes, and the master, who seemed to read my thoughts, asked me whether I did not think it likely that these workers in beautiful forms and combination of harmonious colors would be favorably influenced and assisted by their inspiring surroundings. Who could not but agree with him? We returned to his house, where he told me something of his life, and my admiration for the man increased. He employed only a few

assistants and executed but a limited quantity of work. He was ever striving to improve the quality of his ware, and proudly pointed out the contrast between his former efforts and his present work. A few years ago he told me he had sent a collection of his cloisonné to the Paris Exposition, where he had received a medal and had been fortunate enough to dispose of the greater portion of his stock at very good prices. Thus he was, for the first time in his life, in possession of a considerable amount of money.

Some of his friends advised him to enlarge his workshop, employ more men, and conduct his business on a larger scale. "It was a great temptation," he said, "and I would undoubtedly have become rich; but I felt that work of this kind could not be turned out in great quantities and be good. I could not go on improving, and I would derive but little satisfaction in turning out unsatisfactory work. So I decided to continue as before, and I have never regretted it. All that money," he added quietly, "went to make this garden."

These are motives and ideas worthy of a golden age; and in sentiments such as these, operating through centuries of seclusion, lies the true secret of Japan's artistic greatness.

Theodore Wores.

IN THE ORCHARD.

THE autumn leaves are whirled away;
The sober skies look down
On faded fields and woodlands gray,
And the dun-colored town.

Through the brown orchard's gusty aisle,
In sad-hued gown and hood
Slow passes, with a peaceful smile,
A maiden pure and good.

Her deep, serene, and dove-like eyes
Are downward bent; her face,
Whereon the day's pale shadow lies,
Is sweet with nameless grace.

The frolic wind beside her blows;
The sear leaves dance and leap;
With hands before her clasped, she goes
As in a waking sleep.

To her the ashen skies are bright,
The russet earth is fair;
And never shone a clearer light,
Nor breathed a softer air.

O wizard love! whose magic art
Transmutes to sun the shade,
Thine are the beams that fill the heart
Of this meek Quaker maid.

James B. Kenyon.

ABRAHAM LINCOLN: A HISTORY.¹

CABINET CHANGES—LINCOLN REELECTED—CHASE AS CHIEF-JUSTICE.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

CABINET CHANGES.

THE principal concession in the Baltimore platform made by the friends of the Administration to its opponents was the resolution which called for harmony in the Cabinet; and although no method was specified by which such harmony could be attained, it was no secret that the convention requested, and, so far as its authority went, required, that the Cabinet should be rendered homogeneous by the dismissal of those members who were stigmatized as conservatives. The President at first took no notice, either publicly or privately, of this resolution, and it was with something akin to consternation that the radical body of his supporters heard of the first change which occurred in his Cabinet after the convention adjourned. The resignation of Mr. Chase, whom the extreme radicals regarded as in some sort their special representative in the Government, took them entirely by surprise. The demonstration made by Mr. Wade and Mr. Davis some weeks later increased the feeling of restlessness among them, and brought upon the President a powerful pressure from every quarter to induce him to give satisfaction to the radical demand by the dismissal from the Cabinet of Montgomery Blair, the Postmaster-General, who had gradually attracted to himself the hostility of all the radical Republicans in the country. The unpopularity into which Mr. Blair had fallen among the radicals was one of those incidents that recall the oft-repeated simile that compares political revolutions to Saturn devouring his offspring. Mr. Blair was one of the founders of the Republican party. After graduating at West Point and serving for a year in the Seminole war, he resigned his commission in the army and began to practice law in St. Louis. He immediately gained high distinction in his profession, and became, while yet a young man, a judge of the Court of Common Pleas. He returned to Maryland, and in 1855 was appointed solicitor of the United States in the Court of Claims. The repeal of

the Missouri Compromise made a Republican of him. President Buchanan removed him from office in 1858 on account of his zealous antislavery attitude. He was counsel for the plaintiff in the famous Dred Scott case, and presided over the Republican convention of Maryland in 1860. With the exception of his brother Frank in Missouri, and Cassius M. Clay in Kentucky, he was beyond question the most prominent opponent of the extension of slavery in all the Southern States. The immediate cause which occasioned his loss of caste among the radical antislavery men was the quarrel which sprung up between his family and General Frémont in Missouri. In this also he had the mortification of feeling that he had nursed the pinion that impelled the steel. The reputation of General Frémont was the creation of the Blairs. It was at their solicitation that the President appointed the Pathfinder a major-general in the regular army, and gave him command of the important department of Missouri. So late as the 24th of August, 1861, General Frémont relied upon Montgomery Blair for all the support and assistance he required in Washington. The Postmaster-General, writing to him on that date, spoke of the President and his colleagues with the indiscreet frankness of confidential friendship. "Chase," he said, "has more horror of seeing treasury notes below par than of seeing soldiers killed, and therefore has held back too much, I think. I do not believe at all in that style of managing the Treasury." He goes on lamenting his lack of influence in the Government in a style which reminds us of Mr. Chase himself.

This, I can see [he says], is partly my own fault. I have been too obstreperous, perhaps, in my position, and men do not like those who have exposed their mistakes beforehand and dun them with them afterwards. The main difficulty is, however, with Lincoln himself. He is of the Whig school, and that brings him naturally not only to incline to the feeble policy of the Whigs, but to give his confidence to such advisers. It costs me a great deal of labor to get anything done, because of this inclination in the mind of the President, or leading members of the Cabinet, including Chase, who never voted a Democratic ticket in his life. But you have got the people at your back, and I am doing all I

¹ Copyright by J. G. Nicolay and John Hay, 1886. All rights reserved.

can to cut red tape and get things done. I will be more civil and patient than heretofore, and see if that will work.

No man can be sufficiently sure of friends to write them such letters as this. A few months later Frémont was Blair's deadliest enemy, and these letters, being printed, came up like impertinent ghosts between the Postmaster-General and his colleagues at the Cabinet table.

In the beginning of this quarrel the Blairs were unquestionably right; but being unjustly assailed by the radicals, the natural pugnacity of their dispositions would not permit them to rest firmly planted on their own ground. They entered upon a course of hostility that was at first confined to their factious enemies, but which gradually broadened and extended till it landed them both in the Democratic party. Montgomery Blair was doubtless unconscious of his progress in that direction. He thought himself the most zealous of Republicans until the moment that he declared himself the most zealous of Democrats. Every admonition he received but increased the heat and energy with which he defended himself. The Union League of Philadelphia, towards the close of 1863, left out his name in the resolutions by which they elected all the rest of the Cabinet honorary members of the League. He chose to consider Mr. Winter Davis responsible for some attacks made upon him, and desired to defeat him in Maryland. The President, who had certainly no cause to show personal favor to Mr. Davis, said that as he was the choice of the Union men of Maryland he merited and should receive what friendly support the Administration could give him. Mr. Blair made a speech in Rockville touching upon the subject of reconstruction, and indulged in vigorous and somewhat acrid allusions to some of his leading Republican assailants. This brought upon him, and upon Mr. Lincoln, over his shoulders, much vehement criticism. It was in relation to this speech that the President said:

The controversy between the two sets of men represented by Blair and by Sumner is one of mere form and little else. I do not think Mr. Blair would agree that the States in rebellion are to be permitted to come at once into the political family and renew their performances, which have already so bedeviled us, and I do not think Mr. Sumner would insist that when the loyal people of a State obtain supremacy in their councils and are ready to assume the direction of their own affairs they should be excluded. I do not understand Mr. Blair to admit that Jefferson Davis may take his seat in Congress again as a representative of his people. I do not understand Mr. Sumner to assert that John Minor Botts may not. So far as I understand Mr. Sumner, he seems in favor of Congress taking from the Executive the power it at present exercises over

insurrectionary districts and assuming it to itself; but when the vital question arises as to the right and privilege of the people of these States to govern themselves, I apprehend there will be little difference among loyal men. The question at once is presented, in whom is this power vested? and the practical matter for discussion is how to keep the rebellious population from overwhelming and outvoting the loyal minority.¹

It was about this time that the President wrote the letter of kindly and sensible advice to General Frank Blair which we have given in another place; a letter which, when published many months afterwards, gave great and lasting offense to the enemies of Blair in Congress and in the country. Although General Blair at this time retired from the contest for the speakership, the Postmaster-General continued, with equally bad taste and judgment, to oppose the nomination of Mr. Colfax for that place. Upon Colfax going to him in person and demanding the motive of his hostility, Mr. Blair was so indiscreet as to give as a reason for his opposition that Colfax was running as a Chase candidate.²

The opposition to Blair was not confined to the radical demonstrations in the Baltimore convention and out of it. Some of the most judicious Republicans in the country, who were not personally unfriendly to Blair, urged upon the President the necessity of freeing himself from such a source of weakness and discord. Even in the bosom of the Government itself a strong hostility to Mr. Blair made itself felt. While Mr. Chase remained in the Cabinet there was always a condition of smoldering hostility between the two men. Mr. Blair's enmity to Mr. Seward also became more and more violent in its expression, and his relations with Mr. Stanton were subject to a strain which was hardly endurable. There was still, however, so much in his character and antecedents that was estimable, the President had so deep a regard for both the Blairs, and especially for their father, that he had great reluctance to take any action against the Postmaster-General. In the middle of July, after the termination of Early's raid upon Washington, General Halleck, exasperated by the report of stringent and sarcastic remarks which Mr. Blair, under the provocation of the destruction by rebels of his property in the suburbs of Washington, had made, in reference to the laxity or poltroonery of the defenders of the capital, addressed an angry note to the Secretary of War, saying that he wished to know "whether such wholesale denouncement and accusation by a member of the Cabinet receives the sanction and approbation of the President of the United States.

¹ J. H., Diary, Nov. 1.

² J. H., Diary, Nov. 21.

If so," said General Halleck, "the names of the officers accused should be stricken from the rolls of the army; if not, it is due to the honor of the accused that the slanderer should be dismissed from the Cabinet." Mr. Stanton sent this letter of Halleck's to the President without comment. The President, on the same day, replied in his most masterful manner. After summarizing Halleck's letter, he said:

Whether the remarks were really made I do not know, nor do I suppose such knowledge is necessary to a correct response. If they were made, I do not approve them; and yet, under the circumstances, I would not dismiss a member of the Cabinet therefor. I do not consider what may have been hastily said in a moment of vexation at so severe a loss is sufficient ground for so grave a step. Besides this, truth is generally the best vindication against slander. I propose continuing to be myself the judge as to when a member of the Cabinet shall be dismissed.¹

Not satisfied with this, the President, when the Cabinet came together, made them this impressive and oracular little speech:

I must myself be the judge how long to retain in and when to remove any of you from his position. It would greatly pain me to discover any of you endeavoring to procure another's removal, or in any way to prejudice him before the public. Such endeavor would be a wrong to me, and, much worse, a wrong to the country. My wish is that on this subject no remark be made nor question asked by any of you, here or elsewhere, now or hereafter.²

This, we are inclined to think, is one of the most remarkable speeches ever made by a President. The tone of authority is unmistakable. Washington was never more dignified; Jackson was never more peremptory.

The feeling against Mr. Blair and the pressure upon the President to remove him increased throughout the summer. Henry Wilson wrote on the 5th of September, "Blair every one hates. Tens of thousands of men will be lost to you or will give a reluctant vote on account of the Blairs." The President's mail was filled with such appeals as this; but through the gloom and discouragement of midsummer he declined to act. There was a moment, as we have seen, when he lost heart in the campaign, and believed that the verdict of the country would be against him. Yet even then he refused to make the concession to the radical spirit which he was assured from every quarter would result so greatly to his advantage; but with the victories which came later in the season, and with the response of the country to the infamy of the surrender of the Chicago convention, there came a great and inspiring change of public opinion, and before the

month of September ended the assured triumph of the Union cause became evident to one so capable as was Mr. Lincoln to discern and appreciate the signs of the times. He felt that it was his duty no longer to retain in his Cabinet a member who, whatever his personal merits, had lost the confidence of the great body of Republicans. He had learned also during the long controversy more than he had ever known before of the violent and unruly candor of the Postmaster-General. Exasperated by the attacks made upon him, there were no limits to Mr. Blair's jealousy and suspicion. He wearied the President by insisting upon it that all the leading Republicans were Lincoln's enemies. After Chase left the Cabinet he insisted that Seward and Stanton were in league against Lincoln; that Stanton went into the Cabinet to break down the Administration by thwarting McClellan, and that Seward was coquetting with the Copperheads. Mr. Lincoln listened to these denunciations with growing fatigue and impatience. He protested against them. He said once to Mr. Blair, in the presence of another, "It is much better not to be led from the region of reason into that of hot blood by imputing to public men motives which they do not avow."³ Towards the end of September the President, reasonably sure of his reelection, and feeling that he ought not any longer to delay complying with the demand of a party which was giving him so earnest and loyal a support, wrote this letter to the Postmaster-General:

You have generously said to me more than once that whenever your resignation could be a relief to me it was at my disposal. The time is come. You very well know that this proceeds from no dissatisfaction of mine with you personally or officially. Your uniform kindness has been unsurpassed by that of any other friend; and while it is true that the war does not so greatly add to the difficulties of your department as to those of some others, it is yet much to say, as I most truly can, that in the three years and a half during which you have administered the General Post-office, I remember no single complaint against you in connection therewith.⁴

Mr. Blair accepted his dismissal in a manner which was to have been expected from his manly and generous character. He called upon the President at once, not pretending to be pleased at what had happened, but assuming that the President had good reasons for his action, and refraining from any demand for explanation. He went immediately to Maryland and busied himself in speaking and working for the Union cause, and for the reelection of Mr. Lincoln. He made a

¹ Lincoln to Stanton, July 14, 1864. MS.

³ J. H., Diary.

⁴ Lincoln to Blair, September 23, 1864.

speech a few days later in New York, at a great war meeting, in which he said that the action of the President in asking his resignation was suggested by his own father. All the family received this serious reverse in the temper of fighting men ready for all the chances of battle, and of bold players whose traditional rule of conduct when the cards go against them is, "Pay and look pleasant." General Blair wrote to his father that he was sure in advance that his brother had acted for the good of the country, and in the interest of the reelection of Mr. Lincoln, in which he says "the safety of the country is involved."

I believe [he continued] that the failure to elect Mr. Lincoln would be the greatest disaster that could befall the country, and the sacrifice made by the judge to prevent this is so incomparably small that I feel it would not cost him a pang to make. . . . He leaves the Cabinet with an untarnished name, and a reputation of having administered the department with the greatest ability and success; and so far as worldly considerations go, it is better for him to go out than to remain in the Cabinet. As to the future I have no fear. If Mr. Lincoln's reelection is secured, no matter what his personal disposition may be towards us, or what his political necessities may compel him to do, if the country is saved and restored, those who have served it in its trials will some day be rewarded for the patriotism they have shown by a higher power than that of the President.

After the death of Judge Taney, Mr. Blair for a while indulged the hope that he might be appointed Chief-Justice, a position for which his natural abilities, his legal learning, his former judicial service, and his large acquaintance with the more important matters which would come before the court eminently fitted him; but the competition of Mr. Chase was too strong for any rival, however worthy, and he was chosen, to the bitter disappointment of the Blairs. Even this did not shake their steadfast loyalty to the Union cause, nor their personal fidelity and friendship to the President. Immediately after his second inauguration Mr. Lincoln offered Montgomery Blair his choice of the Spanish or the Austrian mission, an offer which was peremptorily though respectfully declined.¹

Mr. Blair's successor in the Cabinet, ex-Governor William Dennison of Ohio, had been selected beforehand. The President informed him of his appointment in a curt telegram, and directed him to proceed to Washington as soon as possible. Mr. Dennison had rendered admirable service to the Government as governor of Ohio at the outbreak of the war. He was a gentleman of the highest character, of great ability and perfect integrity, and of peculiarly winning and gracious manners. We find

among the President's papers a letter written by his intimate friend, David Davis, on the 2d of June, suggesting Governor Dennison as a proper person to preside over the Baltimore convention. Judge Davis says: "He is a pure, upright man, one of your most devoted friends. If, during this or your subsequent administration, you think it your duty to modify your Cabinet, in my judgment you could not get a wiser counselor than Governor Dennison." This, so far as we know, was the first, perhaps the only, suggestion made to the President in favor of Mr. Dennison for a place in the Cabinet. The claim of localities always had a disproportionate weight in his mind. When Mr. Chase resigned Mr. Lincoln appointed Governor Tod in his place, and after Tod had declined he was glad to find an opportunity to call another Ohio statesman into his Cabinet.

The reconstruction of the Cabinet went on by gradual disintegration rather than by any brusque or even voluntary action of the President. Mr. Bates, the Attorney-General, before the end of the year 1864 grew weary, not only of the labors of his official position, but also of the rapid progress of the revolution of which he had been one of the earliest advocates. Although heartily devoted to the cause of freedom and emancipation, he was wedded, by constitutional temperament and lifelong habit, to the strictest rules of law and precedent. Every deviation from tradition pained him inexpressibly. The natural and unavoidable triumph of the radical party in St. Louis politics, and to a certain extent in those of the nation, seemed to him the herald of the trump of doom. He grew tired of it all, and expressed to the President his desire for retirement. If he had not himself wished to retire, the President would probably not have suggested it; he was greatly displeased at an announcement made by Simon Cameron, as if upon his authority, that in the event of reelection he would call around him fresh and earnest antislavery men. Mr. Lincoln, on hearing of this indiscreet and injurious statement, said, "They need not be so savage about a change in the Government. There are now only three left of the original Cabinet." He put a vacant judgeship at the disposition of the Attorney-General; but Mr. Bates declined it, not without some petulant remarks about the "uselessness of a legal system in a State dominated by the revolutionary spirit which then ruled in Missouri." He said he could not work in harmony with the radicals, whom he regarded as enemies of law and order; there was no such thing as a patriotic and honest American radical; some of the transcendental Republican Germans were honest enough in their moon-struck theorizing, but the

¹ Seward to Lincoln, March 9, 1865. MS.

Americans impudently and dishonestly arrogated to themselves the title of unconditional loyalty, when the whole spirit of their faction was contempt of and opposition to the law. "While the present state of things continues in Missouri there is no need of a court; so says Judge Treat, and I agree with him." Considering the subject of a successor to Mr. Bates, the President, his mind still hampered by the consideration of locality, weighed for several days the names of all the leading men of Missouri who were in any way fitted for the place, but found good reasons for rejecting them all. One of his secretaries said to him, "Why confine yourself to Missouri? Why not go to the adjoining State and take Judge Holt?" The President looked up with some surprise and said: "Why, that would be an excellent appointment. I question if I could do better. I had always intended, though I had never mentioned it to any one, that if a vacancy should occur on the Supreme Bench in any Southern district I would appoint him; but giving him a place in the Cabinet would not hinder that."

Mr. Bates tendered his resignation at last on the 24th of November.

Heretofore [he said], it has not been compatible with my ideas of duty to the public and fidelity to you to leave my post of service for any private considerations, however urgent. Then the fate of the nation hung in doubt and gloom; even your own fate, as identified with that of the nation, was a source of much anxiety. Now, on the contrary, the affairs of the Government display a brighter aspect; and to you, as head and leader of the Government, all the honor and good fortune that we hoped for has come. And it seems to me, under these altered circumstances, that the time has come when I may, without dereliction of duty, ask leave to retire to private life. In tendering the resignation of my office of Attorney-General of the United States (which I now do) I gladly seize the occasion to repeat the expression of my gratitude, not only for your good opinion which led to my appointment, but also for your uniform and unvarying courtesy and kindness during the whole time in which we have been associated in the public service. The memory of that kindness and personal favor I shall bear with me into private life, and hope to retain it in my heart as long as I live. Pray let my resignation take effect on the last day of November.

A few days before the end of November the President offered the place of Attorney-General to Joseph Holt; but Mr. Holt, with that modesty and conscientiousness which formed the most striking trait of his noble character, believed that the length of time which had elapsed since he had retired from active service at the bar had rendered him unfit for the preparation and presentation of cases in an adequate manner before the Supreme Court, and therefore declined the appointment. The President was

not at first inclined to accept this as a sufficient reason for declination; but on the 30th of November Mr. Holt wrote a letter formally reiterating his refusal to accept the appointment.

After the most careful reflection [he said] I have not been able to overcome the embarrassments referred to at our last interview, and which then disinclined me to accept, as they must now determine me respectfully to decline, the appointment tendered in terms at once so generous and so full of encouragement. In view of all the circumstances, I am satisfied that I can serve you better in the position which I now hold at your hands than in the more elevated one to which I have been invited. I have reached this conclusion with extreme reluctance and regret; but having reached it, and with decided convictions, no other course is open to me than that which has been taken. I beg you will be assured that I am and shall ever be most grateful for this distinguished token of your confidence and good-will. In it I cannot fail to find renewed incentives to the faithful and zealous performance of the public duties with which you have already charged me.

Failing to secure Mr. Holt, the mind of the President turned naturally enough to another Kentuckian, Mr. James Speed, an able and accomplished lawyer, a man of high professional and social standing in his State, and the brother of the most intimate friend of the President's youth, Joshua F. Speed. Mr. Holt warmly recommended Mr. Speed. He said:

I can recall no public man in the State, of uncompromising loyalty, who unites in the same degree the qualifications of professional attainments, fervent devotion to the Union and to the principles of your administration, and spotless purity of personal character. To these he adds—what I should deem indispensable—a warm and hearty friendship for yourself, personally and officially.

Soon after the opening of the new year Mr. Fessenden was again elected to the Senate from Maine, and resigned his office as Secretary of the Treasury. In his letter of resignation he said:

I carry with me great and increased respect for your personal character and for the policy which has marked your administration of the Government at a period requiring the most devoted patriotism and the highest intellectual and moral qualities for a place so exalted as yours. Allow me also to congratulate you upon the greatly improved aspect of our national affairs, to which, and to the auspicious result of our prolonged struggle for national life, now, as I sincerely believe, so near at hand, no one can claim to have so largely contributed as the chosen Chief Magistrate of this great people.

The place thus vacated instantly excited a wide and spirited competition of recommendations. The principal bankers of Chicago joined in recommending Hugh McCulloch of Indiana, who had made a remarkably favorable official record as Comptroller of the Currency

in the supervision of the national banks; Governor Morgan was strongly presented by nearly the entire State of New York, though a few of the so-called radicals of that State joined with the great mass of the people of New England in recommending Governor Andrew, whose splendid executive qualities no less than his fiery zeal and patriotism had endeared him to the earnest antislavery people throughout the country. Both branches of the Maine legislature recommended ex-Vice-President Hamlin to take the place vacated by his distinguished colleague. Mr. Jay Cooke, who was carrying on with such remarkable success at that time the great funding operations of the Treasury Department, reinforced with his recommendation the demand of the Western politicians and bankers for Mr. McCulloch. Mr. Montgomery Blair, who still retained his friendly and confidential relations with the President, wrote to him on the 22d of February, saying that Mr. Hamlin did not wish his claim to be appointed Secretary of the Treasury urged upon the President; that Mr. Morgan positively refused the appointment. He supplemented these two important bits of information with the characteristic and irrelevant suggestion that Mr. Seward should leave the Cabinet, that Sumner should take his place, and that Governor Andrew might then succeed Sumner in the Senate. He also added that it would be a good thing to encourage Garibaldi to drive the French from Mexico. The President concluded to nominate Governor Morgan, who declined the honor. Mr. McCulloch was then appointed; upon which Mr. Usher, on the 8th of March, desiring, as he said, to relieve the President from any possible embarrassment which might arise from the fact that two members of the Cabinet were from the same State, resigned his place as Secretary of the Interior. The President indorsed the resignation, "Accepted, to take effect May 15, 1865." Before that date should arrive tremendous changes were to take place in the Government of the United States.

LINCOLN REELECTED.

FROM the moment the Democratic convention named its candidates the stars in their courses seemed to fight against them. During the very hours when the streets of Chicago were blazing with torches, and the air was filled with the perfervid rhetoric of the peace men rejoicing over their work, Hood was preparing for the evacuation of Atlanta; and the

same newspapers which laid before their readers the craven utterances of the Vandalism platform announced the entry of Sherman into the great manufacturing metropolis of Georgia—so close together came bane and antidote. The convention had declared the war was a failure, and demanded that the Government should sue for terms of peace. Lincoln's reply three days afterwards was a proclamation announcing to the country "the signal successes that Divine Providence has recently vouchsafed" the people at Mobile and Atlanta, and calling for "devout acknowledgment to the Supreme Being in whose hands are the destinies of nations." He also tendered, by proclamation, the national thanks to Farragut, Canby, and Granger, and to General Sherman and the gallant officers and soldiers of their respective commands, and ordered that national salutes of one hundred guns should be fired on successive days from all the arsenals and navy yards in the United States in honor of these glorious victories. Thus, amid the prayers and thanksgivings of a grateful people, and the thunder and smoke of great guns uttering from their iron throats the general joy, the presidential campaign began. The darkest hour had come just before the dawn, and the light broadened on the political campaign from beginning to end.¹

One of the earliest speeches of the autumn was made by Mr. Seward at his home in Auburn, New York.² He spoke avowedly without authority from the President, yet, as well from his intimacy with Mr. Lincoln as from his commanding place in the Administration, his speech demanded and received great attention. He said:

While the rebels continue to wage war against the Government of the United States, the military measures affecting slavery, which have been adopted from necessity to bring the war to a speedy and successful end, will be continued, except so far as practical experience shall show that they can be modified advantageously, with a view to the same end. When the insurgents shall have disbanded their armies and laid down their arms the war will instantly cease; and all the war measures then existing, including those which affect slavery, will cease also; and all the moral, economical, and political questions, as well questions affecting slavery as others, which shall then be existing between individuals and States and the Federal Government, whether they arose before the civil war began, or whether they grew out of it, will, by force of the Constitution, pass over to the arbitrament of courts of law and to the councils of legislation.

Referring to the Chicago declaration in favor of the immediate cessation of hostilities, and

¹ The Rev. Dr. Thompson, calling on the President soon after this, congratulated him on the improved aspect of politics, and asked him whether he attributed it in greater part to the Chicago platform or

to the victory at Atlanta. "I should say the victory," Mr. Lincoln answered; "at least, I should prefer to have that repeated."

² September 3, 1864.

the paralyzing effect on the action of the Government which would follow the success of the Democrats upon such a platform, he asked, in that contingency, "Who can vouch for the safety of the country against the rebels during the interval which must elapse before the new Administration can constitutionally come into power?"¹ The opposition journalists immediately seized upon this as a threat that the Administration was determined to keep itself in power whatever might be the verdict of the people, and this clamor went on until the President, as we shall show, put an effectual quietus upon it.

Mr. Lincoln himself took little part in the contest. He was forced, from time to time, to assist with his presence charitable demonstrations in favor of the sick and wounded soldiers; and being always obliged on these occasions to say a few words, he acquitted himself of these necessary tasks with dignity and discretion. He made no personal reference to his opponents, and spoke of his enemies North and South with unflinching charity and moderation. Regiments of soldiers returning to their homes after their term of service was over sometimes called upon him, and in brief and pithy speeches he thanked them for calling, and always added a word or two of wise or witty political thought. Speaking to an Ohio regiment, he defined in one phrase the essential character of our republican government with more accuracy and clearness than ever Jefferson had done:

I wish it might be more generally and universally understood what the country is now engaged in. We have, as all will agree, a free government, where every man has a right to be equal with every other man. In this great struggle this form of government, and every form of human rights, is endangered if our enemies succeed. . . . There is involved in this struggle the question whether your children and my children shall enjoy the privileges we have enjoyed. . . . When you return to your homes, rise up to the height of a generation of men worthy of a free government, and we will carry out the great work we have commenced.

To another regiment he said:

I happen, temporarily, to occupy this house. I am a living witness that any one of your children may look to come here as my father's child has done. It is in order that each one of you may have, through this free government which we have enjoyed, an open field and a fair chance for your industry, enterprise, and intelligence—that you

may all have equal privileges in the race of life with all its desirable human aspirations—it is for this that the struggle should be maintained, that we may not lose our birthright. . . . The nation is worth fighting for to secure such an inestimable jewel.

Being invited to attend a Union mass meeting at Buffalo, the President at first thought of writing a letter, and we find among his papers the following fragment in his own manuscript:

Yours inviting me to attend a Union mass meeting at Buffalo is received. Much is being said about peace, and no man desires peace more ardently than I. Still I am yet unprepared to give up the Union for a peace which, so achieved, could not be of much duration. The preservation of our Union was *not* the sole avowed object for which the war was commenced. It was commenced for precisely the reverse object—to *destroy our Union*. The insurgents commenced it by firing upon the *Star of the West* and on Fort Sumter, and by other similar acts. It is true, however, that the Administration accepted the war thus commenced for the sole avowed object of preserving our Union; and it is not true that it has since been, or will be, prosecuted by this Administration for any other object. In declaring this I only declare what I can know, and do know, to be true, and what no other man can know to be false.

In taking the various steps which have led to my present position in relation to the war, the public interest and my private interest have been perfectly parallel, because in no other way could I serve myself so well as by truly serving the Union. The whole field has been open to me where to choose. No place-hunting necessity has been upon me urging me to seek a position of antagonism to some other man, irrespective of whether such position might be favorable or unfavorable to the Union.

Of course, I may err in judgment; but my present position in reference to the rebellion is the result of my best judgment, and, according to that best judgment, it is the only position upon which any executive can or could save the Union. Any substantial departure from it insures the success of the rebellion. An armistice—a cessation of hostilities—is the end of the struggle, and the insurgents would be in peaceable possession of all that has been struggled for. Any different policy in regard to the colored man deprives us of his help, and this is more than we can bear. We cannot spare the hundred and forty or fifty thousand now serving us as soldiers, seamen, and laborers. This is not a question of sentiment or taste, but one of physical force, which may be measured and estimated as horsepower and steam-power are measured and estimated. Keep it, and you can save the Union. Throw it away, and the Union goes with it. Nor is it possible for any administration to retain the services of these

¹ Ten days later, when Mr. Seward had returned to Washington, he said, in answer to a serenade: "The Democracy of Chicago, after waiting six weeks to see whether this war for the Union is to succeed or fail, finally concluded that it would fail, and therefore went in for a nomination and platform to make it a sure thing by a cessation of hostilities and an abandonment of the contest. At Baltimore, on the contrary, we

determined that there should be no such thing as failure, and therefore we went in to save the Union by battle to the last. Sherman and Farragut have knocked the bottom out of the Chicago nominations, and the elections in Vermont and Maine prove the Baltimore nominations stanch and sound. The issue is thus squarely made up—McClellan and disunion, or Lincoln and Union."

people with the express or implied understanding that upon the first convenient occasion they are to be reënslaved. It cannot be, and it ought not to be.

After he had written thus far he seems to have changed his mind as to the good taste or the expediency of aiding even thus far in his own canvass. He therefore laid his letter aside and wrote a brief note¹ declining to address the meeting, on the ground, first, that it would be a breach of precedent, and, secondly, that if he once began to write letters it would be difficult to discriminate between meetings having equal claims.

Although the dignity and self-control with which Mr. Lincoln held himself aloof from the work of the canvass has been generally acknowledged, there is one incident of the campaign which was the object of severe criticism at the time. Governor Johnson, in accordance with the request of the State convention of Tennessee, had issued a proclamation² specifying the manner in which the vote for presidential electors should be taken, the qualification of voters, and the oath which they should be required to take. The Democratic candidates on the electoral ticket of that State, regarding themselves aggrieved by these requirements of the convention and the governor, united in a protest against this proceeding, and one of their number, a Mr. Lellyet, was sent to present the protest in person.³ In the account of his interview with the President, which he published in the newspapers, Mr. Lellyet said that the President told him "he would manage his side of this contest in his own way, and the friends of General McClellan could manage their side in theirs." It is not impossible that, in a moment of irritation at the presentation of a petition which was in itself an insinuation that he was making a selfish and corrupt use of his power, the President may have treated Mr. Lellyet with scant courtesy; but he took the protest, nevertheless, and told him he would answer it at his convenience. There is certainly nothing of malice or of petulance in the grave and serious tone of the reply which the President sent a few days later to the McClellan electors of Tennessee. He informed them that he had had no communication whatever with Governor Johnson on the subject of his proclamation; that he had given to the subject such consideration as was in his power in the midst of so many pressing public duties.

My conclusion is [he said] that I can have nothing to do with the matter, either to sustain the plan as the convention and Governor Johnson have initiated it, or to revoke or modify it as you demand. By the Constitution and laws the President is charged

with no duty in the conduct of a presidential election in any State; nor do I, in this case, perceive any military reason for his interference in the matter.

The movement set on foot by the convention and Governor Johnson does not, as seems to be assumed by you, emanate from the National Executive. In no proper sense can it be considered other than as an independent movement of at least a portion of the loyal people of Tennessee.

I do not perceive in the plan any menace of violence or coercion towards any one. Governor Johnson, like any other loyal citizen of Tennessee, has the right to favor any political plan he chooses, and, as military governor, it is his duty to keep the peace among and for the loyal people of the State. I cannot discern that by this plan he purposes any more.

But you object to the plan. Leaving it alone will be your perfect security against it. Do as you please on your own account, peacefully and loyally, and Governor Johnson will not molest you, but will protect you against violence so far as in his power.

I presume the conducting of a presidential election in Tennessee in strict accordance with the old code of the State is not now a possibility.

It is scarcely necessary to add that if any election shall be held, and any vote shall be cast in the State of Tennessee for President and Vice-President of the United States, it will belong not to the military agents, nor yet to the Executive Department, but exclusively to another department of the Government, to determine whether they are entitled to be counted in conformity with the Constitution and laws of the United States. Except it be to give protection against violence, I decline to interfere in any way with any presidential election.⁴

The McClellan electors thereupon withdrew from the contest; Lincoln and Johnson electors were chosen, but their votes were not counted by Congress.

The most important utterance of the President during the campaign was a speech which he made on the evening of the 19th of October, in which he referred to the construction which had been placed on the remarks of the Secretary of State at Auburn, already quoted. He thought the distorted and unjust conclusions which had been drawn from Seward's remarks had gone far enough and that the time had come to put an end to them, and he seized, for that purpose, the occasion of a serenade from a party of loyal Marylanders who were celebrating in Washington the victory which the party of emancipation had gained in the elections in their State. He said a few words of congratulation upon that auspicious event, and then added:

A word upon another subject. Something said by the Secretary of State, in his recent speech at Auburn, has been construed by some into a threat that if I shall be beaten at the election I will, between then and the end of my constitutional term, do what I may be able to ruin the Government. Others regard the fact that the Chicago convention

⁴ Lincoln to William B. Campbell *et al.*, Oct. 22, 1864.

adjourned, not *sine die*, but to meet again, if called to do so by a particular individual, as the intimation of a purpose that if their nominee shall be elected he will at once seize control of the Government. I hope the good people will permit themselves to suffer no uneasiness on either point.

I am struggling to maintain government, not to overthrow it. I am struggling especially to prevent others from overthrowing it. I therefore say that if I shall live I shall remain President until the 4th of next March; and that whoever shall be constitutionally elected therefor, in November, shall be duly installed as President on the 4th of March; and that, in the interval, I shall do my utmost that whoever is to hold the helm for the next voyage shall start with the best possible chance to save the ship.

This is due to the people both on principle and under the Constitution. Their will, constitutionally expressed, is the ultimate law for all. If they should deliberately resolve to have immediate peace, even at the loss of their country and their liberty, I know not the power or the right to resist them. It is their own business, and they must do as they please with their own. I believe, however, they are still resolved to preserve their country and their liberty; and in this, in office or out of it, I am resolved to stand by them.¹

During the progress of the campaign Mr. Lincoln was frequently called upon to assist his friends, to oppose his enemies, and to exercise his powerful influence in appeasing discords in different States and districts. He interfered as little as possible, and always in the interests of the party at large, rather than in those of individuals. He took no account of the personal attitude of candidates towards himself. In the case of those who were among his intimate friends he would go no further than to demand that Government officers should not work against them. When Mr. Arnold of Chicago, who had incurred the hostility of Mr. Scripps, the postmaster at that place, complained of the opposition of that official and called upon the President to put a stop to it, the President would do nothing more than to order the offending postmaster to content himself with the exercise of his own rights as a citizen and a voter and to allow his subordinates to do the same. The postmaster answered, as was natural, that this was precisely what he had been doing, and that this was the source of Mr. Arnold's complaint; that the congressman wanted his active official assistance, and would be satisfied with nothing less. Although Arnold was an intimate and valued friend of the President, he declined to exercise any further pressure upon the postmaster, and Mr. Arnold soon afterwards withdrew from the contest. After candidates had been regularly

and fairly nominated, the President had no hesitation in doing all in his power to conciliate hostilities and to unite the party in support of them. He tolerated in these cases no factious or malicious opposition on the part of his office-holders, and he laid his hands most heavily upon those injudicious friends of his own who attempted to defeat the reelection of Republican congressmen who had not been especially friendly to him. A large number of the leading Republicans in Roscoe Conkling's district had declared their intention to oppose him. Mr. Conkling's friends appealed to the President, claiming that the Republican opposition to him had its rise and origin among friends of the Secretary of State. The President commended their complaint to the attention of Mr. Seward, and answered for himself: "I am for the regular nominee in all cases, and no one could be more satisfactory to me as the nominee in that district than Mr. [Roscoe] Conkling. I do not mean to say there are not others as good as he in the district, but I think I know him to be at least good enough."² Being informed of some hostility on the part of the custom-house officials in New York against Frederick A. Conkling, he wrote similar admonitions to them. The postmaster of Philadelphia being accused of interference against William D. Kelley, the President sent for him, and following his custom in grave matters, he read to him a reprimand which he had committed to paper in the following words:

Complaint is made to me that you are using your official power to defeat Judge Kelley's renomination to Congress. I am well satisfied with Judge Kelley as a member of Congress, and I do not know that the man who might supplant him would be as satisfactory; but the correct principle, I think, is that all our friends should have absolute freedom of choice among our friends. My wish, therefore, is that you will do just as you think fit with your own suffrage in the case, and not constrain any of your subordinates to do other than as he thinks fit with his. This is precisely the rule I inculcated and adhered to on my part when a certain other nomination now recently made was being canvassed for.³

The reform of the civil service had not at that time been formulated by its friends, nor even adopted in principle by the country at large, yet it would be difficult even in the light of this day to improve upon this statement of its essential principle as applied to the conduct of office-holders. The postmaster, of course, promised exact obedience; but later in the summer the President was informed, on authority that he credited, that of the two or three hundred employees in the post-office not one of them was openly in favor of the renomination of Judge Kelley. Upon learning

¹ Autograph MS.

² Lincoln to Ward Hunt, Aug. 16, 1864. MS.

³ June 20, 1864. MS.

this, Mr. Lincoln wrote to an influential friend in Philadelphia, stating these facts and adding:

This, if true, is not accidental. Left to their free choice, there can be no doubt that a large number of them, probably as much or more than half, would be for Kelley. And if they are for him and are not restrained they can put it beyond question by publicly saying so. Please tell the postmaster he must find a way to relieve me from the suspicion that he is not keeping his promise to me in good faith.¹

The postmaster felt at last the hand of iron under the velvet glove, and Kelley was renominated and reelected, as he has been ever since—to the honor and advantage of his district and State.

The summer was full of brief panics and flurries among the politicians, and they were continually rushing to Mr. Lincoln to urge him to action or inaction in the interests of the canvass. We believe there is no instance in which he yielded to these solicitations. A matter of especial difficulty was the draft for half a million of men which had been issued on the 18th of July. Leading Republicans all over the country, fearing the effect of the draft upon the elections, begged the President to withdraw the call or suspend operations under it. Mr. Cameron, so late as the 19th of October, after the State elections had been secured, advised against the draft in Philadelphia. Mr. Chase on the same day telegraphed from Ohio, which had been carried triumphantly by the Republicans a few days before, recommending the suspension of the draft for three weeks—Chief-Justice Taney having died a week before. Judge Johnston of Ohio reports that he was with the President when a committee came from Ohio to request him to suspend the draft until after the elections, and that Mr. Lincoln quietly answered, "What is the Presidency worth to me if I have no country?" But these solicitations were not all in the same direction. General Sherman telegraphed from the field, "If the President modifies the draft to the extent of one man, or wavers in its execution, he is gone forever; the army would vote against him." The politicians and the general probably exaggerated in equal measure; the army would not have rejected him if he had seen fit to suspend the draft; and the people stood by him in his refusal to do it. He went so far in compliance with the earnest request of the Union people in Indiana as to write to Sherman expressing his sense of the importance of allowing as many of the Indiana soldiers as possible to go home to vote. Most of the other States which voted in October allowed their soldiers to vote in the field. Indiana had not

passed the necessary legislation for this purpose. The draft was steadily proceeding in that State, and, in the opinion of the leading men there, was endangering the success of the Union party in the elections. "Anything you can safely do," Mr. Lincoln wrote, "to let her soldiers, or any part of them, go home and vote at the State election will be greatly in point. They need not remain for the presidential elections, but may return to you at once."² He was careful, however, not to urge General Sherman to any course of action which he might consider injurious. "This is," he added, "in no sense an order, but is merely intended to impress you with the importance, to the army itself, of your doing all you safely can, yourself being the judge of what you can safely do." There were also reports from Missouri that Rosecrans was inclined to deny the soldiers the right of attending the elections, on the assumed ground that they would get drunk and make disturbance. The President, on being informed of this, quoted to Rosecrans the following words from the letter which he had written to Schofield: "'At elections see that those, and only those, are allowed to vote who are entitled to do so by the laws of Missouri, including as of those laws the restrictions laid by the Missouri convention upon those who may have participated in the rebellion.' This," said Lincoln, "I thought right then and think right now, and I may add I do not remember that either party complained after the election of General Schofield's action under it. Wherever the law allows soldiers to vote, their officers must also allow it."³

The opposition to Mr. Lincoln within the ranks of his own party did not entirely die away, even after the Chicago nomination and the changed political prospect which immediately followed it. So late as the 20th of September Thurlow Weed wrote to Mr. Seward that

The conspiracy against Mr. Lincoln collapsed on Monday last. It was equally formidable and vicious, embracing a larger number of leading men than I had supposed possible. Knowing that I was not satisfied with the President, they came to me for coöperation; but my objection to Mr. Lincoln is that he has done too much for those who now seek to drive him out of the field. Their last meeting was early last week at the house of Dudley Field, which was attended by Greeley, George Wilkes, Tilton, Opdyke, Noyes, and twenty-five others of the same stripe.

He also stated that a circular had been sent to leading Republicans in other States inquiring as to the feasibility of making another nomination for President at that time; that the malcontents, finding themselves in solitude, had concluded to break up operations and try to control the regular State convention.

¹ Lincoln to McMichael, Aug. 5, 1864. MS.

² Lincoln to Sherman, Sept. 19, 1864. MS.

³ Lincoln to Rosecrans, Sept. 26, 1864. MS.

After every semblance of open hostility had disappeared everywhere else in the country the fire of faction still kept it alive in Missouri. A singular state of things existed there. The radical party had almost entirely absorbed the Union sentiment of the State; the conservative party, the President's friends, had almost ceased to exist. The incumbents of the Government offices, a few of the intimate personal friends of Blair, still stood out against the radicals; and so long as this attitude was maintained the radicals, while working vigorously for their State and local tickets, refused to avow themselves in favor of Lincoln. So far as can be ascertained the only reason for this absurd position was that the "Clay Banks," as the conservatives were called, wished the radicals to declare for Lincoln as a pretext by which they could join the vast majority of their party, and the radicals spitefully refused to allow them this accommodation. Mr. Fletcher, the radical candidate for governor, refused during the greater part of the campaign to make any public statement that he would vote for Lincoln. His reason for this, privately given, was that he feared such an announcement would alienate from his support a large number of the more furious anti-Lincoln Germans. At last, however, he concluded to declare for the regular Republican presidential ticket, and a meeting was appointed for the purpose; but, to the astonishment of the moderate Union men, he went no further at this meeting than to say he would not vote for McClellan, and in explanation of this singular performance he told the President's private secretary¹ that he had found at the hotel where his speech was made a letter of the "Clay Bank" committee offering their support on condition of his declaring for Lincoln, and that he would not be coerced into it. The President sent messages to the moderate Unionists expressing his desire that the absurd and futile quarrel should come to an end, and they, to do them justice, desired nothing more. The only condition of their support which they made was that candidates should declare themselves for Lincoln, which they in turn would have been willing to do if it were not that the "Clay Banks" requested it.

So far as practical results went the party was united enough [Mr. Nicolay reported]; it seems to be well understood that, with the exception of very few impracticables, the Union men will cast their votes for you, for the radical congressmen, for the emancipation candidates, for the State legislature and the State convention, so that in practice nearly everybody is right and united, while in profession everybody is wrong or at cross purposes.

This was surmised while the clatter of faction fighting was going on, and was abundantly

proved by the result. While the radical candidate for governor only claimed that he would be elected by a majority of ten thousand, which claim by many of his party was considered sanguine, when the votes were counted it was found that Lincoln had carried the State by the immense majority of forty thousand.

The electoral contest began with the picket firing in Vermont and Maine in September, was continued in what might be called the grand guard fighting in October, in the great States of Pennsylvania, Ohio, and Indiana, and the final battle all along the line took place in November. Vermont and Maine were carried by good Republican majorities, the canvass in the latter State having been managed by James G. Blaine with a dash and energy which gave a presage of his future career. Before the October elections came on, auguries of Republican success had become so significant and universal that there was little doubt in the best-informed political circles of the result. The President, however, was too old a politician to be sure of anything until the votes were counted, and it was not without some natural trepidation that on the evening of the 11th of October he walked over to the War Department to get from the telegraphic instruments the earliest intimations of the course of the contest. The first dispatch he received contained the welcome intelligence of the election of Rutherford B. Hayes and his Republican colleague from the hard-fought Cincinnati districts. Next came dispatches announcing a Republican majority in Philadelphia and indicating a similar result in the State of Pennsylvania. The news continued very much in the same strain during the evening, and the President in the lull of dispatches read aloud to Stanton and Dana selected chapters of the Nasby papers. As the votes of the soldiers in the different camps in the vicinity of Washington began to be reported they were found to be nearly unanimous in favor of the Republican candidate, the proportion among Western troops being generally that of ten to one: among the Eastern troops, although there was everywhere a majority, it was not so large. Carver Hospital, by which Lincoln and Stanton passed every day on their way to the country, gave the heaviest opposition vote reported—about one out of three. Lincoln turned to the Secretary and said, "That's hard on us, Stanton! They know us better than the others." The sum of the day's work was of enormous importance. Indiana indicated a gain of thirty thousand in two years. Governor Morton and the entire Republican ticket were elected by twenty thousand majority, with the gain of four congressmen. Pennsylvania, whose representatives in

¹ Nicolay to Lincoln, Oct. 18, 1864. MS.

Congress had been equally divided, now changed their proportion to fifteen against nine, and made her legislature strongly Republican in both branches, with popular majorities ranging from ten to fifteen thousand. The Unionists carried Ohio by a majority of over fifty-four thousand and effected a complete revolution in her representation in Congress; for while in 1862 she had elected fourteen Democrats and five Republicans, she now sent to Washington seventeen Republicans and two Democrats. But the success of the day which lay nearest to the heart of the President was the adoption in Maryland of the new State constitution abolishing slavery forever on her soil. The majority was a very slender one, the vote of the soldiers in the field being necessary to save emancipation; but it served, and the next month the Union majority was greatly increased.

It would seem strange that after this decisive victory there should have been any room left for hope or confidence on the side of the opposition or for anxiety and panic among Republican politicians; but alternating fits of confidence and despondency are inseparable from all long-continued political campaigns, and even after these overwhelming successes we find the Democratic speeches and papers full of boasting, and the private correspondence of the most experienced Republican leaders full of tremor and apprehension. The President, however, had passed through his moment of despondency, and from this time to the end entertained no shadow of doubt of the result. Mr. Washburne wrote to him on the 17th of October from Galena: "It is no use to deceive ourselves about this State. Everything is at sixes and sevens; no head or tail to anything. There is imminent danger of our losing the State"; and more in the same strain. The President laid away the letter, writing on the envelope the single word, "Stamped." Ten days later Washburne had recovered his spirits, and wrote, "John Logan is carrying everything before him in Egypt." Earlier in the campaign Mr. Washburne, desiring to do all in his power to forward the Union cause, had written to Grant asking permission to print a letter from him in favor of Lincoln. Grant replied that he had no objection to this, but he thought that "for the President to answer all the charges the opposition would bring against him would be like setting a maiden to work to prove her chastity." A friend of Mr. Seward communicated to him about the same time an astonishing mare's nest, in which he claimed to have discovered that the opposition policy for the presidential campaign would be to abstain from voting. The Secretary submitted this letter to the

President. To Mr. Lincoln, with his life-long observation of politics, this idea of abstention from voting seemed more amusing than threatening. He returned the letter to the Secretary with this indorsement: "More likely to abstain from stopping when once they get at it."

As the time drew near for the election in November a flight of rumors of intended secessionist demonstrations in the principal States of the North covered the land. The points of danger which were most clearly indicated were the cities of Chicago and New York. We have related in another place the efficient measures taken to prevent any outbreak in Chicago, with the arrest and punishment of the conspirators. The precautionary measures in other States prevented any attempt at disorder. To preserve the public peace in the city of New York and to secure the guarantee of a fair and orderly election there, General Butler was sent with a considerable force of troops to that city. He issued an order on the 5th of November declaring that troops had been detailed for duty in that district sufficient to preserve the peace of the United States, to protect public property, to prevent disorder, and to insure calm and quiet. He referred to the charge made by the opposition that the presence of Union troops might possibly have an effect upon the free exercise of the duty of voting at the ensuing election. He hotly repudiated this accusation.

The armies of the United States [he said] are ministers of good and not of evil. . . . Those who fear them are accused by their own consciences. Let every citizen having the right to vote act according to the inspiration of his own judgment freely. He will be protected in that right by the whole power of the Government if it shall become necessary.

He denounced energetically the crime of fraudulent voting, but did not assume to himself the duty of separating the tares from the wheat. He simply warned the evil-intentioned that fraudulent voting would be detected and punished after the election was over. Governor Seymour had been, as usual, much exercised for fear of executive usurpation at the polls, and had issued a proclamation on the 2d of November urging the avoidance of all measures which would tend to strife or disorder. He called upon sheriffs of counties to take care that every voter should have a free ballot in the manner secured to him by the constitutional laws, and to exercise the full force of the law and call forth, if need be, the power of their districts against the interference of the military in the vicinity of the polling-places.

There was by no means a unanimous agreement among even the supporters of the Administration as to the expediency of sending

General Butler to New York at this time. The action was taken by Mr. Stanton on his own responsibility. Thurlow Weed disapproved of it, and up to the day of election thought, on the whole, the proceeding was injurious, in spite of Butler's admirable general order; but Butler acted under the circumstances with remarkable judgment and discretion. He devoted the days which elapsed between his arrival and the election to making himself thoroughly acquainted with the city, with its police arrangements, and the means at his disposal to preserve order. Every hour was occupied with a careful study of maps, of police arrangements, of telegraphic communication between his headquarters and every region of the city, and in consultations with general officers, the creation of an improvised engineer department, and the planning of a system of barricades in case of a widespread insurrection. But the object to which he gave special attention, and in which he most thoroughly succeeded, was the avoidance of any pretext for any charge of interference with the rights of citizens at the polls. On the morning of the 8th of November, although the city was absolutely in the hands of the disciplined military force which had been sent to guard it, not a soldier was visible to the thousands of voters who thronged the streets; but everybody knew that they were there, and the result was, as Butler telegraphed to Lincoln at noon on election day, "the quietest city ever seen."

To Mr. Lincoln this was one of the most solemn days of his life. Assured of his personal success, and devoutly confident that the day of peace and the reestablishment of the Union was not far off, he felt no elation and no sense of triumph over his opponents. His mind seemed filled with mingled feelings of deep and humble gratitude to the vast majority of his fellow-citizens who were this day testifying to him their heartfelt confidence and affection, and of a keen and somewhat surprised regret that he should be an object in so many quarters of so bitter and vindictive an opposition. He said to one of his secretaries: "It is singular that I, who am not a vindictive man, should always, except once, have been before the people for election in canvasses marked for their bitterness. When I came to Congress it was a quiet time; but always, except that, the contests in which I have been prominent have been marked with great rancor."¹

In the evening he went over, as was his custom, to the War Department. The night was rainy and dark. As he entered the telegraph room he was handed a dispatch from Mr. Forney claiming 10,000 Union majority in Philadelphia. The figures were so far above his estimate that he said, "Forney is a little ex-

citable." A moment after a dispatch came from Mr. Felton in Baltimore, "15,000 in the city, 5000 in the State. All hail, free Maryland!" A moment after there came messages from Boston announcing majorities for Mr. Hooper and Mr. Rice of something like 4000 each. The President, astonished, asked if this was not a clerical error for 400, but the larger figures were soon confirmed. Mr. Rice afterwards, in speaking of these astounding majorities in districts where there was never the least charge made of irregularity at the polls, quoted an explanation made by a constituent of his, with no irreverent intention, "The Almighty must have stuffed the ballot boxes."

The entrance of General Eckert, who came in covered with mud from a fall in crossing the street, reminded the President of an incident of his defeat by Douglas. He said: "For such an awkward fellow, I am pretty sure-footed. It used to take a rather dexterous man to throw me. I remember the evening of the day in 1858 that decided the contest for the Senate between Mr. Douglas and myself was something like this—dark, raining, and gloomy. I had been reading the returns and had ascertained that we had lost the legislature, and started to go home. The path had been worn hog-backed and was slippery. Both my feet slipped from under me, but I recovered myself and lit clear; and I said to myself, 'It is a slip, and not a fall.'"

Mr. Fox, the Assistant Secretary of the Navy, indulged in some not unnatural exultation over the complete effacement of Henry Winter Davis from Maryland politics. Mr. Davis had assailed the navy with a peculiarly malicious opposition for two years for no cause that Mr. Fox could assign except that he was a brother-in-law of Montgomery Blair. The President would not agree with him. "You have more of that feeling of personal resentment than I," he said. "Perhaps I have too little of it; but I never thought it paid. A man has no time to spend half his life in quarrels. If any man ceases to attack me I never remember the past against him." All the evening the dispatches kept the same tenor of widespread success—in almost all cases above the estimates. The October States showed increased majorities, and long before midnight the indications were that the State of New York had cast her ponderous vote for Lincoln, and made the verdict of the North almost unanimous in his favor, leaving General McClellan but 21 electoral votes, derived from New Jersey, Delaware, and Kentucky, 212 being cast for Lincoln and Johnson.

It was two o'clock in the morning before the President left the War Department. At the

door he met a party of serenaders with a brass band who saluted him with music and cheers, and, in the American fashion, demanded a speech. He made a brief response, saying that he did not pretend that those who had thought the best interests of the nation were to be subserved by the support of the present Administration embraced all the patriotism and loyalty of the country. He continued:

I do believe, and I trust without personal interest, that the welfare of the country does require that such support and indorsement be given.

I earnestly believe that the consequence of this day's work (if it be as you assume, and as now seems probable) will be to the lasting advantage, if not to the very salvation, of the country. I cannot at this hour say what has been the result of the election. But, whatever it may be, I have no desire to modify this opinion, that all who have labored to-day in behalf of the Union organization have wrought for the best interest of their country and the world, not only for the present, but for all future ages.

I am thankful to God for this approval of the people; but, while deeply grateful for this mark of their confidence in me, if I know my heart, my gratitude is free from any taint of personal triumph. I do not impugn the motives of any one opposed to me. It is no pleasure to me to triumph over any one; but I give thanks to the Almighty for this evidence of the people's resolution to stand by free government and the rights of humanity.

For several days the torrent of congratulations came pouring in. Frank Blair wrote from Georgia, where he was leading an army corps under Sherman to the sea: "The vote in this army to-day is almost unanimous for Lincoln. Give Uncle Abe my compliments and congratulations." Grant paused for a moment in his labors in the investment of Richmond to express his sense of the vast importance and significance of the election. He thought a tremendous crisis in the history of the country had been met and triumphantly passed by the quiet and orderly conduct of the American people on the 8th of November.

The manner in which the President received these tumultuous demonstrations of good-will was so characteristic that it seems to us worthy of special attention. He was absolutely free from elation or self-congratulation. He seemed to deprecate his own triumph and to sympathize rather with the beaten than the victorious party. He received notice that on the night of the 10th of November the various Republican clubs in the District of Columbia would serenade him. Not wishing to speak extempore on an occasion where his words would receive so wide a publication, he sat down and hastily wrote a speech which, while it has not received the world-wide fame of certain other of his utterances, is one of the weightiest and wisest of all

his discourses. He read it at the window which opens on the north portico of the Executive Mansion, a secretary standing beside him lighting the page with a candle. "Not very graceful," he said, "but I am growing old enough not to care much for the manner of doing things."¹ There was certainly never an equal compliment paid to a serenading crowd. The inmost philosophy of republican government was in the President's little speech.

It has long been a grave question [he said] whether any government not too strong for the liberties of its people can be strong enough to maintain its existence in great emergencies. On this point the present rebellion has brought our republic to a severe test, and a presidential election occurring in regular course during the rebellion has added not a little to the strain. If the loyal people united were put to the utmost of their strength by the rebellion, must they not fail when divided and partially paralyzed by a political war among themselves? But the election was a necessity. We cannot have a free government without elections; and if the rebellion could force us to forego or postpone a national election, it might fairly claim to have already conquered and ruined us. The strife of the election is but human nature practically applied to the facts of the case. What has occurred in this case must ever recur in similar cases. Human nature will not change. In any future great national trial, compared with the men who have passed through this, we shall have as weak and as strong, as silly and as wise, as bad and as good. Let us, therefore, study the incidents of this as philosophy to learn wisdom from, and none of them as wrongs to be revenged. But the election, along with its incidental and undesired strife, has done good, too. It has demonstrated that a people's government can sustain a national election in the midst of a great civil war. Until now, it has not been known to the world that this was a possibility. It shows, also, how sound and how strong we still are. It shows that, even among candidates of the same party, he who is most devoted to the Union and most opposed to treason can receive most of the people's vote. It shows, also, to an extent yet unknown, that we have more men now than we had when the war began. Gold is good in its place; but living, brave, patriotic men are better than gold.

But the rebellion continues; and, now that the election is over, may not all having a common interest reunite in a common effort to save our common country? For my own part, I have striven and shall strive to avoid placing any obstacle in the way. So long as I have been here, I have not willingly planted a thorn in any man's bosom. While I am duly sensible to the high compliment of a reelection, and duly grateful, as I trust, to Almighty God for having directed my countrymen to a right conclusion, as I think, for their own good, it adds nothing to my satisfaction that any other man may be disappointed or pained by the result.

May I ask those who have not differed with me to join with me in this same spirit towards those who have? And now let me close by asking three

hearty cheers for our brave soldiers and seamen, and their gallant and skillful commanders.¹

In this lofty and magnanimous spirit he received all the addresses of congratulation that came in upon him in these days. To a delegation from Maryland who ascribed it to his rare discretion that Maryland was then a free State he replied with deep appreciation of their courtesy, and he added: "Those who differ from and oppose us will yet see that defeat was better for their own good than if they had been successful." He not only had no feeling of malicious triumph himself, he had no patience with it in others. When Mr. Raymond, who represented his special friends in New York, wrote a letter breathing fire and vengeance against the officials of the custom-house, who, he said, had come near defeating him in the race for Congress, the President merely observed that it was "the spirit of such letters as that which created the factious malignity of which Mr. Raymond complained." To all those who begged for a rigorous and exemplary course of punishment for political derelictions in the late canvass his favorite expression was, "I am in favor of short statutes of limitation in politics." He rejected peremptorily some suggestions of General Butler and the War Department having in view the punishment of flagrant offenders in New York: "We must not sully victory with harshness." His thoughtful and chivalrous consideration for the beaten party did not, however, prevent him from feeling the deepest gratitude for those who had labored on his side. He felt that the humblest citizen who had done his duty had claims upon him. Hearing that Deacon John Phillips of Sturbridge, Massachusetts, a man who had already completed his 104th year, and had voted at every presidential election since the foundation of the Government, had taken the pains to go to the polls to vote for him, the President wrote him a grateful letter of thanks.

The example [he said] of such devotion to civic duties in one whose days have already been extended an average life-time beyond the Psalmist's limit cannot but be valuable and fruitful. It is not for myself only, but for the country which you have in your sphere served so long and so well, that I thank you.

The venerable man, who had attained his majority in the midst of the war of the Revolution, and who had arrived at middle age before this century opened, answered in a note which greatly pleased and moved the President, as coming from one of the oldest men living on the earth.

I feel that I have no desire to live [he said] but to see the conclusion of this wicked rebellion and the power of God displayed in the conversion of the nations. I believe, by the help of God, you will finish the first, and also be the means of establishing universal freedom and restoring peace to the Union. That the God of mercy will bless you in this great work, and through life, is the prayer of your unworthy servant,
JOHN PHILLIPS.

There is one phrase of the President's speech of the 10th of November which we have quoted which is singularly illustrative, not only of the quick apprehension with which he seized upon facts of importance, but also of the accuracy and method with which he ascertained and established them. Within a few hours after the voting had closed he was able to say that the election had shown that "we have more men now than we had when the war began." A great bundle of papers which lies before us as we write, filled with telegrams from every quarter annotated in his own neat handwriting, with a mass of figures which would have dismayed an ordinary accountant, shows the importance which he attached to this fact and the industry with which he investigated it. In his message to Congress a few weeks later he elaborated this statement with the utmost care. He showed from the comparative votes in 1860 and in 1864 a net increase of votes during the three years and a half of war of 145,551. The accomplished statisticians of "The Tribune" almanac in the following month, after the closest study of the official returns, expressed their surprise "at the singular accuracy of the President's figures."

An extract from his annual message to Congress gives the best summing up of the results of the election that has ever been written.

The purpose of the people within the loyal States to maintain the integrity of the Union was never more firm nor more nearly unanimous than now. The extraordinary calmness and good order with which the millions of voters met and mingled at the polls give strong assurance of this. Not only all those who supported the Union ticket so called, but a great majority of the opposing party also, may be fairly claimed to entertain and to be actuated by the same purpose. It is an unanswerable argument to this effect, that no candidate for any office whatever, high or low, has ventured to seek votes on the avowed that he was for giving up the Union. There have been much impugning of motives, and much heated controversy as to the proper means and best mode of advancing the Union cause; but on the distinct issue of Union or no Union the politicians have shown their instinctive knowledge that there is no diversity among the people. In affording the people the fair opportunity of showing one to another and to the world this firmness and unanimity of purpose, the election has been of vast value to the national cause.

On the day of election General McClellan

¹ Autograph MS.

resigned his commission in the army, and the place thus made vacant was filled by the appointment of General Philip H. Sheridan, a fit type and illustration of the turn in the tide of affairs, which was to sweep from that time rapidly onward to the great and decisive national triumph.

CHASE AS CHIEF-JUSTICE.

CHIEF-JUSTICE TANEY died on the 12th day of October, 1864, during the public rejoicings that hailed the success of the Union party at the autumnal elections. He was a man of amiable character, of blameless life, of great learning, of stainless integrity; yet such is the indiscriminating cruelty with which public opinion executes its decrees, that this aged and upright judge was borne to his grave with few expressions of regret, and even with a feeling not wholly suppressed that his removal formed a part of the good news which the autumn had brought to the upholders of the Union. Toilsome and irreproachable as his life had been, so far as purity of intentions were concerned, it was marked by one of those mistakes which are never forgiven. In a critical hour of history he had made a decision contrary to the spirit of the age, contrary to the best hopes and aspirations of the nation at large. Before he had assumed the grave responsibilities of Chief-Justice he had not been insensible to those emotions and sympathies which animated the majority of his countrymen in later years. So early as 1818 he had spoken of slavery as a blot on our national character, and expressed the confident hope that it would effectually though gradually be wiped away. "Until it shall be accomplished, until the time shall come when we can point without a blush to the language held in the Declaration of Independence," he said, "every friend of humanity will seek to lighten the galling chain of slavery and better to the utmost of his power the wretched condition of the slave." But when he assumed public office he became a part of the machinery of his party. He accepted its tenets and carried them unflinchingly to their logical result, so that to a mind so upright and straightforward in its operations there seemed nothing revolting in the enunciation of the dismal and inhuman propositions of the Dred Scott decision. His whole life was therefore read in the light of that one act, and when he died, the nation he had so faithfully served according to his lights looked upon his death as the removal of a barrier to human progress. The general feeling found expression in the grim and profane witticism of Senator Wade, uttered some months before, when it seemed likely that the Chief-Justice would survive the ad-

ministration of Mr. Lincoln: "No man ever prayed as I did that Taney might outlive James Buchanan's term, and now I am afraid I have overdone it."

The friends of Mr. Chase immediately claimed that the place thus vacated belonged to him. They not only insisted that he was best fitted of all the public men in the country for the duties of that high office; that the great issues of the war would be safest in his hands; that the rights of the freedmen would be most secure with an ardent and consistent abolitionist; that the national currency would be best cared for by its parent; they also claimed that the place had been promised him by the President, and this claim, though not wholly true, was not without foundation. Several times during the last year or two the President had intimated in conversation with various friends of Mr. Chase that he thought favorably of appointing him Chief-Justice if a vacancy should occur. These expressions had been faithfully reported to the Secretary, and promptly entered by him in his diary at the time.¹ When Mr. Curtin was a candidate for reelection as governor of Pennsylvania, John Covode came to Mr. Chase and told him if Curtin was elected governor he would shape matters in Pennsylvania so as to secure its delegates in the presidential convention, but that the majority of the loyal men in Pennsylvania preferred Mr. Chase. Mr. Chase replied that no speculations as to Governor Curtin's future course could excuse the loyal men from supporting him now; that the future must take care of itself; that he, Mr. Chase, was not anxious for the Presidency; that there was but one position in the Government which he would really like to have, if it were possible to have it without any sacrifice of principle or public interest, and that was the chief-justiceship. At this Mr. Covode expressed himself satisfied, and went away resolved to permit the renomination of Curtin, which, it may be said in passing, he could have done nothing to prevent. Mr. Chase's eyes seemed pretty constantly fixed upon the bench in the intervals of his presidential aspirations. For a few days after his resignation his feelings against the President were of such bitterness that he seems to have given up that prospect. He was on the verge of open revolt from the party with which he had been so long associated. In his diary of the 6th of July he says:

Pomeroy says he means to go on a buffalo hunt and then to Europe. He cannot support Lincoln, but won't desert his principles. I am much of the same sentiments, though not willing now to decide what duty may demand next fall. Pomeroy remarked that on the news of my resignation reaching

¹ August 30, 1863.

the Senate, several of the Democratic senators came to him and said, "We'll go with you now for Chase." This meant nothing but a vehement desire to overthrow the existing Administration, but might mean much if the Democrats would only cut loose from slavery, and go for freedom and the protection of labor by a national currency. If they would do that I would cheerfully go for any man they might nominate.

A few days later he wrote recounting his efforts for the public good, and added:

My efforts were stoutly resisted outside, and had not earnest sympathy inside of the Administration. They were steadily prevailing, however, when a sense of duty to myself and the country also compelled me to resign.

A few malignant opponents of Mr. Lincoln still continued to write to Mr. Chase and keep alive in his mind the fancy of a possible nomination to the Presidency. His weakness before the people had been signally shown by an ill-judged attempt to secure him the nomination for Congress in Cincinnati, but in spite of this he still responded readily to suggestions from factious partisans. To one writing from Michigan he replied that he was now a private citizen and expected to remain such.

No one [he said] has been authorized to use my name in any political connection, except that I said I should not feel at liberty to refuse my services to the citizens of my congressional district if spontaneously and unanimously demanded. I think now that I erred in saying this; but it seemed right at the time. No such movement as the one you suggest seems to me expedient so far as I am concerned. Whether it would be expedient or patriotic in reference to some other name, I am not able to judge. I see only, as all see, that there is a deplorable lack of harmony, caused chiefly, in my judgment, by the injudicious course of some of Mr. Lincoln's chief advisers, and his own action on their advice.¹

Even to comparative strangers he could not write without speaking slightly of the President. To one he said: "I fear our good President is so anxious for the restoration of the Union that he will not care sufficiently about the basis of representation." To another, with a singular and unusual lack of dignity, he said: "Some seem to think that a man who has handled millions must be rich, and so I should be if I could have retained for myself even one per cent. of what I saved to the people; but I would not exchange the consciousness of having kept my hands free from the touch of one cent of public treasure for all the riches in the world." Mr. Chase

was, of course, absolutely and unquestionably honest, but that virtue is not so rare in public men that one should celebrate it in himself. He passed the heat of the midsummer in the White Mountains. During his absence his tone of bitter and sullen comment towards the President and his associates in the Cabinet continued,² but after the fall of Atlanta, and the evident response of the country to the Chicago nominations, his tone underwent a sudden change. He announced himself at last in favor of the election of Mr. Lincoln. In his diary of the 17th of September, after he had returned to Washington, he said:

I have seen the President twice. . . . His manner was cordial and so were his words; and I hear of nothing but good-will from him. But he is not at all demonstrative, either in speech or manner. I feel that I do not know him, and I found no action on what he says or does. . . . It is my conviction that the cause I love and the general interests of the country will be best promoted by his reflection, and I have resolved to join my efforts to those of almost the whole body of my friends in securing it.

He continues in his usual tone of self-portraiture:

I have been told that the President said he and I could not get along together in the Cabinet. Doubtless there was a difference of temperament, and on some points of judgment I may have been too earnest and eager, while I thought him not earnest enough and too slow. On some occasions, indeed, I found that it was so. But I never desired anything else than his complete success, and never indulged a personal feeling incompatible with absolute fidelity to his administration.

He repeats over and over again in his letters and diaries that he never really desired the Presidency; that he seized the first opportunity of withdrawing from the canvass. From Washington he went to Ohio, where he brought himself at last to make an open declaration of his preference for Mr. Lincoln as against McClellan; he voted for the Republican ticket at the election in October, and sent a telegram to the President that the result was "all right in Ohio and Indiana."

The death of Chief-Justice Taney occurred immediately afterwards, and the canvass for a successor on the part of the friends of Mr. Chase began without a moment's delay. Mr. Sumner was particularly ardent and pressing. "A Chief-Justice is needed," he wrote to the President, "whose position on the slavery question is already fixed and will not need argument of counsel to convert him." A mass

¹ Chase to Charles S. May, August 31, 1864.

² Samuel Bowles wrote September 4, 1864: "Do you notice that the 'Antislavery Standard' and the 'Liberator,' the representatives of the old abolitionists, are both earnest for Lincoln? Yet a new crop of rad-

icals have sprung up, who are resisting the President and making mischief. Chase is going around, peddling his griefs in private ears and sowing dissatisfaction about Lincoln. Oh, how little great men can be!" ["Life and Times of Samuel Bowles," Vol. I., p. 413.]

of solicitations of the same character came in upon the President, and they were reinforced inside the Cabinet by the earnest influence of Mr. Fessenden and Mr. Stanton; and although these and other friends of Mr. Chase were so strongly encouraged by Mr. Lincoln's response that they had no hesitation in assuring him that he would without doubt be made Chief-Justice, the President gave no decided intimation of his purpose. It is altogether probable that he intended from the first to appoint him, but he resolved at the same time to say nothing about it until he was ready to act. He said to his secretary, "I shall be very 'shut pan' about this matter." When one day his secretary brought him a letter from Mr. Chase in Ohio, he said, "What is it about?" "Simply a kind and friendly letter," the secretary answered. Mr. Lincoln, without reading it, replied, with his shrewd smile, "File it with his other recommendations."

So reticent was Mr. Lincoln in regard to his purpose that the enemies of Mr. Chase, who were especially abundant and active in Ohio, endeavored to prevent his nomination by the presentation of strong and numerous signed protests against it. The President received them not too affably, and while he listened respectfully to all they had to say in regard to the merits of the case, he sternly checked them when they began to repeat instances of Mr. Chase's personal hostility to himself. He treated with the same contempt a more serious statement which he received from New York that Mr. Cisco, who had personally declared for McClellan, gave as his reason for such a course that Secretary Chase had told him that Mr. Lincoln was incompetent and unfit for the position he held, though he added that Mr. Chase on his return to Washington had informed him that he then considered it his public duty to support Mr. Lincoln for the Presidency. Strangely enough from the Treasury Department itself came an earnest protest against the late Secretary. The venerable Judge Lewis, Commissioner of Internal Revenue, protested that he was not a man of large legal or financial knowledge; that his selfishness had gradually narrowed and contracted his views of things in general; that he was amazingly ignorant of men; that it was the opinion in the department that he really desired towards the end of his term of office to injure and as far as possible to destroy the influence and popularity of the Administration. By his constant denunciation of the extravagance of disbursements, and his tone of malevolent comment against every act of the President, he clearly indicated his desire to excite popular discontent and grumbling against the Government. Judge Lewis said that with the exception of a

few sycophants the entire department was relieved by the change. Even Mr. Field, for whose sake he gave up his place, expressed himself as gratified by it. To all these representations Mr. Lincoln made no reply. He was equally silent as to the merits of other distinguished jurists whose names were mentioned to him. He had the highest esteem and regard for Mr. Evarts; he had great confidence in the legal learning and weight of character of Judge Swayne; he had a feeling of hearty friendship for Mr. Montgomery Blair, and although he had thought proper in the preceding autumn to ask for his resignation, the intimate and even affectionate relations which he maintained towards the ex-Postmaster-General encouraged him and his friends to believe that he would receive the appointment. The late Vice-President Wilson, shortly before his death,¹ said that Blair met him one day near the War Department and solicited his good word, saying that Chase would certainly not be nominated. Wilson was startled by Blair's confident tone and went at once to the President, to whom he reiterated the arguments already used in favor of Mr. Chase's nomination, saying that the President could well afford to overlook the harsh and indecorous things which Chase had said of him during the summer. "Oh! as to that," replied Lincoln, "I care nothing. Of Mr. Chase's ability and of his soundness on the general issues of the war there is, of course, no question. I have only one doubt about his appointment. He is a man of unbounded ambition, and has been working all his life to become President. That he can never be; and I fear that if I make him Chief-Justice he will simply become more restless and uneasy and neglect the place in his strife and intrigue to make himself President. If I were sure that he would go on the bench and give up his aspirations and do nothing but make himself a great judge, I would not hesitate a moment."

So strong was this impression upon Mr. Lincoln's mind that he half formed the intention of sending for Mr. Chase and saying frankly to him that the way was open to him to become the greatest Chief-Justice the Supreme Court had ever had if he would dismiss at once and forever the subject of the Presidency from his mind. But speaking on the subject with Senator Sumner, he saw in a moment's conversation how liable to misconstruction and misapprehension such action would be. In his eagerness to do what he thought best for the interests of both Mr. Chase and the country, he lost sight for an instant of the construction which Mr. Chase would inevitably place upon such a proposition coming from his twice-successful rival. Convinced as he was of Chase's

¹ April, 1874. Conversation with J. G. N.

great powers, and hoping rather against his own convictions that once upon the bench he would see in what direction his best prospects of usefulness and fame rested, he concluded to take all risks, and on the 6th of December nominated him to the Senate for Chief-Justice. He communicated his intention to no one, and wrote out the nomination in full with his own hand. It was confirmed at once without reference to a committee. Mr. Chase on reaching home the night of the same day was saluted at his door under his new title by his daughter, Mrs. Sprague. He at once sent the President a note, saying:

Before I sleep I must thank you for this mark of your confidence, and especially for the manner in which the nomination was made. I will never forget either, and trust you will never regret either. Be assured that I prize your confidence and goodwill more than any nomination to office.

The appointment was received with the greatest satisfaction throughout the Union. Although the name of Mr. Chase had been especially pressed upon the President by the publicmen who represented the most advanced antislavery sentiment of the North, the appointment when once made met with little opposition from any quarter. Mr. Chase, in a long life of political prominence and constant controversy, had won the universal respect of the country, not only for his abilities, but also for his courage, his integrity, and a certain solid weight of character of which his great head and massive person seemed a fitting embodiment. He had placed his portrait on the lower denominations of the legal-tender notes, saying with his customary heavy pleasantry, "I had put the President's head on the higher priced notes, and my own, as was becoming, on the smaller ones." His handsome face and features had thus become more familiar in the eyes of the people than those of any other man in America; and though neither then nor at any other period of his life did he become what could be called universally popular, the image of him became fixed in the general instinct as a person of serious importance in the national life. The people who gave themselves the trouble to reason about the matter said it was impossible that an original abolitionist should be untrue to the principles of freedom, or that the father of the national currency should ever disown his own offspring; while those who thought and spoke on impulse took it for granted that such a man as Mr. Chase should never for any length of time be out of the highest employment.

After all, the fears of the President in regard to the Chief-Justice were better founded than his hopes. Mr. Chase took his place on the

bench with a conscientious desire to do his whole duty in his great office, to devote his undoubted powers and his prodigious industry to making himself a worthy successor of the great jurists who before him had illustrated the bench, but he could not discharge the political affairs of the country from his mind. He still considered himself called upon to counteract the mischievous tendencies of the President towards conciliation and hasty reconstruction. His slighting references to him in his letters and diaries continued from the hour he took his place on the bench. When the fighting had ended around Richmond, and on the capitulation of Lee the fabric of the Southern Confederacy had fallen about the ears of its framers like a house of cards, the Chief-Justice felt himself called on to come at once to the front, and he wrote from Baltimore to the President:

I am very anxious about the future, and most about the principles which are to govern reconstruction, for as these principles are sound or unsound so will be the work and its results. You have no time to read a long letter nor have I time to write one, so I will be brief. And first as to Virginia.¹

He advised the President to stand by the Peirpoint government. As to the other rebel States, he suggested the enrollment of the loyal citizens without regard to complexion.

This, you know [he said], has long been my opinion. . . . The application of this principle to Louisiana is made somewhat difficult by the organization which has already taken place, but happily the Constitution authorizes the legislature to extend the right of suffrage. . . . What reaches me of the condition of things in Louisiana impresses me strongly with the belief that this extension will be of the greatest benefit to the whole population.

He advised, as to Arkansas, an amendment of the Constitution, or a new convention, the members to be elected by the loyal citizens, without distinction of color. "To all the other States," he said, "the general principle may be easily applied." He closed by saying: "I most respectfully, but most earnestly, commend these matters to your attention. God gives you a great place and a great opportunity. May he guide you in the use of them." But the same day the President delivered from a window of the White House that final speech to the people which he had prepared without waiting for the instructions of the Chief-Justice, and the day after Mr. Chase wrote again from Baltimore reviewing the record of both, reminding the President of his former errors from which Mr. Chase had tried to save him, discussing

¹ Chase to Lincoln, April 11, 1865.

in full the Louisiana case, of which the President had made so masterly and luminous a presentation in his speech, insinuating that if the President were only as well informed as he was he would see things very differently.¹ Almost before the ink was dry on this unasked and superfluous sermon the President was dead. The Chief-Justice, writing to a friend in Ohio, said: "The schemes of politicians will now adjust themselves to the new conditions. I want no part in them."² He retained his attitude at the head of the extreme Republicans until about the time of the impeachment of Andrew Johnson. Over this famous trial he presided with the greatest dignity and impartiality; with a knowledge of law which was never at fault, and with a courage which rose superior to all the threats and all the entreaties of his friends. But his action during the trial and its result alienated him at once from the great body of those who had been his strongest supporters, while it created a momentary appearance of popularity among his life-long opponents. His friends began to persuade him, and he began to think, that he might be the candidate of the Democratic party for the Presidency. He commenced writing voluminous letters to leading Democrats expressing his indifference to the nomination, but at the same time saying he had always been a Democrat, was a Democrat still, and that the course which the Democracy ought to adopt would be to embrace true Democratic principles and declare for universal suffrage in the reconstruction of the Union. He did not flinch for an instant from his position on this important question. He said: "I believe I could refuse the throne of the world if it were offered me at the price of abandoning the cause of equal rights and exact justice to all men."³ Following his inveterate habit of taking a subjective view of the world of politics, he thought it possible that the Democratic party might be converted in the twinkling of an eye by virtue of his broad and liberal views. He cherished this pleasant delusion for several months. Whenever an obscure politician called upon him or wrote to him from some remote corner of the country, expressing a desire that he should be the Democratic candidate for the Presidency, he would say, "Such indications . . . afford ground for hope that a change is going on in the views and policy of the Democratic party which warrants good hopes for the future."⁴ There was for a moment a vague

impression among the leading Democrats that as it was hopeless to make a campaign with one of their own party against the overwhelming popularity of General Grant, it might be worth while to try the experiment of nominating the Chief-Justice with the hope of diverting a portion of the Republican vote, and a correspondence took place between August Belmont and Mr. Chase in relation to that subject. Mr. Chase wrote:

For more than a quarter of a century I have been, in my political views and sentiments, a Democrat, and I still think that upon questions of finance, commerce, and administration generally, the old Democratic principles afford the best guidance.⁵

But he stoutly asserted, even in the face of this temptation, his belief in universal suffrage, though he coupled it with universal amnesty, and said:

If the white citizens hitherto prominent in affairs will simply recognize their [the negroes'] right of suffrage, and assure them against future attempts to take it from them, I am sure that those citizens will be welcomed back to their old lead with joy and acclamation, . . . and a majority, if not all, the Southern States may be carried for the Democratic candidates at the next election.

He repeated this sanguine statement in his correspondence with other leading Democrats, but the negotiation came to nothing; the Democratic convention met in New York, and Mr. Chase's name, mentioned by accident, gained a roar of cheers from the assembly and one-half of one vote from a California delegate. He professed his entire indifference to the result, and took no further interest in the canvass. An injudicious Republican politician in New York asked him to address a Grant meeting. He declined, of course, stating that he could not unreservedly support the Republican ticket, and that this was not the time for discrimination in a public address. "The action of the two parties has obliged me to resume with my old faith my old position, . . . that of Democrat, by the grace of God, free and independent." When his old enemy, General Blair, came to the front in the progress of the canvass and rather overshadowed the more conservative Seymour, the Chief-Justice intimated⁶ that men of his way of thinking would be constrained to the support of General Grant.

But if the political attitude of Mr. Chase in his later years was a subject of amazement

¹ "I most earnestly wish you could have read the New Orleans papers for the past few months. Your duties have not allowed it. I have read them a good deal; quite enough to be certain that if you had read what I have your feelings of humanity and justice would not let you rest till all loyalists are made equal

in the right of self-protection by suffrage." [Chase to Lincoln, April 12, 1865.]

² Chase to Ashley, April 16, 1865.

³ Chase to Barney, May 29, 1868.

⁴ Chase to Belmont, May 30, 1868.

⁵ In a letter to Col. Brown of Kentucky, Sept. 29, 1868.

⁶ Ibid.

and sorrow to his ardent supporters, his decisions upon the bench were a no less startling surprise to those who had insisted upon his appointment as the surest means of conserving all the victories of the war. He who had sustained Mr. Stanton in his most energetic and daring acts during the war now declared such acts illegal; he who had continually criticized, not always loyally, the conduct of the President for what he considered his weak reverence for the rights of States, now became the earnest champion of State rights; and finally the man to whose personal solicitations a majority of Congress had yielded in passing the legal-tender act, without which he said that the war could not have been successfully carried on, from his place on the bench declared the act unconstitutional. But so firm

was the impression in the minds of the people of the United States of the great powers and perfect integrity, the high courage, the exalted patriotism of this man, that when he died, worn out by his tireless devotion to the public welfare, he was mourned and praised as, in spite of all errors and infirmities, he deserved to be. Although his appointment had not accomplished all the good which Mr. Lincoln hoped for when he made it, it cannot be called a mistake. Mr. Chase had deserved well of the Republic. He was entitled to any reward the Republic could give him; and the President, in giving to his most powerful and most distinguished rival the greatest place which a President ever has it in his power to bestow, gave an exemplary proof of the magnanimity and generosity of his own spirit.

LIFE.

I AM o'er-weary picturing the strife;
 This is a solemn fate — to ride to death
 Lashed through the hurrying fatal lists of life,
 Strengthless to cease, begging for one short breath,
 Yet spurned for answer by a Power that thrusts
 Its spurs into the soul. Upon the brow
 Stand beads of blood; the very javelin rusts
 From tears; the drooping form can scarce but bow
 To earth. "One moment, Power, one resting-space,
 Have mercy!" "On, on, on!" the stern reply.
 I urge, "I once have triumphed, is not grace
 For victory?" "Have on! Thy grace am I!"
 "Is there no pause, no rest, however brief?"
 "On to the fight! Thy death is thy relief."

Louise Morgan-Smith.

TO GEORGE KENNAN.

UNFLINCHING Dante of a later day,
 Thou who hast wandered through the realms of pain
 And seen with aching breast and whirling brain
 Woes which thou wert unable to allay,
 What frightful visions hast thou brought away:
 Of torments, passions, agonies, struggles vain
 To break the prison walls, to rend the chain—
 Of hopeless hearts too desperate to pray!
 Men are the devils of that pitiless hell!
 Men guard the labyrinth of that ninefold curse!
 Marvel of marvels! Thou hast lived to tell,
 In prose more sorrowful than Dante's verse,
 Of pangs more grievous, sufferings more fell,
 Than Dante or his master dared rehearse!

Nathan Haskell Dole.

THE PHARAOH OF THE EXODUS, AND HIS SON, IN THE LIGHT OF THEIR MONUMENTS.

3. PRINCE KHAMUS, DECEASED.
(FROM LEPSIUS'S "DENKMÄLER.")

ONLY in its later books does the Bible distinguish the different rulers of Egypt by their proper names. The word "Pharaoh" was a title rather than a personal appellation, and was borne by the reigning king, each one in turn down the long line of sovereigns.

A change of Pharaohs silently occurs in the biblical story between the second and the third chapters of the Book of Exodus. In Chapter II. we read:

Now when Pharaoh heard this thing, he sought to slay Moses. (Ver. 15.)

And it came to pass in the course of those many days, that the king of Egypt died: and the children of Israel sighed by reason of the bondage, and they cried, and their cry came up unto God by reason of the bondage. (Ver. 23.)

From which it is clear that one Pharaoh had passed off the stage — the one who is commonly known as the "Pharaoh of the Oppression." But in Chapter III. we read how God called unto Moses out of the midst of the burning bush, and said:

Come now, therefore, and I will send thee unto Pharaoh, that thou mayest bring forth my people the children of Israel out of Egypt. (Ver. 10.)

From this it is equally clear that another Pharaoh had entered upon the scene — the one who is commonly known as the "Pharaoh of the Exodus." Everybody being acquainted with the peculiar names of such great personages, the writer of the Book of Exodus phrased his recital after the manner of that modern monarchic formula, "The King is dead! Long live the King!"

Not long ago we were astounded to see the tomb open and give up, among its treasures, the first of these two sovereigns, the person, carefully embalmed, of the Pharaoh of the Oppression — to behold his imperishable features after so long a time restored to view, and to find how remarkably faithful those portrait-statues were which his artists had carved when he was in the bloom of youth or in the prime of manhood. Nor, perhaps,

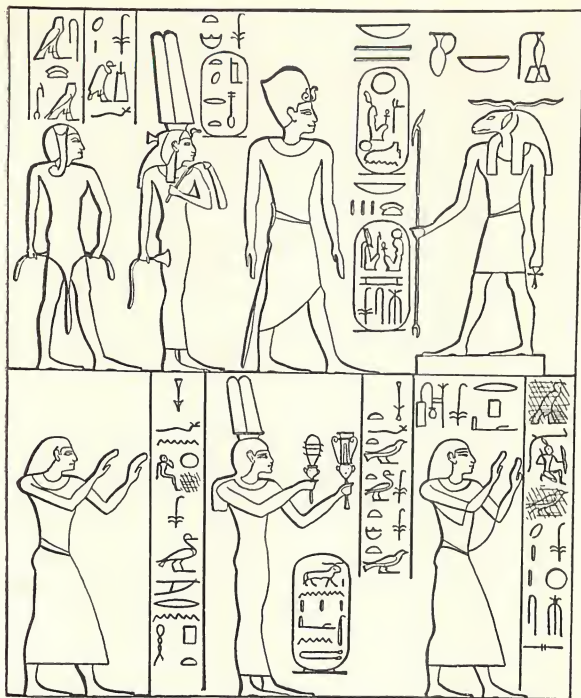

have we forgotten how the monuments stand ready to unlock the mystery in regard to that daughter of his who saved the life of the foundling Moses.

And still, if we were to choose between the Pharaoh of the Oppression and the Pharaoh of the Exodus, or were asked, "Out of the several Pharaohs mentioned in the Bible, which one above all others would you most wish to learn more about, in fact, whatever the archæology of Egypt can teach us?" with scarcely a moment's hesitation we would answer, "The Pharaoh of the Exodus." That one who replied, "Who is the Lord, that I should hearken unto his voice to let Israel go?"; that one who required straw as well as bricks of the already burdened and groaning Hebrews; that one before whom the contest by enchantments took place, until the magicians gave up, exclaiming, "This is the finger of God"; that one who recalled his consent the instant the evils were removed; that one who, under all the signs and wonders and plagues of Jehovah, hardened his heart up to the very entrance of death into his dwelling to lay low his cherished first-born son, the heir to the throne; that one who repented having thrust out the bondsmen, and pursued after them, and overtook them encamping by the sea; that one, in fine, upon whose hosts the sea returned to its flow, till there remained not so much as one of them.

Do, then, the antiquities of Egypt really and in like manner illustrate the Pharaoh of the Exodus? Did he cause statues to be made of himself which show just how he looked? Have the inscriptions anything to tell us about his history also? Do his monuments bear out the many particulars of the biblical relation concerning his resistance to the God of Israel, and his disastrous defeat? Do they clear up the mystery of his first-born son, who was smitten on that fatal midnight when the Lord passed through the land and entered at every door whose posts were not sprinkled with blood?

These are natural questions, which we are eager to have answered in detail. Why not make a second search among the monuments?

Many households among us are accustomed to go to a painter or a photographer once in a while, or even every year, to put on record both faces and numbers of the family group. This custom, however, prevailed in the days of Rameses as well as in our own. He intended

1. FAMILY GROUP OF RAMESES II. (FROM LEPSIUS'S "DENKMÄLER.")

merely to parade his religious zeal; but, all unexpectedly by him, we, for certain reasons, are exceedingly curious to look in upon his domestic circle, and he himself has drawn aside the curtain for us in a manner bearing upon our present inquiry.

Among several such family representations he caused one to be engraved in everlasting rock on the bank of the Nile between Syene and Philæ (illustration 1). He is paying reverence to the ram-headed deity Khnum; and in this religious act he is followed first by the "Royal Wife," Queen, and mother "Isi-nefer-t," holding a scourge as an emblem of sovereignty in one hand and a lotus flower in the other; then by his "Royal Son Khamus," displaying the lock of a prince and wearing the leopard-robe of a priest; and, next in order, by "the Chief of the Soldiers, the Royal Son Rameses, Heir to the Throne, Royal Scribe"; then by "the great Royal Daughter, great Royal Wife, Bint-antha, Queen," holding sistrums of different patterns in her hands; and last of all in the procession, on the extreme lower left, by a "Royal Son, Mer-en-ptah" by name.

Of the three brothers here por-

trayed the eldest, Rameses, died early, probably at the head of the soldiers of which he was commander, and on the field of battle. Then the succession fell on Khamus, the priest, who lived long to bear the honor. He gained great renown as high-priest of the god Ptah at Memphis, residing in the great temple dedicated to this deity there, and devoting himself so strictly to sacerdotal duties as somewhat to neglect the affairs of state—so his fond father thought. In this holy pursuit he sought to restore the olden worship of the Apis-bulls, then regarded as the living type of Ptah-Sokharis; and he carried out the enlargement and decoration of their burial-place, the Serapeum, by works which inscriptions of that time describe as splendid, and for which they overload their author with thankful praise. From illustration 2 we may catch a glimpse of him as he actually appeared when presenting himself in public, with his insignia of regency—a standard in each hand.

However, as we have seen the Great Rameses enduring to the age of nearly one hundred years, Khamus proved unequal to the task of outliving him. He had received the powers and authority of active regent when he must have been not far from five and twenty years old, in the thirtieth year

2. PORTRAIT-STATUE OF KHAMUS AS REGENT. (FROM THE MONUMENT IN THE BRITISH MUSEUM.)

of his father's reign: he died in the fifty-fifth year of his father's reign, at about fifty years of age, having governed in behalf of his father a quarter of a century. And yet, because he had not reached the throne at the time of his death, the monuments represent him as a prince and nothing more, still wearing the side-lock of juniority.

Illustration 3, which is used as an initial to this article, reproduces one of these, where the death-sign, appended to his name above his head, consists of two characters reading "ma-kheru," generally translated "the justified," or "proclaimed righteous," at the judgment-seat of Osiris, the god of Hades, thus declaring the faithful departed to be "triumphant," very much as we are accustomed to do down to this very day: its real signification, therefore, was "deceased."

After Khamus had departed this life the right of inheritance descended to the youngest depicted in the family group above given, Mer-en-ptah: the last became the first. His name, Mer-en-ptah, signifying "beloved by the god Ptah," or, according to the Memphitic dialect, Mer-en-phthah, is generally reduced or anglicized to Menephtah. He could not have been so very much younger than his elder brother, for he served as a similar regent for his father during no less than twelve years — from the fifty-fifth to the sixty-seventh, when at last the latter yielded up the scepter he had held so long.

When Menephtah actually became king he assumed the throne-name Hotep-hi-ma, "Trusting in Ma," together with the epithets Bai-en-ra, "Soul of Ra," and Mer-amen, "Beloved by the god Amen."

Doubtless he caused many statues of himself to be wrought in stone, but comparatively few of them have survived destruction. We are not bewildered by several equally good, or presenting their subject in various aspects, as in the case of Rameses; and yet there is one of the son so far superior to others of himself, even excelling in some respects any of the father, as to command attention and choice, above all others. In order to see this pre-eminent pattern of Menephtah, executed during the best period and in the highest style of Egyptian art, we must ascend the Nile to Thebes. There the Tombs of the Kings shelter a memorial of him which is simply faultless in accurate design, nice chiseling, and complete preservation. It is a bas-relief, maintaining his presence in his own sepulcher, where he would naturally wish to leave behind the finest personation of himself that the most accomplished artists of his day could produce. A plaster-cast of it in Berlin, made by Dr. Richard Lepsius, has been specially photographed for illustra-

4. BAS-RELIEF OF KING MENEPHTAH AT THEBES.
(FROM A CAST IN THE BERLIN MUSEUM.)

tion 4, which, therefore, is a perfect copy of the original sculpture. How easily we detect

in the outline of this profile, in the contour of the face, in the shape of each separate feature, all the characteristic traits of the Rameses family, affected only by the personal element. A masterpiece of ancient art, we find it worthy of all praise as a delineation, either of the man when he was really handsome, or of that glorious form which the proud king desired to own and the foolish people were inclined to ascribe to their ruler, or, still again, perhaps of that blending of human personality with real divinity which alone could qualify him for acceptance with the deity Ra, though probably all of these aims entered into its design. His majesty stands before us in the attitude of worshipping the god Ra-Harmakhis—indeed, in the very gesture of demonstrating, not merely likeness to, but veritable identity with, the god himself, the hieroglyphics beneath his outstretched hand affirming:

He adores the Sun, he worships the Hor of the solar horizons.

In so doing he displays no lack of vanity, not to say presumption, judging him by our own notion of the manner appropriate to one who is venturing into the presence of the Supreme Being. He is shod with sandals, clad in a light transparent robe, furnished with the asp-bordered apron, decked with a royal uræus, and crowned with the atef-tiara. Overhead his panegyric reads:

Lord of the Two Lands, Mer-amen Bai-en-ra,
Lord of Diadems, Mer-en-ptah Hotep-hi-ma,
Crowned by Amen with dominion of the world,
Cherished by the Sun in the great abode.

Doubtless the artist in this transcendent figure sought not only to show forth the particular act of adoration, but to exalt Menephtah ideally to a phase worthy of the reception and society of the gods.

Yet, after many centuries have fled, we, whose feelings are cooler and judgments truer, looking on the changeless face of this bas-relief find less to laud sincerely. Apart from the superhuman element revealing itself through both physical and spiritual beauty, Menephtah betrays both softness and weakness. He is calm and cold: he would stir no heart, waken no love. Even art has not detected the slightest trace of nobility of character, for art could not well heighten a quality totally wanting.

Unless we happen to stop and reflect, we naturally fancy the successor of a king as youthful, or at least adolescent. But a recent instance serves to place in an exacter light the several stages of years reached by other members of a royal family when an aged emperor dies: the crown-prince of Germany had turned

the meridian of life when the Emperor William died, his great deeds were done, his glory was earned, and his career was so much of a memory that his actual reign must have been brief; and his son, in turn, the heir-apparent, now emperor, who possibly might have become active regent in advance of the throne, is the grandchild of the aged departed monarch. So it was when Rameses the Great died in Egypt, three and thirty centuries ago. As already learned, Menephtah was an old man when he became king—certainly not less, and probably more, than sixty years of age.

Soon after ascending the throne he began to exhibit a singular and not altogether scrupulous trait. As if long denied the privilege of writing his name upon a royal shield, he went about gratifying his impatience and vanity by imposing his cartouch upon the monuments of his predecessors. He did not stop to consider—or, what is more likely, he did not have honor enough to care—whether or no the contrast of his own rough work by the side of the finely wrought hieroglyphics of earlier kings would forever cry out to his shame.

Presently in this disgraceful business he ventured a step further and appropriated to himself a royal statue at Memphis. This was a standing image of Amen-em-hat III., the chief king in the twelfth dynasty, and, as a specimen of early art, one of exceptional excellence. Notwithstanding, though he left the remainder of the figure untouched, he went to its face and remorselessly blotted out the features it bore by remodeling them into his own likeness. Thus the portrait of the archaic king is lost to us, but a true view of Menephtah, when advanced in life, is gained.

Again, as he little foresaw, or cared less, the result is an incongruity. Those immense feet, those sturdy limbs, that heavy frame, the stiff pose of the subject, are characteristic of a style nearly a thousand years earlier, and therefore already antique; but the art of the face is in the perfect style of a Ramesside age. Here, in illustration 5, we are looking upon the real Menephtah. Here we still further perceive how as a son he resembled his father. Recalling the peculiar cast of Rameses II. in his portrait-figures at Tanis, at Memphis, at Thebes, at Abû-Simbel, we detect at once certain traits of descent in this strongly pronounced physiognomy—the retreating brow, the arched nose, the high cheek-bones, and the jutting chin. Even the searching eye and the stern expression of countenance seem to share the spirit of Rameses' later pictures. All the softness of the Theban bas-relief has vanished. How insensible the heart must have been to correspond with that brow! How pitiless—nay, how destitute of human sympathy—are the angular lines

5. STATUE OF KING MENEPHTAH AT MEMPHIS. (FROM THE MONUMENT IN THE BERLIN MUSEUM. AFTER A PHOTOGRAPH BY G. NEUMANN.)

of that stony face! His very looks frown oppression; his lips breathe bondage. If a favor were to be asked of that forbidding visage, what answer would surely be forecast — yes, or no? Soul, talent, refinement, every element that makes man attractive, all are absent; superstition, arrogance, selfishness, obstinacy, distrust, fear, all are present in force. Or, what emotions would be inevitably inspired by these lineaments? Respect, affection, loyalty? or, hatred, repulse, revolt, flight? Such a presentment is precisely what we would expect from Menephtah's bearing towards Israel in Egypt. If an attempt were to be made, even by an artist of genius, to invent a face which should unite all the qualities of disposition developed by the trials of Menephtah rehearsed in the Bible, the best surely would fall short of this realistic historical carving.

However much Menephtah may have resembled his predecessor *Rameses II.* in other respects, he did not in the possession of a numerous family. Menephtah had only one son, and, strangely, that son was the fruit of his old age. How the elderly progenitor's heart must have been gladdened by that child, that long-awaited, often wished-for, only boy! And now, because the boon of his tutelary deity, *Set*, — "the giver of life," — the offspring was called *Seti*; and because the sum of his father's joy, the one object of his father's love, he was called Menephtah.

As the lad grew up the father perceived the filial features developing into a duplicate of his own. And when the lad increased into youth, still the father had only to look on his face, as in a mirror, to behold a reflection of himself. Inasmuch as words would fail to show this remarkable likeness as effectively as sight, let us place their pictures side by side and study them comparatively (illustrations 6 and 7).

Both the monuments and the records of Menephtah suddenly become silent after the eighth year of his reign, and remain so a long while — in fact, until just before his

6. DETAIL OF THE THEBAN BAS-RELIEF.

7. SETI-MENEPHTAH IN EARLY LIFE. (FROM A PHOTOGRAPH BY W. M. F. PETRIE.)

death. Certain papyri were indorsed with this eighth year, one of which contains a letter, written by an Egyptian in Syria to a friend at Raamses, after this tenor:

At the moment of writing I am alive and well, so do not be anxious about me; but I want to hear the news as to your welfare every day, and I may add that I expect very soon to rejoin you at Pa-Rameses Mer-amen.

An undertone of apprehension pervades these lines, which is stated plainly in another communication:

Such is the state of affairs with us to-day; but no one knows what will happen to-morrow.

Just here we may recall the fact that the nomadic Shasu were admitted within the lines of Egypt during this eighth year of Menephtah's sole rule.

Of course Menephtah laid his burdens on foreigners only. As a natural result, by and by, history relating what happened "to-morrow," the foreigners in Egypt could endure his cruelty no longer, and, unitedly rising, threw off the yoke of Pharaoh. We learn this from Josephus ("Against Apion," I, 26), who took it from Manetho. A priest at Heliopolis, bearing the name of "Son of Osiris," either stirred up the movement or was elected to be the leader of the rebels; perhaps he, too, was secretly a Semite, for would foreigners trust a real Egyptian? And what is more significant, the revolt was supported in their mutiny by a force of many thousand Jebusites, regarded as descendants of the Shepherds who four centuries back had been expelled from this country.

The area of this uprising extended from

Heliopolis to Avaris, near Zoan, the latter becoming the stronghold of the opposition. Thus the revolt covered the Land of Goshen. Whether or not the Hebrews were concerned in this movement, we are not told; but it is not impossible that they were, and that an unwritten page of history is concealed under the concluding words of the second chapter of Exodus:

And God heard their groaning, and God remembered his covenant with Abraham, with Isaac, and with Jacob. And God saw the children of Israel, and God took knowledge of them. (Vers. 24, 25.)

Now if 600,000 Hebrews and 200,000 men of Jebus were combined in the strike, to say nothing of the Shasu or other foreigners possibly involved in it, Menephtah had a heavy task before him to quell it. Apparently he found this to be the case, for, the story goes on:

He then passed out with the rest of the Egyptians, three hundred thousand of the most warlike of them, against the enemy, who met them. Yet he did not join battle with them; but thinking that would be to fight against the gods, he returned back and came to Memphis.

When the enemy is found to number two to one, other things being equal, no doubt a graceful retreat is better than hopeless valor. Menephtah, furthermore, had reached the age of three score years and ten, an age when courage, as well as vigor, usually gives out. And so, quietly taking his young son with him, he withdrew his whole army up the Nile into Ethiopia, where he wearily wore away twelve long years of exile.

At the end of this sojourn he was eighty or

more years of age, and had been a king twenty years. His son, Seti-Menephtah, in his eighteenth year had grown to be a robust youth. Evidently the father was now too far along in life to do what he had never done before—fight; and if ever the royal pair should return to their realm, it would depend on the spirit and power of the son. During this term of banishment we can scarcely fancy the latter otherwise engaged than in training for this end, and exercising himself in every art of

before. Somewhere in Lower Egypt a final battle was now accepted upon the united challenge of the rebels and the Shepherds, by which the rebels were completely re-subdued and the Jebusites again driven out to the very bounds of Syria.

Either on his way down the Nile, or shortly afterward, Seti-Menephtah visited at Abū Simbel a colossal statue of his grandfather, Rameses II., and inscribed upon one side of it the purpose of his pilgrimage, which was:

In order to render homage to the one who had given him valor.

This was a marked reflection upon his father; but let that pass. At the same time, perhaps, he engraved a tablet on the rock there to commemorate his victories over foreigners—quite likely the very foreigners thus chased back to Syria; in which, as reproduced in illustration 8, he is seen dispatching an Asiatic with a heavy mace, the god Amen-Ra standing by in the act of giving him a scimiter, the legend describing him as

Warlike and valiant, like the goddess Ament.

Also the door-post of his sepulcher, inscribed while he was living, praises him as

The Defender of Egypt, and the Chastiser of the Libyans.

Upon this tablet, as elsewhere, we find that he had already begun to use the double cartouch, Ra-user-kheperu Mer-amen, and Seti Mer-en-ptah. No doubt this was done by agreement between his father and himself. When they came to take their departure from Ethiopia, the very attempt of which depended on the lead and chivalry of the son, the latter, both by the father's desire and by the consent of the army, must have become regent, and probably a regent in more than the usual sense of the word. The father remained real king and retained the throne,—he was to be consulted on all important questions, his wish was to be law, his will supreme, his indorsement was essential as to policy,—but the son was to execute. Moreover, by the results of that brilliant march to the sea the son had earned a share in the dominion, and was entitled to participation in the government of the emancipated country.

Then, too, Seti-Menephtah was the first-born son of his father, the heir-apparent or crown-prince; no brother existed to become a rival; and the cartouches were to belong to him soon by virtue of sole possession of the throne. He was then physical strength itself, the very synonym of health, waking into the morning of life: no cloud marred the horizon, nothing, thought he or his father,—nothing on earth or in heaven,

8. SETI-MENEPHTAH TRIUMPHING OVER FOREIGNERS. (FROM LEPSIUS'S "DENKMÄLER.")

war that might qualify him to be the capable and heroic leader of his Egyptians on the return march to their homes.

At length, in the thirteenth year of their Ethiopian residence, the prince being educated for the fray and the Egyptians eager to recover their land, they all started forth down the Nile, the king of Ethiopia perhaps sending along his troops as auxiliaries.

This return journey was one of success from beginning to end. Seti-Menephtah distinguished himself at every point by a personal prowess that was irresistible: under his masterly generalship triumph followed closely upon the heels of victory. His opponents either were struck with instant death, or crushed under a heavier oppression, or driven before a wave of revolution and military glory that contrasted strangely with the imbecility of a dozen years

9. PORTRAIT-STATUE OF SETI-MENEPHTAH. (FROM THE MONUMENT IN THE BRITISH MUSEUM.)

whether of men or from the gods,—could prevent his wearing the double crown of Egypt alone in the near future. Such was his destiny—in universal human expectation.

Under this arrangement two years passed serenely away. Seti as regent and prospective king pursued the occupations of war by securing the country against the Libyans on the west, and by fortifying the Fountains of Water on the east. He cultivated the arts of peace by fostering authors, both of poetry and of literature, and sculptors, who carved him in stone with exceptional skill and elegance. Their three renowned statues of him now embellish the museums of London, Paris, and Turin. From the first of these illustration 9 is taken, showing us, as successfully as any modern artist could hope to do, just how this distinguished young warrior looked. He carried a frank brow rising just off the line of the nose, a gracefully curved eyebrow, a broad eyelid, a large pensive eye, the arched nose of the Ramesses, full lips, and a delicately molded chin. Altogether his face was singularly genial and

winning. Apparently he was inclined to muse, and smile when his thoughts were far away, as if he were gazing on some vision, either of beauty that engaged his soul or of loveliness that wakened emotions of the heart. Or was he dreaming of the Elysian Fields, that seemed to tempt him hence?

At Thebes he built a little temple, carved the walls of sanctuaries and pylons with bas-reliefs and hymns, set up doorways, obelisks, sphinxes, and stelæ, and even began his own sepulchral chambers on the west of the Nile. But the last date he placed upon any of his works was that of the second year of his executive reign, or when he was about twenty years of age.

Meanwhile, the children of Israel? Their interval of respite from toil was over, and the return of the task-master renewed their bondage with tenfold severity. If they had been concerned in the recent protest against that oppression which Egypt laid upon foreign races who kept their ethnic caste and faith, as a consequence their slavery was made more

10. SETI-MENEPHTAH AS REGENT. (FROM THE STATUE IN THE TURIN MUSEUM. AFTER A PHOTOGRAPH BY CAVRE G. B. BERRA.)

onerous than before. And such seems to have been the case, causing an outcry from the sufferers that ascended unto heaven; a cry that brought Jehovah down to visit his people and declare, "I know their sorrows."

To royal father and son a cloud now rose on the horizon. A new commotion was visible among the servile Hebrews. One man, about equal in age to the venerable Menephtah, joined by another, his brother somewhat younger and just returned from Midian, were observed to be going round among the bondmen advising them to rest from their burdens and inciting them to some sort of concerted movement. Presently they ventured into the presence of the monarch himself, and announced their proposal to be no less than freedom — withdrawal of their entire community from Egypt, or, in the words of the deity of their worship, "Thus saith the Lord, the God of Israel, Let my people go."

What? "To get up out of the land?" Why, that was the very aim Rameses had sought to defeat by rigorous service, together with the drowning Nile, eighty years ago, and the very contingency Menephtah had guarded against seventeen years ago by strengthening the walls and garrisons of Heliopolis. Naturally these two representatives of the Hebrews were told that the proposition could not be thought of. "Wherefore do ye, Moses and Aaron, loose the people from their works? get you unto your burdens."

We cannot follow the contention step by step. Enough that the king proved to be stubborn beyond all influence, that the cloud grew portentous and broke in a storm of disorders without parallel in natural history, and that this series of marvels culminated in an unprecedented tragedy. In the dead of night the spiritual God of Israel, whom Menephtah "knew not," went out into the midst of Egypt and left not a single house in which there was not one dead, "from the first-born of Pharaoh that sat on his throne unto the first-born of the captive that was in the dungeon"; and "even unto the first-born of the maid-

servant behind the mill." Those words disclose an exigency just then obtaining—that a regent shared the throne with the king; they show that this regent (10) was the king's first-born son; they imply with great exactness that conjunction of circumstances to which we have been independently led; in short, they define Seti-Menephtah to the very letter.

The God of Israel could make no exception; had he done so, even the tenth plague would have failed of its purpose. Therefore this singular child on whom the hopes of the empire and the dynasty centered, this fearless and accomplished warrior who had redeemed his country, this unfolding flower of humanity whom to regard was to commend, to love, to celebrate, must be sacrificed to soften the heart of an obdurate father. When he fell asleep that fatal night he woke in those scenes, so far away yet so close at hand, on which he had been wont to brood and dream by day.

Where Seti-Menephtah was at the moment is not clear from the sacred narrative: he may have been at Zoan or at Raamses, where he had commanded the cavalry of the army. If at the former, the horror-stricken father knew the worst immediately; if at the latter, the warning he had received from Moses, together with dire analogy all around, told him the heartrending truth as well as messengers could have told him. Though the country was in confusion, the embalmers would be in duty bound first to minister their last offices unto the king's son; and when at length the imposing ceremonies were over, hands of

II. ENTRANCE TO THE TOMB OF SETI-MENEPHTAH. (FROM A PHOTOGRAPH BY EMIL BRUGSCH BEY.)

genuine grief laid a fallen favorite to repose in the gloom of that sepulcher he himself had already started in the valley of the Tombs of the Kings (11). This he had opened at the very end of the valley and foot of the mountain. The chamber in which the casket of stone was to stand, the intended final resting-place of its excavator, had not been reached. It was on account of such unfinished design that, early in the present century, Champollion wrote:

This poor sepulchral hall was only a corridor in the plan, whose extremity lies still in rough rock; and it became the room of the sarcophagus, or the funeral chamber, by the accident of the death of the Pharaoh.¹

"Accident"? Yes, rather a most unexpected, sudden, shocking, inscrutable providence.

In this beginning of a royal tomb some portions of that sarcophagus, in the rosy granite of Syene, were found lying scattered upon the floor; one (12), from the lower part of the lid carved in effigy, retained the cartouch concluding a legend upon its surface; another (13), upon

¹ "Notices Descriptives," Vol. I., p. 463.

12. VOL. XXXVIII.—94.

13.

14.

15.

16. BAS-RELIEF OF SETI-MENEPHTAH. (FROM A CAST IN THE BRITISH MUSEUM.)

the edge of the lid, preserved a similar record entire, both testifying to the *decease* of Seti-Menephtah; where the hands folded upon the breast the prenominal cartouch (14) was

ness all these carriage; how bright the look of that eye, and fitting the smile upon that almost girlish cheek; how replete with hope the countenance,

carved, surmounted by the symbols of "the Osiris royal," signifying identity with Osiris now, "Thy Spirit is that of Osiris"; and the nominal cartouch (15) concluded an inscription in the same apartment running along the platform of the wall on the right.

Yet, though the royal sarcophagus has been broken to pieces, and the royal mummy has disappeared, happily the image of the prince on the throne, thus cut down without warning, had not long before been carefully imprinted upon the wall of the corridor, just inside the entrance. Turning again to the notes of Champollion :

First corridor, wall on the left, second tableau, sculptured but not painted, and as fresh as if it had just left the hand of the sculptor : the king Menephtah III., coiffé and wearing the atef-crown, offers wine to the god Nefer-tum.

Once more the same Providence that had occasion to deal so severely with both father and son has with extraordinary care shielded from harm this bas-relief of the son all through the centuries, in order that we might see him exactly as he was in life (illustration 16). This figure, regarding either design or engraving, is a masterpiece of beauty. Nothing from antiquity can exceed it in natural form and attitude : more of life, spirit, and sweet expression could scarcely be thrown into stone. The artist who conceived and wrought this gem had real genius, and carried his technical skill to the highest point of attainment. His fine appreciation of spiritual traits underlying physical features, and his delicate power of bringing them out of the wall, were simply marvelous. How full of youthlike tender-

17.

royal cartouches memorializing the personage of this relief, the signs for *deceased*, "makheru," are not only present, they are repeated (17): their date, therefore, must be very nearly that of his death. Had this cavo-rilievo been sculptured any length of time before his death, these signs for *deceased* would be absent. Inasmuch as in this instance there was no need to make the subject younger than he was actually, or more divine, Seti-Menephtah could not have been more than twenty years of age when he was brought low instantly, here to be committed to his "eternal home." A portrait-statue of Seti-Menephtah in middle life or in old age does not exist.

In this light we begin to recognize the true relation of Seti-Menephtah to his father and his true position in time. Under the name of Seti II., he is generally supposed to have been chronologically the successor of his father, and the two years of his reign are generally assumed to have been years of sole authority. On the contrary, the above-related natural version of his brief career is indicated by the monuments to be the right one: let us no longer neglect or misjudge their testimony.

A deep mystery always has hung over the death of Pharaoh's son. Who was he? How old may he have been? Left he absolutely no trace behind?

I venture to assert that his disappearance will ever continue to be completely shrouded in darkness so long as we fail to give proper heed to the light of the monuments. And I invite attention to the fact that the antiquities of Egypt, the best among authorities, stand ready to teach us:

1. That Seti-Menephtah was the first-born son of his father.
2. That his father lived to an advanced age.
3. That the son's administration was

as the offerer of wine holds out his cups to the god! The graver of this iconograph knew how to soften rock, away back in those days of high antiquity.

Yet our object lies outside of all this. The lesson we are to learn from these lines is, that this royal ruler was very young when he died. Underneath the

merely one of regency in behalf of his father. 4. That the son died early, before his father died.

It follows that Seti-Menephtah corresponds to the biblical (1) First-born son (2) of a living Pharaoh, (3) who sat on his throne, (4) but died suddenly, before his father died. Both the Egyptian monuments and the Hebrew Scriptures describe a situation embracing four distinct premises: the four premises are identical in both accounts; the logical conclusion, therefore, must be that they relate to the same personage, for, in the nature of things, two series of such identical particulars would not occur apart once in many ages.

Let us give a few moments to the careful study of the following contemporary Egyptian monuments:

1. *Some Mural Tablets in the Grottoes of Gebel Silsilis.* Menephtah imitated his father in having pictures of his family circle drawn upon ever-enduring rock.

One of these tablets presents to us the group of Menephtah, Isi-nefer-t, and Nehesi. It is graven on the west wall of the Grand Speos, or Temple hewn out of a mountain, and (Cham-pollion, "Monuments," II., cxiv.) exhibits King Menephtah in the ceremony of offering an image of the divinity Ma to the god Amen-Ra and the goddess Maut: he is attended by his wife

18. PORTRAIT OF NEHESI, THE PRIME MINISTER. (FROM A STATUE IN THE BRITISH MUSEUM.)

the Queen Isi-nefer-t, and by an officer named Nehesi. The latter is explained by adjacent hieroglyphs to be

Viceroy over the Two Lands, Fan-bearer at the right of the King, Chief over the priests of all the gods, having admittance to the King's presence, knowing his counsel, Mayor of the city and Governor of the Nome, pa-Nehesi *deceased*.

His office, therefore, was equivalent to that of Privy Councilor and Prime Minister. A sitting statue of him now in London (illustration 18) reveals the fact that he had served in a similar capacity under Rameses II., so

19. KING MENEPHTAH, HIS ROYAL SON, AND NEHESI.
(FROM LEPSIUS'S "DENKMÄLER.")

that he simply held over in both duty and rank under King Menephtah, by whom he was evidently greatly esteemed; but he had passed away prior to the date of this sculpture—the second year in the reign of Menephtah. Isi-nefer-t wears the vulture-head-dress of maternity, but as yet her offspring was too young to be brought into this scene of worship.

A second tablet presents to us the group of King Menephtah, his royal son, and Nehesi. As outlined in illustration 19, it depicts Menephtah again tendering an image of Ma to the deity Amen-Ra; as before, the Privy Councilor to his Majesty, Nehesi *deceased*, finds his place last in the series; now, however, the middle place, immediately behind Menephtah, is occupied, not by Isi-nefer-t the Queen, wife, and mother, but by

Crown Prince of the Palace over the Two Countries, Chief of millions, Head over hundreds of thousands, He who stands in closest relationship to the good god, the Royal Son of his body begotten, beloved of him, of Royal [birth], the Chief of the Soldiers, the very great [Regent in behalf of] him.

Menephtah's Royal Son alive! By the time this rock-engraving was executed so many years had been added to the offspring of Isi-nefer-t that he began to be included in his parents' acts of devotion to the gods.

A third tablet presents to us the group of King Menephtah, Isi-nefer-t, Seti-Menephtah, and Nehesi (20). Its vignette embraces two scenes by means of two registers. In the lower register Menephtah offers an image of a sphinx to the deity Horus and the divinity Ma: here, as in the last tablet, he is attended by

The Heir to the Throne, the Royal Scribe, the Chief of the Soldiers, the Royal Son of his body begotten, beloved of him,

who is closely followed by his *ka*—his "double," or "life"—and remotely by the Privy Councilor, the King's Lion, Nehesi *deceased*.

But we are impatient to learn the name of that royal son; will not this monument identify him for us at last?

Observe that in the upper register King Menephtah, offering once more an image of Ma to Amen-Ra and Ptah, is attended by the royal wife and mother, Queen Isi-nefer-t, followed by

The Heir to the Throne of the whole Land, the Royal Scribe, the Chief of the Soldiers, the great Royal Son (the *sam*) of his body begotten, beloved of him, [Set]ti-Mer-en-ptah *deceased*.

And last of all by Nehesi. In other terms, this royal son of Menephtah was his only son; as only son and heir to the throne, he was his eldest son; as only son and eldest son, he was his "first-born"; the name of this first-born son was Seti-Menephtah, and at the era of this rock-engraving he was already dead! Menephtah and Isi-nefer-t both survive. They are still reigning, and performing the religious duties of king and queen; but they are childless. The scene represented is one in which their beloved offspring, the *sam* or priest of Ptah, Seti-Menephtah, did engage in, with them, until quite recently; but the acknowledgment is made that he does so in person no longer—"the late Seti-

Seti Menephtah

20. VIGNETTE OF MURAL TABLET AT GEBEL SILSILIS. (FROM CHAMPOLLION'S "MONUMENTS.")

Menephtah." He is retained in the group because he was so dearly loved, and because there was no brother to be put in his place. At the beginning of Seti's name, over the back of his head, the figure of the god Set was defaced by iconoclasts some time after the death of both son and father. Champollion, deeming the obliterated character to be no part of the name, read what was spared as Ptah-Amen :

This stela teaches us that the wife of this Pharaoh was called *Isénofré*, as his mother was, and that his eldest son was called *Phtamen*. ("Letters," p. 156.)

But Dr. Richard Lepsius detected the sign under its disfigurement, and correctly reproduced it in his *Königsbuch* :

The Royal Son, the *sam*, Seti-Menephtah (21).

Even if there was no other proof, this monument is quite sufficient of itself to establish the fact that Seti-Menephtah's rule occurred during the lifetime of his father, and that his father, King Menephtah, continued to reign after the son had ceased to help him rule.

This last tablet states that King Menephtah's object in going up the Nile to Silsilis, above Thebes, at this epoch was with pride to publish in the Upper Country the achievement of having reared a temple in honor of the god Amen-Ra at Heliopolis, in the Lower Country. The other monuments which deserve our attention as pertaining to Seti-Menephtah were originally all stationed at Zoan in Lower Egypt.

2. *The Sides of a Statue of Rameses*. This statue is a standing image of Rameses II. holding within his arms two standards, the one on

the right-hand side terminating in a head of the goddess Maut, the other in a head of the goddess Hathor (illustration 22). It was a colossus, between eleven and twelve feet high, carved out of syenite. It has lost its atef-crown, but, cared for now in the Palace of Gizeh, it retains the solar disk, the peculiar wig, the false beard, the kilt hanging from the belt by means of a lion-headed clasp and ending in a row of hooded asps. It was sculptured in fairly good style; but round upon the left side the statue carries an irrelevant supplement, executed in a very different and rather bad manner (23).

Sketched in slight relief, a prince has not yet put off the recurved side-lock as a badge of infancy; he wears the leopard-robe as a badge of that order of priests of Ptah at Memphis called *sam*; and he shows by the plume in his hand that he enjoyed the high rank of Fan-bearer at the right of the king. The inscription identifies this young prince as

The Heir to the Throne over the Upper and Lower Countries, the Royal Scribe, the Chief of the Soldiers, great Royal Son, Mer-en-ptah *deceased*.

Round on the right side of the statue this inscription occurs in more complete form (24):

All life, permanence, purity, and health to the Heir of the Throne over the Two Lands, the Royal Scribe, the Chief of the Soldiers, great Royal Son, the *sam*, . . . [Mer]-en-ptah *deceased*.

On the left standard may be found (25):

All life, stability, and health to the Heir of the Throne, the Royal Son, Mer-en-[pta]h.

And on the right standard (26):

All victory and might to the Heir to the Throne, the Royal Son, Mer-en-ptah *deceased*.

How singular! Who was this royal son "Menephtah *deceased*" when a prince? Was it Menephtah, son of Ramses II.? Impossible; for that Menephtah lived to be king, and to attain nearly as great an age as the illustrious Sesostris. Fur-

22. RAMESES II. AS REGENT. (FROM THE MONUMENT IN THE PALACE OF GIZEH. PHOTOGRAPHED BY SEBAH.)

thermore, this colossus embodies Ramses II. at early manhood, while yet a regent under his father Seti I.: whereas, until long after this stage of life, Khamus was heir to the throne, not Menephtah. Besides, the style of the new figure is so unlike that of the colossus that it must be referred to another hand at a later period.

The solution is not far to seek. This bas-relief pictures Menephtah the son of King Menephtah; and, as we have just seen, the father had no other son bearing his name save Seti-Menephtah. All these titles are precisely those of Seti-Menephtah in the third tablet at Silsilis, particularly the sacerdotal "*sam*" and the military "Chief of the Soldiers." It must

23. LATER SCULPTURE UPON LEFT SIDE OF RAMESES STATUE. (FROM A PHOTOGRAPH BY EMIL BRUGSCH BEV.)

have been the son of Rameses II., Menephtah, when king, who was the author of this meager bas-relief upon his father's statue, and this fully accounts for its misplacement and poor quality. It is a work of pathos: he did it with a trembling hand, for the Heir to his Throne—his hope, his dependence, his joy, his lovely boy—was dead.

Why, then, did he not insert Seti before the "Menephthah" of these inscriptions?

At that time, and for the people of all Egypt in those days, it was wholly unnecessary. Everybody understood who was meant without it.

3. *The Sides of a Statue of Menephtah.* Of course Menephtah must needs imitate his father Rameses in all things, and among all things in setting up a similar image of himself. His was not so much of a colossus perhaps, being scarcely ten feet high, but it was cut of equally fine pale rose-granite of Syene. The standards he tipped with the images of the gods after whom he was named, the right with Ptah-Tutanen, the left with Amen. He assumed a similar wig, upon which an atef-crown was placed ; he put on the conventional beard ; and from his belt he let fall an apron displaying his own titles with the same ornaments his father had used. This statue was discovered by Mariette Bey in the course of his excavations at San nearly thirty years ago, who describes what he saw and read on the sides of the statue in the following terms :

Upon the left side of the base there has been afterwards cut the figure, standing erect, of a personage holding an ostrich plume in his hand. The legend reads: "The Heir upon the throne of Seb (formula designating the heir to the crown), the Governor of the Two Countries for his father, the Royal Son Setimeri-en Ptah, *the justified*."¹

As in the third tablet of Silsilis, so in the present legend, the full or double name, Seti-Menephtah, appears: its author or engraver did not leave the "Seti" out this time.

But how remarkably alike these side-scenes upon the statues of the kings Rameses and Menephtah are! They

¹ "Notice des Principaux Monuments à Boulaq," p. 292.

must have been the work of one and the same author, and that author could not have been Rameses in this instance; he must, therefore, have been King Menephtah in both cases.

Compare now the two accounts—one recorded in the Scriptures, the other recorded on this Egyptian stone :

THE BIBLE.	THE MONUMENT.
The Lord smote	He who governed
The first-born of	Egypt,
Pharaoh,	In behalf of his
That sat on his	father :
throne.	Seti-Menephtah <i>de-</i> <i>ceased.</i>

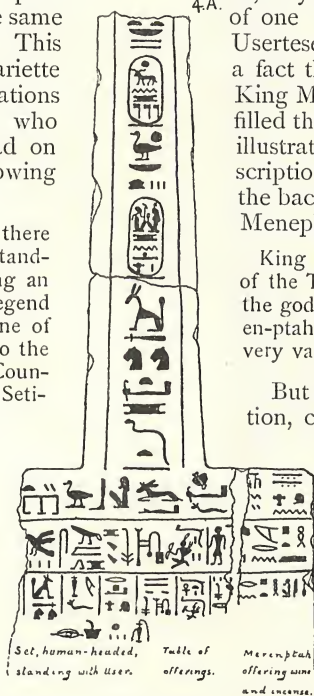

The parallel is absolute. We have already found how Seti-Menephtah, supplying what his father lacked, became conqueror by force of arms, and then active governor of the land. The Egyptian epigraphist confesses all that the sacred narrator affirms, and surpasses him by revealing the full name of the smitten one.

4. *The Back of a Throne of Usertesen surviving at San.* To the open court of the Great Temple, Usertesen I., one of the earliest kings in the twelfth dynasty, contributed two colossal. They were seated figures, in black granite, very highly polished. Upon the back of one of these, still remaining at San, 4A. Usertesen had not engraved anything—a fact that did not escape the notice of King Menephtah, who at different times filled this field with inscriptions, copied in illustration 27. The first or vertical inscription, in large characters, covering the back of the pilaster, pertains to King Menephtah himself, and reads:

King of Upper and Lower Egypt, Lord of the Two Countries Bai-en-ra Beloved of the gods, Son of Ra, Lord of Diadems, Mer-en-ptah Hotep-hi-ma, Beloved of Set the very valiant forever.

But the second or horizontal inscription, covering the back of the throne with small characters, does not pertain to King Menephthah, but to another person, the first two lines running :

[Heir] to the double throne of Seb, inheriting the sovereignty of the Two Lands, Chief of officers, Administrator of the Upper and Lower Countries, the Royal Scribe, the Chief of the Soldiers, the Royal Son, Mer-en-ptah *deceased*.

27. BACK OF USERTESEN'S STATUE AND
THRONE. (FROM TANIS I: EGYPT
EXPLORATION FUND.)

And the last line describes the offering of incense and wine to the deity Set the very valiant by

Sutek the very valiant: His loving Adorer, the Heir to the Throne over the Two Countries, the Royal Scribe, Chief Sealer, Chief Soldier, the Royal Son, Mer-en-ptah *deceased*.

The picture underlying these words, not reproduced by Mr. Petrie, but long ago described by Mariette Bey,

Represents the adoration of Sutekh by a Prince named Menephtah.

The god, clothed in Egyptian fashion, wears upon

us still to read the formula, "Heir upon the throne of Seb," which distinguishes more particularly the prince named to succeed the reigning king. . . . The uræus which he bears upon his brow would seem to indicate that at this moment Prince Menephtah was already associated upon the throne with his father. ("Notice," etc., pp. 283, 284.)

In thus speaking, Mariette refers to King Menephtah when a prince, and to the throne of Rameses II. But Menephtah the father is excluded from consideration by the twice-told tale "dead." Again the truth is, King Menephtah's son, Seti-Menephtah, is meant.

5. *The Back of a Throne of Usertesen removed to Berlin.* Because set up along an avenue the seated colossus of Usertesen I. just described required a mate for company on the opposite side of the way: the throne of this companion was, many years ago, carried away to Berlin, where it silently relates to every visitor its story of the tragedy enacted in Egypt centuries ago (28). Menephtah found the back of this second throne untouched in like manner; and the temptation to fill it up with the decorations of his own glory was too great for him to resist.

His first act was to cover nearly the whole of its surface with his titles and escutcheons in two series.

In the course of time, however, he changed his mind: something happened that led him to recast a portion of his first work. His second act was, esteeming the lower set of titles as of least account, to chisel them away, thus lowering this portion of the back to the depth of two or three inches.

For what purpose?

To inscribe a new name and a new record there,

more in the vein of his newly acquired mood. It was, for the most part, a repetition of what Mariette has described from the San throne. On the right we now look upon

Sutekh, the great god, Lord of heaven.

And on the left we behold his worshiper, decked with the recurved lock of a prince and with the royal uræus, in the act of offering

28. BACK OF USERTSEN'S THRONE. (FROM THE MONUMENT IN THE BERLIN MUSEUM. FROM A SPECIAL PHOTOGRAPH BY G. NEUMANN.)

his head a pointed miter from which depends a kind of long waved ribbon ending in a fork, like the tail of the animal symbolical of Sutekh. This same fork is placed at the extremities of the two little horns with which the forehead of the god is armed.

As to the other personage, he stands erect in the posture of adoration, and exhibits the grand costume of Egyptian princes, with the uræus upon his brow. . . . A fragment of inscription permits

incense and a libation of wine to the god, the adjacent hieroglyphs describing him as

His loving Adorer, his Son, beloved of him, rejoicing in his service, of Royal Birth, the Heir to the Throne, Royal Scribe, Chief of the Soldiers, great Royal Son, Mer-en-ptah *deceased*.

But all these titles are the peculiar distinctions of Seti-Menephtah. And it was only natural that *he* should be represented as professing relationship to, and delight in the service of, that god whose name he bore. The change that had befallen the father and reigning King Menephtah was the untimely death of his matchless son, so very dear to his heart and already exalted so near to his own rank and seat.

6. *The Tablet of Four Hundred Years.* All the foregoing monuments are, in some measure, introductory to, and serve as so many keys for unlocking the purpose of, the longest witness in this series. A double obscurity has always surrounded the Tablet of Four Hundred Years.

After discovering it within the inmost shrine of the Great Temple, under a heap of similar stelæ and mural inscriptions, for the most part broken to fragments, Mariette Bey concealed it on the site, near by, so they say; and when he died he carried the secret of its hiding-place with him into the other world.

But its subject-matter has always been a riddle. A confusion lurks under an evident combination—in its vignette of two unrelated pictures, and in its record of two unconnected stories, pertaining to two different persons.

Referring to illustration 29, the first of these occupies the left-hand side of the vignette *a*, and the first seven lines of the horizontal inscription. Here the vignette sketches an apotheosized forefather, Aa-peh-peh, under the form of the deity Sutekh, or Set, holding a scepter in one hand, the symbol of life in the other; wearing the white crown, rendered quite odd by a forked horn in front, and from its apex by a long waving streamer, likewise forked at the end. Here Ramses II. is the actor, as well as the epigraphist of this part of the tablet, identified by his cartouches and defined by the intermediate hieroglyphics as

Giving wine to his beloved god that He may make him a giver of life.

The upper seven horizontal lines of the record explain the meaning of these sketches of god and king, and reveal the original simple purpose of the tablet to be, on the part of Ramses, to acknowledge and honor the Shepherd king Set Aa-peh-peh, who lived four hundred years before, as the father of Ramses' fathers: the great king hereby seeks to immortalize an act of ancestor worship. Literally, this part of the legend runs as follows:

LINE 1. The living Horus, the living Sun, the powerful Bull beloved of Ma, Lord of the Festivals of Thirty years like his father Ptah, King of Upper and Lower Egypt, Ra-user-ma Sotep-en-ra, Son of Ra, Ramses Mer-amen, Giver of life,

2. Lord of the Vulture and Uræus Diadems, Protector of Egypt, Chastiser of Provinces, Sun born of the gods, Possessor of Lands, the Hawk of gold, Rich in years, Greatest of the Victors,

3. King of Upper and Lower Egypt, Ra-user-ma Sotep-en-ra, Son of Ra, Ramses Mer-amen, Chieftain enriching the Lands with memorials of his name.

4. The sun has shone as the king liked, the king of Upper and Lower Egypt, Ra-user-ma Sotep-en-ra, Son of Ra, Ramses Mer-amen.

5. His Majesty ordered that a great Tablet of granite should be made in the great name of the Father of his fathers

6. (The King of Upper Egypt, Ra-mer-en-ma, Son of Ra, Mer-en-ptah-Seti, being firm and prosperous forever, like Ra every day)

7. In the Four Hundredth year, on the fourth day of the month Mésori, of the King of Upper and Lower Egypt, Set Aa-peh-peh, Son of Ra, beloved of him, Nubti Set, beloved of Harmakhis, who is forever and forever.

No regnal year of Ramses II. is supplied to serve as a date for the monument, because, as line 6 shows, the reign of Ramses had not yet begun; this stela was set up when he was acting as a regent only at Zoan, in Lower Egypt, while his father, Seti I., was still living at Thebes, in Upper Egypt, and continuing to rule as king firmly and prosperously over the land.

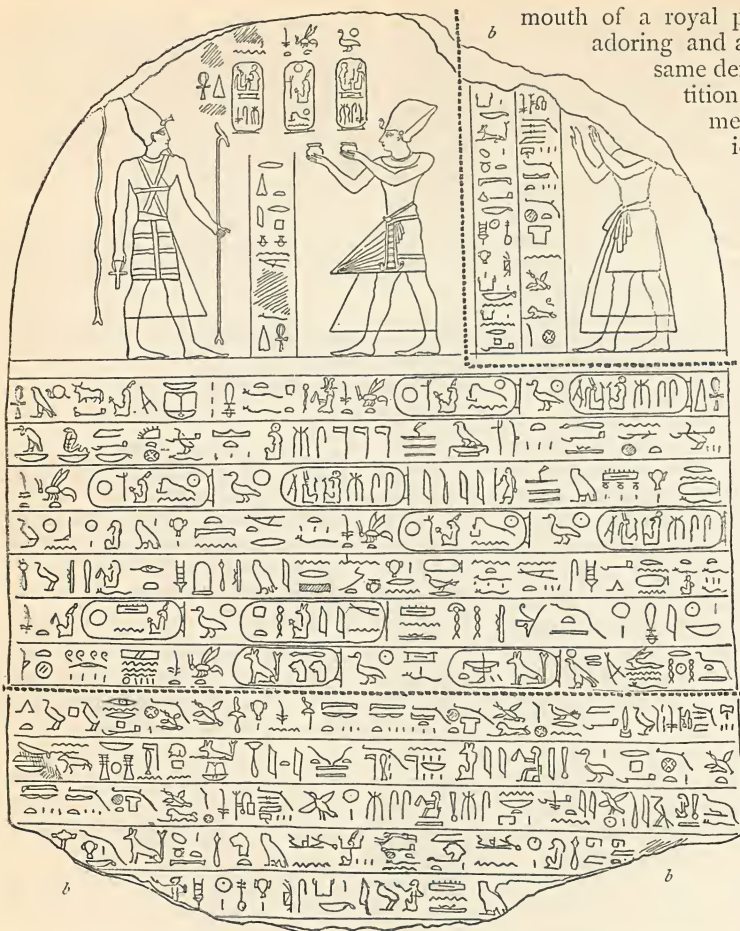

But the second personage is the one in whom our special interest lies: he is treated on the right-hand side of the vignette and in the lower portion of the horizontal inscription *b, b*. By a fracture of the slab his portrait and head are lost; but the two vertical lines of hieroglyphics expressing a petition in his behalf, addressed also to the deity Sutekh on the left, *a*, imperfectly read:

. . . Thy service, O Set, son of Nut, Grant thou a long time in thy service to the *ka* of the Heir to the Throne, Royal Scribe, Commander of the Cavalry, Controller of Provinces, and Superintendent of the fortress-town Tsar-on-the-frontier.

Here the single fact that the prayer is offered for the benefit of the *ka* of the person prayed for would indicate that we have in these words a petition for the welfare of some one no longer in life. Who was he? Already we encounter some of the titles familiar as those belonging to the subject of our study; but the last five lines of the horizontal inscription offer many more:

LINE 8. Having come [before the god represented at *a* in the vignette]—

The Heir to the Throne, Governor of the Nome, Fan-bearer at the King's right hand, Commander

29. THE TABLET OF FOUR HUNDRED YEARS. (FROM THE REVUE ARCHÉOLOGIQUE.)

of the Archers, Controllor of Provinces, Superintendent of the fortress-town Tsar-on-the-frontier, Chief of the Matsu, Royal Scribe, Commander of the Cavalry,

9. The processional priest of the fête Bai-nebtat, High-priest of Set, Officer of Uati, Ruler of Lands, Superintendent of the priests of all the gods, Prince Seti *deceased*, Son, Heir to the Throne, Mayor of the City, Governor of the Nome,

10. The Commander of the Archers, Controllor of Provinces, Superintendent of the fortress-town Tsar-on-the-frontier, Royal Scribe, Commander of the Cavalry of Pa-Rameses, the Prince *deceased* born of the Lady of the House, Chantress superior of Ra, Princess *deceased*,—

He says:

11. Hail to thee, Set, son of Nut, valiant in the boat of millions of years, overthrowing enemies at the prow of the boat of Ra! Great are thy bellowings in . . .

12. . . . Grant thou me a long time in thy service to follow thy person. I have been placed in . . .

Here we have another prayer, an echo of the one written in the vignette, put into the

mouth of a royal personage, represented as adoring and addressing one and the same deity with Rameses. Its petition to the deity Set, "Grant me a long time in thy service," reflects the cultus

drawn upon the last monument, and recalls the words of its adorer of the same god, Sutekh, "Happy" or "Blessed in his service." This personage is plainly named the "Prince Seti *deceased*." By such designation Seti I., the father of Rameses II., cannot be meant, because this Prince Seti, when alive, is said to have been commander of the cavalry stationed at Pa-Rameses, the biblical town Raameses built by the children of Israel for Rameses II., which therefore was not in existence in the days of Seti I., father of Rameses. Hence the "Prince Seti" must designate Seti II., the son of Menephtah the King. Seti I. also would be excluded by

the anachronism involved in the office "Superintendent of the fortress-town Tsar-on-the-frontier," if this frontier fortress, Tsar, was the biblical town Zoan, shown with equal surety by its ruins to have been the creation of Rameses II. A superintendent of Zoan could be only a son or a grandson of Rameses the Great; and so, as his name was Seti, he must have been Seti-Menephtah.

Here, too, we have most of the titles belonging to Seti-Menephtah, already met with—"Heir to the Throne," "Son," "Prince"; and, in addition to these, he is said to have occupied many offices which together would be held only by one on the road to the throne—"Fan-bearer," "Royal Scribe," "Governor," "Commander," "Priest," etc. Indeed, he is declared to have been born of a royal wife, a "Princess," the "Lady of the House." In Egypt the right to the throne descended through the mother; accordingly the mother, from among whose sons the heir was to be selected, must be of the royal line. If the king married out-

side of a royal family the children were ineligible to the crown.

Here also we have apparently the last of King Menephtah's works. Since the tablets described under 1 of this series were placed on the walls of the Speos at Silsilis, this "Princess," the royal wife and mother, had departed; she, too, had gone before to recover her lost boy. The queen was no more, and the heir to the throne was not. What lament could be greater? These are the words of one bereaved indeed. Who inscribed those mortuary strokes? Manifestly, he who had both consort and prince to mourn—Menephtah the King, the desolate survivor. No possibility now remained of another heir or successor in his line to perpetuate his dynasty.

Either Menephtah found the parts of the vignette on the right and the bottom of the tablet (*b*, *b*) without tracing, or he made them so, and then he engraved them between his tears.

Such is the resolution of the "peculiarity," the incongruity, of the Tablet of Four Hundred Years. He who wrote his name upon several monuments of other rulers, his predecessors at Zoan,—he who bequeathed to us a statue composed of the body of Amen-em-hat and the face of Menephtah,—he it was who has caused us to puzzle over a tablet presenting the original worship of Rameses II., supplemented by an imitation of it imputed to Seti-Menephtah his son, who, because no longer with him on earth, was conceived to be entering the presence of an ancestral deity in the world of the gods. So overmastering was Menephtah's misery that he could not refrain from draughting and relettering the honors of his painfully absent child upon every monument, no matter whose, that offered an opportunity.

Upon three of these six memorials the youth referred to has been called Menephtah, upon two Seti-Menephtah, and upon one Seti: no argument is required to show that they all refer to one and the same individual.

Every one of the six, at its end, has confessed just such an unlooked-for death in youth as the Bible attributes to the first-born of Pharaoh and the tomb at Thebes concedes.

Four reasons ascribe the authorship of all these retrospective sketches to Menephtah the King.

First. He was the last survivor of the whole family.

Second. No one except Menephtah would have done such things: Amen-meses and Siptah who followed, descendants of other or irregular lines, were usurpers, rivals, anti-kings, full of antagonism to the house of Menephtah. They would have struck out, effaced, covered up by their own cartouches and claims to

the throne, had they done anything; whereas this sort of regretful work reveals the parental hand. Menephtah was now left a broken-down old man. The high expectation cherished two short years ago, that this vigorous youth would shortly become the sole wearer of Egypt's crown in spite of earth and heaven, the Lord had extinguished in a moment of time. The bright hope was blasted, and in its seat was bitter grief. The stricken father was beside himself: we can fairly hear him moan, not unlike David over Absalom, "O my son Menephtah, my son, my son Menephtah! would God I had died for thee, O Seti, my son, my son!" By day he sought him and by night he missed him. Stooping under the blow, his faltering limbs led him to those spots where his boy had lived, had fought, had worshiped. What wonder if, in this aberration of distress, this agony of loneliness, he should exhibit a weakness for wandering among the monuments of Zoan to picture on them the image that was ever before his eyes, and to remind the people,—who by no means needed to have their memory quickened,—in words that wept, of the lad who was once alive. He would have the world remember his loved one till the world itself should die.

Third. Whatever had been conferred on the son now reverted to the father. Seti-Menephtah had been real ruler and nominal sovereign; the plan that these were to be permanent and finally merge into kingship had been frustrated by a higher power. Both the crown and the government had fallen back wholly upon Menephtah; his reign was continuing as before, and, on account of the absence of other heirs, it must continue till he should die. Then the question must have arisen, How is Seti's brief regency, accompanied by his assumption of kingly prerogative, to be regarded? What would have been reckoned as part of another reign under the nineteenth dynasty could not now be counted. Officially it must be treated as if it had never happened, it must be recognized as such no longer; indeed, measures must be taken to show that he lived and died while yet a prince and not as a king. Accordingly he was represented on the monuments, after his death, just as Khamus was (illustration 3), a deceased prince, distinguished by the side-lock of a royal infant who had not reached the throne as sole ruler after the death of the king.

Fourth. The juxtaposition on the monuments 3, 4, and 5 above-described, of the cartouches and inscriptions of Menephtah the King to those of Seti-Menephtah the son, indicates synchronism.

To the six monumental witnesses of Seti-Menephtah's minority, already considered, another might be added from the papyri. Having

been Chief of the Scribes, where now are his fellows? Have those whom he cherished in his court, and the poets who sought his favor when living, nothing to say of him when dying? Did no others in the realm share the heartache of the father?

They wrote his elegy, and voiced a universal wail when they sang

THE DIRGE OF SETÎ-MENEPHTAH.

O Fan-bearer at the right of the king,
Crown-prince in the grand hall of Seb,
Royal Scribe of truth!
Thy mouth and thy lips were full of health:
Thou wast in favor with the king all thy life.
O Horus, friend of things that are just!
Thou shalt dwell a thousand years on the earth,
Thou reposest upon the mountain
Whose mistress is on the west of Thebes, in the
necropolis.
Thy soul is renewing itself among the living,
And mingling among the perfected spirits.
Descending into the divine bark, thou art not re-
pulsed,
Thou passest even to the jaws of the tomb;
Thou art judged before the deity [Osiris;
Thou art *proclaimed righteous*].

Observe that the poets neither call him king nor imply that he had been such, but only "Fan-bearer" and "Crown-prince," and that after having passed the portal of the tomb and been weighed in the balance of the judgment hall of Osiris, they had no more to wish for him than all the beatitudes of the Egyptian Paradise. They assure him of a thousand years on earth by embalmment, which insured against a second death. And by "the living" they meant the departed, who were supposed scarcely to begin, and not to enjoy, life until they reached the Elysian Fields.

Menephtah, his father, owed his promotion to the throne not to personal merit, but to the removal of most of his elder brothers by death on the field of battle: it is safe to infer that he had kept himself far away from all such dangerous ground. On reaching the throne he had grown too old to learn how to wield the sword or to direct others in actual combat.

But he was an adept in the science of magic, and a believer in the great significance of dreams, visions, and the oracles of the gods. And whenever he was driven into a corner he managed to make superstition avail to extricate him without bodily harm.

When the Libyans, with their allies, were crossing his boundaries and marching on Memphis, he ought to have been at the head of the troops and in the forefront of the defensive works. But as the opposing expedition was about to set out, lo! by night he had a dream, which he naïvely related, to this effect:

Then his Majesty saw in a dream as it were a statue of the god Ptah standing in front of him so as to prevent the king from advancing. It was as high as . . . and it said to him, "Remain where you now are"; and giving him a scimiter, "Put away anxiety from your heart."

Thereupon his Majesty asked, "What am I to do?" And the god replied, "Let the cavalry in great numbers advance in front of the infantry to the cultivated land in the defiles of the nome of Pa-ari-sheps." And so it was done: Menephtah, the incompetent king, trembling with fear, held back clinging to the bank of the Nile, while his army, commanded by his generals, sallied out and won the victory without him.

Later, the goddess Isis appeared to him in another dream, complaining that her temple had been demolished; and this led to that rebellion of his foreign population that drove him to Ethiopia.

From the face of the combined forces of rebels and Jebusites he turned back, as he professed because, forsooth, after a priest had prophesied they were to conquer Egypt and hold it thirteen years, to contend with them would be to fight against the gods; whence, also, the return from Ethiopia at the end of twelve years.

Such inexperience in warfare and such shrinking from exposure to personal harm has some bearing on what he would do in the Exodus at the crossing of the sea: analogy indicates at least a probability.

Had his son been living, the father, now about eighty years of age, certainly again would not have left the bank of the Nile. But the warrior Setî-Menephtah lay motionless on his bier in the palace; and the cavalry, requiring a leader, must now be led forth by the venerable king himself. Though blinded by the shadow of death, though bleeding from his fresh wound of bereavement, though frenzied with rage against those who had brought calamity on him, he made ready his chariot, and all the chariots of Egypt, "The Cavalry of Pa-Ram-eses," and his army, and pursued after escaping Israel. When Pharaoh drew nigh, the children of Israel were sore afraid.

Did he follow them into the midst of the sea, leading his forces after him?

If he did, it was the first time in all his life that he led an attack. Judging from his constitutional cowardice and his record of absence from every field of hostilities, we may be sure he would have had another revelation from heaven sooner than risk his person by such a collision in such a place. For this, too, his feebleness unfitted him, and recent events had unnerved him. Undoubtedly, having brought his host up to the fugitives, remaining in camp

himself he sent his forces forward into the depths to bring Israel back.

And there, standing on the beach at the break of day, he saw the returning waters engulf his troubled, baffled, mighty yet impotent hosts, and, as the day wore on, toss them up at his feet.

Why should we expect the father to perish with the son? For him to live was the greater penalty; shall the less be required? Imagine him, as he furtively fled back to Zoan, unattended by a single one of the gallant charioteers who rode out with him, utterly crushed under multiplied horrors, to linger and suffer out a retributive existence.

Just how long he continued to linger and suffer is unknown. His remaining days were devoted to the pardonable diversion of inscribing upon the monuments at Zoan mementos of him who was his pride, so darkly slain by the mysterious God of the Hebrews. For the sake of these we indulge no regrets that he was spared the sea. No doubt, too, during his last years he was diligently engaged in completing his sepulcher at Thebes. Though not to finish it entirely, he lived long enough to make it in extent and in style of decoration second only to the magnificent tomb of Seti I., his grandfather. Yet his mummy was not there as far back as classic times, when tourists from Italy and Greece left memoranda of pilgrimage in numbers on the spot.

Reference has been made to a single date recorded shortly before King Menephtah's decease. It was observed by Dr. Heinrich Brugsch at Thebes in 1853, and made note of as follows:

Here we meet with the ruins of a temple belonging to the era of Amenhotep III., containing many cartouches of the kings both of earlier and later time; and the remnants of a statue of Menephtah Hotephima, carved out of black granite, with its inscription whose highest date may be the year 33, the lowest not less than the year 25 of this king. ("Reiseberichte," s. 194.)

As we have followed his career, the Exodus and the death of his son must have occurred in the twenty-second or the twenty-third year of his reign: accordingly, if he died in the twenty-fifth year of his reign, he had only two or three years more to live after those critical events; but if he endured to the thirty-third year of his reign, he had about ten to wear away. He must have been between eighty-five and ninety-five years old when at length he was rejoined to his idol.

After the crossing of the sea, Israel chanted words of a song familiar to us:

I will sing unto the Lord,
For he hath triumphed gloriously:
The horse and his rider hath he thrown into the sea.

Not long afterward, when the aged king died, a poem was composed by an Egyptian courtier, eulogistic in character, not familiar to us and deeply interesting as the contemporary elegy: at about the same time and over closely connected events the Hebrews sang a pæan of triumph, but the Egyptians,

THE DIRGE OF MENEPHTAH.

Amen gave thy heart pleasure,
He gave thee a good old age,
A lifetime of pleasure followed thee:
Blessed was thy lip, sound thine arm,
Strong thine eye to see afar.
Thou hast been clothed in linen;
Thou hast guided thy horse and chariot
Of gold with thy hand,
The whip in thy hand, yoked were the steeds;
The Syrians and the Negroes marched before thee.
A proof of what thou hast done—
Thou hast proceeded to thy boat of acacia wood,
A boat made of it before and behind;
Thou hast approached the Beautiful Tower
Which thou thyself made.
Thy mouth was full of wine, beer, bread, and flesh:
Cattle were slaughtered and wine opened.
The sweet song was made before thee:
The chief anointer anointed thee with balsam.
The superintendent of thy fields brought birds,
The fishermen brought fish;
Thy galleys came from Syria laden with good things;
Thy stable was full of horses;
Thy female slaves were strong.
Thine enemies were placed fallen:
Thy word no one opposed.
Thou hast gone before the gods, the victor, *the departed*.

It is often asserted that the Egyptians naturally would not confess a misfortune, and that their antiquities afford no trace of the first-born son of Pharaoh brought low under the last of those ten judgments which liberated Israel. But may not such statements themselves be fallible? As in the example of the Oppressor's daughter, may not the monumental concealment of his son's son, who died for the freedom of God's chosen people, be due rather to our dullness of vision? Is not their ingenuous testimony on record, and waiting only for our unerring discernment?

John A. Paine.

“ALBEMARLE” CUSHING.

JOY in rebel Plymouth town, in the spring of 'sixty-four,
When the *Albemarle* down on the Yankee frigates bore,
With the saucy Stars and Bars at her main;
When she smote the *Southfield* dead, and the stout *Miami* quailed,
And the fleet in terror fled when their mighty cannon hailed
Shot and shell on her iron back in vain,
Till she slowly steamed away to her berth at Plymouth pier,
And their quick eyes saw her sway with her great beak out of gear,
And the color of their courage rose again.

All the summer lay the ram,
Like a wounded beast at bay,
While the watchful squadron swam
In the harbor night and day,
Till the broken beak was mended, and the weary vigil ended,
And her time was come again to smite and slay.

Must they die, and die in vain,
Like a flock of shambled sheep?
Then the Yankee grit and brain
Must be dead or gone to sleep,
And our sailors' gallant story of a hundred years of glory
Let us sell for a song, selling cheap!

Cushing, scarce a man in years,
But a sailor thoroughbred,
“With a dozen volunteers
I will sink the ram,” he said.
“At the worst 't is only dying.” And the old commander, sighing,
“'T is to save the fleet and flag — go ahead!”

Bright the rebel beacons blazed
On the river left and right;
Wide awake their sentries gazed
Through the watches of the night;
Sharp their challenge rang and fiery came the rifle's quick inquiry,
As the little launch swung into the light.

Listening ears afar had heard;
Ready hands to quarters sprung
The *Albemarle* awoke and stirred,
And her howitzers gave tongue;
Till the river and the shore echoed back the mighty roar,
When the portals of her hundred-pounders swung.

Will the swordfish brave the whale,
Doubly girt with boom and chain?
Face the shrapnel's iron hail?
Dare the livid leaden rain?
Ah! that shell has done its duty; it has spoiled the Yankee's beauty
See her turn and fly with half her madmen slain!

High the victors' taunting yell
 Rings above the battle roar,
 And they bid her mock farewell
 As she seeks the farther shore,
 Till they see her sudden swinging, crouching for the leap and springing
 Back to boom and chain and bloody fray once more.

Now the Southron captain, stirred
 By the spirit of his race,
 Stops the firing with a word,
 Bids them yield, and offers grace.
 Cushing, laughing, answers, "No! we are here to fight!" and so
 Swings the dread torpedo spar to its place.

Then the great ship shook and reeled
 With a wounded, gaping side,
 But her steady cannon pealed
 Ere she settled in the tide,
 And the Roanoke's dull flood ran full red with Yankee blood,
 When the fighting *Albemarle* sunk and died.

Woe in rebel Plymouth town when the *Albemarle* fell,
 And the saucy flag went down that had floated long and well,
 Nevermore from her stricken deck to wave.
 For the fallen flag a sigh, for the fallen foe a tear!
 Never shall their glory die while we hold our glory dear,
 And the hero's laurels live on his grave.
 Link their Cooke's with Cushing's name; proudly call them both our own;
 Claim their valor and their fame for America alone —
 Joyful mother of the bravest of the brave!

James Jeffrey Roche.

THE POET.

HE 's not alone an artist weak and white
 O'er-bending scented paper, toying there
 With languid fancies fashioned deft and fair,
 Mere sops to time between the day and night.
 He is a poor torn soul who sees aright
 How far he fails of living out of the rare
 Night-visions God vouchsafes along the air;
 Until the pain burns hot, beyond his might.
 The heart-beat of the universal will
 He hears, and, spite of blindness and disproof,
 Can sense amidst the jar a singing fine.
 Grief-smitten that his lyre should lack the skill
 To speak it plain, he plays in paths aloof,
 And knows the trend is starward, life divine.

Richard E. Burton.

THE HISTORY OF THE KARA POLITICAL PRISON.

When Colonel Kononovich (Kon-on-o'vitch) resigned his position as governor of the Kara (Kah-rah') penal establishment, in 1881, his place was taken by Major Potulof (Po'too-loff), who had previously been connected in some official capacity with the prison administration of the Nerchinsk (Ner'-chinsk) silver mines. Shortly after Potulof assumed command, all of the male political convicts, who then numbered about one hundred, were transferred to the new political prison erected by Colonel Kononovich at the Lower Diggings, where they were divided into gangs of twenty-five men each and shut up in four large *kameras* (kah'me-rahs). Their life, as described in letters surreptitiously written by some of them to their friends,¹ was hard and hopeless, but not absolutely intolerable. They were allowed to exercise every day in the court-yard, they were permitted to receive small sums of money from their friends, they had in the prison a fairly good library consisting of books purchased by them or sent to them from European Russia, and they could amuse themselves occasionally by working with carpenter's or blacksmith's tools in a small shop situated in one corner of the court-yard. On the other hand, they were living under very bad sanitary conditions; some of them were kept night and day in handcuffs and leg-fetters; two or three of them were chained to wheelbarrows; those who still had possession of their mental faculties were forced to listen constantly to the babbling or the raving of their insane comrades; they were no longer allowed to diversify their monotonous existence by work in the gold placers; they were deprived of the privilege of enrollment in the free command at the expiration of their terms of probation; they were forbidden to communicate with their relatives; and their whole world was bounded by the high serrated wall of the prison stockade. That their life was a terribly hard one seems to have been admitted, even by the most indifferent of Siberian officials. In March, 1882, Governor-General Anuchin (An-noo'-chin) made a "secret" report to the Tsar with

regard to the state of affairs in Eastern Siberia, in the course of which he referred to the political convicts at Kara as follows:

In concluding this part of my report [upon the prisons and the exile system], I must offer, for the consideration of your Imperial Majesty, a few words concerning the state criminals now living in Eastern Siberia. On the 1st of January, 1882, they numbered in all 430 persons, as follows:

a. Sent to Siberia by decree of a court and now	
1. In penal servitude	123
2. In forced colonization	49
3. In assigned residences [na zhitvo] . . .	41
b. Sent to Siberia by administrative process and now	
1. In assigned residences [na zhitelstvo].	217
Total	430 ²

All of the state criminals belonging to the penal-servitude class are held at the Kara gold mines under guard of a foot company of the Trans-Baikal [By-kahl'] Cossacks consisting of two hundred men. The sending of these criminals to work with the common convicts in the gold placers is impossible.³ To employ them in such work in isolation from the others is very difficult, on account of the lack of suitable working-places, their unfitness for hard physical labor, and the want of an adequate convey. If to these considerations be added the fact that unproductive hard labor, such as that employed in other countries merely to subject the prisoner to severe physical exertion, is not practiced with us, it will become apparent that we have no hard labor for this class of criminals to perform; and the local authorities who are in charge of them, and who are held to strict accountability for escapes, are compelled, by force of circumstances, to limit themselves to keeping such state criminals in prison under strict guard, employing them, occasionally, in work within the prison court, or not far from it. Such labor has not the character of penal servitude, but may rather be regarded as hygienic. Immunity from hard labor, however, does not render the lot of state criminals an easy one. On the contrary, complete isolation and constant confinement to their own limited circle make their life unbearable. . . . There have been a number of suicides among them, and within a few days one of them, Pozen, has gone insane. A number of others are in a mental condition very near to insanity. In accordance with an understanding that I have with the

¹ I have in my possession a number of these letters, and many of the facts set forth in the following pages have been derived from them. Although the letters themselves must be regarded, of course, as *ex-parte* testimony, they were not intended to excite public sympathy, nor to affect public opinion, since it was not supposed by the writers that they would ever obtain publicity.

² It is a noteworthy fact, frankly admitted by the Governor-General, that out of 430 political offenders banished to Eastern Siberia, 217 — or more than half —

had been sent there without trial, and without even a pretense of judicial investigation. I submit this officially stated fact for the attentive consideration of the advocates of a Russo-American extradition treaty.

³ The Governor-General does not say why this was "impossible," nor does he try to explain the fact that although the politicals were constantly sent to the gold placers under Colonel Kononovich's management, no evil results followed, and not a single attempt was made to escape.

Ministry of the Interior, all sufferers from mental disorder will be removed, if possible, to hired quarters in the town of Chita [Chee'tah],¹ since there are in Siberia no regular asylums for the insane, and all the existing institutions of that kind in European Russia are full.²

It is a fact perhaps worthy of remark that the life of the political convicts at Kara, which Governor-General Anuchin describes as "unbearable," was made unbearable by the direct and deliberate action of the Government itself. Anuchin caused to be erected in front of the prison windows the high stockade that hid from the prisoners the whole outside world and turned their place of confinement into a huge coverless box; while the Minister of the Interior, apparently without the least provocation, abolished the free command, and ordered the "complete isolation" which resulted in the suicide and insanity that the Governor-General seems to deplore. The condition of the state criminals was not "unbearable" under the administration of Colonel Kononovich. It became unbearable as a consequence of the orders that forced the latter's resignation.

It was hardly to be expected that young and energetic men would quietly submit to a state of things that was officially recognized as "unbearable," and that was gradually driving the weakest of them to suicide or insanity. In April, 1882, less than a year after Colonel Kononovich's resignation, and less than a month after the delivery of Governor-General Anuchin's report to the Tsar, a few of the boldest and bravest of the state criminals at Kara made an attempt to escape by digging a tunnel under the prison wall. The excavation, which was made under the floor in one of the *kameras*, was not discovered; but owing to the marshy nature of the ground upon which the building stood, the hole quickly filled with water, and work in it was abandoned. It then occurred to some of the prisoners that they might escape by concealing themselves during the day in the small shop in one corner of the court-yard where they were allowed to work, and then scaling the stockade from its

roof at night. The most serious difficulty in the way was the evening "verification." After supper every night the prisoners in all the cells were counted, and the men concealed in the workshop would be missed before it grew dark enough to render the scaling of the stockade reasonably safe. This difficulty the prisoners hoped to overcome by making dummies to take the places of the missing men in the *kameras*. It was not customary to waken prisoners who happened to be asleep at the time of the evening verification. The officer on duty merely included them in the count without disturbing them, and as he did not enter the dimly lighted cell, but made his count from the door, he was not likely to notice the difference between the figure of a dummy and the figure of a real man lying asleep on the platform with his face to the wall. If the proposed stratagem should succeed, the men who escaped were to make their way down the valley of the Amur (Am-moor') River to the Pacific Ocean, and there endeavor to get on board of some American whaling or trading vessel. In the mean time their comrades in the prison were to supply their places with dummies at every verification, in order to conceal their escape as long as possible and give them time enough to reach the coast before the inevitable hue and cry should be raised. Late one afternoon in April, when all necessary preparations had been made, two political convicts named Muishkin (Mwish'kin) and Khrushchef (Khroosh'cheff) concealed themselves in a large box in the prison workshop, and just before the time for the evening verification their places were taken by two skillfully constructed dummies in convict dress which were laid on the sleeping-platform in the cell that they had occupied. The substitution was not noticed by the officer who made the evening count, and at a late hour of the night Muishkin and Khrushchef crept out of the box in the workshop, climbed up on the roof, scaled the stockade without attracting the attention of the sentry, and stole away into the forest. A few days later two more men escaped in the

¹ Up to the time of our visit to the mines, three years and a half later, this promised removal had not been made. Insane politicals were still living in the same *kameras* with their sane comrades, and intensifying, by their presence, the misery of the latter's existence. In East Siberian prisons generally we found little attention paid to the seclusion or care of demented convicts. In more than one place in the Trans-Baikal we were startled, as we entered a crowded prison *kamera*, by some uncared-for lunatic, who sprung suddenly towards us with a wild cry or with a burst of hysterical laughter. The reasons for this state of affairs are given, in part, by the Governor-General. There is not an insane asylum in the whole country, and it is easier and cheaper to make the prison comrades of a lunatic take

care of him than to keep him in seclusion and provide him with an attendant. For educated political prisoners, who dread insanity more than anything else, it is, of course, terribly depressing to have constantly before them, in the form of a wrecked intelligence, an illustration of the possible end of their own existence.

² Report of Governor-General Anuchin to Alexander III., Chapter V., Section 3, under the heading of "Exile Penal Servitude and the Prison Department." A copy of this report is in my possession, and I intend, ultimately, to publish it in full. The original bears, as an indorsement, in the Tsar's handwriting, the significant words, "Grustnaya no ne novaya kartina" ["A melancholy but not a new picture"].

same way, and at the end of two weeks the prison authorities were counting every night and morning no less than six dummies, while the six prisoners represented by these lay figures were far on their way towards the coast of the Pacific. Sometime in the course of the third week after the departure of Muishkin and Khrushchef two more dummies were laid on the sleeping-platforms in the prison *kameras*, and a fourth couple escaped. In getting away from the stockade, however, one of them unfortunately fell into a ditch or a pool of water, and the splash attracted the attention of the nearest sentry, who promptly fired his rifle and raised an alarm. In ten minutes the whole prison was in commotion. A careful count was made of the prisoners in all the *kameras*, and it was found that eight men were missing. A few days before this time a visit of inspection had been made to the prison by Mr. Galkin Vraskoi (Gal'kin Vrass'koy), chief of the Russian prison administration, and General Ilyashevich (Il-yah-shay'vitch), governor of the Trans-Baikal, and when the escape was discovered these high officials were on their way from Kara to Chita. In response to a summons from Major Potulof they hurried back to the Lower Diggings and personally superintended the organization of a thorough and widely extended search for the missing men. Telegrams were dispatched to all the seaport towns along the coast of the Pacific, as well as to all points on the Amur that could be reached by telegraph; descriptions and photographs of the fugitives were mailed to police officials throughout Eastern Siberia; orders were issued to arrest all suspicious or unknown persons; and searching parties of natives, stimulated by the promise of reward, scoured the forests in all parts of the Trans-Baikal. It was impossible, of course, for men who were unfamiliar with the country, who had neither guides, maps, nor compasses, and who were enfeebled by long imprisonment, to elude, for any great length of time, so persistent and far-reaching a pursuit. Although two of them, Muishkin and Khrushchef, made a journey of more than a thousand miles, and actually reached the seaport town of Vla-

divostok, every one of the fugitives was ultimately recaptured and brought back to Kara in handcuffs and leg-fetters.¹

In the mean time the prison authorities at Kara were making preparations to "give the political convicts a lesson"² and "reduce the prison to order." This they purposed to do by depriving the prisoners of all the privileges that they had previously enjoyed; by taking away from them books, money, underclothing, bed-clothing, and every other thing not furnished by the Government to common criminals of the penal-servitude class; by distributing them in small parties among the common-convict prisons at Ust Kara, Middle Kara, and Upper Kara; and by subjecting them to what are known to Russian prisoners as "dungeon conditions" (*kartsernoi polozhenie*).³ Anticipating, or pretending to anticipate, insubordination or resistance to these measures on the part of the politicals, Ilyashevich and Galkin Vraskoi concentrated at the Lower Diggings six *sotnias* of Cossacks, and after ten days of inaction, intended, apparently, to throw the prisoners off their guard, ordered a sudden descent upon the prison in the night. This unprovoked attack of an armed force upon sleeping and defenseless prisoners is known in the history of the Kara political prison as "the pogrom of May 11."⁴ Three or four hundred Cossacks with bayoneted rifles marched noiselessly into the court-yard under direction of Lieutenant-Colonel Rudenko (Roo'den-ko), filled the prison corridor, and then, throwing open suddenly and simultaneously the doors of all the *kameras*, rushed in upon the bewildered politicals, dragged them from their sleeping-platforms, and proceeded with great roughness and brutality to search them, deprive them of their personal property, strip them of their clothing, and hale them out into the court-yard. All the remonstrances and protests of the sufferers were answered with insults; and when some of the more impetuous of them, indignant at the unprovoked brutality of the assault, armed themselves with boards torn up from the sleeping-platforms and made an attempt to defend themselves, they were knocked down and mercilessly beaten by the

¹ The politicals who took part in this unsuccessful attempt to escape were Muishkin, Khrushchéf, Bólo-mez, Levchéenko, Yurkófski, Dikófski, Kryzhanófski, and Minakóf.

² This was the expression used by Major Potulof in speaking to me of the events that followed the escape. It is believed by many of the politicals at Kara that the prison authorities deliberately intended to provoke them to violence, in order, first, to have an excuse for administering corporal punishment, and, secondly, artificially to create a "boont," or prison insurrection, that would divert the attention of the Minister of the Interior from their (the officials') negligence in allowing eight dangerous criminals to escape.

³ A prisoner living under "dungeon conditions" is deprived of money, books, writing materials, underclothing, bed-clothing, tobacco, and all other luxuries; he is not allowed to walk for exercise in the court-yard nor to have any communication with the outside world; and he must live exclusively upon black rye-bread and water, with now and then a little of the soup or broth thickened with barley, which is known to the political convicts as "balánda."

⁴ The word "pogrom" has no precise equivalent in the English language. It means a sudden, violent, and destructive attack, like one of the raids made upon the Jews by infuriated peasants in Russian towns some years ago.

Cossacks with the butt-ends of their guns. Among the prisoners most cruelly maltreated were Voloshénko, Rodiónof, Kobylíanski, Bobókhof, and Orlóf. It is not necessary to go minutely into the details of this scene of cruelty and violence. I do not wish to make it out any worse than it really was, and for my purpose it is sufficient to say that before noon on the 11th of May, 1882, the bruised and bleeding political convicts, robbed of all their personal possessions and stripped of the boots and underclothing that they had bought with their own money and that they had previously been permitted to wear, set out in three parties, on foot and without breakfast, for the common-criminal prisons of Ust, Middle, and Upper Kara. They were guarded by convoys of from fifty to one hundred Cossacks, who had express instructions from Governor Ilyashevich not to spare the butt-ends of their guns. The party destined for Ust Kara, in which there was one man chained to a wheelbarrow, asked permission to stop and rest on the road, as they had had nothing to eat or drink that day and were marching a distance of fifteen versts (about ten miles). The soldiers of the convoy, however, refused to allow them to stop, and pricked them on with their bayonets. Thereupon the prisoners who were not handcuffed attacked the Cossacks with stones. An unequal contest followed, in the course of which the men who resisted were knocked down and beaten again with the butt-ends of guns, and all who were not already manacled had their hands tied securely behind their backs. Late in the afternoon, bruised, tired, hungry, and thirsty, they reached Ust Kara, and after being again carefully searched were shut up by twos in the dark and dirty "secret" cells¹ of the common-criminal prison, where they threw their weary bodies down on the cold, damp floors and congratulated themselves that the day was over. The parties sent respectively to the Amurski

(Am-moor'skee) prison and the prison in Middle Kara had an experience similar to that of the Ust Kara party, except that they were not beaten by their guards. Before dark the hundred or more state criminals who had occupied the kameras of the political prison were distributed in small parties among the common-criminal prisons of Ust Kara, the Lower Diggings, Middle Kara, and Upper Kara; the long-term (*bez sróchni*) convicts were in both handcuffs and leg-fetters, and all were living under "dungeon conditions." In this manner Governor Ilyashevich and Mr. Galkin Vraskoi put down the "insurrection" (*boont*) that a hundred or more sleeping prisoners presumably would have raised when they awoke, taught the "insurgents" a valuable and much needed "lesson," and showed the Minister of the Interior how vigorously and successfully his subordinates could deal with a sudden and threatening emergency—and with sleeping men! The political prison had been "reduced to order," but it was the order that once "reigned in Warsaw."

For two months the political convicts lived under "dungeon conditions" in the cells of the common-criminal prisons, seeing little of one another and knowing nothing of what was happening in the outside world. Bad air, bad and insufficient food, and the complete lack of exercise soon began injuriously to affect their health; scurvy broke out among them, and in less than a month several of them, including Tikhonof (*Tee'khon-off*) and Zhukofski (*Zhoo-koff'skee*), were at the point of death,² and many more were so weak that they could not rise to their feet when ordered to stand up for verification. During all of this time the prison authorities had in their possession money belonging to these wretched convicts; but they would not allow the latter to use it, nor to direct its expenditure for the underclothing, bedding, and nourishing food of which the sick especially

¹ "Secret" cells in Siberian prisons are those intended for the solitary confinement of persons accused of murder or other capital crimes. They were not generally shown us in our visits to prisons, but I was permitted by Colonel Makofski to inspect the "secret" cells in the prison at Irkutsk (*Eer-kootsk'*). These had neither beds nor sleeping-platforms, and contained no furniture of any kind except a "parásha," or excrement bucket. The prisoners confined in them were forced to sleep without pillows or bed-clothing on the cold cement or stone floor, and during the day had either to sit on this floor or to stand. I saw men who had not yet been tried occupying such cells as these in the Irkutsk prison. If I had power to summon as witnesses the subordinate officials of the House of Preliminary Detention in St. Petersburg, I could prove, in a Russian court, that even in that show prison of the Empire there were "kartsers," or disciplinary cells, where there was not so much as a "parásha," and where the floors were covered with excrement. Of course Mr. Galkin Vraskoi and Mr. Kokovtsef (*Ko-kov'tsef*),

the heads of the Russian prison administration, were not aware of this fact; but, nevertheless, it is a fact, unless both political prisoners and the prison officials themselves severally and independently lied to me. The political offender Dicheskulo (*Dee-chess-kool'o*) was put into such a cell as this after the riot in the house of Preliminary Detention that followed the flogging of Bogoliubof (*Bo-go-lioo-boff*). I did not see the "secret" cells in the Kara prisons, but there is no reason to suppose that they were in any better condition than the kameras that I did see and that I have described. I do not mean to have the reader draw the sweeping and mistaken conclusion that all cells, or even all "secret" cells, in Russian prisons are of this kind, nor that the higher prison officials are in all cases responsible for such a state of affairs. All that I aim to do is to make plain the conditions under which educated and delicately nurtured political offenders in Russian prisons are sometimes compelled to live.

² Tikhonof died shortly afterwards.

were in such urgent need. It was not until scurvy threatened to become epidemic that Major Khalturin (Khal-too'rin), a cruel gendarme officer from Irkutsk who had succeeded Major Potulof in the command of the political prison, consented to allow the prisoners to have bedding.

In the women's prison at Ust Kara the state of affairs was little better. The women, of course, had had nothing whatever to do with the escape, nor with the artificially created "insurrection," but they had, nevertheless, to take their share of the consequences. The new commandant, Major Khalturin, believed in strict discipline with no favors; and he regarded the permission that had been tacitly given the women to wear their own dress instead of the prison costume as an unnecessary concession to a foolish and sentimental weakness. He therefore ordered that their own clothing be taken away from them, and that they be required to put on the convict garb. Some of the women were sick and unable to change their dress, others did not believe that the order would really be enforced, and they refused to obey it, and finally the overseer of the prison resorted to violence. The scene that ensued produced such an effect upon Madame Leschern that she attempted to commit suicide.

Outside the political prison at the Lower Diggings were living a number of women who had voluntarily come to the mines in order to be near their husbands. Previous to the escape and the "pogrom" these women had been allowed to have interviews with their imprisoned husbands once or twice a week, and had received from the latter small sums of money, with the help of which they contrived to exist. After the prison had been "reduced to order" and the political convicts had been subjected to "dungeon conditions," interviews between husbands and wives were no longer permitted; and as the prisoners' money was all held in the possession of the authorities, the unfortunate women and children were soon reduced almost to starvation. Vera Rogatchëf, wife of Lieutenant Dmitri Rogatchëf, a young artillery officer then in penal servitude, was brought to such a state of destitution and despair that she finally shot herself.

On the 6th of July, 1882, eight of the political convicts, who were regarded by the Government for some reason as particularly dangerous, were sent back in chains from Kara to St. Petersburg to be immured for life in the "stone bags" of the castle of Schlüsselburg.¹

¹ These "dangerous" prisoners were Messrs. Gëllis, Voloshénko, Butsinski, Paul Orlóf, Malávski, Popóf, Shchedrin, and Kobylánski. Nothing is known with regard to their fate. Madame Gëllis, the wife of one of them, whose acquaintance I made in the Trans-

A few days later — about the middle of July — all the rest of the state criminals were brought back to the political prison at the Lower Diggings, where they were put into new and much smaller cells that had been made by erecting partitions in the original kameras in such a manner as to divide each of them into thirds. The effect of this change was to crowd every group of seven or eight men into a cell that was so nearly filled by the sleeping-platform as to leave no room for locomotion. Two men could not stand side by side in the narrow space between the edge of the platform and the wall, and the occupants of the cell were therefore compelled to sit or lie all day on the plank nares without occupation for either minds or bodies. To add to their misery, paráshas were set in their small cells, and the air at times became so offensive and polluted that, to use the expression of one of them in a letter to me, "it was simply maddening." No other reply was made to their petitions and remonstrances than a threat from Khalturin that if they did not keep quiet they would be flogged. With a view to intimidating them Khalturin even sent a surgeon to make a physical examination of one political, for the avowed purpose of ascertaining whether his state of health was such that he could be flogged without endangering his life. This was the last straw. The wretched state criminals, deprived of exercise, living under "dungeon conditions," poisoned by air laden with the stench of excrement-buckets, and finally threatened with the whip when they complained, could endure no more. They resolved to make that last desperate protest against cruelty which is known in Russian prisons as a "golodófka," or "hunger-strike." They sent a notification to Major Khalturin that their life had finally become unendurable, that they preferred death to such an existence, and that they should refuse to take food until they either perished or forced the Government to treat them with more humanity. No attention was paid to their notification, but from that moment not a mouthful of the food that was set into their cells was touched. As day after day passed the stillness of death gradually settled down upon the prison. The starving convicts, too weak and apathetic even to talk to one another, lay in rows, like dead men, upon the plank sleeping-platforms, and the only sounds to be heard in the building were the footsteps of the sentries, and now and then the incoherent mutterings of the insane. On the fifth day of the "golodófka" Major Khalturin, convinced

Baikal, told me that she was denied a last interview with her husband when he was taken away from Kara, that she never afterwards heard from him, and that she did not know whether he was among the living or the dead.

that the hunger-strike was serious, came to the prison and asked the convicts to state definitely upon what terms they would discontinue their protest. They replied that the conditions of their life were unbearable, and that they should continue their self-starvation until the excrement-buckets were taken out of their cells, until they were permitted to have books and to exercise daily in the open air, until they were allowed to direct the expenditure of their money for better food and better clothing than were furnished by the Government, and until he (Khalturin) gave them a solemn assurance that none of them should be flogged. The commandant told them that the talk about flogging was nonsense; that there had never been any serious intention of resorting to the whip, and that, if they would end their strike, he would see what could be done to improve the material conditions of their life. Not being able to get any positive assurances that their demands would be complied with, the prisoners continued the "golodófka." On the tenth day the state of affairs had become alarming. All of the starving men were in the last stages of physical prostration, and some of them seemed to be near death. Count Dmitri Tolstoï, the Minister of the Interior, who had been apprised of the situation, telegraphed the commandant to keep a "skórbnoi leest," or "hospital sheet," setting forth the symptoms and condition of the strikers, and to inform him promptly of any marked change.¹ Every day thereafter a feldsher, or hospital steward, went through the cells taking the pulse and the temperature of the starving men. On the thirteenth day of the "golodófka" Major Khalturin sent word to the wives of all political convicts living at the Lower Diggings that they might have an interview with their husbands—the first in more than two months—if they would try to persuade them to begin taking food. They gladly assented, of course, to this condition, and were admitted to the prison. At the same time Khalturin went himself to the starving men and assured them, on his honor, that if they would end the hunger-strike he would do everything in his power to satisfy their demands.

¹ I have never been able to understand why a government that is capable, when irritated, of treating prisoners in this way should hesitate a moment about letting them die and thus getting rid of them. However, I believe it is a fact that in every case where political hunger-strikers have had courage and nerve enough to starve themselves to the point of death the authorities have manifested anxiety and have ultimately yielded. It is one of many similar inconsistencies in Russian penal administration. The Government seems to be sensitive to some things and brutally insensible to others. It prides itself upon its humanity in expunging the death penalty from its civil code, and yet it inflicts death constantly by sentences of courts-martial in civil cases. It has abolished the knout, but it flogs

The entreaties of the wretched, heart-broken women and the promises of the commandant finally broke down the resolution of the politicals, and on the thirteenth day the first and most obstinate hunger-strike in the history of the Kara political prison came to an end.

While these events were taking place, a young married woman about twenty-four years of age, named Maria Kutitonskaya (Koo-teeton'ska-ya), who had been condemned to penal servitude on account of her revolutionary activity in Odessa, finished her prison term in Kara and was sent as a forced colonist to a small village called Aksha (Ak-shah'), situated in the southern part of the Trans-Baikal on the frontier of Mongolia. She had been an eyewitness of the brutalities that attended the "reduction of the political prison to order" by Rudenko and Potulof; she had seen the "lesson" given to the political convicts with the butt-ends of guns; she had herself felt the shame and misery that impelled Madame Lesschern and Mrs. Rogatchëf to attempt self-destruction; she was acquainted with the causes and history of the long and desperate hunger-strike that had just ended; and, stirred to the very depths of her soul by a feeling of intense indignation, she determined, as a last resort and at the cost of her own life, to assassinate General Ilyashevich, the governor of the Trans-Baikal, and thus call the attention of the world to the cruelties practiced by his authority, and in part under his direction, at the mines of Kara. She was at this time pregnant, and was aware of her condition; she knew that it would be impossible to escape after committing the crime that she contemplated; she knew that she was about to sacrifice her own life, and probably the life also of her unborn child; but so intense were the emotions aroused by all she had seen and known at Kara, that she was ready to commit murder, and to die for it, upon the chance that the deed and its investigation would give publicity to the wrongs and outrages that she and her companions had suffered. As soon as she could get together money enough for her traveling expenses after her arrival at Aksha, she

with the plet, which, according to the testimony of Russian officers, can be made to cause death in a hundred blows. It shrinks from allowing political convicts to die of self-starvation, and yet it puts them to a slow death in the "stone bags" of the castle of Schlüsselburg. To the practical American intelligence it would seem to be safer, as well as more humane, to order political convicts out into the prison court-yard and have them shot, than to kill them slowly under "dungeon conditions." Society would not be half so much shocked and exasperated by summary executions as it now is by suicides, hunger-strikes, and similar evidences of intolerable misery among the political convicts in prison and at the mines.

bought a small, cheap revolver from a common-criminal colonist, ran away from her place of banishment, and, hiring horses from the peasants in the villages through which she passed, made her way towards Chita, which was the governor's place of residence. As it was not customary for young and attractive women to travel entirely alone in that part of the world, she was regarded with a good deal of interest and curiosity by the peasants, and just before she reached her destination she was arrested by a village official upon suspicion. She persuaded this man to take her to Chita and turn her over to the *ispravnik*, with whom she was personally acquainted. To the *ispravnik* she admitted frankly that she had run away from her place of exile, but said that in so doing she had not intended to escape, but merely to get an interview with the governor. After some conversation the *ispravnik* went with her to the governor's house, and leaving her in a reception room went to apprise Ilyashevich of her presence and her desire for an interview.

"Have you searched her?" inquired the governor suspiciously.

"No," replied the *ispravnik*; "I did n't think of it."

"Never mind," said Ilyashevich. "What can a woman do?" And with these words he entered the reception room where Madame Kutitonskaya, with a cocked revolver hidden under a handkerchief in her right hand, was awaiting him. As he advanced to greet her she raised the revolver, and saying, "This is for the 11th of May,"¹ shot him through the lungs. The wound was not mortal, but he fell to the floor and was carried to a couch by some of the servants, while the *ispravnik* seized and disarmed Madame Kutitonskaya, caused her to be bound, and sent her under strong guard to the Chita prison. Her life there was a life of terrible loneliness and misery. She was put into a cold, dirty, "secret" cell, which the district architect of the Trans-Baikal described to me as "hardly long enough to lie down in or high enough to stand up in." Her own dress and underclothing were taken away from her, and in place of them she was given an old prison suit that had already been worn by a common convict and was full of vermin. She lived under strict "dungeon conditions," and for three months lay without bed-clothing on the bare floor. When, as a result of such hardships and privations, she became sick, and asked for straw to lay down on the planks

where she slept, she was told by the chief of police, Mélnikof, that there was no straw for her. But for the food smuggled into her cell and the aid surreptitiously given to her by sympathetic common-criminal convicts in the same prison, she would undoubtedly have died before the meeting of the court appointed to investigate the case. After three months of this wretched existence she was tried by court-martial and sentenced to be hanged. Then, for another whole month, she lay under sentence of death, arguing with herself, through many long, sleepless nights, the question whether or not she should make known to the authorities her pregnant condition, which had not yet become apparent. She knew that an announcement of the fact that she was with child would, in accordance with the custom in such cases, secure a long reprieve if not a commutation of her sentence; but, on the other hand, life held no hope for her, and she believed that if she allowed herself to be hanged under such circumstances, the fact of her pregnancy, which would inevitably be discovered after her death, would intensify the feeling of horror that she hoped would be excited by the series of events which had led up to the catastrophe—would give to such events even greater publicity, and would inspire all lovers of humanity and justice with a deeper and bitterer hatred of the Government. The questions that tormented her most were, first, whether, if she allowed herself to be hanged without revealing her condition, she would not be the murderer of her unborn child, and, secondly, whether that child would die when she died, or would live for a time in her dead body. This last ghastly doubt seems to have been particularly harrowing to her in her morbid mental condition, but even in the face of such reflections she finally decided to allow herself to be hanged. Early in January, 1883, the Government, without reference to her condition, of which it was still ignorant, commuted her sentence to penal servitude for life² and sent her with a returning party of common-criminal exiles to the city of Irkutsk. Although it was midwinter, she was not provided with a sheepskin overcoat nor with felt boots, and she might have perished from cold on the road if the common criminals in the party had not taken pity upon her and furnished her with warm clothing at the expense of their own comfort. When she reached Irkutsk she was in such a condition that she had to be lifted

¹ The date of the "pogrom" in the Kara political prison.

² I was credibly informed, and in justice the fact should be stated, that this commutation of sentence was asked for by Governor Ilyashevich, whose life Madame Kutitonskaya had attempted. Whether he

felt, upon reflection, some stirrings of pity and remorse, or whether he merely wished to make a showing of magnanimity in order to throw doubt upon the reports of his cruelty at the mines and break their effect, I do not know.

out of her sleigh. As a result of this prolonged agony of mind and body, her child, a short time afterwards, was born dead in the Irkutsk prison. When we left Siberia in 1886 she was still living. All that I know of her life since that time is that it has ended.

When one of my informants first knew Madame Kutitonskaya she was a happy, careless school-girl in Odessa, and no one would have ventured to predict that in less than ten years she would develop into a woman of such extraordinary energy, courage, self-control, and firmness of purpose. There are few things more remarkable in the records of heroism than the determination of Madame Kutitonskaya to allow herself to be hanged, with a child in her womb, in order that the horror of such an execution might stir the emotions of every man and woman who heard of it, and give wider publicity to the series of events of which it was the final outcome. Such, however, is the type of character that is forged in the furnace of oppression and tempered in the cold bath of solitary confinement.

The statements that I have made with regard to the events that led to the shooting of Governor Ilyashevich are based upon conversations with the political convicts who were actors in them, and upon three independently prepared accounts in manuscript of the escape, the "pogrom," and the hunger-strike. The story of the attempted assassination, and of Madame Kutitonskaya's life in prison, is from one of her letters, written after her arrival in Irkutsk. The brief transcript of her intentions, thoughts, and reflections while lying under sentence of death in Chita was obtained from an exiled lady who had many long talks with her in the Irkutsk prison, and whose acquaintance I subsequently made. The whole story, in its main outlines, is known to political exiles throughout Siberia, and I heard it in half a dozen different places. All the efforts that I dared make to get at the Government's side of the case were unsuccessful. The officials to whom I applied for information—with a few exceptions—either manifested such a disinclination to talk that I could not pursue the subject, or else made preposterous attempts to deceive me. A young surgeon in the Irkutsk prison whom I questioned about Madame Kutitonskaya was so frightened that he got rid of me as soon as possible and never dared return my call. The *ispravnik* of Nerchinski Zavod (Ner'chin-skee Zah-vod'), who went to Kara with some of the recaptured fugitives after the escape, described the political convicts to me as "*lofki moshenniki*" (clever rogues) who were not deserving of either sympathy or respect. Most of them, he said, were "priests' sons, or seminarists who had been ex-

pelled from school." Lieutenant-Colonel Novikov (No'vee-koff), who was for three years or more commander of the Cossack battalion at the mines of Kara, assured me that the political convicts were mere "*malchishki*" (miserable insignificant boys), without any definite aims or convictions; that out of one hundred and fifty of them that he had known at Kara only three or four had any education, and that Madame Kutitonskaya's attempt to assassinate Governor Ilyashevich was "a mere crazy freak"—that "she did n't know herself what she did it for." The attentive reader will see that I have had no difficulty in making my choice between such preposterous statements as these and the clear, coherent, and detailed narratives of the political convicts themselves. If my history of the Kara political prison is one-sided, it is simply because the other side either refused to give me information, or was too ignorant to state its own case with any show of plausibility.

How far from the real truth were the statements made to me by officials with regard to the character of the political convicts at Kara I purpose to show by giving brief biographies of three or four of the men and women who took an active part in the series of events that I have tried to describe, or who were identified with the later history of the political prison. One of the ablest and most distinguished of them was Anna Pavlovna Korba (Kor-bah'), whose portrait, made from a photograph taken before her exile, will be found on page 741. She was the daughter of a Russian nobleman named Paul Mengart, and was born in the province of Tver, near Moscow, in 1849. She was carefully educated under the direction of her mother, a cultured and deeply religious woman, and at the early age of eighteen or nineteen she was married to a Swiss gentleman residing in Russia named Victor Korba. Her beauty and accomplishments made her greatly sought after in society, her husband was wealthy and was proud of her social success, and for a time she lived the life of a woman of the great world. This life, however, could not long satisfy a young girl of bright mind and serious character, and in 1869, when she was only twenty years of age, she made an attempt to fit herself for something better. A school for the higher education of the daughters of the nobility was opened about that time in connection with a boys' college in St. Petersburg, and Madame Korba at once enrolled herself as a student, with the intention of finally completing her education in one of the institutions for women at Zurich or in Paris. In 1870 her husband failed in business: she was forced to abandon the hope of finishing her collegiate training abroad, and a short time

afterwards went with her husband to reside in the small provincial town of Minsk, where he had obtained employment. Here she began her career of public activity by organizing a society and raising a fund for the purpose of promoting popular education and aiding poor students in the universities. Of this society she was the president. In 1877 the Russo-Turkish war broke out and opened to her ardent and generous nature a new field of benevolent activity. As soon as wounded Russian soldiers began to come back from Bulgaria, she went into the hospitals of Minsk as a Sister of Mercy, and a short time afterwards put on the uniform of the International Association of the Red Cross, and went to the front and took a position as a Red Cross nurse in a Russian field hospital beyond the Danube. She was then hardly twenty-seven years of age. What she saw and what she suffered in the course of that terrible Russo-Turkish campaign can be imagined by those who have seen the paintings of the Russian artist Verestchagin. Her experience had a marked and permanent effect upon her character. She became an enthusiastic lover and admirer of the common Russian peasant, who bears upon his weary shoulders the whole burden of the Russian state, but who is cheated, robbed, and oppressed, even while fighting the battles of his country. She determined to devote the remainder of her life to the education and the emancipation of this oppressed class of the Russian people. At the close of the war she returned to Russia, but was almost immediately prostrated by typhus fever contracted in an overcrowded hospital. After a long and dangerous illness she finally recovered and began the task that she had set herself; but she was opposed and thwarted at every step by the police and the bureaucratic officials who were interested in maintaining the existing state of things, and she gradually became convinced that before much could be done to improve the condition of the common people the Government must be overthrown. She soon afterwards became a revolutionist, joined the party of "The Will of the People," and participated actively in all the attempts that were made between 1879 and 1882 to overthrow the autocracy and establish a constitutional form of government. On the 5th of June, 1882, she was arrested and thrown into the fortress of Petropavlovsk, and some months later was tried before the Governing Senate upon the charge of being a terrorist. At the end of the trial she was asked if she had any last words to say in her own defense, and she replied as follows:

"I do not admit my guilt. I will, however, admit that I belong to the revolutionary party, — the party of the Will of the People, — and that

I believe in its principles and share its views. As for an organization that chooses and prefers a path of bloodshed, I do not know any such organization, and I doubt whether any such organization exists. Such a party may arise in time, if the revolutionary movement extends, but if I be living when the time comes, I will not belong to it. If the party of the Will of the People adopts the policy of terror, it is not because it prefers terrorism, but because terrorism is the only possible method of attaining the objects set before it by the historical conditions of Russian life." These are sad and fateful words, and they bear a prophecy of terrible calamity: "Gentlemen—Senators! You are well acquainted with the fundamental laws of the Russian Empire. You are aware that no one has a right to advocate any change in the existing Imperial form of Government, or even to think of such a thing. Merely to present to the Crown a collective petition is forbidden — and yet the country is growing and developing, the conditions of social life are becoming day by day more and more complicated, and the moment approaches when the Russian people will burst through the barriers from which there is no exit."

The presiding judge, interrupting: "That is your personal opinion."

Madame Korba, continuing: "The historical task set before the party of the Will of the People is to widen these barriers and to obtain for Russia independence and freedom. The means for the attainment of these objects depend directly upon the Government. We do not adhere obstinately to terrorism. The hand that is raised to strike will instantly fall if the Government will change the political conditions of life. Our party has patriotic self-control enough not to take revenge for its bleeding wounds; but, unless it prove false to the Russian people, it cannot lay down its arms until it has conquered for that people freedom and well-being. As a proof that the aims of our party are wholly peaceful, I beg you to read the letter written to Alexander III. soon after the 1st of March.¹ You will see from it that we desire only reforms, but reforms that shall be sincere, complete, and vital."

MADAME KORBA's last words did not soften towards her the hearts of her judges, and of course she did not expect that they would. She was found guilty, and was sentenced to twenty years of penal servitude with deprivation of all civil rights, and forced colonization in Siberia for life at the expiration of her penal term. At the date of my last advices from the mines of Kara she was still living, but she was greatly broken, and there was little probability

¹ The date of the assassination of Alexander II.

ANNA PAVLOVNA KORBA.

that she would long endure the hardships and privations of penal servitude.

Among the male political convicts at the mines of Kara whose careers most interested me was Hypolyte Muishkin, whose portrait was engraved from a police photograph taken while he was in the fortress of Petropavlovsk. In the year 1864 a well-known author and political economist named Chernishevski (Chernee-shef'skee), whose famous novel "What is to be Done?" has recently been translated into English, was tried in St. Petersburg as a revolutionist and banished to Siberia. He was at first sent to the Alexandrofski central prison, near Irkutsk, but ultimately he was transferred to the small town of Villuisk (Villoo'isk), in the sub-arctic province of Yakutsk (Yah-kootsk'), where he lived many years under the strictest police surveillance. When the modern revolutionary movement began, in 1870, it was the dream of all the ardent young Russian revolutionists to rescue Cher-

nishevski from Siberian exile and enable him to escape from the Empire to some place where he could continue his work unmolested. Several attempts were made to liberate him, but they all failed, and the project was finally abandoned as impracticable. In 1875 a young student in the Technological Institute at St. Petersburg named Hypolyte Muishkin conceived the idea of going to Siberia in the disguise of a captain of gendarmes and presenting himself boldly to the ispravnik in Villuisk with forged orders from the gendarmerie directing him (Muishkin) to take charge of the exile Chernishevski and carry him to St. Petersburg for incarceration in the castle of Schlusselburg. Such transfers of dangerous political exiles from Siberia to the Russian fortresses were not at that time uncommon, and Muishkin felt confident that he should accomplish his purpose. He went as a private traveler to Irkutsk, resided there several months, succeeded in getting into the corps of gendarmes as a sub-

HYPOLYTE MUISHKIN.

ordinate officer, and in a short time made himself so useful that he was generally trusted and was given the freedom of the office. He provided himself with the necessary blanks, filled them up with an order accrediting him as a gendarme officer intrusted with the duty of taking the exile Chernishefski to St. Petersburg, forged the signatures, affixed the proper seals, provided himself with the uniform of a captain of gendarmes, and then resigned his position in the gendarmerie upon the pretext that he had received news that made it necessary for him to return at once to European Russia. He disappeared from Irkutsk, and as soon as he deemed it prudent to do so he set out for Villuisk with the uniform of a gendarme officer in his satchel, and a forged order in his

pocket directing the ispravnik of Villuisk to turn over the exile Chernishefski to him for conveyance to St. Petersburg. Muishkin was an accomplished conspirator, an eloquent talker, and a man of fine personal presence, and when he presented himself in the uniform of a gendarme officer to the ispravnik at Villuisk he was received at first with unquestioning deference and respect. He stated his business, said that it had been decided to imprison Chernishefski in the castle of Schlusselburg, and produced the order directing the ispravnik to turn over the distinguished exile to him for conveyance to St. Petersburg. The plot came very near succeeding, and probably would have succeeded if Muishkin had had money enough to bring with him two or three confederates in

the disguise of soldiers or gendarmes and in the capacity of escort. It is very unusual for a commissioned officer to travel in Siberia without at least one soldier or Cossack to look after his baggage, to see about getting post-horses promptly, and to act generally in the capacity of body-servant. The absence of such a man or men was especially noticeable and unusual in this case, for the reason that Muishkin was to take charge of an important and dangerous political offender. This absence of an escort was the first thing that excited the *ispravnik's* suspicion. It seemed to him very strange that a gendarme officer should be sent there after Chernishefski without a guard of two or three soldiers to help him take care of the dangerous prisoner, and the more he thought about it the more suspicious the whole affair appeared to him. After a night's reflection he decided not to turn over Chernishefski to this gendarme officer without the sanction of the governor of the province, who resided in Yakutsk, and at breakfast the next morning he told Muishkin that Governor Chernaiyef (*Cher-ny'yef*) was his—the *ispravnik's*—immediate superior, and that without an order from the governor he did not feel justified in surrendering an exile of so much importance as the political economist Chernishefski. He proposed, therefore, to send a courier to Yakutsk with Muishkin's papers, and to await the return of this courier before taking any action.

"Very well," replied Muishkin coolly. "I did not suppose that it would be necessary to obtain the consent of the governor before complying with the orders of the imperial police; but if such consent is indispensable, I will go to Governor Chernaiyef myself and get it."

When Muishkin set out for Yakutsk, the *ispravnik*, whose suspicions had meanwhile grown stronger, said to him, "It is not proper for an officer of your rank to travel about without any escort, and if you will permit me to do so I will send with you a couple of Cossacks." Muishkin could not object, and the Cossacks were sent—the *ispravnik* instructing them that they were on no account to lose sight of this gendarme officer, because there was something suspicious about him, and it was not certain that he really was what he pretended to be. As soon as Muishkin had gone the *ispravnik* wrote a letter to the governor, apprising him of his suspicions, and sent it by another Cossack, with directions to get ahead of Muishkin, if possible and deliver it before the latter reached his destination. The Cossack overtook Muishkin on the road, and in the course of conversation among the soldiers the fact transpired that the third Cossack had a letter from the *ispravnik* to the

governor. Muishkin knew then that the game was lost, and at the first favorable opportunity he attempted to escape by dashing suddenly into the woods. The Cossacks, in pursuance of their instructions, endeavored to keep him in sight; but he drew his revolver, fired at them, wounded one of them, and finally made his escape. For nearly a week he wandered around in the great primeval forests that border the river Lena; but at last, half dead from cold, hunger, and exhaustion, he was captured. After some months of imprisonment in Irkutsk he was sent under strong guard to St. Petersburg and was there thrown into the fortress of Petropavlovsk. For nearly three years he lay in a bomb-proof casemate of the Trubetskoi ('Troo-bet-skoy') bastion awaiting trial, and all that I know of this part of his life I learned from an exile in Siberia who occupied a cell in the fortress near him. This gentleman said that Muishkin was often delirious from fever, excitement, or the maddening effect of long solitary confinement, and that he frequently heard his cries when he was put into a strait-jacket or strapped to his bed by the fortress guard.

In October, 1878, Muishkin was finally tried with "the 193" before a special session of the Governing Senate. All of the political prisoners brought to the bar on the occasion of this famous trial insisted that the public should be admitted to hear the proceedings, and that they—the prisoners—should be allowed to have their own stenographer. The Government refused to accede to either of these demands, and, as a consequence, most of the politicals refused to make any defense or to take any part in the proceedings. At the end of the trial Muishkin, when asked if he had any last words to say, made a fiery speech denouncing the secrecy of the trial and declaring that they did not desire nor expect to escape punishment, but thought they had a right to ask that they be tried in open court and that their case be laid before the people through the press. As soon as Muishkin began to attack the Government he was ordered by the presiding judge to be silent, and when he refused, and insisted upon his right to be heard, the gendarmes were directed to remove him from the courtroom. The last words he uttered before he was choked into silence and dragged out were: "This court is worse than a house of ill-fame; there they sell only bodies, but here you prostitute honor, and justice, and law!" For his original offense, aggravated by this outrageous insult to the court, Muishkin was sentenced to ten years of penal servitude with deprivation of all civil rights, and was shortly afterwards incarcerated in the central convict prison at Kharkoff (*Khar-koff*). I have not space for

MADAME KAVALSKAYA.

even the briefest description of the sufferings of the political convicts in that prison. The story has been written by one of them and published surreptitiously in Russia under the significant title, "Last Words over the Coffin of Alexander II." I hope sometime to translate and republish this document, and I need only say now that I have the names of six politicals who went insane in that prison during the short time that it was used as a place of confinement for such offenders. Muishkin was put into a small cell in the lower story that had formerly been occupied by the distinguished political Prince Tsitsianof (Tsit-see-an'off). His courage and energy soon led him to meditate plans of escape, and before the end of the first year he had made a dummy to lie in his place on the sleeping-platform, and with only his hands and a small piece of board had dug a tunnel out under the prison wall, disposing of the earth that he removed by packing it into a space between the floor of his cell and the ground. He had also made himself a suit of clothing to put on in place of the prison costume after he should make his escape. Prince Tsitsianof, who had occupied the cell before him, was a scientist, and during his term of imprisonment had been allowed to have some large maps. These maps had been left as old rubbish on the oven, and Muishkin had soaked the paper off from the muslin on which they were mounted and had made out of the cloth a shirt and a pair of trousers. His preparations for escape were virtually complete, and he

was only waiting for a favorable opportunity, when one of the prison officials came to his cell at an unusual hour to speak to him. Muishkin happened to be down in his tunnel, while the dummy was lying in his place on the bed as if he were asleep. The official soon discovered that the lay figure was not the prisoner, an alarm was raised, the mouth of the tunnel was found, and Muishkin was dragged out like a rat from its hole. He was then put into another cell, from which escape was impossible. At the expiration of two or three months, fearing that he was about to become insane, he determined to do something for which he would be shot. He asked and obtained permission to attend service in the prison church one Sunday, and while there contrived to get near the governor of the prison; and as the latter turned around, after kissing the cross in the hands of the priest, Muishkin struck him in the face. For this offense he would, under ordinary circumstances, have been shot; but just at that time the attention of the Minister of the Interior was attracted to the Kharkoff central prison by the large number of deaths and cases of insanity among the politicals, and Professor Dobroslavin (Do-bro-slah'vin), a sanitary expert from St. Petersburg, was sent to the prison to make an investigation. He reported that it was not fit for human habitation, said that the cases of death and insanity among the political convicts were not surprising, and recommended that all the prisoners of that class

MADAME BOGOMOLETS.

be removed. In the face of this report it was presumed that Muishkin was insane, or at least in an abnormal mental condition, at the time when he struck the governor of the prison, and he was not even tried for the offense. Shortly afterwards he was sent, with all his fellow-prisoners, to the mines of Kara. While they were in the city of Irkutsk on their way to the mines, one of the party, a man named Leo Dmokhowski (Dmo-khoff'skee), died. All the convicts in the party were permitted to attend the funeral in the prison church, and at the conclusion of the brief services Muishkin felt impelled to say a few words over the body of his comrade. He referred to the high moral character of the dead man and his lovable personality, quoted a verse from the Russian liberal poet Nekrassof (Ne-krass'off), and said, "Out of the ashes of this heroic man, and of other men like him, will grow the tree of liberty for Russia." At this point he was stopped by the chief of police and at once taken back to his cell. For making what was regarded as a revolutionary speech within the sacred precincts of a church and in the presence of the "images of the Holy Saints of the Lord" he was condemned to fifteen years more of penal servitude. In talking to me about Muishkin, some of his comrades described him as "a born orator who never made but two speeches in his life; one of them cost him ten years of penal servitude, and the other fifteen." Muishkin himself said, after reaching the mines of Kara, that there was only one thing in his life which he regretted, and that was his speech over the dead body of his comrade Dmokhowski in Irkutsk. The world could not hear it, it did no good, it was merely the gratification of a personal impulse, and it added so many years to his term of penal servitude that, even if he should live out that term, he would be too old, when finally released, to work any more for the cause of Russian freedom.

Muishkin was one of the first of the eight prisoners who escaped from the Kara political prison in April, 1882, and he was recaptured, as I have said, in the seaport town of Vladivostok, to which American vessels come every summer. In 1883 he was sent back to St. Petersburg, with a party of other "dangerous" politicals and incarcerated in the castle of Schlusselfburg. He was shot there in 1885 for striking the prison surgeon.

In January, 1882, about three months before the escape of the eight convicts from the political prison at Kara, two married women, Madame Kavalskaya (Kah-vahl'ska-ya) and Madame Bogomolets (Bo-go-mo'lets), escaped from prison while passing through Irkutsk on their way to the mines. They were recaptured before they could get out of the city, and

when they were brought back to their cells they were subjected to the customary personal search. These searches are always made by men, even when the prisoners are women, but in most cases they are conducted with decency and with the forms of respect. On this occasion, however, Colonel Soliviof (Sol-o-vee-off'),

SHCHEDRIN.

an adjutant of the Governor-General, and a man of disreputable personal character, who happened to be in the prison when Madame Kavalskaya and Madame Bogomolets were brought back, conducted the search himself, and in the course of it not only insulted the women but caused them to be stripped naked in his presence. He then had the audacity to go to a kamera in which were confined a number of male political convicts and boast of his exploit, remarking contemptuously, "Your political women are not much to look at." Among the convicts in the cell was a school-teacher named Shchedrin (Shched-rin') who, exasperated beyond endurance by the recital and the insulting taunt, sprung towards Soliviof, and, calling him a "despicable coward and liar," struck him in the face. For this insult to an officer, and for an attempt that he had made to escape, Shchedrin, upon his arrival at Kara, was chained to a wheelbarrow. In July, 1882, he, with the other "dangerous" political convicts named on page 736, was sent to St. Petersburg to be incarcerated in the castle of Schlusselfburg. He was not released from the wheelbarrow, even when put into a vehicle; but as the roads were rough, and as he was

A RELIGIOUS SERVICE AT AN OROZHANNI ENCAMPMENT.

constantly being bruised by the jolting of the barrow against him, it was finally found necessary to unchain him and lash the wheelbarrow on behind. Lieutenant-Colonel Vinokurof (Vin-o-koor'off), inspector of exile transportation for Western Siberia, told me that he saw Shchedrin, with the wheelbarrow still lashed to his vehicle, passing through the province of Tobolsk.

After the hunger-strike in the Kara political prison in the summer of 1882 the life of the

prisoners became a little more tolerable. They were again allowed to have books, money, and some warm clothing of their own, and they were permitted to walk two hours a day in the court-yard. The sanitary conditions of their life, however, continued to be very bad, little attention was paid to the sick, and the death rate was abnormally high.¹

Between the resignation of Colonel Kononovich in 1881 and the appointment of Captain Nikolin in 1885 there were seven changes

¹ I have not been able to obtain a complete list of the prisoners who died, committed suicide, or went insane in the Kara political prison between 1879 and 1886, but I know of the following cases:

Deaths (all except one from prison consumption): Ishutinof, Krivoshein, Zhukof, Popoko, Madame Lissofskaya, Tikhonof, Rogatchëf, Dr. Veimar, Miss Arm-

feldt, and Madame Kutitonskaya. *Suicides*: Semyonofski (shot himself), Rodin (poisoned himself), Uspenski (hanged himself). *Insane*: Matveivich, Zubkofski, Pozen, and Madame Kavalskaya (the last named recovered). At the time of our visit to the mines eight out of the eleven women in the women's political prison were sick.

of commandment¹ and the prison was managed in a hit-or-miss sort of way, according to the caprice of the man who was at the head of it. At one time the prisoners were allowed books, daily walks, money, and communication with their relatives, while at another time

occupied only by law. The best of the commandants, according to the testimony of the prisoners, was Burlei. Khalturin was brutally cruel, Shubin was a man of little character, and Manaiyef was not only a drunkard, but a thief who destroyed hundreds of the prisoners' let-

PEASANTS THRESHING OUT GRAIN ON THE ICE.

all these privileges were taken away from them. The partitions that were erected in the kameras to reduce the size of the cells in 1882 were removed in 1884. The free command, which was abolished in 1881, was reestablished in 1885. With every new officer there was a change in the regulations, and official whim or impulse took the place that should be oc-

¹ Kononovich, Potulof, Khalturin, Burlei, Shubin, Manaiyef, Burlei (a second time), and Nikolin.

ters and embezzled nineteen hundred rubles of money sent to them by their relatives and friends in European Russia. All of these officers were from the gendarmerie in Irkutsk. On the 16th of January, 1884, the political prison was put under the exclusive control of the imperial police, and early in 1885 Captain Nikolin was sent from St. Petersburg to take command of it.

Every word that Colonel Kononovich said to Assistant Minister of the Interior Durnova

RETURNING FROM KARA ON THE ICE OF THE SHILKA RIVER.

in 1881 with regard to the management of the political prison was shown by the subsequent course of events to be true. The Government forced an honest and humane man to resign and sent, one after another, half a dozen cruel or incapable men to take his place, and it reaped, in tragedies and scandals, the harvest that might have been expected. It is still pursuing, as I shall show in a subsequent paper, the same course, and it may look for the same results. It is sowing the wind, and sometime, in the not distant future, it will reap the whirlwind.

On the 12th of November, Mr. Frost and I, with glad hearts, turned our faces at last homeward. As we drove, with Major Potulof, out of the dreary settlement known as the Lower Diggings, two political convicts in long gray overcoats, who were walking towards the prison at a distance of one hundred and fifty or two hundred yards from the road, saw and

recognized us, and as we passed they stopped, removed their caps, and made towards us what the Russians call a "waist bow"—a bow so low that the body is bent at right angles from the waist. It was their last mute farewell to the travelers who had shown them sympathy and pity, and it is the last remembrance I have of the mines of Kara.

We spent that night in the house of the overseer of the Ust Kara prison at the mouth of the river, and on the following morning remounted our horses for another ride across the mountains to Stretinsk (Stray'tinsk). Major Potulof opened a bottle of white Crimean wine after we had climbed into our saddles, and, pouring out a glassful for each of us and for himself, said, "Here's to the beginning of a journey to America!" We drank the stirrup-cup with bright anticipations of a return to home and friends, thanked Major Potulof for his kindness and hospitality, promised to

apprise him by telegraph of our safe arrival at Stretinsk, and rode away into the mountains.

The country lying along the Shilka in the vicinity of Kara is inhabited, away from the river, only by a tribe of half-wild nomads, known to the Russians as "Orozhánni." They acknowledge allegiance to the Russian Government, pay taxes, and are nominally Christians; but they rarely come into the Russian settlements, unless brought there by a desire to exchange their furs or reindeer for knives, kettles, or tobacco. The Russian priest at Kara visits them from time to time to conduct religious services, and the picture of an Orozhánni encampment during one of these services, on page 746, is from a photograph made and given to me by a political exile in Nerchinsk.

For two days after leaving Kara we rode on horseback across the rugged, forest-clad mountains that skirt the river Shilka, suffering constantly from cold, hunger, and fatigue. On the third day we reached Boti (Bo-tee'), the village

from which we had taken our horses, and found most of the population engaged in threshing out grain with flails on the ice. The peasants manifested great pleasure at seeing us, and said we had been gone so long that they had almost given us up for lost. The excitement and anxiety of our life at Kara and the hardships of our ride across the mountains in a temperature below zero had so exhausted my strength that when we reached Boti my pulse was running at 120 and I could hardly sit in the saddle. I should not have been able to ride on horseback another day. Fortunately we found the river at Boti solidly frozen and were able to continue our journey in sledges on the ice. Late on the night of November 16, tired, half-starved, and deadly cold, we reached the town of Stretinsk and found food, shelter, and rest in the little cabin of the young peasant Zablikof (Zah'blee-koff), where we had left most of our baggage when we set out on horseback for the mines of Kara.

George Kennan.

ATTALIE BROUILLARD.

BY GEORGE W. CABLE,

Author of "The Grandissimes," "Bonaventure," etc.

IN EIGHTEEN FIFTY-FIVE.

THE strange true stories we have thus far told have all been matter of public or of private record. Pages of history and travel, law reports, documents of court, the testimony of eye-witnesses, old manuscripts and letters, have insured to them the full force and charm of their reality. But now we must have it clearly and mutually understood that here is one the verity of which is vouched for stoutly, but only by tradition. It is very much as if we had nearly finished a strong, solid stone house and would now ask permission of our underwriters to add to it at the rear a small frame lean-to.

It is a mere bit of lawyers' table-talk, a piece of after-dinner property. It originally belonged, they say, to Judge Collins of New Orleans, as I believe we have already mentioned; his by right of personal knowledge. I might have got it straight from him had I heard of it but a few years sooner. His small, iron-gray head, dark, keen eyes, and nervous face and form are in my mind's eye now, as I saw him one day on the bench interrupting a lawyer at the bar and telling him in ten words what the lawyer was trying to tell in two hundred and fifty.

That the judge's right to this story was that

of discovery, not of invention, is well attested; and if he or any one else allowed fictitious embellishments to gather upon it by oft telling of it in merry hours, the story had certainly lost all such superfluities the day it came to me as completely as if some one had stolen its clothes while it was in swimming. The best I can say is that it came unmutilated, and that I have done only what any humane person would have done—given it drapery enough to cover its nakedness.

To speak yet plainer, I do not, even now, put aside, abridge, or alter a single *fact*; only, at most, restore one or two to spaces that indicate just what has dropped out. If a dentist may lawfully supply the place of a lost tooth, or an old beau comb his hair skillfully over a bald spot, then am I guiltless. I make the tale not less, and only just a trifle more, true; not more, but only a trifle less, strange. And this is it:

In 1855 this Attalie Brouillard—so called, mark you, for present convenience only—lived in the French quarter of New Orleans; I think they say in Bienville street, but that is no matter; somewhere in the *vieux carré* of Bienville's original town. She was a worthy woman; youngish, honest, rather handsome, with a little money—just a little; of attractive dress, with good manners, too; alone in the world, and—a quadroon. She kept furnished rooms to

rent — as a matter of course; what would she do?

Hence she was not so utterly alone in the world as she might have been. She even did what Stevenson says is so good, but not so easy, to do, "to keep a few friends, but these without capitulation." For instance there was Camille Ducour. That was not his name; but as we have called the woman A. B., let the man be represented by C. D.

He, too, was a quadroon; an f. m. c.¹ His personal appearance has not been described to us, but he must have had one. Fancy a small figure, thin, let us say, narrow-chested, round-shouldered, his complexion a dull clay color spattered with large red freckles, his eyes small, gray, and close together, his hair not long or bushy, but dense, crinkled, and hesitating between a dull yellow and a hot red; his clothes his own and his linen last week's.

He is said to have been a shrewd fellow; had picked up much practical knowledge of the law, especially of notarial business, and drove a smart trade giving private advice on points of law to people of his caste. From many a trap had he saved his poor clients of an hour. Out of many a danger of their own making had he safely drawn them, all unseen by, though not unknown to, the legitimate guild of judges, lawyers, and notaries out of whose professional garbage barrel he enjoyed a sort of stray dog's privilege of feeding.

His meetings with Attalie Brouillard were almost always on the street and by accident. Yet such meetings were invariably turned into pleasant visits in the middle of the sidewalk, after the time-honored Southern fashion. Hopes, ailments, the hardness of the times, the health of each one's "folks," and the condition of their own souls could not be told all in a breath. He never failed, when he could detain her no longer, to bid her feel free to call on him whenever she found herself in dire need of a wise friend's counsel. There was always in his words the hint that, though he never had quite enough cash for one, he never failed of knowledge and wisdom enough for two. And the gentle Attalie believed both clauses of his avowal.

Attalie had another friend, a white man.

JOHN BULL.

THIS other friend was a big, burly Englishman, forty-something years old, but looking older; a big pink cabbage-rose of a man who had for many years been Attalie's principal lodger. He, too, was alone in the world.

And yet neither was he so utterly alone as he might have been. For he was a cotton

buyer. In 1855 there was no business like the cotton business. Everything else was subservient to that. The cotton buyer's part, in particular, was a "pretty business." The cotton *factor* was harassingly responsible to a whole swarm of planter patrons, of whose feelings he had to be all the more careful when they were in his debt. The cotton *broker* could be bullied by his buyer. But the *buyer* was answerable only to some big commercial house away off in Havre or Hamburg or Liverpool, that had to leave all but a few of the largest and most vital matters to his discretion. Commendations and criticisms alike had to come by mail across the Atlantic.

Now, if a cotton buyer of this sort happened to be a bachelor, with no taste for society, was any one likely to care what he substituted, out of business hours, for the conventional relations of domestic life? No one answers. Cotton buyers of that sort were apt to have very comfortable furnished rooms in the old French quarter. This one in Attalie's house had the two main rooms on the first floor above the street.

Honestly, for all our winking and tittering, we know nothing whatever against this person's private character except the sad fact that he was a man and a bachelor. At forty-odd, it is fair to suppose, one who knows the world well enough to be the trusted agent of others, thousands of miles across the ocean, has bid farewell to all mere innocence and has made choice between virtue and vice. But we have no proof whatever that Attalie's cotton buyer had not solemnly chosen virtue and stuck to his choice as an Englishman can.

All we know as to this, really, is that for many years here he had roomed, and that, moved by some sentiment, we know not certainly what, he had again and again assured Attalie that she should never want while he had anything, and that in his will, whenever he should make it, she would find herself his sole legatee. On neither side of the water, said he, had he any one to whom the law obliged him to leave his property nor, indeed, any large wealth; only a little money in bank — a very indefinite statement. In 1855 the will was still unwritten.

There is little room to doubt that this state of affairs did much interest Camille Ducour — at a distance. The Englishman may have known him by sight. The kind of acquaintance he might have had with the quadroon was not likely to vary much from an acquaintance with some unknown neighbor's cat on which he mildly hoped to bestow a pitcher of water if ever he caught him under his window.

Camille mentioned the Englishman approvingly to three other friends of Attalie, when, with what they thought was adroitness, they turned conversation upon her pecuniary wel-

¹ Free man of color.

fare. They were Jean d'Eau, a slumberous butcher; Richard Reau, an embarrassed baker; and one — Ecswyzee, an illiterate but prosperous candlestick-maker. These names may sound inexact, but *can you prove* that these were not their names and occupations? We shall proceed.

These three simple souls were bound to Attalie by the strong yet tender bonds of debit and credit. She was not distressingly but only interestingly "behind" on their well-greased books, where Camille's account, too, was longer on the left-hand side. When they alluded inquiringly to her bill, he mentioned the Englishman vaguely and assured them it was "good paper to hold," once or twice growing so extravagant as to add that his (Camille's) own was hardly better!

The tradesmen replied that they had n't a shadow of doubt. In fact, they said, their mention of the matter was mere jest, etc.

DULOUR'S MEDITATIONS.

THERE were a few points in this case upon which Camille wished he could bring to bear those purely intellectual—not magical—powers of divination which he modestly told his clients were the secret of all his sagacious advice. He wished he could determine conclusively and exactly what was the mutual relation of Attalie and her lodger. Out of the minutest corner of one eye he had watched her for years.

A quadroon woman's lot was a hard one; any true woman would say that, even while approving the laws and popular notions of necessity that made that lot what it was. The law, popular sentiment, public policy, always looked at Attalie's sort with their right eye shut. And according to all the demands of the other eye Camille knew that Attalie was honest, faithful. But was that all; or did she stand above and beyond the demands of law and popular sentiment? In a word, to whom was she honest, faithful; to the Englishman merely, or actually to herself? If to herself actually, then in case of his early death,—for Camille had got a notion of that, and had got it from Attalie, who had got it from the Englishman,—what then? Would she get his money, or any of it? No, not if Camille knew men—especially white men. For a quadroon woman to be true to herself and to her God was not the kind of thing that white men—if he knew them—rewarded. But if the case was not of that sort, and the relation was what he *hoped* it was, and according to his ideas of higher law it had a right to be, why, then, she might reasonably hope for a good fat slice—if there should turn out, after all, to be any fat to slice.

Thence arose the other question—had the Englishman any money? And if so, was it much, or was it so little as to make it hardly worth while for the Englishman to die early at all? You can't tell just by looking at a man or his clothes. In fact, is it not astonishing how quietly a man—of the quiet kind—can either save great shining stacks of money, or get rid of all he makes as fast as he makes it? Is n't it astonishing? Being a cotton buyer did not answer the question. He might be getting very large pay or very small; or even none. Some men had got rich without ever charging anything for their services. The cotton business those days was a perfectly lovely business—so many shady by-paths and circuitous labyrinths. Even in the law—why, sometimes even he, Camille Ducour, did not charge anything. But that was not often.

Only one thing was clear—there ought to be a written will. For Attalie Brouillard, f. w. c., could by no means be or become the Englishman's legal heir. The law mumbled something about "one-tenth," but for the rest answered in the negative and with a black frown. Her only chance—but we shall come to that.

All in a tremor one day a messenger, Attalie's black slave girl, came to Camille to say that her mistress was in trouble! in distress! in deeper distress than he could possibly imagine, and in instant need of that wise counsel which Camille Ducour had so frequently offered to give.

"I am busy," he said, in the creole-negro *patois*, "but—has anybody—has anything happened to—to anybody in Madame Brouillard's house?"

"Yes," the messenger feared that "*ce Michiè qui poté soulié jaune*—that gentleman who wears yellow shoes—is ill. Madame Brouillard is hurrying to and fro and crying."

"Very loud?"

"No, silently; yet as though her heart were breaking."

"And the doctor?" asks Camille, as he and the messenger are hurrying side by side out of Exchange alley into Bienville street.

"— was there yesterday and the day before."

They reach the house. Attalie meets her counselor alone at the top of the stairs. "*Li bien malade*," she whispers, weeping; "he is very ill."

"— wants to make his will?" asks Camille. All their talk is in their bad French.

Attalie nods, answers inaudibly, and weeps afresh. Presently she manages to tell how the sick man had tried to write, and failed, and had fallen back exclaiming, "Attalie—Attalie—I want to leave it all to you—what little—" and did not finish, but presently gasped out, "Bring a notary."

"And the doctor?"

"—— has not come to-day. Michié told the doctor if he came again he would kick him downstairs. Yes, and the doctor says whenever a patient of his says that he stops coming."

They reach the door of the sick man's bed-chamber. Attalie pushes it softly, looks into the darkened chamber and draws back, whispering, "He has dropped asleep."

Camille changes places with her and looks in. Then he moves a step across the threshold, leans forward peeringly, and then turns about, lifts his ill-kept forefinger, and murmurs while he fixes his little eyes on hers:

"If you make a noise, or in any way let any one know what has happened, it will cost you all he is worth. I will leave you alone with him just ten minutes." He makes as if to pass by her towards the stair, but she seizes him by the wrist.

"What do you mean?" she asks, with alarm.

"Hush! you speak too loud. He is dead."

The woman leaps by him, slamming him against the banisters, and disappears within the room. Camille hears her loud, long moan as she reaches the bedside. He takes three or four audible steps away from the door and towards the stairs, then turns, and darting with the swift silence of a cat surprises her on her knees by the bed, disheveled, unheeding, all moans and tears, and covering with passionate kisses the dead man's — hands only!

To impute moral sublimity to a white man and a quadroon woman at one and the same time and in one and the same affair was something beyond the powers of Camille's small soul. But he gave Attalie, on the instant, full credit, over credit it may be, and felt a momentary thrill of spiritual contagion that he had scarcely known before in all his days. He uttered not a sound; but for all that he said within himself, drawing his breath in through his clenched teeth, and tightening his fists till they trembled, "Oho-o! — Aha! — No wonder you postponed the writing of your will day by day, month by month, year in and year out! But you shall see, my fine Michié White man — dead as you are, you shall see — you 'll see if you shan't! — she shall have the money, little or much! Unless there are heirs she shall have every picayune of it!" Almost as quickly as it had flashed up, the faint flicker of moral feeling died out; yet the resolution remained. He was going to "beat" a dead white man.

PROXY.

CAMILLE glided to the woman's side and laid a gentle yet commanding touch upon her.

"Come, there is not a moment to lose."

"What do you want?" asked Attalie. She neither rose nor turned her head, nor even let go the dead man's hand.

"I must make haste to fulfill the oft-repeated request of my friend here."

"Your friend!" She still knelt, and held the hand, but turned her face, full of pained resentment, upon the speaker behind her. He was calm.

"Our friend; yes, this man here. You did not know that I was his secret confidential adviser? Well, that was all right; I told him to tell no one. But now I must carry out his instructions. Madame Brouillard, this man wished to leave you every cent he had in the world."

Attalie slowly laid her lips on the big cold hand lying in her two hot ones and let the silent tears wet all three. Camille spoke on to her averted form:

"He may never have told you so till to-day, but he has often told me. 'I tell you, Camille,' he used to say, 'because I can trust you: I can't trust a white man in a matter like this.' He told you? Yes; then you know that I speak the truth. But one thing you did not know; that this intention of his was the result of my earnest advice.—Stop! Madame Brouillard — if you please — we have no time for amazement or questions now; and less than none for expressions of gratitude. Listen to me. You know he was always afraid he would die some day suddenly? Yes, of course; everybody knew that. One night — our meetings were invariably at night — he said to me, 'Camille, my dear friend, if I should go all of a sudden some day before I write that will, *you know what to do.*' Those were his exact words: 'Camille, my dear friend, *you know what to do.*'" All this was said to the back of Attalie's head and neck; but now the speaker touched her with one finger: "Madame, are your lodgers all down town?"

She nodded.

"Good. And you have but the one servant. Go tell her that our dear friend has been in great suffering but is now much better, quite free from pain, in fact, and wants to attend to some business. Send her to Exchange alley, to the office of Eugene Favre. He is a notary public" — He murmured some further description. "Understand?"

Attalie, still kneeling, kept her eyes on his in silence, but she understood; he saw that.

"She must tell him," he continued, "to come at once. But before she goes there she must stop on the way and tell three persons to come and witness a notarial act. Now whom shall they be? For they must be white male residents of the parish, and they must not be

insane, deaf, dumb, blind, nor disqualified by crime. I will tell you: let them be Jean d'Eau—at the French market. He will still be there; it is his turn to scrub the market to-day. Get him, Richard Reau, and old man Ecswyzee. And on no account must the doctor be allowed to come. Do that, Madame Brouillard, as quickly as you can. I will wait here."

But the kneeling figure hesitated, with intense distress in her upturned face: "What are you going to do, Michié Ducour?"

"We are going to make you sole legatee."

"I do not want it! How are you going to do it? How?"

"In a way which he knows about and approves."

Attalie hid her shapely forehead again on the dead hand. "I cannot leave him. Do what you please, only let me stay here. Oh! let me stay here."

"I see," said Camille, with cold severity, "like all women, you count the foolish sentiments of the living of more value than the reasonable wish of the dead." He waited a moment for these words to take effect upon her motionless form, and then, seeing that—again like a woman—she was waiting and wishing for compulsion, he lifted her by one arm. "Come. Go. And make haste to get back again; we are losing priceless time."

She went. But just outside the door she seemed to halt. Camille put out his freckled face and turtle neck. "Well?"

"O Michié Ducour!" the trembling woman whispered, "those three witnesses will never do. I am in debt to every one of them!"

"Madame Brouillard, the one you owe the most to will be the best witness. Well? What next?"

"O my dear friend! what is this going to cost?—in money, I mean. I am so afraid of lawyers' accounts! I have nothing, and if it turns out that he has very, very little— It is true that I sent for you, but—I did not think you—what must you charge?"

"Nothing!" whispered Camille. "Madame Brouillard, whether he leaves you little or much, this must be for me a labor of love to him who was secretly my friend, or I will not touch it. He certainly had something, however, or he would not have tried to write a will. But, my dear madame, if you do not right here, now, stop looking scared, as if you were about to steal something instead of saving something from being stolen, it will cost us a great deal. Go. Make haste! That's right!—Ts-s-st! Hold on! Which is your own bedroom, upstairs?—Never mind why I ask; tell me. Yes; all right! Now, go!—Ts-s-st! Bring my hat up as you return."

She went downstairs. Camille tiptoed quick-

ly back into the death chamber, whipped off his shoes, ran to a small writing-table, then to the bureau, then to the armoire, trying their drawers. Locked they were, every one. He ran to the bed and searched swiftly under pillows and mattresses—no keys. Never mind. He wrapped a single sheet about the dead man's form, stepped lightly to the door, looked out, listened, heard nothing, and tripped back again.

And then with all his poor strength he lifted the bulk, still limp, in his arms, and with only two or three halts in the toilsome journey, to dash the streaming sweat from his brows and to better his hold so that the heels should not drag on the steps, carried it up to Attalie's small room and laid it, decently composed, on her bed.

Then he glided downstairs again and had just slipped into his shoes when Attalie came up hastily from below. She was pale and seemed both awe-struck and suspicious. As she met him outside the door grief and dismay were struggling in her eyes with mistrust, and as he coolly handed her the key of her room indignation joined the strife. She reddened and flashed:

"My God! you have not, yourself, already?"

"I could not wait, Madame Brouillard. We must run up now, and do for him whatever cannot be put off; and then you must let me come back, leaving my hat and shoes and coat up there, and—you understand?"

Yes; the whole thing was heartless and horrible, but—she understood. They went up.

THE NUNCUPATIVE WILL.

In their sad task upstairs Attalie held command. Camille went and came on short errands to and from the door of her room, and was let in only once or twice when, for lifting or some such thing, four hands were indispensable. Soon both he and she came down to the door of the vacated room again together. He was in his shirt sleeves and without his shoes; but he had resumed command.

"And now, Madame Brouillard, to do this thing in the very best way I ought to say to you at once that our dear friend—did he ever tell you what he was worth?" The speaker leaned against the door-post and seemed to concern himself languidly with his black-rimmed finger-nails, while in fact he was watching Attalie from head to foot with all his senses and wits. She looked grief-stricken and thoroughly wretched.

"No," she said, very quietly, then suddenly burst into noiseless fresh tears, sank into a chair, buried her face in her wet handkerchief, and cried, "Ah! no, no, no! that was none of

my business. He was going to leave it all to me. I never asked if it was little or much."

While she spoke Camille was reckoning with all his might and speed: "She has at least some notion as to whether he is rich or poor. She seemed a few minutes ago to fear he is poor, but I must try her again. Let me see: if he is poor and I say he is rich she will hope I know better than she, and will be silent. But if he is rich and she knows it, and I say he is poor, she will suspect fraud and will out with the actual fact on the spot." By this time she had ceased, and he spoke out:

"Well, Madame Brouillard, the plain fact is he was—as you may say—poor."

She looked up quickly from her soaking handkerchief, dropped her hands into her lap, and gazing at Camille through her tears said, "Alas! I feared it. That is what I feared. But ah! since it makes no difference to him now, it makes little to me. I feared it. That accounts for his leaving it to me, poor *milatraise*."

"But would you have imagined, madame, that all he had was barely three thousand dollars?"

"Ah! three thousand—ah! Michié Ducour," she said between a sob and a moan, "that is not so little. Three thousand! In Paris, where my brother lives, that would be fifteen thousand francs. Ah! Michié Ducour, I never guessed half that much. Michié Ducour, I tell you—he was too good to be rich." Her eyes stood full.

Camille started busily from his leaning posture and they began again to be active. But, as I have said, their relations were reversed once more. He gave directions from within the room, and she did short errands to and from the door.

The witnesses came: first Jean d'Eau, then Richard Reau, and almost at the same moment the aged Ecswyzee. The black maid led them up from below, and Attalie, tearless now, but meek and red-eyed, and speaking low through the slightly opened door from within the Englishman's bed-chamber, thanked them, explained that a will was to be made, and was just asking them to find seats in the adjoining front room, when the notary, aged, bent, dark-goggled, and as insensible as a machine, arrived. Attalie's offers to explain were murmured away by his wrinkled hand, and the four men followed her into the bed-chamber. The black maid-of-all-work also entered.

The room was heavily darkened. There was a rich aroma of fine brandy on its air. The Englishman's little desk had been drawn up near the bedside. Two candles were on it, unlighted, in small, old silver candlesticks. Attalie, grief-worn, distressed, visibly agitated, moved close to the bedside. Her sad figure suited the place with poetic fitness. The notary

stood by the chair at the desk. The three witnesses edged along the wall where the curtained windows glimmered, took seats there, and held their hats in their hands. All looked at one object.

It was a man reclining on the bed under a light covering, deep in pillows, his head and shoulders much bundled up in wrappings. He moaned faintly and showed every sign of utmost weakness. His eyes opened only now and then, but when they did so they shone intelligently, though with a restless intensity, apparently from both pain and anxiety.

He gasped a faint word. Attalie hung over him for an instant, and then turning quickly to her maid, who was lighting the candles for the notary and placing them so they should not shine into the eyes of the man in bed, said:

"His feet—another hot-water bottle."

The maid went to get it. While she was gone the notary asked the butcher, then the baker, and then the candlestick-maker if they could speak and understand English, and where they resided. Their answers were satisfactory. Then he sat down, bent low to the desk, and wrote on a blank form the preamble of a nuncupative will. By the time he had finished, the maid had got back and the hot bottle had been properly placed. The notary turned his goggles upon the reclining figure and asked in English, with a strong creole accent:

"What is your name?"

The words of the man in the bed were an inaudible gasp. But Attalie bent her ear quickly, caught them, and turning repeated:

"More brandy."

The black girl brought a decanter from the floor behind the bureau, and a wine-glass from the washstand. Attalie poured, the patient drank, and the maid replaced glass and decanter. The eyes of the butcher and the baker followed the sparkling vessel till it disappeared, and the maker of candlesticks made a dry swallow and faintly licked his lips. The notary remarked that there must be no intervention of speakers between himself and the person making the will, nor any turning aside to other matters; but that merely stopping a moment to satisfy thirst without leaving the room was not a vitiation turning aside and would not be, even if done by others besides the party making the will. But here the patient moaned and said audibly, "Let us go on." And they went on. The notary asked the patient's name, the place and date of his birth, etc., and the patient's answers were in every case whatever the Englishman's would have been. Presently the point was reached where the patient should express his wishes unprompted by suggestion or inquiry. He said faintly, "I will and bequeath"—

The servant girl, seeing her mistress bury her face in her handkerchief, did the same. The patient gasped audibly and said again, but more faintly:

"I will and bequeath—some more brandy."

The decanter was brought. He drank again. He let Attalie hand it back to the maid and the maid get nearly to the bureau when he said in a low tone of distinct reproof:

"Pass it 'round." The four visitors drank.

Then the patient resumed with stronger voice. "I will and bequeath to my friend Camille Ducour"—

Attalie started from her chair with a half-uttered cry of amazement and protest, but dropped back again at the notary's gesture for silence, and the patient spoke straight on without hesitation—"to my friend Camille Ducour, the sum of fifteen hundred dollars in cash."

Attalie and her handmaiden looked at each other with a dumb show of lamentation; but her butcher and her baker turned slowly upon her candlestick-maker, and he upon them, a look of quiet but profound approval. The notary wrote, and the patient spoke again:

"I will everything else which I may leave at my death, both real and personal property, to Madame Attalie Brouillard."

"Ah!" exclaimed Attalie, in the manner of one largely, but not entirely, propitiated. The maid suited her silent movement to the utterance, and the three witnesses exchanged slow looks of grave satisfaction. Mistress and maid, since the will seemed to them so manifestly and entirely finished, began to whisper together, although the patient and the notary were still perfecting some concluding formalities. But presently the notary began to read aloud the instrument he had prepared, keeping his face buried in the paper and running his nose and purblind eyes about it nervously, like a newborn thing hunting the warm fountain of life. All gave close heed. We need not give the document in its full length, nor his creole accent in its entire breadth. This is only something like it:

"Dthee State of Louisiana," etc. "Be h-it known dthat on dthees h-eighth day of dthee month of May, One thousan' h-eight hawndred and fifty-five, dthat I, Emile Favre, a not-arie pewblic een and for dthe State of Louisiana, parish of Orleans, duly commissioned and qualeefi-ed, was sue-mon-ed to dthe domee-ceel of Mr. [the Englishman's name], Number [so-and-so] Bienville street; . . . dthat I found sayed Mr. [Englishman] lyingue in heez bade in dthee rear room of dthee second floor h-of dthee sayed house . . . at about two o'clock in dthee h-afternoon, and beingue inform-ed by dthee sayed Mr. [Englishman] dthat he *diz-i-red* too make heez weel, I,

sayed not-arie, sue-mon-ed into sayed bed-chamber of dthe sayed Mr. [Englishman] dthe following nam-ed witnesses of lawfool h-age and residents of dthe sayed cittie, parish, and State, to wit: Mr. Jean d'Eau, Mr. Richard Reau, and Mr. V. Deblieux Ecswyzee. That there *up-on* sayed Mr. [Englishman] being seek in bodie but of soun' mine, which was *happarent* to me not-arie and dthe sayed witnesses by heez lang-uage and h-actions then and there in dthe presence of sayed witnesses *dictated* to me not-arie dthe following as heez laz weel and testament, wheech was written by me sayed not-arie as *dictated* by the sayed Mr. [Englishman], to wit:

"My name ees [John Bull]. I was born in," etc. "My father and mother are dade. I have no chil'ren. I have never had annie brawther or seester. I have never been married. Thees is my laz weel. I have never made a weel befo'. I weel and *bickweath* to my fran' Camille Ducour dthe sawm of fifteen hawndred dollars in cash. I weel h-everything else wheech I may leave at my daith, both real and personal property, to Madame Attalie Brouillard, leevingue at Number," etc. "I appoint my sayed fran' Camille Ducour as my testamentary *executor*, weeth-out bon', and grant heem dthe seizin' of my h-estate, h-and I dir-ect heem to pay h-all my juz debts.

"Thees weel and testament as thus *dictated* too me by sayed *testator* and wheech was wreeten by me not-arie by my h-own han' jus' as *dictated*, was thane by me not-arie rade to sayed Mr. [Englishman] in an *audible* voice and in the presence of dthe aforesayed three witnesses, and dthe sayed Mr. [Englishman] *diclar-ed* that he well awnder-stood me not-arie and persever-ed een *diclar-ing* the same too be his laz weel; all of wheech was don' at one time and place weethout *inter'up-tion* and weethout turningue aside to other acts.

"Thus done and passed," etc.

The notary rose, a wet pen in one hand and the will—with his portfolio under it for a tablet—in the other. Attalie hurried to the bedside and stood ready to assist. The patient took the pen with a trembling hand. The writing was laid before him, and Attalie with a knee on the bed thrust her arm under the pillows behind him to make a firmer support.

The patient seemed to summon all his power to poise and steady the pen, but his hand shook, his fingers loosened, and it fell upon the document, making two or three blots there and another on the bed-covering, whither it rolled. He groped faintly for it, moaned, and then relaxed.

"He cannot sign!" whispered Attalie, piteously.

"Yes," gasped the patient.

The notary once more handed him the pen, but the same thing happened again.

The butcher cleared his throat in a way to draw attention. Attalie looked towards him and he drawled, half rising from his chair:

"I t'ink—a li'l' more cognac"—

"Yass," murmured the baker. The candlestick-maker did not speak, but unconsciously wet his lips with his tongue and wiped them with the back of his forefinger. But every eye turned to the patient, who said:

"I cannot write—my hand—shakes so."

The notary asked a formal question or two, to which the patient answered "yes" and "no." The official sat again at the desk, wrote a proper statement of the case, and then read it aloud. The patient gave assent, and the three witnesses stepped forward and signed. Then the notary signed.

As the four men approached the door to depart the baker said, lingeringly, to Attalie, smiling diffidently as he spoke:

"Dat settin' still make a man mighty dry, yass."

"Yass, da's true," said Attalie.

"Yass," he added, "same time he dawn't better drink much *water* dat hot weader, no." The butcher turned and smiled concurrence; but Attalie, though she again said "yass," only added good-day, and the maid led them and the notary downstairs and let them out.

MEN CAN BE BETTER THAN THEIR LAWS.

AN hour later, when the black maid returned from an errand, she found her mistress at the head of the stairs near the Englishman's door, talking in suppressed tones to Camille Ducour, who, hat in hand, seemed to have just dropped in and to be just going out again. He went, and Attalie said to her maid that he was "so good" and was going to come and sit up all night with the sick man.

The next morning the maid—and the neighborhood—were startled to hear that the cotton buyer had died in the night. The physician called and gave a certificate of death without going up to the death chamber.

The funeral procession was short. There was first the carriage with the priest and acolytes; then the hearse; then a carriage in which sat the cotton buyer's clerk,—he had had but one,—his broker, and two men of that singular sort that go to everybody's funeral; then a carriage occupied by Attalie's other lodgers, and then, in a carriage bringing up the rear, of course, were Camille Ducour and Madame Brouillard. She alone wept, and, for all we have seen, we yet need not doubt her tears were genuine. Such was the cortège. Oh! also, in his private vehicle, driven by himself,

was a very comfortable and genteel-looking man, whom neither Camille nor Attalie knew, but whom every other attendant at the funeral seemed to regard with deference. While the tomb was being sealed Camille sidled up to the broker and made bold to ask who the stranger was. Attalie did not see the movement, and Camille did not tell her what the broker said.

Late in the next afternoon but one Camille again received word from Attalie to call and see her in all haste. He found her in the Englishman's front room. Five white men were sitting there with her. They not only looked amused, but plainly could have looked more so but for the restraints of rank and station. Attalie was quite as visibly frightened. Camille's knees weakened and a sickness came over him as he glanced around the group. For in the midst sat the stranger who had been at the funeral, while on his right sat two, and on his left two, men, the terror of whose presence we shall understand in a moment.

"Mr. Ducour," said the one who had been at the funeral, "as friends of Mr. [Englishman] we desire to express our satisfaction at the terms of his last will and testament. We have had a long talk with Madame Brouillard; but for myself, I already knew his wish that she should have whatever he might leave. But a wish is one thing; a will, even a nuncupative will by public act, is another and an infinitely better and more effective thing. But we wish also to express our determination to see that you are not hindered in the execution of any of the terms of this will, whose genuineness we, of course, do not for a moment question." He looked about upon his companions. Three of them shook their heads gravely; but the fourth, in his over-zeal, attempted to say "No," and burst into a laugh; whereupon they all broadly smiled, while Camille looked ghastly. The speaker resumed:

"I am the custodian of all Mr. [Englishman's] accounts and assets. This gentleman is a judge, this one is a lawyer,—I believe you know them all by sight,—this one is a banker, and this one—a—in fact, a detective. We wish you to feel at all times free to call upon any or all of us for advice, and to bear in mind that our eyes are ever on you with a positively solicitous interest. You are a busy man, Mr. Ducour, living largely by your wits, and we must not detain you longer. We are glad that you are yourself to receive fifteen hundred dollars. We doubt not you have determined to settle the affairs of the estate without other remuneration, and we not merely approve but distinctly recommend that decision. The task will involve an outlay of your time and labor for which fifteen hundred dollars will be a gen-

erous, a handsome, but not an excessive remuneration. You will be glad to know there will still be something left for Madame Brouillard. And now, Mr. Ducour,"—he arose and approached the pallid scamp, smiling benevolently,—"*remember* us as your friends, who will *watch* you"—he smote him on the shoulder with all the weight of his open palm—"with no *ordinary* interest. Be assured you

shall get your fifteen hundred, and Attalie shall have the rest, which—as Attalie tells me she has well known for years—will be about thirty thousand dollars. Gentlemen, our dinner at the lake will be waiting. Good-day, Mr. Ducour. Good-day, Madame Brouillard. Have no fear. Mr. Ducour is going to render you full justice,—without unnecessary delay,—in solid cash." And he did.

G. W. Cable.

HEN Mynheer van Steen in Sippken spoke of the great De Keyser of Rotterdam he seemed to melt together in abject humility.

There were two things about which he grew almost poetic: a young herring of the first precious batch, young, unsophisticated, tender, for which his Majesty of Holland gives a gratuity of five hundred guilders, and—Mynheer de Keyser.

Such a herring nestling beside a pickled onion brought tears to his eyes, and he would say, as he gulped down the tenderest part, "If Mynheer de Keyser were only here!" It was understood if the illustrious man ever did come to Sippken the festivities would be worthy of the distinguished visitor and of Mynheer van Steen, who was great not only in the grocery business and as a tobacco grower, but he was besides Burgomeister of Sippken. It was Mynheer de Keyser who bought his tobacco and sold him his groceries, and in his day Nicodemus de Keyser had turned his guilders to so good an account that Van Steen grew quite faint in the contemplation of that rather un-

steady signature, representing, as it did, fabulous wealth.

Mevrouw van Steen had faded out of the world after bringing Jufrow Mettje into existence, the only change for Mynheer being that in future he played his nightly games of cards with his sister, Aunt Jetta. They played for a penny a game, and when he had bad cards he lost his temper, but Aunt Jetta was always placid. Never was the purple bow stirred that rested lightly on the parting of her brown front.

Early in life Aunt Jetta had resigned herself to playing cards with her brother and listening to glowing accounts of how Mynheer de Keyser would be received should he ever come to Sippken.

"How I long to see him!" Mynheer cried with enthusiasm. For forty years he had lived and trusted the great man simply by mail. "A man so rich must be good and wise," he exclaimed; and he meant it, did Mynheer van Steen. The good, the true, and the beautiful were all represented to him by his ideal of Mynheer de Keyser.

One day Mynheer received a joyful shock. It made the sheet of letter-paper in his hand rattle, for the illustrious De Keyser, after certain orders relative to tobacco, added, without false

sentiment, postage being dear, that having heard much of the charms of Jufrow Mettje van Steen and being lonely in his big house on the Boompjes Graacht, he would do himself the honor of offering her his hand in marriage.

Mynheer sank back in his leathern arm-chair in ecstasy; then he rang a hand-bell, and Aunt Jetta appeared.

"Mynheer de Keyser—"

"Dear me, dead?" Aunt Jetta suggested placidly.

"Dead!" Here he laughed. "Well, hardly. Prepare yourself for joyful news. Jetta, Mynheer de Keyser desires to marry again."

"Marry again?" Aunt Jetta repeated, and flushed.

"Marry, yes, marry. Be joyful—he wishes to marry our Mettje."

Aunt Jetta folded her hands and was distinctly icy in her joy.

"Call Mettje!" And Mynheer strode along the polished floor until his felt slippers flapped up and down in agitation.

"How sweet it sounds!—Mevrouw de Keyser. Some day—yes, some day I may hope to say to him, 'Nicodemus.' There, call Mettje. Imagine her joy."

"Joy! Humph! Think of his age. Joy? Seventeen and seventy! Well, hardly."

So short did Mynheer stop in his career that for a second his coat-tails lay outspread in the air.

"Jetta, a De Keyser has no age. He is always beautiful, good, and young. As long as he lasts he is always a princely match. If he had only one leg—in fact, no legs—he would still be more than desirable. Mynheer has, God be praised! all his faculties, and therefore—Jetta, don't stand staring; call Mettje."

Mettje looked in at the door and gave a doubtful glance at the family group.

"If, child, you had a wish granted to you, what should it be?" Mynheer asked solemnly, and beat time with his forefinger on Mynheer de Keyser's letter.

Mettje leaned her slim back against the door and considered.

"There are two things."

"But, my dearest child, it can be but one thing."

"Very well, then"—with a sign of resignation: "as much apple-sauce as I can possibly eat."

"My innocent child! I knew you would not venture. There, prepare yourself for exceeding joy. A part of this letter relates to you. I will read it: how simple, yet how impressive! 'The last invoice of tobacco was hardly up to—'

No, that is n't it. 'Five hundred pounds of better quality.' I am so agitated, I really can't find it. In short, Mettje, he does you the honor to offer you his hand in marriage."

"What?" Jufrow van Steen cried and laughed until her brown eyes glistened with tears. "Marry me? I marry Mynheer de Keyser? Why then I shall have to call him—ha! ha!—Nicodemus."

"True," her father assented respectfully. "To him there could be nothing ludicrous about a De Keyser."

"How old is Mynheer?" she asked with sudden gravity.

"Well—in the prime of life, child: seventy or thereabouts."

"He might live ten or fifteen years longer, eh, papa?"

"Twenty," her papa assented briskly.

"Ah, dear me! that is just the trouble."

"What—what?"

"Trouble! You—you don't dare to say, suggest—where is your joy? where is your gratitude?"

"As for joy, papa, no matter about that"; and Mistress Mettje shrugged her pretty shoulders. "You can say to him, please, that Jufrow van Steen is deeply grateful, and having no choice whatever in the matter she accepts his offer with—with temperate rapture."

Mynheer's suitable and respectful reply was forwarded to Rotterdam by "Trekschuit" (canal-boat) at the rate of about six miles a day, which is as fast as the wings of love can in Holland carry a declaration of passion.

"AUNT JETTA FOLDED HER HANDS AND WAS DISTINCTLY ICY IN HER JOY."

II.

A HUNDRED years ago it was a matter of some expense to send a letter; therefore Mynheer van Steen sensibly prefaced his answer with certain business commissions, after which he expressed his joy at the honor Mynheer conferred on the Van Steen family by desiring to marry Mistress Mettje.

It was young Laurens de Keyser who carelessly broke open the five ponderous seals that hid so much information; then he whistled so long and so loud that the nine other clerks paused in the scratching of their several goose-quills to look up in marked disapproval. The truth was that the only son of De Keyser was a black sheep, criminally indifferent to the whole East India trade. Instead of writing at his desk he preferred to stroll along the canals, his hands in his breeches pockets, his cocked hat on the back of his head, gathering information from every vagabond in Rotterdam. Slowly and stately Mynheer de Keyser's great merchantmen sailed down the Boompjes Graacht and anchored at his very front door, and the sight of strange creatures all nimbleness, earrings, and grins, and the pungent smell of the sea, suggesting unknown lands, filled Laurens de Keyser's mind with wild longings for—he hardly knew what.

"Let me see the world, father, sow my wild oats, come back and be a worthy progenitor of the De Keyzers," Laurens urged. This being an innovation on family traditions, young Laurens staid where he was, and became a thorn in Mynheer's flesh.

Instead of writing in the ponderous ledgers, he drew fantastic pictures of young females on the precious office paper—young females not without interest to the other clerks, but at sight of whom Mynheer de Keyser and his head bookkeeper shuddered. If it be added that Laurens owned a guitar and sang songs which made the respectable echoes of the old house moan and quake to have to perpetuate anything so lively, it will be acknowledged that as a De Keyser he was a failure.

He smiled as he folded up Mynheer's letter and murmured, "A nice young person you must be, Mistress Mettje." Then full of visions of compromise he knocked at his father's door.

"What do you want, Laurens? More money, more time for idleness, eh?"

The great De Keyser sat in a cubby-hole surrounded by dusty shelves laden with fly-

blown bottles of ancient samples of everything under heaven. Mynheer sat at a shabby desk beside a window that had an unwashed view of brick area, and one other chair constituted the furniture of this apartment.

"THE GREAT DE KEYSER SAT IN A CUBBY-HOLE."

"By no means, father. Here is a letter from Mynheer van Steen."

"About what?"

"Herrings, currants, brown sugar, and"—here Laurens looked encouragingly at his father—"well, yes, and love."

"Love? What do you mean?"

"Just what I say. Now, father, let us take it easily and comfortably." And to begin Laurens sat himself astride the chair, folded his arms on the back, and smiled.

"It seems, my dear father, while I am pinning for freedom you are seeking bondage—every one to his taste! It is not every son who would gracefully, nay joyously, receive a new mother, but I will do so if—"

"If what?"

"If you will let me go away from here. Give me a little freedom. I have never seen

METTJE.

the world. I know nothing, I hear nothing. In a general way, I suppose, God made the world for a De Keyser to trade in, and he made people for a De Keyser to trade with. But, father," he added confidently, "I am so deadly tired of being a De Keyser; I should like a change."

"And this is the son I have brought into the world!" was all Mynheer could utter.

Laurens nodded and sighed. "I wish sometimes you had brought some one else into the world."

"And you dare to suggest a bargain with me? Your freedom for mine, indeed! I wish you to understand that if I choose to marry again you have nothing whatever to say about it."

"But, father, if I go away you will have plain sailing, and if I stay she might draw comparisons — and, after all, father, you have been younger."

"Younger! That I have lived to see this day!"

"I am very glad of it, I am sure, but supposing that Mevrouw should fall in love with — me?"

Mynheer turned livid with rage. "Go to the devil! Leave my house! I can get on without you; see if you can get on without me!"

"Do you really mean it, father?" And Laurens rose to his feet.

"Go to the devil!"

"Ultimately perhaps, but I mean to stop at one or two places on the way. Good-by, father"; and young Laurens stepped briskly over the threshold and departed from out of the presence of Mynheer.

III.

THERE had been times of great public commotion in Sippken. The Spaniards in their day had clattered over the highway, and Duke Alva had passed a night in the old town house in the market-place; but even these circumstances were not so remarkable as to see a young and able-bodied man sitting on a milking-stool in the meadow sketching one of Mynheer van Steen's cows. That any one should do anything but milk a cow was so absurd that the cow was apparently struck by it, for she paused in the chewing of her cud to contemplate the artist. In this she was joined by a small urchin sent to recover the milking-stool, followed by the dairy-maid, a buxom wench in clogs, and on her head a tight, white cap with gold ornaments dangling against her temples.

"Quick, Peter, fetch the Jufrow," she whispered in open-mouthed wonder.

The message reached Mistress Mettje thus: "Quick, Jufrow! something is happening to Brigitta the cow in the meadow."

Mynheer was just taking his afternoon nap when Mettje roused him:

"Father, come down to the meadow; something has happened to our Brigitta." And before he could ask a question she was gone.

Mynheer yawned grievously, took down a rusty old sword, put on his cocked hat, and passed majestically through the kitchen garden to the meadow where danger threatened Brigitta the cow.

"What are you doing to my cow, young man?" he asked, heroically. For the first time the villain looked up at sight of Mynheer and his drawn sword.

"Making a picture of her—if you don't mind."

"Picture of a cow? Bless my soul, what nonsense! What 'll you do with it, eh?"

"Look at it, Mynheer."

"Look at the picture of a cow! What for? You can't cook it or milk it."

"Perhaps I might sell it."

"Sell it! Who'd buy a picture of a cow when he can buy a real one? Listen, Mettje, sell a picture of a cow!" And here he laughed loud and long, while the artist turned hastily about and discovered three hitherto unperceived critics—a small urchin, a fat servant, and the very sweetest young maid in the world, who gazed at him in the most charming surprise. He had a glimpse of brown eyes and chestnut hair, all gold in the ripples, a silver-gray gown dashed with blush-roses, a narrow black velvet about the white throat, and a full sleeve that showed the fairest round arm.

To be laughed at in her presence was not to be borne. He sprang to his feet, kicked over the milking-stool, clutched his sketch, and with a hasty "Pardon my trespassing, Mynheer" turned away just as Mynheer added, with renewed enjoyment:

"Mettje, paint a cow; sell a painted cow! O Nicodemus de Keyser, what would you say to this?"

The artist of the cow turned to catch a last glimpse of young Mettje. He saw the dimple fade out of her cheek, and she sighed.

"Mettje! Sippken! Mynheer de Keyser, to be sure," he thought, filled with wonder and resentment. "Are you Mynheer van Steen?" he asked with sudden interest.

"Truly. I am Hendrick van Steen, Burgomeister of Sippken, young man. But I don't think you have done Brigitta any lasting harm; so do not be alarmed."

"Then you must know old De Keyser of Rotterdam."

"I know the great Mynheer de Keyser," he replied solemnly, resenting the familiarity of this painter of cows. "May I ask who you are, sir?"

"Well, I—I am his son's very—yes, his very dearest friend."

"A very unworthy young man he is, I have heard—Mettje, don't pull at my coat. Still, he is a De Keyser. Assuch he will be related to us some day through my daughter Mettje here, the promised wife of Mynheer de Keyser."

The artist of the cow bowed low and Mettje blushed and dropped a shy courtesy, while the dairy-maid admired this slim and limber young Mynheer.

"And what may your name be, young man?"

"My name, Mynheer? Oh, yes, I—I quite forgot. It is Zachary Jansen of Rotterdam, at your service."

It appeared that Zachary Jansen had a letter of introduction to Mynheer from Laurens De Keyser, and he brought it to him the very next day. "He is my best and dearest friend, and any kindness you may show to him you show to me," the letter read.

Sippken was a sleepy, prosperous Dutch town eddying about a grass-grown marketplace where stood the town pump. The canal that flowed through Sippken to Rotterdam was bordered on each side by a neat row of linden trees and the tidiest of houses, each with a different gable and all having green front doors and brass knockers. An occasional canal-boat, pulled by a heavy, plodding horse, touched the stillness with a suggestion of life. A sybarite could yearn for no greater comfort than to sail on a *trekschuit* with its cozy cabin, lace cur-

"SELL A PICTURE OF A COW!"

tains to the windows, plants on the sills, easy chairs on deck, and a faint line of smoke curling out of a chimney to promise culinary possibilities.

"Haste hastens life," Mynheer liked to say; nevertheless as a rich Dutch merchant he set up a canal-boat of his own with a big, philosophic horse to trundle it down the stream, and so resigned himself to travel at the rate of a mile an hour and hoped it might not be tempting Divine Providence. However, Mynheer had never dallied with the Fates farther than

six miles beyond Sippken. On that occasion, well wrapped up, with a glass of hot grog at his elbow, a bottle of gin on the table, a pipe in his mouth, and a box of hot charcoal under his feet, so had he traveled down the canal all alone to Arndt. Having seen that the rest of the world was a good deal like Sippken he returned and never again succumbed to wild yearnings for change; but it was owing to his heroic energy that he was unanimously chosen Burgomeister of Sippken in the face of no less a rival than Nicholas de Groot.

IV.

ZACHARY JANSEN was invited to visit Mynheer van Steen, and old Jaspas went over to

JASPAR.

the "Blue Elephant" to fetch his belongings. He returned with a varied collection, among them even a guitar tied with blue ribbons, which caused considerable consternation to the maid who did the chamberwork: even Mettje was perplexed until Aunt Jetta explained. Out of the ashes of remembrance she produced a faint glow.

"I once knew a young Mynheer who played on just such a thing under my window," she sighed.

"What for?" Mettje asked in surprise.

"To tell me, my dear child, that—ah—that he loved me."

"Does playing on that always mean that a young Mynheer is in love?" Mettje spoke with evident anxiety.

"Yes, nearly always."

"Why did he play outside of the window? He might have taken cold."

"He never did recover." And Aunt Jetta sighed heavily.

"Of what, poor aunt?"

"You see, child, your grandfather was deaf, a man of violent passion, sudden purpose, and he lived only for his tulips. One night he thought he heard something move among them—"

"Dear Aunt Jetta!"

"He turned the watering-pot on them—on him. He was drenched—he died."

"From the shock, dear Aunt Jetta, that night?"

"Not quite." Aunt Jetta heaved a sigh. "It was thirty years after, but I always felt sure it was the cause of his death." And she dusted the guitar and felt a gentle interest in young Zachary.

"I wonder if any one has played before Billa's window?" Mettje mused.

Billa de Groot was her dearest friend and the most enterprising young person in Sippken. She had been to Rotterdam, from which she brought fashions that made Sippken groan. One day a coffin-shaped box came by canal-boat and was borne into the De Groot house. Immediately after awful sounds broke the stillness, so that worthy burghers in passing paused and shook their heads. It was said that these sounds had a great deal to do with defeating Nicholas de Groot's heart desire to be Burgomeister of Sippken.

Mynheer de Groot had little to say in his own house, and that saved him a great deal of exertion. He liked to smoke his long clay pipe, sit at the window and watch the canal-boats pass, and he rejoiced to think that he was not in one. Mynheer was not so grateful for what he had in life as for what he avoided. Sometimes when he had the energy he wished some one would kindly marry Jufrow Billa and take her and her piano away; and just when it did seem to him as if no one would relieve him of Billa, the maid one afternoon ushered Mynheer van Steen into the sitting-room.

"What?" Mynheer de Groot murmured.

"Yes," said Mynheer van Steen. Then there was a long pause during which Billa's father took a short nap, from which he was aroused by these extraordinary words: "Will you bestow on me the hand of Jufrow Billa? I shall be very lonely if ever Mettje gets married."

"Do you mean it?" Mynheer de Groot asked tremulously. Mynheer van Steen to marry Billa—and the piano. "My dear friend, my dearest friend, take her, and God bless you"; and he spoke hurriedly for the first time in his life. Then it occurred to them to notify Jufrow Billa of her good fortune.

The piano was still sounding overhead. The two old gentlemen shuddered at the harmonics, and Mynheer gazed at the bold suitor with a wan smile.

"Don't be alarmed. I have no fear. We will change all that. The late Mevrouw van Steen obeyed me like a—a lamb."

Mynheer de Groot vanished, the piano stopped with a crash, but in hardly more than a moment he reappeared, quivering, undone; even his lower lip trembled.

"What ails you? Where is your daughter?"

"My dear, dear friend." Here he dropped into the nearest chair and groaned.

"What—speak out."

"It—it—cannot be."

"What are you talking about?"

"Billa—dear God in heaven, that I should have to say it! Billa—will—not."

What, he, Hendrik van Steen jilted—tossed aside by a fool of a girl?

Mynheer spoke never a word more, but he seized his cocked hat and cane, slammed the door behind him and vowed vengeance, and the first thing he did was to be elected Burgomeister of Sippken in opposition to Nicholas de Groot.

v.

MYNHEER ZACHARY was a great acquisition, and he made himself infinitely agreeable. As he had great tact and unlimited spare time, he talked with Mynheer about investments, herrings, and De Keyser; with Aunt Jetta about poetry and cooking (for she loved both); and he helped Jufrow Mettje to water the plants and cut the fruit in the kitchen garden.

Dare to say there is no sentiment in a kitchen garden! Did not Mettje sit on the bench under a peach tree and stare at a fat yellow pumpkin and feel that her heart was breaking?

Strange to say, every afternoon before this, while the Burgomeister took his afternoon nap and Aunt Jetta's front reposed on a bust without features, Mettje with her garden basket on her arm met Zachary in the kitchen garden and he helped her to gather—the vegetables. No sentiment, indeed! Why, a field of vegetables is as full of poetry as the desolate moors. O Teltower turnips and tender carrots, Brussels sprouts, poetry of cabbage, melons in golden ripeness, and great black grapes with a purple blush! Pumpkins heavy but precious, yellow pears mellowing in the sun, and peaches as rosy as Mettje's cheeks. No sentiment, indeed! There was even shadow to bring the sunlight into relief, for Mettje's heart was heavy for Zachary. Well, Zachary did not come.

Mynheer van Steen, who abhorred music, was awakened the very next afternoon by the

tinkle of a guitar. At first he thought it was an aggressive fly, but at last he traced the obnoxious sound to Mynheer Zachary's chamber overhead, and when that sinner strolled in for his afternoon cup of tea Mynheer remarked that he should advise his young friend to cultivate the acquaintance of Billa de Groot, as she made just the same damnable noise.

Then the awful secret was divulged, and Mettje heard it.

"Jufrow de Groot, my old friend from Rotterdam? I have seen her very often since I came here. She played to me yesterday afternoon."

Here Mettje's hand shook so as she passed the tea-cup to Zachary that it played a tune of its own on the saucer. So while she had waited in vain in the kitchen garden he was leaning over that dreadful box on spindle legs and gazing into Billa's eyes!

Here Mettje hid behind the tea-kettle and was very wretched. Just then Zachary asked for more tea, and as he held out his cup he tried very artfully to touch her slim fingers with his own. I do not say that he had never before succeeded, only this time Mettje drew herself up with great dignity. But when she returned the cup he looked so reproachfully, so beseechingly at her, that she wished she had taken firmer hold of the saucer even at the risk of meeting the hurried touch of his hand, for it fell with a crash and inundated the tea-caddy, the cookies, the dish of rock-candy, and the sacred tea-cloth, and just then the maid came in with a letter which she placed at Mynheer's side on the window-sill. Then like a crack of doom sounded his voice:

"Mettje, my child, rejoice. Mynheer de Keyser is coming next week. In the meantime he sends you the expression of his profound esteem."

With one accord Mettje's eyes met Zachary's. She forgot her anger and pain, everything but that this was the end, and the roses faded out of her cheeks and her lips trembled.

"Aha, young man, you will meet Mynheer under particularly pleasing circumstances. He shall help you at my recommendation." And all day long Mynheer went about the house murmuring, "Nicodemus, Nicodemus de Keyser, my son-in-law." He put his nose into every pot and pan, and was discovered shining the little mirror in the guest room with the tail of his dressing-gown. In short, his one thought was to make everything worthy of the illustrious advent of Nicodemus de Keyser.

In the midst of the expectant joy young Zachary's face wore a look of profound gloom, so that at last the Burgomeister remonstrated.

"What ails you, young man? Be happy; Mynheer de Keyser is coming."

Here Zachary groaned, and leaned against the table and played a tattoo on the shining mahogany. "The truth is, I must go away."

"Oh, is that all?"

"All!"

"Well, you could not expect to stay forever: the best of friends must part." At this juncture Mynheer burst into a gruff "Haw! haw!" while Zachary stared at him in surprise.

"Young man, do you think that I am a fool? Don't you suppose I know that something ails you? Shall I guess?"

"Guess!"

"Think I am blind, eh? Well, not of late

sentiment. I know the young person, and I have reason to believe that her father is dying to get rid of her. He loves her, of course, but still she is too lively for him. Here is your chance."

"But, Mynheer, I have neither money nor position."

"Bah! He has enough for all. Listen. What is done cannot be undone."

"I know, but I do not see the connection."

"She is his only child; he will forgive her even if she marries you against his will. He must relent — I will intercede." And Mynheer slapped his honest breast.

"I AM NICODEMUS DE KEYSER."

years! Young man, you are — ha! ha! — in love."

"In love, Mynheer?"

"Such things have happened before — it's no crime." And here he wagged his old head.

"You are right"; and Zachary appeared resigned. "I am in love."

"So while she played 'Bang, bang, bang' and you 'Twang, twang, twang,' Cupid flew between, eh? Why to Heaven, you fool, don't you speak to her — marry her?"

Zachary seated himself in the nearest chair and contemplated his worthy friend.

"Marry her? That's not so easy."

"Does n't she know?"

Zachary shook his head.

"Of course she knows; I thought so. Then, in Heaven's name, of what are you afraid?"

"Well, of — her father."

"Of her father? A nice lover you! Don't be a milksop! There, we'll speak without

Zachary leaned back and gazed at him with sparkling eyes.

"So you advise me to — to —"

"I advise nothing. All I say is, the inevitable cannot be undone, and he will relent."

"But the going — that is not so easy."

"Listen, Zachary. I will give you a proof of my friendship. You shall have my *trekschuit*, Jasper, and the horse whenever you wish. Jasper shall ask no questions; he rarely speaks, and he never thinks."

"My more than father! Who would have thought to find so much sentiment in so serious a man."

"Sentiment? I believe you. Wait until you see the *trekschuit* and the little cupboards for rum and gin, and a charcoal stove. Nothing wanting — all my own inventions. True sentiment remembers that man must eat and drink. God bless you, my boy. The boat shall be ready whenever you are."

This being a true history, I must confess that no sooner was Zachary in the corridor than he seemed to shake to pieces with suppressed laughter, while on the other side of the door Mynheer sank back in his arm-chair and roared until the tears rolled down his fat cheeks.

"And so the piano was too much for you, Nicholas de Groot? Now we shall see how you like that other damnable instrument; and this time, Mynheer, it is—ha! ha!—forever."

The next day Zachary confided to his benevolent friend that he was ready.

"Ah, you sly dog, when do you want the *trekschuit*? You see I am a man of my word."

"At five o'clock to-morrow morning."

"Five o'clock!" Mynheer cried in dismay.

"Why, old Jasper never got up at five o'clock in his life. He could n't and he would n't."

"Shall my life's happiness wreck on old Jasper?" Zachary demanded with some resentment.

"Why at five? Make it nine."

"We shall get no start. If we go at five no one but you will know, and when they miss us about ten o'clock, why, don't you see there is n't a horse in Sippken fast enough to overtake us?"

"That is true. I will do more. I will bribe Jasper: he shall have a new snuff-box. But one thing I cannot do: I cannot see you off."

"God forbid!" Zachary cried in alarm.

"That would n't do at all."

"Well, then, God be with you! We 've all been young in our day. Aha, you sly rogue, you!"

VI.

THE eventful day dawned like any other day except that Mettje had a headache, so Aunt Jetta said. Mynheer shook his head in disapproval and ate his breakfast in silence. He ate five meals in marked displeasure, and after a hearty supper he and Aunt Jetta sat down for their nightly game of cards.

"I am glad, Jetta, when Mynheer de Keyser takes the child off my hands," he cried irritably.

"Did it ever occur to you that Mynheer is a little old for Mettje?"

"Old? Jetta, do you want to make me angry?" And down he flung his cards.

"Yes, old," Aunt Jetta repeated stoutly.

"There, take up your cards and play."

"I tell you a De Keyser is never old."

"Very well, then; he has been younger. She will never love him."

"Love—love? Did I ever love Mevrouw?"

"Never! But did n't we live in peace and comfort?"

"You did."

"Will you hold your tongue, Jetta?"

"There, yes, I 'll stop. Take up your cards and play."

Mynheer obeyed, though boiling with rage; but as he had good cards the wrath in his face gave way to a look of pleasing excitement, in the midst of which some one knocked with the knocker against the front door.

"Some one to see Mynheer," the maid announced briefly.

"This is no time to come. Can't see any one." And Mynheer did not even look up from his cards.

"Shall I tell him to wait, Mynheer?"

"Tell him to go to the devil. No, tell him to wait. I am busy just now."

"He looks accustomed to waiting," the handmaid volunteered, and departed. Mynheer played on. Half an hour passed, the luck began to turn, and Mynheer lost his temper. The door opened once more. "If you please, Mynheer, he is still waiting. He would be glad if—"

"Get out! Tell him pretty soon. Impudent beggar. Beggar, is n't he?"

"Probably, Mynheer. He is shabby enough."

"Tell him to come to-morrow," Mynheer commanded petulantly, and continued to play until there came another knock at the door.

"Come in, and be hanged!" he roared, and dashed his cards on the table until everything shook.

On the threshold appeared a little old man in shabby clothes, faded and snuff-strewn. He held a cocked hat under his arm, and he looked inquiringly at Mynheer.

"How dare you disturb me? What do you want? Did n't I tell you to come to-morrow? Am I to have no peace in life—am I always to be pestered? What—what—who—who?" Mynheer gasped, deprived of breath.

The little ancient man came a step nearer. "I am anxious to speak to you. I have something of importance to say and to find out—"

"The old story!" Mynheer cried, in unrepressed scorn. "What is your name?"

"Pardon my forgetfulness. I forgot—as people always know me. I am Nicodemus de Keyser of Rotterdam."

Mynheer van Steen was prostrated. Even Aunt Jetta stared at the stranger quite aghast.

"I came sooner than you expected for certain reasons."

"Heavenly powers!" moaned Mynheer van Steen. Here he revived, leaped to his feet, flung his arms about the struggling visitor, and kissed him on the top of his wig.

"Nicodemus de Keyser, the great, the rich De Keyser, so to receive a De Keyser!" Whereupon he thrust him into his own arm-chair, placed a cricket under his feet, then with a flash of inspiration he cried:

"Call Mettje. She is longing to see Mynheer. Hurry, Jetta!"

"Hendrik, do not forget that she is ill," Aunt Jetta remonstrated, and folded her hands on her knees; but the great De Keyser interposed shortly, "First disagreeables, then pleasures. Sit down, Mynheer; you make me nervous. I have reasons for coming without notice and not giving my name. You may know that I have a son."

Mynheer bowed with respectful commiseration.

"He has run away. We parted in anger. He was traced to Sippken. Has he been here? I must see him—speak to him."

"No, he has not been here; only a very pleasing young friend of his who brought me a warm letter of introduction from your son. To be recommended by a De Keyser is sufficient; this humble abode has been his home for three weeks. Perhaps you may know him—Zachary Jansen of Rotterdam."

"Never heard of him. Where is he now?"

"Ha! ha! a sly young dog. I have reason to believe that he has gone on a pleasure excursion, in what I guess to be rather pleasant company. You understand, Mynheer; but boys will be boys—ha, ha!"

"Describe this reprobate to me, you old fool!" Mynheer de Keyser roared.

Mynheer van Steen quaked. A terrible illumination broke upon him, and it was Aunt Jetta who placed a neat silhouette before Mynheer de Keyser.

"That is Zachary: he had it cut for me at the 'kirmess' last week," she explained.

"As I thought—my son."

Mynheer van Steen grew faint with rage as he thought how he had helped Jufrow de Groot to a De Keyser, no matter how unworthy.

"And is it this young man who is taking a country excursion with—oh!" the indignant father cried, and strode up and down the room.

"Call Mettje! She must come, Jetta; I tell you she must come," Mynheer cried. He would lighten the blow by producing a counter attraction. "Yes, you shall see Mettje! Forget this wretched young man. I will fetch her."

"Hendrik, consider she is ill." And Aunt Jetta barred the way.

"Let me pass!"

"Then in God's name!" And the old lady sunk into the nearest chair and grasped the arms for support.

"Something awful is going to happen. O Mynheer de Keyser! consider, be merciful. She was too young for you."

"What are you all talking about! Are you all mad?" But before she could explain

Mynheer burst into the room, an open letter in one hand and a dripping candle in the other.

"Mynheer de Keyser," was all he could say as he fell into a chair and dropped the candle on the floor. "Read."

"My dear father," Mynheer de Keyser read, "forgive me—I love him—I cannot live without him—when this reaches you I—I shall be the happiest girl in Holland, for I shall be the wife of Laurens de Keyser."

"Mynheer van Steen, how is this? You knew that my son had eloped with your daughter?"

"Oh no, no!" Mynheer groaned. "It is a horrible mistake. I thought—I had reason to think he loved Jufrow de Groot. It was she I suspected—and she has been missing all day"; and he held his head in his hands and rocked to and fro.

Just then Jaspar looked cheerfully in at the door. "I've come back, Mynheer. Mynheer Zachary sends his love and his best thanks. He said it was the happiest day of his life; so did the Jufrow."

"Jufrow—what Jufrow?"

"Why, Jufrow Mettje, of course."

"Blockhead! And you let your master's daughter run away in a boat with this villain and you did n't try to bring her back, even if—if you had to knock him down?"

This was too much for old Jaspar.

"Did n't you tell me to take no notice?" he demanded in righteous resentment. "Did you not say to me, 'Whatever you see or hear, Jaspar, don't be surprised. Don't ask questions, don't notice the young folks. It is all right.' And I will say it was pretty hard not to be surprised when I saw Mynheer Zachary lift Jufrow Mettje into the boat. She was all rosy red and ready to cry, but young Mynheer kissed her and I heard him say: 'It's all your dear father's doing. If it had n't been for him we never should have got away. So you see it is God's will, Mettje.' So she wiped her eyes and was very happy."

"It's all a lie!" Mynheer shouted, but Jaspar's composure was not to be ruffled.

"And, if you please, here's a letter from Mynheer Zachary," he added, and departed.

The letter was addressed to Mynheer de Keyser when he should arrive in Sippken.

"Later, Mynheer, you will explain to me your connection with this wretched affair," he said sternly, and then he opened the letter.

My dear father [Laurens wrote], you were very unwise not to take my advice. Had you granted me my wish, Mettje, instead of being my dear wife, as she will be when this reaches you, would have been my revered mother. If you knew my enchanting Mettje you would understand that I prefer her

in her present character. You must know I strayed to Sippken out of sheer idleness, and I was besides curious to see the young person who was willing to be my step-mother. The first thing I did was to fall in love with her. It is not my fault: it is Mettje's, and even you will forgive when you see her. After all, she remains in the family, and that is a great thing. Above everything thank Mynheer van Steen for the happiness he has conferred upon us. Without his aid Mettje and I would still be pining in Sippken, and instead we are sitting side by side in the snuggest cabin in the world, and Mettje's head is on my shoulder. O father, if you could only see the roses in Mettje's cheeks! Tell Mynheer that the cupboards were all he described—he was too thoughtful! The gin was particularly good—good as the advice and help of Jufrow de Groot, which, next to his own, helped to support Mettje and me in this trial. Had I not already chosen Mettje, I might have followed his excellent counsel and taken Jufrow de Groot, but even Mettje thought we'd best not change our plans. It is the loveliest morning that ever dawned—made just for Mettje and me. As soon as I have sealed this letter I shall send it back by Jasper and the boat. Father, don't say that I did not warn you! I said she might fall in love with me—and I have just asked her. She looked up at me with her brown eyes and then she hid her sunny head on my breast and said—Father, pray forgive the blots, for I dropped the pen to—no matter! You were once young yourself and courted Mevrouw, my dear mother, and you know how it is. Forgive me, and some day open your heart again. You have had your romance, probably; forgive me mine. If you only knew what I have to live for now you would believe me when I say that from this day I shall be another man.

LAURENS DE KEYSER.

Mynheer de Keyser slowly folded the letter and gazed in profound scorn at the Burgomeister. The pause that followed was simply appalling, but Aunt Jetta broke it.

"Mynheer de Keyser," she began quite calmly, "believe me you have escaped a great misfortune. What did you, an old man, want of a young wife? She would have ruined the last of your life. Be grateful that your son saw her before it was too late for you both. You cannot be heart-broken, for you have never seen my niece. To be sure, your son has run away with a pretty girl, but under other circumstances this marriage would have been satisfactory to you. Therefore take my advice,

forgive and forget. Return to Rotterdam and receive those children with open arms, and rejoice that your son has chosen the wife of his heart. As for you, brother,"—and Aunt Jetta turned sharply upon him where he sat crushed and subdued,—“you seem the victim of a mistake. I will not try to guess why you wished the charming Billa to run away with a young man of whom you know nothing. As it was Mettje, however, who went instead, I will tell you that I also helped her to escape from a fate an older person would have welcomed.” Here Aunt Jetta courtesied and Mynheer de Keyser bowed low. “Consider that, as Laurens says, she remains in the family; and so if Mynheer will graciously forgive, you certainly should, for,” Aunt Jetta concluded dryly, “it was all your fault.”

“If Mynheer de Keyser will forgive,” the Burgomeister faltered.

“After all,” said the great De Keyser, “it might have been worse, for I shall not have to worry in future about getting him married. Your sister,” he concluded, in an admiring undertone, “is a very sensible person.”

Indeed, in the course of a week he found her so much to his taste that when he returned to Rotterdam it was in company with a new Mevrouw de Keyser. To be sure, not the one he went in search of; but, as he said with great satisfaction to Laurens, when that young man returned from his wedding journey with Mevrouw Mettje, it was all right, for they had remained in the family. Thereupon he pinched Mettje's cheeks until the child glowed like a peach, and he pinched his own Mevrouw de Keyser's until she glowed like a winter apple. In the course of time Mynheer Laurens became a famous merchant, and he ended as Burgomeister of Rotterdam. From being slim he grew portly, and when he was in good humor he liked to talk of his travels. The best journey he had ever taken was, he always declared, on a *trekschuit*. “Eh, Mevrouw Mettje?” he would cry, and to her last day Mevrouw always hung her head and blushed.

“What is your opinion, Mettje? Were you ever sorry?”

“No, Mynheer—if you were not.”

IV.

HERE was one individual in Hillsborough who did not give the cold shoulder to Judge Bascom on his return, and that was the negro Jesse, who had been bought by Major Jimmy Bass some years before the war from Merriwether Bascom, a cousin of the Judge.

Jesse made no outward demonstration of welcome; he was more practical than that. He merely went to his old master with whom he had been living since he became free, and told him that he was going to find employment elsewhere.

"Why, what in the nation!" exclaimed Major Bass. "Why, what's the matter, Jess?"

The very idea was preposterous. In the Bass household the negro was almost indispensable. He was in the nature of a piece of furniture that holds its own against all fashions and fills a place that nothing else can fill.

"Dey ain't nothin' 't all de matter, Marse Maje. I des took it in my min', like, dat I 'd go off some'r's roun' town en set up fer myse'f," said Jesse, scratching his head in a dubious way. He felt very uncomfortable.

"Has anybody hurt your feelin's, Jess?"

"No, suh! Lord, no suh, dat dey ain't!" exclaimed Jesse, with the emphasis of astonishment. "Nobody ain't pester me."

"Ain't your Miss Sarah been rushin' you roun' too lively fer to suit your notions?"

"No, suh."

"Ain't she been a-quarrelin' after you about your work?"

"No, Marse Maje; she ain't say a word."

"Well, then, Jess, what in the name of common sense are you gwine off fer?" The major wanted to argue the matter.

"I got it in my min', Marse Maje, but I dunno ez I kin git it out straight." Jesse leaned his cane against the house, and placed his hat on the steps, as if preparing for a lengthy and elaborate explanation. "Now den, hit look dis way ter me, des like I 'm gwine ter tell you. I ain't nothin' but a nigger, I know dat mighty well, en nobody don't hafter tell me. I 'm a nigger, en you a white man. You're a-settin' up dar in de peazzer, en I 'm a-stan'in' down yer

on de groun'. I been wid you a long time; you treat me well, you gimme plenty vittles, en you pay me up when you got de money, en I hustle roun' en do de bes' I kin in de house en in de gyarden. Dat de way it been gwine on; bofe un us feel like it all sati'factual. Bimeby it come over me dat maybe I kin do mo' work dan what I been a-doin' en git mo' money. Hit work roun' in my min' dat I better be layin' up somepin' n'er fer de ole 'oman en de chillun."

"Well!" exclaimed Major Bass with a snort. It was all he could say.

"En den ag'in," Jesse went on, "one er de ole fambly done come back 'long wid his daughter. Marse Briscoe Bascom en Miss Mildred dey done come back, en dey ain't got nobody fer ter he'p um out no way; en my ole 'oman she say dat ef I got any fambly feelin' I better go dar whar Marse Briscoe is."

For some time Major Jimmy Bass sat silent. He was shocked and stunned. Finally Jesse picked up his hat and cane and started to go. As he brushed his hat with his coat-sleeve his old master saw that he was rigged out in his Sunday clothes. As he moved away the major called him:

"Oh, Jess!"

"Suh?"

"I allers knowed you was a durned fool, Jess, but I never did know before that you was the durndest fool in the universal world."

Jesse made no reply, and the major went into the house. When he told his wife about Jesse's departure, that active-minded and sharp-tongued lady was very angry.

"Indeed, and I 'm glad of it," she exclaimed as she poured out the major's coffee; "I 'm truly glad of it. For twenty-five years that nigger has been laying around here doing nothing, and we a-paying him. But for pity's sake I 'd 'a' drove him off the lot long ago. You may n't believe it, but that nigger is ready and willing to eat his own weight in vittles every week the Lord sends. I ain't sorry he's gone, but I 'm sorry I did n't have a chance to give him a piece of my mind. Now, don't you go to blabbing it around, like you do everything else, that Jesse has gone and left us to go with old Briscoe Bascom."

Major Bass said he would n't, and he did n't, and that is the reason he expressed surprise

when Joe-Bob Grissom informed him that Jesse was waiting on the old Judge and his daughter. Major Jimmy was talkative and fond of gossip, but he had too much respect for his wife's judgment and discretion to refuse to toe the mark, even when it was an imaginary one.

The Bascom family had no claim whatever on Jesse, but he had often heard his mother and other negroes boasting that they had once belonged to the Bascoms, and his fondness for the family was the result of both tradition and instinct. He had that undefined and undefinable respect for people of quality that is one of the virtues, or possibly one of the failings, of human nature. The nearest approach to people of quality, so far as his experience went, was to be found in the Bascom family, and he had never forgotten that he had belonged to an important branch of it. He held it as a sort of distinction. Feeling thus, it is no wonder that he was ready to leave a comfortable home at Major Jimmy Bass's for the privilege of attaching himself and his fortunes to those of the Judge and his daughter. Jesse made up his mind to take this step as soon as the Bascoms returned to Hillsborough, and he made no delay in carrying out his intentions.

Early one morning, not long after Judge Bascom and his daughter had settled themselves in the modest little house which they had selected because the rent was low, Mildred heard some one cutting wood in the yard. Opening her window blinds a little, she saw that the ax was wielded by a stalwart negro a little past middle age. Her father was walking up and down the sidewalk on the outside with his hands behind him, and seemed to be talking to himself.

A little while afterwards Mildred went into the kitchen. She found a fire burning in the stove, and everything in noticeably good order, but the girl she had employed to help her about the house was nowhere to be seen. Whereupon the young lady called her—

"Elvira!"

At this the negro dropped his ax and went to the kitchen.

"Howdy, Mistiss?"

"Have you seen Elvira?" Mildred asked.

"Yes 'm, she wuz hangin' roun' yer when I come roun' dis mornin'. I went in dar, ma'm, en I see how de kitchen wuz all messed up, en den I sent her off. She de mos' no 'countest nigger gal what I ever laid my two eyes on. I'm name' Jesse, ma'm, en I use' ter b'long ter de Bascom fambly when I wuz a boy. Is you ready fer breakfus, Mistiss?"

"Has my father—has Judge Bascom employed you?" Mildred asked. Jesse laughed as though enjoying a good joke.

"No 'm, dat he ain't! I des come my own se'f, kaze I know'd in reason you wuz gwine ter be in needance er somebody. Lord, no 'm, none er de Bascoms don't hafter hire me, ma'm."

"And who told you to send Elvira away?" Mildred inquired, half vexed and half amused.

"Nobody ain't tell me, ma'm," Jesse replied. "When I come she wuz des settin' in dar by de stove noddin', en de whole kitchen look like it been tore up by a harrycane. I des shuck her up, I did, en tell her dat if dat de way she gwine do, she better go 'long back en stay wid her mammy."

"Well, you are very meddlesome," said Mildred. "I don't understand you at all. Who is going to cook breakfast?"

"Mistiss, I done tell you dat breakfus is all ready en a-waitin'," exclaimed Jesse in an injured tone. "I made dat gal set de table, en dey ain't nothin' ter do but put de vittles on it."

It turned out to be a very good breakfast, too, such as it was. Jesse thought while he was preparing it that it was a very small allowance for two hearty persons. But the secret of its scantiness cropped out while the Judge and his daughter were eating.

"These biscuits are very well cooked. But there are too many of them. My daughter, we must pinch and save; it will only be for a little while. We must have the old Place back; we must rake and scrape, and save money and buy it back. And this coffee is very good, too," he went on; "it has quite the old flavor. I thought the girl was too young, but she's a good cook—a very good cook indeed."

Jesse, who had taken his stand behind the Judge's chair, arrayed in a snow-white apron, moved his body uneasily from one foot to the other. Mildred, glad to change the conversation, told her father about Jesse.

"Ah, yes," said Judge Bascom, in his kindly, patronizing way; "I saw him in the yard. And he used to belong to the Bascoms? Well, well, it must have been a long time ago. This is Jesse behind me? Stand out there, Jesse, and let me look at you. Ah, yes, a likely negro; a very likely negro indeed. And what Bascom did you belong to, Jesse? Merriwether Bascom! Why, to be sure; why, certainly!" the Judge continued with as much animation as his feebleness would admit of. "Why, of course, Merriwether Bascom. Well, well, I remember him distinctly. A rough-and-tumble sort of man he was, fighting, gambling, horse-racing, always on the wing. A good man at bottom, but wild. And so you belonged to Merriwether Bascom? Well, boy, once a Bascom always a Bascom. We'll have the old Place back, Jesse, we'll have it back: but we must pinch ourselves; we must save."

Thus the old Judge rambled on in his talk. But no matter what the subject, no matter how far his memory and his experiences carried him away from the present, he was sure to return to the old Place at last. He must have it back. Every thought, every idea, was subordinate to this. He brooded over it and talked of it waking, and he dreamed of it sleeping. It was the one thought that dominated every other. Money must be saved, the old Place must be bought, and to that end everything must tend. The more his daughter economized the more he urged her to economize. His earnestness and enthusiasm impressed and influenced the young girl in a larger measure than she would have been willing to acknowledge, and unconsciously she found herself looking forward to the day when her father and herself would be able to call the Bascom Place their own. In the Judge the thought was the delusion of old age, in the maiden it was the dream of youth; and pardonable, perhaps, in both.

Their hopes and desires running thus in one channel, they loved to wander of an evening in the neighborhood of the old Place—it was just in the outskirts of the town—and long for the time when they should take possession of their home. On these occasions Mildred, by way of interesting her father, would suggest changes to be made.

"The barn is painted red," she would say. "I think olive green would be prettier."

"No," the Judge would reply; "we will have the barn removed. It was not there in my time. It is an innovation. We will have it moved a mile away from the house. We will make many changes. There are hundreds of acres in the meadow yonder that ought to be in cotton. In my time we tried to kill grass, but this man is doing his best to propagate it. Look at that field of Bermuda there. Two years of hard work will be required to get the grass out."

Once while the Judge and his daughter were passing by the old Place they met Prince, the mastiff, in the road. The great dog looked at the young lady with kindly eyes, and expressed his approval by wagging his tail. Then he approached and allowed her to fondle his lion-like head, and walked by her side, responding to her talk in a dumb but eloquent way. Prince evidently thought that the young lady and her father were going in the avenue gate and to the house, for when they got nearly opposite, the dog trotted on ahead, looking back occasionally, as if by that means to extend them an invitation and to assure them that they were welcome. At the gate he stopped and turned around, and seeing that the fair lady and the old gentleman were going by, he dropped his bulky body on the ground in a disconsolate

way and watched them as they passed down the street.

The next afternoon Prince made it a point to watch for the young lady; and when she and her father appeared in sight he ran to meet them and cut up such unusual capers, barking and running around, that his master went down the avenue to see what the trouble was. Mr. Underwood took off his hat as Judge Bascom and his daughter drew near.

"This is Judge Bascom, I presume," he said. "My name is Underwood. I am glad to meet you."

"This is my daughter, Mr. Underwood," said the Judge, bowing with great dignity.

"My dog has paid you a great compliment, Miss Bascom," said Francis Underwood. "He makes few friends, and I have never before seen him sacrifice his dignity to his enthusiasm."

"I feel highly flattered by his attentions," said Mildred, laughing. "I have read somewhere, or heard it said, that the instincts of a little child and a dog are unerring."

"I imagine," said the Judge, in his dignified way, "that instinct has little to do with the matter. I prefer to believe"—He paused a moment, looked at Underwood, and laid his hand on the young man's stalwart shoulder. "Did you know, sir," he went on, "that this place, all these lands, once belonged to me?" His dignity had vanished, his whole attitude changed. The pathos in his voice, which was suggested rather than expressed, swept away whatever astonishment Francis Underwood might have felt. The young man looked at the Judge's daughter and their eyes met. In that one glance, transitory though it was, he found his cue; in her lustrous eyes, proud yet appealing, he read a history of trouble and sacrifice.

"Yes," Underwood replied, in a matter-of-fact way. "I knew the place once belonged to you, and I have been somewhat proud of the fact. We still call it the Bascom Place, you know."

"I should think so!" exclaimed the Judge, bridling up a little; "I should think so! Pray what else could it be called?"

"Well, it might have been called Grasslands, you know, or The Poplars, but somehow the old name seemed to suit it best. I like to think of it as the Bascom Place."

"You are right, sir," said the Judge with emphasis; "you are right, sir. It is the Bascom Place. All the powers of earth cannot strip us of our name."

Again Underwood looked at the young girl, and again he read in her shining but apprehensive eyes the answer he should make.

"I have been compelled to add some con-

veniences—I will not call them improvements—and I have made some repairs, but I have tried to preserve the main and familiar features of the Place.”

“But the barn there; that is not where it should be. It should be a mile away—on the creek.”

“That would improve appearances, no doubt; but if you were compelled to get out at four or five o’clock in the morning and see to the milking of twelve or fifteen cows, I dare say you would wish the barn even nearer than it is.”

“Yes, yes, I suppose so,” responded the Judge; “yes, no doubt. But it was not there in my time—not in my time.”

“I have some very fine cows,” Underwood went on. “Won’t you go in and look at them? I think they would interest Miss Bascom, and my sister would be glad to meet her. Won’t you go in, sir, and look at the old house?”

The Judge turned his pale and wrinkled face towards his old home.

“No,” he said, “not now. I thank you very much. I—somehow—no, sir, I cannot go now.”

His hand shook as he raised it to his face, and his lips trembled as he spoke.

“Let us go home, daughter,” he said after a while. “We have walked far enough.” He bowed to young Underwood, and Mildred bade him good-bye with a troubled smile.

Prince went with them a little way down the street. He walked by the side of the lady, and her pretty hand rested lightly on the dog’s massive head. It was a beautiful picture, Underwood thought, as he stood watching them pass out of sight.

“You are a lucky dog,” he said to Prince when the latter came back, “but you don’t appreciate your privileges. If you did you would have gone home with that lovely woman.” Prince wagged his tail, but it is doubtful if he fully understood the remark.

v.

ONE Sunday morning as Major Jimmy Bass was shaving himself, he heard a knock at the back door. The major had his coat and waistcoat off and his suspenders were hanging around his hips. He was applying the lather for the last time, and the knocking was so sudden and so unexpected that he rubbed the shaving-brush in one of his eyes. He began to make some remarks which, however appropriate they may have been to the occasion, could not be reported here with propriety. But in the midst of his indignant monologue he remembered that the knocking might have proceeded from some of Mrs. Bass’s lady friends who frequently

made a descent on the premises in that direction for the purpose of borrowing a cupful of sugar or coffee in a social way. These considerations acted as powerful brakes on the conversation that Major Bass was carrying on with some imaginary foe. Holding a towel to his smarting eye, he peeped from his room door and looked down the hall. The back door was open, but he could see no one.

“Who was that knocking?” he cried. “I’ll go one eye on you anyways.”

“T ain’t nobody but me, Marse Maje,” came the response from the door.

“Is that you, Jess?” exclaimed the major. “Well, pleg-take your hide to the pleg-taken nation! A little more an’ you’d ’a’ made me cut my th’oat from year to year; an’ as it is, I’ve jest about got enough soap in my eye fer to do a day’s washin’.”

“Is you shavin’ yourse’f, Marse Maje?” asked Jesse, diplomatically.

“That I am,” replied the major with emphasis. “I allers was independent of white folks, an’ sence you pulled up your stakes an’ took up wi’ the quality I’m about independent of the niggers. An’ it’s mighty quare to me,” the major went on, “that you’d leave your high an’ mighty people long enough fer to come a-bangin’ an’ makin’ me put out my eyes. Why, ef I’d ’a’ had my razor out, I’ll be boun’ you’d made me cut my th’oat, an’ much good may it ’a’ done you.”

“Name er goodness, Marse Maje,” protested Jesse, “what make you go on dat a-way? Ef I’d ’a’ knowed you wuz busy in dar I’d ’a’ set out yer in de sun en waited twel you got thoo.”

“Yes,” said the major in a sarcastic but somewhat mollified tone, “you’d ’a’ sot out there an’ got to noddin’, an’ then bimeby your Miss Sarah would ’a’ come along an’ ketched you there, an’ I’ll be boun’ she’d ’a’ lammed you wi’ a chunk of wood; bekaze she don’t ’low no loafin’ in the back yard sence you been gone. I don’t know what you come fer,” the major continued, still wiping the lather out of his eye, “an’ nuther do I keer; but sence you are here you kin come in an’ finish shavin’ me, fer to pay fer the damage you’ve done.”

Jesse was apparently overjoyed to find that he could be of some service. He bustled around in the liveliest manner, and was soon mowing the major’s fat face with the light but firm touch for which he was noted. As he shaved he talked.

“Marse Maje,” he said, “does you know what I come fer dis mornin’?”

“I’ve been tryin’ to think,” replied the major; “but I could n’t tell you ef I was a-gwine to be hung fer it. You are up to some devilment, I know mighty well, but I wisht I may die ef I’ve got any idee what it is.”

"Now, Marse Maje, what make you talk dat a-way?"

"Oh, I know you, Jess, an' I've been a-knowin' you a mighty long time. Your Miss Sarah may n't know you, Jess, but I know you from the groun' all the way up."

Jesse laughed. He was well aware that the major's wife was the knowing one of that family. He had waited until that excellent lady had issued from the house on her way to church, and it was not until she was out of sight that he thought it safe to call on the major. Even now, after he had found the major alone, the negro was somewhat doubtful as to the propriety of explaining the nature of his business; but the old man was inquisitive.

"Oh, yes, Jess!" the major went on, after pausing long enough to have the corner of his mouth shaved — "oh, yes! I know you, an' I know you've got somethin' on your min' right now. Spit it out."

"Well, I'll tell you de trufe, Marse Maje," said Jesse, after hesitating for some time; "I tell you de Lord's trufe, I come yer atter somepin' ter eat."

Major Bass caught the negro by the arm, pushed the razor carefully out of the way, and sat bolt upright in the chair.

"Do you mean to stan' up there, you triflin' rascal," the major exclaimed, "an' tell me, right before my face an' eyes, that you've come a-sneakin' back here atter vittles? Why n't you stay where the vittles was?" Major Bass was really indignant.

"Wait, Marse Maje; des gimme time," said Jesse, nervously strapping the razor on the palm of his hand. "Des gimme time, Marse Maje. You fly up so, suh, dat you 'git me all mixed up wid myse'f. I come atter vittles, dat de Lord's trufe; but I ain't come atter 'em fer myse'f. Nigger like me don't stay hongry long roun' whar folks know 'em like dey does me."

"Well, who in the name of reason sent you then?" asked the major.

"Nobody ain't sont me, suh," said Jesse.

"Well, who do you want 'em fer?" insisted the major.

"Marse Judge Bascom en Miss Mildred," replied Jesse, solemnly.

Major Jimmy Bass fell back in his chair in a state of collapse, overcome by his astonishment.

"*Well!*" he exclaimed as soon as he could catch his breath. "Ef this don't beat the Jews an' the Gentiles, the Scribes an' the Pharisees, then I ain't a-settin' here. Did they tell you to come to this house fer vittles?"

"No, suh; *dat* dey ain't—*dat* dey ain't! Ef Miss Mildred wuz ter know I went anywhar on dis kin' er errun' she'd mighty nigh have a fit."

"Well, *well*, WELL!" snorted the major.

"I des come my own se'f," Jesse went on. He would have begun shaving again, but the major waved him away. "Look like I 'bleege' ter come. You'd 'a' come yo'se'f, Marse Maje, druther dan see dem folks pe'sh deyse'f ter deff. Dey got money, but Marse Judge Bascom got de idee dat dey hafter save it all fer ter buy back de ole Place. Dey pinch deyse'f day in en day out, en yistiddy when Miss Mildred say she gwine buy somepin' fer Sunday, Marse Judge Bascom he say no; he 'low dat dey mus' save en pinch en buy back de ole home. I done year him say dat twel it make me plum sick. An' dar dey is naturally starvin' deyse'f."

"Miss Mildred," continued Jesse, "got de idee dat her pa know what he talkin' 'bout; but 'twix' you en me, Marse Maje, dat ole man done about lose his min'. He ain't so mighty much older dan what you is, but he mighty feeble in his limbs, en he mighty flighty in his head. He talk funny, now, en he don't talk 'bout nothin' skacely but buyin' back de ole Place."

"Jess," said Major Bass in the smooth, insinuating tone that the negro knew so well, and that he had learned to fear, "ain't I allers treated you right? Ain't I allers done the clean thing by you?"

"Yes, Marse Maje, you is," said the negro with emphasis.

"Well, then, Jess, what in the name of Moses do you want to come roun' me wi' such a tale as this? Don't you know I know you clean through? Why n't you come right out an' say you want the vittles fer yourself? What is the use of whippin' the devil 'roun' the stump?"

"Marse Maje," said Jesse, solemnly, "I'm a-tellin' you de Lord's trufe." By this time he had begun to shave the major again.

"Well," said Major Bass, after a pause, during which he seemed to be thinking, "suppos'n' I was to let myself be took in by your tale, an' suppos'n' I was to give you some vittles, what have you got to put 'em in?"

"I got a basket out dar, Marse Maje," said Jesse, cheerfully. "I brung it a purpose."

"Why, tooby shore, tooby shore!" exclaimed the major, sarcastically. "Ef you was as fore-handed as you is fore-thoughted you would n't be a-runnin' roun' beggin' vittles from han' to mouth. But sence you are here you'd better make haste; bekaze ef your Miss Sarah comes back from church and ketches you here, she'll kick up a purty rippit."

The major was correct. As he and Jesse went into the pantry Mrs. Bass entered the front door. Flinging her bonnet and mantilla on a bed, she went to the back porch for a

drink of water. The major heard her coming through the hallway, and, by a swift gesture of his hand, cautioned Jesse to be quiet.

"I 'll vow if the place ain't left to take care of itself," Mrs. Bass was saying. "Doors all open, chickens in the dining-room, cat licking the churn-dasher, and I 'll bet my existence that not a drop of fresh water has been put in the house bucket since I left this morning.

vestigate. The sight she saw in the pantry struck her speechless. In one corner stood the major, holding up one foot as if he was afraid of breaking something, and vainly trying to smile. In another corner stood Jesse, so badly frightened that very little could be seen of his face except the whites of his eyes. The tableau was a comical one. Mrs. Bass did not long remain speechless.

"WELL, WHO IN THE NAME OF REASON SENT YOU THEN?"

Everything gone to rack and ruin. I can't say my prayers in peace at home, and if I go to church one Sunday in a month there ain't no satisfaction in the sermon, because I know everything's at loose ends on this whole blessed place. And if you 'd go up the street right now, you 'd find Mr. Bass a-setting up there at the tavern with the other loafers, a-giggling and a-snickerling and a-dribbling at the mouth like one possessed."

The major, in the pantry, winced visibly at this picture drawn true to life, and as he attempted to change his position he knocked a tin vessel from one of the shelves. He caught at it, and it fell to the floor with a loud crash.

"The Lord have mercy!" exclaimed Mrs. Bass. "Is Satan and all his imps in the pantry, a-tearing down and a-smashing up things?" Not being a timid woman, she hastened to in-

"Mr. Bass!" she exclaimed, "what under the shining sun are you doing colloquing with niggers in my pantry? If you want to colloque with niggers, why, in the name of common sense, don't you take 'em out to the barn? What are you doing in there, anyhow? For mercy's sake! have you gone stark-natural crazy? And if you ain't, what brand-new caper are you trying to cut up?"

"Don't talk so loud, Sarah," said the major, wiping the cold perspiration from his face. "All the neighbors 'll hear you."

"And why should n't they hear me?" exclaimed Mrs. Bass. "What could be worse than for me to come home from church in the broad daylight and find you penned up in my pantry, arm-in-arm with a nigger? What business have you got with niggers that you have to take 'em into my pantry to colloque with

'em? I'd a heap rather you'd a' taken 'em in the parlor—a heap rather."

Then Mrs. Bass's eyes fell on the basket Jesse had in his hand, and this added to her indignation.

"I believe in my soul," she went on, "that you are stealing the meat and bread out of your own mouth to feed that nigger. If you ain't, what is the basket for?"

"Tut, tut, Sarah, don't you go on so; you'll make yourself the laughin'-stock of the town," said the major in a conciliatory tone.

"And what'll you be?" continued Mrs. Bass, relentlessly; "what'll you be—a-honeyin' up with buck niggers in my pantry in the broad open daytime? Maybe you'll have the manners to introduce me to your pardner. Who is he anyhow?" Then Mrs. Bass turned her attention to the negro.

"Come out of my pantry, you nasty, trifling rascal! Who are you?"

"T ain't nobody but me, Miss Sa'ah," said Jesse as he issued forth.

"You!" she exclaimed. "You are the nigger that was too biggity to stay with 'em that raised you up and took care of you, and now you come back and try to steal their bread and meat! Well! I know the end of the world ain't so mighty far off."

Mrs. Bass sank into a chair, exhausted by her indignation. Then the major took the floor, so to say, and showed that if he could be frightened by his wife, he could also, at the proper time, show that he had a will of his own. He explained the situation at some length, and with an emphasis that carried conviction with it. He made no mention of Jesse in his highly colored narrative, but left his wife to infer that while she was at church praying for peace of mind and not having her prayers answered to any great extent, he was at home engaged in works of practical charity. Nothing could have been finer than the major's air of injured innocence, unless it was Jesse's attitude of helpless and abandoned humiliation. The result of it was that Mrs. Bass filled the basket with the best she had in the house, and Jesse went home happy.

VI.

As for the Bascoms, they seemed to be getting along comfortably in spite of the harrowing story that Jesse had told to Major Jimmy Bass and to others. As a matter of fact, the shrewd negro had purposely exaggerated the condition of affairs in the Bascom household. He had an idea that the fare they lived on was too common and cheap for the representatives of such a grand family, forgetting, or not knowing, the privations they had passed through. The

Judge insisted on the most rigid economy, and Mildred was at one with him in this. She was familiar with the necessity for it, but she could see that her father was anxious to push it to unmeasurable lengths. It never occurred to her, however, that her father's morbid anxiety to repossess the Bascom Place was rapidly taking the shape of mania. This desire on the part of Judge Bascom was a part of his daughter's life. She had heard it expressed in various ways ever since she could remember, and it was a part, not merely of her experience, but of her growth and development. She had heard the matter discussed so many times that it seemed to her nothing but natural that her father should one day realize the dream of his later years and reoccupy the old Place as proprietor.

Judge Bascom had no other thought than this. As he grew older and feebler, the desire became more ardent and overpowering. While his daughter was teaching her school, with which she had made quite a success, the Judge would be planning improvements to be added to his old home when he should own it again. Not a day passed—unless, indeed, the weather was stormy—that he did not walk in the neighborhood of the old Place. Sometimes he would go with his daughter, sometimes he would go alone, but it was observed by those who came to be interested in his comings and goings that he invariably refused to accept the invitation of Mr. Underwood to enter the house or to inspect the improvements that had been made. He persisted in remaining on the outside of the domain, content to wait for the day when he could enter as proprietor. He was willing to accept the position of spectator, but he was not willing to be a guest.

The culmination came one fine day in the fall, and it was so sudden and so peculiar that it took Hillsborough completely by surprise, and gave the people food for gossip for a long time afterwards. The season was hesitating as to whether summer should return or winter should be introduced. There was a hint of winter in the crisp morning breezes, but the world seemed to float summerwards in the glimmering haze that wrapped the hills in the afternoons. On one of these fine mornings Judge Bascom rose and dressed himself. His daughter heard him humming a tune as he walked about the room, and she observed also, with inward satisfaction, that his movements were brisker than usual. Listening a little attentively, she heard him talking to himself, and presently she heard him laugh. This was such an unusual occurrence that she was moved to knock at his door. He responded with a cheery "Come in!" Mildred found him shaved and dressed, and she saw that there was a great

"JESSE WAS CALLED IN TO BRUSH THE JUDGE'S HAT AND COAT."

change in his appearance. His cheeks, usually so wan and white, were flushed a little and his eyes were bright. He smiled as Mildred entered, and exclaimed in a tone that she had not heard for years:

"Good-morning, my daughter! And how do you find yourself this morning?"

It was the old manner she used to admire so when she was a slip of a girl—a manner that was a charming combination of dignity and affection.

"Why, father!" she exclaimed, "you must be feeling better. You have positively grown younger in a night."

The Judge laughed until his eyes sparkled. "Yes, my dear, I am feeling very well indeed. I never felt better. I am happy, quite happy. Everything has been made clear to me. I am going to-day to transact some business that has been troubling me a long time. I shall arrange it all to-day—yes, to-day."

The change that had come over her father was such a relief to Mildred that she asked him no questions. Now, as always, she trusted to his judgment and his experience. Jesse, however, was more critical. He watched the Judge furtively and shook his head.

"Mistiss," he said to Mildred when he found an opportunity, "did you shave master?"

"Why, what a ridiculous question!" she exclaimed. "How could I shave him? It makes me shiver merely to touch the razors."

"Well, Mistiss," Jesse insisted, "ef I ain't shave him, en you ain't shave him, den who

de name er goodness is done gone en done it?"

"He shaved himself of course," Mildred said. "He is very much better this morning. I noticed it the moment I saw him. I should think you could see it yourself."

"I seed somepin' nuther wuz de matter," said Jesse. "Somepin' 'bleege' ter be de matter when I put him ter bed las' night des like he wuz a baby, ma'm, en now yer he is gwine roun' des ez spry ez de nex' one. Yessum, somepin' 'bleege' ter be de matter. Yistiddy his han's wuz shakin' same like he got de polzy, ma'm, en now yer he is shavin' hissef; dat what rack my min'."

"Well, I hope you are glad he is so well, Jesse," said Mildred in an injured tone.

"Oh, yessum," said Jesse, scratching his head. "Lor', yessum. Dey ain't nobody no gladder dan what I is; but it come on me so sudden, ma'm, dat it sorter skeer me."

"Well, it does n't frighten me," said Mildred. "It makes me very happy."

"Yessum," replied Jesse, deferentially. He made no further comment; but after Mildred had gone to attend to her school duties he made it his business to keep an eye on the Judge, and the closer the negro watched, the more forcibly was he struck by the great change that a night had made in the old man.

"I hear talk 'bout folks bein' conjured inter sickness," Jesse said to himself, "but I ain't never hear talk 'bout dey bein' conjured so dey git well."

Certainly a great change had come over Judge Bascom. He stood firmly on his feet once more. He held his head erect, as in the old days, and when he talked to Jesse his tone was patronizing and commanding, instead of querulous and complaining. He seemed to be very fastidious about his appearance. After Mildred had gone to her school, Jesse was called in to brush the Judge's hat and coat and to polish his shoes. The Judge watched this process with great interest, and talked to the negro in his blandest manner. This was not so surprising to Jesse as the fact that the Judge persisted in calling him Wesley; Wesley was the Judge's old body-servant who had been dead for twenty years. It was Wesley this and Wesley that so long as Jesse was in the room, and once the Judge asked how long before the carriage would be ready. The negro parried this question, but he remembered it. He was sorely puzzled an hour afterwards, however, when Judge Bascom called him and said:

"Wesley, tell Jordan he need not bring the carriage around for me. I will walk. Jordan can bring your mistress when she is ready."

"Well," exclaimed Jesse, when the Judge

disappeared in the house, "dis bangs me! What de name er goodness put de ole man Jerd'n in his min', which he died endurance er de war? It's all away beyant me. Miss Mildred oughter be yer wid her pa right now, yit, ef I go atter her, dey ain't no tellin' what he gwine do."

Jess cut an armful of wood, and then made a pretense of washing dishes, going from the kitchen to the dining-room several times. More than once he stopped to listen, but he could hear nothing. After a while he made bold to peep into the sitting-room. There was nobody there. He went into the Judge's bedroom; it was empty. Then he called—"Marster! oh, Marster!" but there was no reply. Jesse was in a quandary. He was not alarmed, but he was uneasy.

"Ef I run en tell Miss Mildred dat Marster done gone som'ers," he said to himself, "she'll des laugh en say I ain't got no sense; en I don't speck I is, but it make my flesh crawl fer ter hear folks callin' on dead niggers ter do dis en do dat."

Meanwhile the Judge had sallied forth from the house, and was proceeding in the direction of the Bascom Place. His step was firm and elastic, his bearing dignified. The acquaintances whom he met on his way stopped and looked after him when they had returned his Chesterfieldian salutation. He walked rapidly, and there was an air of decision in his movements that had long been lacking. At the great gate opening into the avenue of the Bascom Place the Judge was met by Prince the mastiff, who gave him a hospitable welcome, and gravely preceded him to the house. Miss Sophie, Mr. Underwood's maiden sister, who was sitting in the piazza, engaged on some kind of feminine embroidery, saw the Judge coming, too late to beat a retreat, so she merely whipped behind one of the large pillars, gave her dress a little shake at the sides and behind, ran her hands over her hair, and appeared before the caller cool, calm, and collected.

"Good-morning, madam," said the Judge in his grand way, taking off his hat.

"Good-morning, sir," said Miss Sophie. "Have this chair?"

"No, no," said the Judge, smiling blandly, and waving his hand. "I prefer my own chair—the large rocker with the cushion, you know. It is more comfortable."

Somewhat puzzled, Miss Sophie fetched a rocker. It had no cushion, but the Judge seemed not to miss it.

"Why, where are the servants?" he asked, his brows contracting a little. "I could have brought the chair."

"Mercy!" exclaimed Miss Sophie, "if I

were to sit down and expect the negroes to wait on me, I'd have a good many disappointments during the day."

"Yes," said the Judge, "that is very true; very true. Where is Wesley?"

"I'm sure I don't know," Miss Sophie replied. "Is he a white man or a negro?"

"Wesley?" exclaimed the Judge. "Why, he's a nigger; he's my body-servant."

"Is n't this Judge Bascom?" Miss Sophie inquired, regarding him curiously.

"Yes, certainly, madam," responded the Judge.

"Well, I've seen a negro named Jesse following you and your daughter about," said Miss Sophie. "Perhaps you are speaking of Jesse."

"No, no," said the Judge. "I mean Wesley—or, maybe you are only a visitor here. Your face is familiar, but I have forgotten your name."

"I am Francis Underwood's sister," said Miss Sophie, with some degree of pride.

"Ah, yes!" the Judge sighed—"Francis Underwood. He is the gentleman who has had charge of the place these several years. A very clever man, I have no doubt. He has done very well, very well indeed; better than most men would have done. Do you know where he will go next year?"

"Now, I could n't tell you, really," Miss Sophie replied, looking at the Judge through her gold-rimmed eyeglasses. "He did intend to go North this fall, but he's always too busy to carry out his intentions."

"Yes," said Judge Bascom; "I have no doubt he is a very busy man. He has managed everything very cleverly here, and I shall wish him well wherever he goes."

Miss Sophie was very glad when she heard her brother's step in the hall; not that she was nervous or easily frightened, but there was something in Judge Bascom's actions, something in the tone of his voice, some suggestion in his words, that gave her uneasiness, and she breathed a sigh of relief when her stalwart brother made his appearance.

Francis Underwood greeted his guest cordially—more cordially, Miss Sophie thought, than circumstances warranted; but the beautiful face of Mildred Bascom was not stamped on Miss Sophie's mind as it was on her brother's.

"I am sorry to put you to any inconvenience," said the Judge, after they had talked for some time on commonplace topics—"very sorry. I have put the matter off until at last I felt it to be a solemn duty I owed my family to come here. Believe me, sir," he continued, turning to the young man with some emotion—"believe me, sir, it grieves me to trouble

you in the matter, but I could no longer postpone coming here. I think I understand and appreciate your attachment —"

"Why, my dear sir," cried Francis Underwood in his heartiest manner, "it is no trouble at all. No one could be more welcome here. I have often wondered why you have never called before. Don't talk about trouble and inconvenience."

"I think I understand and appreciate your attachment for the Place," the Judge went on as though he had not been interrupted, "and it embarrasses me, I assure you, to be compelled to trouble you now."

"Well," said Francis Underwood, with a hospitable laugh, "if it is no trouble to you, it certainly is none to me. As my neighbors around here say, when I call on them, 'Just make yourself at home.'"

Judge Bascom rose from his chair trembling. He seemed suddenly to be laboring under the most intense excitement.

"My home?" he almost shrieked — "make myself at home! In God's name, man, what can you mean? It *is* my home! It has always been my home! Everything here is mine — every foot of land, every tree, every brick and stone and piece of timber in this house. It is *all* mine, and I will have it! I have come here to assert my rights!"

He panted with passion and excitement as he looked from Francis Underwood to Miss Sophie. He paused, as if daring them to dispute his claims. Miss Sophie, who had a temper of her own, would have given the Judge a piece of her mind, but she saw her brother regarding the old man with a puzzled, pitying expression. Then the truth flashed on her, and for an instant she felt like crying. Francis Underwood approached the Judge and led him gently back to his chair.

"Now that you are at home, Judge Bascom," he said, "you need not worry yourself."

"I tell you it is *mine*!" the Judge went on, beating the arm of his chair with his clenched fist; "it is mine. It has always been mine, and it will always be mine."

Francis Underwood stood before the old man, active, alert, smiling. His sister said afterwards that she was surprised at the prompt gentleness with which her brother disposed of what promised to be a very disagreeable scene.

"Judge Bascom," said the young man, swinging himself around on his boot heels, "as your guest here, allow me to suggest that you ought to show me over the place. I have been told you have some very fine cows here."

Immediately Judge Bascom was himself again. His old air of dignity returned, and he became in a moment the affable host.

"As my guests here," he said, smiling with

pleasure, "you and the lady are very welcome. We keep open house at the Bascom Place, and we are glad to have our friends with us. What we have is yours. I suppose," he went on, still smiling, "some of our neighbors have been joking about our cows. We have a good many of them, but they don't amount to much. They have been driven to the pasture by this time, and that is on the creek a mile and a half from here. I wonder where Wesley is! I think he is growing more worthless every year. He ought to be here with my daughter. The carriage was sent for her some time ago."

"I will see if he is in the yard," said Underwood, and his sister followed him through the hall.

"Mercy!" Miss Sophie exclaimed when they were out of hearing; "does the old Judge purpose to swarm and settle down on us?" She had an economical turn of mind. "What in the world is the matter with him?"

"I pity him from the bottom of my heart," said Francis Underwood, "but I am sorrier for his daughter. Everything seems to be blotted out of his mind except the notion that he is the owner of this Place. We must humor him, sister, and we must be tender with the daughter. You know how to do that much better than I do."

Miss Sophie frowned a little. The situation was a new and trying one, but she had been confronted with emergencies before, and her experience and her strong common sense stood her in good stead now. With a woman's promptness she decided on a line of action at once sympathetic and effectual. The buggy was ordered out and young Underwood went for a physician.

Then, when he had returned, Miss Sophie said he must go for the daughter, and she cautioned, with some severity of manner, as to what he should say and how he should deport himself. But at this Francis Underwood rebelled. Ordinarily he was a very agreeable and accommodating young fellow, but when his sister informed him that he must fetch Mildred Bascom to her father, he pulled off his hat and scratched his blonde head in perplexity.

"What could I say, sister?" he protested. "How could I explain the situation? No; it is a woman's work, and you must go. It would be a pretty come-off for me to go after this poor girl and in a fit of awkwardness frighten her to death. It is bad enough as it is. There is no hurry. You shall have the carriage. It would never do for me to go; no one but a woman knows how to be sympathetic in a matter of this kind."

"I never knew before that you were so bashful," said Miss Sophie, regarding him keenly. "It is a recent development."

"It is not bashfulness, sister," said Underwood, coloring a little. "It is consideration. How could I explain matters to this poor girl? How could I prevail on her to come here without giving her an inkling of the situation, and thus frighten her, perhaps unnecessarily?"

"Perhaps you are right," said Miss Sophie, who, as an experienced spinster, was not always ready to make concessions of this kind. "At any rate I'll go for Miss Bascom, and I think I can manage it without alarming her; but the matter troubles me. I hope the poor old Judge will not be a dangerous guest."

"There is not the slightest fear of that," said

Francis Underwood. "He is too feeble for that. When I placed my hand on his shoulder just now he was all of a tremble. He is no stronger than a little child, and no more dangerous. Besides, the doctor is with him."

"Well," said Miss Sophie with a sigh, "I'll go. Women are compelled to do most of the odd jobs that men are afraid to take up; but I shiver to think of it. I shall surely break down when I see that poor child."

"No," said her brother, "you will not. I know you too well for that. We must humor this old man, and that will be for me to do; his daughter must be left to you."

(To be concluded in the next number.)

Joel Chandler Harris.

SAINT-MÉMIN'S PORTRAIT OF MARSHALL.¹

THE fine engraving of Chief-Justice Marshall's portrait which embellishes the present number of this magazine is made from a crayon by Saint-Mémin taken in March, 1808, when the

Chief-Justice was at the zenith of his powers, in the fifty-third year of his age. It is probably the most exact presentation of his face and bust that was ever made. Saint-Mémin was peculiarly gifted in the art of making accurate likenesses. He was a native of Dijon, the capital of ancient Burgundy, and was the last male descendant of a distinguished and honorable family named Févret, the ordinary surname of Saint-Mémin being undoubtedly taken from some family estate, as was the custom in France. His full name was Charles Balthazar Julien Févret de Saint-Mémin. He was born March

12, 1770, his father being a counselor of the Parliament of Dijon, and his mother a beautiful and wealthy creole of San Domingo. He had a natural genius for design and the finer mechanic arts; and though bred at a military school in Paris and destined for the army, he could not resist the temptation to cultivate his favorite pursuits. His regiment (of the Guards) being re-formed on the breaking out of the Revolution, he with the other officers was discharged from service, and soon after the family was obliged to seek safety by retiring to Switzerland. Saint-Mémin, however, joined the army of the princes, which was hovering on the Rhine, and while there still employed himself in making sketches of its beautiful scenery. After the disbandment of this army, he and his father conceived the project of going to San Domingo in order to look after Madame Saint-Mémin's property, and to avoid the accusation of being emigrants from the territory

¹ The other portraits of Chief-Justice Marshall which have come to my knowledge are the following:

1. A silhouette by Saint-Mémin in possession of Mrs. M. L. Smith, residing near the Alexandria Seminary.

2. An elaborate half-length portrait was taken by Rembrandt Peale in 1825, and was presented to Chief-Justice Chase by the New York Bar Association, and by him bequeathed to the Supreme Court of the United States, and is now in the robing-room of the court at the Capitol. Although a fine painting, this portrait has not been recognized as a good likeness by those who knew the Chief-Justice.

3. A full-length portrait was taken by Hubbard, a French artist, at Richmond, 1830, and is considered by the Marshall family as an excellent likeness. It is now in Washington and Lee University at Lexington, Va.

4. A full-length miniature in a sitting posture by the same artist is at Markham, Va., in possession of the family of the late Edward C. Marshall, and a replica at Leedstown, Va., belongs to the family of James K. Marshall.

5. A portrait taken by Henry Inman at Washington in 1831, from which many copies have been taken and engravings made—among others, the bank-note engraving made by the Bureau of Engraving and Printing. The original is in possession of the Philadelphia Law Association.

6. A very fine portrait by Jarvis, formerly owned by Hon. I. E. Morse of New Orleans, now by Mr. Justice Gray of the United States Supreme Court.

7. A full-length portrait by Harding, owned by the Boston Athenæum, a replica of which is in the Harvard Law School.

8. A large painting, representing the Chief-Justice at full length, seated, was made some years since by a Mr. Washington, not from life, but as an eclectic portrait from several others, and is now in the court-house at Warrenton, Va. A copy of it made ten or twelve years since by Mr. Brooke of Washington was purchased by Congress, and is now in the robing-room of the Supreme Court. Of course it cannot have much value as a portrait, whatever may be its merits as a painting.

of France. They went by way of Holland, England, Canada, and the United States, and arrived at New York in 1793. There they found many fugitives from San Domingo, whose reports rendered aid from that quarter very doubtful — although the father finally sailed for the island, but took the fever immediately upon landing and died. Young Saint-Mémin was thus thrown upon his own resources, and for a while boarded with a fellow-countryman who had sought an asylum in America. Struck with the beauty of New York and its harbor and the surrounding scenery, he made a most accurate sketch of it, which was greatly admired, and he was advised to have it engraved and offered to the public. He obtained an introduction to the public library, where by the aid of the encyclopedia he mastered the principles of engraving and made a highly finished copper-plate of his sketch. So successful was this his first effort in that line that he was advised to devote himself to the art of making and engraving portraits. Chrétien, in 1786, had invented an instrument which he denominated the "physionotrace," by which the profile outline of a face could be taken with mathematical precision, both as to figure and dimensions. Saint-Mémin constructed such an instrument for himself and employed it with great success, filling in the outline with crayon, generally black on a pink ground. His portraits were greatly admired for their faithfulness, and became very much in vogue. He executed no less than 818 from 1793 to 1810, visiting for the purpose most of the Atlantic cities from New York to Charleston. For the moderate sum of thirty-three dollars he furnished to each sitter a full-sized portrait of the bust, a copper-plate of the same engraved in miniature (reduced from the portrait by another instrument called a "pantograph"), and twelve proofs.

These miniatures were of medallion size, circular in form and about two inches in diameter, with the face nearly the size of a quarter-dollar. He kept two or three proofs for his own portfolio, and after his return to France in 1814 he made up two complete sets, which after his death (which occurred in 1852) were sent to this country for sale. One of them is in the possession of the Corcoran Art Gallery in Washington; the other was purchased by Mr. Elias Dexter of New York, who photographed the engravings and published them with an introduction containing a memoir of Saint-Mémin and a short biographical sketch of the persons whose portraits are contained in the collection. The memoir is merely a translation of an address before the Academy of Dijon made by M. Guignard after Saint-Mémin's decease. During the latter portion of

his life, from 1817 to 1852, he was Director of the Museum of Dijon, one of the most valuable depositories of works of art in France.

The original portrait of Chief-Justice Marshall of which the accompanying engraving is a copy is owned by Mr. Thomas Marshall Smith of Baltimore, whose mother was a daughter of the Chief-Justice's eldest son, and the portrait has always remained in the family. It is regarded by them as the very best likeness ever taken of their honored ancestor. Mr. Smith has recently allowed a full-sized photograph of it to be taken by Rice of Washington for the Supreme Court, reserving the copyright. The engraving in *THE CENTURY* is made from this excellent photograph, and, with the exception of the dozen miniatures struck off by Saint-Mémin, is the only engraving ever made from the portrait.

John Marshall is one of those purely American characters of whom we may well be proud. Born on the 24th of September, 1755, in Fauquier County, Va., a region then comparatively new, he enjoyed few of the educational facilities which existed in the older portions of the State. This was made up, however, in great degree, by one of the happiest and most intellectual of homes. His father, Colonel Thomas Marshall, was an intimate friend and old schoolmate of Washington, and was associated with him in the surveys of the Fairfax estates, which embraced a large portion of northern and north-western Virginia. His mother was Mary Keith, daughter of the Episcopal clergyman of the parish, and educated in the choicest English literature of that day. The home was a constant and regularly organized school. The best English poets and historians were made as familiar as household words, and the mathematical and other sciences were not neglected. Mr. Justice Story, who probably had it from the Chief-Justice himself, relates that at the age of twelve John, who was the eldest of the children, had transcribed the whole of Pope's "Essay on Man" and some of his "Moral Essays," and had committed to memory many of the most interesting passages of that poet. When he had become sufficiently advanced a private tutor was procured to initiate him into the mysteries of classical lore. Rev. James Thompson, an Episcopal clergyman from Scotland, was employed for this duty. At fourteen John was sent to Westmoreland County to attend the school of Rev. Mr. Campbell, where his father and Washington had been students and where he staid for a year. He then returned home and continued his classical studies under Mr. Thompson. His outdoor recreations were hunting and fishing, of which he was exceedingly fond. At eighteen he began the study of law by reading Blackstone's Com-

mentaries, then a new book. But soon the Revolution broke out and Thomas Marshall and his son John joined the troops raised by Virginia, the former as colonel of a regiment, the latter as lieutenant in a different regiment, and both served in the field the greater portion of the war, John being promoted to a captaincy in 1777. He was at the battles of Trenton, Germantown, Monmouth, Stony Point, and nearly all the important engagements of the army of Washington's immediate command. Though so young, being only twenty when the war began, he became exceedingly popular with his brother officers, as well as with his men, and his sound common sense and good judgment led to his often being selected to decide disputes between them and also to act as judge-advocate. He was thus brought into personal contact with General Washington and Colonel Hamilton, who afterwards became his warmest friends. At this time he is described as being the picture of health, six feet high, straight, slender, of dark complexion, with a round face and piercing black eye, and a countenance beaming with intelligence and good nature. He had an upright but not high forehead, terminated in a horizontal line by a mass of raven-black hair, and his temples were fully developed, indicating strong memory and great power of combination.

Being sent home at the close of 1779 to aid in raising new recruits, he had an opportunity, of which he availed himself, to attend the law lectures of George Wythe (afterwards Chancellor) and those of Professor (afterwards Bishop) Madison on natural philosophy. This was all the collegiate education he ever enjoyed. When the courts were opened, after the capture of Cornwallis, he began the practice of law, and in January, 1783, married Mary Willis Ambler, with whom he lived in devoted affection for nearly fifty years. He now took up his permanent residence in Richmond, where he continued to reside the remainder of his life. It was not long before he became a leader of the Virginia bar. His wonderful strength of logic and clearness of statement made him almost irresistible in argument, and his industry and faithfulness in the discharge of his duties secured him a very large practice. He was frequently sent to the legislature, which, as he lived at the capital, he could attend without material prejudice to his business; and he was as eminent in debate on important political questions as he was at the bar. In the latter sphere his services were sought in all the important causes of the day, many of which involved public questions growing out of the war and its attendant consequences. Among other clients he was employed by the celebrated Beaumarchais to sue the State of Virginia for

supplies furnished during the war, and obtained a large judgment against the State under a law at that time existing which allowed such suits. He was one of the leading counsel in the great case of the debts due to British subjects which had been paid to the State during the war under a statute authorizing such payments to be made. In the department of public law he became especially proficient, and probably had no superior in the country.

In his political views Marshall was firm and decided. He was always in favor of a Federal Government clothed with adequate power to maintain itself and the national dignity and credit, and when the new Constitution was proposed he was one of its most ardent supporters. Being elected to the State convention which met in 1788 to consider its adoption, his calm and powerful arguments interposed a successful resistance to the fiery eloquence of Patrick Henry, who was opposed to the Constitution. His services in finally securing its ratification were second only to those of Madison himself. After the Federal Government was organized he was ever the powerful champion of Washington's administration, both in the legislature and in popular assemblies. He sustained the financial and other measures of the first Congress, by which the Government was made a reality and set in motion. He defended Jay's treaty, and compelled its opponents to abandon the charge of unconstitutionality. In 1797 General Marshall, as he was then called, was sent by President Adams, with Gerry and Pinckney, to France, and in the diplomatic contest with the corrupt and insolent Directory of that day he defended the dignity of his country in one of the ablest of state papers. On his return, in 1798, he was received with the enthusiastic approbation of all parties. His progress from New York to Richmond was an ovation.

Marshall hoped now to be permitted to devote himself to his profession. But this could not be. He had become too important a personage to be allowed to retire from public life. At the earnest personal entreaty of Washington, who was deeply interested in the success of the Federal or Constitutional party, Marshall consented to run for Congress, and was elected, though his district (Richmond) was anti-Federal in its sympathies. In the session of 1799-1800 he made that memorable speech in which he so ably sustained the action of the Executive in delivering up to the British Government, under the treaty of 1794, Nash (*alias* Robbins), who was charged with piracy and murder committed on a British vessel. It was confessed by the Republican leaders that this speech could not be answered. It is still referred to as a conclusive exposition of the

public law on the subject of international obligations in regard to the extradition of criminals.

On the disruption of Mr. Adams's Cabinet, in May, 1800, General Marshall was nominated, first as Secretary of War, and then as Secretary of State. He served in the latter office during the remainder of Adams's administration, and his state papers are characterized by all his wonted clearness and power of argument. In November, 1800, Chief-Justice Ellsworth, then in Europe, resigned, and Marshall, though still holding the office of Secretary of State, was appointed in his place. It was to him an unsolicited and unexpected honor. The President first offered the place to Mr. Jay, its former occupant, but then near the close of his term as governor of New York. Mr. Jay declined the offer, desiring to retire from public life. The President meeting Marshall, who had suggested some name for the office, announced his determination to appoint a plain Virginia lawyer named John Marshall. The latter was so surprised and confused by this announcement that for a moment he could not utter a word.

The great office to which Marshall was now elevated was held until his death, which occurred on the sixth day of July, 1835, in the eightieth year of his age. He believed himself to be better fitted for the judicial function than for any other vocation. It was the great object of his ambition. He told his son that when President Adams told him that he had decided to nominate him as Chief-Justice it was the happiest moment of his life. He felt his power. He was conscious of the spirit that was in him. And yet he was one of the most modest of men. A consciousness of power is not inconsistent with true modesty. "Let me repeat it," says Lavater, "he only is great who has the habits of greatness; who, after performing what none in ten thousand could accomplish, passes on, like Samson, and *'tells neither father nor mother of it.'*" Quiet, simple, and unassuming, Marshall was inherently great; and though conscious of his power, he did not regard it as exceptional, but as all in the ordinary course.

It is needless to say that Marshall's reputation as a great constitutional judge is peerless. The character of his mind and his previous

training were such as to enable him to handle the momentous questions to which the conflicting views upon the Constitution gave rise with the soundest logic, the greatest breadth of view, and the most far-seeing statesmanship. He came to the bench with a reputation already established — the reputation not only of a great lawyer, but of an eminent statesman and publicist; and under his lead the Supreme Court lost none of the prestige which it had enjoyed under Jay and Ellsworth. This was a matter of consequence at a period when so much depended upon the public confidence in the decisions of this tribunal upon the questions of constitutional construction which agitated the public mind. The result answered the requirements of the situation. It may truly be said that the Constitution received its final and permanent form from the judgments rendered by the Supreme Court during the period in which Marshall was at its head.

With a few modifications, superinduced by the somewhat differing views on two or three points of his great successor, and aside from the new questions growing out of the late civil war and the recent constitutional amendments, the decisions made since Marshall's time have been little more than the application of the principles established by him and his venerated associates. It must be confessed that the business of the Supreme Court at that period allowed more time for elaborate argument and judicial deliberation than at present. It has increased since Marshall's time more than sevenfold. Against forty-two cases reported in January term, 1835, more than three hundred were reported in October term, 1887. Another advantage enjoyed by the old court was the selectness and distinguished ability of its bar. Dexter, Webster, Pinckney, Ogden, Wood, Binney, Sergeant, Ingersoll, Taney, Livingston, and many others of almost equal fame are frequently named as counsel. The system of railroads and the consequent ease of communication with all parts of the country now enable the local counsel to argue their own cases, and have had the effect of lessening the elevated and eclectic character of the arguments made before the Supreme Court of the United States.

Joseph P. Bradley.

TELEGRAPHING IN BATTLE.

BEFORE 1861 the value of the military telegraph had not been demonstrated. Crude experiments had been made, with poorly equipped lines, in the Crimea, in India, and by France, Spain, and Italy in different campaigns, while the Germans possessed a distinct military telegraph organization as yet untested; but it was on the very route where Morse's first message, "What hath God wrought!" announced the benefits of his invention to the

arts of peace that the telegraph was to begin its first practical use in war. The outbreak of the mob in Baltimore on the 19th of April, 1861, culminated in the destruction of railroads, bridges, and telegraphs, and for a time Washington was isolated from the North. In this emergency the Administration called upon Thomas A. Scott of the Pennsylvania Railroad to aid the military operations of General Butler in re-opening communication. Taking with him Andrew Carnegie and four of his best telegraphers, Mr. Scott attacked the problem with amazing energy. Rails were relaid, bridges rebuilt, wires restrung, as if by magic; and as the nation poured its defenders towards Washington, the genius of Scott, aided by the sagacity of these assistants, guided the long trains of volunteers safely to their destination. Reaching Washington after the accomplishment of this mission, the telegraph corps was enlarged to connect important stations, as the navy yard and the arsenal, with the War Department, and to run lines to Arlington, Chain Bridge, and other outposts. The names of the four pioneers of the service were David Strouse, D. Homer Bates, Samuel Brown, and Richard O'Brien. Strouse soon succumbed to the hardships of the new service, and went home to die: he sleeps by the Juniata. Of the three others, Bates served at the War Department and Brown and O'Brien at the front throughout the war. Thus informally began the career of the corps, which grew to number

more than 1000 experts, which constructed 15,000 miles of line in the field, transmitted millions of important dispatches, regulated the movements of distant armies, as those of Grant, Sherman, and Thomas, and, in short, made it possible to move vast forces as a unit over a wide territory. It will be remembered that in 1861 telegraphy was not twenty years old, and that the art of rapid operating by sound was still younger. Most of those who responded to the call for operators to serve in the field were in their teens, but they were enthusiastic, already trained to the faithful performance of duty, and ready to face danger when necessary. At Great Falls, an outpost on the Maryland side of the Potomac, the pickets were one day withdrawn, and simultaneously the Confederates began to shell the telegraph office. As steps, porch, and roof were successively shot away, the operator, Ed. Conway, reported progress to the War Department, adding that his office would "now close for repairs," and withdrew with his instrument as the enemy crossed the river.

With McDowell's advance to Bull Run, in 1861, lines were extended to Alexandria, Fairfax Station, and Fairfax Court House. Aided by a line of couriers, the progress of the first battle of Bull Run was reported to the War Department by operators at the front, who were among the last to leave the field.

They soon became veterans. A gorgeous uniform which had marked the gilt-edged, brass-button period of the telegraph service, and which had not sufficiently distinguished the operators from major-generals, was discarded, and the corps settled down to the exigencies of its novel situation, sharing the dangers and privations of the troops, keeping up communication night and day, and faithfully guarding the important military secrets intrusted for transmission.

It might be supposed that Southern sympathizers would have endeavored to interrupt Government communication by telegraph when it could so easily be done by cutting wires and cables, or by connecting them with each other or with the ground. As a matter of fact, lines in Washington were interrupted by cross connections made with fine copper wire which could not be seen from the ground; but these were so quickly detected by electrical tests and the lines were so well guarded that such attempts became too dangerous and ceased.

As we advanced southward whole sections

of wire would sometimes be torn down at night by bushwhackers and carried into the woods, and the work of repair often proved extremely hazardous. A favorite point for such exploits on the part of the Confederates was the line between Fort Monroe and Newport News. They being camped at Yorktown, and our videttes, after the Big Bethel affair, only extending to Hampton, they could strike the exposed line anywhere from there to Newport News. This they usually did at night. On one occasion, early in 1862, the chief operator at Fort Monroe went out to repair such a break, accompanied by an escort of infantry. Being well mounted he left the troops out of sight, found the wire torn down near Newport News, repaired it, and returned rapidly towards Hampton. As he passed the New Market road he received simultaneously a bullet through his coat and an order to halt from a party of cavalry charging down upon him from the direction of Yorktown. Disregarding both bullet and order, he spurred his horse forward and succeeded in reaching his escort, who poured a volley into his pursuers which caused them to wheel and retreat as rapidly as they had come.

It was on this line that the operator at Newport News reported from his point of view the phases of the fight between the *Merrimac* and our wooden ships, while shells from the former and her consorts burst around him at short range. Amid the reverberations of the heavy broadsides from our ships, which shook the massive ramparts of Fort Monroe, the writer read to the assembled officers, from the click of the instrument, this terse description: "The *Merrimac* steers straight for the *Cumberland*." "The *Cumberland* gives her a broadside." "The *Merrimac* keels over." "She seems to be sinking." A pause. "No; she comes on again." "She has struck the *Cumberland* and poured a broadside into her." "God! the *Cumberland* is sinking." Another pause and then: "The *Cumberland* has fired her last broadside." Next day the historic combat of the iron-clads occurred, and though largely within view from our ramparts, it was similarly bulletined by the same steady hand from Newport News.

Telegraphic operations began in West Virginia almost contemporaneously with those about Washington, and materially aided General McClellan in his campaign in that quarter. Operations in other States will be noted further on. By the close of the first year of the war over a thousand miles of line had been built with the armies in the different departments; the telegraph having proved itself invaluable in the strategic movement of troops in the field, and equally essential to the efficiency of

the commissariat and the prompt transportation of quartermasters' supplies.

A new era was now begun by the appointment of Colonel Anson Stager as general superintendent of all military telegraphs, with Thomas T. Eckert, afterwards Assistant Secretary of War, in immediate charge of the Department of Virginia and North Carolina, and later with other competent telegraphers in charge of the departments of West Virginia, Ohio, the Cumberland, Missouri, Tennessee, the South, and the Gulf. In these several departments material was accumulated, operators employed, and construction corps organized to build and operate lines in the field with efficiency and dispatch, so that every army, whether moving or fighting, should act in harmony with the rest.

Preparatory to McClellan's peninsular campaign a line was carried from Washington via Wilmington along the eastern shore of Delaware, Maryland, and Virginia to Cape Charles and Cherrystone Inlet, whence communication was completed to Fort Monroe, first by dispatch-boats and afterwards by cable. The first attempt to lay this cable resulted in the wreck of the vessel containing it on Cape Henry, where the whole party narrowly escaped capture. A second attempt proved successful and placed McClellan in direct communication with the War Department, by a line of about two hundred miles in length. On this single wire, during McClellan's campaign, throbbed and pulsed the hurried orders for supplies, entreaties for reinforcements, fateful lists of killed and wounded, news of victory and defeat — all the tidings of glory and of horror which pertain to war.

At Cherrystone, Eastville, Cape Charles, and northward the military telegraphers enjoyed a holiday, faring on luscious oysters, shooting wild ducks, lazily riding with a cavalry escort over the line, wherein was just sufficient danger from guerrillas to give zest to life; while across the bay at the front the boys were working their instruments under fire in the trenches around Yorktown, keeping McClellan in constant communication with his generals and with Fort Monroe and Washington.

The telegraph not only worked through sea and land, but sought to establish communication in cloud-land, carrying a light wire skyward by balloon near Washington, at Pohick Church, Va., and several times on the Peninsula. Before Yorktown the operator in the clouds telegraphed to headquarters the position of Confederate intrenchments and the effect of our fire, assisting to regulate the range of our guns.

One of the first of our army to enter York-

town was operator Lathrop, who hurried to the Confederate telegraph tent to try the Richmond wire, and was blown to pieces by an ingeniously placed torpedo of the enemy. After Yorktown the construction party always kept the main line up with the troops as they marched, and the branches to corps headquarters when they halted, stringing the wire on poles or trees as the needs of the march required. The Count of Paris attests that the generals were surprised and delighted to find the telegraph at hand at the end of each day's march, giving them communication with one another and with the base of operations. The instruments of slight resistance and currents of small electro-motive force employed on the well-insulated lines of to-day would not have recorded signals, nor have overcome the "escapes" of our field lines of that time. We used "relays" of great resistance, and nitric acid batteries of the strongest kind. The operators at the front, too, were experts. Seated under fire, on a stump or a cracker-box, while troops and artillery swept by, they would send or take thousands of words of military orders, at the rate of forty words per minute, without an error. From the battle of Williamsburg to that of Fair Oaks and in the Seven Days' fighting the telegraph assisted largely in handling the several corps of the Army of the Potomac. At Gaines's Mill, Porter obtained reinforcements at the critical juncture through the promptness of his operator, who tapped the wire as our line of battle receded, and transmitted the necessary dispatches under a heavy fire which killed several of his mounted messengers.

The inner history of this campaign can best be read in the pregnant telegrams of McClellan and the Administration, found in the Official Records. These dispatches, and all succeeding ones of importance throughout the war, were transmitted over the wires in cipher, the keys of which were held only by confidential telegraph operators and were not permitted to be revealed even to commanding generals. The principle of the cipher consisted in writing a message with an equal number of words in each line, then copying the words up and down the columns by various routes, throwing in an extra word at the end of each column, and substituting other words for important names and verbs. This code was frequently changed to insure secrecy, as when a cipher operator was captured. The reader who may be curious on this subject is referred to Plum's "History of the Military Telegraph," which contains a full exposé of both the Union and the Confederate cryptographs. The Confederate ciphers were always easily solved by our experts, sharing, as they did, the faults of all ciphers constructed on an alphabetical system, while it is

believed that no instance is known of the enemy having been able to decipher a telegram in one of our ciphers. When the Army of the Potomac was recalled from the James, our lines were taken down as far back as Williamsburg. South of the James we had communication with Norfolk by cable from Fort Monroe, through Hampton Roads and thence to Suffolk, on the Nansemond. At Norfolk, in 1862, the chief operator was offered by a committee twenty thousand dollars in gold, the freedom of the Confederacy, and passage to England by blockade runner if he would anticipate a telegram expected from Mr. Lincoln granting a reprieve to a citizen condemned for shooting a Union officer. The offer was made on the day preceding that fixed for the execution and was indignantly rejected.

During 1862 nearly four thousand miles of line was built over the wide territory occupied by our forces. Of this nearly half was taken down or abandoned as the necessities of the conflict dictated; over a million important telegrams were transmitted. As much more line was constructed in the field in 1863, and again 1500 miles was abandoned, while about 2,000,000 dispatches were transmitted; and from 1863 to the close more than 6000 miles of line was built and about 5,000,000 dispatches were forwarded. While the Army of the Potomac was engaged on the Peninsula the telegraphic situation nearer Washington consisted of three principal lines radiating thence to McDowell at Fredericksburg, to Manassas Junction, extended via the Manassas Gap road to Strasburg, and a line via Harper's Ferry to Winchester, following Banks to Strasburg.¹

In the retreat of Banks from Strasburg, Jackson captured both his telegraphers. One of them, while detained at Winchester to send important messages after our rear-guard had passed, finding himself surrounded, destroyed his dispatches, broke his instruments, and surrendered. Three other operators, while pushing forward a reconnaissance by locomotive on the Manassas Gap route, were captured by Jackson's men, who obstructed the track in their front and rear.

In Pope's Virginia campaign of three weeks his essential telegraph lines formed a triangle, its base extending from Washington along the Virginia side of the Potomac to Aquia Creek and Fredericksburg, its sides from the latter point to Culpeper Court House, and from Washington via the Orange and Alexandria Railroad to the same point, whence a single wire accompanied him to the battlefield of Cedar Mountain and beyond. In the retro-

¹ This was exclusive of the Fort Monroe line, the civil lines northward, and a network of short wires connecting fortifications and outposts.

grade movement as soon as he uncovered the apex of the telegraph triangle at Culpeper he lost the Fredericksburg wire, which became more inaccessible the farther he receded on the Orange and Alexandria route, while "Jeb" Stuart rode in and cut the line in his rear at Manassas Junction, capturing our operator, who was shot while attempting to escape. Thus was Pope entirely isolated, while Washington seemed as completely cut off from knowledge of his movements or of Jackson's as it was from the North on the 20th of April, 1861. Again the telegraphers plunged into the work of re-opening communication, this time at far greater hazard. Pushing out on the Orange and Alexandria and Manassas Gap roads, by locomotive or by hand-car, they concealed themselves in woods and cliffs, observing the movements of the enemy's forces and of our own, and giving all the definite information which reached the Administration at that time. The field operators with Pope, too, finding their usual occupation gone, became independent scouts, reconnoitering the country and tapping the wires wherever reached to obtain information of the enemy or to communicate news to the War Department. The earliest advices of the second battle of Bull Run, like those of the first, were given by the operators, two of them riding direct from the battlefield to the nearest line and telegraphing their own description of it to the President, who personally thanked them by telegraph. In such hazardous work a number were wounded or captured.

On one occasion an operator started out from Fairfax Station on a hand-car propelled by three contrabands to attempt to restore the line so that Pope's operators could communicate his whereabouts. Finding the line cut beyond Pohick Bridge, he spliced it and got signals from both directions. While so engaged a party of guerrillas emerged from the woods to the track and surrounded him. Bidding the negroes stand fast, he dictated a swift message over the line, which was being repeated back to him and copied as the Confederate leader leaned over his shoulder and read the significant words: "Buford has sent back a regiment of cavalry to meet the one from here and guard the line. If you are molested we will hang

every citizen on the route." The instrument ceased ticking as the operator firmly replied, ". . . —" (O. K.). A painful pause ensued. The Confederate might have suspected a ruse if at the moment a gleam of sabers had not shone in the direction of Fairfax Court House. Hastily starting for the woods, the leader ex-

TELEGRAPH CAMP, BRANDY STATION, ORANGE AND ALEXANDRIA RAILROAD (ON THE LINE BETWEEN WASHINGTON AND CULPEPER).

claimed, "Come home, boys; these yere ain't *our niggers*"; and they disappeared, while the hand-car, as if driven by forty contraband power, sped rapidly rearward. Pope's wires were not well guarded at any time.

Later in the war, in attempting to re-open this line for Sheridan, via the Manassas Gap road to Front Royal, a railroad and telegraph party while proceeding by locomotive were ambushed and five of them killed.

In the Antietam campaign McClellan had a line to Hagerstown looped via Poolesville to Point of Rocks, whence a branch extended to Harper's Ferry. Stuart cut this loop as Lee advanced, and an attempt to restore it proving disastrous to the telegraph party, Harper's Ferry remained isolated until captured. Five military operators surrendered with the troops at that point, but they escaped and at Antietam joined their comrades, who had pushed the line to the battlefield of South Mountain and on through Boonesboro' and Keedysville.

The electric tongue which had aided him on the Peninsula and in Maryland now proclaimed McClellan's victory at Antietam and again became the messenger of his humiliation. The telegraph corps revered "Little Mac," both in person and in military genius. Perhaps

none knew better than some of its members the extent and scope of his plans or had more confidence in their success. The orders for his withdrawal from the James were reluctantly transmitted, and on his removal from the command of the Army of the Potomac, in November, his chief operator telegraphed, "We are all grieved at McClellan's removal. The whole army, from major-generals down to foot orderlies, feel it. Old soldiers of the regulars wept like boys when he left."

Burnside's lines in the Fredericksburg campaign were the same as Pope's had been in August, but were less extended and less exposed. Three of the operators were captured at their posts, one of whom escaped by his wits and the others joined the considerable dele-

phone, he would have succeeded. It will undoubtedly be used with Morse telegraphy in future wars;¹ but the antiquated system introduced, and expected to be worked by officers unfamiliar with electricity, resulted in disastrous failure. Had the telegraphic field not been thus divided, and had General Hooker ordered the necessary lines, he would probably have had better control of his forces, particularly of Sedgwick's corps.

A swift glance southward and westward, without regard to chronological order, may indicate the value of the telegraph in other fields than the Potomac.

Military lines were not required in North Carolina until 1863, when they connected Morehead City, New Berne, Bachelor's Creek,

A FIELD EXPEDIENT.

gation of the corps already in captivity, where they suffered the usual horrors of Libby, Belle Isle, and Andersonville, and whence they communicated by many ingenious devices with their friends. A brass button by the hands of an exchanged prisoner would contain a cipher dispatch on tissue paper. A ring carved from bone and marked with a few Morse characters told us of our captured comrades.

From the beginning of the war there had been some friction between the telegraph and the signal corps. Early in 1861 the chief signal officer assumed control of the telegraph in Butler's department, from which he was immediately relieved by the Secretary of War. In 1863 he was again in the field with thirty cumbersome "magneto" machines, intended to operate a dial telegraph. The system was operated by the signal officers in the Chancellorsville campaign, and, proving inefficient, it was turned over to the telegraphers, who discarded the machines and worked with Morse instruments the short lines laid by the signal corps. Had Major Myer then had the tele-

graph and outposts. General Palmer credited the telegraph with having apprised him of the approach of Pickett's force against New Berne in February, 1864, and with enabling him promptly to concentrate his forces to meet the attack.

Three of his operators died of yellow fever. Plum says: "On the pay-rolls, which alone indicate that these men were in the service of their country, is written opposite their names, 'Discharged.' An eternal discharge, indeed."² Yet that epitaph comprises all of rank, reward, or pension ever tendered an operator of the military telegraph, or his family, by the United States.

In the same region, in March, 1865, the writer ran the line along with the troops in General Schofield's advance on Kinston and Goldsboro', lying in Gum Swamp—where the enemy struck us—two days and nights with the relay to his ear, transmitting dispatches. The signal corps co-operated handsomely, and ten picked cavalry-

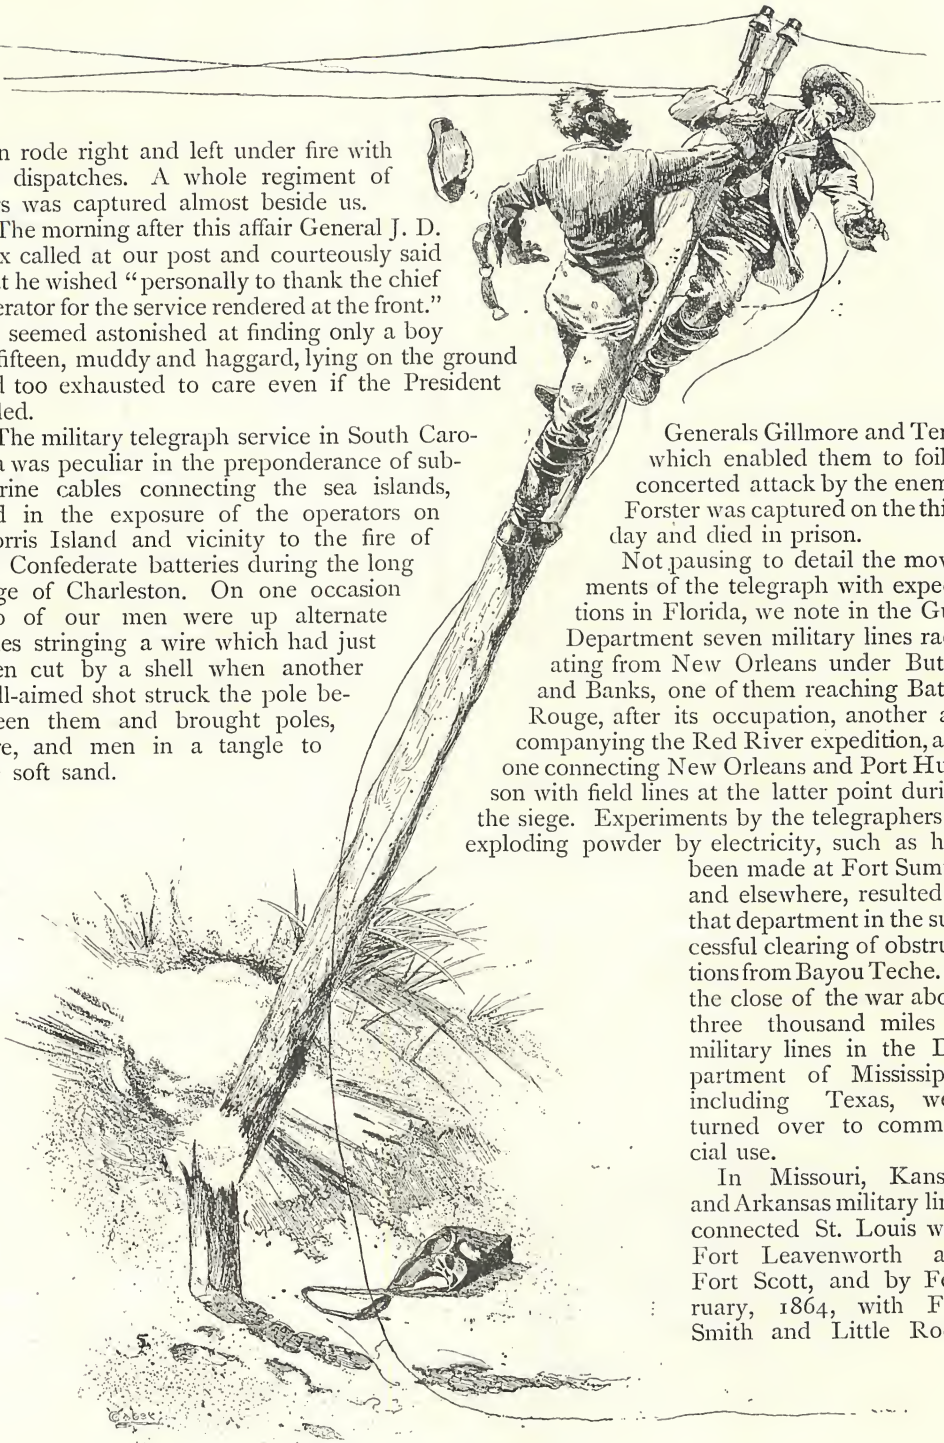

¹ The hand 'phone is a sensitive instrument for Morse telegraphy.

² "History of the Military Telegraph."

men rode right and left under fire with the dispatches. A whole regiment of ours was captured almost beside us.

The morning after this affair General J. D. Cox called at our post and courteously said that he wished "personally to thank the chief operator for the service rendered at the front." He seemed astonished at finding only a boy of fifteen, muddy and haggard, lying on the ground and too exhausted to care even if the President called.

The military telegraph service in South Carolina was peculiar in the preponderance of submarine cables connecting the sea islands, and in the exposure of the operators on Morris Island and vicinity to the fire of the Confederate batteries during the long siege of Charleston. On one occasion two of our men were up alternate poles stringing a wire which had just been cut by a shell when another well-aimed shot struck the pole between them and brought poles, wire, and men in a tangle to the soft sand.

"INSULATED."

Generals Gillmore and Terry which enabled them to foil a concerted attack by the enemy. Forster was captured on the third day and died in prison.

Not pausing to detail the movements of the telegraph with expeditions in Florida, we note in the Gulf Department seven military lines radiating from New Orleans under Butler and Banks, one of them reaching Baton Rouge, after its occupation, another accompanying the Red River expedition, and one connecting New Orleans and Port Hudson with field lines at the latter point during the siege. Experiments by the telegraphers in exploding powder by electricity, such as had been made at Fort Sumter and elsewhere, resulted in that department in the successful clearing of obstructions from Bayou Teche. At the close of the war about three thousand miles of military lines in the Department of Mississippi, including Texas, were turned over to commercial use.

In Missouri, Kansas, and Arkansas military lines connected St. Louis with Fort Leavenworth and Fort Scott, and by February, 1864, with Fort Smith and Little Rock,

In September, 1863, a Union operator named Forster tapped the Charleston and Savannah line near Pocotaligo and sent information to from which point three wires radiated to important posts. In March, 1864, three of our builders were killed by guerrillas on the Fort

Smith line. By 1865 these lines aggregated seventeen hundred miles.

In Tennessee about a thousand miles of lines were constructed for Halleck's and Grant's operations. These, in 1862, connected St. Louis with Forts Henry and Donelson when captured, thence reaching to Nashville and on to Bowling Green, Kentucky. Nashville was connected with Decatur, Alabama, and other points. In the Shiloh campaign Buell carried a line from Nashville with him, meeting midway one from Grant, who was at Pittsburg Landing, so that Grant, Buell, and Halleck were in telegraphic communication on the eve of the unexpected battle of Shiloh. This must have been a source of reliance to Grant when the fight actually opened. During the siege of Vicksburg field lines connected Grant with all his forces, and the telegraph gave timely notice of Johnston's movements.

When Rosecrans was defeated at Chickamauga and retreated to Chattanooga, where Grant sent him timely aid; and in the concentration of Sherman and Hooker with Thomas, which culminated in the victory of Chattanooga, the telegraph was of incalculable service.

About this time Longstreet besieged Burnside at Knoxville and Grant sent Sherman swiftly to the rescue. Plum says: "After Grant had driven Bragg from Missionary Ridge he received dispatches from the advance office at Tazewell, notifying him that Burnside could not hold out longer than December 1. Secretary Stanton telegraphed for Colonel Stager to 'come to the key.' Stager had retired, but an instrument by his bedside awakened him. Stanton in Washington asked Stager, who was in his bed-chamber in Clevel-

land, Ohio, to forward news to Burnside by the most trusty means. The colonel instantly called up the chief operator in Louisville, Kentucky, and the latter the operators at four separate points nearest to Burnside. Thus it happened that in the dead of night four telegraphers, each with a cipher message notifying Burnside of the approach of Union troops, started on their perilous journey from four separate points." Some of them reached Burnside, and he held out until his army was saved. The episode has not been immortalized nor its heroes rewarded.

While Sherman was preparing his army to start from Chattanooga in the Atlanta campaign the military telegraph spread a network of additional wires in Tennessee for his use, some of them extending into Alabama and Georgia and accompanying him to Atlanta. In his "Memoirs" he says: "There was perfect concert of action between the armies in Virginia and Georgia in all 1864; hardly a day intervened when General Grant did not know the exact state of facts with me, more than fifteen hundred miles off, as the wires ran." The operations of Sherman's telegraph in the advance on Atlanta were similar to those with the Army of the Potomac on the Peninsula. For instance, in front of Kenesaw, when about to hurl his whole force on Johnston's center, he says: "In order to oversee the whole and be in close communication with all parts of the army, I had a space cleared on top of a hill to the rear of Thomas's center, and had the telegraph wires laid to it." Sherman further says, speaking of the telegraph on the battlefield, "This is better far than the signal flags and torches." November 12, 1864, the line north from Atlanta was severed as the last message passed, and Sherman went out of the region of the knowable, so far as the telegraph and the North were concerned. He was accompanied by telegraphers, however, who busied themselves in tapping the Southern wires, and who carried the cipher keys. The first use of the latter was on the march north from Savannah in exchanging dispatches with Schofield,

TAPPING A WIRE.

LIGHT FIELD SERVICE.

who on the taking of Wilmington sent his dispatches in cipher by Lieutenant Cushing of the navy, who had already distinguished himself for reckless bravery. Cushing, going up the Cape Fear River in a steam launch, met Sherman's scouts near Fayetteville. Thus Sherman was informed of successful coöperation in North Carolina, and the cipher code permitted full explanation of plans of campaign between Grant, Schofield, and Sherman.

It also enabled us later, at Raleigh, to communicate over the Confederate wires with General James H. Wilson at Macon, Georgia, pending the negotiations for the surrender of Johnston.

Meantime the telegraph served Thomas in retreat and defense—covering his front during

the siege of Nashville with watchful sentinels, reporting his condition daily to Grant, and bringing constant messages from City Point and Washington.¹

Taking up the electric thread with the Army of the Potomac, in 1864, Badeau attests that when Grant crossed the Rapidan in the final campaign he moved synchronously by telegraph Sherman in Georgia, Crook in the Valley, and Butler on the Peninsula, and received responses from each before night, while all the remaining forces of the Union were placed on the alert by the same agency. In addition to

¹ For an account of the Western service the reader is referred to Plum's History, already quoted, to which the writer is much indebted for details of the Western departments.

UNITED STATES MILITARY TELEGRAPH CONSTRUCTION CORPS.

the main line, via the Orange and Alexandria road, accompanying Grant, keeping him in direct communication with Washington, General Eckert had at this time perfected a field telegraph system somewhat on the mountain howitzer plan. Reels of insulated cable, strong enough to resist cannon-wheels, were carried on the backs of mules paying out the wire over the field, where it was raised on lances or on trees, while compact portable electric batteries were transported in ambulances constructed for the purpose. This system was found efficient on the battlefield and at Spotylvania Court House, where at one time operators and cable were within the enemy's lines, and in subsequent battles it was thoroughly tested. Throughout the remainder of the war General Grant received almost daily reports by telegraph from all the armies in the field, and issued his orders, in cipher, over our wires to all his lieutenants in pursuance of one comprehensive plan. With Butler's coöperative move up the Peninsula went the telegraph to Gloucester Point, West Point, and White House on the Pamunkey; and when this feint on the York was followed by the real attack on the other side of the Peninsula, the telegraph was pushed up the James as rapidly as possible; so that when Grant swung around Richmond he was met at White House and at City Point by these electric nerves. Before Grant's arrival wires were run from Bermuda Hundred to Point of Rocks, on the left bank of the Appomattox, under fire from the enemy's batteries on the right bank, to Butler's headquarters, midway between that point and Broadway Landing,

and to W. F. Smith's and Gillmore's corps. A line was run down the south bank of the James from City Point to Fort Powhatan, and another was pushed across from Jamestown Island to Yorktown, whence it completed connection by McClellan's old wire to Fort Monroe and Washington. These links were then united by a submarine cable from Jamestown Island to Fort Powhatan, some nineteen miles in the James River, and a short one across the Appomattox. The James River cable was necessitated by the incursions of guerrillas on both banks. Facilities for the manufacture of telegraph cable in this country being then deficient, a portion of the original Atlantic cable was used. It never worked well, and in September, William Mackintosh, with a construction party of ten men and an infantry escort of one hundred, made an attempt to replace the cable by a land line on the south bank, which resulted in the capture of all but two of the party, six six-mule teams, and twenty miles of wire. The party had camped at night on a tidal creek below City Point, expecting to start out in the morning, all but "Mack" and the colored cook preferring the right bank on account of its being higher ground. About day-break the contraband heard firing and roused Mack, who thought it was only his escort killing pigs for breakfast. The old cook started to make a fire and fry some bacon, but a bullet whistling near his head demoralized him and he took to the woods. Mack then saw the raiders on the opposite bank of the creek and heard them shouting to him to surrender. Fortunately the tide was in, and while they

were crossing he secured his horse and set off amid a shower of bullets, closely pursued by the Confederates.¹ The chase was kept up for a mile by augmenting parties of cavalry who had forded the creek higher up, and was stopped only when the pursuers were confronted by a regiment of our men, who poured a volley into them and emptied a number of saddles. Mackintosh thus escaped a third term in Libby prison, he having been twice before captured and exchanged. A week after the capture of the telegraph party a "climber," barefoot and tattered, found his way back to our lines. When asked where his shoes were, he replied, "The ribils schkarred me out of me boots."

In Butler's advance on the Petersburg and Richmond Railroad, 7th of May, a line was carried along with the column to within sight of that road, and worked until Beauregard struck us at Drewry's Bluff, on the 16th, when General Butler ordered his chief operator to "bring the line within the intrenchments." In these trenches, one night, Maynard Huyck was awakened from sleep, not by the familiar voice of his instrument, but by the shriek of a Whitworth bolt, a six-pound steel shell, which passed through the few clothes he had doffed, then ricocheted, and exploded beyond. Congratulating himself that he was not in his "duds" at the moment, the boy turned over and slept through the infernal turmoil of an awakening cannonade until aroused by the gentle tick of the telegraph relay. We used no "sounders" in those days at the front.

In illustration of the sensibility of hearing acquired by the military operators for this one sound, the writer may be pardoned another personal incident. At Norfolk, in April, 1863, he happened to be alone in charge of the telegraph when Longstreet with a large force laid siege to Suffolk. In the emergency he remained on duty, without sleep, for three days and nights, repeating orders between Fort Monroe and the front. Towards morning on the third night he fell asleep, but was roused by the

strenuous calls of the fort and asked why he had not given "O. K." for the messages just sent. He replied that none had been received. "We called you," said the operator at the fort; "you answered, and we sent you two messages, but you failed to acknowledge them." The dispatches were repeated and forwarded, when on taking up a volume of Scott's novels, with which he had previously endeavored to keep awake, the writer was astonished to find the missing telegrams scrawled across the printed page in his own writing, some sentences omitted, and some repeated. It was a curious instance of somnambulism.

During the siege of Petersburg every salient point on the front of the armies of the Potomac and James was covered with the wires radiating from Grant's headquarters at City Point. One circuit, crossing the Appomattox, took in the intrenchments on the Bermuda Hundred front, the Tenth Corps' headquarters. Later it crossed the James at Deep Bottom by cable, included the "Crow's Nest," Dutch Gap, headquarters Army of the James, Fort Harrison when captured, and eventually Weitzel's headquarters and Kautz's cavalry on our extreme right. The second circuit followed up the south bank of the Appomattox to our advanced works, and running to the left connected Smith, Hancock, Burnside, and Warren, Sheridan on his arrival, and other commands as they arrived or were shifted on this important field as the tide of

FIELD TELEGRAPH — BATTERY WAGON.

battle ebbed and flowed, pushing farther to the left as Grant, throughout the winter and spring, deployed his forces to envelop Lee's

¹ This proved to be Hampton's famous "cattle raid," than which there stands nothing bolder or more curious in the annals of such exploits. It originated in a telegraphic episode, General Hampton's operator, Gaston, having lain six weeks in the woods, with his instrument connected by fine wire to our line. All that he heard of importance was in cipher, except one message

mentioning that 2586 beeves, to feed our army, would be landed at Coggin's Point for pasture. Hampton got them all but one lame steer. Doubtless the hungry "Johnnies" blessed the operator who neglected to put that message in cipher. The other dispatches which Gaston copied were sent to Richmond, but were never deciphered.

right, until the line reached the Weldon railroad and beyond. Thus all our forces in front of Richmond and Petersburg—a semicircle of thirty miles of intrenchments—were manipulated in concert by the hand of General Grant.

Parke in command, gave him three corps and empowered him to assault, while its repair restored Meade, regulated the assault, enabling Grant to use his whole force as a unit, and secured an advance by our forces, all within the space of a few hours. Thus were forts lost and retaken, and thus were battles won by the aid of the telegraph! Its success in this emergency was due to the field system. But for the portable batteries the cutting of the City

GENERAL GRANT AND HIS OPERATOR.

The result of battles sometimes hung on the continuity of a slender wire, as when on March 25, 1865, the Confederates under Gordon attacked and carried Fort Stedman and cut the wire to City Point. The capture occurred about 5 A. M. According to General Humphreys, who has described this campaign, General Parke, then commanding the Ninth Corps, which received the attack, telegraphed at 5:30 A. M. to General Webb the loss of the fort. Webb immediately replied that Meade was at City Point, and he (Parke) in command. At 6:15 Humphreys, commanding the Second Corps, on Parke's left, received the news also by telegraph that the enemy had "broken our right, taken Stedman, and were moving on City Point." Parke ordered Warren up with the Fifth Corps, the Ninth assaulted, and the fort was recaptured by eight o'clock. Promptly the telegraph was repaired and flashed the news to Grant and Meade, who as quickly projected the Second and the Ninth Corps against the enemy, capturing his intrenched picket line, a position of immense subsequent advantage, inflicting a loss of 4000 men, and losing 2000 in the whole operation. Thus the cutting of the wire by Gordon removed Meade from control, placed

Point current would have rendered the rest of the circuit useless.

In the final pursuit and capture of Lee's army all authorities unite in attesting the efficiency of the telegraph corps. In the rush of fifty miles from Petersburg to Appomattox, Grant, Meade, and all the corps of both the Potomac and James armies, except Sheridan's, were kept connected. Our men found poles standing on the South-side road, which materially facilitated our advance with the army. Where the retreat of the Confederates had been too rapid to destroy wires these were spliced to ours and used, turning the enemy's telegraph against himself, an operation which we were able to make on an extended scale in the North Carolina campaign.

The President at this time was at City Point, and later in Petersburg and Richmond, and to him Grant telegraphed the phases of the conflict, beginning with Sheridan's victory at Five Forks and ending with Lee's surrender. Meantime, over the wire pushed forward north of the James sped the message, "Richmond is fallen."

Sherman had reached Goldsboro'; and Schofield, advancing by two routes from the coast,

overcoming all obstacles, had built railroads and telegraphs to meet and supply him, and now he was advancing to Raleigh. Johnston surrendered, and at last over the military line which has been traced began to flow a tide of commercial dispatches, transmitted by the military telegraphers, Schofield's operators at Raleigh taking the business from Columbia and the south, rushing it over the Raleigh and Gaston wire, sixty messages an hour to Petersburg, whence northward flew the silent harbingers of peace. It was the first link to bind the North and the South together again.

It may surprise the reader to learn that, beyond the commendation of Lincoln, Stanton, Grant, Sherman, Sheridan, and all the higher officers, the military telegraphers—except a few heads of departments, who were commissioned and promoted from captains up to brigadier-generals—have never received any recognition for their great services. Though suffering captivity, wounds, and all of the hardships of the troops, the members of the corps cannot tell their children that they were soldiers, nor hail their brother veterans of the Grand Army of

the Republic as comrades. They were merely "civilians" who faithfully performed dangerous and harassing military duty with boyish enthusiasm, and some of whom have survived to learn that republics are ungrateful, or at least forgetful. Uncle Sam, who has been more generous to his veterans than any potentate of history, has forgotten them. Their widows and orphans receive no pensions.

Once a year the survivors of the corps from all parts of the Union meet to renew old acquaintance, cemented by the electric spark over leagues of wire. Many of them never met in the field, but they knew each other well by telegraph, and can still recognize the touch of a comrade's hand on the "key" a thousand miles away.

The experience of this country, which demonstrated the value of a military telegraph, induced the immediate organization of such corps, but on a more strictly military basis, in all European armies.¹

J. Emmet O'Brien.

TOPICS OF THE TIME.

Ballot Reform Progress.

THE record of ballot reform legislation for the current year is one of most encouraging progress. At the beginning of the year only one State, Massachusetts, had such a law on its statute books. At its close, the legislatures of nine States had passed comprehensive measures closely resembling that of Massachusetts, seven of which were approved and became laws and two of which were defeated by executive vetoes. The States which have these, all of which are to go into effect in the near future, are, given in the order of enactment: Massachusetts, Indiana, Montana, Rhode Island, Wisconsin, Tennessee, Minnesota, and Missouri. The two States which lost theirs through vetoes are New York and Connecticut. New York has been deprived in this way twice in succession, both times by the same governor. In Connecticut a so-called secret ballot law was hurriedly passed on the last day of the session, and was approved by the governor. It is in no sense an application of the Australian system, and there is considerable doubt as to whether it will accomplish much real reform in practice. It is, however, a step in advance.

When the agitation for ballot reform was started by the discussions of the Commonwealth Club of New York City in the spring of 1887, there was no law embodying the principles of the Australian system to be found in any part of the United States. A bill proposing a partial application of that system was discussed that winter in the Michigan legislature, and finally

passed one house, but it failed in the other house. Later in the spring of 1887 the Wisconsin legislature passed a law, applying only to the city of Milwaukee, in which some of the Australian principles, notably those providing for an absolutely secret ballot, were embodied. The committee appointed by the Commonwealth Club to draft a bill for presentation to the New York legislature spent a great deal of time during the autumn and early winter of 1887 in devising a simple and comprehensive scheme for applying the Australian system to American election methods. They completed their work in time to have their bill presented to the New York legislature soon after its assembling in January, 1888. This bill has served as the model for all subsequent measures, and while the eight laws now in existence differ from it in details, its underlying principles are to be found without modification in all of them. It was used in 1888 as the basis for the Massachusetts law, which, with the exception of a very excellent law passed by the Kentucky legislature and applying exclusively to the city of Louisville, was the only advance made by the reform during that year. The New York legislature passed the Commonwealth Club bill, but Governor Hill vetoed it.

The discussions aroused in New York and Massachusetts on the pending measures called the attention of the whole country to the subject. A valuable demonstration of the practicability of the reform was furnished by elections in Milwaukee and Louisville, for in both instances the new system worked with such smoothness and success as to command the praise of its most

strenuous opponents. This helped forward the movement, but a far more vigorous impulse was given to it by the revelations which were made after the presidential election concerning the unprecedented use of money for the purchase of votes by both political parties. These awoke the public conscience in all parts of the country, and caused a general demand for some ballot system which would secure a secret and untrammelled vote. When the State legislatures came together in January last, there was scarcely one of them which did not have before it in some form a measure for a change in existing ballot systems. The Australian method was the favorite everywhere, partly because it had stood the test of experience in Australia for 30 years, in England for 18 years, and in Canada for 16 years, and partly because discussion of it had made the public to some extent familiar with its principles.

The result of the legislative year's work was the seven laws which we have enumerated. In Maine, Michigan, Ohio, Illinois, and several other States similar laws were considered but were not passed. The seed sown by the discussions of them is certain, however, to bear fruit in the near future. The leading principles of the eight laws which we now have are the same in all. They are:

1. An exclusively official ballot, printed and distributed at the public expense. The names of all candidates for all offices are to be placed upon these ballots, and none others are to be received or counted.

2. Absolute secrecy in voting. Every voter is required to take his ballots and retire alone with them to a compartment where, free from observation or espionage of any kind, he must mark them to indicate the candidates for whom he wishes to vote. There is slight variation in the methods prescribed by the different laws for this marking. In Indiana the voter is to make the mark with an official stamp, furnished for the purpose; in Missouri he must erase from the ballot all names except those for which he wishes to vote; and in Massachusetts, Montana, Rhode Island, Wisconsin, Tennessee, and Minnesota he must indicate his choice by an X opposite the name of each candidate for whom he wishes to vote. In three of the laws, those of Indiana, Missouri, and Tennessee, the names of candidates are grouped under party titles, but in the others they follow the order in which the nominations are received by the officer in charge of the printing, with the politics indicated after each name.

3. Ample provision for independent nominations. All the laws contain careful provision whereby a specified number of voters can, by agreeing upon an independent candidate, and by making his nomination in writing to the official printer of the ballots, have his name placed upon the ballots on equal terms with those of the regular candidates.

It is easy to see at a glance what a momentous gain for honest elections has been secured by the engrafting of these three principles upon our electoral system. The printing and distributing of ballots at the public expense, and the prohibition of all others, takes away all excuse for assessments upon candidates, and drives from the polls all the ticket-peddlers, watchers, and political workers of all kinds. There will be nothing for them to do outside and about the polls, they are forbidden to congregate near the polls, and they are

not allowed inside. Thus we are rid at once of the chief excuse for raising money for corrupt purposes at the polls, and of the ability to use it, even if raised, with any certainty that the receivers of it will carry out their part of the corrupt bargain at the ballot-boxes. By having an absolutely secret ballot we are rid of espionage and intimidation of all kinds. The ward "boss" cannot follow his henchmen to the polls to see if they vote according to orders, or according to the terms of a "deal." The bulldozing employer cannot intimidate his employees to vote in accordance with his interests, but must leave them to vote in accordance with their own free will.

Possibly the greatest gain of all will be found in time to be that secured through independent nominations. This is the straightest and deadliest blow which has been struck at the dictatorial caucus system. Henceforth in eight States, any body of men, though a mere handful, can get their candidates' names upon the ballots and can have them distributed at the polls on equal terms with those of the regular parties. Every caucus will thus have hanging over its deliberations the threat of a formidable and easily organized independent movement in case its own nominations are not satisfactory. Heretofore the most effective obstacle to an independent ticket has been the difficulty and expense of getting it distributed at the polls.

Eight Hours a Day.

AGITATION is by no means a thing to be condemned off-hand. The justification of it rests on the same basis as that of any other advocacy: its ground of defense is that no other agency will take pains to defend its client; that opposing forces have their advocates who will bring out the best points on their behalf; and that this particular client should also have its advocate, to bring out the strong points of its case, leaving the balance of justice to be ascertained by those to whom that duty properly belongs. It will certainly not be asserted that any of our "trusts," or pools, or associations of manufacturers, or other employers, will make as hearty and persistent efforts as a labor organization would make to state and make clear the reasons or provocations for a troublesome and expensive strike. Nor, on the other hand, is it the primary business of the labor organization to maintain the cause of any but its own members. The case will be best understood and decided by the general public and by the parties interested when each side has been presented fully by those who feel its justice most keenly and know most about it, provided the presentation has been made in a spirit of fairness and of willingness to compromise. Even then some points will be imperfectly understood, but substantial justice can in no other way be so closely reached.

Every man, then, who is interested in industrial discussion has a right to protest against the spirit in which some industrial disputes are settled. A settlement into which either side brings personal rancor, or in which either side yields only perforce after a mismanaged struggle, with the reservation of an intention to try it again at the earliest opportunity or to gain the wished-for end by treachery and indirection, is no settlement at all. The employer who abandons a lock-out, but takes every subsequent opportunity to discharge "agi-

tators," whom he regards as troublesome, will find, when he next has need of public sympathy, that he has alienated it. And there is no more real excuse for the labor agitator who, after a complete exposure of his failure to understand the circumstances through which he has undertaken to be the guide of his fellows, refuses to admit his mistake, but seeks some new ground upon which to prepare a second failure.

It is not quite a misnomer to give the name of "discussion" to a strike. The essence of the strike is that it is a clumsy means of testing truth. With some philosophical differences as to the source from which wages are paid, there is a pretty general agreement as to the manner in which the rate of wages is fixed. One distinguished writer on the subject has even gone for his text to the summing up of an intelligent workman, who said: "When I see two bosses running after one man, I know that wages are going to be high; when I see two men running after one boss, I know that wages are going to be low." All this means that supply and demand have the same influence on the price of labor as on the price of corn. But man has found no means of ascertaining the "visible supply" of labor in any trade as he has in the case of corn: corn remains corn and cannot become wheat or oats, but the man who is a shoemaker to-day may be a farmer or a horse-car driver to-morrow. How then is the possible labor supply to be ascertained? The workman says: "The supply of labor in our trade is sufficiently short to justify a ten per cent. increase of wages." The employer denies it. In the dearth of statistics, how is the controversy to be decided? The strike furnishes a clumsy mode of decision. The men suspend their work, and the employer attempts, by engaging new men, to justify his contention that the supply of labor was not "short."

It must be evident that it is unskilled labor which is at the greatest disadvantage in such a mode of coming to conclusions. This is the class of labor, therefore, which is most interested in finding some reasonable substitute for the strike and lockout rather than in contriving new pretexts or methods for either. The strike of the car-drivers in Brooklyn and New York last winter, for example, was successful only in showing that, for every hundred men who had struck, at least five times the number, of equal or superior capacity, were waiting to take their places. Having demonstrated this unwelcome state of affairs, what were rational men to do next? The circumstances could be changed only by sheer violence; and the city government was not to be counted as a passive but as an active neutral; it was not to leave the struggle to the arbitrament of violence, but intended to protect property as well as life. The men were wisest, then, in yielding to circumstances and again seeking their old work.

What are we to think, then, of the wisdom of guides who condemn circumstances and seek only for new

reasons or methods for strikes? Yet the "lesson" which a leading labor journal drew from the failure of the street-car strike was as follows:

The state should appoint boards of arbitration to which all grievances could be referred, and enact laws to enforce the decisions of the arbitrators. Reduce the hours of labor to eight per day, and establish a minimum rate of wages. Attach a penalty for working overtime, and give an opportunity to labor to the vast army of industrious idle men who flood the larger American cities at the present time. This would render strikes unnecessary, as an employer would think twice before allowing his work to stop when he did not know where to look for men. The employer reaps all the benefit of the competition in labor under present methods.

The two branches of this proposal are apt to seem plausible, even to men presumed to be educated. And yet the first, that of compulsory arbitration, really amounts to either a stoppage of production or the re-introduction of slavery. If the arbitration is made compulsory on the employer alone, production must stop, for the scheme would be merely a legal confiscation of the property of the employer, who, if he is sane, will go out of business. In the second place, the decision of the arbitrators can be enforced on the employer through his property: if he refuses to obey, his property can be sold by the sheriff. The workman has, roughly speaking, no property on which to levy, unless his labor be accounted his property. Compulsory arbitration for workmen, then, means compulsory labor, and that always has in it something of the principle of slavery. The state could not afford even to permit workmen to consent to its admission.

The second part of the proposal, the struggle for "eight hours a day," is founded on the notion that if less work is done in eight than in ten hours there will be just so much work left for those now unemployed; while the consequent employment of previously idle men will prevent an employer from filling the places of strikers, and will guard against a decrease of wages. If the proposal were that every man should work with one hand tied behind him, for the same purpose, the naked folly of it would need no demonstration. Any man could estimate for himself the effects on the industry and prosperity of the community or nation, and could see that, instead of providing work for the unemployed, the practical result would be the decrease of work, through the ruin of industries which have now but the narrowest margin of profit to rely upon. And yet where is the essential difference between the two proposals, except that this reason for an eight-hour day is solemnly put out as an "economic" proposition?

There are more respectable reasons for the eight-hour day, which are entitled to argument. But the reason above assigned is rather the dense obstinacy which attempts to retain or regain a discredited leadership by cozening the victims into treading again the same old road to ruin.

OPEN LETTERS.

The Centenary of Fenimore Cooper.

MOST appropriate is it that the first literary centenary which we are called upon to commemorate one hundred years after the adoption of the Constitution that knit these States into a nation should be the birthday of the author who has done the most to make us known to the nations of Europe. In the first year of Washington's first term as President, on the fifteenth day of September, 1789, was born James Fenimore Cooper, the first of American novelists and the first American author to carry our flag outside the limits of our language. Franklin was the earliest American who had fame among foreigners; but his wide popularity was due rather to his achievements as a philosopher, as a physicist, as a statesman, than to his labors as an author. Irving was six years older than Cooper, and his reputation was as high in England as at home; yet to this day he is little more than a name to those who do not speak our mother tongue. But after Cooper had published "The Spy," "The Last of the Mohicans," and "The Pilot," his popularity was cosmopolitan; he was almost as widely read in France, in Germany, and in Italy as in Great Britain and the United States. Only one American book has ever since attained the international success of these of Cooper's—"Uncle Tom's Cabin," and only one American author has since gained a name at all commensurate with Cooper's abroad—Poe. Here in these United States, we know what Emerson was to us and what he did for us and what our debt is to him; but the French and the Germans and the Italians do not know Emerson. When Professor Boyesen visited Hugo some ten years ago he found that the great French lyrist had never heard of Emerson. I have a copy of "Evangeline" annotated in French for the use of French children learning English at school; but whatever Longfellow's popularity in England or in Germany, he is really but little known in France or Italy or Spain. With Goethe and Schiller, with Scott and Byron, Cooper was one of the foreign forces which brought about the Romanticist revolt in France, profoundly affecting the literature of all Latin countries. Dumas owed almost as much to Cooper as he did to Scott; and Balzac said that if Cooper had only drawn character as well as he painted "the phenomena of nature, he would have uttered the last word of our art."

In his admirable life of Cooper, one of the best of modern biographies, Professor Lounsbury shows clearly the extraordinary state of affairs with which Cooper had to contend. Foremost among the disadvantages against which he had to labor was the dull, deadening provincialism of American criticism at the time when "The Spy" was written; and as we read Professor Lounsbury's pages we see how bravely Cooper fought for our intellectual emancipation from the shackles of the British criticism of that time, even more ignorant then and more insular than it is now. Abroad Cooper received the attention nearly always

given in literature to those who bring a new thing; and the new thing which Cooper annexed to literature was America. At home he had to struggle against a belief that our soil was barren of romance—as though the author who used his eyes could not find ample material wherever there was humanity. Cooper was the first who proved the fitness of American life and American history for the uses of fiction. "The Spy" is really the first of American novels, and it remains one of the best. Cooper was the prospector of that little army of industrious miners now engaged in working every vein of local color and character, and in sifting out the golden dust from the sands of local history. The authors of "Oldtown Folks," of the "Tales of the Argonauts," of "Old Creole Days," and of "In the Tennessee Mountains" were but following in Cooper's footsteps—though they carried more modern tools. And when the desire of the day is for detail and for finish, it is not without profit to turn again to stories of a bolder sweep. When the tendency of the times is perhaps toward an undue elaboration of miniature portraits, there is gain in going back to the masterpieces of a literary artist who succeeded best in heroic statues. And not a few of us, whatever our code of literary esthetics, may find delight, fleeting though it be, in the free outline drawing of Cooper, after our eyes are tired by the niggling and cross-hatching of many among our contemporary realists. When our pleasant duty is done, when our examination is at an end, and when we seek to sum up our impressions and to set them down plainly, we find that chief among Cooper's characteristics were, first, a sturdy, hearty, robust, outdoor and open-air wholesomeness, devoid of any trace of offense and free from all morbid taint; and, secondly, an intense Americanism—ingrained, abiding, and dominant. Professor Lounsbury quotes from an English magazine of 1831 the statement that to an Englishman Cooper appeared to be prouder of his birth as an American than of his genius as an author—an attitude which may seem to some a little old-fashioned, but which on Cooper's part was both natural and becoming.

"The Spy" was the earliest of Cooper's American novels (and its predecessor, "Precaution," a mere stencil imitation of the minor British novel of that day, need not be held in remembrance against him). "The Spy," published in 1821, was followed in 1823 by "The Pioneers," the first of the "Leatherstocking Tales" to appear and by far the poorest; indeed it is the only one of the five for which any apology need be made. The narrative drags under the burden of overabundant detail; and the story may deserve to be called dull at times. Leatherstocking even is but a faint outline of himself as the author afterward with loving care elaborated the character. "The Last of the Mohicans" came out in 1826, and its success was instantaneous and enduring. In 1827 appeared "The Prairie," the third tale in which Leatherstocking is the chief character. It is rare that an author is ever able to write a successful sequel to a successful story, yet Cooper did more; "The

Prairie" is a sequel to "The Pioneers," and "The Last of the Mohicans" is a prologue to it. Eighteen years after the first of the "Leatherstocking Tales" had been published Cooper issued the last of them, amplifying his single sketch into a drama in five acts by the addition of "The Pathfinder," printed in 1840, and of "The Deerslayer," printed in 1841. In the sequence of events "The Deerslayer," the latest written, is the earliest to be read; then comes "The Last of the Mohicans"; followed by "The Pathfinder" and "The Pioneers"; while in "The Prairie" the series end. Of the incomparable variety of scene in these five related tales, or of the extraordinary fertility of invention which they reveal, it would not be easy to say too much. In their kind they have never been surpassed. The earliest to appear, "The Pioneers," is the least meritorious — as though Cooper had not yet seen the value of his material and had not yet acquired the art of handling it to advantage. "The Pathfinder," dignified as it is and pathetic in its portrayal of Leatherstocking's love-making, lacks the absorbing interest of "The Last of the Mohicans"; it is perhaps inferior in art to "The Deerslayer," which was written the year after, and it has not the noble simplicity of "The Prairie," in which we see the end of the old hunter.

There are, no doubt, irregularities in the "Leatherstocking Tales," and the incongruities and lesser errors inevitable in a mode of composition at once desultory and protracted; but there they stand, a solid monument of American literature, and not the least enduring. "If anything from the pen of the writer of these romances is at all to outlive himself, it is, unquestionably, the series of the 'Leatherstocking Tales,'" — so wrote the author when he sent forth the first collected and revised edition of the narrative of Natty Bumppo's adventures. That Cooper was right seems to-day indisputable. An author may fairly claim to be judged by his best, to be measured by his highest; and the "Leatherstocking Tales" are Cooper's highest and best in more ways than one, but chiefly because of the lofty figure of Leatherstocking. Mr. Lowell, when fabling for critics, said that Cooper had drawn but one new character, explaining afterward that

The men who have given to *one* character life
Objective existence, are not very rare;
You may number them all, both prose-writers and singers,
Without overrunning the bounds of your fingers,
And Natty won't go to oblivion quicker
Than Adams the parson or Primrose the vicar.

And Thackeray — perhaps recalling the final scene in "The Prairie," where the dying Leatherstocking drew himself up and said "Here!" and that other scene in "The Newcomes" where the dying Colonel drew himself up and said "Adsum!" — was frequent in praise of Cooper; and in one of the "Roundabout Papers," after expressing his fondness for Scott's modest and honorable heroes, he adds: "Much as I like these most unassuming, manly, unpretentious gentlemen, I have to own that I think the heroes of another writer — viz., Leatherstocking, Uncas, Hardheart, Tom Coffin — are quite the equals of Scott's men; perhaps Leatherstocking is better than any one in 'Scott's lot.' *La Longue Carabine* is one of the great prize-men of fiction. He ranks with your Uncle Toby, Sir Roger de Coverley, Falstaff — heroic figures all, American or British, and the artist has deserved well of his country who devised them."

It is to be noticed that Thackeray singled out for praise two of Cooper's Indians to pair with the hunter and the sailor; and it seems to me that Thackeray is fairer towards him who conceived Uncas and Hardheart than are the authors of "A Fable for Critics" and of "Condensed Novels." "Muck-a-Muck" I should set aside among the parodies which are unfair — so far as the red man is concerned, at least; for I hold as quite fair Mr. Harte's raillery of the wooden maidens and polysyllabic old men who stalk through Cooper's pages. Cooper's Indian has been disputed and he has been laughed at, but he still lives. Cooper's Indian is very like Mr. Parkman's Indian — and who knows the red man better than the author of "The Oregon Trail"? Uncas and Chingachgook and Hardheart are all good men and true, and June, the wife of Arrowhead, the Tuscarora, is a good wife and a true woman. They are Indians, all of them; heroic figures, no doubt, and yet taken from life, with no more idealization than may serve the maker of romance. They remind us that when West first saw the Apollo Belvedere he thought at once of a Mohawk brave. They were the result of knowledge and of much patient investigation under conditions forever passed away. We see Cooper's Indians nowadays through mists of prejudice due to those who have imitated them from the outside. "The Last of the Mohicans" has suffered the degradation of a trail of dime novels, written by those apparently more familiar with the Five Points than with the Five Nations. Cooper begat Mayne Reid, and Mayne Reid begat Ned Buntline and "Buffalo Bill's First Scalp for Custer" and similar abominations. But none the less are Uncas and Hardheart noble figures, worthily drawn, and never to be mentioned without praise.

In 1821 Cooper published "The Spy," the first American historical novel; in 1823 he published "The Pioneers," in which the backwoodsman and the red man were first introduced into literature; and in 1824 he published "The Pilot," and for the first time the scene of a story was laid on the sea rather than on the land, and the interest turned wholly on marine adventure. In four years Cooper had put forth three novels, each in its way road-breaking and epoch-making: only the great men of letters have a record like this. With the recollection before us of some of Smollett's highly colored naval characters we cannot say that Cooper sketched the first real sailor in fiction, but he invented the sea tale just as Poe invented the detective story — and in neither case has any disciple surpassed the master. The supremacy of "The Pilot" and "The Red Rover" is quite as evident as the supremacy of "The Gold Bug" and "The Murders in the Rue Morgue." We have been used to the novel of the ocean, and it is hard for us now to understand why Cooper's friends thought his attempt to write one perilous and why they sought to dissuade him. It was believed that readers could not be interested in the contingencies and emergencies of life on the ocean wave. Nowadays it seems to us that if any part of "The Pilot" lags and stumbles it is that which passes ashore: Cooper's landscapes, or at least his views of a ruined abbey, may be affected at times, but his marines are always true and always captivating.

Cooper, like Thackeray, forbade his family to authorize or aid any biographer — although the American

novelist had as little to conceal as the English. No doubt Cooper had his faults, both as a man and as an author. He was thin-skinned and hot-headed. He let himself become involved in a great many foolish quarrels. He had a plentiful lack of tact. But the man was straightforward and high-minded, and so was the author. We can readily pardon his petty pedantries and the little vices of expression he persisted in. We can confess that his "females," as he would term them, are indubitably wooden. We may acknowledge that even among his men there is no wide range of character; Richard Jones (in "The Pioneers") is first cousin to Cap (in "The Pathfinder"), just as Long Tom Coffin is a half-brother of Natty Bumppo. We may not deny that Cooper's lighter characters are not touched with the humor that Scott could command at will; the Naturalist (in "The Prairie"), for example, is not alive and delightful like the Antiquary of Scott.

In the main, indeed, Cooper's humor is not of the purest. When he attempted it of malice prepense it was often laboriously unfunny. But sometimes, as it fell accidentally from the lips of Leatherstocking, it was unforced and delicious (see, for instance, at the end of chapter xxvii. of "The Pathfinder," the account of Natty's sparing the sleeping Mingos and of the fate which thereafter befell them at the hands of Chingachgook). On the other hand Cooper's best work abounds in fine romantic touches—Long Tom pinning the British captain to the mast with the harpoon, the wretched Abiram (in "The Prairie") tied hand and foot and left on a ledge with a rope around his neck so that he can move only to hang himself, the death grip of the brave (in "The Last of the Mohicans") hanging wounded and without hope over the watery abyss—these are pictures fixed in the memory and now unforgettable.

Time is unerring in its selection. Cooper has now been dead nearly two-score years. What survives of his work are the "Sea Tales" and the "Leatherstocking Tales." From these I have found myself forced to cite characters and episodes. These are the stories which hold their own in the libraries. Public and critics are at one here. The wind of the lakes and the prairies has not lost its balsam and the salt of the sea keeps its savor. For the free movement of his figures and for the proper expansion of his story Cooper needed a broad region and a widening vista. He excelled in conveying the suggestion of vastness and limitless space and of depicting the human beings proper to these great reaches of land and water—the two elements he ruled; and he was equally at home on the rolling waves of the prairie and on the green and irregular hillocks of the ocean.

Brander Matthews.

"Strange True Stories of Louisiana."

A CIRCUMSTANCE presently to be mentioned requires me to review and extend my inquiry into the character of the old manuscript from which I have translated the story of Alix de Morainville.

In the chapter called "How I got them" (CENTURY MAGAZINE, November, 1888), I suggested that the name De Morainville might be a convenient fiction of Alix herself, well understood as such by Françoise and Suzanne. I may still repeat the obvious fact that an assumed name does not vitiate the truth of the story; although discoveries made since, which I am still in-

vestigating, offer probabilities that, after all, the name is genuine.

I also gave some reasons for my belief that the manuscript is old. The total absence of quotation-marks from its many conversational passages either identified it with a time when such things were not universal and imperative as they now are, or else indicated a cunning pretense of age. But there were so many proofs that it had lain for many years filed among old papers that the theory of a cunning pretense had no room. One leaf had been torn first and written on afterward; another had been written on first and part of it torn away and lost or destroyed afterward. The two rents, therefore, must have occurred at different times; for the one which mutilates the text is on the earlier page and surely would not have been left so by the author at the time of writing it, but only by some one careless of it, and at some time between its completion and the manifestly later date, when it was so carefully bestowed in its old-fashioned silken case and its inner wrapper of black paper. So an intention to deceive, were it supposable, would have to be of recent date.

Now let me show that an intention to deceive could not be of recent date, and at the same time we shall see the need of this minuteness of explanation. Notice, then, that the manuscript comes directly from the lady who says she found it in a trunk of her family's private papers. A prominent paper-maker in Boston has examined it and says that, while its age cannot be certified to from its texture, its leaves are of three different kinds of paper, each of which might be a hundred years old. But, bluntly, this lady, though a person of literary tastes and talent, who recognized the literary value of Alix's *history*, esteemed original documents so lightly as to put no value upon Louisa Cheval's thrilling letter to her brother, and to prize this Alix manuscript only because, being a simple, succinct, unadorned narrative, she could use it, as she could not Françoise's long, pretty story, for the foundation of a nearly threefold expanded romance; and this, in fact, she had written, copyrighted, and arranged to publish when our joint experience concerning Françoise's manuscript at length readjusted her sense of values, and she sold me the little Alix manuscript at a price still out of all proportion below her valuation of her own writing, and counting it a mistake that the expanded romance should go unpreferred and unpublished.

But who, then, wrote the smaller manuscript? Madame found it, she says, in the possession of her very aged mother, the daughter and namesake of Françoise. Surely she was not its author; it is she who says she burned almost the whole original draft of Françoise's "Voyage," because it was "in the way and smelt bad." Neither could Françoise have written it. Her awkward handwriting, her sparkling flood of words and details, and her ignorance of the simplest rules of spelling, make it impossible. Nor could Suzanne have done it. She wrote and spelled no better at fifty-nine than Françoise at forty-three. Nor could any one have imposed it on either of the sisters. So, then, we find no intention to deceive, either early or recent. I translated the manuscript, it went to press, and I sat down to eat, drink, and revel, never dreaming that the brazen water-gates of my Babylon were standing wide open.

For all this time two huge, glaring anachronisms were staring me, and half a dozen other persons,

squarely in the face, and actually escaping our notice by their serene audacity. But hardly was the pie — I mean the magazine — opened when these two birds began to sing. Was n't that — interesting? Of course Louis de la Houssaye, who in 1786 "had lately come from San Domingo," had *not* "been fighting the insurgents" — who did not revolt until four or five years afterward! And of course the old count, who so kindly left the family group that was bidding Madeline de Livilier good-bye, was not the Prime Minister Maurepas, who was *not* "only a few months returned from exile," and who was *not* then "at the pinnacle of royal favor"; for these matters were of earlier date, and this "most lovable old man in the world" was n't any longer in the world at all, and had not been for eight years. He was dead and buried.

And so, after all, fraudulent intent or none, *this* manuscript, just as it is, could never have been written by Alix. On "this 22d of August, 1795," she could not have perpetrated such statements as these two. Her memory of persons and events could not have been so grotesquely at fault, nor could she have hoped so to deceive any one. The misstatements are of later date, and from some one to whom the two events were historical. But the manuscript is all in one simple, undisguised, feminine handwriting, and with no interlineation save only here and there the correction of a miswritten word.

Now in translating madame's "Voyage de ma Grand'mère," I had noticed something equivalent to an interlineation, but added in a perfectly un concealed, candid manner, at the end of a paragraph near the close of the story. It had struck me as an innocent gloss of the copyist, justified in her mind by some well-credited family tradition. It was this: "Just as we [Françoise and Alix] were parting, she [Alix] handed me the story of her life." But now I thought it well to ask my friend to explain this gloss. I had already called her attention to the anachronisms, and she was in keen distress, because totally unable to account for them. But my new inquiry flashed light upon her aged memory. She explained at once that, to connect the two stories of Françoise and Alix, she had thought it right to impute these few words to Françoise rather than for mere exactness to thrust a detailed statement of her own into a story hurrying to its close. My question called back an incident of long ago and resulted first in her rummaging a whole day among her papers, and then in my receiving the certificate of a gentleman of high official standing in Louisiana that, on the 10th of last April (1889), this lady, in his presence, took from a large trunk of written papers, variously dated and "appearing to be perfectly genuine," a book of memoranda from which, writes he, "I copy the following paragraph written by Madame S. de la Houssaye herself in the middle of the book, on page 29." Then follows in French:

Reflections.

THE wages of righteousness are earned by the job, not by the day.

You may pull the ox out of the mire on the Sabbath day, but don't push him into the mire for the purpose of pulling him out.

JUNE 20, 1841.—M. Gerbeau has dined here again. What a singular story he tells me. We talked of my grandmother and Madame Carpentier, and what does M. Gerbeau tell me but that Alix had not finished her history when my grandmother and my aunt returned, and that he had promised to get it to them. "And I kept it two years for want of an opportunity," he added. How mad Grandmamma must have been! How the delay must have made her suffer!

Well and good! Then Alix did write her story! But if she wrote for both her "dear and good friends," Suzanne and Françoise, then Françoise, the more likely, would have to be content, sooner or later, with a copy. This, I find no reason to doubt, is what lies before me. Indeed, here (italicized by me) are signs of a copyist's pen: "Mais hélas! *il desespéroit de reussir quand' il desespe* rencontra," etc. Is not that a copyist's repetition? Or this: "— et lui, mon mari apres tout se fit mon *mari m* domestique." And here the copyist misread the original: "Lorsque le maire entendit les noms et les *personnes* prenom de la mariée," etc. In the manuscript *personnes* is crossed out, and the correct word, *prenoms*, is written above it.

Whoever made this copy it remains still so simple and compact that he or she cannot be charged with many embellishments. And yet it is easy to believe that some one with that looseness of family tradition and largeness of ancestral pride so common among the Creoles, in half-knowledge and half-ignorance should have ventured aside for an instant to attribute in pure parenthesis to an ancestral De la Houssaye the premature honor of a San Domingan war; or, incited by some tradition of the old Prime Minister's intimate friendship with Madeline's family, should have imputed a gracious attention to the wrong Count de Maurepas, or to the wrong count altogether.

I find no other theory tenable. To reject the whole matter as a forgery flies into the face of more incontestable facts than the anachronisms do. We know, without this manuscript, that there was an Alix Carpentier, daughter of a count, widow of a viscount, an *émigrée* of the Revolution, married to a Norman peasant, known to M. Gerbeau, beloved of Suzanne and Françoise, with whom they journeyed to Attakapas, and who wrote for them the history of her strange life. I hold a manuscript carefully kept by at least two generations of Françoise's descendants among their valuable private papers. It professes to be that history — a short, modest, unadorned narrative, apparently a copy of a paper of like compass, notwithstanding the evident insertion of two impossible statements whose complete omission does not disturb the narrative. I see no good reason to doubt that it contains the true story of a real and lovely woman.

NORTHAMPTON, MASS., June 21, 1889.

BRIC-À-BRAC.

BLUE blood should assert itself without the help of a placard.

LIFE is a half-way house, and each guest should take contentedly the room to which he is assigned.

THE back-log without the small sticks will never heat the room.

J. A. Macon.

The Dog Stealer's Story.

I 'M willin' to talk if you 're all on the square,
An' it is n't some kind of a sham.
I 'm the best hand with dogs thar is in the line!
Better hang for a sheep than a lamb.

Yes, 't is a mean trade, so I lay out to be
'Bout as mean as they make 'em, yer know;
But only jest once hev I ever *felt* mean —
Well, it happened a long time ago.

I was down on my luck, with nary a dog,
When I passed by a bone-yard one night,
The sun goin' down over back of the hills
Makin' things sorter shiny an' bright.

I heard a long howl an' looked over the fence,
An' in thar on a grave that was new
Sat a dog jest mournin' away like a man —
Feelin' worse than the most of 'em do!

Yer see, it 's my trade, so I went fur that dog,
But I did n't git on very fast;
Though I 've tackled all kinds that cur was the worst,
An' I had to play trumps, sir, at last.

One dodge never fails, an' he came 'gin his will,
But I tell yer, I felt like a hog,
For somehow it seemed a low kind of a trick,
A-persuadin' a dead feller's dog.

He came sorter whinin', his tail hangin' down,
An' he never got sot up ag'in.
I was good to him, Mister, treated him well,
But he pined hisself sickly an' thin.

Months later I come to the very same place,
An' that night, sir, the dog run away,
So I started out fur to go look him up —
I 'd a weakness fur him, I must say.

He 'd never forgot, nor took kindly to me,
But I kinder respected his sense,
An' so paddled after him, all in the dark,
Till I ran myself into a fence.

But the moon jest then wriggled out o' the clouds,
An' I saw the old place straight ahead,
An' that cuss of a dog! He crawled on the grave,
Gave a low sort of moan, an' lay — dead!

Well, I 'm never soft-hearted, but somehow I thought
He had stuck pretty well to his game,
An' if that dead feller was all that he thought
I guessed he 'd hev wanted the same.

So thar in the moonlight I dug him a grave
'T would take a good sexton to beat,
An' come away glad to be leavin' him thar,
Down, at last, at his old master's feet.

Well, my trotters will stop some day like the rest,
I suppose, an' I have n't a friend,
But sometimes I think I would like to lay down
Alongside o' them two in the end!

Thank yer, sir! You 're the sort! I 'll drink your
good health.
Must be gettin' along while it 's light.
Your dog? A real Gordon! Hum! 'T is gettin' late —
Lemme sleep in your barn over night?

Maria Bowen Chapin.

Chloris and Corydon.

(A PASTORAL.)

CHLORIS, a maid of nimble feet,
Whose tongue was nimble too,
A shepherd, — Corydon, I weat, —
Come bashfully to woo.

He spake with awkward turn of head,
A-leaning on his crook;
"Now get thee hence," the maiden said,
"Thou hast a sheepish look!"

At this in lower tone he sighed,
"In love with thee I am":
And she with merry laughter cried,
"It is a pretty lamb!"

Then roared he out, a lion bold,
His love of many a day,
Until sweet Chloris, it is told,
Was glad to say him "Yea."

Thus maids in pastoral days were won,
Are still, — my tale is true:
For I was shepherd Corydon,
And Chloris, — that was *you!*

Clinton Scollard.

Song of a Blue-Bird's Egg.

ONE blue-bird's egg I eat;
Den itch dese foolish feet,
Paths day appear s' sweet,
I quit my home.

You blue-bird, I run
Whar yo' spy wings begun;
But my road 's nar done,
I 'bleged ter roam.

Blue-bird, yo' egg 's small,
Yit summer, spring, and fall
I wanders mid 'em all —
Never kin rest.

Dar th'oo de wrinkled corn,
Pass de place I wuz born, —
Ole massa's dinner-horn
Can't sound dis fur.

O my feet, lemme stay;
O my knees, give away;
O my feet, stop, I pray,
Nigh de ole place!

No! rain, nor hail, nor snow,
Dis nigger 'bleged ter go —
Hants day is callin' so
Fur 'crost de fiel'

By ev'y yaller crick,
In whar de woods air thick,
'Long whar de river 's slick,
Down stream day call.

Eli Shepperd.

The Apple.

THANKS for the apple. If thou carest,
What difference, I will tell to thee,
'Twixt me and Paris there may be:
He gave the apple to the fairest —
The fairest gave the fruit to me.

No. 6.

IN EAST-SIBERIAN SILVER MINES.

R. FROST and I reached Stretinsk (Stray'tinsk) on our return from the mines of Kara (Kah-rah') in a state of physical exhaustion that made rest an absolute necessity. Excitement, privation,

and exposure, without sufficient food, to intense cold had so reduced my strength that I could not walk a hundred yards without fatigue, and the mere exertion of putting on a fur overcoat would quicken my pulse twenty or thirty beats. It did not seem to me prudent, in this weak condition, to undertake a ride of six hundred miles, in springless telegas (tel-lay'gas), through the wild and lonely region in which are situated the Nerchinsk (Ner'chinsk) silver mines. For three days, therefore, we rested quietly in the log-house of the young peasant Zablikof (Zah'blee-koff), on the bank of the Shilka (Shill'kah) River, eating all the nourishing food we could get, sleeping as much as possible, and bracing ourselves up with quinine and Liebig's extract of beef.

Sunday morning, finding my strength measurably restored, I walked across the ice of the river to the town of Stretinsk and called upon the zasedatel (zah-se-dat'el), or district inspector of police, for the purpose of obtaining horses. Through the greater part of the Nerchinsk silver-mining district regular post-roads are lacking; but we had received authority by telegraph from the governor of the province to ask the coöperation of the police in hiring horses from the peasants along our route, and I had letters of introduction to most of the police officials from Major Potulof (Po'tooloff). The zasedatel received me courteously, and at once made the necessary requisition for horses, but said he must warn me that an epidemic of small-pox prevailed in all the region between Stretinsk and the mines, and that it

would be unsafe for us to sleep at night in the peasants' houses, or even to go into them for food. This unwelcome intelligence discouraged us more than anything that we had yet heard. The journey to the mines would involve hardship enough at best, and if, in a temperature that was almost constantly below zero, we could not enter a peasant's house to obtain food or shelter without risk of taking the small-pox, we should be between the horns of a very unpleasant dilemma. I was strongly tempted to proceed westward to the town of Nerchinsk and enter the mining district from that side; but such a course would greatly increase the distance to be traveled, and finding that Mr. Frost was willing to share with me the risk of infection, I finally decided to adhere to our original plan. Sunday afternoon we loaded our baggage into a small, shallow telega, lashed on behind a bag of frozen bread upon which we could not comfortably sit, and set out, with two horses and a ragged, low-spirited driver, for the Alexandrofski Zavod (Al-ex-androf'skee Zah-vod') and the mine of Algachi (Al-gah-chee').

The silver mines of Nerchinsk are not situated, as one might suppose them to be, at or near the town of Nerchinsk, but are scattered over a wild, desolate, mountainous region, thousands of square miles in extent, known as "The Nerchinsk Silver-mining District." This district is coterminous, on its southern side, with the frontier line of Mongolia, and occupies the greater part of the irregular triangle formed by the rivers Shilka and Argun (Argoon') just above the point where they unite to form the Amur (Am-moor'). The existence of silver and lead ore in this region was known even to the prehistoric aborigines of Siberia, and traces of their primitive mining operations were found near the Argun by the first Rus-

sian explorers of the country. In the year 1700 Greek mining engineers in the employ of the Russian Government founded the Nerchinski Zavod (Ner'chin-skee Zah-vod'), or Nerchinsk Works, near the Mongolian frontier, and before the end of the century shafts had been sunk in more than twenty places between the Argun and the Shilka, and eight zavods, or smelting-furnaces, had been constructed for the reduction of the ore. The mines were worked at first by peasants brought from other parts of Siberia and forcibly colonized at points where their labor was needed, but in 1722 their places were taken to some extent by hard-labor convicts deported from the prisons of European Russia. Since that time the mines have been manned partly by colonized peasants and partly by common criminals of the penal-servitude class. With the exception of Poles and a few of the Decembrist conspirators of 1825, political convicts have never been sent to the Nerchinsk silver-mining district. Thousands of Polish insurgents were transported thither after the unsuccessful insurrection of 1863,¹ but since that time political offenders as a rule have been sent to the mines of Kara.

Our first objective point, after leaving Stretinsk, was the Alexandrofski Zavod, or Alexander Works, distant in a south-westerly direction about one hundred and twenty-five miles. The "Works," from which the place originally derived a part of its name and all of its importance, were abandoned many years ago and gradually fell into ruins, but the village attached to them still lingers in a moribund condition and now sustains a small convict prison. As we wished to examine this prison, and as the Alexandrofski Zavod, moreover, was a convenient point of departure for the once famous but now abandoned mine of Akatui (Ak-ah-too'ee), we decided to make there a short stay. The weather when we left Stretinsk was cold and cloudy, with a raw wind from the north-east. The low, desolate mountains between which we traveled were whitened by a thin film of snow, but the road was bare and dry, and we were soon covered with dust thrown up by the wheels of our vehicle. By the time we had made the first stretch of twenty miles we were cold, tired, and hungry enough to seek rest and refreshment; but the village where we stopped to change horses had a deserted, pestilence-stricken appearance, and we did not even dare to alight from our telega. Cold and hunger were preferable to small-pox.

Our driver tried to reassure us by declaring that the disease was of a mild type, but Mr. Frost expressed a fear that it might resemble Siberian vermin in being comparatively "mild" and harmless to natives but death to foreigners. When we reached the village of Kopun (Ko-poon'), at the end of the second stretch, it was beginning to grow dark, the mercury had fallen nearly to zero, and I was so deadly cold that I could hardly move my stiffened and benumbed limbs.

"I can't stand this any longer," I said to Mr. Frost. "One might as well get the small-pox as freeze to death. I'm going to knock at the door of this house and ask whether they have the confounded disease or not. If they say they have n't, I'm going in to warm myself and get something to eat."

I knocked at the door and it was opened by a pale-faced, weary-looking woman.

"Will you be kind enough to tell me whether you have small-pox in the house?" I inquired.

"Yes," she replied; "we have."

That was enough. I did not wait for particulars, but hastened back to the telega, and said to Mr. Frost that, as we seemed to be between the devil and the deep sea, I was going for the bread-bag. Another disappointment, however, awaited me. The loaves not only were frozen to the consistency of geodes, but were completely covered with dust and sand that had been thrown up by the wheels of the telega, and had sifted through the loose meshes of the homespun linen bag. I gave one of them to Mr. Frost, took another myself, and for three-quarters of an hour we sat there in the deepening twilight, shivering with the cold and gnawing frozen bread, while we waited for horses.

What we had to do was to warm and aerate with imagination the food that we could get, and congratulate ourselves upon having escaped the small-pox. I proposed, however, that we should sit on the bread throughout the next stretch, and thus protect it to some extent from dust and the refrigerating influence of an arctic climate. The proposition was approved and adopted, but the result was merely to exchange one sort of discomfort for another.

Horses were forthcoming at last, and after another long, cold, and dreary ride we reached, about nine o'clock at night, the comfortable station of Shelapugina (Shell-ah-poo'gin-ah), on the post-road between the town of Nerchinsk and the Nerchinski Zavod. I did not feel able to go any farther that day, and as the postmaster assured us that there had

¹ According to Maximof, who had access to the official records, the number of Poles exiled to Siberia between the years 1863 and 1866 was 18,623. Of this number 8199—including 4252 nobles—were sent to Eastern Siberia and 7109 of them were condemned to

penal servitude. Nearly all of the last-named class went to the Nerchinsk silver mines. [Maximof, "Siberia and Penal Servitude," Vol. III., pp. 80, 81. St. Petersburg: A. Transhel, 1871.]

THE WELL AT ALGACHI.

never been a case of small-pox in the station, we brought in our baggage, drank tea, and, without removing our clothing, lay down as usual on our sheepskin overcoats upon the floor of the travelers' room. Monday morning, refreshed by a good night's sleep and a breakfast of tea, fresh bread, and fat soup, we resumed our journey and rode all day through shallow valleys, between low, treeless, and dreary-looking mountains, towards the Alexandrofski Zavod. The sky was clear and the sunshine inspiring; but the mercury had fallen to fifteen degrees below zero, our horses were white and shaggy with frost, the jolting of our vehicle made it difficult to keep our furs wrapped closely about us, and we suffered

severely all day from cold. About half-past six o'clock in the evening we stopped for an hour to drink tea in a village whose name, *Kavvikuchigazamurskaya* (*Kah-vwee'koo-chee-gaz-ah-moor'skah-yah*), seemed to me to contain more letters than the place itself had inhabitants. We met there a young technologist from St. Petersburg, who had been sent to the mines to teach the convicts the use of dynamite, and who was on his way home. He gave us a most gloomy account of life in the silver-mining district. The convict prisons, he said, were "the very worst in the Empire"; the officials were "cruel and incompetent"; the convicts were "ill-treated, beaten by everybody, with or without reason, forced to work

THE ALEXANDROFSKI ZAVOD.

when sick, and killed outright with explosives which the overseers were too ignorant or too careless to handle with proper precautions." He referred to the mining authorities with bitterness, as if his personal relations with them had been unpleasant; and, in view of that fact, it seemed to me prudent to take his statements with some allowance. I give them for what they may be worth in connection with my own later investigations.

Just before midnight on Tuesday we reached the village of Makarovo (Mah-kah'ro-vo), 112 miles from Stretinsk, and stopped for the night in what was known as the "zemski kvartir" (zem'skee kvar-teer'), a log-house occupied by a peasant family whose duty it was to give food and shelter to traveling officials. As soon as possible after drinking tea we went to bed, Mr. Frost lying on the floor, while I stretched myself out on a bench near one of the windows. The room was intolerably hot, the pine logs of the walls in the vicinity of the oven emitted a strong resinous odor, the air was close and heavy, and for a long time I could not get to sleep. I had just lost consciousness, as it seemed to me, when I was aroused by a loud and prolonged "Cock-a-doo-oo-dle-doo-oo!" which proceeded, apparently, from a point distant only a few inches from my head. Upon investigating this singular phenomenon I discovered that the space under the bench upon which I lay had been inclosed with slats and turned into a chicken-coop. A large cock, thinking, doubtless, that it must be near morning, had put his head out and up through the slats, and

crowed lustily in my very ear. This performance he repeated, at short intervals, throughout the remainder of the night, so that, although I finally took a position as far away from him as possible on the floor, I could get little rest. I have slept in Siberian cabins with colts, dogs, cattle, and sheep, but one wakeful Shanghai rooster will make more disturbance in a small room at night than a whole ark-load of quadrupeds.

We reached the Alexandrofski Zavod at ten o'clock Tuesday morning and found it to be a dreary, dead-and-alive Siberian village of two or three hundred inhabitants, situated in the middle of a flat, uncultivated steppe, with a rickety, tumble-down bridge in the foreground, and low, bare, snow-covered mountains in the distance. The convict prison, to which we were conducted by the warden, Mr. Fomin, proved to be nothing more than a "bogadielnia" (bo-gah-dyel'nya), or infirmary, to which were sent hopelessly disabled and broken-down convicts from other parts of the Nerchinsk mining district. The main building, which is shown on the right of the bridge in the illustration on this page, is a one-story log structure of the usual Kara type, and contained, at the time of our visit, 137 prisoners. It had been standing, the warden said, about half a century, and its sanitary condition, as might have been expected, was bad. The floors were dirty, the air in the cells was heavy and vitiated, and the corridors were filled with the stench of privies and neglected parashas. In two of the *kameras* (kah'mer-ahs) we found lunatics living with their sane comrades. The hospital

attached to the prison is small, but it was not overcrowded, and it seemed to me to be clean and in fairly good condition. The coarse linen on the cot beds was dirty, but the feldsher, or hospital-steward, said that this was not his fault. The supply of bed-linen was scanty, and he did the best he could with what was furnished him. He seemed to be very much gratified when I told him that his hospital, although small, impressed me as being the cleanest and best-managed institution of the kind that I had seen in the Trans-Baikal.

After having inspected the prison, Mr. Frost and I returned to Mr. Fomin's comfortable

existing state of affairs he referred to two gold placers in his district, which had been carefully examined by engineers of the Tsar's cabinet¹ and had been pronounced worthless. They had subsequently been sold or granted by the Tsar to private individuals, and had then produced 600 puds (poods), or more than 27,000 pounds of pure gold. The ispravnik intimated, although he did not explicitly say, that the Government engineers who examined the placers and declared them worthless were in league with the private individuals who desired to obtain title to them; and that the proceeds of this robbery of the Crown were shared by

THE OLD POLITICAL PRISON AT THE MINE OF AKATUI.

house, where we met the ispravnik of Nerchinski Zavod, a tall, well-built, good-looking man about forty years of age, who was making a tour of his district. He was very pleasant and communicative, talked with us frankly about the Nerchinsk mines, and said, without hesitation, that the Government's management of them was "clumsy, incompetent, and wasteful." He thought that it would be much better for the country if the whole Nerchinsk silver-mining district were thrown open to private enterprise. Many of the engineers in the employ of the Government were either corrupt or incapable, and the mines did not produce half as much silver as they ought. As an illustration of the

the parties to the corrupt agreement. I have no doubt that such was the case. The Tsar himself is constantly robbed and defrauded by the officials to whom he intrusts the management of his Siberian property.

After a good dinner of soup, fish, roasted grouse, vegetables, and compote of fruits, with vodka and two or three kinds of wine, which Mr. Fomin set out in honor of his guests, the ispravnik, the warden, Mr. Frost, and I started with two troikas of horses for the mine of Akatui, which was distant about twelve miles. This mine had long before been abandoned by the Government and had filled with water; but I was particularly anxious to see how it

¹ Nearly all the mines in this part of the Trans-Baikal belong to the Tsar in person and are known as the "cabinet mines." How the Tsar acquired title to them I do not know. An educated Russian gentleman

of my acquaintance began the compilation of a work that he intended to publish abroad under the title, "The Origin of the Wealth of the Romanoffs," but he was sent to Siberia before he could complete his investigation.

was situated, partly because it had once been the most dreaded place of punishment in all Siberia, and partly because the Government was then making preparations to transport to it all of the political convicts at the mines of Kara. The road ran across the desolate steppe to the foot of a low mountain range six or eight miles north-west of the Zavod, and then entered a shallow valley between rounded and perfectly barren hills, about a thousand feet in height, whose snowy slopes limited the vision in every direction. As we ascended this valley the hills shut it in more and more closely,

of a peculiar, half-ruined log building, which had once apparently been covered with stucco or plaster, and through the middle of which ran a high-arched gateway. On the flanks of this structure, and forty or fifty yards from it, stood two weather-beaten prisons of stuccoed brick, one of them roofless, and both gradually falling into ruins. It was evident that these prisons had once been surrounded by a stockade, and that the log building with the arched gateway was the corps-de-garde through which admission was had to the inclosure. The stockade, however, had long

1. THE VALLEY AND MINING SETTLEMENT OF ALGACHI. 2. THE PRISON AT ALGACHI. 3. THE PRISON CORRIDOR.

until, a mile and a half or two miles beyond the small village of Akatui, it became a secluded and inexpressibly dreary glen, where there were no signs of life except the stunted and leafless bushes which here and there broke the uniform whiteness of the snow-covered hills. It seemed to me that I had never seen a place so lonely, so cheerless, so isolated from all the living world. It might have been a valley among the arctic hills of Greenland near the Pole.

"Here is the old political prison," said the *ispravnik*; and as he spoke we stopped in front

before disappeared, the iron gratings had been removed from the windows, and little remained to indicate to a careless observer the real nature of the ruins or the purposes that they had served. I alighted from my telega and entered the prison on the right of the corps-de-garde, thinking that I might discover a mural inscription left by some lonely and unhappy prisoner, or perhaps find one of the iron rings or staples in the wall to which refractory convicts were chained. Every scrap of iron, however, that could be used elsewhere had been stripped from the building; the

floors had rotted away; the plaster had fallen; and nothing whatever remained to suggest to one's imagination the unwritten history of the gloomy prison, or bear witness to the cruelties and tragedies that had given to Akatui its evil fame. The prison on the left of the corps-de-garde was in a much better state of repair than the other, and would doubtless have repaid a careful examination; but its windows were fastened, its heavy plank doors were secured with padlocks, and the warden said he did not know where the keys were or how we could gain admission. The entrance to the mine of Akatui was on the hillside, five or six hundred feet above the bottom of the valley, and we could just see, in the deepening twilight, the outlines of a small tool-house that stood near the mouth of the shaft. At an earlier hour of the day I should have proposed to visit it; but the darkness of night was already gathering in the valley, the air was bitterly cold, and as the *ispravnik* and the warden seemed anxious to return to the *Zavod* I was obliged to content myself with such an examination of Akatui as could be made in the vicinity of the prisons. Lunin (*Loon'in*), one of the Decembrist conspirators of 1825, lived and died in penal servitude at this mine, and somewhere in the neighborhood lie buried many of the Polish patriots sent to Akatui after the insurrection of 1863. I was unable, however, to find their graves. The Russian Government does not take pains to perpetuate the memory of the political offenders whom it tortures to death in its Siberian prisons, and over the moldering bodies of most of them there is not so much as a mound. Since my return from Siberia a new prison has been erected in the dreary valley of Akatui, and to it are to be transported all of the political convicts from Kara. The intention of the Government is to pump the water out of the abandoned mine and set the politicals at work in its damp and gloomy galleries. The change, of course, will be for the worse. If there is in Siberia a more lonely, a more cheerless, a more God-forsaken place than Kara, it is the snowy, secluded valley of Akatui.

At a late hour Tuesday night we returned to the Alexandrofski *Zavod*, and about noon on Wednesday, after a refreshing night's sleep and a good breakfast, we set out for the mine of Algachi, distant about twenty-two miles. There was little, if any, change in the appearance of the country as we made our way slowly into the silver-mining district. One range of low, barren, round-topped mountains succeeded another, like great ocean swells, with hardly a sign of life or vegetation, except in the shallow haystack-dotted valleys. From the summit of the last divide that we crossed be-

fore reaching Algachi, the country, which we could see for thirty miles, looked like a boundless ocean suddenly frozen solid in the midst of a tremendous Cape Horn gale when the seas were running high. Far down in a snowy trough between two of these mighty surges we could just make out a little cluster of unpainted log-houses, which our driver said was the mining village of Algachi. I wondered, as we stopped for a moment on the summit to look at it, whether in all the world one could find a settlement situated in a more dreary and desolate spot. As far as the eye could see there was not a tree, nor a dark object of any kind, to break the ghastly whiteness of the rolling ocean of snowy mountains; and it was not hard to imagine that the village itself was nothing more than a little collection of floating driftwood, caught in the trough of the sea at the moment when the tremendous billows were suddenly turned to snow and ice. We descended the steep slope of the mountain to the village by a stony, zigzag road, entered a long, dirty, straw-littered street between two rows of unpainted wooden houses, passed through several herds of cattle that sheepskin-coated boys were driving in from pasture, and finally stopped, amid a crowd of curious idlers, in front of the "*zemski kvartir*," or official lodging-house, where we intended to spend the night. It was already five o'clock,—too late for a visit to the prison or an inspection of the mine,—and as soon as we had brought in our baggage and explained to the people of the house who we were, we set about the preparation of supper. Our resources were rather limited, but our peasant hostess furnished a steaming samovar with a little milk and butter, Mr. Frost produced, with triumph, a can of Californian preserved peaches, which he said he had bought in Stretinsk "for a holiday," and we thawed out and toasted on a stick, before a cheerful open fire, some of our frozen, sand-powdered bread. Altogether we made out so good a supper that Mr. Frost's imagination never once suggested to him the desirability of milk-toast, and we went to bed on the floor about nine o'clock—warm, comfortable, and happy.

Wednesday morning, after breakfast, we called upon Mr. Nesterof (*Nes'ter-off*), the resident mining engineer, and Lieutenant-Colonel Saltstein, the warden of the prison, for the purpose of getting permission to examine and investigate. Mr. Nesterof received us with generous Russian hospitality, insisted upon our taking a supplementary breakfast with him, and filled and refilled our glasses with vodka, cordial, Crimean wine, and Boston canned lemonade, until we feared that we should have to postpone our investigations indefinitely. Lieutenant-Colonel Saltstein, who lived in a

large, comfortable house full of blossoming oleanders, geraniums, and abutilon, then declared that we must drink another bottle of wine and eat a third breakfast with him, and it was after one o'clock when we finally set out for the prison and the mine.

Lieutenant-Colonel Saltstein was a Finn by birth and spoke Russian badly and with a strong German accent, but he seemed to be honest and trustworthy, and talked to me with great frankness and good-humor.

"I am afraid," he said, as we drove through the village street, "that you will find our prison the worst you have ever seen. It is very old and in bad condition, but I can't do much to improve it. We are too far away from Peter" (St. Petersburg).

I replied reassuringly that I did not think it could be worse than the common-criminal prison at Ust Kara (Oost Kah-rah'), and said that I had had experience enough to understand some of the difficulties in the way of prison reform. He said nothing, but shook his head doubtfully, as if he thought that my experience would not be complete until I had examined the prison at Algachi. We presently stopped in front of a high log stockade, and, alighting from our vehicle, were received by a sentry with presented arms, and then admitted by the officer of the day to a spacious courtyard, in the middle of which stood the prison. It was a long, low, quadrangular building of squared logs, with a plain board roof, a small porch and a door at one end, and a long row of heavily grated windows. It seemed to me at first sight to be falling down. The wall on the side next to us had sunk into the ground until it was apparently two feet or more out of plumb, and, so far as I could see, nothing prevented it from giving way altogether except a row of logs braced against it at nearly a right angle on the side towards which it leaned. All of the walls, at some remote time in the past, had been covered with plaster or stucco and then whitewashed; but this superficial coating had fallen off here and there in patches, giving to the building a most dilapidated appearance. It was, manifestly, a very old prison; but exactly how old, Lieutenant-Colonel Saltstein could not tell me. For aught that he knew to the contrary it might have been standing since the opening of the mine in 1817. We entered the door at one end of the building and found ourselves in a long, dark, foul-smelling corridor, which was lighted only at the ends, and which divided the prison longitudinally into halves. Immediately to the left of the door as we entered was the pharmacy, and next to it a large square kamera used as a hospital or lazaret. In the latter were eight or ten low beds, upon which, under dirty,

and in some cases bloody, sheets, were lying eight or ten sick or wounded convicts, whose faces were whiter, more emaciated, and more ghastly than any I had yet seen. Two or three of them, the warden said, had just been torn and shattered by a premature explosion of dynamite in the mine. The atmosphere of the lazaret, polluted by over-respiration, heavy with the fevered breath of the sick, and pervaded by a faint odor of liniment and drugs, was so insufferable that I was glad, after a quick glance about the room, to escape into the corridor. The first regular kamera that we examined was about twenty-two feet square and seven or eight feet high, with two windows, a large brick oven, and a plank sleeping-platform extending around three of its sides. There was no provision for ventilation, and the air was almost, if not quite, as bad as in the worst cells of the prisons at Ust Kara. I could breathe enough of it to sustain life, and that was all. The first thing that particularly attracted my attention, after I entered the kamera, was a broad band of dull red which extended around the dingy, whitewashed walls, just above the sleeping-platform, like a spotty dado of iron rust. Noticing that I was looking at it with curiosity, Lieutenant-Colonel Saltstein remarked, with a half-humorous, half-cynical smile, that the prisoners had been "trying to paint their walls red."

"What is it, any way?" I inquired, and stepping to one end of the sleeping-platform I made a closer examination. The dull red band at once resolved itself into a multitude of contiguous or overlapping blood-stains, with here and there the dried and flattened body of a bed-bug sticking to the whitewash. I had no further difficulty in guessing the nature and significance of the discoloration. The tortured and sleepless prisoners had been "trying to paint their walls red" by crushing bed-bugs with their hands, as high up as they could reach while lying on the nares, and in this way had so stained the dingy whitewash with their own blood that at a little distance there seemed to be a dado of iron rust around the three sides of the kamera where they slept. How many years this had been going on, how many thousand convicts had helped to "paint" those "walls red," I do not know; but I had suffered enough in Siberia myself from vermin fully to understand and appreciate the significance of that dull red band.

It is unnecessary to describe in detail the other kameras of this wretched prison. They were all precisely like the first one except that they differed slightly in dimensions. All were overcrowded, all were swarming with vermin, and the air in them was polluted almost beyond endurance. At the time of our visit the prison

as a whole contained 169 convicts—about twice the number for which there was adequate air space.

At the first favorable opportunity I said to Lieutenant-Colonel Saltstein: "I cannot understand why you allow such a prison as this to exist. You have here 169 convicts. Only forty or fifty of them work in the mine; the rest lie all day in these foul cells in idleness. Why don't you take them out to the nearest forest, set them at work cutting timber, make them drag the logs to the village, and have them build a better and larger prison for themselves? They would be glad to do it, the expense would be trifling, and in a few months you would have here a prison fit for a human being to live in."

"My dear sir," he replied,¹ "I cannot send convicts into the woods without orders to do so. Suppose some of them should escape,—as they probably would,—I should be held responsible and should lose my place. I don't dare do anything that I have not been ordered to do by the Prison Department. The authorities in St. Petersburg are aware of the condition of this prison. I have reported on it year after year. As much as five years ago, after calling attention as urgently as I dared to the state of affairs, I received orders to consult with the district architect and draw up a plan and estimates for a new prison. I did so; but you know how such things go. Letters are two or three months in reaching St. Petersburg from here. When our plans and estimates finally get there they go to the Prison Department, where they have to take their turn with hundreds of other documents from hundreds of other prisons in all parts of the Empire. Perhaps for months they are not even looked at. Finally they are examined, and some decision is reached with regard to them. If they require an extraordinary expenditure of money they may have to go to the Minister of the Interior and the Minister of Finance, or await the making up of the budget for the next fiscal year. In any event twelve months or more elapse before their fate is finally determined. Somewhere and by somebody objection is almost sure to be made, either to the plans themselves, or to the amount of money that they require, and the documents are returned to us for modification or amendment in accordance with the suggestions of some official who knows little or nothing about our needs and circumstances. Thus, a year or more after the departure for St. Petersburg of our plans and estimates they come back to us for alteration. We alter them in such a way as to meet the views of

our superiors and send them to St. Petersburg again. In the mean time the personnel of the Prison Department has perhaps changed. New officials have taken the places of the old; new ideas with regard to prisons and prison reform have become prevalent; and our modified plans and estimates, which would have satisfied the prison authorities of 1880, are found defective by the prison authorities of 1882. After the lapse of another period of sixteen or eighteen months the papers again come back to us for revision and alteration. And so it goes year after year. Plans and estimates for a new prison at the mine of Algachi have been in existence ever since 1880. Meanwhile they have twice been to St. Petersburg and back, and are now there for the third time. What are you going to do about it? Even when the erection of a new prison has been authorized, the work proceeds very slowly. It is now almost ten years since the Government actually began to build a new brick prison at the mine of Gorni Zerentui (Gor'nee Zer-en-too'-ee), and the carpenters have n't even got the roof on, to say nothing about floors."

"But," I said, "such a system is all wrong; there's no sense in such management. What is the use of corresponding for years with indifferent officials in St. Petersburg about a matter that might be settled in twenty-four hours by the governor of the province, or even by a petty *ispravnik*? All over Eastern Siberia I have found miserable, decaying, tumble-down log prisons, and everywhere in such prisons I have seen able-bodied convicts living month after month in absolute idleness. The country is full of trees suitable for timber, you have plenty of labor that costs you nothing, every Russian peasant knows how to put up a log building—why don't you let your idle convicts build prisons for themselves?"

"We have n't a strong enough convoy here to guard convicts in the woods," said the warden; "they would escape."

"That is no reason," I replied. "It is easy enough for a government like yours to strengthen the convoy during the time that the timber is being cut; and suppose that a few of the prisoners do escape. From my point of view it would be better to let half of them escape than to keep them shut up in idleness in such a prison as this. Nobody yet has given me a satisfactory explanation of the fact that, although hundreds, if not thousands, of convicts lie idle for months or years in overcrowded and decaying log prisons, no attempt is made to utilize their labor in the erection of larger and better buildings."

The warden shrugged his shoulders in the significant Russian way, but did not pursue the subject. I have never seen any reason to

¹ I do not pretend to quote Lieutenant-Colonel Saltstein's exact words, but I give accurately, I think, the substance of his statements.

change the opinion that I formed at Algachi with regard to this prison. As a place of confinement, even for the worst class of offenders, it was a disgrace to a civilized state, and the negligence, indifference, and incompetence shown by the Government in dealing with its admitted evils were absolutely inexcusable.

After having thanked Lieutenant-Colonel Saltstein for his hospitality and for his courtesy in showing us the prison, Mr. Frost and I set out, with Mr. Nesterof, for the Algachi mine, which is situated about a mile from the village, on the northern slope of one of the great mountain waves that form the valley. The day was clear and pleasant, but very cold; the ground was everywhere covered with snow, and a most dreary arctic landscape was presented to us as we rode from the prison down into the valley. A few hundred yards from the village our attention was attracted to half a dozen dark objects—apparently animals of some kind—on the white slope of the adjacent hill.

"I verily believe," said Mr. Frost, after a prolonged stare at them, "that they're camels!"

"Camels!" I exclaimed incredulously. "Who ever heard of camels at the mines of Nerchinsk? and how could they live in such a climate as this?"

As we drew nearer to them, however, it became evident that camels they were. To whom they belonged, whence they had come, and whither they were going I do not know; but it seemed strange enough to see a herd of great double-humped Bactrian camels nibbling the tufts of frost-bitten grass that appeared here and there above the snow in the foreground of that bleak, desolate, arctic landscape.

If we had expected to find at the mine of Algachi the buildings, the steam-engines, the hoisting machinery, and the stamp-mills that would have marked the location of an American mine, we should have been greatly disappointed. The mining-plant consisted of a powder-magazine, a roofed-over cellar used for the storage of dynamite, a shanty or two, and a small log tool-house which served also as a smithy, a repair shop, a crushing and sorting room, and a guard-house. In the building last mentioned half a dozen convicts, including two or three women, were breaking up ore with short hammers and sorting it into piles, an overseer was sharpening a drill on an old worn grindstone, and three or four soldiers were lounging on a low bench, over which, in a rack against the wall, hung their Berdan rifles. It was, without exception, the most feeble exhibition of mining activity that I had ever witnessed.

Mr. Nesterof did not seem inclined to go down into the mine with us, but turned us over

to one of the convicts, who, he said, would show us all that there was to be seen. Meanwhile he himself would attend to some matters of business and await our reappearance. Our guide gave to each of us an unsheltered tallow candle, with a piece of paper wrapped around it, provided himself with a similar light, thrust half a dozen dynamite cartridges about as big as cannon firecrackers into the breast of his sheepskin coat in such a manner as to leave the long white fuses hanging out, and said that he was ready. We followed him out of the tool-house, ascended the mountain-side about a hundred yards, and entered through a narrow wooden door a low horizontal gallery the sides of which were timbered and upon whose inclined floor had been laid a rude wooden tramway. Stopping for a moment just inside the door to light our candles, we groped our way in a half-crouching attitude along the low gallery, our convict guide stumbling now and then over the loose planks in such a way as to suggest to my mind the idea that he would eventually fall down, bring the flame of his light into contact with the dangling fuses of his dynamite cartridges, and blow us all out of the tunnel like wads from a Fourth-of-July cannon. About 150 feet from the entrance we came to the black, unguarded mouth of the main shaft, out of which projected the end of a worn, icy ladder. Down this our guide climbed with practiced ease, shouting back at us a warning to be careful where we stepped, since some of the rungs were missing and the ladders were set diagonally parallel with one another at such an angle as to necessitate a long stride across the shaft from the bottom of one to the top of the next. We were not half as much afraid, however, of losing our foothold as we were of being blown into fragments by an accidental explosion of his dynamite cartridges. I still had a vivid remembrance of the ghastly forms lying under the bloody sheets in the prison hospital, and every time I looked down and saw the guide's candle swaying back and forth in close proximity to the white fuses that hung out of the breast of his sheepskin coat I could not help imagining the appearance that I should present when laid out for surgical treatment, or perhaps for burial, on one of those dirty prison cots.

As we slowly descended into the depths of the mine, sometimes on ladders and sometimes on slippery notched logs, I became conscious of a peculiar, unpleasant odor, which I presumed to be due to a recent explosion of dynamite in one of the adjacent galleries. Our candles began to burn blue and finally went out altogether, matches could hardly be made to light, and we found ourselves clinging to a

CAMELS GRAZING IN THE SNOW NEAR THE
ALGACHI MINE.

worn ladder, in total darkness, over a bottomless abyss, wondering how long air that would not support combustion would support life. We did not feel any sensation of oppression, nor did we seem to be in any immediate danger of asphyxiation; but there was evidently very little of oxygen in the air, and we were not a little relieved when, by dint of striking innumerable matches, we succeeded in groping our way down two or three more ladders to the mouth of a gallery where our candles would again burn. Along this gallery we proceeded for a hundred yards or more, clambering here and there over piles of glittering ore which convicts were carrying on small hand-barrows to one of the hoisting shafts. The temperature of the mine seemed to be everywhere below the freezing point, and in many places the walls and roof were thickly incrustated with frost-crystals, which sparkled in the candlelight as if the gallery were lined with gems. After wandering about hither and thither in a maze of low, narrow passages, we came to another shaft, and descended another series of worn, icy ladders to the deepest part of the mine. Here six or eight men were at work getting out ore and drilling holes in the rock for the insertion of blasting cartridges. Their tools and appliances were of the rudest, most primitive description, and the way in which the work was being carried on would have brought

a contemptuous smile to the face of a Nevada miner. The air almost everywhere on the lower level had been exhausted of its oxygen and vitiated by explosives to such an extent that our candles went out almost as fast as we could relight them; but no adequate provision had been made for renewing the air supply. The only ventilating apparatus in use was a circular iron fan, or blower, which a single convict turned by means of a clumsy wooden crank. It made a loud rumbling noise that could be heard all over the lower part of the mine, but, as there were no pipes to it or from it, it was absolutely useless. It merely agitated the impure air a little in the immediate vicinity, and so far as desirable results were concerned the convict who operated it might as well have turned a grindstone.

After wandering about the mine for half an hour, examining at various points the silver-bearing veins, collecting specimens of the ore, and watching the work of the sheepskin-coated convicts, we retraced our steps to the bottom of the main shaft, laboriously climbed up thirty or forty ladders and notched logs to the upper level, and returned to the tool-house.

A cold, piercing wind was blowing across the desolate mountain-side, and ten or fifteen shivering convicts who had finished their day's task and

IN THE MINE OF ALGACHI.

were standing in a group near the tool-house asked permission of Mr. Nesterof to return to their prison, where they might at least keep warm. He told them rather roughly that the day's output of ore had not all been "sorted," and that they must wait. There was no place where they could go for shelter; they had had nothing to eat since morning; and for an hour and a half or more they were compelled to stand out-of-doors on the snow, exposed to a piercing wind, in a temperature below zero, while the "sorters" in the tool-house were finishing their work. It was, perhaps, a trivial thing, but it showed a hardness and indifference to suffering on the part of the mining officials that went far to confirm the statements made to us by the young technologist from St. Petersburg. Mr. Nesterof seemed to be irritated by the very reasonable request of the half-frozen convicts as if it was an evidence of impudence and insubordination.

After watching for a few moments the breaking up and sorting of the ore in the tool-house we drove to the Pokrofski (Po-kroff'skee) mine, which was situated on the side of another bare mountain ridge about four miles farther to the north-westward. The country between the two mines was as dreary and desolate as any we had yet traversed. Not a tree nor a bush

was to be seen in any direction, and the rolling, snow-clad mountains suggested in general contour the immense surges and mounds of water raised by a hurricane at sea. The buildings at the entrance to the mine consisted of a tool-house like that at the mine of Algachi, a magazine or storehouse, a few A-shaped shanties, in which lived the convicts of the free command, and two small prisons, one of which

all and the shaft and galleries were dripping with moisture. The air in the Pokrofski mine seemed to be pure and our candles everywhere burned freely. Only a few men were at work, and they seemed to be engaged in hauling up ore in small buckets by means of a cable and a primitive hand-windlass.

After climbing up and down slippery ladders until I was covered with mud, and walking in

THE POKROFSKI MINE.

was apparently new. On the summit of a rocky ridge just over these buildings were two sentry-boxes, in each of which stood an armed soldier on guard. Mr. Frost, who was very tired, did not care to inspect any more mines, and taking a position on the snow near the tool-house he proceeded, with hands encased in thick gloves, to make a sketch of the scene, while Mr. Nesterof and I, under the guidance of a convict, descended the main shaft. The Pokrofski mine did not differ essentially from that of Algachi, except that it was not so extensive nor so deep. The air in it was damp and comparatively warm, water dripped from the roofs of the galleries into little pools here and there on the floors, and the ladders in the main shaft were slippery with mud. Why it should thaw in this mine and freeze in the mine of Algachi, only four miles away, I could not understand, nor did Mr. Nesterof seem to be able to give me a satisfactory explanation. In the mine of Algachi there was no water and the galleries for seventy-five or a hundred feet together were lined with frost-crystals and ice. In the mine of Pokrofski there was no ice at

THE POKROFSKI PRISON.

a bent posture through low galleries until my back ached, I told Mr. Nesterof that I was satisfied, and we returned, tired and bathed in perspiration, to the tool-house. The convict who had accompanied us through the mine blew out his tallow candle, and without taking the trouble completely to extinguish the wick, laid it, still all aglow, in a small wooden box, which contained among other things a dynamite cartridge big enough to blow the whole tool-house into the air. I did not regard myself as naturally timorous or nervous, but when the convict shut down the lid of that box over the long glowing wick of a tallow candle and a dynamite cartridge with fuse attached, I had business out-of-doors. When I thought time enough had elapsed for the wick to go out, I reëntered the house, washed my muddy hands in the grindstone trough, inspected Mr. Frost's

sketches, and asked Mr. Nesterof a long series of questions about the mines.

The silver-bearing veins or lodes in the mines of Algachi and Pokrofski vary in thickness from 12 or 14 inches to 5 or 6 feet. The ore, which has a bright glittering appearance, consists of silver and lead in the proportion of about 1 to 100, with a greater or less admixture of what the Russian miners call "zinkovi obmanka" (zink-o'vee ob-man'kah) or "zinc deceit." As the metal last named is much less fusible than lead, it becomes very troublesome in the reducing furnaces, and, so far as possible, the miners get rid of it by breaking up the ore into small pieces and discarding that part of it in which the zinc predominates. The work of crushing and sorting is performed by the weaker male convicts and the women, and is regarded as the lightest form of hard labor. It is about equivalent to breaking stones on the road with a heavy, short-handled hammer. Out of the mines of Algachi and Pokrofski, which are the most productive in the district, there are taken every year nearly 400 short tons of ore, which, when reduced, yields about 1440 pounds of silver, valued at \$20,000, and 144,000 pounds of lead. The lead, owing to the expense of transportation to a market, is virtually worthless, and at the time of our visit nearly 2000 tons of it were lying at the Kutomarski (Kooto-mar'skee) Zavod, where the ore from these mines for many years has been reduced. The average number of convicts employed in the two mines is 220, and each of them gets out 3600 pounds of ore a year, or about 10 pounds a day. These figures alone are enough to show how feebly and inefficiently the mines are worked. Until the early part of 1885 the convicts were sent down the shafts every day in the year with the exception of a few great church holy days, but since that time they have been allowed two days' rest a month, viz., the 1st and the 15th. They work by stents, or "tasks," which can be completed by able-bodied men in from eight to ten hours. They receive, in quantity and kind, substantially the same food and clothing that are given to the hard-labor convicts at the mines of Kara, and their maintenance costs the Government about \$40 a year, or a little less than 11 cents a day per capita.

Regarded as places of punishment the Nerchinsk mines did not seem to me so terrible as they are often represented to be. It is not very pleasant, of course, to work eight or ten hours every day in a damp or icy gallery 300 feet underground; but even such employment is, I think, less prejudicial to health than unbroken confinement in a dirty, overcrowded, and foul-smelling convict prison. The mines are badly ventilated and the gases liberated in them by the explosives used are doubtless injurious;

but there are no deadly fumes or exhalations from poisonous ores like cinnabar to affect the health of the laborers, and experience seems to show that the death rate is no higher among the convicts who go regularly every day into the mines than among those who lie idle day after day in the vitiated air of the prison kameras. If I were permitted to make choice between complete idleness in such a prison as that of Algachi or Ust Kara and regular daily labor in the mines, I should, without hesitation, choose the latter. So far as I could ascertain by careful inquiry among the convicts themselves, no one has ever been compelled to live and sleep in these mines day and night, and I believe that all the stories to that effect published from time to time are wholly imaginary and fictitious. The working force may occasionally have been divided into day and night gangs, or shifts, sent into the mines alternately, but the same men have never been required to remain there continuously for twenty-four hours. At the present time there is no night work and all of the convicts return to their prisons before dark, or in the short days of mid-winter very soon after dark. I do not wish to be understood as saying that the life of Russian convicts at the Nerchinsk silver mines is an easy one, or that they do not suffer. I can hardly imagine a more terrible and hopeless existence than that of a man who works all day in one of the damp, muddy galleries of the Pokrofski mine, and goes back at night to a close, foul, vermin-infested prison like that of Algachi. It is worse than the life of any pariah dog, but at the same time it is not the sensationally terrible life of the fictitious convict described by Mr. Grenville Murray—the convict who lives night and day underground, sleeps in a rocky niche, toils in hopeless misery under the lash of a pitiless overseer, and is slowly poisoned to death by the fumes of quicksilver. Such things may be effective in a sensational drama, but they are not true. The worst feature of penal servitude in Siberia is not hard labor in the mines; it is the condition of the prisons.

When Mr. Frost, Mr. Nesterof, and I returned from the Pokrofski mine to the village of Algachi it was beginning to grow dark, and the village girls were watering their cows and filling their icy buckets at a curbed spring or well near the zemski kvartir. We drove to the house of Mr. Nesterof for dinner, spent an hour or two in conversation, and devoted the remainder of the evening to writing up note-books and completing sketches.

Friday morning, November 20, we bade Mr. Nesterof and Lieutenant-Colonel Saltstein good-bye, and set out with two horses, a small uncomfortable telega, and a fresh supply of

THE VILLAGE OF KADAIYA.

provisions for the village and mine of Kadaiya (Kah-dy'ya), distant from Algachi about ninety miles. The weather was still very cold, the road ran through the same dreary, desolate sea of snow-covered mountains that surrounds this mine of Algachi, and for two days we neither saw nor heard anything of particular interest. At half-past eleven o'clock Friday night, tired, hungry, and half frozen, we reached the village of Dono (Doh-noh'), forty-six miles from Algachi; Saturday afternoon we passed the Kutomarski Zavod, where we stopped for two or three hours to examine the smelting works; and early Sunday morning, after having traveled nearly all night at the expense of not a little suffering from cold and hunger, we finally reached the miserable, forlorn mining village of Kadaiya, found the zemski kvar-tir, and as soon as we could warm and refresh ourselves a little with tea went promptly to bed — Mr. Frost on top of the large brick oven, and I on the floor.

About ten o'clock Sunday forenoon we got up, somewhat rested and refreshed, and after a hasty and rather unsatisfactory breakfast of bread and tea went out into the broad, snowy, and deserted street of the village — Mr. Frost to make a sketch, and I to find the ustavshchik (oo-stav'shchik), or officer in charge of the mine.

The Kadainski mine, which is one of the oldest and most extensive silver mines in the Ner-

chinsk district, is situated on the side of a bold, steep, round-topped mountain about 300 yards from the village and 200 or 300 feet above it. It has been worked for more than a century and was at one time very productive; but the richest veins of ore in it have been exhausted, and it does not now yield nearly as much silver as the Pokrofski mine or the mine of Algachi.

The ustavshchik, whom I found at work in a log-house near the mine, and who seemed to be an intelligent and well-educated Siberian peasant, received me pleasantly but with some surprise, read my letters of introduction, expressed his willingness to show me everything that I desired to see, and in ten minutes we were on our way to the mine. In the tool-house, which stood over the mouth of the main shaft, I put on the outer dress of one of the convicts, — which I soon found to be full of vermin, — the ustavshchik donned a long, mud-stained khalat, a battered uniform cap, and a pair of heavy leather mittens, and providing ourselves with tallow candles we lowered ourselves into the black mouth of the Voskresenski (Voss-kre-sen'-sknee) or Ascension shaft. After descending ten or twelve ladders, we reached, at a depth of about 120 feet, a spacious chamber from which radiated three or four horizontal galleries much wider and higher than any that I had seen in the mines of Pokrofski and Algachi. The floor of the chamber was covered with water to a depth of three or four inches and moisture was

dripping everywhere from the walls. At a depth of 200 feet we reached another landing and entered the mouth of a very wide and high gallery leading away into the heart of the mountain. There had just been a blast somewhere in this part of the mine, and as we proceeded through the gallery filled with powder smoke I could see absolutely nothing except the faint glimmer of the ustavshchik's candle in the mist ahead. Guided by that, I stumbled along the uneven floor of the gallery, stepping

—some upward, some horizontally, and some downward at a steep angle into an abyss of darkness. It was evident that the ore had been followed wherever it went and scooped out in the cheapest and most expeditious manner possible, without regard to safety, and with little attention to timbering. It was the most dangerous-looking place I had ever seen.

From these great caverns, of the time of Catherine II., we proceeded to the deepest part of the mine by descending a shaft cut through

THE KADAINSKI MINE.

now and then into a hole or splashing into a pool of water, and imagining for an instant that I had tumbled into an abandoned shaft. In one place we passed a very extensive excavation, out of which the ustavshchik said an immense body of ore had been taken as long ago as the middle of the last century. An immense area of roof had been left supported by quadrangular piles of crossed logs, which were so black from lapse of time that they were hardly recognizable as wood, and in many cases so soft that I could take pinches of rotten fiber out of them with my fingers. This part of the mine the ustavshchik said was regarded as very dangerous, and he did not think it prudent to go any farther. From the point where we turned to retrace our steps black, irregular caverns could still be seen stretching away in every direction

the solid rock at an angle of about forty-five degrees and not provided with ladders. A heavy and rusty chain had been festooned against one side by means of staples driven into holes drilled in the rock, and clinging to this chain we cautiously descended the shaft with a stream of water running ankle-deep around our legs and tumbling in cascades into the depths of the mine. On the lowest level that we reached a party of convicts was at work blasting out a new gallery with dynamite. A perpendicular climb of 300 or 400 feet up slippery ladders in another shaft brought us once more to the surface, and when, wet, muddy, and breathless, I stepped from the end of the last ladder upon the floor of the tool-house I was so exhausted that I could hardly stand on my feet.

George Kennan.

MOLIÈRE AND SHAKSPERE.

BY C. COQUELIN, OF THE COMÉDIE FRANÇAISE.

EVERYTHING has been said about Molière, and in France he has been the object of the most extravagant theories. There is only one suggestion which no one has ventured: this is to deny that he is the author of his works. In England there is a school which declares that Shakspeare was but a man of straw, and that the true poet of "Hamlet" and of "The Tempest" was the lord chancellor Bacon. We have not yet a school like this. Is an hypothesis of this sort impossible? Could we not, with equal likelihood, attribute the paternity of the "School for Wives" and "Don Juan" to the great Condé, for instance, to whom tradition already imputes at least one line of "Tartuffe"—

Il est de faux dévots ainsi que de faux braves,—

and who was the avowed protector of Molière? He prided himself, as we know, on his wit and on his freedom of thought, and he was fond of the stage. Why may he not have had a hand in these plays? That would explain why this same "Tartuffe" was acted at his house in full long before it was revised; why it was at his house again that the revised version was first seen; and also why Molière left no manuscripts behind him.

It would not be difficult, I think, if some imaginative scholar would but undertake it, to establish this hypothesis as solidly as the famous Baconian theory; and it could be proved that Molière and Shakspeare are but masks, just as it has been proved that Napoleon and Mr. Gladstone have never existed and that the first of these is a sun-myth and the second an old Breton deity—no doubt, the deity of eloquence!

But I have no intention of fighting the Baconian revelation, nor of building up any theory of that kind; I wish only to throw on paper a few notes, inspired by the study and the comparison of the two masters of the stage.

If Molière seems like a belated twin of Shakspeare, it is not only because of an admirable equality of genius, it is also because of the many likenesses shown in their lives and in their habits. First actors, then authors, then managers, they entered the profession very young and pretty poor; and both made money by the theater and died rich, one at fifty-two and

the other at fifty-one; leaving almost the same number of works, as to which they seem to have been negligent, since these were printed in full only after their deaths, and by the care of their comrades. Born in the burgher class, they had princes for friends and knew the royal favor; and Louis XIV. asked Molière for the "Magnificent Lovers," as Queen Elizabeth had asked Shakspeare for the "Merry Wives of Windsor." Thus one and the other, turn by turn, amused the court and the city, the people of quality and the rabble. Their free genius brought them out safely.

Wherefore the classic Ben Jonson cried out against his comrade Shakspeare; wherefore also the rigorous Boileau condemned judicially the author of "The Misanthrope," thrust into the sack of *Scapin*. Nevertheless, they went on, taking their property where they found it, borrowing everywhere the matter which their alchemic genius turned to gold, bearing in mind no rules but to be true and to please; pleasing indeed, and always pleasing, the foolish as well as the wise, the ignorant as well as the refined.

Not only did they skirmish with pedants, but they also quarreled with the envious, a viler tribe: Shakspeare had Greene, Molière had Visé; they were hunted even into their private life, and infamous vices were imputed to them. They were, however, excellent comrades, liking a large life, good fare, and frank friendships; they gladly had wit-combats at the "Syren" or at the "Cross of Lorraine"; and they kept open house. If we believe the legend, it was because he entertained too liberally his old friend Ben Jonson and his compatriot Drayton that Shakspeare took to his bed and died. It is thus that our Regnard died; but it is not thus that Molière died. His heartrending death is familiar; and God, who does not disdain an antithesis, crowned these careers so alike with the most opposite ends, making a comedy of the death of the great tragedian and of the death of the great comedian a drama.

In yet another point the end of Shakspeare differed from that of Molière. He had retired. He was living in his dear Stratford, as a rich country gentleman, taking very good care of his property; even careless of his glory, and not having written, when he died, perhaps one verse in four years. His will does not mention his works, nor do the four lines inscribed over

M. COQUELIN AS MASCARILLE IN THE "PRÉCIEUSES RIDICULES."

his tomb. Æschylus also, in the epitaph he wrote for himself, forgot his hundred tragedies, but he had fought at Marathon, and this he recalled proudly; and it is conceivable that he should claim this glory in preference to the other. But the tomb of Shakspeare makes no similar claim: it begs that it be left alone, and this is not for the sake of "Hamlet" or of "Lear" or of so many masterpieces, but for Jesus' sake.

Molière never retired; scarcely even did he take a vacation: he worked while ill and he worked when dying; and he died almost on the stage. One of the reasons for this difference — not enough noticed, I think — is that Molière was a much better actor than Shakspeare.

Shakspeare the actor has left no trace. It is vaguely known that he played the old *Adam* in "As You Like It," and the *Ghost* in "Hamlet." But it was not he but Burbage who "created" his great parts. Becoming an actor by accident, it seems probable that he was such without passion, and that he ceased to play as soon as possible.

This was not the case with Molière. There is no doubt that his vocation as an actor was his master-passion. He did not leave the paternal roof for the purpose of writing plays — but for the purpose of acting them. And we know that these were not comedies — the Illustrious Theater had in stock at first nothing but tragedies. When he wrote "L'Étourdi," his first work, Molière had been an actor for nine years, and for fifteen when he wrote the "Précieuses Ridicules." Never could his great success as an author tempt him to leave the boards. He not only continued to act in his own plays, but he acted in the plays of others and did not consider this as lost time. He acted, as we have said, although coughing and spitting blood; and to Boileau, who advised him to leave the stage, he replied, "It is for my honor that I remain" — so much did he love his profession, which was killing him. But then he excelled in it. His contemporaries are unanimous on this point. He was extraordinary — "Better actor even than author," one of them goes so far as to say. We can imagine what joy it must have been to see him in his great parts — *Sganarelle*, *Orgon*, *Alceste*, *Harpagon*.

He had come to this degree of excellence only by dint of hard work, as his appearance was not pleasing and his voice difficult to manage. It was his voice, above all, that gave him trouble; but, notwithstanding the hiccough that remained, he made it so rich in varied inflections that it seemed as though he had many. He was particular about the articulation: it is to him that we owe the right way of pronouncing certain words; for example, the infinitives

in *er*. He left nothing to chance, and insisted that an actor should have counted all his steps and decided upon every glance before he stepped upon the stage. We have in the "Impromptu" a theatrical criticism of his that we can compare to the theatrical criticism of Shakspeare in "Hamlet." At bottom they agree: they have the same passion for nature, the same aversion from emphasis — but Molière had the advantage in that he practiced what he preached.

It will be objected that he was not good in tragic characters. That is possible; it is so human to err! But perhaps we have been too quick to believe his enemies on this point. The manner of acting tragedy in those days was very different from his theories. He may have disconcerted the public by abstaining from bombastic delivery and by bringing down the heroes to a more natural level. Notice, however, that he played Corneille up to the very last. It seems likely that if the pit had disapproved of him so strongly in these parts, he would not have been so insistent; then it would have affected the receipts — and Molière was a manager. Finally, it was he who trained Baron; and Baron in tragedy, as in comedy, was incomparable. This passion of Molière's for his profession as actor was eminently advantageous. It increased his power of observation. The gaze he fixed on man was in some sort a double mirror; he studied first to know, and afterwards so as to reproduce. What might have escaped him had he only written the play came to him when he acted it. Then — forgive me the metaphor — the ink became blood. Therefore it is, I think, because Molière was a greater actor than Shakspeare that he was a more sure and more complete observer, although in a narrower sphere.

And to this quality of actor, which was accompanied in both by the gift of stage-management, they each owed the dramatic force that to-day animates their works. We feel that these were not written coldly in the silence of the closet, but thrown alive upon the stage. And it is this too — I think the remark is Sainte-Beuve's — that explains the indifference of Shakspeare and Molière to the printing of their works. They did not recognize these on paper. "Tartuffe" and "Hamlet" existed for them only before the footlights. It was only there that they felt their plays bone of their bone and flesh of their flesh.

It has been possible, after much erudition, to establish the chronological sequence of the works of Shakspeare; and through this study has been evolved the history of his thought. It is at first a period of experiment; Shakspeare begins, he feels the need of living, he is the Jack-at-all-trades at the Globe; he makes

over old pieces and writes new ones in imitation of Plautus or the Italians: no originality as yet, and, oddly enough, no dramatic genius; he was, above all, the poet of "Venus and Adonis," in whom it was difficult to foresee the writer of "Hamlet." But the time of groping ceased: he wrote "Richard III.," and in that he discovered character; he wrote "Romeo and Juliet," and in that he discovered drama. Still the second part of his career is almost entirely devoted to comedy. If he attempts drama, it is through the national history; which gives him the chance of creating *Falstaff*, perhaps his best rounded comic type. This was the time when he began his fortune and his glory. He is full of hope and gaiety; he takes delight in those adorable compositions "A Midsummer Night's Dream," "The Merchant of Venice," "Much Ado about Nothing." Fancy is his queen, and if Melancholy seizes him, it is to draw him to that marvelous forest of Arden, where so many songs are sung that the wickedest become good and the things that seem the most difficult to arrange end there—as you like it.

To this period of youth succeeds the prime of life. Shakspeare is rich and seems happy; but his thoughts are more somber. He doubts, he despairs, "Man pleases him not," and if he forgives Woman it is to make her fall under the injustice of destiny. From 1601 to 1607 were written these dramas: "Julius Cæsar," "Hamlet," "Measure for Measure," "Othello," "Lear," "Macbeth," "Antony and Cleopatra," "Timon of Athens"—masterpieces, all of them, and all disconsolate; it is the triumph of evil; the more *Hamlet* thinks the more he is discouraged; and it finishes with the anathema of *Timon* giving society at large over to destruction.

But now what happens? Because he has so often shown Man as the miserable plaything of heredity and chance, Shakspeare takes pity on him; and pity engenders serenity. Then the last period opens, the period of "A Winter's Tale," of "Cymbeline," of "The Tempest," of the fragments of "Pericles." Always life and its troubles; but a dream mingles strangely with action, and it is Providence that settles the end. The drama loses in concentration; but, on the other hand, the poetry becomes wonderful: it attains to the ineffable in "The Tempest," the most divine poem ever dreamed by man.

Is it now possible to discover in the work of Molière, as in that of his rival, a history of his private thought? And does the chronological sequence of his comedies reveal to us something of his views on man and of the secret leanings of his genius?

I think so; but only on one condition: the

date of "Tartuffe" must be that of its composition, and not that of its first representation, as is generally taken. Then we find in the work of Molière, as in that of Shakspeare, four distinct periods.

The period of groping, first: Molière is likewise the Jack-at-all-trades of his company; he acts in tragedy, tinkers old plays with the help of Madeleine Béjart, and writes farces, most of them imitated from the Italian, many of them derived from our old stock of *fabliaux*. Then, as success came, he attempts better things—writes "L'Étourdi" and the "Lover's Quarrel." We have there only his gaiety unfailing and full of *go*; his observation betrays itself only in comic touches, and does not rise as high as character-drawing; but what an admirable choice of words—lively, alert, and full of savor! And he not only finds words but scenes, such as the delicious quarrel in the "Dépit."

At last he is in Paris; and as though he became conscious of his genius upon touching his native soil, he throws "Les Précieuses" at the society of the day. No imitation of the ancients this time, no more Italian comedy; he paints the times, but he paints only its absurdities.

It is a great step forward. No matter. The work is brave and alive; it begins the second period; but strange to relate, although the "Précieuses" was a success, Molière did not follow it up; he returned to bolder farce with "Sganarelle," to tragi-comedy with "Don Garcia de Navarre"; and it is from the ancients, from Terence, that he borrows the "School for Husbands." But these still were but gropings: the last was at all events a real work, and Molière became more confident. A lucky chance brings him to the notice of the king, for whom he acts "Les Fâcheux," a sparkling improvisation; and then he is in favor, sure of himself, sure of the princes; and he writes the "School for Wives."

It is the first of the great masterpieces, it is the beginning of the third period; Molière has discovered himself. He has the vocabulary, he has the daring and the invention; he creates; *Arnolphe*, *Agnes*, are immortal. But there is still more, and this it is that to my mind characterizes this third manner: the "School for Wives" is a social comedy. I beg pardon for the word, which is modern, but I could replace it only by a long periphrase. What I mean is that the "School for Wives" shows society itself; *Arnolphe* has his own ideas on these eternally serious points, woman's education and marriage, and he calls religion to the aid of his ideas.

Molière is there on delicate ground, but it is by his own wish; and it is very valiantly

that he takes part against *Arnolphe's* theories and turns them into ridicule. This causes a tempest; the bigots discover an enemy. Molière is censured, cast forth, vilified. He does not care. Ever since the "Critique of the School for Wives" one feels that he will not recede. In that play he attacks the marquises, and more than one anecdote shows that this needed courage. But what is this skirmish compared with the battle of "Tartuffe"! Here evidently is comedy as it was dreamed of by the master in full possession of his strength; it turns towards satire of society; it makes itself a power, and shows on the stage the secrets of social organization. What will he respect, this Molière? He touches the Church! And it is in the name of nature that he scoffs at the theories of the mystics. But what happens? This time he is beaten. "Tartuffe" is forbidden. Well! Molière does not give in. Such is then his ardor for the fray that, after having attacked false piety, he combats what next is most dangerous—false science. He begins his war on the physicians. But this is a mere episode: he meditates a revenge; he creates "Don Juan." This is his most extraordinary work; we are stupefied by what he has dared to say in the scene with the *Poor Man*, and in that with *Don Louis*, and in the whole of the fifth act. After the Church, it is autocracy which he shakes. He was never so free, or, as they said in those days, so *libertine*.

Unfortunately—others perhaps will say fortunately—"Don Juan" was not enough of a success, and the piece met much dangerous hostility in high quarters; at the same time the flood of insults increases. Molière ill, perhaps discouraged, and feeling, doubtless, that he could not go farther on this road, that the people of his century would not follow him there—Molière reasons with himself. A contest arises within him: Molière, the indignant, protests, wants to combat, and would let loose "the vigorous hatreds"; Molière, the philosopher, puts reason first, which wishes that we be wise with sobriety, and which counsels man, being incorrigible, to accept fate without cursing him, and to observe him as one observes the "evil apes" and with "mad wolves."

This profound mental debate gave birth to "The Misanthrope," another masterpiece, that belongs to third manner by *Alceste* and to the last by *Philinte*. For it is *Philinte* who gets the best of it. Certainly Molière does not renounce the correction of men, but he gives up calling to judgment the powers of society. With more sharpness than ever he studies character, but individual character, not the social character. He avoids the soldier, he leaves the speculator to Le Sage; while the judge will await Beaumarchais.

He no longer fights—he contemplates. Even after "Tartuffe" was authorized he persisted in not giving a companion piece to "Tartuffe." He will come back to Plautus—"Amphitryon," the "Miser"; he will come back to Italian comedy—the "Tricks of Scapin"; he will come back to the satire of the provincials—"Pourceaugnac," "Georges Dandin"; and in each of these returns he will create masterpieces, for he is absolute master of his art, and not for one instant does his genius pale. But he never returns to "Don Juan." Twice he approaches the forbidden ground; but the "Would-be Gentleman" is not the whole of the burgher class; and if you would see how much the new Molière differs from the old, compare the youth, the fierceness, the set purpose of the "School for Wives" with the serene maturity, impartial and profound, of the "Learned Ladies."

We must say at once that Molière's self-denial cost his vivacity nothing; this dazzles us to the last moment, and it is with one of his gayest farces that he ends. It is true that this farce is, upon reflection, one of his strongest comedies. He is, I repeat, in this last period absolute master of his art; I would add that he is much more careful of form; to such an extent that not having time to give to his verses that degree of perfection which he desired, he wrote no more except in prose. From the "Physician in Spite of Himself" to the "Imaginary Invalid" there are ten plays in prose, three in verse, in which must be counted "Psyche," although "Psyche," it is well known, was principally by Corneille. But the other two are the most finished works of Molière in point of style. We may regret sometimes Rabelaisian freedom of the earlier manner, the large and oily brush marks of "Tartuffe"; but we must render homage to the adorable workmanship of "Amphitryon" as well as to the judicial and sustained grandeur of style of the "Learned Ladies."

After all, if he from preference used prose, it was not that he might be negligent, for now he cadences it and fills it with blank verse, and now, as in the "Would-be Gentleman," he gives it such a variety of shading that the author disappears, leaving only his characters to be heard, each one speaking his own language, like that good *Madame Jourdain*, according to the frankness of their nature.

I will not enter upon the comparisons that these historical portraits of the minds of the two masters might suggest. I would insist on but one point. It does not appear that, at any moment of his career, Shakspeare thought it possible to reform society by the stage. Neither in his fantastic, optimistic comedy nor in the merciless, pitiless drama of the somber period,

nor in the providential drama of the last period, did he appear to occupy himself with correcting men of their vices. He makes works of art—that is all. If there be in them a lesson, it is, in a way, unmeant by him, and as there might be one in the spectacle of human affairs. Molière, on the contrary, has taken seriously his duty as a comic author. He has, just like old Corneille, frankly wished to put into practice Aristotle's principle of purging mankind of its faults. He has accepted comedy as a social power. And, even after he was forced to renounce "*Tartuffe*," he renounced neither correcting nor instructing; and almost all his plays, if not all, have an aim and a moral. This difference is accounted for, I think, by another, which is to a certain extent primary: Molière was a Latin, Shakspeare was not. Shakspeare very probably received a much better education than Ben Jonson leads us to believe. He loved and read the ancients much; many Latinisms have been found in his style. In his youth he imitated the "*Menæchmi*" of Plautus; and in his maturity he took from Plutarch not only the plots of dramas, but phrases, even whole discourses, to which he gave only the rhythm of verse, but which are absolutely opposed in tone to his poetry. Notwithstanding all this he remains free, original, and modern. It is with deliberation that he rejects the classic rules promulgated and put in use by the Ben Jonsons.

What connection is there between the spirit of antiquity and that of "*Venus and Adonis*," his sensual poem, all sparkling with *concetti* of the Italian type? Has he not gone as far as to parody the "*Iliad*" in "*Troilus and Cressida*"? Finally, in his great Roman drama, are they real Romans that he shows us? The place, the costume, the speech, and the soil—all are contemporary with Shakspeare. Romans, no; but men surely! And that is enough. And as for the people, whom he loved to paint,—though not to flatter,—it is the populace that he has known and mingled with, the mob and not the plebeians, to such an extent that one might say that "*Coriolanus*" was one of the most English of Shakspeare's plays.

In short, the spirit of the Renaissance breathed upon Shakspeare, but did not transform him. Shakspeare was in his country, the definite and supreme end of the Middle Ages. In France, on the contrary, the Middle Ages did not end. In the sixteenth century the Latin spirit seized the people once more, and instead of finding, with Shakspeare, their inspiration in the miracle-plays, in the Gesta, in the Round Table, in the fabliaux, our authors turned back to Rome. Thus did Molière. It was not that he despised our immense repertory of farces and moralities; he was too fond of Rabelais for

that, and he borrowed from the fabliaux for his little pieces, now almost all lost; but for his great comedies it is Plautus, it is Terence, who are his models and his inspiration. He imitated them, one may say, up to his last hour. To this he was predisposed not only by race, but by education; we know what vigorous training he had received, and that one of his pastimes—if he ever had any pastimes—was translating Lucretius in verse.

It is the alliance of the Latin and the French genius that has given to our comedy its character and its superiority. The Frenchman has inherited from the Celt, at the same time with the love of combat and the love of speech-making, an admirable promptness in seizing the ridiculous and in imitating it. He has found in his Latin heritage the taste for generalizations, the sentiment of measure, and the cult of reason. French comedy has been born of all these. It is gay on its Celtic side, and on its Latin side realistic and practical. In its most dizzy flights you would never see it, like the comedy of Shakspeare, beat its wings and fly into pure fantasy and the dream of a mid-summer's night; it would not leave the earth, it would observe, it would keep one shred of truth, it would wish to be of use, to serve, to *prove* something.

Castigat ridendo mores. It has a mission; later, we might call it a function. I have said that it is a power, and Beaumarchais is there to show it. It has not been lost. What is Augier? What is Dumas? They are reformers! What is Labiche? A moralist! Sterne has said and shows in his way that the French people is the most serious of peoples; for he who loved so much to laugh does not care to laugh for nothing. He wishes that something should stay in the mind after even the lightest of vaudevilles, and that after having laughed one should think. Musset went further: he wished us to weep. That is too much. And I ask myself if there be not a grain of exaggeration in our contempt for the useless laugh. To laugh is good in itself. What is left after a laugh? the philosophers ask. Ah! what remains of a beautiful day after it has passed? And yet happiness is made up of beautiful days. But, to be definite, it is this taste for truth, this respect for reason, even this pretension of lifting up human nature, that makes the force of our comedy, and this is why it would be unjust to compare the comedies of Shakspeare with those of Molière.

Shakspeare's comedies are mostly youthful works. We find in them humors rather than characters, and no comedy of situation. They are imaginings, often charming; equivoques; disguises; forest surprises, as in "*As You Like It*," where every one becomes good; islands,

as in "The Tempest," enchanted with invisible music, where life is painted like a soap bubble—iridescent and empty. What likeness can there be between these exquisite fairy tales, made of dreams, and the comedy of Molière, all kneaded with reality?

There are exceptions, however. There is one of Shakspeare's comedies that approaches the French manner: it is the "Taming of the Shrew." This has a logical action and a moral. *Petruchio* tames his devilish wife by showing himself more of a devil than she. But they both are eccentrics rather than true characters; and the play is a farce, where caricature injures the truth. No matter, it is one of the gayest, and—see the power of the French form—it has remained one of the most popular.

He has been less successful, to my mind, in the "Merry Wives of Windsor," another exception in his works, for it is a contemporaneous satire, notwithstanding the date, and a portrait of middle-class manners. It has excellent scenes. *Ford* recalls our *Arnolphe*. Like *Arnolphe* he is jealous, like *Arnolphe* he is kept informed of all that is being prepared against him (at least he thinks so), and like *Arnolphe* he succeeds only in getting himself laughed at. But how feeble and brutal he is! What unreason in all his actions! In short, he is any husband, while *Arnolphe*, in representing the old sect which insists on the subjection of woman, is one of those faces in which the humanity of all times recognizes itself laughing at the recognition. Even in the *Falstaff* of the "Merry Wives" one can pick flaws. Is this the *Falstaff* of "Henry IV.," who was always brimming over with audacity and humor? Alas! how he is faded! What a fall! No, no; this dupe is not *Falstaff*! Shakspeare was no more at ease in working on an idea of Elizabeth's than was Molière when he composed the "Magnificent Lovers" on an outline of Louis XIV.'s.

A few words must be added on the wit of Shakspeare, the sparkling of which fills the first plays of Shakspeare. It is with double meanings, with puns, that he makes the laughter break out; counterfeit coin, doubtless, but so prettily struck off, so brilliant, so resonant! Recall the battles of wit between *Beatrice* and *Benedict*, and the loving chatter of *Rosalind* and the elegant babble of *Mercutio*. But all this has sadly cooled in three centuries.

Molière has no mere wit. Puns, points, the collocation of droll sounds, words taken one for another—all these are absent from his work. At most he permits himself, in his farces, some Gallic equivoques. He wishes to bring a laugh only by touches of nature. It is not from him as author that come his witticisms; it is from his characters, and they come naturally and by the force of things. He himself explains this

in his criticism. "The author has not put this in as a clever saying of his own, but only as a thing that characterizes the man." So with him there is nothing unnecessary. Each touch brings out the character in the living reality.

Can we here say that from this point of view Molière has the better of his rival? But it would be easy to reply that Shakspeare in his mighty maturity renounced witticisms to seek effects only from nature. And it is by their masterpieces that these great men must be compared. Thus we admire in them the same creative fecundity, the same intensity of life, the same dramatic vigor. This latter is so great in Molière that it was able to lead astray his fervent admirer the great Goethe, who attributed to him tragic genius. This seems an error; but nothing shows better than this error the force of the situations in "The Misanthrope," in "Tartuffe," and elsewhere. They have suggested to Molière, as to Shakspeare, those phrases that suddenly shed light into the very depths of the soul. Pathetic in Shakspeare, comic in Molière, they are sublime in both. Sublime, you say? Can the comic be sublime? Why not? After all, the sublime is but a stroke of truth, so brilliant, so deep, that it calls for no explanation or reasoning, leaves nothing to be said, and sometimes—like the *Qu'il mourût* of the old *Horace*—attains a pure and simple absurdity.

Even in Shakspeare there are strokes of this kind of comedy; such is the famous acclamation of the "Brutus! Hail Brutus! Let Brutus be Cæsar." And another saying, in "Coriolanus," "Let us kill Marcius, and we'll have corn at our own price." As for the pathetic cries it is unnecessary for me to recall the apostrophe of *Lear* to the storm, "Nor rain, wind, thunder, fire, are my daughters!" Nor the saying of *Macduff*, "He has no children!" Nor all those that spring from the troubled conscience of *Hamlet*. But is not the *Poor Man* in "Tartuffe" of the same caliber? Does not *Alceste's* "Morbleu! Faut-il que je vous aime?" spring from the same depths? And the innocent question of *Arnolphe*, "Why not love me, Madam Impudence?" But Molière has whole scenes written in this tone. Recall the scene before the last in the third act of "Tartuffe" between *Orgon*, *Tartuffe*, and *Damis*. There is not a line that does not carry. If it were not so funny it would be terrible. Never has human credulity been so truly painted, neither has the faculty which Tartuffes have of dishumanizing the best of us. If one forgets to laugh, the scene leaves an impression of stupefaction, and this I think is the duty of the sublime.

In Shakspeare *Othello* is less deeply duped by *Iago*. For from the moment that he has

made the germ of jealousy tremble that had been sleeping in his breast, from the moment that this frightful passion is awakened, it is this which acts and governs; it is this that makes the unhappy creature believe what it will; it is this that, in one word, cheats him and makes him breathe blood and death.

Passion — this is the true domain of Shakspeare. It is the domain of the drama. (Shakspeare has the heart, Molière the head.) Shakspeare's personages are the *changing* and *differing* men, frequently made or unmade by the torrent of blood and of life. Those of Molière are man built all of a piece, born what he is, and dying as he was born. Could anything modify *Tartuffe*? Could *Alceste* have been different from what we see him? And was not *Harpagon* from his mother's womb a petty usurer? Did *Arnolphe* need to develop to become the pedant and the brute that he is? Scarcely has study added to the natural bent. And it is certainly not by philosophizing on a school bench that *Don Juan* came to the denying of all things. He came into the world unbelieving, and never admitted the existence of any other God but his own good pleasure. Molière shows us these unchanging characters in the most diverse situations; they remain there true to themselves and make their own fate.

Shakspeare likes to take an irreproachable man; he shows him coming straight from nature's hands, full of the milk of human kindness and seeking nobly all that he most ardently craves. But there is in him a germ, sometimes imperceptible; this germ, circumstances, chance, the perfidy of an *Iago*, the meeting of the three old women on the heath, a dream, even less, — a doubt, — may cause suddenly to ferment; it rises up, swells, and becomes a devouring and irresistible passion; the end is fatal, it is crime, despair, death. Nothing can help it; the will of the man is the sport of chance and the heat of his blood. Even in the last works — in which the ending is happy — the man has had nothing to do with it; it is again chance which this time ends everything well; but *Posthumus* and *Leontes* are as miserably the prey of their imaginations as *Othello* or *Lear*.

Thus Molière's personages are; Shakspeare's become. I leave it to the philosophers to decide which are the more true. But we must not exaggerate; one finds likewise in Shakspeare innate characters. *Iago*, *Lady Macbeth*, are certainly born what they are. Likewise it is a great wrong to Molière to reproach him with not knowing the contradictions of the human heart; his works are filled with it. See *Alceste* in love with *Célimène*, see *Tartuffe* at the same time so arrogant and so humble; see *Orgon*, most tender of fathers and most humane of men, led by his bigotry to sacrifice his daugh-

ter and his whole house to the egotistic needs of his own salvation! These contradictions are marvelously natural; they do not indicate a single modification of man, they only reveal his complexity, and Molière knows how to render the comic side of this with his usual superiority.

This difference between the characters of drama and those of comedy has still another reason. To laugh one must be impersonal. He who sees that it is he himself who is on the stage and made fun of does not laugh willingly. Other people, — that is all right, — one can laugh at others without scruple. And this is why Molière shows us from the first his people well characterized, well possessed by their proper individuality, in a way resembling us as little as possible. After this, quite at our ease, sure of being neither *Harpagon*, nor *M. Jourdain*, nor *Sganarelle*, we can follow the master in laughing at them and at the same time at the *Harpagons* and the *M. Jourdain*s and the *Sganarelles* that we know in real life and that we are delighted to find before us here.

The drama needs a contrary sentiment. To make us shudder or weep it must show us in its personages, if not the man that we are, at least the man that we flatter ourselves to be — good, valiant, and wise. Then we are interested in what happens to these men who are like us. It seems as though we were following our own possible history. And this is why *Othello* or *Macbeth* are at first neither ambitious nor jealous; they only become so after we have contracted a fellow feeling for them.

Hamlet has been compared to *Alceste*, but what ground can they offer for comparison? The one delicate, scant of breath, an obstinate dreamer, whom destiny makes a dispenser of justice in spite of himself; and the other robust, bristling, scolding, misanthropic — not as *Hamlet* is, in consequence of a melancholy that makes him see everything through a black veil, but from the effect of a vigorous nature full of itself and not understanding that all the world does not resemble him, and irritated by the differences as by so many personal injuries.

It would be easier to compare *Alceste* and *Timon* of Athens. They have common hatreds and both end with the desert. But *Alceste* is born a misanthrope: *Timon*, on the contrary, begins with the love of man, as immeasured in this liberal tenderness as later he will be in his execrations. With all his faults *Alceste* is better balanced; he is a character. *Timon* is ill. (Note in passing, as a matter of curiosity, that the repast of hot water offered by *Timon* to his lukewarm friends is found again in "Le Misanthrope et L'Auvergnat" of La-biche.)

It is remarkable that in "Timon" Shakspeare, who intended a drama, should have deprived himself of that powerful element, Woman, and that it should be the comic author who had that idea of genius, profoundly dramatic, of making his misanthrope in love with a coquette. Shakspeare had put his *Célimène* elsewhere: as a young girl she is in *Cressida*; mature and sovereign she is in *Cleopatra*. It would be pleasant to compare with each other these attractive and perverse figures, but let me note only this characteristic point: it is that *Célimène* is cold, and that *Cressida* and *Cleopatra* are sensual. *Cressida*, a maiden yet, has instinctively all the trickery of an accomplished coquette, but she is sensual and she succumbs. And as she belonged to *Troilus* so she will belong to *Diomedes*; she has wit, perfidy, and weakness; she is a courtesan.

As for *Cleopatra* she is the enchantress, but the irresistible grace that emanates from her is sustained by a deep art, which experience has developed. Then, too, how she leads him on, her *Antony*! But she is sensual; she loves him.

Célimène is cold: she neither loves nor is she capable of loving; her heart is in her head. She is a flower special to society, selfish, despot, charming, deceiving everybody to nobody's profit, for the pleasure of it.

In general Shakspeare's women are admired; and yet what diversity in this curious series. The young girls, *Ophelia*, *Cordelia*, sister *Isabella*, *Juliet*, *Perdita*, *Rosalind*, and *Celia*; *Beatrice*; and the wives *Portia*, *Desdemona*, *Hermione*, *Imogen*, *Catherine of Aragon*. I pass over some and not least celebrated. But among these delicious types, either profound or sublime, it is strange that you meet neither an *Agnes* nor an *Armande*. In Shakspeare the most chaste maid is not without knowledge. Ignorance, so dear to *Arnolphe*, seems impossible to our poet. *Juliet* is fourteen years old and she is a woman. And *Miranda*, brought up in a desert island between her father and *Caliban*, and so like *Agnes* in so many ways — *Miranda* has not the innocence of *Agnes*. She feels for *Frederick* the same admiration that *Agnes* feels for *Horace*; when *Prospero* threatens the young prince and inflicts upon him a slave's duties, she gives the same cry that *Agnes* does when *Arnolphe* orders *Horace* to throw a stone from the window if the young man calls, "But he is such a fine fellow!" Finally, like *Arnolphe's* ward, she gives herself secretly to him whom she loves; but she reserves her chastity, as *Agnes* does not, not knowing enough.

I said there is no *Armande* in Shakspeare either. In truth, there is not a trace of that fine contempt of the flesh which the young philosopher boasts. Even sister *Isabella*, so rigid, has only a horror for the sin, and not aversion for the

matter. The severe young girl recognized the sanctity of marriage, which *Armande* will not have mentioned; and in the end she marries the *Duke*. *Armande*, you will say, would have the same sort of yielding for *Clitandre*. I agree, but none the less does she feel the sentiment that she expresses; and it is rather strange that Shakspeare, although nearer than Molière to the mysticism of the Middle Ages, seems not to have known it. All his plays are of flesh and blood! Besides, Molière, who is the apostle of nature, laughs at the philosophical disgust of the beautiful *Armande*, and is careful not to give it to *Henriette*. Although his young girls are often quite adventurous, they have neither the ardent love of a *Juliet* nor the romantic intrepidity of a *Rosalind*. They are sweet and sentimental, like the adorable *Marianne* in "Tartuffe"; exquisitely sensible, like *Henriette*, very likely later to become sincere *Éliantes*, or wise and keen *Elmires*. As for those whom reading has spoiled, like *Cathos* and *Madelon*, it is not for the love of love that they would lose themselves, but for love of wit.

Other physiognomies might be compared. *Harpagon* and *Shylock* for example — two misers. But it seems precisely as though in these two characters Shakspeare and Molière had two absolutely contrary aims; that Shakspeare, with a generosity not common in his day, wished to show the man in the Jew, and in the insulted man surviving the insult and bent on vengeance, the sacred feelings of a father and a husband; while Molière showed in *Harpagon* these same feelings and all the human sentiments, smothered by the encroaching vice. I fear that it is Molière who is right. But there is much to say in favor of *Shylock*, in whom avarice — being a fault of his race — has not the dominant and special character that it takes with *Harpagon*. Do we find a *Tartuffe* in Shakspeare? *Iago* has been cited: but *Iago* only seeks the satisfaction of a personal hate; *Tartuffe*, in the name of the Church, seeks complete dominion. Honest *Iago* knows what he wants and does not hide from himself the fact that he is a rascal; *Tartuffe* goes so far as to deceive himself; he believes in the goodness of his actions; they are only for the glory of Heaven. *Iago* is but a passing scamp, an individual. As for *Tartuffe* he is legion; *Tartuffe* is eternal, perhaps indestructible.

There is more of *Tartuffe* in *Richard III.*, I think. *Richard* has no illusions about himself, but he plays his part with a perfection worthy of Molière's character. We can even discover rather frequent resemblances between the scene of *Richard* with *Anne* (Act i.) and those of *Tartuffe* with *Elmire*. Both propose to seduce a woman who holds them in horror — *Tartuffe*, the wife of his host whom he ruins

and betrays; *Richard*, the wife of his king whom he murders. Both plead marvelously, with the same catlike softness, the same captious theories, the same subtleties. In both scenes the husband is present: he is under the table with Molière, in his coffin with Shakspeare. The difference is not as great as might be supposed, since the corpse denounces the presence of its murderer by the bleeding of its wounds. But where the two scenes differ is in their ending. For *Richard III.* succeeds, *Tartuffe* fails. Has, then, *Tartuffe* less wit than *Richard*? No, but he has to do with a stronger woman. *Anne* is the feminine character, feeble, vain, inconstant; *Elmire* is the lady, fashioned by society, who knows and guesses, a woman of taste and reason, who used the advantages of her sex, but who watches herself and does not lose her head. As she has no vanity, no sensuality, *Tartuffe* has no hold on her.

Molière and Shakspeare both worked fast. Molière, however, has retouched none of his plays, except "*Tartuffe*." Shakspeare, on the contrary, has rehandled, sometimes considerably, a number of his. "*Hamlet*," for instance, was probably for him what "*Faust*" was for Goethe—the preoccupation of his whole artistic life. He did not ripen his plans, and in the rapidity of his work he was too easily contented with helping himself from the novels or the histories from which he took his plays to the scenes in the order in which he found them, adding, it is true, the characters and the poetry. From this comes a lack of simplicity, incoherencies, contradictions, that revision does not always efface and sometimes even augments. Molière has more art and more method; he graduates his effects better.

Volumnia and the Roman matrons arrive at the camp of *Coriolanus*. The fierce refugee is seized with respect; he bends the knee at once. But *Volumnia* wishes only to be the suppliant; she, in her turn, kneels and makes all those who have followed her kneel, and with them the wife and sons of *Coriolanus*. Here is surely a powerful dramatic effect, but it is not led up to—it ends in nothing. *Coriolanus* gets up, then *Volumnia*, and then long discourses are pronounced that Shakspeare takes almost word for word from Plutarch. The emotion evaporates, the impression disappears. Compare to this the double kneeling of *Tartuffe* and *Orgon* in the scene before the last of Act iii. How well it all goes, how all is developed from it later, and how the effect is prepared and sustained up to the fall of the curtain. It is a marvel of skill, as well as a marvel of truth.

It must, however, be said that Molière, more careful of his plots, neglected his endings; while Shakspeare worked over his with a kind of predilection, which has sometimes given us

some of an unnecessary length. He stuffs them with emotions, makes royal personages appear and pronounce great words. Everything is cleared up, even what the public knows best. No matter, the emotion is immense. See the catastrophe of "*Lear*." The soul of the spectator is plunged into a kind of desolate annihilation with the unfortunate old man. In a different style, re-read the endings of "*Pericles*" and of "*The Winter's Tale*." The sweetest tears that earth can know will flow of themselves from your eyes. And again, that close of the "*Merchant of Venice*" which one does not dare call an ending,—for the play was finished in Act iv.,—and which is a tailing off of a comedy after a comedy. What ravishing poetry and what malicious grace!

Shakspeare delights in complexity. He has often two, sometimes three, plots in his plays. He likes to vary the place of action, which changes without one's knowing why. In "*Antony and Cleopatra*" the scene is the world. The poet leads us almost to the Parthians to present to us *Ventidius*, of whom afterward we shall hear no more, and who is of not the least importance to the play. He needs these vast distances, yet he did not despise the power of concentration (see the last act of "*Othello*" and "*Macbeth*"). But he then falls into the excess that our tragedians are reproached with. He hurries the events, makes them take place in too short a time. If we may trust the text, the duration of "*Macbeth*" is hardly eight days. Who will ever believe that this somber and terrible history developed itself in so short a time, and that the *Lady Macbeth* of the sleep-walking night was but one week more advanced in life than the *Lady Macbeth* of the night of the crime? Molière, on the contrary, fancies the greatest simplicity in his plots and expedients.

There is some resemblance between the "*School for Wives*" and "*Romeo and Juliet*." A perfume of youth is exhaled from these two masterpieces, both of them love-stories. It is impossible to listen to them without profound interest. But to keep up this interest how many incidents did not Shakspeare need? Duels, a secret marriage, a potion, poison, a final killing, where the *County Paris* takes part most unnecessarily! Molière does not ask so much. Hardly anything happens in his play: *Horace* loves *Agnes*, *Agnes* loves *Horace*; they let each other know it, notwithstanding *Arnolphe*; and by the help of some innocent ruses that *Horace's* manly experience suggests and that *Arnolphe's* jealousy cannot detect, they get married in the end, to our great content. The story has happened a thousand times. It has happened to us—or something like it. And this is why it touches us, and why we laugh with such good

will at that jealous wretch, taken in by an innocent girl.

For the rest, poetry is not wanting in the "School for Wives." The whole part of *Agnes* is as poetically naïve as the words of children. And the part of *Arnolphe* is comic poetry, rich in color, and rising into humor. But on these two points, poetry and humor, the advantage is with Shakspeare.

Molière contents himself with humanity; he does not know nature. Shakspeare does not separate one from the other. There is in him no deed that has not an echo in things; no phenomenon of nature that is not prolonged in the soul. For him creation is one; the earth feels what man does, and shares his emotions. Is she not full of unknown forces? Are there not more things in heaven and earth than are dreamed of in all philosophy? From this union of the world and man, of the world of things and the world of mind or of forces, Shakspeare draws forth the most strange, the most mighty, the most bewildering poetry. I will not try to describe its thousand sides; it would be beyond my powers. Music has been called the art of expressing the inexpressible; it can be said too of Shakspeare's poetry. In fact, there is visibly too much of it in his last plays, as there was too much wit in the first ones. "Cymbeline," "The Winter's Tale," are lengthened with episodes and descriptions admirable but parasitical, and almost all the characters in them are lyrical. The supernatural is introduced in the action; the gods it is who proclaim the innocence of *Hermione*, the gods bring about the climax (interminable besides) of "Cymbeline." As for "The Tempest," of which I have already said a word, we are there in full fairyland. There the exquisite and visionary poetry is in its true place.

Shakspeare likewise has humor, little known to Molière, although Molière was a grandson of Rabelais. It is to the humor of Shakspeare that we owe the incomparable *Falstaff*. Yet Shakspeare is not, strictly speaking, a humorist, like Swift or Sterne. As it seems to me, humor is more literary than dramatic, with its hints, its ironies, and its intentional incoherencies. It is not always clear; and it is clearness that the pit needs.

Many definitions of humor have been attempted. It seems as though the true one were still to be found. It is, I think, that they attempt to make a quality of the mind out of what is rather a state of the spirit. There is the humorous state, just as there is the poetic state. He who is subject to it sees things in a special manner, out of proportion, out of place, upside down; then he discovers in them unexpected resemblances, and he expresses his sensations in appropriate language, that is to say, in affect-

ing the contrary tone to that which he would have used were he in the ordinary state. This manner of seeing things does not absolutely disfigure them; it gives them a new aspect, striking and singular, comic because it is crazy, useful because by exaggerating the proportions it can bring to light certain points of truth that were not before suspected. You know the story of the husband who did not love his wife; he had no knowledge that she was pretty. Chance let him one day see her on the stage masquerading as a man, and he fell desperately in love with her. Humor sometimes renders this same service and ideas; in clothing them in what seems to be the least suitable it makes them most pleasing.

But this turning of things upside down, as the humorist does, to see what is in them, this dislocating of the thought and sentiment, is greatly against the spirit of reason; this is why we care but little for it. Yet, as it is a very Celtic taste, it comes back to us now and again. Witness Rabelais, whom I cited just now, and who is the universal father of humorists; witness also Voltaire's tales.

Molière knows not humor except on the extreme and extravagant side. It is certain that in this kind the ceremony in the "Would-be Gentleman," and above all that of the "Imaginary Invalid," are masterpieces of humor in the Rabelaisian taste, full of vengeful irony and irresistible comedy. But to be definite, Molière did not seek humor any more than he sought wit; one and both were for him too easy. "There is nothing common," said the great Goethe, "that does not appear humorous if you express it in a grotesque way." As for poetry, that of Shakspeare, it will be conceded, would be little in place in the comedy of Molière. But if the force or the delicacy of expression are elements of it, if the freshness or vivacity of the language, if the beautiful marriage of words, if this living breath of truth is poetic, then Molière is a poet. He has the "vigorous hates," "the well-placed soul," "the clearness of everything." He knows where is the "tenderness of the soul," and dictates to *Agnes* a delicious letter. He is, in more than one scene, as eloquent as Corneille, and he handles the popular proverb with the same vigor. There is as much lightness and grace in *Acaste* as in *Mercutio*. And the verses of *Éliante* are as charming as those of *Rosalind*, and truer. What is not in this poetry—what could not be in it—is the dreaming. It is the loyal reflection of the true depth of humanity.

Molière and Shakspeare had an entirely different conception of life. Shakspeare saw it moving, troubled, changing, uncircumscribed in its development by human will, subject to "the winds and the rain and all the breezes

that blow." He says in one of those passages of the "Two Noble Kinsmen" which were evidently written by him:

This world's a city full of straying streets,
And death's the market-place where each one meets.

It is in these straying streets that Shakspeare moves, the obscure labyrinth where man goes blindly, meeting here an ambush, there a precipice, and where he changes fortune from a chance-meeting. There is nothing certain, not one of his characters who could swear to what he will do an hour later. They do not belong to themselves. They are so much the plaything of a higher force that they do not even feel sure of their conscience. "I believe myself passably virtuous," says *Hamlet*.

But who shall explain *Hamlet*? *Hamlet* is an enigma. How far was he mad? When is he completely mad? But no one in these plays is quite sane. *Lear* is out of his senses long before he is demented; *Macbeth* has hallucinations; *Othello* sees blood at the first word; *Brutus* talks to a ghost; that terrible sceptic *Richard III.* sees visions. Events themselves sometimes seem half crazy. What I have said of "Macbeth" might be said of "Romeo and Juliet," where in five days *Juliet* sees, loves, marries, dies, and resuscitates, and dies once more. All is falsehood, deceit, bewilderment. This cavalier, it is *Rosalind*; this page, *Imogen*; this judge, *Portia*; this statue, *Hermione*. One scene in "King Lear" makes *Lear* (who goes mad from sorrow) and an exile (who pre-

tends to madness) and a fool (who is mad by profession) all talk together amid the thunder and lightning. We ask ourselves, Where are we? Who are we? *Prospero* tells us:

We are such stuff
As dreams are made on; and our little life
Is rounded with a sleep.

Shakspeare saw life as in a dream, and thus he has shown it. Molière saw things in their reality. He went down to the immutable. As for life, in his plays he sees it simple. Only those events happen which happen to all of us. We love, we marry, we have children, we consult the doctor, we die. The other incidents that may occur spring from the shock of character; they can be deducted logically one from the other, and would remain in the control of man if he would but listen to reason.

And this is the great moral that can be drawn from Molière: keep your head, and all will go well. His work is as clear as day; hatred of vice shows itself, and the love of truth—no platonic love, but an active love, armed and fighting to the last hour. For Molière is in the thick of the crowd; Shakspeare dwells in the Temples of Serenity; he observes, somber at first, peacefully later on; and he gives to our meditation and reflection the immense and painful spectacle of the world, but draws from it no rule, for what rule can be found used in a dream? Perhaps, to finish, it might be said that Shakspeare teaches us to think, but that Molière teaches us to live.

C. Coquelin.

THE MARTENS.

WITH the first chills on August heat,
From early frosts foreboding fall,
In ranks arrayed the martens meet,
And wait their punctual yearly call.

On walls and wires, ridge-pole and eave,
In patient conclave how they sit,
Certain the summons to receive
For all their tiny hosts to flit!

Their coat of jasper, pearly vest,
Leave royal robes without compare:
They chirp, yet shiver, thinly dressed,
And contemplate a change of air.

As prophets, mocking unbelief,
With lids half shut their faith to clear,
In head so small—a balm for grief—
They hold another hemisphere.

When fleets the season out of sight
Their fluttering feathers are unfurled,
To show our sky and earth of right
Are but one half the human world.

Our hope is but a bird's-eye view,
Our race an emigrating band:
The way for us will open too,
While listening for the last command.

C. A. Bartol.

BASE-BALL—FOR THE SPECTATOR.

THE next generation of Americans will be as thoroughly educated in the technicalities of base-ball as our English cousins are in the intricacies of cricket. Many a man to-day has felt a little defrauded by the increasing space his morning paper gives to the game, and has been inclined to look with disapproval upon the devotion of his boy at school to something apart from his studies. As the present generation of boys become men, however, there will be a softer spot in their hearts for a pastime whose ways they know and whose fascinations they remember. Putting aside for a moment its professional questions, base-ball is for every boy a good, wholesome sport. It brings him out of the close confinement of the school-room. It takes the stoop from his shoulders and puts hard, honest muscle all over his frame. It rests his eyes, strengthens his lungs, and teaches him self-reliance and courage. Every mother ought to rejoice when her boy says he is on his school or college nine. And she would if she knew what he means when he says he is "in training." It means that he is following, with the closest observation, the laws of health. He is free from the taint of dissipation, and is making of himself a clean, strong young man. This training has been made a study, and the results have been handed down through college and school, until every boy now enjoys the advantages. The enforcement, too, of these laws of training is more strict than that of any rules of teacher or faculty, for, instead of surveillance, the boy is bound by his honor to his captain and his fellows.

The history of the game is an interesting record of progress and development. Away back in the fifties we find it assuming its first stage as a well-defined sport. Previous to that time there were certain games played with bat and ball, but there were not enough points of

similarity to warrant one in attempting to prove or disprove conclusively where the game of base-ball originated. In this early stage the game was chiefly confined to local nines, with here and there a sporadic outbreak of it at the colleges. There were occasional attempts at organization; but while these had existed here and there, an association or league of men making base-ball a profession was unthought of. Men who played ball for a financial consideration had other means of livelihood, and there were no players whose efforts could accumulate a fund sufficient to last through the winter. As the game grew in popular favor it became possible for men to turn it into a money-making venture, and this they did not hesitate to do. The sport had not at that time acquired sufficient strength to withstand the evils dragged into it by those whose sympathies were only with the gambling and pool-selling classes, so that in the sixties the evil of betting had crept into the sport so much as seriously to compromise its prospects and give it a bad odor among respectable communities. Sold games were a common thing, and many of the journals of that day predicted its speedy downfall. As a notable effort to reinstate the game in popular favor and scotch the betting and selling evil, stands out most prominently the convention held in Philadelphia in December, 1867. An idea of the thoroughness of the effort can be gained from the fact that five hundred clubs were represented.

The leading ball clubs during the next year or two were, in the East, the Atlantics of Brooklyn, Athletics of Philadelphia, Unions of Morrisania, and the Mutuels, while the Red Stockings of Cincinnati bore the palm in the West. This latter club made a most successful trip east in 1869, winning all of the twenty-one games played. Such was the enthusiasm produced by these victories that on the return of the

club it was met with a perfect ovation, tendered a banquet, and presented with a champion bat. This rather remarkable testimonial was twenty-seven feet long and nine inches in diameter. The same nine made another Eastern trip the following season, and met with almost equal success, suffering but one defeat, and that by the Atlantics on the Capitoline grounds. A crowd of ten thousand people assembled to witness this match, and so lost their heads in the excitement as to give the Western men a very unfair reception. The game was not decided at the end of the ninth inning, each club having five runs. The tenth inning was played in a pause of breathless excitement, neither club scoring; but in the eleventh inning, in a perfect bedlam of noise, the Atlantics succeeded in making three runs, while the Red Stockings scored but two.

In 1874 American base-ball men made their first foreign trip. The ex-champion Athletics and the champion Bostons crossed the water and played several exhibition games. Their first game was played at Lord's, on Bank Holiday, August 3.

This was fifteen years ago, and this year two nines of representative American ball players, after carrying the sport through almost every civilized quarter of the globe, completed their tour by a game at Lord's.

The comments of the English papers upon the sport at that time are very amusing. Speaking of the practice before the game, they say: "The larking indulged in by the Americans for ten minutes before the match shows great precision, but after the game commenced returns were not so accurate." Comparing the game with cricket, they admit that the fielding is far better, but ascribe it to the difference in the ball used. By this time the American game had also made a fair stand in Canada, the Maple Leaf Club of Guelph, Ontario, being the most prominent in that region.

In 1876 the National League was formed of eight clubs, containing the very pick and flower of the ball-playing fraternity. This selection was so small when compared with the large number of people anxious to be spectators of ball games that in 1881 the American Association was organized. Until time had demonstrated that there was plenty of room for both, there was bitter rivalry between the two. This was not long lived, and what is known as the National Agreement now unites the two in respectful and harmonious tolerance. Their united power is quite sufficient to govern, with their blacklists, reservations, and contracts, the entire professional ball-playing community. Their rule is tyrannical and pro-

vokes much hard feeling and occasionally open rebellion, but not as yet a sufficient revolt to overthrow their authority.

During the last twenty years the Boston Ball Club has won more than a third of the annual championships, bearing off the honors in seven years. The Chicago Club stands next, with five championships to their credit. The only other club to win more than once has been the Providence nine, which has been successful twice. A study of the records of the League and the Association shows that the contest is closer in the latter—that there is not so great a difference between the records of the first and last clubs.

Another feature of the records is of interest as showing the tendency of men to drift in and out of this rather nomadic profession. There are but seven men in the books of 1888 who have played through the twelve years upon one or the other of the League nines. These seven men stand, however, with but one exception, high in the profession, and exhibit the same superiority that tenacity of purpose and experience produce in any calling.

The history of college base-ball follows the line of the professional game very closely. At times the college men have been rather more conservative, and have clung to certain rules for a season or two after their abandonment

THE CATCHER.

by the professionals. In the end, however, in nearly every instance, they have realized the advantage of the change, and followed the lead set them. In the early days of the sport the collegians coped successfully with the majority of the semi-professionals, but even then, when they were pitted against the strongest, the college nines met with defeat. The first game of note between a college nine and professionals was in the spring of 1868, between Yale and the Unions of Morrisania. The Unions were at that time the champions

THE FIELD.

of the country. The game was intensely exciting. At the end of the fifth inning Yale led, 8 to 4, but by the end of the ninth inning the Unions had tied the score and eventually won the game, 16 to 14. Frequently the score sheets of college nines show excellent fielding, but when these same men are brought to face the sharp, hard hitting of the professional batsmen their errors begin to multiply, and, in an inverse ratio, their hits diminish. The increase of errors is due to the difficulty they find in handling the fast drives of the trained batsmen, and also to the nervousness produced by the knowledge that they must play a quicker game. A professional gets away to first base far more rapidly than a college player, and the first sensation of a college infield on meeting a professional nine is one of hurry. A short-stop or third baseman finds that he has no time to "juggle" the ball and then throw the man out, as he often can do with college runners. The ordinary college pitcher is no match for League or Association batters, and they find an easy prey in him. On the other hand, the skill of the professional pitcher readily balks the attempts of the college batsmen to find the ball, and only the best men handle

the stick with any effect. The rest of the nine become nervous over their failure to judge the delivery, and before the end of the game apparently dread to come to the plate for their turn.

Perhaps the host of people who understand the game of base-ball thoroughly will forgive a few words of explanation for the sake of those who have never witnessed a match. It may not be uninteresting to try to realize how the game appears for the first time to an outsider. Any comparatively level piece of ground over a hundred yards square will serve for a base-ball field. Upon this field is laid out a diamond whose sides measure thirty yards, and whose nearest corner is distant about ninety feet from one end of the field. This corner is marked by a white marble plate a foot square, sunk level with the ground, and called the home base. At the other three corners are canvas bags fifteen inches square, and called, beginning at the right as one looks into the field from the home plate, the first, second, and third bases respectively. The lines from home to first and home to third, indefinitely prolonged, are called the foul lines. The game is played by two sides of nine men each, one of these sides tak-

ing its turn at the bat while the other side is in the field endeavoring, as provided by certain rules, to retire or put out the side at bat. Each side has nine turns at the bat. The arrangement of the men in the field, with the exception of pitcher and catcher, is in the form of two arcs facing the home plate, whose radii are, roughly speaking, thirty and sixty yards. Forming the arc with the lesser radius are four men called the infielders, and named the first, second, and third basemen, and the short-stop. The latter player stands midway between the second and third basemen. The other arc is composed of the outfielders, and they are named right, center, and left fielders. Inside the diamond, and distant in a straight line in front of the home plate some fifty feet, is the pitcher's position, or box, as it is called. This is a rectangular space five and a half feet by four in which the pitcher is obliged to stand when performing the duty which devolves upon him of delivering the ball to the batsman. The catcher's position is not thus defined, but according

AN "OUT CURVE"—THE BEGINNING.

ing the ball to the pitcher, as it is unnecessary for him to catch it under these circumstances. The players of the side at the bat take their turn in regular rotation and continue until three of them have been put out by the opponents. This retires the side to the field, and the others come in to the bat. The batsman has a box similar to the pitcher's, in which he must stand when striking at the ball. The batsman becomes a base runner immediately when he has made a "fair hit" (that is, knocked the ball so that it will fall in front of the foul lines); or when he has had "three strikes" (that is, three fair opportunities of hitting the ball); or, finally, when the pitcher has delivered "four balls," none of which have been struck at by the batsman or have passed over the plate at the proper height. In this latter case he is entitled to occupy first base without being put out; in the other cases he is the legitimate prey of the opponents, and his only havens of refuge are the bases, which he must take in regular order, first, second, third, and

home. When he completes this circuit and crosses the home plate without being put out, he scores a run, and the number of runs thus scored in nine innings decides the match.

A batsman is put out if he hits the ball and the ball be caught by an opponent before touching the ground. A base runner may be put out in any one of the following ways: if, having made a fair hit, the ball be caught by an opponent before touching the ground, or, having touched the ground, be held by a fielder any part of whose person is touching the first base before the runner reaches that base; if, after three strikes, the ball be caught before it touches the ground, or, having touched the ground, be held at first base as above described; and, finally, if he be touched by the ball in the hands of a fielder at any time during his circuit of the bases when he is not touching the base to which he is legally entitled. To provide for the satisfactory conduct of the game, an umpire is agreed upon by the contesting nines, and it is his duty to see that all the provisions of the rules are observed. He is also the judge of good and bad balls, put outs, and runs. Any other question liable to become a point of dispute comes under his jurisdiction.

Such are, in general, the laws by which the modern game of base-ball is governed. These laws or rules are the growth of many years, and it is to them and to their annual revision and improvement that the game owes in a large measure its success. There are many technical terms, and a knowledge of these is necessary to a perfect understanding of the game. Every ball that the pitcher delivers to the batsman, and which he does not hit with his bat, is called by the umpire either "a strike" or "a ball." If the batsman attempts to hit it and misses it, it is a strike, whether it passed over the plate at the proper height or not. If the batsman makes no attempt to hit it and it passes over the plate at a height

PITCHING A "DROP" BALL.

AN "OUT CURVE"—THE END.

RUNNING TO FIRST BASE.

not greater than his shoulder or below his knee, the umpire calls it a strike. If it fails to meet these requirements and the batsman makes no attempt to hit it, the umpire calls it a ball.

As above described,

four of these called balls make the batsman a base runner and entitle him to his base; and at the third strike, whether called or attempted, he becomes a base runner and must reach first or be put out. A base runner cannot run out of the direct line in order to avoid a player with the ball, nor can he interfere with any of his opponents legitimately attempting to handle the ball. It often happens in a game that a base runner is obliged to vacate his base by the occupancy of that base by a following runner. This is called being "forced," and when it happens that runner may be put out by being touched with the ball, or by its being held by a fielder on the base to which this succeeding runner forces him, before he can reach it. There is only one base which a runner may overrun without liability of being touched out, and that is first base. "A balk" is any motion made by the pitcher towards delivering the ball to the batsman without so delivering it, and every base runner is entitled to the next base on such offense. Within the province of the umpire comes the duty of deciding regarding the weather and darkness. In the case of the former the rule is laid down for him that the rain is sufficiently severe to stop the game when the spectators seek shelter. If the rain then continues for a half-hour he "calls" the game, and if five complete innings or over have been played it stands as a game, otherwise not. The same result holds in the case of darkness.

In the scoring of the game there are also technical terms, and a slight knowledge of these enables one to glean from the tabulated forms in the newspapers a fairly good idea of what each man has accomplished. The columns are headed by the initials of these technical terms. The first column shows the number of times the man has been "at the bat," and is usually headed A. B. The next is headed R., and indicates the number of runs he has made. The column headed B. H. indicates the character of his batting, and the letters

stand for the term "base hits." A batsman makes a base hit when he strikes a fair ball in such a direction that it is impossible for his opponents either to catch it on the fly or to field it to first base before he crosses that base. Following this column is one headed S. B., which means "stolen bases." These are bases gained by good running or by strategy, without the assistance of a hit. In addition to these columns, which indicate what each man of the side has accomplished while at the bat, are three columns devoted to the record of the fielding. These are headed P. O., A., and E. The first stands for "put outs," and indicates how many of the opponents he has individually retired. It will be noticed that the first baseman and the catcher usually succeed in taking the lion's share of this column. The next letter stands for "assists," and any player who handles a ball during a play which might or does eventually result in the putting out of an opponent receives for every such assistance a credit of one in this column. The last column indicates the number of missed opportunities or "errors." A player is accredited with an error for every chance he has failed to accept in a manner to result directly or indirectly in the putting out of an opponent. It will be seen, then, that the sum of these three columns shows just how many opportunities each fielder has had, and the relative ratio of the sum of the put outs and assists to the errors indicates his fielding record.

Other special phrases and terms are almost self-explanatory. An "earned run" is one that is made without the assistance of fielding errors; that is, in spite of the most perfect playing of the opponents. From the nature of things, a ball so knocked that it cannot be caught or fielded to the plate before the man can make the entire circuit of the bases yields an earned, or, as it is in such instance more generally called, a "home run." A "passed ball" is a pitched ball which by an error of the catcher is allowed to go behind him so that a runner is advanced a base. A "wild pitch" is a ball delivered by the pitcher so wide of the mark that the catcher cannot recover it before the runner has advanced a base. A "sacrifice hit" is a

FIRST BASEMAN CATCHING A HIGH BALL.

ball so batted as to advance a base runner while it gives an opportunity of putting out the man batting it.

There are certain strategic plays which go to make up the finer points of the game. One of the most common of these is missing a catch in order to put out more than one man. For instance, when there is a runner on first base and a fly is batted near second. If the second baseman caught the fly he would put out the man who hit it, but the man on first would simply hold his base. Whereas if the second baseman misses the catch, the man on first is thereby forced to run to second, and by quick work the second baseman can, after dropping the ball, pick it up, touch second, and throw the ball to first before the runner who struck the ball can reach that point. In this way he makes what is called a double play, putting out both men. Triple plays are also possible, although seldom made. Another point which shows the brains of the game is in attempting to put out the man who is nearest home in his circuit of the bases. Thus, whenever there is an opportunity of putting out a runner who is coming from third and one who is

going to first, the preference is given to the former, unless the chances of putting him out are unusually slender. Still another fine point is the race of man against the ball, as shown in the case of a man on third base when a long fly is batted into the outfield. According to the rule, the runner must touch the base after the fly is caught before he can run, but the distance from the fielder making the catch to the home plate is so great that there is a very fair chance of his getting home before the ball. He therefore stands with his foot touching the bag and leaning forward for a start. Just as the ball settles into the fielder's hands, off he goes. The fielder, too, is prepared for this, and recovering himself almost instantly, he drives the ball in on its long journey towards the plate, often reaching it just as the runner crosses it, but too late for the catcher to touch him.

Of all the positions on the field, the two that command the most attention are those of pitcher and catcher, or battery, as they are called. Upon them are pinned the hopes of every other man. If the pitcher succeeds in deceiving the opposing batsmen and the catcher gives him good support, all will be well; but if the curves and strategies of the pitcher are readily solved, or if the catcher fails to hold him well, the field will have some sorry work to do before the nine innings are finished. Successful batteries are in great demand, and receive the highest salaries among

professional ball players. In valuing a battery the first points of consideration are their effectiveness and endurance, and then their ability to get on well with the rest of the nine.

A pitcher to-day is not a strong pitcher unless he has good command of the curves, a fair amount of speed, and ordinary accuracy. These are only the average recommendations. The crack men have these, combined with excellent judgment and unusual endurance. A pitcher who can pitch more than two games a week successfully through a season can boast of his record. Nor is a catcher much better off. His hands are liable to slight injuries which may keep him off a day or two, or, if he persists in playing, result so badly as to incapacitate him for weeks. The constant strain when under the

SLIDING TO BASE.

bat is too great for him to endure more than two or three games a week. The rest of the men can, if necessary, play their four or five games a week without serious inconvenience, but the battery requires constant care and frequent relief.

Probably no point in the game has been more developed in the last twenty years than the pitching. The old method was to deliver the ball by a perfectly straight swing, the arm passing close to the side of the body, and the ball being sent from a point below the pitcher's hip. This style of delivery would meet with such a reception from the trained batsmen of to-day that an inning would last longer than the ordinary game. The first step from this old-time true pitching was to the use of the wrist in the delivery, making what was known as an underhand throw. At just about the same time the discovery was made that a ball could be so pitched or thrown as to cause it to curve slightly from the straight line. Many were the skeptics regarding the possibility of such a thing. For a long time men versed in physical science and phenomena pooh-poohed at this, saying that it was impossible and that it was simply an optical illusion. But the ball did curve, and the first pitchers to acquire the art proved problems to the best of batsmen. The "out curve" was the one first discovered, as it is the easiest to effect. This is a delivery by a right-handed pitcher which causes the ball to curve away from a right-handed batsman. Slowly after this came the "in curve," or re-

verse of this. The "rise" and "drop," which had probably existed for some time previous, then took on definite names and became combined with the other curves. The most logical explanation of the curvature of a ball depends upon the supposition of the compression of the air just in front of the ball and a corresponding rarefaction immediately behind it, so that the ball by its friction is deflected from its true course. When the curves were mastered, the tendency of the pitchers was to bring the hand up above the hip in order to get more of a twist to the ball and thereby assist the curve. The difficulty experienced by umpires in controlling this tendency led to the adoption of a rule allowing the pitcher to deliver the ball from any point below the shoulder. This rule prevailed for a time, but no sooner were the pitchers allowed this leeway than they began to make the umpire's task equally difficult again by getting their delivery just a trifle higher than the law allowed. In order to put an end to the eternal field discussions upon this point a rule was passed permitting the pitcher to throw the ball in any way he saw fit, and this rule has met with comparatively good success. The pitcher, who had formerly been placed forty-five feet from the batsman, was relegated to a fifty-foot distance. Even then, by taking advantage of a step or two behind his line, he acquired so much speed that it became necessary to fix his position more definitely, and to-day he is even bound to the extent of the exact position of his feet when delivering the ball. In spite of all these restrictions, such is the growing skill of pitchers that the problem is constantly under discussion how to legislate in favor of the batsman.

The rest of the fielding has kept some measure of progress with the pitching, the catcher's position exhibiting the highest development. This development is fortunately accompanied by numerous safeguards against the shocks of the increased speed of the ball. The first catchers who came up under the bat were wont to wear a small piece of rubber in the mouth as a protection to the teeth from foul tips. It was not long before an inventive genius designed a wire mask which buckled about the head, and, while allowing perfect freedom and sight, rendered the catcher safe from any chance ball

striking his face. The next step was the use of a large breastplate extending quite to the legs. This is made of rubber, and inflated so as to make a yielding cushion. The gloves which the catchers have worn ever since the days of the rubber mouth-piece have also undergone radical changes, and are to-day so heavily made as thoroughly to protect both hands, leaving free only the fingers of the right hand.

Outside the battery, in these days of almost perfect fielding, the strongest factor is team play. Plenty of men can be found who can perform the ordinary duties of basemen and fielders, but the problem is to secure men for these positions who are strong batsmen and who harmonize well with one another. The usual merits for the individual positions are: in a first baseman, ability to catch bad throwing; in a second baseman, an especial capacity for covering a large amount of ground; in a third baseman, rapidity in fielding ground balls over to first. A third baseman must recover himself quickly and have a strong throw. A short-stop should be an accurate thrower, and a man of brains sufficient to take advantage of opportunities for double plays and fielding out advanced runners. The outfielders must be fast, not only in covering ground, but also in returning balls to the diamond.

Base-ball is a game for the people. The materials are inexpensive, and all that is wanted is a field. If one may judge from what one sees by the way, it is more difficult to say what will not answer for a ball-field than what will; for in spite of carts, cabs, and police, no street is too small or too crowded for Young America to make a ball-field of it. With its eager young followers everywhere and with many men now growing into the prime of life who have enjoyed it most heartily in their younger days, it is safe to say that as a sport, and as, par excellence, the American sport, it is sure of a long life.

ABRAHAM LINCOLN: A HISTORY.¹

BLAIR'S MEXICAN PROJECT—THE HAMPTON ROADS CONFERENCE—THE XIIIITH AMENDMENT.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

BLAIR'S MEXICAN PROJECT.

HE triumphant reëlection of Mr. Lincoln in November, 1864, greatly simplified the political conditions as well as the military prospects of the country. Decisive popular majorities had pointedly rebuked the individuals who proclaimed, and the party which had resolved, that the war was a failure. The verdict of the ballot-box not only decided the continuance of a war administration and a war policy, but renewed the assurance of a public sentiment to sustain its prosecution. When Congress convened on the 6th of December, and the President transmitted to that body his annual message, he included in his comprehensive review of public affairs a temperate but strong and terse statement of this fact and its potent significance. Inspired by this majestic manifestation of the popular will to preserve the Union and maintain the Constitution, he was able to speak of the future with hope and confidence. But, with characteristic prudence and good taste, he uttered no word of boasting and indulged in no syllable of acrimony; on the contrary, in terms of fatherly kindness, he again offered the rebellious States the generous conditions he had previously tendered them by various acts and declarations, and specifically in his amnesty proclamation of December 8, 1863. The statement of the whole situation with its alternative issues was so admirably compressed into the closing paragraphs of his message as to leave no room for ignorance or misunderstanding.

The national resources, then [he said], are unexhausted, and, as we believe, inexhaustible. The public purpose to reëstablish and maintain the national authority is unchanged, and, as we believe, unchangeable. The manner of continuing the effort remains to choose. On careful consideration of all the evidence accessible, it seems to me that no attempt at negotiation with the insurgent leader could result in any good. He would accept nothing short

of severance of the Union—precisely what we will not and cannot give. His declarations to this effect are explicit and oft-repeated. He does not attempt to deceive us. He affords us no excuse to deceive ourselves. He cannot voluntarily re-accept the Union; we cannot voluntarily yield it. Between him and us the issue is distinct, simple, and inflexible. It is an issue which can only be tried by war, and decided by victory. If we yield, we are beaten; if the Southern people fail him, he is beaten. Either way, it would be the victory and defeat following war. What is true, however, of him who heads the insurgent cause is not necessarily true of those who follow. Although he cannot re-accept the Union, they can. Some of them, we know, already desire peace and reunion. The number of such may increase. They can, at any moment, have peace simply by laying down their arms, and submitting to the national authority under the Constitution. After so much, the Government could not, if it would, maintain war against them. The loyal people would not sustain or allow it. If questions should remain, we would adjust them by the peaceful means of legislation, conference, courts, and votes, operating only in constitutional and lawful channels. Some certain, and other possible, questions are, and would be, beyond the Executive power to adjust; as, for instance, the admission of members into Congress, and whatever might require the appropriation of money. The Executive power itself would be greatly diminished by the cessation of actual war. Pardons and remissions of forfeitures, however, would still be within Executive control. In what spirit and temper this control would be exercised can be fairly judged of by the past. A year ago general pardon and amnesty, upon specified terms, were offered to all, except certain designated classes; and it was, at the same time, made known that the excepted classes were still within contemplation of special clemency. . . . In presenting the abandonment of armed resistance to the national authority, on the part of the insurgents, as the only indispensable condition to ending the war on the part of the Government, I retract nothing heretofore said as to slavery. I repeat the declaration made a year ago, that "While I remain in my present position I shall not attempt to retract or modify the Emancipation Proclamation, nor shall I return to slavery any person who is free by the terms of that proclamation, or by any of the acts of Congress." If the people should, by whatever mode or means, make it an Executive duty to reënslave such persons, another, and not I, must be their instrument

¹ Copyright by J. G. Nicolay and John Hay, 1886. All rights reserved.

to perform it. In stating a single condition of peace, I mean simply to say that the war will cease on the part of the Government whenever it shall have ceased on the part of those who began it.¹

The country was about to enter upon the fifth year of actual war; but at length all the indications were pointing unmistakably to a speedy collapse of the rebellion. This foreshadowed disaster to the Confederate armies gave rise to another volunteer peace project and negotiation, which, from the boldness of its animating thought and the official prominence of its actors, assumes a special historical importance.

The veteran politician Francis P. Blair, senior, who as a young journalist, thirty-five years before, had helped President Jackson throttle the South Carolina nullification; who, from his long political and personal experience at Washington, perhaps knew better than almost any one else the individual characters and tempers of Southern leaders; and who, moreover, was ambitious to crown his remarkable career with another dazzling chapter of political intrigue, conceived that the time had arrived when he might perhaps take up the rôle of a successful mediator between the North and the South. He gave various hints of his desire to President Lincoln, but received neither encouragement nor opportunity to unfold his plans. "Come to me after Savannah falls," was Lincoln's evasive reply; and when, on the 22d of December, Sherman announced the surrender of that city as a national Christmas gift, Mr. Blair hastened to put his design into execution. Three days after Christmas the President gave him a simple card bearing the words:

Allow the bearer, F. P. Blair, Sr., to pass our lines, go south, and return.

December 28, 1864.²

A. LINCOLN.

With this single credential he went to the camp of General Grant, from which he forwarded, by the usual flags of truce, the following letters to Jefferson Davis at Richmond:

HEADQUARTERS ARMIES OF THE UNITED STATES,
December 30, 1864.

JEFFERSON DAVIS, President, etc., etc.

MY DEAR SIR: The loss of some papers of importance (title papers), which I suppose may have been taken by some persons who had access to my house when Genl. Early's army were in possession of my place, induces me to ask the privilege of visiting Richmond and beg the favor of you to facilitate my inquiries in regard to them.

Your mo. ob. st.
F. P. BLAIR.³

HEADQUARTERS ARMIES OF THE UNITED STATES,
Dec'r 30, 1864.

JEFFERSON DAVIS, President, etc., etc.

MY DEAR SIR: The fact stated in the inclosed note may serve to answer inquiries as to the object of my visit, which, if allowed by you, I would not communicate fully to any one but yourself. The main purpose I have in seeing you is to explain the views I entertain in reference to the state of the affairs of our country, and to submit to your consideration ideas which in my opinion you may turn to good and possibly bring to practical results—that may not only repair all the ruin the war has brought upon the nation, but contribute to promote the welfare of other nations that have suffered from it. In candor I must say to you in advance that I come to you wholly unaccredited except in so far as I may be by having permission to pass our lines and to offer to you my own suggestions—suggestions which I have submitted to no one in authority on this side the lines, and will not, without my conversation with you may lead me to suppose they may lead to something practicable. With the hope of such result, if allowed, I will confidentially unbosom my heart frankly and without reserve. You will of course hold in reserve all that is not proper to be said to one coming, as I do, merely as a private citizen and addressing one clothed with the highest responsibilities. Unless the great interests now at stake induce you to attribute more importance to my application than it would otherwise command I could not expect that you would invite the intrusion. I venture however to submit the matter to your judgment.

Your most obedient servant,

F. P. BLAIR.⁴

Mr. Davis returned a reply with permission to make the visit; but by some mischance it did not reach Mr. Blair till after his patience had become exhausted by waiting and he had returned to Washington. Proceeding then to Richmond he was received by Jefferson Davis in a confidential interview on the 12th of January, 1865,⁵ which he so thoroughly described in a written report that it is quoted in full:

"I introduced the subject to Mr. Davis by giving him an account of the mode in which I obtained leave to go through the lines, telling him that the President stopped me when I told him 'I had kindly relations with Mr. Davis, and at the proper time I might do something towards peace,' and said, 'Come to me when Savannah falls'—how after that event he shunned an interview with me, until I perceived he did not wish to hear me, but desired I should go without explanation of my object. I then told Mr. Davis that I wanted to know, if he thought fit to communicate it, whether he had any commitments with European powers which would control his conduct in making arrangements with the Government of the United States. He said in the most de-

¹ Message, Dec. 6, 1864.

² MS.

³ Unpublished MS.

⁴ Unpublished MS.

⁵ Davis, "Rise and Fall of the Confederate Government," Vol. II., p. 612.

cisive manner that there were none, that he had no commitments; and expressed himself with some vehemence that he was absolutely free and would die a freeman in all respects. This is pretty much his language; it was his sentiment and manner certainly. I told him that that was an all-important point, for if it were otherwise I would not have another word to say. I then prefaced the reading of the paper—which I had intended to embody in a letter to him, or present in some form if I could not reach him, or if I were prevented from seeing him personally—by saying that it was somewhat after the manner of an editorial and was not of a diplomatic character, and that I was like a shoemaker who sticks to his last, and could not change my mode of expressing my thoughts; moreover, I had become an old man, and what I was about to submit to him might be the dreams of an old man, but that I depended upon his practical good sense to assure me whether they were dreams that could be realized or not; that I had no doubt that he would deal with me with the utmost frankness, and give me credit for the like candor; that he knew that every drop of my blood and that of my children flowed from a Southern source; that I loved my whole country, but could not help feeling the force of the affections which my native instincts, enforced by habit, had attached me to the South. He replied that he gave me his full confidence, knew that I was an earnest man, and believed I was an honest man, and said he reciprocated the attachment which I had expressed for him and his family; that he was under great obligations to my family for kindnesses rendered to his, that he would never forget them, and that even when dying they would be remembered in his prayers. I then read the paper to him.¹

“‘ Suggestions submitted to Jefferson Davis, President, etc., etc.

“‘ The amnesty proclamation of President Lincoln in connection with his last message to Congress, referring to the termination of the rebellion, presents a basis on which I think permanent peace and union between the warring sections of our country may be reëstablished. The amnesty offered would doubtless be enlarged to secure these objects and made to embrace all who sincerely desired to renew and confirm their allegiance to the Government of the United States by the extinction of the institution which originated the war against the National Republic. The proposition of the message is, that the war should be no longer waged by the United States against those who began it, after it had been relinquished by

¹ Unpublished MS.

them, with the designs it was meant to accomplish. This, simply as the first step to peace, is a proposal of an armistice, that, with proper conditions arranged to accommodate it to the feelings, the wishes, the interests of all concerned, might facilitate a restoration of perfect harmony among the parties to the war and lead on again the prosperity which has been so unhappily interrupted.

“‘ Slavery no longer remains an insurmountable obstruction to pacification. You propose to use the slaves in some mode to conquer a peace for the South. If this race be employed to secure the independence of the Southern States by risking their lives in the service, the achievement is certainly to be crowned with their deliverance from bondage. But why should blacks or whites, the slaves or the free, be offered as victims to slaughter to acquire freedom and independence, when both objects are now attainable without such sacrifice? The white race of the South for almost a century have justly considered themselves, both as individuals and States, free and independent. If that proud eminence can again be reached, with the addition of all the material prosperity which has distinguished the free States, without making hecatombs of either whites or blacks, merely by the manumission of the latter, why should the atonement by blood be further insisted on? Slavery, ‘‘the cause of all our woes,’’ is admitted now on all sides to be doomed. As an institution all the world condemns it.

“‘ This expiation made, what remains to distract our country? It now seems a free-will offering on the part of the South as essential to its own safety. Being made, nothing but military force can keep the North and South asunder. The people are one people, speak a common language, are educated in the same common law, are brought up in one common habitude,—the growth of republican representative institutions,—all fixed in freeholds rooted in the soil of a great luxuriant continent bound as one body by backbone mountains, pervaded in every member with gigantic streams running in every direction to give animation and strength like arteries and veins in the human system. Such an embodiment, in such a country, cannot be divided. The instruction of all ages appealing to the intelligence of the race brings conviction that union is strength—strength to build up the grandeur of the Republic; strength essential to secure the peace, the safety, the prosperity and glory of a great Republic. At the birth of the Government the necessities of commerce and the influence of social relations among a people of the same origin overcame the repugnance generated between the Northern and Southern States by the presence of negro slavery in the latter, and

brought them together as one people under a general government in spite of the revolting principle of slavery incorporated into the free system, which made liberty its essential element. Now that the ingredient, adverse to union, which produced disruption is removed, there is nothing left to counteract the powerful attraction that even as colonies brought our people together as a nation and which still resists victoriously the frenzy of revolution. The instincts of kindred, the bonds of commerce delineated on our maps, rivers, railroads, canals, which mark its transit, are circulating the life's blood of a gigantic race which claims the continent for its pedestal. The love of liberty nurtured by popular institutions, so dear to the Anglo-Saxon race, makes its attachments indestructible on this continent. We see them coming together again, after momentary rupture, along the Ohio, the Mississippi, upon the Gulf, the Potomac, and gradually in the interior wherever defense is assured from the military power that at first overthrew the Government. It is now plain to every sense that nothing but the interposition of the soldiery of foreign tyrannies can prevent all the States from resuming their places in the Union, casting from them the demon of discord. The few States remaining in arms that made the war for slavery as the *sine qua non* now propose to surrender it, and even the independence which was coveted to support it, as a price for foreign aid.

"Slavery abandoned, the issue is changed, and war against the Union becomes a war for monarchy; and the cry for independence of a government that assured the independence of the Southern States of all foreign powers and their equality in the Union, is converted into an appeal for succor to European potentates, to whom they offer, in return, homage as dependencies! And this is the price they propose to pay for success in breaking up the National Government! But will the people who have consented to wage this war for an institution once considered a property, now that they have abandoned it, continue the war to enslave themselves? Would they abandon slavery to commend themselves to the protection of European monarchies, and thus escape the embrace of that national Republic as a part of which they have enjoyed almost a century of prosperity and renown? The whole aspect of the controversy upon this view is changed. The patriarchal domestic institution given up and the idea of independence and 'being let alone' in happy isolation surrendered to obtain the boon of foreign protection under the rule of monarchy! The most modern exemplification of this programme for discontented republican States defeating their popular in-

stitution by intestine hostilities is found in the French emperor's Austrian deputy, Maximilian, sent to prescribe for their disorders. Certainly a better choice for a vice-royalty under the auspices of France and Germany could not have been made. This scion of the house of Hapsburg must have inherited from a line of ancestors extending to the Dark Ages the very innate instincts of that despotism which has manacled the little republics of Italy and the little principalities of Germany, and subjected them to the will of the Kaiser for more than a thousand years. With the blessing of Heaven, the great American Republic will foil this design of the central despotism of Europe to destroy all that remains of liberty on the civilized continents of the earth. Great Britain's jealousy and apprehension of her ancient enemy, and the ambition of Russia, looking to the South for aggrandizement, will unite in arresting the strides to power of this new Holy Alliance in the heart of Europe. England, for her wars in Europe, draws her armies from India and America. She will never consent to see France, which is a laboratory of soldiers, add to her means of creating armies by making military colonies of Mexico and the Southern States of this Union for the purpose.

"The design of Louis Napoleon in reference to conquest on this continent is not left to conjecture. With extraordinary frankness he made a public declaration that his object was to make the Latin race supreme in the southern section of the North American continent. This is a Napoleonic idea. The great Napoleon, in a letter or one of his dictations at St. Helena, states that it had been his purpose to embody an army of negroes in San Domingo, to be landed in the slave States with French support to instigate the blacks there to insurrection, and through revolution effect conquest. Louis Napoleon saw revolution involving the struggle of races and sections on the question of slavery made to his hand, when he instantly recurred to his uncle's ideas of establishing colonies to create commerce and a navy for France and to breed the material for armies to maintain his European empire. The moment he perceived our frenzied people engaged in perpetrating a national suicide he invaded Mexico to take up a position on the southern flank of this Republic, to avail himself of its distractions as well as those of Mexico, to give effect to the darling scheme of the Bonapartist dynasty to make for the Latin race in all our regions on the Gulf a seat of power under the auspices of France. His phrase "Supremacy of the Latin race" was to conciliate to his object the whole Spanish as well as the French and the mixed populations which originally founded and built up the colonies that introduced civ-

ilization around the Gulf of Mexico and on the streams of its wilderness interior. Jefferson Davis is the fortunate man who now holds the commanding position to encounter this formidable scheme of conquest, and whose fiat can at the same time deliver his country from the bloody agony now covering it in mourning. He can drive Maximilian from his American throne, and baffle the designs of Napoleon to subject our Southern people to the "Latin race." With a breath he can blow away all pretense for proscription, conscription, or confiscation in the Southern States, restore their fields to luxuriant cultivation, their ports to the commerce of the world, their constitutions and their rights under them as essentially a part of the Constitution of the United States to that strong guaranty under which they flourished for nearly a century not only as equals, but down to the hour of conflict the prevalent power on the continent. All this may be achieved by means which, so far from subjecting the weaker section of our Republic to humiliation or those asserting its cause by secession to dishonor, will add to the glory of both.

"To accomplish this great good for our common country President Lincoln has opened the way in his amnesty proclamation and the message which looks to armistice. Suppose the first enlarged to embrace all engaged in the war; suppose secret preliminaries to armistice enable President Davis to transfer such portions of his army as he may deem proper for his purpose to Texas, held out to it as the land of promise; suppose this force on the banks of the Rio Grande, armed, equipped, and provided, and Juarez propitiated and rallying the Liberals of Mexico to give it welcome and support—could it not enter Mexico in full confidence of expelling the invaders, who, taking advantage of the distractions of our own Republic, have overthrown that of Mexico and established a foreign despotism to rule that land and spread its power over ours? I know Romero, the able, patriotic minister who represents the Republic of Mexico near our Government. He is intimate with my son Montgomery, who is persuaded that he could induce Juarez to devolve all the power he can command on President Davis—a dictatorship, if necessary—to restore the rights of Mexico and her people and provide for the stability of its government. With such hopes inspiring and a veteran army of invincibles to rally on, such a force of Mexicans might be embodied as would make the conquest of the country the work of its own people under able leading. But if more force were wanted than these Mexican recruits and the army of the South would supply, would not multitudes of the army of the North, officers and men, be found ready to embark in an

enterprise vital to the interests of our whole Republic? The Republican party has staked itself on the assertion of the Monroe doctrine proposed by Canning and sanctioned by a British cabinet. The Democrats of the North have proclaimed their adhesion to it, and I doubt not from the spirit exhibited by the Congress now in session, however unwilling to declare war, it would countenance all legitimate efforts short of such result to restore the Mexican Republic. I think I could venture to pledge my son General Blair, now commanding a corps against the Confederacy, to resign his commission, expatriate himself, and join all the force he could draw to the standard borne on a crusade for the expulsion of the European despotism now threatening our confines. There is no cause so dear to the soul of American patriotism as that which embodies resistance to the intrusion of a foreign tyranny. Its infancy, nurtured in the sternest trials of a war against dictation from potentates of another hemisphere, has grown to a manhood that will never permit its approaches. He who expels the Bonaparte-Hapsburg dynasty from our southern flank, which General Jackson in one of his letters warned me was the vulnerable point through which foreign invasion would come, will ally his name with those of Washington and Jackson as a defender of the liberty of the country. If in delivering Mexico he should model its States in form and principle to adapt them to our Union and add a new Southern constellation to its benignant sky while rounding off our possession on the continent at the Isthmus, and opening the way to blending the waters of the Atlantic and Pacific, thus embracing our Republic in the arms of the ocean, he would complete the work of Jefferson, who first set one foot of our colossal government on the Pacific by a stride from the Gulf of Mexico. Such achievement would be more highly appreciated in the South, inasmuch as it would restore the equipoise between the Northern and Southern States—if indeed such sectional distinctions could be recognized after the peculiar institution which created them had ceased to exist."

It is of course possible that the hard mental processes in political metaphysics through which Jefferson Davis had forced his intellect in pursuing the ambitious hallucinations which led him from loyalty to treason, had blighted all generous sentiment and healthy imagination. But if his heart was yet capable of a single patriotic memory and impulse, strange emotions must have troubled him as he sat listening to the reading of this paper by the man who had been the familiar friend, the trusted adviser, it might almost be said the confidential voice, of Andrew Jackson. It was as

though the ghost of the great President had come from his grave in Tennessee to draw him a sad and solemn picture of the ruin and shame to which he was bringing, and had almost brought, the American Republic, especially "his people" of the Southern States—nationality squandered, slavery doomed, and his Confederacy a supplicant for life at the hands of European despotisms. If he did not correctly realize the scene and hour in all its impressiveness, he seems at least to have tacitly acknowledged that his sanguinary adventure in statesmanship was moribund, and that it was high time to listen earnestly to any scheme which might give hope of averting from himself and his adherents the catastrophe to whose near approach he could no longer shut his eyes. Mr. Blair's report thus narrates the remainder of the interview:

"I then said to him, 'There is my problem, Mr. Davis; do you think it possible to be solved?' After consideration he said, 'I think so.' I then said, 'You see that I make the great point of this matter that the war is no longer made for slavery, but monarchy. You know that if the war is kept up and the Union divided, armies must be kept afoot on both sides, and this state of things has never continued long without resulting in monarchy on one side or the other, and on both generally.' He assented to this, and with great emphasis remarked that he was like Lucius Junius Brutus, and uttered the sentiment ascribed to him in Shakspeare, without exactly quoting it:

There was a Brutus once that would have brooked
The eternal devil to keep his state in Rome
As easily as a king.

Then he said that he was thoroughly for popular government, that this feeling had been born and bred in him. Touching the project, he said, of bringing the sections together again, the great difficulty was the excessive vindictiveness produced by outrages perpetrated in the invaded States during the war. He said reconciliation must depend, he thought, upon time and events, which he hoped would restore better feelings, but that he was certain that no circumstance would have a greater effect than to see the arms of our countrymen from the North and the South united in a war upon a foreign power assailing principles of government common to both sections and threatening their destruction. And he said he was convinced that all the powers of Europe felt it their interest that our people in this quarrel should exhaust all their energies in destroying each other, and thus make them a prey to the potentates of Europe, who felt that the destruction of our Government was necessary to the maintenance of the monarchical

principles on which their own were founded. I told him that I was encouraged by finding him holding these views, and believed that our country, if impressed with them, as I thought it might be universally, would soon resume its happy unity. He said I ought to know with what reluctance he had been drawn out of the Union; that he labored to the last moment to avoid it; that he had followed the old flag longer and with more devotion than anything else on earth; that at Bull Run when he saw the flag he supposed it was his own hanging on the staff,—they were more alike then than now,—and when the flag of the United States unfurled itself in the breeze he saw it with a sigh, but he had to choose between it and his own, and he had to look to it as that of an enemy. He felt now that it was laid up, but the circumstances to which he had adverted might restore it and reconciliation be easier. With regard to Mexico, if the foreign power was driven out, it would have to depend on the events there to make it possible to connect that country with this and restore the equipoise to which I looked; nobody could foresee how things would shape themselves.

"In relation to the vindictiveness produced by the war, I said I thought he was mistaken in supposing it would be attended with great difficulty in producing reconciliation between the States and people; I told him I had spent four hours on the picket line and perceived that kind feeling existed, instead of estrangement, between the men on both sides who stood armed to shoot each other. There was nothing to prevent the immediate indulgence of hostile feelings if they felt them. But they manifested a friendly feeling. A Boston Captain Deacon, who carried me through the lines to deliver me over to Captain Davis of South Carolina, drew his bottle from his bag and proposed to drink his health. They drank together with mutual good-will and gave each other their hands. This spirit of magnanimity exists in the soldiery on both sides. It is only the politicians and those who profit, or hope to profit, by the disasters of the war who indulge in acrimony. Mr. Davis said that what I remarked was very just in the main. He admitted that it was for the most part the people at home, who brooded over the disasters of the war, who indulged in bitterness.

"Touching the matter of arrangement for reconciliation proposed by me, he remarked that all depended upon well-founded confidence, and, looking at me with very significant expression, he said, 'What, Mr. Blair, do you think of Mr. Seward?' I replied: 'Mr. Seward is a very pleasant companion; he has good social feelings, but I have no doubt that where his ambition is concerned his selfish

feelings prevail over all principle. I have no doubt he would betray any man, no matter what his obligations to him, if he stood in the way of his selfish and ambitious schemes. But,' I said, 'this matter, if entered upon at all, must be with Mr. Lincoln himself. The transaction is a military transaction, and depends entirely upon the Commander-in-Chief of our armies. If he goes into it he will certainly consider it as the affair of the military head of the Government. Now I know that Mr. Lincoln is capable of great personal sacrifices—of sacrificing the strongest feelings of his heart, of sacrificing a friend when he thinks it necessary for the good of the country; and you may rely upon it, if he plights his faith to any man in a transaction for which he is responsible as an officer or a man, he will maintain his word inviolably.' Mr. Davis said he was glad to hear me say so. He did not know Mr. Lincoln; but he was sure I did, and therefore my declaration gave him the highest satisfaction. As to Mr. Seward, he had no confidence in him himself, and he did not know any man or party in the South that had any.

"In relation to the mode of effecting the object about which we had been talking, he said we ought soon to have some understanding, because things to be done or omitted will depend upon it; that he was willing to appoint persons to have conferences, without regard to forms; that there must be some medium of communication; that he would appoint a person or persons who could be implicitly relied on by Mr. Lincoln; that he had on a former occasion indicated Judge Campbell, of the Supreme Court, as a person who could be relied on. I told him he was a person in whom I had unbounded confidence, both as regarded talents and fidelity.

"In reply to some remarks that I made as to the fame he would acquire in relieving the country from all its disasters, restoring its harmony, and extending its dominion to the Isthmus, he said what his name might be in history he cared not. If he could restore the prosperity and happiness of his country, that was the end and aim of his being. For himself, death would end his cares, and that was very easy to be accomplished.

"The next day after my first interview he sent me a note, saying he thought I might desire to have something in writing in regard to his conclusion, and therefore he made a brief statement which I brought away."¹

The substantial accuracy of Mr. Blair's re-

port is confirmed by the memorandum of the same interview which Jefferson Davis wrote at the time and has since printed.² In this conversation the rebel leader took little pains to disguise his entire willingness to enter upon the wild scheme of military conquest and annexation which could easily be read between the lines of a political crusade to rescue the Monroe doctrine from its present peril. If Mr. Blair felt elated at having so quickly made a convert of the Confederate President, he was still further gratified at discovering yet more favorable symptoms in his official surrounding at Richmond. In the three or four days he spent at the rebel capital he found nearly every prominent personage convinced of the hopeless condition of the rebellion, and even eager to seize upon any contrivance to help them out of their direful prospects. The letter which he bore from Jefferson Davis to be shown to President Lincoln was in the following language:

RICHMOND, VIRGINIA, January 12, 1865.

F. P. BLAIR, ESQ.

SIR: I have deemed it proper, and probably desirable to you, to give you, in this form, the substance of remarks made by me, to be repeated by you to President Lincoln, etc., etc. I have no disposition to find obstacles in forms, and am willing now, as heretofore, to enter into negotiations for the restoration of peace; and am ready to send a commission whenever I have reason to suppose it will be received, or to receive a commission, if the United States Government shall choose to send one. That, notwithstanding the rejection of our former offers, I would, if you could promise that a commissioner, minister, or other agent would be received, appoint one immediately, and renew the effort to enter into conference, with a view to secure peace to the two countries.

Yours, etc.,

JEFFERSON DAVIS.³

But the Government councils at Washington were not ruled by the spirit of political adventure. Abraham Lincoln had a loftier conception of patriotic duty and a higher ideal of national ethics. The proposal to divert his nation, "conceived in Liberty," from its grand task of preserving for humanity "government of the people, by the people, for the people," and degrade its heroic struggle and sacrifice to the low level of a joint filibustering foray, which, instead of crowning his work of emancipation, might perhaps eventuate in a renewal, extension, and perpetuation of slavery, did not receive from him an instant's consideration. His whole interest in Mr. Blair's mission was in the despondency of the rebel leaders which it disclosed, and the possibility of bringing them to an acknowledgment of their despair and the abandonment of their resistance. His only response to the overture thus half officially brought to his notice was to open the door of negotiation a little wider than he had done

¹ Unpublished MS.

³ "House Journal," 2d Session 38th Congress, p. 229.

before, but for the specific and exclusive objects of union and peace. As an answer to Jefferson Davis's note he therefore wrote Mr. Blair the following :

WASHINGTON, January 18, 1865.

F. P. BLAIR, Esq.

SIR: You having shown me Mr. Davis's letter to you of the 12th instant, you may say to him that I have constantly been, am now, and shall continue ready to receive any agent whom he, or any other influential person now resisting the national authority, may informally send to me, with the view of securing peace to the people of our one common country.

Yours, etc.,

A. LINCOLN.¹

With this note Mr. Blair returned to Richmond, giving Mr. Davis such feeble excuses as he could hastily frame why Mr. Lincoln had rejected his overture for a joint invasion of Mexico,² alleging that Mr. Lincoln was embarrassed by radical politicians and could not use "political agencies." Mr. Blair then, but again without authority, proposed a new project, namely, that Grant and Lee should enter into negotiations, the scope and object of which, however, he seems to have left altogether vague. The simple truth is evident that Mr. Blair was, as best he might, covering his retreat from an abortive intrigue. He soon reported to Davis that military negotiation was out of the question.

Jefferson Davis therefore had only two alternatives before him—either to repeat his stubborn ultimatum of separation and independence, or frankly to accept Lincoln's ultimatum of reunion. The principal Richmond authorities knew, and some of them had tacitly admitted, that their Confederacy was nearly in collapse. Vice-President Stephens, in a secret speech to the rebel Senate, had pointed out that "we could not match our opponents in numbers, and should not attempt to cope with them in direct physical power," and advocated a Fabian policy which involved the abandonment of Richmond.³ Judge Campbell, rebel Assistant Secretary of War, had collected facts and figures, which a few weeks later he embodied in a formal report, showing the South to be in practical exhaustion.⁴ Lee sent

a dispatch saying he had not two days' rations for his army.⁵ Richmond was already in a panic at rumors of evacuation. Flour was selling at a thousand dollars a barrel in Confederate currency. The recent fall of Fort Fisher had closed the last avenue through which blockade runners could bring them foreign supplies. Governor Brown of Georgia was refusing to obey orders from Richmond and characterizing them as "usurping" and "despotic."⁶ Under such circumstances a defiant cry of independence would not reassure anybody; nor, on the other hand, was it longer possible to remain silent. Mr. Blair's first visit to Richmond had created general interest. Old friends plied him with eager questions and laid his truthful answers concerning their gloomy prospects solemnly to heart. The fact of his secret consultation with Davis transpired. When Mr. Blair came a second time and held a second secret consultation with the rebel President wonder and rumor rose to fever heat.

Impelled to take action, Mr. Davis had not the courage to be frank. He called, first, Vice-President Stephens, and afterward his cabinet, to a discussion of the project. A peace commission of three was appointed, consisting of Alexander H. Stephens, Vice-President; R. M. T. Hunter, senator and ex-Secretary of State; and John A. Campbell, Assistant Secretary of War—all of them convinced that the rebellion was hopeless, and yet unwilling to admit the logical consequences and necessities. The drafting of instructions for the guidance of the commissioners was a difficult problem, since the explicit condition prescribed by Mr. Lincoln's note was that he would only receive an agent sent him "with the view of securing peace to the people of our one common country." The astute Mr. Benjamin, rebel Secretary of State, in order to make the instructions "as vague and general as possible," proposed the simple direction to confer "upon the subject to which it relates."⁷ His action and language were broad enough to carry the inference that in his secret heart he too was sick of rebellion and ready to make terms. Whether it was so meant or not, his chief refused to receive the delicate suggestion.

¹ "House Journal," 2d Session 38th Congress, p. 229.

² "He [Blair] then unfolded to me [writes Davis] the embarrassment of Mr. Lincoln on account of the extreme men, in Congress and elsewhere, who wished to drive him into harsher measures than he was inclined to adopt; whence it would not be feasible for him to enter into any arrangement with us by the use of political agencies; that if anything beneficial could be effected it must be done without the intervention of the politicians. He therefore suggested that Generals Lee and Grant might enter into an arrangement by which hostilities would be suspended, and a way paved for the restoration of peace. I responded that I would

willingly intrust to General Lee such negotiation as was indicated." [Davis, "Rise and Fall of the Confederate Government," Vol. II., pp. 616, 617.]

⁶ *Ibid.*, p. 395.

⁷ Benjamin to Davis, May 17, 1877. "Southern Historical Papers," Vol. IV., pp. 212-214.

With the ruin and defeat of the Confederate cause staring him full in the face Davis could bring himself neither to a dignified refusal nor to a resigned acceptance of the form of negotiation as Mr. Lincoln had tendered it. Even in this gulf of war and destitution into which he had led his people he could not forego the vanity of masquerading as a champion. He was unwilling, says Mr. Benjamin, to appear to betray his trust as Confederate President. "You thought, from regard to your personal honor, that your language ought to be such as to render impossible any malignant comment on your actions."¹ But if so, why not adopt the heroic alternative and refuse to negotiate? Why resort to the yet more humiliating absurdity of sending a commission on terms which he knew Mr. Lincoln had pointedly rejected?² With greater sacrifice of personal dignity the Confederate President adopted the devious alternative—a continuation of the narrow, unmanly, pettifogging misrepresentation with which Southern leaders had deluded the Southern people. Instead of Mr. Benjamin's phraseology, Jefferson Davis wrote the following instruction to the commissioners, which carried a palpable contradiction on its face:

RICHMOND, January 28, 1865.

In conformity with the letter of Mr. Lincoln, of which the foregoing is a copy, you are requested to proceed to Washington City for informal conference with him upon the issues involved in the existing war, and for the purpose of securing peace to the two countries. Your obedient servant,

JEFFERSON DAVIS.³

THE HAMPTON ROADS CONFERENCE.

WITH this double-meaning credential the commissioners presented themselves at the Union lines near Richmond on the evening of January 29, 1865, and, instead of frankly showing their authority, asked admission "in accordance with an understanding claimed to exist with Lieutenant-General Grant, on their way to Washington as peace commissioners."⁴ The application being telegraphed to Washington, Mr. Stanton answered that no one should be admitted under such character or profession until the President's instructions were received.⁵ Mr. Lincoln, being apprised of the application, promptly dispatched a

special messenger with written directions to admit the commissioners under safe conduct if they would say in writing that they came for the purpose of an informal conference on the basis of his note of January 18 to Mr. Blair, "with a view of securing peace to the people of our one common country."⁶ Before this messenger arrived, however, the commissioners reconsidered the form of their application and addressed a new one to General Grant, asking permission "to proceed to Washington to hold a conference with President Lincoln upon the subject of the existing war, and with a view of ascertaining upon what terms it may be terminated, in pursuance of the course indicated by him in his letter to Mr. Blair of January 18, 1865."⁷

Pursuant to this request, they were provisionally conveyed to Grant's headquarters. One of them records with evident surprise the unostentatious surroundings of the General-in-Chief.

I was instantly struck with the great simplicity and perfect naturalness of his manners, and the entire absence of everything like affectation, show, or even the usual military air or *mien* of men in his position. He was plainly attired, sitting in a log-cabin, busily writing on a small table, by a kerosene lamp. It was night when we arrived. There was nothing in his appearance or surroundings which indicated his official rank. There were neither guards nor aids about him. . . . He furnished us with comfortable quarters on board one of his dispatch boats. The more I became acquainted with him, the more I became thoroughly impressed with the very extraordinary combination of rare elements of character which he exhibited. During the time he met us frequently and conversed freely upon various subjects, not much upon our mission. I saw, however, very clearly that he was very anxious for the proposed conference to take place.⁸

The commissioners' note to Grant had been a substantial compliance with the requirements of President Lincoln; and so accepting it, he, on the 31st of January, sent Secretary Seward to meet them, giving him for this purpose the following written instructions:

EXECUTIVE MANSION,

WASHINGTON, January 31, 1865.

Hon. WILLIAM H. SEWARD, Secretary of State:

You will proceed to Fortress Monroe, Virginia, there to meet and informally confer with Messrs.

'the two countries,' to which Mr. Davis replied that he so understood it. A. LINCOLN."

² [INDORSEMENT BY MR. LINCOLN.]

"To-day [January 28] Mr. Blair tells me that on the 21st instant he delivered to Mr. Davis the original, of which the within is a copy, and left it with him; that at the time of delivering it Mr. Davis read it over twice in Mr. Blair's presence, at the close of which he (Mr. Blair) remarked that the part about 'our one common country' related to the part of Mr. Davis's letter about

Stephens, Hunter, and Campbell, on the basis of my letter to F. P. Blair, Esq., of January 18, 1865, a copy of which you have. You will make known to them that three things are indispensable, to wit: *First*, the restoration of the national authority throughout all the States. *Second*, no receding by the Executive of the United States on the slavery question from the position assumed thereon in the late annual message to Congress, and in preceding documents. *Third*, no cessation of hostilities short of an end of the war, and the disbanding of all forces hostile to the Government. You will inform them that all propositions of theirs, not inconsistent with the above, will be considered and passed upon in a spirit of sincere liberality. You will hear all they may choose to say, and report to me. You will not assume to definitely consummate anything.

Yours, etc.,

ABRAHAM LINCOLN.¹

Mr. Seward started on the morning of February 1, and simultaneously with his departure the President repeated to General Grant the monition which the Secretary of War had already sent him two days before through the special messenger, "Let nothing which is transpiring change, hinder, or delay your military movements or plans."² Grant responded to the order, promising that no armistice should ensue, adding, "The troops are kept in readiness to move at the shortest notice, if occasion should justify it."³ The special messenger, Major Thomas J. Eckert, arrived while Mr. Seward was yet on his way. On informing the commissioners of the President's exact requirement, they replied by presenting Jefferson Davis's instruction. This was receding from the terms contained in their note to Grant, and Major Eckert promptly notified them that they could not proceed further unless they complied strictly with President Lincoln's terms. Thus at half-past nine on the night of February 1 the mission of Stephens, Hunter, and Campbell was practically at an end. It was never explained why they took this course, for the next day they again changed their minds. The only conjecture which seems plausible is that they hoped to persuade General Grant to take some extraordinary and dictatorial step. One of them hints as much in a newspaper article written long after the war. "We had tried," he wrote, "to intimate to General Grant, before we reached Old Point, that a settlement generally satisfactory to both sides could be more easily effected through him and General Lee by an armistice than in any other way. The attempt was in vain."⁴ The general had indeed

listened to them, with great interest; and in their eagerness to convert him they had probably indulged in stronger phrases of repentance than they felt. About an hour after the commissioners refused Major Eckert's ultimatum General Grant telegraphed the following to Secretary Stanton, from which it will be seen that at least two of the commissioners had declared to him their personal willingness "to restore peace and union."

February 1, 10.30 P. M., 1865.

Hon. EDWIN M. STANTON, Secretary of War:

Now that the interview between Major Eckert, under his written instructions, and Mr. Stephens and party has ended, I will state confidentially, but not officially, to become a matter of record, that I am convinced, upon conversation with Messrs. Stephens and Hunter, that their intentions are good and their desire sincere to restore peace and union. I have not felt myself at liberty to express even views of my own, or to account for my reticency. This has placed me in an awkward position, which I could have avoided by not seeing them in the first instance. I fear now their going back without any expression from any one in authority will have a bad influence. At the same time I recognize the difficulties in the way of receiving these informal commissioners at this time, and do not know what to recommend. I am sorry, however, that Mr. Lincoln cannot have an interview with the two named in this dispatch, if not all three now within our lines. Their letter to me was all that the President's instructions contemplated to secure their safe conduct, if they had used the same language to Major Eckert.

U. S. GRANT, Lieut.-General.⁵

On the morning of February 2, President Lincoln went to the War Department, and, reading Major Eckert's report, was about to recall Mr. Seward by telegraph, when Grant's dispatch was placed in his hands. The communication served to change his purpose. Resolving not to neglect the indications of sincerity here described, he immediately telegraphed in reply, "Say to the gentlemen I will meet them personally at Fortress Monroe as soon as I can get there."⁶ The commissioners by this time had decided to accept Mr. Lincoln's terms, which they did in writing to both Major Eckert and General Grant, and thereupon were at once conveyed from General Grant's headquarters at City Point to Fort Monroe, where Mr. Lincoln joined Secretary Seward on the same night.

On the morning of February 3, 1865, the rebel commissioners were conducted on board the *River Queen*, lying at anchor near Fort Monroe, where President Lincoln and Secretary Seward awaited them; and in the saloon of that steamer an informal conference of four hours' duration ensued. It was agreed beforehand that no writing or memorandum should be made at the time, so that the record of the interview remains only in the separate accounts

which each of the rebel commissioners afterward wrote out from memory, neither Mr. Seward nor President Lincoln ever having made any report in detail. Former personal acquaintance made the beginning easy and cordial, through pleasant reminiscences of the past and mutual inquiries after friends. In a careful analysis of these reports, thus furnished by the Confederates themselves, the first striking feature is the difference of intention between the parties. It is apparent that Mr. Lincoln went, honestly and frankly in all friendliness, to offer them the best terms he could to secure peace and reunion, but to abate no jot of official duty and personal dignity; while the main thought of the commissioners was to evade the express condition on which they had been admitted to conference; to seek to postpone the vital issue; and to propose an armistice, by debating a mere juggling expedient, against which they had in a private agreement with one another already committed themselves.

Mr. Stephens began the discussion by asking whether there was no way of restoring the harmony and happiness of former days; to which Mr. Lincoln replied, "There was but one way that he knew of, and that was, for those who were resisting the laws of the Union to cease that resistance." Mr. Stephens rejoined that they had been induced to believe that both parties might for a while leave their present strife in abeyance and occupy themselves with some continental question till their anger should cool and accommodation become possible.

Here Mr. Lincoln interposed promptly and frankly: "I suppose you refer to something that Mr. Blair has said. Now it is proper to state at the beginning that whatever he said was of his own accord, and without the least authority from me. When he applied for a passport to go to Richmond, with certain ideas which he wished to make known to me, I told him flatly that I did not want to hear them. If he desired to go to Richmond of his own accord, I would give him a passport; but he had no authority to speak for me in any way whatever. When he returned and brought me Mr. Davis's letter, I gave him the one to which you alluded in your application for leave to cross the lines. I was always willing to hear propositions for peace on the conditions of this letter, and on no other. The restoration of the Union is a *sine qua non* with me, and hence my instructions that no conference was to be held except upon that basis."

Despite this express disavowal Mr. Stephens persisted in believing that Mr. Lincoln had come with ulterior designs, and went on at considerable length to elaborate his idea of a

joint Mexican expedition, to be undertaken during an armistice and without a prior pledge of ultimate reunion. Such an expedition, he argued, would establish the "right of self-government to all peoples on this continent against the dominion or control of any European power." Establishing this principle of the right of peoples to self-government would necessarily also establish, by logical sequence, the right of States to self-government; and, present passions being cooled, there would ensue "an Ocean-bound Federal Republic, under the operation of this *Continental Regulator*—the ultimate absolute sovereignty of each State." His idea was that "All the States might reasonably be expected, very soon, to return, of their own accord, to their former relations to the Union, just as they came together at first by their own consent, and for their mutual interests. Others, too, would continue to join it in the future, as they had in the past. This great law of the system would effect the same certain results in its organization as the law of gravitation in the material world."¹

Mr. Stephens does not seem to have realized how comically absurd was his effort to convert President Lincoln to the doctrine of secession by this very transparent bit of cunning, and the others listened with considerate and patient gravity. Mr. Seward at length punctured the bubble with a few well-directed sentences, when Mr. Hunter also intervened to express his entire dissent from Mr. Stephens's proposal. "In this view," reports Mr. Stephens naively, "he expressed the joint opinion of the commissioners; indeed, we had determined not to enter into any agreement that would require the Confederate arms to join in any invasion of Mexico."² But the rebel Vice-President fails to record why, under these circumstances, he had opened this useless branch of the discussion.

At this stage President Lincoln brought back the conversation pointedly to the original object of the conference:

He repeated that he could not entertain a proposition for an armistice on any terms while the great and vital question of reunion was undisposed of. That was the first question to be settled. He could enter into no treaty, convention, or stipulation, or agreement with the Confederate States, jointly or separately, upon that or any other subject, but upon the basis first settled that the Union was to be restored. Any such agreement, or stipulation, would be a *quasi* recognition of the States then in arms against the National Government, as a separate power. That he never could do.³

¹ Stephens, "War between the States," Vol. II., pp. 600-604.

² *Ibid.*, p. 608.

³ Stephens, "War between the States," Vol. II., p. 608.

This branch of the discussion [also reports Judge Campbell] was closed by Mr. Lincoln, who answered that it could not be entertained; that there could be no war without the consent of Congress, and no treaty without the consent of the Senate of the United States; that he could make no treaty with the Confederate States, because that would be a recognition of those States, and that this could not be done under any circumstances; that unless a settlement were made there would be danger that the quarrel would break out in the midst of the joint operations; that one party might unite with the common enemy to destroy the other; that he was determined to do nothing to suspend the operations for bringing the existing struggle to a close to attain any collateral end. Mr. Lincoln in this part of the conversation admitted that he had power to make a military convention, and that his arrangements under that might extend to settle several of the points mentioned, but others it could not.¹

The sophistical theory of secession as a conservative principle, and the filibustering bait of a joint expedition to steal Mexico under guise of enforcing the Monroe doctrine, being thus effectually cleared away, the discussion at length turned to the only reasonable inquiry which remained. Judge Campbell asked how restoration could be brought about if the Confederate States would consent, mentioning important questions, such as the disbandment of the army, confiscation acts on both sides, the effect of the Emancipation Proclamation, representation in Congress, the division of Virginia, and so on, which would inevitably arise and require immediate adjustment. On these various topics much conversation ensued, which, even as briefly reported, is too long to be quoted entire. It will be more useful to condense, under specific headings, the substantial declarations and offers which the commissioners report Mr. Lincoln to have made.

I. RECONSTRUCTION.—The shortest way the insurgents could effect this, he said, was "by disbanding their armies and permitting the national authorities to resume their functions." Mr. Seward called attention to that phrase of his annual message where he had declared, "In stating a single condition of peace, I mean simply to say that the war will cease on the part of the Government whenever it shall have ceased on the part of those who began it." As to the rebel States being admitted to representation in Congress, "Mr. Lincoln very promptly replied that his own individual opinion was they ought to be. He also thought they would be; but he could not enter into any stipulation upon the subject. His own opinion was that when the resistance ceased and the national authority was recognized the States would be immediately restored to their practical relations to the Union."

II. CONFISCATION ACTS.—"Mr. Lincoln said that so far as the confiscation acts and other penal acts were concerned, their enforcement was left entirely with him, and on that point he was perfectly willing to be full and explicit, and on his assurance perfect reliance might be placed. He should exercise the power of the Executive with the utmost liberality."² "As to all questions," says Judge Campbell's report, "involving rights of property, the courts could determine them, and that Congress would no doubt be liberal in making restitution of confiscated property, or by indemnity, after the passions that had been excited by the war had been composed."³

III. THE EMANCIPATION PROCLAMATION.—"Mr. Lincoln said that was a judicial question. How the courts would decide it he did not know, and could give no answer. His own opinion was, that as the proclamation was a war measure, and would have effect only from its being an exercise of the war power, as soon as the war ceased it would be inoperative for the future. It would be held to apply only to such slaves as had come under its operation while it was in active exercise. This was his individual opinion, but the courts might decide the other way, and hold that it effectually emancipated all the slaves in the States to which it applied at the time. So far as he was concerned, he should leave it to the courts to decide. He never would change or modify the terms of the proclamation in the slightest particular."

At another point in the conversation "He said it was not his intention in the beginning to interfere with slavery in the States; that he never would have done it if he had not been compelled by necessity to do it to maintain the Union; that the subject presented many difficult and perplexing questions to him; that he had hesitated for some time, and had resorted to this measure only when driven to it by public necessity; that he had been in favor of the General Government prohibiting the extension of slavery into the Territories, but did not think that that Government possessed power over the subject in the States, except as a war measure; and that he had always himself been in favor of emancipation, but not immediate emancipation, even by the States. Many evils attending this appeared to him."

Recurring once more to the subject of emancipation, "He went on to say that he would be willing to be taxed to remunerate the South-

³ Campbell in "Southern Magazine," December, 1874, p. 192.

ern people for their slaves. He believed the people of the North were as responsible for slavery as the people of the South; and if the war should then cease, with the voluntary abolition of slavery by the States, he should be in favor, individually, of the Government paying a fair indemnity for the loss to the owners. He said he believed this feeling had an extensive existence at the North. He knew some who were in favor of an appropriation as high as four hundred millions of dollars for this purpose. I could mention persons, said he, whose names would astonish you, who are willing to do this if the war shall now cease without further expense, and with the abolition of slavery as stated. But on this subject, he said, he could give no assurance—enter into no stipulation. He barely expressed his own feelings and views, and what he believed to be the views of others upon the subject.”

IV. THE DIVISION OF VIRGINIA.—“Mr. Lincoln said he could only give an individual opinion, which was, that Western Virginia would be continued to be recognized as a separate State in the Union.”

V. THE XIIITH AMENDMENT.—Mr. Seward brought to the notice of the commissioners one topic which to them was new; namely, that only a few days before, on the 31st of January, Congress had passed the XIIIth Amendment to the Constitution, which, when ratified by three-fourths of the States, would effect an immediate abolition of slavery throughout the entire Union. The reports of the commissioners represent Mr. Seward as saying that if the South would submit and agree to immediate restoration, the restored States might yet defeat the ratification of this amendment, intimating that Congress had passed it “under the predominance of revolutionary passion,” which would abate on the cessation of the war. It may well be doubted whether Mr. Seward stated the case as strongly as the commissioners intimate, since he himself, like Mr. Lincoln and his entire cabinet, had favored the measure. It is probable that the commissioners allowed their own feelings and wishes to color too strongly the hypothesis he stated, and to interpret as a probability what he mentioned as only among the possible events of the future.

It will be seen that in what he said upon these various propositions Mr. Lincoln was always extremely careful to discriminate between what he was under the Constitution authorized to do as Executive, and what would devolve upon coördinate branches of the Government under their own powers and limitations. With the utmost circumspection he pointed out the distinctions between his personal opinions and wishes and his official authority. More especially, however, did he repeat and emphasize

the declaration that he would do none of the things mentioned or promised without a previous pledge of reunion and cessation of resistance. “Even in case the Confederate States should entertain the proposition of a return to the Union,” says Mr. Stephens’s narrative, “he persisted in asserting that he could not enter into any agreement upon this subject [reconstruction], or upon any other matters of that sort, with parties in arms against the Government.” Mr. Hunter interposed, and in illustration of the propriety of the Executive entering into agreements with persons in arms against the acknowledged rightful public authority referred to repeated instances of this character between Charles I. of England and the people in arms against him. Mr. Lincoln in reply to this said: “I do not profess to be posted in history. On all such matters I will turn you over to Seward. All I distinctly recollect about the case of Charles I. is that he lost his head.” The pertinent retort reduced Mr. Hunter to his last rhetorical resource—a wail of protest, in the very worst tone of sectional egotism, that the Confederate States and their people were by these terms forced to unconditional surrender and submission. To this Mr. Seward replied with patience and dignity “That no words like unconditional submission had been used, or any importing or justly implying degradation, or humiliation even, to the people of the Confederate States. . . . Nor did he think that in yielding to the execution of the laws under the Constitution of the United States, with all its guarantees and securities for personal and political rights, as they might be declared to be by the courts, could be properly considered as unconditional submission to conquerors, or as having anything humiliating in it. The Southern people and the Southern States would be under the Constitution of the United States, with all their rights secured thereby, in the same way, and through the same instrumentalities, as the similar rights of the people of the other States were.”

The reader will recall that in his last annual message President Lincoln declared his belief, based “on careful consideration of all the evidence accessible,” that it was useless to attempt to negotiate with Jefferson Davis, but that the prospect would be better with his followers. Mr. Lincoln had evidently gone to Fort Monroe in hope of making some direct impression upon Stephens and Hunter, whom Grant represented as having such good intentions “to restore peace and union.” He did not neglect to try this joint of the rebel commissioners’ armor. Seizing the proper opportunity, he pressed upon Stephens the suggestion of separate State action to bring about a cessation of hostilities. Addressing him, he said:

If I resided in Georgia, with my present sentiments, I'll tell you what I would do if I were in your place. I would go home and get the governor of the State to call the legislature together, and get them to recall all the State troops from the war; elect senators and members to Congress, and ratify this constitutional amendment prospectively, so as to take effect—say in five years. Such a ratification would be valid, in my opinion. I have looked into the subject, and think such a prospective ratification would be valid. Whatever may have been the views of your people before the war, they must be convinced now that slavery is doomed. It cannot last long in any event, and the best course, it seems to me, for your public men to pursue would be to adopt such a policy as will avoid, as far as possible, the evils of immediate emancipation. This would be my course, if I were in your place.

The salutary advice was wasted. Mr. Stephens was a very incarnation of political paradoxes. Perhaps in all the South there was not another man whose personal desires were so moderate and correct, and whose political theories were so radical and wrong. At the beginning he had opposed secession as premature and foolish, war as desperate and ruinous; yet, against his better judgment, he had followed his "corner-stone" theory of slavery and his "supremacy" theory of States rights to the war and the ruin he foretold. Now, at the end of four years' experiment, he still clung obstinately to his new theory of secession as a "continental regulator," and the vain hope that Mr. Lincoln would yet adopt it. When at last the parties were separating, with friendly handshakings, he asked Mr. Lincoln to reconsider the plan of an armistice on the basis of a Mexican expedition. "Well, Stephens," replied Mr. Lincoln, "I will reconsider it; but I do not think my mind will change." And so ended the Hampton Roads conference.¹

The commissioners returned to Richmond in great disappointment, and communicated the failure of their efforts to Jefferson Davis, whose chagrin was as great as their own. They had all caught eagerly at the hope that this negotiation would somehow extricate them from the dilemmas and dangers whose crushing portent they realized, but had no power to

avert except by surrender; and now, when this last hope failed them, they were doubly cast down. Campbell says he "favored negotiations for peace"²—doubtless meaning by this language that he advocated the acceptance of the proffered terms. Stephens yet believed that Mr. Lincoln would be tempted by the Mexican scheme and would reconsider his decision. He therefore advised that the results of the meeting should be kept secret; and when the other commissioners and Davis refused to follow this advice, he gave up the Confederate cause as hopeless, withdrew from Richmond, abandoned the rebellion, and went into retirement.³ His signature to the brief public report of the commissioners stating the result of the Hampton Roads conference was his last participation in the ill-starred enterprise.

Davis took the only course open to him after refusing the honorable peace which Mr. Lincoln had tendered. He transmitted the commissioners' report to the rebel Congress with a brief and dry message, stating that the enemy refused any terms except those the conqueror may grant; and then arranged as vigorous an effort as the circumstances permitted, once more to "fire the Southern heart." A public meeting was called, and on the evening of February 6 Jefferson Davis and others made speeches at the African Church,⁴ which, judging from the meager reports that were printed, were as denunciatory and bellicose as the bitterest Confederate could have wished. Davis, particularly, is represented to have excelled himself in that lurid flow of partisan passion and vaunting prophecy which he so effectively used upon Southern listeners for many years. "Sooner than we should ever be united again," he said, "he would be willing to yield up everything he had on earth—if it were possible he would sacrifice a thousand lives"; and further announced his confidence that they would yet "compel the Yankees, in less than twelve months, to petition us for peace on our own terms."⁵ He denounced President Lincoln as "His Majesty Abraham the First," and said "before the campaign was over he aters, and swelled the eloquence of this last grand appeal to the people and armies of the South. . . . It was an extraordinary day in Richmond; vast crowds huddled around the stands of the speakers or lined the streets; and the air was vocal with the efforts of the orator and the responses of his audience. It appeared indeed that the blood of the people had again been kindled. But it was only the sickly glare of an expiring flame; there was no steadiness in the excitement; there was no virtue in the huzzas; the inspiration ended with the voices and ceremonies that invoked it; and it was found that the spirit of the people of the Confederacy was too weak, too much broken, to react with effect or assume the position of erect and desperate defiance." [Pollard, "The Lost Cause," pp. 684, 685.]

⁵ "Richmond Dispatch," Feb. 7, 1865.

¹ Stephens, "War between the States," Vol. II., pp. 610-618.

² Campbell, "Recollections," etc. Pamphlet.

³ Stephens, "War between the States," Vol. II., pp. 224-226.

⁴ This meeting at the African Church was supplemented, a few days later, by a grand concerted effort at public speech-making at different places in Richmond, intended to electrify the South. Pollard, the Southern historian, thus describes it: "All business was suspended in Richmond; at high noon processions were formed to the different places of meeting; and no less than twenty different orators, composed of the most effective speakers in Congress and the cabinet, and the most eloquent divines of Richmond, took their stands in the halls of legislation, in the churches and the the-

and Seward might find 'they had been speaking to their masters.'"¹

This extravagance of impotent anger, this rage of baffled ambition, would seem merely pitifully grotesque were it not rendered ghastly by the reflection that it was the signal which carried many additional thousands of brave soldiers to bloody graves in continuing a palpably hopeless military struggle.

THE XIIIITH AMENDMENT.

WE have enumerated with some detail the series of radical antislavery measures enacted at the second session of the Thirty-seventh Congress, which ended July 17, 1862—the abolition of slavery in the District of Columbia; the prohibition of slavery in the national Territories; the practical repeal of the fugitive slave law; and the sweeping measures of confiscation which in different forms decreed forfeiture of slave property for the crimes of treason and rebellion. When this wholesale legislation was supplemented by the President's preliminary Emancipation Proclamation of September 22, 1862, and his final edict of freedom of January 1, 1863, the institution had clearly received its *coup de grâce* in all except the loyal border States. Consequently the third session of the Thirty-seventh Congress ending March 4, 1863, occupied itself with this phase of the slavery question only to the extent of an effort to put into operation the President's plan of compensated abolishment. That effort took practical shape in a bill to give the State of Missouri fifteen millions on condition that she would emancipate her slaves; but the proposition failed, largely through the opposition of a few conservative members from Missouri, and the session adjourned without having by its legislation advanced the destruction of slavery.

When Congress met again in December, 1863, and organized by the election of Schuyler Colfax of Indiana as Speaker, the whole situation had undergone further change. The Union arms had been triumphant—Gettysburg had been won and Vicksburg had capitulated; Lincoln's edict of freedom had become an accepted fact; fifty regiments of negro soldiers carried bayonets in the Union armies; Vandalism had been beaten for governor in Ohio by a hundred thousand majority; the draft had been successfully enforced in every district of every loyal State in the Union. Under these brightening prospects, military and political, the more progressive spirits in Con-

gress took up anew the suspended battle with slavery which the institution had itself invited by its unprovoked assault on the life of the Government.

The President's reference to the subject in his annual message was very brief:

The movements [said he] by State action for emancipation in several of the States not included in the Emancipation Proclamation are matters of profound gratulation. And while I do not repeat in detail what I have heretofore so earnestly urged upon this subject, my general views and feelings remain unchanged; and I trust that Congress will omit no fair opportunity of aiding these important steps to a great consummation.²

His language had reference to Maryland, where during the autumn of 1863 the question of emancipation had been actively discussed by political parties, and where at the election of November 4, 1863, a legislature had been chosen containing a considerable majority pledged to emancipation.

More especially did it refer to Missouri, where, notwithstanding the failure of the fifteen-million compensation bill at the previous session, a State convention had actually passed an ordinance of emancipation, though with such limitations as rendered it unacceptable to the more advanced public opinion of the State. Prudence was the very essence of Mr. Lincoln's statesmanship, and he doubtless felt it was not safe for the Executive to venture farther at that time. "We are like whalers," he said to Governor Morgan one day, "who have been on a long chase: we have at last got the harpoon into the monster, but we must now look how we steer, or with one 'flop' of his tail he will yet send us all into eternity."³

Senators and members of the House, especially those representing antislavery States or districts, did not need to be so circumspect. It was doubtless with this consciousness that J. M. Ashley, a Republican representative from Ohio, and James F. Wilson, a Republican representative from Iowa, on the 14th of December, 1863,—that being the earliest opportunity after the House was organized,—introduced, the former a bill and the latter a joint resolution to propose to the several States an amendment of the Constitution prohibiting slavery throughout the United States. Both the propositions were referred to the Committee on the Judiciary, of which Mr. Wilson was chairman; but before he made any report on the subject it had been brought before the Senate, where its discussion attracted marked public attention.

Senator John B. Henderson, who with rare courage and skill had, as a progressive conservative, made himself one of the leading champions of Missouri emancipation, on the 11th of January, 1864, introduced into the

¹ Jones, "A Rebel War Clerk's Diary," Vol. II., p. 411.

² Message, Dec. 8, 1863.

³ Carpenter in Raymond, "Life of Abraham Lincoln," p. 752.

Senate a joint resolution proposing an amendment to the Constitution that slavery shall not exist in the United States.¹ It is not probable that either he or the Senate saw any near hope of success in such a measure. The resolution went to the Senate Committee on the Judiciary, where it caused some discussion, but apparently without being treated as a matter of pressing importance. Nearly a month had elapsed when Mr. Sumner also introduced a joint resolution, proposing an amendment that "Everywhere within the limits of the United States, and of each State or Territory thereof, all persons are equal before the law, so that no person can hold another as a slave."² He asked its reference to the select committee on slavery, of which he was chairman; but several senators argued that such an amendment properly belonged to the Committee on the Judiciary, and in this reference Mr. Sumner finally acquiesced. It is possible that this slight and courteously worded rivalry between the two committees induced earlier action than would otherwise have happened, for two days later — February 10 — Mr. Trumbull, chairman of the Judiciary Committee, reported back a substitute in the following language, differing from the phraseology of both Mr. Sumner and Mr. Henderson :

ARTICLE XIII.

SECTION 1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

SECT. 2. Congress shall have power to enforce this article by appropriate legislation.³

Even after the Committee on the Judiciary by this report had adopted the measure, it was evidently thought to be merely in an experimental or trial stage, for more than six weeks elapsed before the Senate again took it up for action. On the 28th of March, however, Mr. Trumbull formally opened debate upon it in an elaborate speech. The discussion was continued from time to time until April 8. As the Republicans had almost unanimous control of the Senate, their speeches, though able and eloquent, seemed perfunctory and devoted to a foregone conclusion. Those which attracted most attention were the arguments of Reverdy Johnson of Maryland and Mr. Henderson of Missouri,—senators representing slave States,—advocating the amendment. Senator Sumner, whose pride of

erudition amounted almost to vanity, pleaded earnestly for his phrase, "All persons are equal before the law," copied from the Constitution of revolutionary France. But Mr. Howard of Michigan, one of the soundest lawyers and clearest thinkers of the Senate, pointed out the inapplicability of the words, and declared it safer to follow the Ordinance of 1787, with its historical associations and its well-adjudicated meaning.

There was, of course, from the first no doubt whatever that the Senate would pass the constitutional amendment, the political classification of that body being thirty-six Republicans, five Conditional Unionists, and nine Democrats. Not only was the whole Republican strength, thirty-six votes, cast in its favor, but two Democrats,—Reverdy Johnson of Maryland and James W. Nesmith of Oregon,—with a political wisdom far in advance of their party, also voted for it, giving more than the two-thirds required by the Constitution.

When, however, the joint resolution went to the House of Representatives there was such a formidable party strength arrayed against it as to foreshadow its failure. The party classification of the House stood one hundred and two Republicans, seventy-five Democrats, and nine from the border States, leaving but little chance of obtaining the required two-thirds in favor of the measure. Nevertheless there was sufficient Republican strength to secure its discussion; and when it came up on the 31st of May the first vote showed seventy-six to fifty-five against rejecting the joint resolution.

We may infer that the conviction of the present hopelessness of the measure greatly shortened the debate upon it. The question occupied the House only on three different days—the 31st of May, when it was taken up, and the 14th and 15th of June. The speeches in opposition all came from Democrats; the speeches in its favor all came from Republicans, except one. From its adoption the former predicted the direst evils to the Constitution and the Republic; the latter the most beneficial results in the restoration of the country to peace and the fulfillment of the high destiny intended for it by its founders. Upon the final question of its passage the vote stood: yeas, ninety-three; nays, sixty-five; absent or not voting, twenty-three. Of those voting in favor of the resolution eighty-seven were Republicans and four were Democrats.⁴ Those voting against it were all Democrats. The resolution, not having secured a two-thirds vote, was

¹ Henry Wilson, "Antislavery Measures in Congress," p. 251.

² "Globe," Feb. 8, 1864, p. 521.

³ "Globe," March 28, 1864, p. 1313.

⁴ The Democrats voting for the joint resolution

were Moses F. Odell and John A. Griswold of New York, Joseph Bailly of Pennsylvania, and Ezra Wheeler of Wisconsin, the latter having also made the only speech in its favor from the Democratic side.

thus lost; seeing which Mr. Ashley, Republican, who had the measure in charge, changed his vote so that he might, if occasion arose, move its reconsideration.

The ever-vigilant public opinion of the loyal States, intensified by the burdens and anxieties of the war, took up this far-reaching question of abolishing slavery by constitutional amendment with an interest fully as deep as that manifested by Congress. Before the joint resolution had failed in the House of Representatives the issue was already transferred to discussion and prospective decision in a new forum.

When on the 7th of June, 1864, the National Republican Convention met in Baltimore, the two most vital thoughts which animated its members were the renomination of Mr. Lincoln and the success of the constitutional amendment. The first was recognized as a popular decision needing only the formality of an announcement by the convention; and the full emphasis of speech and resolution was therefore centered on the latter, as the dominant and aggressive reform upon which the party would stake its political fortunes in the coming campaign.

It is not among the least of the evidences of President Lincoln's political sagacity and political courage that it was he himself who supplied the spark that fired this train of popular action. The editor of the "New York Independent," who attended the convention, and who with others visited Mr. Lincoln immediately after the nomination, printed the following in his paper of June 16, 1864: "When one of us mentioned the great enthusiasm at the convention, after Senator E. D. Morgan's proposition to amend the Constitution, abolishing slavery, Mr. Lincoln instantly said, 'It was I who suggested to Mr. Morgan that he should put that idea into his opening speech.'" The declaration of Morgan, who was chairman of the National Republican Committee, and as such called the convention to order, immediately found an echo in the speech of the temporary chairman, the Rev. Dr. Robert J. Breckinridge. The indorsement of the principle by the eminent Kentucky divine, not on the ground of party, but on the high philosophy of true universal government and of genuine Christian religion, gave the announcement an interest and significance accorded to few planks in party platforms. Permanent chairman Dennison reaffirmed the doctrine of Morgan and Breckinridge, and the thunderous applause of the whole convention greeted the formal proclamation of the new dogma of political faith in the third resolution of the platform:

Resolved, That as slavery was the cause and now constitutes the strength of this rebellion, and as it must be always and everywhere hostile to the prin-

ciples of republican government, justice and the national safety demand its utter and complete extirpation from the soil of the Republic; and that while we uphold and maintain the acts and proclamations by which the Government in its own defense has aimed a death blow at this gigantic evil, we are in favor, furthermore, of such an amendment to the Constitution, to be made by the people, in conformity with its provisions, as shall terminate and forever prohibit the existence of slavery within the limits or the jurisdiction of the United States.

We have related elsewhere how upon this and the other declarations of the platform the Republican party went to battle and gained an overwhelming victory—a popular majority of 411,281, an electoral majority of 191, and a House of Representatives of 138 Unionists to 35 Democrats. In view of this result the President was able to take up the question with confidence among his official recommendations; and in the annual message which he transmitted to Congress on the 6th of December, 1864, he urged upon the members whose terms were about to expire the propriety of at once carrying into effect the clearly expressed popular will. Said he:

At the last session of Congress a proposed amendment of the Constitution, abolishing slavery throughout the United States, passed the Senate, but failed, for lack of the requisite two-thirds vote, in the House of Representatives. Although the present is the same Congress, and nearly the same members, and without questioning the wisdom or patriotism of those who stood in opposition, I venture to recommend the reconsideration and passage of the measure at the present session. Of course the abstract question is not changed; but an intervening election shows, almost certainly, that the next Congress will pass the measure if this does not. Hence there is only a question of *time* as to when the proposed amendment will go to the States for their action. And as it is to so go at all events, may we not agree that the sooner the better? It is not claimed that the election has imposed a duty on members to change their views or their votes any further than, as an additional element to be considered, their judgment may be affected by it. It is the voice of the people, now for the first time heard upon the question. In a great national crisis like ours unanimity of action among those seeking a common end is very desirable—almost indispensable. And yet no approach to unanimity is attainable unless some deference shall be paid to the will of the majority, simply because it is the will of the majority. In this case the common end is the maintenance of the Union; and, among the means to secure that end, such will, through the election, is most clearly declared in favor of such constitutional amendment.¹

On the 15th of December Mr. Ashley gave notice that he would on the 6th of January, 1865, call up the constitutional amendment for reconsideration;² and accordingly on the

¹ Lincoln, Annual Message, Dec. 6, 1864.

² "Globe, Dec. 15, 1864, p. 53.

day appointed he opened the new debate upon it in an earnest speech. General discussion followed from time to time, occupying perhaps half the days of the month of January. As at the previous session, the Republicans all favored, while the Democrats mainly opposed it, but the important exceptions among the latter showed what immense gains the proposition had made in popular opinion and in congressional willingness to recognize and embody it. The logic of events had become more powerful than party creed or strategy. For fifteen years the Democratic party had stood as sentinel and bulwark to slavery; and yet, despite its alliance and championship, the peculiar institution was being consumed like dry leaves in the fire of war. For a whole decade it had been defeated in every great contest of congressional debate and legislation. It had withered in popular elections, been paralyzed by confiscation laws, crushed by Executive decrees, trampled upon by marching Union armies. More notable than all, the agony of dissolution had come upon it in its final stronghold—the constitutions of the slave States. Local public opinion had throttled it in West Virginia, in Missouri, in Arkansas, in Louisiana, in Maryland; and the same spirit of change was upon Tennessee, and even showing itself in Kentucky. Here was a great revolution of ideas, a mighty sweep of sentiment, which could not be explained away by the stale charge of sectional fanaticism, or by alleging technical irregularities of political procedure. Here was a mighty flood of public opinion, overleaping old barriers and rushing into new channels. The Democratic party did not and could not shut its eyes to the accomplished facts. "In my judgment," said Mr. Holman of Indiana, "the fate of slavery is sealed. It dies by the rebellious hand of its votaries, untouched by the law. Its fate is determined by the war; by the measures of the war; by the results of the war. These, sir, must determine it, even if the Constitution were amended."¹ He opposed the amendment, he declared, simply because it was unnecessary. Though few other Democrats were so frank, all their speeches were weighed down by the same consciousness of a losing fight, a hopeless cause. The Democratic leader of the House, and lately defeated Democratic candidate for Vice-President, Mr. Pendleton, opposed the amendment, as he had done at the previous session, by asserting that three-fourths of the States did not possess constitutional power to pass it, this being—if the paradox be excused—at the same time the weakest and the strongest argument: weakest, because the Constitution in terms contradicted the assertion; strongest, because under the circumstances nothing less than unconstitutionality could jus-

tify opposition. But while the Democrats as a party thus persisted in a false attitude, more progressive members had the courage to take independent and wiser action. Not only did the four Democrats—Moses F. Odell and John A. Griswold, of New York; Joseph Baily, of Pennsylvania; and Ezra Wheeler, of Wisconsin—who supported the amendment at the first session again record their votes in its favor, but they were now joined by thirteen others of their party associates, namely: Augustus C. Baldwin, of Michigan; Alexander H. Coffroth and Archibald McAllister, of Pennsylvania; James E. English, of Connecticut; John Ganson, Anson Herrick, Homer A. Nelson, William Radford, and John B. Steele, of New York; Wells A. Hutchins, of Ohio; Austin A. King and James S. Rollins, of Missouri; and George H. Yeaman, of Kentucky; and by their help the favorable two-thirds vote was secured. But special credit for the result must not be accorded to these alone. Even more than of Northern Democrats must be recognized the courage and progressive liberality of members from the border slave States—one from Delaware, four from Maryland, three from West Virginia, four from Kentucky, and seven from Missouri, whose speeches and votes aided the consummation of the great act; and, finally, something is due to those Democrats, eight in number, who were absent without pairs, and thus, perhaps not altogether by accident, reduced somewhat the two-thirds vote necessary to the passage of the joint resolution.

Mingled with these influences of a public and moral nature it is not unlikely that others of more selfish interest, operating both for and against the amendment, were not entirely wanting. One, who was a member of the House, writes:

The success of the measure had been considered very doubtful, and depended upon certain negotiations the result of which was not fully assured, and the particulars of which never reached the public.²

So also one of the President's secretaries wrote on the 18th of January:

I went to the President this afternoon at the request of Mr. Ashley, on a matter connecting itself with the pending amendment of the Constitution. The Camden and Amboy railroad interest promised Mr. Ashley that if he would help postpone the Raritan railroad bill over this session they would in return make the New Jersey Democrats help about the amendment, either by their votes or absence. Sumner being the Senate champion of the Raritan bill, Ashley went to him to ask him to drop it for this session. Sumner, however, showed reluctance to adopt Mr. Ashley's suggestion, saying that he hoped the amendment would pass anyhow,

¹ "Globe," Jan. 11, 1865, p. 219.

² George W. Julian, "Political Recollections," p. 250.

etc. Ashley thought he discerned in Sumner's manner two reasons: (1) That if the present Senate resolution were not adopted by the House, the Senate would send them another in which they would most likely adopt Sumner's own phraseology and thereby gratify his ambition; and (2) that Sumner thinks the defeat of the Camden and Amboy monopoly would establish a principle by legislative enactment which would effectually crush out the last lingering relics of the States rights dogma. Ashley therefore desired the President to send for Sumner, and urge him to be practical and secure the passage of the amendment in the manner suggested by Mr. Ashley. I stated these points to the President, who replied at once: "I can do nothing with Mr. Sumner in these matters. While Mr. Sumner is very cordial with me, he is making his history in an issue with me on this very point. He hopes to succeed in beating the President so as to change this Government from its original form and make it a strong centralized power." Then calling Mr. Ashley into the room, the President said to him, "I think I understand Mr. Sumner; and I think he would be all the more resolute in his persistence on the points which Mr. Nicolay has mentioned to me if he supposed I were at all watching his course on this matter."¹

The issue was decided in the afternoon of the 31st of January, 1865. The scene was one of unusual interest. The galleries were filled to overflowing; the members watched the proceedings with unconcealed solicitude. "Up to noon," said a contemporaneous formal report, "the pro-slavery party are said to have been confident of defeating the amendment, and after that time had passed, one of the most earnest advocates of the measure said, 'T is the toss of a copper.'"² There were the usual pleas for postponement and for permission to offer amendments or substitutes, but at four o'clock the House came to a final vote, and the roll-call showed, yeas, 119; nays, 56; not voting, 8. Scattering murmurs of applause had followed the announcement of affirmative votes from several of the Democratic members. This was renewed when by direction of the Speaker the clerk called his name and he voted aye. But when the Speaker finally announced, "The constitutional majority of two-thirds having voted in the affirmative, the joint resolution is passed," "the announcement"—so continues the official report printed in the "Globe"—"was received by the House and by the spectators with an outburst of enthusiasm. The members on the Republican side of the House instantly sprung to their feet, and, regardless of parliamentary rules, applauded with cheers and clapping of hands. The example was followed by the male spectators in the gal-

leries, which were crowded to excess, who waved their hats and cheered loud and long, while the ladies, hundreds of whom were present, rose in their seats and waved their handkerchiefs, participating in and adding to the general excitement and intense interest of the scene. This lasted for several minutes."³ "In honor of this immortal and sublime event," cried Mr. Ingersoll of Illinois, "I move that the House do now adjourn," and against the objection of a Maryland Democrat the motion was carried by a ye and nay vote. A salute of one hundred guns soon made the occasion the subject of comment and congratulation throughout the city. On the following night a considerable procession marched with music to the Executive Mansion to carry popular greetings to the President. In response to their calls, Mr. Lincoln appeared at a window and made a brief speech, of which only an abstract report was preserved, but which is nevertheless important as showing the searching analysis of cause and effect which this question had undergone in his mind, the deep interest he felt, and the far-reaching consequences he attached to the measure and its success.

He supposed [he said] the passage through Congress of the constitutional amendment for the abolishment of slavery throughout the United States was the occasion to which he was indebted for the honor of this call. The occasion was one of congratulation to the country and to the whole world. But there is a task yet before us—to go forward and have consummated by the votes of the States that which Congress had so nobly begun yesterday. He had the honor to inform those present that Illinois had to-day already done the work. Maryland was about half through, but he felt proud that Illinois was a little ahead. He thought this measure was a very fitting if not an indispensable adjunct to the winding up of the great difficulty. He wished the reunion of all the States perfected, and so effected as to remove all causes of disturbance in the future; and to attain this end, it was necessary that the original disturbing cause should, if possible, be rooted out. He thought all would bear him witness that he had never shrunk from doing all that he could to eradicate slavery, by issuing an Emancipation Proclamation. But that proclamation falls far short of what the amendment will be when fully consummated. A question might be raised whether the proclamation was legally valid. It might be urged, that it only aided those that came into our lines, and that it was inoperative as to those who did not give themselves up; or that it would have no effect upon the children of slaves born hereafter; in fact, it would be urged that it did not meet the evil. But this amendment is a king's cure-all for all the evils. It winds the whole thing up. He would repeat, that it was the fitting if not the indispensable adjunct to the consummation of the great game we are playing. He could not but congratulate all present—himself, the country, and the whole world—upon this great moral victory.

IN SORROW'S HOUR.

THE brambles blow without you,—at the door
 They make late April,—and the brier too
 Buds its first rose for other folk than you ;
 In the deep grass the elder bush once more
 Heaps its sweet snow ; and the marsh-marigold
 With its small fire sets all the sedge aflame,
 Like flakes of flame blown down the gray, still air ;
 The cardinal-flower is out in thickets old.
 Oh, love ! oh, love ! what road is yours to-day ?
 For I would follow after, see your face,
 Put my hand in your hand, feel the dear grace
 Of hair, mouth, eyes, hear the brave words you say.
 The dark is void, and all the daylight vain.
 Oh, that you were but here with me again !

Lizette Wordsworth Reese.

FRA FILIPPO LIPPI (1402-12-1469).

(ITALIAN OLD MASTERS.)

THE character of the work of Masaccio in art may be compared to that of Luther in religion, in kind if not in measure. It was the first bold and unequivocal departure from the authority of the traditions of art recognized by all the followers of Giotto, the first frank declaration of the value of individuality in art. Like Luther's, this reform did not extend to the repudiation of the great motives of the fathers, but was devoted to limitation of the manner of interpreting them and the forms they should take. The example set by Masaccio of turning his back on the world of the ecstasies and the types of authority and opening his eyes to the living flesh and blood about him was followed by his pupil, Fra Filippo Lippi, with a hearty and unreserved abandonment to the logical consequences, which would perhaps have surprised and repelled the master as much as the later doctrines of reform would have shocked Luther. In Masaccio we found the first unbiased, natural inspiration ; in Filippo we have the first direct recourse to the individual as a substitute for the ideal. For though far from ideal in the large and now generally accepted use of the word, embracing the old and the new, the Greek as well as the Christian, the Byzantine type was an ideal as completely as the Phidian, and the imagery of the ecstatic school was drawn from the inner vision. Its Christ was the man of many sorrows, emaciated by spirit-

ual struggles and not beautiful to look on ; its Madonna, the woman who mothered all human griefs—spiritual ideals, between which and the Greek ideals of physical beauty there was all the antagonism of the religions from which they grew.

Not to push a parallel too far, the art of the school of Masaccio was an art involving the reform of externals ; and in it, as might be expected, the departure of the followers in reform from the old canons was a rapidly accelerating progress. In Filippo the ideal becomes personal ; and whatever may be the truth as to the stories of his relations to Lucrezia Buti, there is no mistaking the fact that some fair face had come between his eyes and the Madonna. The forms of beauty to him became all of one mold, and there is for the first time in the progress of Christian art a distinct and systematic employment of the individual and the personal in the representation of sacred personages, especially of the Madonna, an employment which later becomes the rule.

No doubt the work of Donatello contributed greatly to this result, but that was still ideal. His system of types had a kind of individuality not known before in sculpture ; but those types, distinct as they were, do not bear the mark of the model, but seem rather the outcome of an imaginative conception of the character more analogous to Greek idealization than to that of the art which began with Fra Filippo. From this time forward the naturalism of painting becomes more and more

concrete; and though direct work from a model as practiced to-day does not appear for a long time after Fra Filippo, the naturalistic element gains strength with every generation of painters.

It is not easy to decide upon the exact date of Fra Filippo's birth. Vasari says in his first edition 1402, in the second, 1412; and if we could accept his assertion that the Frate died at the age of fifty-seven the latter date would be correct, for we know that he was buried in 1469. The records state that he was the son of a Florentine butcher, that his mother died in 1412, shortly after his birth, and that his father died two years later, leaving the orphan to the care of an aunt, Monna Lapaccia, a woman in poor circumstances, as were all his relatives. Milanese, however, says that the ledger of the Carmelite convent where Filippo passed his youth states that he professed at the age of sixteen, the date given being 1421, which would put the date of his birth at 1405-06. The legend runs that Monna Lapaccia kept him till he was eight years old, when, unable to support him longer, she placed him in the monastery of the Carmine, which, as fate would have it, was in the immediate vicinity of her house. Here the boy proved to be dexterous in all kinds of handicraft, but absolutely dull and indolent at his books. The "grammar-master" could make nothing of him: instead of studying he drew little figures all over his own and his classmates' books, so at last the prior very sensibly put him to drawing, and gave him every facility for developing his talent. Masaccio's frescos in the monastery were a source of great delight to the boy artist, who would spend long hours every day studying them. He made such rapid progress that every one prophesied that he would become famous, and Vasari says that "many thought that the spirit of Masaccio must have entered into Filippo." He painted many frescos in the Carmine, all of which have perished.

In 1431-32 he seems to have left the monastery, though the reasons that are attributed to him for so doing are of the most opposite natures. Vasari says that, having become elated by the praise of all those who saw his work, he cast off his monkish garb and went into the world, where he led a life of dissipation. Being one day at Ancona in a little pleasure-boat with some friends, the party was captured by Moorish pirates and carried off to Barbary, where Filippo remained eighteen months. One day he amused himself by drawing his master in charcoal on a white wall, and this feat so much astonished and delighted the Moors that, having caused him to paint one or two pictures for them, they took him to Naples and set him free. There he

painted a panel in tempera for King Alfonso, and then returned to Florence.

This whole story is denied by modern historians. Cavalcaselle declares that Fra Filippo was never at Ancona or at Naples; that he never abandoned his monkhood, since he signed himself to the end "*Frater Filippus*," and was by others given the same name; and finally that Vasari is untruthful when he speaks of the Carmelite as a dissolute man, as a letter of his to Piero de' Medici shows him in a very different light. In this letter he complains of having been underpaid for one of his pictures, and says that it has pleased Heaven to leave him the poorest friar in Florence, in charge of six marriageable nieces, who are entirely dependent on him: he begs Piero to allow him a grant of corn and wine to support them while he is away.

This certainly does not look like the letter of a man whom, according to Vasari, Piero de' Medici was forced to lock up in order to get any work done, and who knotted his sheets together and escaped by the window after two days to get off and revel. Vasari relates that, being engaged by the nuns of St. Margaret to paint a panel, he fell in love with a young girl of whom the Sisters had charge, Lucrezia Buti—Filippino Lippi being, according to this account, the child of this unlawful union. This again Cavalcaselle indignantly denies, and points out that it is unlikely that so immoral a person as was Fra Filippo should have been created chaplain to a convent of nuns in 1452, and rector of St. Quirico at Legnaia in 1457. He supposes the younger artist to have been adopted by the older, as was frequently done in those days.

Very few of Fra Filippo's earliest works are known. Probably the Nativity in the Academy of Fine Arts at Florence belongs to the period of his monastic life, and it may be the one painted for Cosimo de' Medici of which Vasari speaks. It shows the influence of Fra Angelico much more than his later work. Another altar-piece, in the Berlin museum, bearing his signature, belongs to the same epoch. In the Louvre is a Madonna and Child painted by Fra Filippo at the age of twenty-six; in the Lateran Gallery another altar-piece, executed to the order of Carlo Marzuppinì, in which the donor of the piece is introduced. Vasari says that Marzuppinì called the artist's attention to the careless manner in which the hands and feet were drawn, and that Fra Filippo hid them with the drapery to hide their imperfection—one of those curious technical details continually occurring in the history of the art of this epoch which shows as clearly as any tradition can that the practice of drawing the subject from the model was

not yet adopted, but that the figure was drawn from traditional and inherited knowledge of it, as it had been by the Byzantines. To understand the relations of the Italian art of the thirteenth, fourteenth, and fifteenth centuries, it is necessary to have this always in mind, as it will then be easy to see how far and how fast the practice obtained of drawing from nature as a preparation for the final work.

In 1441 Fra Filippo executed a commission for the nuns of S. Ambrogio; and in the "Coronation of the Virgin," which he executed for them, there is a half-length portrait of himself, tonsured, which proves that at least as late as 1441 he retained the badge of monastic life.

From this time Fra Filippo seems to have orders enough, one would think, to furnish means of subsistence for any number of relatives, yet he appears to have remained poor and needy. The Medici took him under their patronage, and in 1452 he was made chaplain in the convent of S. Giovannino in Florence.

In 1456 he was at Prato, painting the series of frescos in the choir of the cathedral, which remains on the whole the most important of his works, both for size and for preservation. The next year he received an order from Giovanni de' Medici to leave his work and come to Florence and paint a picture for the king of Naples; and though loath to return to Florence, on account of debts he owed there, he obeyed his patron. We have a letter of his begging for money to buy the gold-leaf he needed to complete the picture; and the agent of the Medici, who went to his shop to urge him on with his work, says in a letter to Cosimo that he found a sale going on in Filippo's studio to pay his rent and some other debts.

The picture for the king, and one for Count de Rohan, were sent to Naples, and gave much satisfaction, as we learn from a letter of Cosimo's; but they are no longer there, unless a panel in the museum, somewhat like one in the National Gallery, London, be by him; but it appears to me more like the work of Filippino. In the Pitti Gallery, Florence, there is an admirable madonna by Fra Filippo, which he is said to have painted from Lucrezia Buti. The head is of the same type as most of his representations of women. There is another reputed portrait of Lucrezia in the Louvre, but Cavalcaselle says the picture is not even by Fra Filippo, and attributes it to Peselli. At Prato, in the gallery, there is a madonna by Filippo, and in the municipal gallery a Virgin and Child with attendant saints. In the refectory of S. Dominico there is an extremely fine Nativity, which, with the frescos noted in the cathedral, shows that Fra Filippo's stay in Prato must have been a considerable one. His work there however seems to have suffered several

interruptions. The first, as we have seen, was caused by a summons from his patron. In 1461 he went to Perugia to value the frescos of Benedetto Buonfigli in the chapel of the Palazzo del Comune; in 1463 and 1464 we find the representatives of Prato meeting in great perplexity as to how the painter can be forced to finish his work, for which he has been in part paid, and deciding to ask Messer Carlo de' Medici to interfere. By some means or other the frescos were completed, and in the last of the series, the "Death of S. Stefano," Lippi introduced a fine portrait of Carlo de' Medici, and one of himself.

From Prato, Fra Filippo seems to have gone to Spoleto, where he painted in the cathedral several scenes from the life of the Virgin, which still remain, though in a damaged condition, being, moreover, never finished, as he died there in 1469, poisoned — according to Vasari again — by the relatives of one of his mistresses. Lorenzo de' Medici erected a tomb to him in the cathedral of Spoleto, and Politian wrote his epitaph.

One of Fra Filippo's chief pupils was Fra Diamante. Cavalcaselle brings forward the theory that he, and not his master, was guilty of Lucrezia's seduction, and that all the libertinism attributed by Vasari to Fra Filippo should be laid on his disciple. This he deduces from the fact that while Fra Filippo was at Prato, completing his commissions there, Fra Diamante was imprisoned in Florence, by order of his superior, and did not join his master till the latter went to Spoleto. He thinks that Fra Filippo would not have been able to continue at Prato had he been guilty of the crime Vasari charges him with, for fear of the vendetta which Lucrezia's father and the nuns would assuredly have tried to bring upon him.

The sacrilegious intrigue, on account of which the life of the Frate has been so charged with obloquy, seems to me to be disputed with reason by Cavalcaselle, and the alleged poisoning at Spoleto for a similar offense is one of those vague statements of which the history of the Middle and subsequent ages is full. Any sudden death was attributed to poisoning, though we know now that many forms of malarial disease, for some of which Italy has always been noted, cause death as sudden and mysterious as poison. There were in Lippi's day no tests and no post-mortems, and suspicion was universal. And where suspicion of poisoning arose a motive was sure to be supplied. Current rumors are not evidence sufficient to establish accusations of such gravity that if recognized by the ecclesiastical authorities they would have brought Fra Filippo before the Inquisition.

It is possible, and indeed probable, that the

whole basis for the tradition was in the artistic sacrilege the artist committed in adopting a living type of womanhood as the sacred image alike of saint and Madonna. That a certain want of ecstatic susceptibility was characteristic of the Frate is clear, not only from his absolute dependence for his types on physical presence, but in a certain mental heaviness and in indifference to real ecclesiastical qualifications. He was of the true modern artistic temperament, which is rarely notably reverential of sacred things; and the simple fact that he drew a living woman as the Madonna may have been to the religious feeling of the day a worse offense than the abduction of a nun.

The innovations introduced by Fra Filippo were not limited to the type. The use of oil over his tempera painting is clear, and to this is no doubt due an advance in color which could otherwise have been the result only of a facility of retouching and overworking such as he did not possess in tempera. The "Coronation of the Virgin" in the Florentine Accademia is a masterpiece in this direction, which anticipates many of the finest qualities of the best modern French art; and the group at the apex of the composition, Christ crowning the Virgin, is as subtle in every way as any work I can re-

call in all the art of the Renaissance. But there is still nothing realistic in it in the sense which I have given to the word in writing of Masaccio. The main motive of the work is decorative; ornament is used much as the earlier men used it; the distinction between frescos and easel pictures is more marked; and we begin to see the foreshadowing of a form of art which the Venetians carried to great perfection. The color is perfectly pure and bright—qualities due to the tempera basis, and only slightly affected by the oil painting in transparent color over it. The blackening, which is the chief vice of oil painting, does not appear till about the time of Fra Bartolommeo, who in his easel pictures appears to have used oil only as his vehicle.

When we go from the Coronation in the Accademia to the frescos at Prato, large in manner and masterly in execution, we can estimate the technical power of Fra Filippo as readily as we can his originality when we compare his conceptions of the sacred personages with those of Masaccio, and can see our way to place him, as I must, as the first great master of modern art in the sense in which modern art is distinguished from that of the schools sprung from the Byzantine.

W. J. Stillman.

NOTES BY TIMOTHY COLE, ENGRAVER.

THE "Madonna Adoring the Child Jesus," by Fra Filippo Lippi, in the Uffizi, Florence, ranks among his very finest panel pictures. It is painted in tempera on wood, and measures two feet wide by three feet high, exclusive of its beautiful frame of fruit and flowers.

It is a very pretty allusion to the text of Scripture: "For he shall give his angels charge over thee. . . . They shall bear thee up in their hands." (Ps. xci. 11, 12.) The Virgin is by an open window and the infant Jesus is seated upon the sill, when she becomes aware of the presence of the ministering spirits. She is in an attitude of adoration, looking off somewhat as in a reverie. The farther angel, who stands on the other side of the window, has just caught the pious look of the Virgin as he glances up between the arms of Jesus; his mouth is full of the innocence of childhood. The other angel, full of childish glee, turns to look at the spectator. This face is remarkable for the sweetness of its smile. It is most captivating to look close into it and observe the refinement of its treatment, and the young, guileless purity of expression. These are real Florentine boys, and I know of two just such, who might have been the identical models that Filippo Lippi used—the difference of time not considered. They need only wings clapped to their shoulders to make real angels.

The group is gracefully and naturally disposed and forms a charming composition against the quiet background, which also is full of interest. To the right in the distance is a walled city with spires and towers

relieved against the evening sky, which is of a neutral, warm, or greenish tint. Then comes a pile of rocks in which the fissures and coarse texture are minutely painted—too delicately worked to be given adequately in a small engraving. To the left a river winds through cultivated fields, losing itself among distant hills dotted with clumps of bushes and trees. Towards the foreground is seen a little red-topped cottage, part of which is visible through a portion of the elaborate, transparent headdress of the Madonna. It is a chapel, perhaps, as it has a cross on top. The coloring of the whole is rich, though somewhat faded. Perhaps the darks have grown darker and the lights lighter. The robe of the Virgin is a dark green of soft, rich tone, the flesh tints are yellowish. The robe of the laughing angel is of a fine purplish tinge, tipped aside as it is, which brings it more in shade. His white garment in the soft light is delicately felt.

This illustrates a tender and graceful phase of the master's work, and was a favorite subject with him; but to see him in his grandeur we must pay a visit to the Duomo at Prato, a short distance from Florence, where are his most important works—large, grand frescos, which are among the highest creations of the art of the fifteenth century. (See Morelli, "Italian Masters in German Galleries.") I regret very much my inability to engrave an example from these pictures as well; but circumstances were against it, and, after all, no mere detail could convey any idea of their magnificence.

"THE VIRGIN ADORING THE INFANT CHRIST," BY FILIPPO LIPPI.

(IN THE UFFIZI GALLERY, FLORENCE.)

THREE JEWISH KINGS.

ZION'S GATE, JERUSALEM.

IN the twenty-first chapter of Judges a Jewish city is located with unusual exactitude—"On the north side of Bethel, on the east side of the highway that goeth up from Bethel to Shechem, and on the south of Lebonah." The Bible name of the city is Shiloh. The modern Arab calls it Seilûn. It was the chief resort of the Israelites for a long time before the gates of Jerusalem were opened to them. There, after the battle of Ai, Joshua had moved the Tabernacle from Gilgal, and made it his headquarters until his death; there the division of the land took place; there Eli lived; and there Samuel spent his boyhood and was "established to be a prophet of the Lord."

The route from Bethel to Shiloh is exceedingly rough; but the large olive orchards, the rich grain fields, and the millions of flowers which come into view compensate one for the hard traveling. As the journey proceeds the scenery grows sublime. The mountains rise higher, come more closely to one another and narrow the valleys; then, for a time, they are lower and farther apart, and the widening valleys present a picturesque and busy scene. The brown-armed peasants are plowing; girls clad in gay attire are pulling tares from the grain, and children, singing merrily, are helping them. Frequently the tinkling of a bell attracts attention to the pathways which wind around the cliffs, and a tall Bedouin, with a striped *aba* and a long fowling-piece swung across his shoulders, is

discovered guiding his flocks of sheep and goats. A long caravan of camels and donkeys laden with American kerosene may often be seen trailing slowly and demurely along the narrow, zigzag mountain paths. It is one of the busiest neighborhoods in Palestine. The cultivated fields line both sides of the "highway"—only a narrow bridle-path—until the ruins of the old crushed city are made out. What remains of Shiloh is located on a knoll a little higher than its neighbors. As soon as this is reached all the light seems to go out of the picture, so quickly do you climb from the delightful to the desolate. Some walls of an old castle, quite four feet thick, are standing. Several sturdy buttresses brace them up, and broken columns, capitals, and here and there a doorway tell how Shiloh was built to bear the brunt of battle; but they also tell what the Almighty "did to it for the wickedness of . . . Israel." At the southern base of the hill is a low, square building which the Bedouins call a mosque. In it the cattle now gather to escape the fierce rays of the sun when the shade of the splendid old terebinth which stands close by cannot accommodate all. The camera has done its best, with such rough material, to secure a representative view of

AT SHILOH.

SCOPUS FROM THE MOUNT OF OLIVES.

Shiloh. Part of the walls of the ancient city are in the foreground, while beyond, on the side of a second hill, are the ruins of the building to the thick walls of which reference is made. The prospect is not a familiar one; and yet almost every Christian child on the face of the earth is told the story of the youth who became the great prophet of Shiloh. Probably Hophni and Phinehas, the renegade sons of Eli, descended this very pictured hill when, bearing the sacred ark with them, they went forth to the fatal battle of Ebenezer, where they lost their lives and the ark of God was taken. Not very far away "Eli sat upon a seat by the wayside watching: for his heart trembled for the ark of God." It may have been very near this "that he fell from off the seat backward by the side of the gate, and his neck brake, and he died."

Matters did not move on prosperously at Shiloh. Consequently on all sides the opinion grew that some of the neighboring nations were managed better. The Israelites had long been in the grip of the Philistines. Among other sore grievances forced upon them was the necessity of carrying their plows and other farming implements to the Philistine blacksmiths for repairs; because no Israelite was allowed to swell the bellows and swing the sledge lest he forges spears and armor, to say nothing of making iron chariots such as some of the invaders had. The hearts of the older and more serious Israelites were broken by seeing the masses forsake the God of Egypt, the God of Sinai, the God of the Wilderness of Kadesh, the God of Eli, for the diabolical worship of Baal

and Ashtaroth. For twenty years after the ark was taken no priest offered sacrifice, and but few were reverent enough to visit it while it rested quietly at Kirjath-jearim. The only ray of sunshine in all this moral and physical darkness was the devout Samuel. It was he who kept alive what little grace there was left. His work was a personal one for a time, for he did not dare at first to call a public assemblage. But when the Philistines found it was an injury to them and to their gods to hold the stolen ark, they concluded to restore it, and did indeed with great pomp send commissioners with it to Beth-shemesh. Samuel, with keen insight, understood their fear, and grew more bold. He called the famous assemblage of Mizpeh; prayed for the people; sacrificed a lamb at the altar "wholly unto the Lord: . . . and the Lord heard him." The battle of Mizpeh followed; the Philistines were defeated, and so subdued that no more trouble came from their quarter while Samuel lived.

The Bible does not define the location of Mizpeh as exactly as it does that of Shiloh. Nevertheless it is agreed that the long ridge called Scopus, which continues northward from the Mount of Olives, is the spot where Samuel took the oath of allegiance from the wandering people, and that not far from there he set up the stone of Ebenezer.

How marvelous is the view! You can see from the hill of Scopus better than from any other point how much lower is the hill on which

THE CAVE OF ADULLAM.

the holy city is located than any of the surrounding heights. The descent of the Valley of the Kedron and its depression appear much greater than when you are standing in the valley. The roofs of the houses of Siloam and the olive trees of Olivet appear small. Then there are the minarets, the broad domes, and the old gray walls of the city of David, with all of which we are familiar. A few minutes after the feet are turned descending towards Shiloh, the long mountain ridge, like a curtain, hides the historical theater from view, and the aspect presented by nature is desolate enough. The final battle with the Philistines occurred thereabouts. Israel seemed content with Samuel's

no fanatical pilgrims about, you may climb to its roof and obtain a very satisfactory view of the small Mohammedan *wely*, or tomb of a saint, and the hilly country around it. Bethlehem is in full view, and at night seems brought very close by its glimmering lights and the sounds which come from it, though it is a mile away.

While Saul was king down in the fields of Bethlehem, within sight of where Jesus was born more than a thousand years afterwards, David was occupied tending his father's sheep. It makes his history seem very real to visit fields just outside of Bethlehem, say towards the south-east. At first the slopes of the hills

RACHEL'S SEPULCHER.

government until the work grew too burdensome for him, and he sent his sons, Joel and Abiah, as his deputies, to the southern districts, with their headquarters at Beersheba. Then arose again, more strenuously than ever, the cry from the elders and from the people, "Make us a king to judge us like all the nations." Though the aged Samuel was displeased at this at first, the people refused to obey his voice, and in time a king was brought into Samuel's presence and anointed.

This interview and the parting of Saul and Samuel took place but a short distance from Rachel's sepulcher, about two miles south of Bethlehem. The surrounding country cannot have changed much during the thirty centuries and more which have passed away since Jacob set a pillar upon the grave of his wife, unless the stones have increased. If there are

seem barren and lifeless; but when you are upon them you will see that they are green, with plenty of highly tinted flowers growing in families everywhere. The monotony of the scene is broken by groups of olive trees and by the flocks of sheep which gather under them in the heat of the day. You may see young shepherds practicing with their slings, and sometimes putting their home-made weapons to a use which you had not suspected. If a member of the flock strays too far away from his fellows he is first gently called, "Tally-henna, ya giddi" ("Come here, you kid"). But if that does not avail, he is brought to his senses by a stone sent whizzing after him from the shepherd's sling.

In one of the Bethlehem fields you may see the ruins of a strongly built stone structure. It is called the "Shepherd's Castle." Great

blocks of stone, which seem to have formed part of the "castle," lie under the neighboring olive trees. There are several caves close by, which are used now for the protection of the sheep during the colder weather. The long line of dark in the far distance is a part of the hills of Moab. The Dead Sea lies sunken near their western base. No place made familiar by the history of David is very far away. Here David was when Samuel visited the house of Jesse, the father of David, and Jesse sent for his son to come home and meet the man of God. Much of history was written upon the few miles of country which came within his circuit.

The women's quarters are next, separated by tent-cloth and rugs. An improvised divan of the same material is the only piece of furniture in the "hospitality tent."

On such a sumptuous article of antique furniture my companions and I sat and suffered "hospitality" for nearly four hours. A fire of twigs was first built. That was very welcome, for the night was chilly. Twenty-five natives, who, attended by one old veiled woman, came to share the fire and the feast, were not so agreeable. Each one brought a "contribution," usually some twigs for fuel. Coffee was made with great ceremony. Several of the men took part in bruising the blessed bean in a wooden

WHERE DAVID WAS A SHEPHERD, NEAR BETHLEHEM.

The humblest Bedouin does his best to reserve what he dubs his "hospitality tent," and is always willing to entertain strangers, be they "angels unawares," or probable subjects for brigandage after they are a half-day's journey from his quarters. I have good cause to remember always the "hospitality" I accepted from a murderous tribe of Azazimehs not more than a dozen miles away from where David guarded Nabal's flocks. A "feast" was part of the programme, and it was as full and as good as the one which David gave — "a cake of bread, and a good piece of flesh, and a flagon of wine" — when the ark was brought into Jerusalem, and it was served with much ceremony. In an Arab village the tents are arranged on three sides of a plot of ground with the fourth side open. The "hospitality tent" is usually at one end, near the open.

mortar, with a pestle almost as long as the arm. Tune or time was kept with the rude implements. If a younger person than the one officiating at the pestle entered the tent, he politely resumed the labor and caught up the tune. The coffee was boiled in a ladle and the water was cleared in the same utensil. Oftentimes water is as scarce as coffee — always less plenty than milk. Three times the mocha was served in tiny china cups, one of which had been broken and was mended with copper bands and wire. Next a sheik was sent out with sword in hand to slaughter a sheep for the feast. While he was gone a two-gallon bowl of *leben*, or sour goat's milk, was kept in circulation, all drinking from it. The plenteous American mustache came in protectingly useful then. If it was smeared with the dainty lactate the "hospitality" giver was content.

MODERN JEWS AT JERUSALEM.

How long this ceremony would have continued no one could have conjectured had not a cross-eyed Azazimeh, a nephew of the sheik, come in late and hungry from some marauding jaunt and emptied the bowl. It was the only cause for gratitude we had during the entire feast. In about three hours a great wooden bowl was brought in, filled with stewed meat and barley pancakes — by no means a distasteful combination. With fingers all helped themselves from the same bowl until all were satisfied; then the feast ended. For this accommodation on our part we were treated next day very much as David was by the children of Keilah, for we were not allowed to depart until we had fully paid for the hospitality, with usury added.

Surely these wild people show more of the characteristics of the Bedouin David and his outlaw band than do the modern Hebrews who flock to Palestine and lead an idle, dependent life in order that they may end their days in the land of their forefathers.

RUNNING across the whole country from south-west to north-east, beginning at the Mediterranean just north of Mount Carmel and reaching up like the arm of some great giant submerged in the sea to the mountains which line the west side of the Jordan, and then reaching between the ranges to the very shores of the sacred river, is a vast plain. If you could obtain a topographical view of it from a balloon, the Jordan side would present the appearance of a mutilated hand. The mountain ridges would appear to you like fingers; their highest peaks as knuckles; and the narrow valleys, to carry out the simile, as the spaces between the fingers reaching to the Jordan. This lovely expanse is the plain of Jezreel, or, in softer Greek, the plain of Esdraelon.

Our observations begin at Jenin. It is a typical town of northern Palestine, with its fruit gardens, its lovely water supply, and its groves of palms. There, too, is the inevitable broad dome of the mosque, and, overreaching all in height,

MOUNT GILBOA AND THE FOUNTAIN OF JEZREEL.

the slender minaret whence the muezzin cry may be heard from Samaria to Galilee. The views from this minaret are worth a journey to Palestine to see. The backward look towards Shechem and Samaria affords a new view of Ebal and Gerizim, and not only covers a splendid country under a high state of cultivation, dotted with olive groves as fine as any south of Damascus, but embraces a region full of thrilling history. In some places the long lines of the broken arches of an aqueduct lifted high in the air remind you of the Roman Campagna. Down in the fields near Samaria, if your observations are made in the afternoon, you may see strange-looking vertical masses of light arranged in a long eccentric row, at irregular distances from one another. Sometimes they look like specters, sometimes like masses of water thrown up by some deep artesian power as if intended to irrigate the fertile fields wherein they have been marshaled by kingly direction. They are, indeed, the granite remnants of the great colonnade of Sebaste, which Herod built, reflecting the strong sunlight as it comes to them from across the plain. Right among them you may also see picturesque ruins of the crusader's day. Then, when your eyes fall nearer to your lookout, you will see a richly cultivated country. The whole region is hilly. The rocks protrude from the hills

on every side, yet every spot of ground from the bases to the summits presents testimony to the thrift of the husbandman. Every valley has its stream even now. The tiniest of these is made to drive the wheels of some primitive flour mill. You may see the long line of the Mediterranean on the left. Turning to the north and west, besides the mountains already named, far beyond you may see the spurs of the Anti-Lebanon range with the snowy peak of Mount Hermon looking like the light surrounding clouds. The eastern slopes of Gilboa and Little Hermon lead your mind down to the long, dark, and narrow depression which marks the course of the winding Jordan, and another depth of shadow, at that distance looking almost as round as a well, discloses the location of the Sea of Galilee. At your feet, beginning as soon as you look beyond the borders

of the village, is the lovely plain. The rich carpeting supplied by nature is indescribable. There are no fences between the vast undulating plots of green and gold and pink and gray; but the narrow roads, with soil as red as the shale of northern New Jersey, mark out the boundaries for the Bedouin husbandmen. A silvery stream, whose starting-point cannot be made out, may be discerned finding its way down from west to east. It is the river Kishon, on whose borders Sisera was defeated; where, while he was awearyed and asleep, Jael drove the tent-pin through his head and fastened it to the ground; and where Elijah slew the priests of Baal. This view in the springtime looks like a great garden under the highest state of cultivation. The position of the plain supplies the key to its bloody record. It is a broad avenue, open at each end, and has drawn to battle within its narrow limits the Philistines of the western coast, the Israelites of the east, and the Syrians from the north. Later on the armies of the Assyrians and of the Egyptians passed and repassed, rested and manœuvred, previous to the awful struggles which followed. Even Napoleon here pitted his handful against a Mussulman horde that outnumbered him ten times or more. It has always been the main avenue for ingress and egress of the nomadic as well as the civilized

THE POOL IN HEBRON WHERE DAVID HUNG THE MURDERERS OF ISH-BOSHETH.

peoples who combated one another that they might possess the rich land surrounding.

The mountains and the towns which come within the broad encirclement of the eastern half of the plain are what most interest us now. We climb to the top of Mount Gilboa first. Its summit is almost bare. On the western incline every few rods there is a well or pit sunk into the solid rock. It is said that Joseph's brethren hid him in one of these pits, for the plain of Dothan is only a short distance away from the base of the mountain. Such pits are plenty in Palestine, and have been sunk to catch water when the winter torrents come rolling down. They have been provided by some kindly Jacob so that the thirsty traveler may find refreshment on the way.

The range of mountains known as the Little Hermon, the fountain of Jezreel, and the villages of Jezreel, Shunem, and Endor are the points of interest which come into the line marked out by the International Lessons, and they are all within an hour or so of the summit of Mount Gilboa—all within the borders of the plain of Esdraelon. There are only about twenty houses at Jezreel now, and the people are very squalid. Yet they support an ancient tower where they insist upon entertaining strangers at their own expense. Their hospitality does not create a desire to remain with them during the season, but the view from their tower compensates for all the loss of appetite caused by their curdled goat's milk and unleavened bread.

Endor lies near here. There is not much to attract one, except the number of caves or caverns which have been hewn in the cliffs overlooking the village. If bats are witches, as some maintain, and witches are bats, then Endor has lost none of its ancient reputation. At least the appearance of things

thereabouts is uncanny enough, and you will be glad to spur your horse back towards the fountain of Jezreel. This fountain holds the next interest for us. It is a beauty spot and a natural wonder. When on Mount Gilboa, if you have a guide who knows the country, you may ride northward until you come to the point where the mountain abruptly ends, as though a section or at least a part of the slope had been cut away, as is often the case in railway construction: hold your guide's hand while you look over, and you will hear the trickling of water, the splashing of cattle, and the voices of their chattering attendants. They are all a hundred feet below you, where is a wide cavern walled by conglomerate rock, from which the waters break forth with suffi-

GIHON, WHERE SOLOMON WAS ANOINTED.

cient force to turn a little mill. This is the fountain of Jezreel. The rocky sides and the top of the cavern are lined with ferns, and water plants abound. The water flows perennially. After emerging from its source the stream widens into a small lake and feeds one of the winding tributaries which contribute to the waters of the Jordan. The husbandmen of the plain of Esdraelon bring their cattle and their flocks here to drink, but they guard them well, for the visits of the invader are still frequent.

Philistines to stand fight. It was his last battle, and it went hard with him. Three of his sons, including Jonathan, were killed; many of his men were slain, and the rest of his army fled, leaving their king, lying wounded by the arrows of the archers, upon Mount Gilboa. In this dreadful plight Saul pleaded with his armor-bearer to finish the dire work of the enemy, but even that favor was refused him. In his desperation he seized a sword, fell upon it, and died. His armor-bearer immediately followed suit. Ish-bosheth, the son of Saul,

THE TOWERS OF DAVID AND OF JESUS

It was in Shunem that Saul made his last stand against the Philistines, and gathered his forces together on Mount Gilboa. It was part of his usual tactics to choose a height for his headquarters, rather than the low land. From his encampment on Gilboa he could witness the marshaling of the Philistines across the valley. His spies could creep about among the thickets and watch the enemy's every movement. The reports of his scouts filled him with trembling and fear. He sought for Divine direction in the matter, but it was not given him. He was forsaken of God and down in spirit. In his tribulation at nightfall he left his quarters disguised and went around to Endor to consult a witch. He obtained no comfort from the necromancer and next day was forced by the

had but a short reign, and then David came to the throne.

Comparative quiet now reigned for a time. David was recognized as king by all the elders of Israel. He was only thirty years of age when he began to reign at Hebron. He remained there seven years and a half. Everything grew and prospered under his hands; but Hebron was too small for the capital of so great a king. "Nevertheless David took the stronghold of Zion . . . and called it the city of David." His next step was to convey the ark there. He reigned in Jerusalem over thirty years.

Gihon, with its lovely gardens, where Solomon was anointed, was just in the valley below the royal palace—scarce a stone's-throw from

THE CITY OF DAVID NEAR ZION'S GATE.

the strong gate of Zion. There is a great reservoir there now, which for many centuries has been one of the water supplies of Jerusalem. Pictured with the western sides of the city it forms one of the most interesting views — so full of history — in the neighborhood.

Edward L. Wilson.

OVER THEIR GRAVES.

OVER their graves rang once the bugle's call,
 The searching shrapnel, and the crashing ball;
 The shriek, the shock of battle, and the neigh
 Of horse; the cries of anguish and dismay;
 And the loud cannon's thunders that appall.

Now through the years the brown pine-needles fall,
 The vines run riot by the old stone wall,
 By hedge, by meadow streamlet, far away,
 Over their graves!

We love our dead where'er so held in thrall,—
 Than they no Greek more bravely died, nor Gaul,—
 A love that's deathless! but they look to-day
 With no reproaches on us when we say,
 "Come! let us clasp your hands, we're brothers all,"
 Over their graves!

Henry Jerome Stockard.

DRAWN BY MARY HALLOCK FOOTE.

A PRETTY GIRL IN THE WEST.

ENGRAVED BY CHARLES STATE.

THE PRETTY GIRLS IN THE WEST.

PICTURES OF THE FAR WEST.—X.

HE wish so often expressed by mothers in the West that their daughters should have a "good time," suggests an inquiry as to what precisely is meant by this fond aspiration.

A mother's idea of a "good time" for her daughter usually signifies the sort of time she has failed to have herself. If she has been a hard-working woman, with many children to care for, she will desire that her daughter shall live easy and be blessed, in the way of offspring, with something less than a quiver-full. Where in the past labor has urged her, often beyond her strength, pleasure in the future shall invite her child.

So the mothers of the West, women of the heroic days of pioneering, unconsciously tell the story of their own struggles and deprivations in the ambitions which they indulge for their children.

Along the roads over which her parents journeyed in their white-topped wagon, their tent by night, their tabernacle, their fortress in time of danger, the settler's daughter shall ride in a tailor-made habit, or fare luxuriously in a drawing-room car. Where the mother's steadfast face grew brown with the glare of the alkali plain, the daughter shall glance out carelessly from behind the tapestry blind of her Pullman "section." Where the mother's hands washed and cooked and mended, and dressed wounds, and fanned the coals of the camp-fire, the daughter's shall trifle with books and music, shall be soft and "manicured" and daintily gloved.

It is one of the curious sights in the shops of a little town of frame houses—chiefly of one story, where the work of the house is not unfrequently done by the house-mother, not from poverty, but from the want in a new community of a servant class—to behold about Christmas time the display of sumptuous toilet articles implying hours spent upon the care of the feminine person, especially the feminine hands. This may be one of the indications of the sort of good time that is preparing for the daughters of the town. There are other and more hopeful suggestions, but none that seriously counteract the plainly projected revolt, on the part of the mothers, against a future of physical effort for their girls.

There are girls and girls in the West, of all

degrees and styles of prettiness; but here, as elsewhere, and in all her glory, is seen the pre-eminently pretty girl—who by that patent exists, to herself, to her world, and in the imagination of her parents. The career of this young lady in her native environment is something amazing to persons of a sober imagination as to what should constitute a girl's "good time." The risks that she takes, no less than her extraordinary escapes from the usual consequences, are enough to make one's time-honored principles reel on the judgment seat of propriety.

It is true she does not always escape; but she escapes so often that it is quite impossible to draw any wholesome deductions from her. The only thing that can be done with her is to disapprove of her (with the consciousness that she will not mind in the least) and forgive her, because she knows not what she does. Why should she not take the good time for which, and for little else, she has been trained—the life of pleasure for which some one else pays!

In the novels she goes abroad and marries an English duke; in real life not quite so often; but she is an element of confusion, morally, in all one's prophecies with regard to her. She may have talent and make an actress or a singer, if she has any capacity for work; or she may marry the man she loves and become an exemplary wife. That which in her history appeals most deeply to one's imagination is the contrast between her fortunes and those of her mother.

If Creusa had survived the fall of Troy to accompany Æneas on his wanderings, with a brood of fast-growing boys and girls, whose travel-worn garments she would have been mending while her hero entertained Dido with the tale of his misfortunes, it is not unlikely that that much-tried woman would have had her ideas as to those qualities in her sex that make for a "good time," and those which mostly go to supply a good time for others. And we may be sure that in planning the futures of the Misses Æneas she would not have chosen for them the virtues that go unrewarded; rather shall they sit, white-handed and royally clad, and turn a smiling face upon some eloquent adventurer—who shall not be, in all respects, a copy of father Æneas.

Whoever has lived in the West must have

observed that here it is the unexpected that always happens; therefore it will be a mistake to take the pretty girl too seriously, or to regard her as a fatal sign of the tendency of the life she is so fitted to enjoy. She is merely a phase,—an entertaining if not an instructive one,—for which her parents' hard lives and changes of fortune are mainly responsible. Her children will reverse the tendency, or carry it to the point of fracture, where nature steps in, in her significant way, and rubs out the false sum.

But as often as not nature permits the whole illogical proceeding to go on, and nothing happens of all that we have prophesied. We see that the fountain *does* rise higher than its source, that grapes *do* grow upon thorns and figs upon thistles, on some theory of cause and effect unknown to social dynamics.

The pretty girl from the East is hardly enough of a "rusher" to please the young Western masculine taste; but there will not be wanting pilgrims to her shrine. Her Eastern hostess will be proud of the chance to demonstrate that she is n't at all the same sort of pretty girl as her sister of the West,—it is the shades of difference that are vital,—and she will receive an almost pathetic welcome at the hands of her young countrymen, stranded upon cattle-ranches, or in railroad or mining camps, or engaged in hardy attempts of one sort or another wherein there is room for feminine sympathy.

Whether she takes her pleasure actively, in the saddle or in the canoe, or sits out the red summer twilights on the ranch piazza, or tunes her guitar to the ear of a single listener who has ridden over miles of desert plain for the privilege, she will be conscious that she supplies a motive, a new meaning to the life around her.

All this is very dangerous. She is in a world of illusions capable of turning into ordeals for those who put them to the proof—ordeals for which there has been no preparation in the life of the pretty girl. Even the ordeal of taste is not to be despised—taste, which en-

virons and consoles and unites and stimulates women in the East, and which disunites and tortures and sets them at defiance, one with another, in the West.

The life of the men may be large and dramatic, even in failure; but the life of women, here, as everywhere, is made up of very small matters—a badly cooked dinner, a horrible wall-paper, a wind that tears the nerves, a child with something the matter with it which the doctor "does n't understand," an acquaintance that is just near enough *not* to be a friend: it is the little shocks for which one is never prepared, the little disappointments and insecurities and failures and postponements, the want of completeness and perfection in anything, that harrows a woman's soul and makes her forget, too often, that she has a soul.

So let our pretty Eastern girl remember, before she pledges herself irrevocably to follow the fortunes of some charming young man she has had a "good time" with on the frontier, that—all good times and masculine assurances to the contrary notwithstanding—the frontier is not yet ready for her kind of pretty girl. There is more than one generation between her and the mother of a new community—unless she be minded to offer herself up on the altar of social enlightenment, or for the particular benefit of her particular young man. This is a fate which will always have a baleful fascination for the young woman who is capable of arguing that, if the frontier be not ready for her, the young man is.

The pity of it is that these young gentlemen always will pick out the pretty girl, when a less expensive choice would be so much more serviceable and fit the conditions of their lives so much better. But they are all potential millionaires, these energetic dreamers. They do not pinch themselves in their prospective arrangements, including the prospective wife. Between them both, the girl who expects to have a good time, and the young man who is confident that he can give it to her, there will probably be a good deal to learn.

* * *

ON A GREAT POET'S OBSCURITY.

WHAT means his line? You say none knows?
Yet one perhaps may learn—in time:
For, sure, could Life be told in prose
There were no need at all for rhyme.

Alike two waters blunt the sight—
The muddy shallow and the sea;
Here every current leads aright
To deeps where lucent wonders be.

Robert Underwood Johnson.

THE LONGWORTH MYSTERY.

BY THE CITY EDITOR.

HE eccentric old telegraph editor, in his little sleeping-den in the great publication building of the "Democratic Banner," was writing a compendium of Kant's philosophy, and kept a colony of white mice in a squirrel-cage, feeding them upon soda-crackers and milk. He was a patient, uncomplaining, and gentle slave, who toiled the ten hours of night without a word unless it were asked, and then it was freely, even generously, given. Somehow, with the knowledge that he knew enough to make a compendium of Kant, there came to the young men of the force the conviction that he knew everything else. And thus, in addition to his labors at the telegraph desk, he discharged the important function of encyclopedia-in-chief to the "Banner" staff.

Did anybody want to know the meaning of a word? Kant's disciple nimbly followed it to its Latin, Greek, or even Phenician root. Those curious expeditions into the infinitude of astronomic lore which the young reporter, in happy and unsuspecting ignorance, is so fond of making when assigned to "a paragraph on the partial eclipse of the moon to-night," were always more or less piloted by the friendly hand of the patient old philosopher, who turned from his work only to lighten that of somebody else. Touching all the astounding and deeply hidden mysteries of earth, air, science, philosophy, and religion that placid mind was a never-failing fount of information.

These things, it is true, were as airy nothings to the stern and immutable mission of the daily newspaper; they merely served to give pedants on the staff an opportunity to "kill space" on the days when storms and electrical phenomena reduced the capacity of the telegraph wires to convey sufficient "copy." But the young men felt a veneration for that mind so deeply stored with knowledge they could not understand, and a kindly pity that it stopped short of the important names upon the 2.30 class of trotters. Alas! it was a blank upon those stirring and absorbing subjects that engage the best intellect of the city editor's practical department. When he passed away it was perhaps in the fullness of a ripe, dry, and musty scholarship, but there was not a "regular," a "special," an "extra," or a "loose" man on the staff who did not recognize with

something of kindly compassion that that gentle spirit had gone to its eternal rest without knowing—or even caring to know, so sublime is the indifference of simple scholarship—the order of finish of the League base-ball clubs for the previous season, and all regardless of the fame of that single batsman who could face Pitchington, the curve terror, with any hope of a safe hit.

It is not pleasant to record these blots upon an otherwise fair page of life. It is, indeed, somewhat of gratuitous cruelty to set them down, for the telegraph editor had nothing whatever to do with Robert Longworth or "The Longworth Mystery." It may be excused, then, as a touch of that local color which accompanies the action of life as the painted scene gives emphasis to the actor's spoutings. It is even true that if the stupendously informed but sadly ignorant delver into Kant's philosophy had never lived, Longworth's career would have been in no wise changed. They occupied adjoining apartments in the building for a year, these two singular and interesting men, without knowing each other, although each knew the firmament and the stars and planets therein as familiarly as Mr. Forrest, the dramatic critic, knew the stars of his peculiar firmament, or Mr. Burke, the sporting editor, knew the planets that revolved around the twenty-four-foot ring or the mile circle at the racing-park.

These two men, though they resembled each other in the immensity of their knowledge and in the open-handed way in which it was dispensed, were entirely dissimilar. They supplemented, and, as it were, completed each other as practical factors of that staff of talented and industrious journalists. What the patient telegraph editor knew of things so hoary and impracticable as to pass all modern understanding in journalism, Longworth knew of that which was the prime meat, the juice, the essence, the all, of the local newspapers. His wonderful mind reached back and enveloped in the symmetry of minutest detail the prize-fights of the last century; the winners of the Derby when that famous stake was in puling infancy in England; the names and records of the champion high, long, and clear jumpers; the "averages" of the giants of the great base-ball profession; and the gossip, private but reliable, of those smirched in the extension of the

franchise of the Paradise and Paddy's Run Street Railway. Upon the personalities of politics, the drift of issues, and the progress of legislation his mind was a fruitful expanse of information.

Looking back now it is comparatively easy to sum up and credit his great talents and his great services, but these were evolved slowly into recognition. The writer hereof, an entire stranger to the city, had scarcely settled himself in the august chair of the city editorship when Longworth made the almost unnoticed entry through which his genius was destined to filter, enlarging as it came, until it had flooded the local department of the "Democratic Banner" with shame, mortification, and base hatred.

The negligent copy-reader and the unspeakable proof-reader had both passed, in the course of an elaborate description of the new gymnasium, the absurd statement that Sayres had once fought the Tipton Slasher to his knees in the first round. Next morning there lay on the city editor's desk this note:

TO THE EDITOR OF THE "DEMOCRATIC BANNER."

In the otherwise admirable report of the opening of the new gymnasium, in your valuable paper of this morning, your reporter falls into a common but inexcusable error regarding the mill between Sayres and The Slasher, fought at Tunbridge Wells, May 23, 1857. Sayres did *not* fight The Slasher to his knees during the first or any subsequent round of that remarkable contest. The misstatement originated in the Tunbridge Wells "Gazette's" report of the 24th of May, 1857, and was promptly corrected in "Bell's Life" of the succeeding week. Crapster's "Life of Sayres" expressly says that The Slasher slipped upon a pebble which had been overlooked in preparing the ring, and fell to one knee—not his *knees*—by accident. There is no stronger admirer of Sayres than his biographer, Crapster, and if any well-informed person felt any necessity to claim even a doubt of the cause of The Slasher's fall, that doubt would have been perpetuated in Sayres's "Life." But Crapster distinctly disavows any claim for his hero on that point.

ROBERT LONGWORTH.

This communication, written in a feeble and straggling hand, was published. It gave the copy-reader pain, it rebuked the unspeakable proof-reader, and it covered with the first heavy mantle of humiliation the sporting editor himself. That oracular member of the staff had never before experienced the salutary discovery of an equal, much less a superior, mind in the domain of his own peculiar information. Who "Robert Longworth" was the sporting editor did not know; no more did the city editor; but there was the note itself, proof of the presumption that its writer had read the classic of fistiana, with which the sporting editor had no acquaintance. And, knowing

nothing about it at all, the city editor, with that impartial dignity and quick decision which imparts so much strength to his position and elevates him in the respect of the staff, pronounced Longworth's correction to be well-timed, accurate, and due to the truth of history. This decision at once gave the city editor rank in the estimation of the force, which as a stranger he much needed, and he was henceforth looked upon as a remarkably well-informed and cultured journalist. Soon, when he passed opinions upon sporting topics, they were occasionally echoed in the sporting column in the easily detected phraseology of the sporting editor.

But it must be said of Mr. Burke that his first impulse, smarting under the sting of so bold a rebuke, was bitterness to Longworth.

"As if it made a cussed bit of difference," he explained with picturesque animation to Mr. Forrest, the dramatic critic, that night, seated at their regular midnight lunch over Drinkworth's beer and oysters. "The point of my reference was to illustrate the perfection to which the cultivation of the dukes might be carried—not to insist merely, begad, that Sayres had knocked The Slasher down in the first go. There 's lots of duffers that have knocked handy men to their knees in the first round, and that sustains the point. But I happened to hit on Sayres just by accident, because it was a great name, I suppose, and this Longworth wants to come along and knock the whole point out. What difference does it make, anyhow, over a fight fought in '57?"

And the dramatic critic, an unapproachable and gloomy person, who unbent to nobody upon earth save Mr. Burke,—and whose reasons for unbending in that direction were basely attributed to certain selfish desires to obtain passes to all slugging-matches, cock-mains, race-meetings, and base-ball games, which passes were the sole perquisites and entirely within the influence of the sporting editor to obtain,—agreed mutely, but with a bored air, to his friend's defense.

It was soon apparent, however, that Longworth had no petty desire personally to annoy or humiliate the sporting editor. If he had, his malevolence must certainly have extended to other and finally to all the members of the staff; for within a week the note that had been forgotten was followed by another in the same quavering, straggling hand, and which, to the unconcealed delight of the force in whole, was directed to uncovering the fallibility of the religious department. It was plain that Longworth could not have any feeling of malignity towards the pale, amiable, and yearning youth whose duty of once a week, on Saturday, throwing the contributed religious

notices into shape had earned for him the title of the religious editor. He was a rustic youth, with remarkable capacity for enjoying all the privileges of journalism and escaping its grinding demands. The religious editor regarded Mr. Burke, the sporting editor, with a veneration born of similar, but as yet unsatisfied, ambition. Nothing more delighted him than the occurrence of what was technically known as a "double sporting event," in which case he left no pleading unattempted to secure the assignment for reporting the lesser, while Mr. Burke himself attended the greater in person and, with patronizing kindness, corrected the "copy" of his youthful and rapidly fledgling emulator. It is painful to record that these associations and the peculiar ambition of the religious editor soon brought rumors that he was beginning to be seen about the gambling-houses. From that to cigarettes and the chewing of tobacco, with not yet entirely concealed repugnance, was a short step, and he began to swear vigorously as he compiled the church notices on Saturday nights. But he retained a boyish geniality and an engaging amiability, and his elasticity of imagination in circulating unimportant facts that he picked up at random diverted and amused all of us. And thus his title of religious editor was fastened upon him, it is only proper to confess, for purely ribald and satirical reasons.

The religious editor, it appears, in editing a paragraph announcing the subject of the Rev. Dr. Calvin's sermon for the next day had incautiously accepted an opening for pedantic display,—the bane of young journalists,—and upon the result of his attempt (which Burke declared revolutionized at one swoop all preconceived notions of the Mosaic code) Longworth came down in a note that was brief but which weighed like a ton upon the religious editor's self-satisfaction.

This note attracted our attention sharply to Longworth, though nobody had the remotest idea who Longworth was. But the time came when there was no room to doubt that Longworth knew the "Democratic Banner" with a critical intimacy that was wonderful. The office soon learned to fancy Longworth's Eye as being in itself some insatiate monster, roaming up and down the columns of the paper, searching everywhere, penetrating all departments, finding and dragging to light unwary inaccuracies and blunders. Nothing escaped his relentless scrutiny. He challenged alike the book reviewer's reference to the date of the publication of a French work on infidelity and the haughty dramatic critic's smuggled reminiscences of the elder Booth. When a typographical error in the market reports put up the price of eggs seven cents in the dozen

Longworth sent in a communication, full of appalling statistics, to show that it must be a mistake, because in no year since 1817 had eggs ever reached such a figure at that season. He knew the productions of the unsung hen as thoroughly as those of more renowned authors. He sent up, from nobody knew where, in little dirty envelopes, memoranda of all sorts and conditions, setting the court reporter right in regard to the date of certain ordinances and reminding the art critic of facts hitherto unknown to that authority about the origin of pottery in Japan. He fell upon the "Answers to Correspondents," and for weeks the timid bookworm of that department, who stood intrenched behind the awful array of information he had himself heaped up, sat silent, aghast, and stricken with remorse at the ignorance and blunders that had crept into what he had heretofore considered an impregnable wall of passionless and impartial fact.

It was not long until the rumor grew that even the throned omnipotence that fulminated the tariff articles had received a note in which his figures upon the prime cost of pig iron in the southern water-shed were ruthlessly challenged, scattered, and put to flight. Whether this was true will never be demonstrable by actual proof, for no secrets leaked out of the gloomy chamber in which were written articles upon the necessity of a tariff revision, upon a plan that nobody understood, and which could not be explained to anybody. But it was certainly more than a coincidence that about this time the tariff editor's evolutions became tinged with acrid but obscure references to "certain emissaries of the arrogant money classes who, led by gross ignorance and upheld by intolerable effrontery, have questioned our accuracy upon this point." Then followed arrays of figures, with the first cost of raw material multiplied by classifications of multiples and divided by divisors, "selected for reasons explained at length in our articles upon this absorbing subject last year." A few days later the tariff editor fulminated a great broadside of sweeping sarcasm and bitter abuse against the still mysterious "emissary" who, "not content with disputing our facts, actually has the impertinence to deny the correctness of our multiples and divisors."

The young gentlemen who prepared with facile pens the light and airy chronicles of the local page listened to the thunder and roar and watched the flashes of this battle between the giants with openly expressed delight. The denounced "emissary" was never unmasked by name, but continued to stalk purely as an "emissary"; yet we knew, with the accuracy of unerring instinct, that it was Longworth who

was stirring up the splendid but intellectually irritable and unsociable animal in the tariff cage.

"And for one," remarked the sporting editor, with a burst of feeling, "I'm glad of it. The old man" (meaning, without disrespect or familiarity, the venerable editor-in-chief, whose special study was the tariff)—"the old man has been writing that stuff so long, he believes, begad, he knows all about it. Just because nobody has ever tackled him before he thought he was dead right in everything he said about pig iron. I don't know who's right, but I'll bet the drinks, begad, that he don't know as much about it as Longworth does."

Tom Kirby, the police reporter, agreed with Mr. Burke as far as the sporting editor concluded to go. It made Kirby sick, he confessed, to pick up the paper and see the editorial page loaded down with pig iron day after day. There was the old man writing it by the yard, when he, Kirby, would bet that he, the old man, had never seen an iron-furnace in his life. But, notwithstanding the failure of the old man to equip himself with a statistical knowledge of the cost of iron production by apprenticing himself as a puddler in his youth, Kirby was ready to bet his sweet life that the old man was "a dandy" and could write all around anybody else in the West on the tariff question.

This uncertain, but, on the whole, loyal and complimentary, sentiment regarding the old man was indorsed by the assembled judges of the local department, it is a pleasure to say, without a dissenting voice.

As has been declared, we never knew directly that it *was* Longworth who had interposed himself between the tariff editor and his man of straw, but we believed it firmly. By this time we had learned to know Longworth well. If his notes to the tariff editor had been published with Longworth's name attached it would have added little to the weight of conviction. The notes were not published, of course; for the very sensible and sufficient reason that the public ought to be satisfied with what the editor writes without reference to what may be said on the other side. What would be the use of a man devoting his life to journalism if every scribbler who came along were privileged to take issue with him?

In the local department we had long ago ceased publishing Longworth's communications and corrections. If we had continued to give them space they would have impeached the reliability of that great engine itself in which we were merely cogs, wheels, and connections. But though we secreted them, we did not despise them. They secretly furnished the city editor, many a time, the basis for a sharp crit-

icism of somebody's negligence. And, indeed, the entire staff were influenced by the intangible but undoubted presence of Longworth, and were writing more or less in view of and under the fear of Longworth. If the police reporter felt tempted to add any technical frills to the account of a post-mortem in a "three-column crime," he did so only after submitting his notes to the correction of a surgeon. Even Mr. Burke became singularly conscientious touching dates, and Mr. Forrest gradually ceased his reminiscences of the elder Booth, simply because all were challenged or discredited in some point by Longworth.

Only the amiable but unregenerate religious editor scorned and ignored him. Far from being chastened, corrected, or advised by Longworth's notes, the religious editor damned them with fervent vigor when they were laid upon his desk, and damned the mysterious Longworth along with them.

But though Longworth's notes were not published, they continued to arrive every day or two. They came regularly for years. They covered all imaginable subjects, and ruthlessly impeached countless statements that, nevertheless, continued to stand for facts. Longworth was recognized as a member—if a very irritating one—of the staff. At last everybody about the office who chanced to be in urgent need of information upon any subject was sarcastically advised to "Ask Longworth."

But we continued not to know who Longworth was any more than who was the man in the moon. Even the right hand of the city editor, the well-thumbed and faithful city directory, was silent upon the momentous question of his habitation, as it was of his name. His notes came steadily in the mails; but though we ignored them as to publication, we could not discourage Longworth's self-imposed resolution. That he did not finally appear in person and, as "an old and valued contributor," seek some personal benefit from his self-established intimacy with the paper, gave us cause for astonishment. There was the lady who had been selected by the local temperance union to contribute a column of temperance paragraphs to the Sunday edition, and who had been permitted to do so as a special favor: *she* was filling her column in three months with "puffs" of business houses; another lady, who wrote essays upon "Woman's Sphere" and was convinced that intellectual progress suddenly stood still when her essays were temporarily omitted; and still another lady, who had astonishingly frequent attacks of divine frenzy and came out of each with a manuscript poem that nobody understood—these came constantly in person and took such elaborate interest in the fate of their "copy" as would

have made of the managing editor a social pariah if the comments he uttered in private had been publicly circulated. And all of them enjoyed the conviction that their contributions entitled them to such favors as they freely asked in the puffing of numerous enterprises thinly veiled under the alluring name of charity. Longworth alone of all that band of self-invited assistants continued laboriously, conscientiously, and ably to edit the waste-basket in silence and resignation.

Kirby, the police reporter, whose duties frequently constituted him a detective upon most embarrassing mysteries, and whose wonderful capacity for knowing a great deal about everybody had established him as a very remarkable person, could not throw any light upon the mystery of Longworth and his identity.

Out of this grew the usual slang jests. Anybody who volunteered information was "Longworth"; Webster's Unabridged was known as "the office Longworth"; the city directory was "the local Longworth." A patriarchal old printer in the job-printing department, whose benevolent face and appearance of extreme wisdom invited the joke, was commonly called "Longworth." Coming up with this elderly man one day in the elevator, the religious editor asked in a whisper of the sporting editor:

"Who is the old duck?"

"That," answered the sporting editor, as the old man stepped out on the next floor, and with a pitying smile, as if the information ought to be superfluous—"That? Why, that's Longworth."

Months afterward the staff learned with a shout of amusement that the guileless religious editor had been regularly addressing the elderly job printer as "Mr. Longworth" when they chanced to meet in the elevator. This discovery heaped ridicule and mortification upon the ingenuous youth, but he did not entirely succumb.

"I don't care," said he, affecting a smile that was not all an honest and spontaneous smile should be. "When I say, 'How d' ye do, Mr. Longworth,' he says, 'Pretty well, I thank you'; and if the name suits him I'm blessed if it don't answer my purpose."

And it did. The elderly job printer had thenceforth no other name than Longworth. If he had taken pains to inform the whole staff that he possessed another, it is probable that the satisfaction of the slang would still have outweighed the truth of the suggestion.

But there was an end to Longworth, as there is to all other things; though what we thought at first to be the end was really only the beginning. And that beginning of the end was the sudden and complete cessation of

Longworth's notes. Was he ill? Or had he gone on a journey? Both explanations were suggested. Several weeks passed and the religious editor filed the fervent and unchristian hope that he was dead and housed hotly somewhere. But that portion of the staff engaged in embodying facts continued to gather and to write them in full fear of Longworth and with a keen appreciation of his sensitiveness on the subject, which in itself was a silent tribute to the salutary and profound effect of Longworth's unremitting labor. Silent as he was,—perhaps dead, at any rate missing,—the unconscious standard he had compelled continued to be the pole star by which those mariners upon the sea of current events steered their hazardous statements.

It is not the intention to slur truth in this narration, and it is only right, therefore, to admit that, as time passed, the embargo which Longworth had laid upon the imagination and the neglectfulness of the staff was gradually, and, eventually, entirely raised. Mr. Forrest resumed cautiously his reminiscences of the elder Booth, the sporting editor's opinionativeness increased, and even the tariff editor sailed a little farther away from the beacon lights of James Madison at every voyage.

The Longworth mystery was finally solved through the haughty dramatic critic. Panoplied with indignation at an assignment from the city editor to "go to the United States Court to-day and write a column characteristic sketch of the arraignment of moonshiners," Mr. Forrest went to his duty stoically and came back greatly pleased and patronizing in mood.

"Those moonshiners," said he to the city editor, "are worth about as many lines as will hold their names; but there was a case up on demurrer, or something of that sort, and there is a story in it that will make your hair curl."

"What is it all about?" inquired the city editor, who was not in primitive ignorance of the means resorted to by the various persons on the staff to give their discoveries a pretended value that was occasionally intrinsically lacking.

"All about Longworth," said Mr. Forrest, patronizingly and with a trace of annoyance in his tone, as he laid upon the city editor's table a handful of notes labeled: "Tabitha J. Longworth *vs.* the Order of Good Friends."

"Well, what has Longworth been doing?" asked Mr. Forrest's chief, with a tinge of authority and brusqueness in his manner.

"Oh, nothing particularly," snapped out the dramatic critic, with a sneer in his voice, "but to marry and shamelessly deceive two trusting women, involve a noble charitable order in costly litigation, and write a lot of insuf-

ferably impertinent notes to his betters on this paper for the past seven years."

"ROBERT LONGWORTH!" cried the city editor in the unmistakable capital letters of great astonishment.

For answer Mr. Forrest again affected annoyance, and asked if it would be necessary for him to make an affidavit to support the truth of what he had already said.

But the little personal throes of pride, of triumph, and of ill-nature that attend the oiling of the great engine of information are not to be idly exhibited to the public; and it is enough to say that after those throes had subsided in this instance the staff of the "Democratic Banner" were soon seething with curiosity as to Longworth and his duplicity. Only brief and detached outlines had been given by Mr. Forrest, who, with a masterly and supreme affectation of indifference, began early in the evening to compose the "story" that his fellow journalists awaited so eagerly.

The details of Mr. Forrest's story will not be given here. Most of its interest was due to his powerful and inimitable style, and only the entire narrative as he wrote it would preserve that for full appreciation. It must be owned that it was one of the most brilliant efforts of his facile pen, and those who desire to read it may refer to the files of the "Democratic Banner," where Mr. Forrest revealed the mystery and the crime of Robert Longworth, under the captions of

A VILLAIN UNVEILED!

ONE OF THE MOST SURPRISING STORIES IN LEGAL ANNALS.

The Unparalleled and Criminal Duplicity of Robert Longworth, who Broke Two Hearts and Cruelly Threw One Away.

A STORY OF FACT RIVALING IN ROMANCE AND MYSTERY THE PLOT OF THE MOST IMPROBABLE NOVEL!

In denouncing Longworth's duplicity Mr. Forrest wrote with all the vigorous and picturesque interjectiveness that small capital "sub-heads" skillfully placed could lend to a style whetted and nerved by recollections of Longworth's ruthless corrections of certain more or less smuggled reminiscences of the elder Booth. It must be admitted that while Mr. Forrest wrote with venom he wrote, also, with certain power.

THOSE DAMNING RECORDS,

HIS BASILISK EYES,

A MYSTERIOUS SECRET,

are some of the catch-lines in small capitals that the reader who cares to look up this

memorable "scoop" upon one of the most loathsome of contemporaries will find standing out boldly in the three columns of leaded minion with which, in the figurative and highly colored language of the religious editor, the "Democratic Banner" "paralyzed that old fraud" at last.

As briefly as possible it may be explained that Longworth was undoubtedly a bigamist. He had, many years before, clandestinely married a well-to-do widow in a Pennsylvania town, and had expended much of her means in attempting to establish a newspaper. He had then left to seek an opening in the West and had never returned to his deserted wife. True, he had maintained a most ingenious and constant correspondence with her, which did not cease even in the happy period when he was enjoying another honeymoon with a second well-to-do and unsuspecting widow. Supporting a most elaborate falsehood and a most ingenious system of detail with his first wife, he had evidently mailed his letters to her from a suburb across the river, while he was as plainly residing in the city. The end came to this fragile fabric when Robert Longworth took passage on the steamboat *Evening Star*, on that memorable night when her boilers exploded and the souls of forty-six excursionists never returned to complain of crowded accommodations. True, his body was never recovered, nor had his name appeared in the list of the lost published in the "Democratic Banner's" splendid account of that deplorable tragedy — an account so infinitely superior to the miserably inaccurate and poorly written story in our loathsome contemporary as to stand out as one of the greatest achievements in Western journalism. This is not said in mere vainglory, but is a well-attested fact, due to the presence on board the ill-starred boat of one of the "Democratic Banner's" reporters, who swam triumphantly ashore on a hen-coop and walked four miles to a telegraph office to send his report, while our miserable contemporary was forced to content itself with the untrained hearsay of a country correspondent.

But though his name was not in the death list Robert Longworth had disappeared in that disaster, and his widow — or, to speak more accurately, his second widow — had promptly received from the Order of Good Friends, of which he was a member, the sum always paid to the families of members who had died.

In the mean time his first wife, missing her accustomed letters, had set on foot a laborious investigation with the aid of a lawyer, had unearthed all his conduct, and was now suing to recover, as his only lawful wife, the benefit already paid to the second wife.

"And this," wrote Mr. Forrest, "was the punctiliously correct and painfully accurate person who in 187-, or thereabouts, began sending to the 'Democratic Banner' communications of all sorts and upon every conceivable subject, finding fault with the statements of everybody. He soon established the repu-

one subject. While all agreed that there was not another man on the force who possessed Mr. Forrest's ability as a first-class, all-around journalist, yet the opinion seemed to prevail that he had taken something of an unfair advantage and a personal delight in making the whole thing look as black as possible for Long-

AT DRINKWORTH'S.

tation in the 'Banner' office of being a first-class crank, desirous of the notoriety that such creatures usually achieve in the way of getting their names in print. Longworth was an aggravation of 'Tax Payer,' the evil quintessence of 'Citizen,' 'Fair-Play,' and 'Veritas.' He thought he knew more than everybody else, and exhibited his ignorance and presumption with a lavishness of pen, ink, and paper that might have bankrupted a stationer.

"The trial of this case," so the article concluded, "will be one of the most famous in local annals, and the facts unfold to us one of those romances of villainy in real life that fiction and the stage so often feebly attempt to portray."

It is needless to say that the proof-slips of Mr. Forrest's three-column story were discussed that night before the paper went to press with an interest not often betrayed towards the most startling episodes that come within the practical province of newspaper work. Displaying in heroic measure his affectation of indifference, Mr. Forrest had turned in his copy and immediately gone home, and his absence left the remainder of the force free to discuss the

worth. This view of it came out little by little, and was shared by all except the religious editor. That young gentleman, now in the height of a career of dissipation and pleasure which seemed to steel his heart against sympathy, was relentless.

"Serves him right," said he; "and Forrest can't hit him too hard to suit me. I always thought Longworth was too fond of little unnecessary facts to be any good. People of that kind," continued the religious editor, breezily generalizing, "are mostly no good. A man can be so confounded accurate, you know, that he won't have time to be anything else. I like facts about as well as anybody else, but I don't go around proving that everybody else is a liar because he does n't happen to agree with me. That was about Longworth's size. He was so busy trying to keep other people from straying that he did n't have time to keep from becoming an infernal rascal himself."

But this extreme view found not a single echo. In fact, all recognized that Longworth had been more or less a mentor and a benefit to the staff, and there was no resentment harbored against his memory.

The fact that he had married two, or even more, wives did not influence us against him. In newspaper offices, among the men who make up the chronicle of daily history, the moral sense is not necessarily lost, but it is often not aroused by the discovery of wrong-doing. Tireless and inquisitive reporters see so many men doing wrong with impunity and know that so often punishment is a matter of accident or of interested malice, that they give a great deal of weight to the eleventh commandment, against being found out, and become unresponsive to personal morality in others as a moving sentiment to repel or attract. Longworth had been found out, but not until he was beyond punishment, and we bore him no malice on that score. That his crime gave us a good "story" rather told in his favor, and as to his notes and his corrections, there was no denying he had always been right.

"Oh, I'd let it go in that way," said Mr. Burke, from the desk in his corner, illuminated by prints of race-horses and portraits of prize-fighters, where he used to receive all sorts of hard-looking persons in pea-jackets, variously ornamented with ponderous jewelry. "Longworth is dead; he won't care, and both his wives will like to see him roasted. That part about his letters to the paper is very good, I think. It will teach a lot of other ducks of the kind who think they know it all that there are fellows in the office quietly keeping tab on them."

And so adopting this view of it, as, on the whole, journalistically sufficient, at two o'clock in the morning we buried in three columns of the first page all mortal that had been discovered of Longworth. He had been of us for seven or eight years, but it was only above his grave, and standing, as it were, over the wreck of his character and his good name, that we knew him at all. As we walked out of the great building in the early morning, the moon, bright and cloudless, sailing through the sky and marking shadows black and broad along the sidewalk, the burdened and groaning press was busily multiplying the humiliation of one who in his time had humiliated the active spirit of that very engine's existence.

The most startling manifestations of human nature, the most unexpected disappointments of life, do not burden the mind or engage the emotions of the journalist. Wrecks of character, of life, and of hope are, for his professional attention, only just what the most dangerous wounds or most perilous diseases are to engage the trained attention of surgeon or physician. The one soon becomes accustomed to seeing all the sorrow and shame of life pass before him in sad review, as the other listens to the moan of pain or watches the unconscious

throes of the sick. And as each detaches himself from his personal feelings deftly to use the scalpel of his profession upon the abstract subject before him, he devotes no emotion to the effort and rapidly recoups himself for the next "case."

So it was with Longworth's story. Next day the highest feeling left in the bosoms of the "Democratic Banner" staff was that it was a splendid and unqualified "scoop." In our loathsome contemporary appeared not a line of the singular romance the three fascinating columns of which made the "Democratic Banner" a thing of beauty to the trained journalistic eye.

Even the business manager, a person usually of no journalistic instinct, and useful about newspaper offices only to pay editorial salaries, smiled that morning and was moved to approving comment upon the excellence of the exclusive story.

The city editor went to his desk therefore with buoyant spirit. Only, however, to have even his experienced and well-directed ardor dampened by the most unexpected of reactions contained in this note:

TO THE EDITOR OF THE "DEMOCRATIC BANNER."

Will you kindly state in your issue of to-morrow that the Robert Longworth whose villainies are so vividly and entertainingly described in this morning's paper is not the Robert Longworth who has resided in the thriving suburb of Milltown for so many years? I ask this in justice to myself, because I infer that your reporter has made the error of confounding two Longworths. I have written a great many contributions for the "Democratic Banner," and may have laid myself open to the reflections in which he indulges about them; but I have not been blown up on the *Evening Star*, or on any other boat, and have no desire to be burdened with any other Longworth's shortcomings in addition to those your reporter has so vigorously pointed out as perhaps properly belonging to me.

ROBERT LONGWORTH.

The note was written in the unmistakable feeble, quavering handwriting of Robert Longworth himself—the Robert Longworth who, but the night before, had been dismissed with so much of genuine compassionate feeling. That note seemed like his ghost suddenly returned from its mysterious bourn.

"Who left this note?" the city editor inquired of the office-boy.

"An old man laid it on your desk and walked out," answered the boy.

"Did he seem angry—did he say anything?" pursued the city editor.

"He never showed no signs," answered the astute youth, "of being hot in the collar. He just says, 'Give that to the editor,' and walked out whenst he come."

Here was annoyance! And enough of it to take the keen edge of satisfaction from the delight of the "scoop." Evidently Mr. Forrest had jumped at conclusions and confounded two Longworths. The story was not discredited by that fact, of course; but at best it was a careless and annoying error, entailing upon the paper the mortifying necessity of confusing a

this and in no wise deserved. The city editor relies of course upon the accuracy of the men who obtain the facts for his department, and if he is responsible it is only for perpetuating the mistakes of subordinates. And this much the city editor remarked to Mr. Forrest, adding the off-hand offer to bet fifty dollars against five that if he (the city editor) had

"WHO LEFT THIS NOTE?"

good story by an immaterial explanation and an *amende*. The city editor reflected that Kirby, with his steady training and his unerring instinct for facts, would not have made such a blunder. If he could not have written the story half so well, he would have ferreted out the exact identity at least, or restrained his desire to wreak his vengeance on Longworth until identity was established. The substance of this observation Mr. Kirby did not fail to make to the city editor in confidence afterward.

Mr. Forrest acknowledged with dignified condescension that he might have taken the trouble to make sure, if he had thought there was any doubt. He added with stinging irony, wholly gratuitous, that, considering how notorious was his error, he was astonished that the city editor had not detected it in the copy. This was an ill-natured fling at the writer of

been investigating the story he would not have made the mistake of putting such an error into copy.

But it is unnecessary to waste space upon these disagreeable details. Kirby made a hasty remark about jumping at conclusions, and the city editor admitted in his own mind the absolute unreliability of dramatic critics in matters of pure fact. The sporting editor observed that as the facts about the other Longworth were all true, he could not understand why any Longworth should raise a howl about it. This was unfair in temper, since *our* Longworth had not raised a howl. He had, in the politest manner only, asked to be exculpated from a false accusation.

The new aspect of the case surprised us all. In the general willingness to let Mr. Forrest revenge himself upon a presumptive Longworth the actual Longworth who had offended

him was stirred to activity again. The city editor revolved the situation in his mind all day, and, in order to protect Mr. Forrest's dignity, determined personally to investigate the matter further. In the multiplicity of his labors, however, he neglected to do so that day, and the correcting note was left out of the paper next morning.

The next afternoon the foreman of the job-printing department came up from his separate quarters and inquired of the city editor if a note of that purport had been received.

"Longworth asked me," said he, "to request you to publish it."

"Longworth!" echoed the city editor. "Do you know him?"

"Oh, yes," said the foreman. "I've known him for years, and he is out here now."

He stepped quickly to the door, called out into the hall very loudly, "Longworth!" and the next moment there entered the benevolent and taciturn old job printer whom the religious editor had been addressing as "Mr. Longworth" for the past two years!

The city editor gave this apparition a keen and reproachful look as if he would not have thought it of him, and then, finding himself at bay, suavely explained that the correction had been carelessly overlooked the night before, but would certainly be published next morning.

"I'll be very much obliged," said Longworth in a thin and quavering voice, that sounded to the city editor like his handwriting translated into sound. The old man said it simply and earnestly, as if it were to be a favor bestowed upon him unworthily, and there was a kindly, pleased smile upon his face.

Longworth was plainly entitled to the explanation, and his gentleness and lack of self-assertion had their due effect in softening the city editor to its admission without further inquiry.

The announcement to the staff that Robert Longworth was the elderly job printer carried its full surprise. Only, the religious editor's eye brightened with the fire of conscious penetration in view of the fact that he had even unwittingly known Longworth so long.

We all knew him better soon; for, needing a copy-reader to assist the city editor, Longworth was sought at his "case" and readily agreed to undertake the duty, which thus gave him the revision of all the copy and an oppor-

tunity to arrest all those errors of haste and imagination that he had been able to detect heretofore only after they had been betrayed in print. A better man for the post could not have been made to hand; and at his table, alongside the city editor's desk, he soon became one of the most valuable aids, one of the most conscientious and untiring of workers.

It was curious to notice that not even the discursive and pretentious dramatic critic or the opinionative Mr. Burke objected to his corrections, so long as they were suggested or made in the privacy of office confidence and not in the publicity of print. Indeed, they soon learned to lean upon his friendly hand and his unerring memory. It was Longworth's exactitude of knowledge that lent additional value to their work; it was his patient attention that made all the force strong in facts, more effective in literary style, and finally more dependent in spirit. Longworth soon pervaded the whole local department, and all relied upon him. He

"A BETTER MAN FOR THE POST COULD NOT HAVE BEEN MADE TO HAND."

was the most honest and toilsome slave that ever served under the lamp. Even the city editor soon took his turn of adding burdens to those willing shoulders, and felt safer that Longworth was at hand to smooth over the difficulties of shirking.

All this is due to him. This story would possess no value if it was not true, and in confidences such as should exist between the reader and this confessor nothing should be reserved. So the confession of his value and his faithfulness is due to the patient and gentle old man who sat night after night at his table, going with rapid fingers through the great piles of copy, his kindly face illumined, as if by a nimbus, by the gaslight that sifted through his white hair.

Longworth was not talkative, but like other agreeable spirits he would converse when the conditions were favorable. When there was a lull in work, or during the brief period of relaxation after the night's labor was done and

the staff lounged about, sitting on the desks, to recall and recount incidents and gather suggestions, Longworth was not averse to engaging in the conversation. He discussed news critically, and frequently gave suggestions that opened up entirely new avenues in sensations apparently exhausted. He watched the merely effective as well as the legal points of all the mysteries and tragedies so dear to the reportorial heart. He always recurred to the other Longworth's bigamy case as one of unusual interest. He it was who unearthed the legal point that, as the body of Longworth had not been produced nor the death absolutely proved, and the statutory time for presumption of death had not elapsed, the payment of the "benefit" to the second wife was legally nothing more than a gratuity from the Order of Good Friends, and that the first wife by proving her prior and legal marriage could secure payment from the Order as if none had ever been made. He returned to the case often—so often that at last it came to be called the "Great Longworth Mystery," and even Kirby became infected with his idea of the possibility of a still more startling dénouement. That Monsieur Vidocq of the staff had little appreciation of the romantic and picturesque in crime, but he possessed a sterling idea of the value of facts, and this drew him nearer to Longworth. For Longworth had unusually combined those qualities so often found divided, a conscientious devotion to facts and an artistic appreciation of their vivid and effective grouping and coloring for honest results.

It would not do to say that Kirby fully comprehended Longworth's sensitive anticipation of the opportunity to heap upon the climax of the story already related by Mr. Forrest any unexpected dénouement; but it may have occurred to him keenly that if the dead Longworth were only missing it would be a triumph of fact to overtake and confound him with punishment, or, if he were dead, to supply the missing link in the first widow's testimony by discovering proof of the fact. The unsympathizing nature of his mind did not see, as Longworth saw, the irony of such a result in its effect upon a jury in compelling it to allow the first widow's claim and thus compensate all the afflicted ones. Perhaps even Longworth was not taking that view of it. Whatever their differing motives, the conversations that we overheard between Longworth and Kirby, in which the old man's quavering and gentle voice was pitched in an ardent tenor key, seemed solely designed to point out the importance of settling the mystery itself as a matter of truth.

"There is nothing at all certain," he would say, "in the mere presumption that, because

this man took passage on the boat and never returned, he is dead. There is nothing certain, either, in the mere presumption that, because he has not returned, he is not dead. The question is, what *is* the fact—*what* is the mystery?"

"A hopeless crank!" continued Mr. Forrest, gloomily, upon one of these occasions, as we walked out for lunch. "I think the old man has a special and personal hatred of that poor dead and gone creature, simply because they bore the same name. And I don't know any more ingenious contrivance for gratifying his malice than to set Kirby on to keep the ghost unquiet."

But it was not hatred. There was genuine journalistic instinct and suggestiveness in his idea: nothing less than that would have finally induced the city editor himself to take a due share of interest in the possibility of there being further development in the "Great Longworth Mystery."

The winter passed, marked along its cold and foggy course by Longworth's asthmatic struggles. He said it was asthma, and it probably was asthma before it became consumption. But he never complained; was even apologetic if one of his paroxysms of coughing drew from any of the nervous and impatient young men a rattling of chairs or the hasty and quickly regretted ejaculation of "Cheese it!" or "Rats!"

When the spring came, only a milder and muggier edition of winter, the old man would come in at noon from his vital waking struggles with his cough, haggard in look and broken in strength, but not the less conscientious in his devotion to his duties. He was upborne by something of that physical heroism which in its contemplation brings the hardest world to its knees in gentleness and sympathy. In some such silent and figurative attitude the little world of the "Democratic Banner" staff stood towards his shattering cough and his oft-times pitiful struggles to gasp back the difficult breath.

"Suppose," he suggested one night to the city editor, "this mysterious Longworth is not dead at all! Suppose he merely stepped ashore at some landing and made away with the intention of creating the impression that he had been lost overboard—an impression which the subsequent destruction of the steamer made unnecessary! He alone knew at that time that he was a bigamist, and the dread of exposure, if any was felt, was felt by him alone. Is there not enough motive there to color the theory of mere disappearance instead of death? It would be nothing to a man who had lived a lie for years and maintained with two wives a theoretical existence to duplicate that existence with a third, or, for that matter, to deceive

all his acquaintances and the whole power of the law itself. Suppose, instead of being destroyed in the explosion, he had merely stepped ashore and into another name and another residence! How do we know his name is Robert Longworth? What do we know of him when his wife could not fathom him? May he not be one of those singular men, incapable of enjoying a regular life and destined to eccentricity—finding security in his very boldness? Is anything certain of him? Is it not at least possible that he merely ‘stepped ashore’?”

When Mrs. Longworth of Pennsylvania arrived with the expressed intention of remaining until her suit was decided and the legality of her widowhood established, Kirby interviewed her upon this line of conjecture. But he found the first Mrs. Longworth a woman of unusual coolness and resolution, who, however easily she might have been inveigled into a romantic marriage, had strict views as to reporters. Her case, she said, was

in the hands of her lawyers, and she could not discuss it in the newspapers. Yes, Mr. Longworth *might* be alive. She was prepared for *anything* after hearing of his second marriage. She was not more surprised at *that*, however, than she was at having married him herself. Her acquaintance with him previous to the marriage had been brief, and she knew *absolutely nothing* of his life before she met him. Yes, he *might* have had another name; she was no longer *sure* of *anything*.

Mrs. Longworth of Pennsylvania impressed Kirby rather unfavorably as a reservoir of journalistic information. But her daughter, he confessed abruptly, was a “daisy.”

“Her daughter?” inquired old man Longworth, as he listened to this report.

“The girl,” said Kirby, “is as pretty as a peach; young, well educated, and has charming manners.”

That she was all Kirby painted her was true. The suit, first passed, then postponed, and again continued, seemed likely to develop into a chancery case. Still Mrs. Longworth of Pennsylvania remained at her post, perhaps

“HE BROUGHT MRS. KIRBY INTO THE OFFICE.”

from a very natural hatred of the woman who claimed the name she bore, more than from any desire to secure the mere pittance at stake.

And her stay succeeded in permanently fixing Kirby's interest in the case, since, the first we knew, he was married to the daughter and thus irrevocably committed to the solution of the mystery. They had been quietly married without warning. Kirby was a good fellow, a sensible one, and well deserved his good fortune. And we soon had an opportunity to judge how good it was; for one evening he brought Mrs. Kirby into the office, “just to show her the den, you know, boys,” and the city editor's staff of envious celibates looked with unmistakable admiration upon the trim and pretty young girl, her bright eyes just even with Kirby's broad shoulders, whence they glanced up towards his own with a constant and dancing delight in his mere presence and in her pride and young joy. She had surprised all the boys with their coats off, hard at work, but hats were quickly doffed to give her that royal welcome that men willingly express to youthful feminine beauty.

You may be sure there was nothing ever came home to the "Democratic Banner" like this "Great Longworth Mystery." Already there was Longworth's namesake on the staff, landed there by an accident of the case, and now here was his daughter transplanted among us, so to speak, by a stranger accident of the case, and shaking hands in happy and smiling ease with all the young men. She even shook hands with old man Longworth himself, and Longworth's kindly old eyes rested upon her with gentle delight expressed in them, and, with all of us, he followed with appreciation her trim and graceful figure as it moved about the room.

The "Democratic Banner" was committed to the revelation of the "Great Longworth Mystery" beyond escape. It had become something of a family affair too, involving at least a little tact in its new bearings. And so, after Kirby's marriage, the city editor took down his assignment book and made a change of suggestions. The new one read thus:

Sept. 15.—Longworth trial, U. S. Court. Full descriptive report. R. LONGWORTH.

This was a mere memorandum, however, for Longworth was not employed as a reporter and was not assignable to duty of that sort save with his own consent. But, upon the point of delicacy, it was very plain that Kirby could not be assigned to report the trial. When I mentioned to old man Longworth my desire that he, who understood the case so well, should undertake it, he flatly declined the task.

One can never tell how impressions are made; but out of this declination, somehow or other, the shadow of a suspicion developed in the mind of the city editor. Was it something in Longworth's manner?—no; in his voice? Or was it a mere cruelty of fancy, arising from annoyance, that made me suspect that old man Longworth himself, sitting there toiling in his almost pathetic way, was the center of that mystery? The idea seemed to insinuate itself, and every time the old man returned to the subject, with his startling suggestion that Robert Longworth might still be alive, the suspicion grew and fixed itself more firmly in the mind of the city editor. *Was not the Robert Longworth whose mystery seemed to be burned up in that burning boat the Robert Longworth who was possessed of this absorbing interest in the outcome of the case?*

For a month the city editor carried this secret doubt about with him, being debarred, in such phase of the case, from consultation with Kirby or even from taking any member of the staff into his confidence. There was a certain feeling of guilt in harboring the sus-

picion, and yet a certain instinct of its possibility of truth. Finally he determined to take the question to Longworth himself for answer.

And thus it was that one night, while he sat discussing the endless possibilities of the mystery, he fixed his eyes keenly and unflinchingly upon the old man, and asked:

"Mr. Longworth, don't you *know* that this man went safely ashore from that boat and is alive to-day?"

The question was the sword-thrust of Hamlet behind the curtain. If nothing was concealed there nothing would be pierced. As he delivered it the city editor felt his heart beat and the flush rise to his face that was to be of triumph, perhaps—or mortification. But it faded away into the mere heat of expectation, as the old man, looking him steadily in the eye, and with gentle earnestness and simple confidence, answered:

"I can say I *do* know it, Mr. Brown, because I believe it as firmly as I believe you are sitting there. Perhaps it is because I have thought of it so much from the standpoint of that theory. There are more curious things in the world than ever creep into fiction, and I believe this Longworth mystery is one of them. No man who had lived the double life he lived could be trusted to die upon such testimony as there is in this case."

There was no guile in those gentle eyes, no fear or secret emotion in that familiar and eloquent voice, and with guilty pleasure the city editor recognized that the thrust which might have returned so much mortification upon himself or pressed such guilt upon the old man had passed through the curtain only to impale vague shadows.

From that night there never was a time when he heard the hollow knell of old man Longworth's death cough sounding, or looked upon his kindly old face bending over the piles of copy at the little desk beside him, that the city editor did not make reparation in remorse for the wrong of that thought, for the uncleanness of mind, harbored for that long month.

Yet, it might have been—but no matter now.

The crisis of the Longworth mystery approached rapidly. Summer passed, and when September arrived, bringing with it the trial, it brought a summons for old man Longworth from a court whose jurisdiction covers no contempts, since it has no mandates that are not obeyed. Rapidly enough now was the weak but racking cough tearing at the very citadel doors of his life, and Mr. Burke announced, when message came one day that the old man was confined to bed and unable to come to his desk, "There is not another round left in him, and he is out of the ring for good." And

he said it kindly and sympathetically enough — and truly.

For old man Longworth came to his desk no more. Removed to an infirmary where the good Sisters watched the struggle and cared

But on the last day of the trial there came relief; and when the city editor called on his way to the court-room Longworth could talk in a faint whisper, and the cough was easier and less frequent.

"I CAN SAY I DO KNOW IT."

for the weaker side, he lay in his cot with the clammy dew of exhaustion upon his fine old face. Kirby was put at his desk and the city editor himself undertook the assignment:

Sept. 15.—Longworth trial, U. S. Court. Full descriptive report.

And, with Kirby for conferences, he followed the evidence and searched for the clues and failures of testimony in which lay corroboration or disproof of the old man's pet theory.

Poor old man! Beyond interest in any mystery now save that last one which we must all face some day and explore — God helping us — as best we can. We could not carry the burden of details into the room where Death stood at the foot of that low bed and guarded his feeble prey. And Longworth was too weak to ask, if he wanted to know. Even the cough was a mere convulsion now, the voice only a feeble rattle.

"Is it over yet?" he asked, as the city editor bent down at command of his eyes.

"No," was the answer. "It will go to the jury this afternoon."

And the city editor went out at a sign from the good angel in black, lest the patient should over-exert himself.

It was late in the afternoon when Kirby and the city editor walked constrainedly to the old man's door bearing with them more than the import of the verdict. *That* was, that, in the absence of the *corpus delicti* and the non-intervention of statutory lapse, the payment to the second Mrs. Longworth was not a legal one, but that it was still due to the first and legal Mrs. Longworth. More than this, they bore a cruel suspicion that had been preying upon Kirby all day, and for which the city editor's own conscience had been active in remorse. There was high contention between them.

"I tell you," said Kirby, doggedly, "that

it is very singular this man should begin to recover to-day when this trial is at an end. It is singular that his condition at this particular time should prevent his appearance at the trial, where there were those who might have been able to recognize him. If he is my wife's father, and the scoundrel who has played this villainous deceit upon his wife and child, I will know it."

It was in vain the city editor urged upon Kirby his own suspicion and its dissipation. He was obdurate.

"As long as I thought he was dying," said Kirby, hotly, "I was willing to let it die with him; but now that he begins to get well on this day, I shall know the truth before I go home."

"How will you get it?" asked the city editor, pausing at the top of the stairway, whence at the end of the hall we could see old man Longworth's room.

"From his own lips," said Kirby.

"And would you," cried the other, "go into that old man's room and ask such a question at the side of a death-bed? for I tell you he is not getting well."

Kirby stopped at this, for a hand was laid upon his arm with some weight. He was excited and obstinate.

"Brown," said he, calmly, "I am not cruel. You cannot understand this as I feel it. I have had this suspicion more than a week, keeping it in my own heart. I have never mentioned it even to my wife, nor to you. I could not ask him while he lay there gasping. But—why, man, he may be my wife's father! And if he is," he concluded, deliberately, "I am going to know it."

"Now, Kirby," I said, tightening the grasp upon his arm, and communicating the earnestness I felt, "that old man is not your wife's father. I know it. I would go bail for him upon any charge. You are going back to a suspicion which I myself tested. And I tell you that you shall not go in there and strike to that generous old heart the blow you are so ill-prepared to deal."

"*Shall* not?" cried Kirby.

"SHALL not!"

"But —," cried Kirby, with an oath, "I will!" And turning away angrily, he strode down the hall.

In a moment he was overtaken, and two hands were laid upon his shoulders with a grip that was not to be evaded. He turned furiously, but he saw that no violence was intended.

"Kirby," I said, almost in despair, but quite as determined as he, "you are not yourself. You must not do a wrong like this upon the wild desire to right another wrong. You and

I are not enemies, and I propose we shall remain friends."

"You go about your proposition very singularly," he returned.

"No," said I, "I do not. We will go in there, and I will question him in a way to leave it clear to you whether you are called upon to follow up your suspicion or not. You are too excited to do it kindly. If you think you are justified in questioning him when I am done, you may do so. But I tell you that if you are cruel to that old man without justification it will be better for you, so help me God! that you had never gone in there, for I may be compelled to make his injuries my own."

Kirby flushed hotly, but he said, "I will agree to that"; and, turning the knob quietly, we entered the room.

Old man Longworth's eyes shone feverishly bright from the shadows of the pillows among which he lay propped, and as we approached the bed they looked all the curiosity he felt in his undaunted soul.

"Well," said I, "it is over, and we gain the case. That is, the *corpus delicti* was not proved, and Longworth may have 'stepped ashore.'"

The weak eyes gleamed a little brighter and he lifted his hand slightly, only to let it fall wearily. Then we saw that the rally of the morning had been deceptive, and that old man Longworth was deeper in the shadows of that inevitable valley. I hesitated in the presence of such a fact to carry out my part of that inquest of curiosity which was pushing Kirby to such lengths. But I said with as kindly a smile as I could assume to mask the intent:

"But the mystery seems to end there, Mr. Longworth, for all we can do to solve it. We do not know where to turn for the missing Robert Longworth — unless *you* are the man."

The hint, given with a jesting smile, went on its mission. At first there was an answering shadow of a smile upon the old man's face; then a troubled look; and finally the poison of the bitter jest stung him. The possibility of the suspicion flashed fully into his mind. Startled surprise, it seemed, mingled with inexpressible pain, was in his eyes as he signed to Kirby to come nearer. There was upon Kirby's strong countenance a look of determination that made it almost cruel as he bent over the bed to hear the faint whisper.

"Do — you," asked old man Longworth, painfully, as his startled eyes searched Kirby's inmost recesses and conveyed all the astonishment the pitiless suspicion aroused, "do — you — believe — *that*?"

"Do I believe what?" answered Kirby, with nervous but manly hesitation and evasion.

"That—I—am—your—wife's—father?"

The pain, the sorrow, the surprise, the mortification, and the implied reproach in his voice were mirrored upon the wasted face, where there was also infinite and yearning eagerness for answer. His very soul was answering for his innocence. I felt, rather than saw, the remorse that sprung into Kirby's eyes, and recognized that he recoiled from any collision with that gentle spirit in its last struggle. It had all passed quickly, but the old man had perceived that such a suspicion actually existed, and so, after a moment of hesitation, Kirby blurted out in a great explosion of manly recantation:

"No, I don't!"

Peace fell instantly upon the worn old face in the pillows, but succeeding it came a sad smile, as if there might still be a doubt in Kirby's honest mind, when there should be complete re-assurance. Signing Kirby forward again, he murmured:

"You—must—bring—your—wife—and her—mother—to—see—me—to-morrow."

"Oh, no, no!" cried Kirby, in deep distress; "not *that*. I don't know what it was induced me—but I cannot do that."

"Unless," said I, gently, "he might desire it."

"I—do," said old man Longworth; and there was a mute appeal in his eyes to which Kirby answered with a nod. Then, pressing the friendly and thin hands that were never again

to be busy with our work and ambitions, we left him to his repose and the thoughts that I should not dare try to follow, and walked away in silence. But as we parted Kirby said, with his voice a little choked:

"Brown, we shall always be friends. You knew better than I felt."

The next morning Kirby came with his wife and her mother to pay that visit of re-assurance and generous confidence. I had got there hours earlier, but a visitor had entered even before me. So when the girlish young wife and her handsome mother entered, upon the couch near the window, where the sun came streaming into the chamber, now so barren, lay a white coverlid over stark and rigid outlines. With reverent hands I turned down the corner of the folds, and as she looked upon the features Mrs. Longworth uttered one penetrant shriek and gasped:

"*My husband!*"

But the sound never reached the soul that had quietly "stepped ashore."

Kirby led her from that surprising room, and I drew the pall again over the dead face. But as I did so I wondered what mystery, what depths of motive, or what shallows of expedience, were stilled behind that pallid and serene mask, upon which hovered the trace of a smile so gentle as to wave curiosity back dismayed forever.

Young E. Allison.

COMPENSATION.

"**L**ORD, I am weary!" cried my soul. "The sun
Is fierce upon my path, and sore the weight
Of smarting burdens; ere the goal be won
I sink, unless thou help, dear Lord!" And straight
My fainting heart rose bravely up, made strong
To bear its cross: God granted me a song!

"Lord, I am conquered! Ceaseless, night and day,
A thousand cruel ills have hedged me round,
Till like a stag the hounds have brought to bay
My stricken heart lies bleeding on the ground!"
When lo! with new-found life my soul, made strong,
Spurned all its foes: God granted me a song!

"Lord, I am dying! Earth and sea and sky
Fade and grow dark; yet, after all, the end
Wrings from my breaking heart a feeble sigh
For this poor world, not overmuch its friend!"
But suddenly with immortal power made strong,
My soul, set free, sprung heavenward in a song!

Stuart Sterne.

SONGS OF IRELAND.

PANCAKE DAY.

(Pancake day immediately precedes Lent, and the custom of tossing the cake still prevails in every district of the south of Ireland.)

ON pancake day in the morning,
Shan O'Leary throd his own leather,
Which is the politeness for sphakin'
He was barefoot in cold winter weather.
His clothing was patches and holes,
But his heart it was merry and light,
As he knocked at the door of Norah McShane,
Soon as ever the bog-fire was bright—
On pancake day in the morning.

On pancake day in the morning,
Norah opened the door wid a cry
Of surprise at the sight of young Shan,
Who gin her a blink wid his eye.
Swate Norah she bade him come in:
"Och, vourneen," the rascal he said,
"Now, Norah, the pancake we 'll toss,
To thry if this year we will wed—
On pancake day in the morning!"

On pancake day in the morning,
Swate Norah she gave the first toss;
The pancake fell back in the pan,
Reversed, without ruffle or loss.
"Arrah, it 's good luck you will have,"
Said Shan, "an' now give me a thry;
An' lest I should toss it askew,
Och, Norah, jist turn 'way your eye—
On pancake day in the morning!"

On pancake day in the morning,—
The pity, och hone, I should tell,—
Shan's elbow it got a bad jog,
An' the cake in the ashes it fell!
'T was Norah the mischief had done,
"Ah, vo, an' ah, vo," then she said,
"Poor Shan, an' whatever you do,
This year an' you never will wed—
On pancake day in the morning!"

On pancake day in the morning,
Shan knew the thrick she had played,
An' widout so much as a word
His footsteps he never delayed.
"What is it yiz afther forgetting,"
Cried Norah, "to thus run away?"
"It 's yourself I 'm afther forgetting,"
Said Shan widout any delay—
On pancake day in the morning!

On pancake day in the morning,
Losing Shan was none of her game,
An' so she fell weeping and wailing,
An' calling his thratement a shame!
Then Shan, wid a laugh in his heart,
Cried, "Norah, 't is never you fret,"
An' to end up the quarrel, the wedding
In less than a jiffy was set—
On pancake day in the morning!

SWEET MOLLIE.

Of all the colleens in the land,
Sweet Mollie is the daisy;
Though when I 'm wid her or widout,
My heart is never aisy!
Ahone, an' I am quarely lost
Whenever she comes tripping!
An' afther her widout delay,
Avick, I 'm lightly skipping!—
Och, of all the colleens in the land,
Sweet Mollie is the daisy;
Though when I 'm wid her or widout,
My heart—

*(The cunning crathure, wid her witching
ways, her gold head, an' her rollicking
black eyes.)*

My heart is never aisy!

Musha, if Mollie would be mine,
The world would all admire her;
A lady I would make of her,
In silk I would attire her!
Arrah, an' I would sphake the praste
Widout a minute's tarry,
If Mollie would but name the day
Or night on which she'd marry!—
Och, of all the colleens in the land,
Sweet Mollie is the daisy;
Though when I 'm wid her or widout,
My heart—

*(Mollie, my darling, Mollie, acushla, Mollie
vourneen, alanna machree.)*

My heart is never aisy!

Ah, vo, she 'll be the death o' me,
My heart wid love is burning,
An' all because o' love o' her,
My head is quarely turning!
Faix, Mollie, if you kill me quite,
Think on your sitavation,
Wid you a-weeping day and night,
Widout my consolation!—

Och, of all the colleens in the land,
Sweet Mollie is the daisy;
Though when I 'm wid her or widout,
My heart —

*(The cruel deludher, who knows betther than
to chate me wid her soothing ways, break-
ing my heart into smithereens, och, hone!)*
My heart is never aisy!

If Mollie were a prisoner,
Faix, I would be her warden;
An' till she 'd give a pogue to me,
I 'd never thrate o' pardon:
Bad cess, it 's I 'm the prisoner,
Wid fetters firm and weighty,
An' if Mollie will not marry me,
I 'll stay one till I 'm eighty!—
Och, of all the colleens in the land,
Sweet Mollie is the daisy;
Though when I 'm wid her or widout,
My heart—

*(Bedad, hold your whisth, for whether she
loves me or not, I will love her all my life
long.)*
Though my heart be never aisy!

THERE 'S A GREEN GRAVE IN IRELAND.

THERE 's a green grave in Ireland,
Where my heart lies buried deep;
Where Mary, my fond sweetheart,
Rests in her dreamless sleep:
We loved when both our hearts were young,
And hope throbb'd in each breast;
But nevermore has hope been mine
Since Mary sank to rest!

I 've lived through many weary years,
Since on that summer morn
Sweet Mary gave her farewell kiss
And left me all forlorn:
I hear her sweet voice calling me,
I have not long to stay;
Bright hope will once again be mine
When death bids me away!

There 's a green grave in Ireland,
Where my heart lies buried deep;
Oh, lay me there beside my love,
In my last, dreamless sleep!

HEY FOR A LASS!

I AXED her for a pogue,
The black-eyed saucy rogue,
For a single little pogue,
An' she scornful turned away!
Wid a blue-eyed swate colleen
I was shortly afther seen,
An' what did the black-eyed queen
But weep the livelong day!

COME OVER THE S'A.

OCH, Larry, come over the s'a —
Though you 'll die seven deaths coming over,
But yiz would n't be stoppin' for that,
When yiz live ever afther in clover;
Ameriky is a foin land,
'T is a flowing wid milk an' wid honey —
Which is only the poethry of sphakin'
That a man has a pocket o' money!—
Och, Larry, come over the s'a!

Och, Larry, come over the s'a,
The poorest have praties in store,
An' though you will miss the poteen,
There 's whisky and 'baccy galore!
The men they are all o' them lords,
An' each colleen I know is a quean;
If you choose you can vote for yourself,
An' no one will think it is m'an!—
Och, Larry, come over the s'a!

Och, Larry, come over the s'a,
An' when comin' fetch over your sthick,
The chances for foighten are few,
But the bobbies may play you a thrick!
Two dollars a day you can git,
Widout workin' scarce any at all,
Jist to throw up a scrapin' o' dirt,
Or to carry the bricks for a wall!—
Och, Larry, come over the s'a!

AN' IF I HAD MONEY GALORE.

An' if I had money galore,
I 'd git me a scrapin' o' ground;
Wid sphadin' I 'd toss it about,
An' wid praties I 'd set it around:
I 'd buy me a bit of a cow,
An' a nate little pig in a pen,
An' laste I 'd be ch'atin' in Lent,
I 'd have me a duck of a hen:
Och! the thought of it sets me agog,
Till the c'aling is down to the floor!
Bedad! what a Paddy I 'd be,
An' if I had money galore!

An' if I had money galore,
I 'd sphort me a coat wid a tail,
An' the gossoon that throd on the same
A b'atin' I 'd give wid a flail!
I 'd build me a bit of a house,
To Norah I 'd fall on my kneas,
An' wid Father McCarthy to wed,
We 'd live ever afther at 'ase:
Och! the thought of it sets me agog,
Till the c'aling is down to the floor!
Bedad! what a Paddy I 'd be,
An' if I had money galore!

Jennie E. T. Dowe.

BEN AND JUDAS.

PREFATORY NOTE.

[I am quite aware of the apparent willfulness which hovers about my action in writing the following bit of social history. I have assailed, so often and so unsparingly, the spirit of dialect, which for a decade has dominated our "school" of fiction makers, that for me, at this late day, to offer a dialect sketch to the public is to bare my breast and defy all comers. Still I have no apology to make, unless it be apologizing when I explain that it is not fiction, but history, which I have written in this simple and clumsy fashion. The days of slavery are gone forever, and so rapidly has the world spun forward since the chains were cut, we can scarcely realize that we have come so far in so short a time. It is due to future generations that every characteristic of the old time shall be recorded ere it be forgotten, that every correlation between master and slave shall be preserved in the cast, that all the curious and touching instances of slave life shall have their places in history, and that no element injected by slavery into the tissues of American civilization shall have its origin obscured a century hence. While their bondage lasted the negroes absorbed a great deal of Anglo-Saxon life and influence, and at the same time the whites as masters took into themselves an indescribable, but very noticeable, something from the negroes. How could it have been otherwise? The very foundations of human nature make it sure that it must often have happened, as in the case I have tried to record, that master and slave shaped each other's lives. I do not know, nor do I pretend to say, that the following instance is a typical one. Like all detached fragments of history, however, it has a trace of allegory in it. When I came upon it I felt the lurking significance which I may have failed to preserve in my imperfect sketch. Those who care for dialect literature, as such, may read lightly; but let the serious reader ponder over what may shimmer between my lines. The editor has suggested to me that the prayer by Judas recorded herein resembles the one in Mr. H. S. Edwards's fine sketch, "Two Runaways." If it does, I hasten to disclaim everything. My story is mere history, for which I am responsible only as the chronicler. If my facts and Mr. Edwards's fiction have even one point in common, the praise is due to Mr. Edwards, not to me.—MAURICE THOMPSON.]

ON a dark and stormy night, early in the present century, two male children were born on the Wilson plantation in middle Georgia. One of the babes came into the world covered with a skin as black as the night, the other was of that complexion known as sandy; one was born a slave, the other a free American citizen. Two such screeching and squalling infants never before or since assaulted simultaneously the peace of the world. Such lungs had they and such vocal chords that cabin and mansion fairly shook with their boisterous and unrhythmical wailing. The white mother died, leaving her chubby, kicking, brawling offspring to share the breast of the more fortunate colored matron with the fat, black, howling, hereditary dependent thereto; and so Ben and Judas, master and slave, began their companionship at the very fountain of life. They grew, as it were, arm in arm and quite apace with each other, as healthy boys will, crawling, then toddling, anon running on the sandy lawn between the cabin and the mansion, often quarreling and sometimes fight-

ing vigorously. Soon enough, however, Judas discovered that, by some invisible and inscrutable decree, he was slave to Ben, and Ben became aware that he was rightful master to Judas. The conditions adjusted themselves to the lives of the boys in a most peculiar way. The twain became almost inseparable, and grew up so intimately that Judas looked like the black shadow of Ben. If one rode a horse, the other rode a mule; if the white boy habitually set his hat far back on his head, the negro did the same; if Ben went swimming or fishing, there went Judas also. And yet Ben was forever scolding Judas and threatening to whip him, a proceeding treated quite respectfully and as a matter of course by the slave. Wherever they went Ben walked a pace or two in advance of Judas, who followed, however, with exactly the consequential air of his master and with a step timed to every peculiarity observable in the pace set by his leader. Ben's father, who became dissipated and careless after his wife's death, left the boy to come up rather loosely, and there was no one to make note of the constantly growing familiarity between the two youths, nor did any person chance to

observe how much alike they were becoming as time slipped away. Ben's education was neglected, albeit now and again a tutor was brought to the Wilson place and some effort was made to soften the crust of ignorance which was forming around the lad's mind. Stormy and self-willed, with a peculiar facility in the rapid selection and instantaneous use of the most picturesque and outlandish expletives, Ben drove these adventurous disciples of learning one by one from the place, and at length grew to manhood and to be master of the Wilson plantation (when his father died) without having changed in the least the manner of his life. He did not marry, nor did he think of marriage, but grew stout and round-shouldered, stormed and raved when he felt like it, threatened all the negroes, whipped not one of them, and so went along into middle life, and beyond, with Judas treading as exactly as possible in his footprints.

They grew prematurely old, these two men: the master's white hair was matched by the slave's snowy wool; they both walked with a shuffling gait, and their faces gradually took on a network of wrinkles; neither wore any beard. To this day it remains doubtful which was indebted most to the other in the matter of borrowed characteristics. The negro hoarded up the white man's words, especially the polysyllabic ones, and in turn the whiteman adopted in an elusive, modified way the negro's pronunciation and gestures. If the African apostatized and fell away from the grace of a savage taste to like soda biscuits and very sweet coffee, the American of Scotch descent dropped so low in barbarity that he became a confirmed 'possum-eater. Ben Wilson could read, after a fashion, and had a taste for romance of the swash-buckler, kidnap-a-heroine sort. Judas was a good listener, as his master mouthed these wonderful stories aloud, and his hereditary Congo imagination, crude but powerful, was fed and strengthened by the pabulum thus absorbed.

It was a picture worth seeing, worth sketching in pure colors and setting in an imperishable frame, that group, the master, the slave, and the dog Chawm. Chawm is a name boiled down from "chew them"; as a Latin commentator would put it: chew them, *vel* chew them, *vel* chew 'em, *vel* chawm. He was a copperas-yellow cur of middle size and indefinite age, who loved to lie at the feet of his two masters and snap at the flies. This trio, when they came together for a literary purpose, usually occupied that part of the old vine-covered veranda which caught the black afternoon shade of the Wilson mansion. In parenthesis let me say that I use this word mansion out of courtesy, for the house was small and dilapidated; the custom of the

country made it a mansion, just as Ben Wilson was made Colonel Ben. There they were, the white, the black, and the dog, enjoying a certain story of medieval days, about a nameless, terrible knight-errant who had stolen and borne away the beautiful Rosamond, and about the slender, graceful youth who buckled his heavy armor on to ride off in melodramatic pursuit. Judas listened with eyes half closed and mouth agape; Chawm was panting, possibly with excitement, his red tongue lolling and weltering, and his kindly brown eyes upturned to watch the motions of Ben's leisurely lips. There was a wayward breeze, a desultory satin rustle, in the vine-leaves. The sky was cloudless, the red, country road hot and dusty, the mansion all silent within. Some negro plowmen were singing plaintively far off in a cornfield. The eyes of Judas grew blissfully heavy, closed themselves, his under jaw fell lower, he snored in a deep, mellow, well-satisfied key. Ben ceased reading and looked at the sleepers—for Chawm, too, had fallen into a light doze.

"Dad blast yer lazy hides! Wake erp yer, er I 'll thrash ye till ye don't know yerselves! Wake up, I say!" Ben's voice started echoes in every direction. Chawm sprang to his feet, Judas caught his breath with an indrawn snort and stared up inquiringly at his raging master.

"Yer jest go to that watermillion patch and git to yer hoein' of them vines mighty fast, er I 'll whale enough hide off 'm' yer to half-sole my boots, yer lazy, good fer nothin', low-down, sleepy-headed, snorin', flop-yearred —" He hesitated, rummaging in his memory for yet another adjective. Meantime Judas had scrambled up unsteadily and was saying "Yah sah, yah sah," as fast as ever he could, and bowing apologetically while his hands performed rapid deprecatory gestures.

"Move off, I say!" thundered Ben.

Chawm moved off with his tail between his legs; Judas went in search of his hoe, and soon after he was heard singing a camp-meeting song over in the melon patch:

Ya-a-as, my mother 's over yander,
Ya-a-as, my mother 's over yander,
Ya-a-as, my mother 's over yander,
On de oder sho'.

To any casual observer who for a series of years had chanced now and again to see these twain, it must have appeared that Ben Wilson's chief aim in life was to storm at Judas, and that Judas, not daring to respond in kind directly to the voluble raging of his master, lived for the sole purpose of singing religious songs and heaping maledictions on Bolus, the mule. If Ben desired his horse saddled and brought to him, he issued the order somewhat as follows:

"Judas! Hey there, yer old humpbacked scamp! How long are yer a-goin' to be a-fetchin' me that hoss? Hurry up! Step lively, er I'll tie ye up an' jest whale the whole skin off 'm' ye! Trot lively, I say!"

Really, what did Judas care if Ben spoke thus to him? The master never had struck the slave in anger since the days when they enjoyed the luxury of their childish fisticuffs. These threats were the merest mouthing, and Judas knew it very well.

"Yah, dar! Yo' Bolus! yo' ole rib-nosed, so'-eyed, knock-kneed, pigeon-toed t'ief! I jest wa' yo' out wid er fence-rail, ef yo' don' step pow'ful libely now; sho 's yo' bo'n I jest will!"

This was the echo sent back from the rickety stables by Judas to the ears of his master, who sat smoking his short pipe on the sunken veranda under his vine and close to his gnarled fig tree. The voice was meant to sound very savage; but in spite of Judas it would be melodious and unimpressive, a mere echo and nothing more—*vox, et præterea nihil*.

Ben always chuckled reflectively when he heard Judas roaring like that. He could not have said just why he chuckled; perhaps it was mere force of habit.

"Dad blast that fool nigger!" he would mutter below his breath. "Puts me in mind of a hongry mule a-brayin' fer fodder. I'll skin 'im alive fer it yet."

"Consoun' Mars Ben! Better keep he ole mouf shet," Judas would growl; but neither ever heard the side remarks of the other. Indeed, in a certain restricted and abnormal way, they were very tender of each other's feelings.

The older they grew the nearer came these two men together. It was as if, starting from widely separated birthrights, they had journeyed towards the same end, and thus, their paths converging, they were at last to lie down in graves dug side by side.

But no matter if their cradle was a common one, and notwithstanding that their footsteps kept such even time, Ben was master, Judas slave. They were differentiated at this one point, and at another, the point of color, irrevocably, hopelessly. As other differences were sloughed; as atom by atom their lines blended together; as strange attachments, like the feelers of vines, grew between them; and as the license of familiarity took possession of them more and more, the attitude of the master partook of tyranny in a greater and greater degree. I use the word attitude, because it expresses precisely my meaning. Ben Wilson's tyranny was an attitude, nothing more. Judas never had seen the moment when he was afraid of his master; still there was a line over which he had not dared to step—the line of down-

right disobedience. In some obscure way the negro had felt the weakness of the white man's character, from which a stream of flashing, rumbling threats had poured for a lifetime; he knew that Ben Wilson was a harmless blusterer who was scarcely aware of his own windy utterances, and yet he hesitated to admit that he knew it—nay, he forced himself to be proud of his master's prodigious temperamental expansions. He felt his own importance in the world barely below that of the man who owned him, and deep in his old heart stirred the delicious dream of freedom. What a dream! Amorphous as a cloud, and rosy as ever morning vapor was, it informed his soul with vague, haunting perfumes and nameless strains of song. Strange that so crude a being could absorb such an element into the innermost tissues of his life! Judas had a conscience, rudimentary indeed, but insistent, which gnawed him frightfully at times: not for stealing,—he was callous to that,—but for rebellion, which he could not cast out of him entirely. Occasionally he soliloquized:

"Ef I could jest be de mars erwhile an' Mars Ben be de nigger, bress de good Lor' but would n't I jest mor' 'n mek 'im bounce erroun' one time! Sorty fink I 'd wake 'im up afo' day, an' would n't I cuss 'im an' 'buse 'im an' rah an' cha'ge at 'im tell he know 'zac'ly how it was hese'f! Yo' may say so, honey, dat yo' may!"

Following treasonable thoughts like these came bitings by the hot teeth of the poor slave's conscience, all the deeper and crueller by contrast with the love forever upgushing to be lavished on his truly indulgent, but strongly exasperating, master.

"Lor', do forgib po' ole Judas," he would pray, "kase he been er-jokin' ter hese'f 'bout er pow'ful ticklish ci'cumstance, sho 's yo' bo'n, Lor'; an' he no business trompin' roun' er ole well in de night. Git he neck broke, sho'!"

Notwithstanding conscience and prayer, however, the thought grew clearer and waxed more vigorous in the heart of Judas as the years slipped by and Ben gradually increased his scolding. The more he fought it the closer clung to him the vision of that revolution which would turn him on top and Ben below, if but for a few moments of delirious triumph.

"Lor', but would n't Mars Ben hate 'r hab dis ole nigger er-rahin' an' er-cha'gin' an' er-rantin' an' er-yellin' at 'im, an' jest er-cussin' 'im like de berry debil fo' eberyting 'at 's mean, an' de sweat jest er-rollin' off 'm 'im an' 'im jest er-linkin' down ter wo'k, an' me jest eberlastin'ly an' outlandishly er-gibin' 'im de limmer jaw fo' he laziness an' he dog-gone general no 'countness! Ef dat would n't be satisfaccional ter dis yer darkey, den I dunno nuffin' 't

all 'bout it. Dat 's his way er doin' me, an' it seem lak my time orter be comin' erlong pooty soon ter do 'im dat way er leetle, debil take de nigger ef it don't!"

In good truth, however, Judas had no right to complain of hard work; he did not earn his salt. A large part of the time he and his master occupied with angling in the rivulet hard by, wherein catfish were the chief game. Side by side on the sandy bank of the stream the twain looked like two frogs ready to leap into the water, so expectant and eager were their wrinkled faces and protruding eyes, so comically set akimbo their arms and legs. With little art they cast and recast their clumsy bait of bacon-rind, exchanging few words, but enjoying, doubtless, a sense of subtle companionship peculiarly satisfying.

"Airy a bite, Judas?"

"No, sah."

"Too lazy to keep yer hook baited?"

"No, sah."

A while of silence, the river swashing dreamily, the sunshine shimmering far along the slowly lapsing current; then Judas begins humming a revival tune.

"Shet yer mouth; stop that infernal howling, yer blasted old eejit, er I 'll take this yer fish-pole an' I 'll naturally lam the life out of ye!" storms the master. "Yer 'll scare all the fish till they 'll go clean to the Gulf of Mexico. Hain't yer got a striffin' of sense left?"

The slave sulks in silence. Ten minutes later Ben takes out a plug of bright, greasy-looking navy tobacco, and after biting off a liberal chew says, in a very soft voice:

"Here, Jude, try some of my terbacker, an' maybe yer luck 'll change."

Judas fills his cheek with the comforting weed and gazes with expectant contentment into the stream, but the luck continues much the same. The wind may blow a trifle sweeter, fluting an old Pan-pipe tune in a half-whisper through the fringe of shining reeds, and the thrushes may trill suddenly a strange, soft phrase from the dark foliage of the grove hard by; still, in blissful ignorance of the voices of nature and all unaware of their own picturesque-ness, without a nibble to encourage them, the two white-haired men watch away the golden afternoon. At the last, just as Judas has given up and is winding his line around his pole, Ben yanks out a slimy, wriggling, prickly catfish, and his round face flings out through its screen of wrinkles a spray of sudden excitement.

"Grab 'im, Judas! Grab 'im, yer lubberly old lout ye! What yer doin' a-grinnin' an' a-gazin' an' that fish a-floppin' right back — grab 'im! If yer do let 'im get away, I 'll

break yer old neck an' pull out yer backbone — grab 'im, I say!"

Judas scrambles after the fish, sprawling and grabbing, while it actively flops about in the sand. It spears him cruelly till the red blood is spattered over his great rusty black hands, but he captures it finally and puts a stick through its gills.

On many and many an afternoon they trudged homeward together in the softening light, Judas carrying both rods on his shoulder, the bait-cups in his hands, and the string of fish, if there were any, dangling somewhere about his squat person. The black man might have been the incarnate shadow of the white one, so much were they alike in everything but color. Even to a slight limp of the left leg, their movements were the same. Each had a peculiar fashion of setting his right elbow at a certain angle and of elevating slightly the right shoulder. Precisely alike sat their well-worn straw hats far over on the back of their heads.

It was in the spring of 1860 that Ben took measles and came near to death. Judas nursed his master with a faithfulness that knew not the shadow of abatement until the disease had spent its force and Ben began to convalesce. With the turn of the tide which bore him back from the shore of death the master recovered his tongue and grew refractory and abusive inversely as the negro was silent and obedient. He exhausted upon poor Judas, over and over again, the vocabulary of vituperative epithets at his command. When Ben was quite well Judas lay down with the disease.

"A nigger with the measles! Well, I 'll be dern! Yer 're gone, Jude — gone fer sure. Measles nearly always kills a nigger."

Ben uttered these consoling words as he entered his old slave's cabin and stood beside the low bed. "Not much use ter do anythin' fer ye 's I know of — bound ter go this time. Don't ye feel a sort of dyin' sensation in yer blamed old bones already?"

But Judas was nursed by his master as a child by its mother. Never was man better cared for night and day. Ben's whole life for the time was centered in the one thought of saving the old slave. In this he was absolutely unselfish and at last successful.

As Judas grew better, after the crisis was passed, he did not fail to follow his master's example and make himself as troublesome as possible. Nothing was good enough for him; none of his food was properly prepared or served, his bed was not right, he wanted water from a certain distant spring, he grumbled at Ben without reason, and grew more abusive and personal daily. At last one afternoon Ben came out of the cabin with a very peculiar look on his face. He stopped just as he left

"SIDE BY SIDE ON THE SANDY BANK OF THE STREAM."

the threshold, and with his hands in his trousers' pockets and his head thrown back he whistled a low, gentle note.

"Well, I'll everlastin'ly jest be dad burned!" he exclaimed. Then he puffed out his wrinkled cheeks till they looked like two freckled bladders. "Who'd 'a' thought it!" He chuckled long and low, looking down at his boots and then up at the sky. "Cussed me! *Cussed* me! The blamed old rooster a-cussin' *me*! Don't seem possible, but he did all the same. Gamest nigger I ever seen!"

It must have been a revelation to the master when the old slave actually swore at him and cursed him vigorously. Ben went about chuckling retrospectively and muttering to himself:

"The old coon, he cussed me!"

Next day for dinner Judas had chicken pie and dumplings, his favorite pot, and Ben brought some old peach brandy from the cellar and poured it for him with his own hand.

In due time the negro got well and the two resumed their old life, a little feebler, a trifle more stoop in their shoulders, their voices huskier, but yet quite as happy as before.

The watermelon patch has ever been the jewel on the breast of the Georgia plantation. "What is home without a watermelon?" runs the well-known phrase, and in sooth what cool, delicious suggestions run with it! Ben and

Judas each had a patch, year in and year out. Not that Ben ever hoed in his; but he made Judas keep it free of weeds. Here was a source of trouble; for invariably the negro's patch was better, the melons were the larger and finer. Scold and storm and threaten as he might, Ben could not change this, nor could he convince his slave that there was anything at all strange in the matter.

"How I gwine fin' out 'bout what mek yo' watermillions so runty an' so scrunty?" Judas exclaimed. "Hain't I jest hoed 'em an' plowed 'em an' took care ob 'em an' try ter mek 'em do somefin'? But dey jest kinder wommux an' squommux erlong an' don't grow wof er dern! I jest sw'a I can't holp it, Mars Ben, ef yo' got no luck erbout yo' nohow! Watermillions grows ter luck, not ter de hoe."

"Luck! Luck!" bawled Ben, shaking his fist at the negro. "Luck! yer old lump er lamp-black—yer old, lazy, sneaking scamp! I 'll show ye about luck! Ef I don't have a good patch of watermillions next year I 'll skin ye alive, see ef I don't, yer old villain ye!"

It was one of Ben's greatest luxuries to sit on the top rail of the worm-fence which inclosed the melon-patch, his own particular patch, and superintend the hoeing thereof. To Judas this was a bitter ordeal, whose particular tang grew more offensive year by year as the half-smothered longing to be master, if

for but a moment, gripped his imagination closer and closer.

"Ef I jest could set up dah on dat fence an' cuss 'im while he hoed, an' ef I jest could one time see 'im er-hus'lin' erroun' w'en I tole 'im, dis nigger 'd be ready ter die right den."

Any observer a trifle sharper than Ben would have read Judas's thoughts as he ruminated thus; but Ben was not a student of human nature,—or, for that matter, any other nature,—and he scolded away merely to give vent to the pressure of habit.

One morning, when the melon vines were young,—it must have been late in April,—Judas leaned on his hoe-handle, and looking up at Ben, who sat on the fence top, as usual, smoking his short pipe, he remarked:

"Don' yeyerdat mockin'-bird er tee-diddlin' an' er too-doodlin', Mars Ben?"

"I 'll tee-diddle an' too-doodle ye ef ye don't keep on a-hoein'," raged Ben. "This year I 'm bound to have some big melons, ef I have to wear ye out to do it!"

Judas sprang to work and for about a minute hoed desperately; then looking up again, he said, "De feesh allus bites bestest w'en de mockin'-birds tee-diddles an' too-doodles dat away."

Such a flood of abusive eloquence as Ben now let go upon the balmy morning air would have surprised and overwhelmed a less adequately fortified soul than that of Judas. The negro, however, was well prepared for the onslaught, and received it with most industrious though indifferent silence. When the master had exhausted both his breath and his vocabulary, the negro turned up his rheumy eyes and suggested that "feesh ain't gwine ter bite eber' day like dey 'll bite ter-day." This remark was made in a tone of voice expressive of absent-mindedness, and almost instantly the speaker added dreamily, leaning on his hoe again:

"Time do crawl off wid a feller's life pow'-ful fast, Mars Ben. Seem lak yistyd'y, or day 'fore yistyd'y, 'at we 's leetle beety boys. Don' yo' 'member w'en ole Bolus—dat fust Bolus, I mean—done went an' kick de lof' outer de new stable? We 's er-gittin' pooty ole, Mars Ben, pooty ole."

"Yes, an' we 'll die an' be buried an' resurrected, yer old vagabond ye, before yer get one hill of this here patch hoed!" roared Ben.

Judas did not move, but, wagging his head in a dreamy way, said:

"I 'members one time,"—here he chuckled softly,—"*I 'members one time w'en we had er fight an' I whirped yo'; made yo' yelp out an' say: 'Nough, 'nough! Take 'im off!' an' Moses, how I wus er-linkin' it ter yo' wid bofe fists ter oncet! Does yo' rickermember dat, Mars Ben?*"

Ben remembered. It was when they were little children, before Judas had found out his hereditary limitation, and before Ben had dreamed of asserting the superiority inherent in his blood. Somehow the retrospect filled the master's vision instantly with a sort of Indian-summer haze of tenderness. He forgot to scold. For some time there was silence, save that the mocking-bird poured forth a song as rich and plaintive as any ever heard by Sappho under the rose-bannered garden-walls of Mitylene; then Judas, with sudden energy, exclaimed:

"Mars Ben, yo' nebber did whirp me, did yo'?"

Ben, having lapsed into retrospective distance, did not heed the negro's interrogation, but sat there on the fence with his pipe-stem clamped between his teeth. He was smiling in a mild, childish way.

"No," added Judas, answering his own question—"no, yo' nebber whirped me in yo' life; but I whirped yo' oncet, like de berry debil, did n't I, Mars Ben?"

Ben's hat was far back on his head, and his thin, white hair shone like silver floss on his wrinkled forehead. The expression of his face was that of silly delight in a barren and commonplace reminiscence.

"Mars Ben, I wants ter ax one leetle fabor ob yo'."

No answer.

"Mars Ben!"

The master clung to his distance.

"Hey dar! Mars Ben!"

"Well, what yer want, yer old scarecrow?" inquired Ben, pulling himself together and yawning so that he dropped his pipe, which Judas quickly restored to him.

"Well, Mars Ben, 't ain't much w'at I wants, but I 's been er-wantin' it seem lak er thousan' years."

Ben began to look dreamy again.

"I wants ter swap places wid yo', Mars Ben, dat's w'at I wants," continued Judas, speaking rapidly, as if forcing out the words against a heavy pressure of restraint. "I wants ter set up dah on dat fence, an' yo' git down yer an' I cuss yo', an' yo' jest hoe like de debil—dat 's w'at I wants."

It was a slow process by which Judas at last forced upon his master's comprehension the preposterous proposition for a temporary exchange of situations. Ben could not understand it fully until it had been insinuated into his mind particle by particle, so to speak; for the direct method failed wholly, and the wily old African resorted to subtle suggestion and elusive supposititious illustration of his desire.

"We 's been er-libin' tergedder lo! des many ye'rs, Mars Ben, an' did I eber 'fuse ter do

anyfing 'at yo' axed ob me? No, sah, I nebber did. Sort er seem lak yo' mought do jest dis one leetle 'commodation fo' me."

Ben began to grin in a sheepish, half-fascinated way as the proposition gradually took hold of his imagination. How would it feel to be a "nigger" and have a master over him? What sort 'of sensation would it afford to be compelled to do implicitly the will of another, and that other a querulous and conscienceless old sinner like Judas? The end of it was that he slid down from his perch and took the hoe while Judas got up and sat on the fence.

"Han' me dat pipe," was the first peremptory order.

Ben winced, but gave up the coveted nicotian censer.

"Now den, yo' flop-yearred, bandy-shanked, hook-nosed, freckle-faced, wall-eyed, double-chinned, bald-head-ed, hump-shoul'-ered —"

"Come now, Judas," Ben interrupted, "I won't stan' no sech langwidges —"

"Hol' on dah, Mars Ben," cried Judas, in an injured tone. "Yo' p'omised me yo' 'd do it, an' I knows yo' 's not gwine back on yo' wo'd: no Wilson eber do dat."

Ben was abashed. It was true no Wilson ever broke a promise. The Wilsons were men of honor.

"Well, fire away," he said, falling to work again. "Fire away!"

"Hussle up, dah! Hussle up, yo' lazy ole vagabon' yo', er I 'll git down f'om heah an' I 'll w'ar out ebry hic'ry sprout in de county

"HUSSLE UP, YO' LAZY OLE VAGABON'!"

on yo' ole rusty back! Git erlong!—hurry up!—faster! Don' yo' heah? Ef I do come down dah I jest nat'rally comb yo' head tell ebry ha'r on it 'll sw'ar de day ob judgment done come! I 'll wa'm yo' jacket tell de dus' er-comin' out 'm it 'll look lak a sto'm-cloud! Wiggle faster, dern yo' ole skin! Wiggle faster, er I 'll yank out yo' backbone an' mek er trace-chain out 'm it! Don' yo' heah me, Ben?"

Ben heard and obeyed. Never did hoe go faster, never was soil so stirred and pulverized. The sweat sprung from every pore of the man's skin, it trickled over his face and streamed from his chin, it saturated his clothes.

Judas was intoxicated with delight; almost delirious with the sensation of freedom and masterhood. His eloquence increased as the situation affected his imagination, and his words tumbled forth in torrents. Not less was Ben absorbed and carried away. He was a slave, Judas was his master, the puppet must wriggle when the owner pulled the strings. He worked furiously. Judas forgot to smoke the pipe, but held it in his hand and made all sorts of gestures with it.

"Hit dem clods! Mash 'em fine!" he screamed. "Don' look up, yo' ole poky tarrypin yo'! Ef yo' does I 'll wommux de hide off 'm yo' blamed ole back faster 'n forty-seben shoemakers kin peg it on ag'in! Hussle, I tole yo', er I 'll jest wring yo' neck an' tie yo' years in er hard knot! Yo' heah me now, Ben?"

This was bad enough, but not the worst, for Judas used many words and phrases not permissible in print. He spared no joint of the master's armor, he left no vulnerable point unassailed. The accumulated riches of a lifetime spent in collecting a picturesque vocabulary, and the stored force of nearly sixty years given to private practice in using it, now served him a full turn. In the thickest shower of the negro's mingled threats, commands, and maledictions, however, Ben quit work, and, leaning on his hoe, panted rapidly. He gazed up at Judas pathetically and said:

"How that mockin'-bird does tee-diddle an' too-doodle!"

Judas actually stopped short in the mid-career of his eloquence, and Ben added:

"Never see sich signs for feesh a-bitin'; did you, Jude?"

The charm was broken, the farce was ended. A little later the two old men might have been seen, with their bait-cups and fishing-poles in their hands, toddling along down the slope to the rivulet, the white leading, the black following. They were both rather abstracted, it appeared, for each cast in his hook without any bacon-rind on it, and sat on the stream's bank all the rest of the forenoon in blissful expectancy of an impossible nibble.

One good came of the little episode at the melon-patch. The vine around whose roots Ben had plied the hoe with such vigor thrived amazingly, and in due time bore a watermelon of huge size, a grand spheroid as green as emerald and as richly soft in surface color as the most costly old velvet.

"JUDAS! YOU OLD COON!" "MARS BEN!"

"Got de twin ob it down dah in my patch," said Judas; "jest es much like it es one bean 's like anoder bean. Yo' orter come down an' see it, Mars Ben."

Ben went, and, sure enough, there was a melon just the duplicate of his own. Of course, however, he claimed that he saw some indices of inferiority in Judas's fruit, but he could n't just point them out—maybe the rind was not as healthy-looking, he thought, and then the stem appeared to be shriveling. Judas, for his part, was quite sure that his master's melon would not "sweeten up" as his would, and that it would be found lacking in that "jaw-leeciousness" and that "fo'-de-Lor'-sake-hand me-some-moreness" so characteristic of those of his own raising.

Ben's pride in his melon matured and ripened at the same time with the maturing and ripening of that wonderful globule of racy pulp and juice whose core he longed to see. After so many failures, here at last was his triumph. There was a certain danger connected with plucking this melon. It was of a variety locally called "ice-rind" on account of

the thickness of the outer part or shell which made it very difficult to tell when it was ripe, and so Ben dreaded to act. Every evening in the latest dusk of twilight he would go out and lean over the patch fence to have a darkling view of his treasure, which thus seen was mightily magnified.

When the moment of sacrifice had come, Ben actually shrunk from the task of plucking that melon. He leaned on the fence until it was quite dark and until the moon had begun to show in the east before he bethought him that that night was Judas's birth-night, and then a bright idea came to him. He would take the melon to the old slave's cabin and they would have a feast. But when he had climbed over the fence and had stooped above the huge, dusky sphere, his heart failed him, and at the same time another thought struck him with great force. He straightened himself up, placed his hands on his hips, and chuckled. Just the thing! The best joke on Judas! He would go to the negro's patch, steal his big melon, and then share it with him on the following day. His own melon he would keep a few days longer to be sure that it had ripened. A very simple proceeding, without a thought of dishonor in it.

It was as beautiful and balmy a midsummer night as ever fell upon the world. Ben felt its soft influence in his old blood as he toddled surreptitiously along the path leading through a little wood to Judas's cabin and patch. He was picturing in his mind how foolish Judas would look and how beaten he would feel when he found out that he had been feasted on his own big melon. One might have seen by the increasing light of the moon that Ben's trellis-work of facial wrinkles could scarcely hold in the laughing glee that was in him, and his eyes twinkled while his mouth drew itself into a set, suppressed smile. Chawm trotted along silently at Ben's heels, his tail drooping and his ears hanging limp. In the distance, amid the hills, an owl was hooting dolefully, but the little wood was as silent as the grave. Suddenly Ben heard a footfall coming up the path, and he slipped into the bushes just in time to let Judas go shuffling by all unaware.

"The blamed old rooster," he said to himself in a tender, affectionate whisper. "The blamed old rooster! I wonder what he 's a-thinkin' about jest now?"

Chawm slipped out and fell noiselessly behind Judas, following him on towards the mansion. Ben chuckled with deep satisfaction as he climbed over into Judas's patch and laid hands on the negro's large melon. What a typical thief he appeared as he hurried furtively along, stooping low with his ill-gotten load, his crooked shadow dancing vaguely beside him! Over

the fence he toiled with difficulty, the melon was so heavy and slippery, then on up the path. Once in the shadowy wood, he laid down his burden and wiped his dewy face with his sleeve. He did not realize how excited he was; it was the first time in all his life that he ever had stolen anything, even in fun. Every little sound startled him and made him pant. He felt as if running as fast as his legs could carry him would be the richest of all luxuries.

When again he picked up the melon and resumed his way he found his heart fluttering and his limbs weak, but he hurried on. Suddenly he halted, with a black apparition barring the path before him.

"Judas! you old coon!"

"Mars Ben!"

They leaned forward and glared at each other.

"Mars Ben! Yo' been er-stealin' my water-million!"

"Judas! You thievin' old rooster! You 've stole—"

Their voices blended, and such a mixture! The wood resounded. They stood facing each other, as much alike as duplicates in everything save color, each clasp ing in his arms the other's watermelon. It was a moment of intense surprise, of voluble swearing, of picturesque posturing; then followed a sudden collapse and down fell both great ripe, luscious spheres with a dull, heavy bump, breaking open on the ground and filling the air with a spray of sweet juice and the faint luxuriant aroma so dear to Georgian nostrils. Chawm stepped forward and sniffed idly and indifferently at one of the pieces. A little screech-owl mewed plaintively in a bush hard by. Both men, having exhausted themselves simultaneously, began to sway and tremble, their legs slowly giving way under them. The spot of moonlight in which they stood lent a strange effect to their bent and faltering forms. Judas had been more or less a thief all his life, but this was the first time he ever had been caught in the act, therefore he was as deeply shocked as was Ben. Down they sank until they sat flat on the ground in the path and facing each other, the broken melons between them. Chawm took position a little to one side and looked on gravely, as if he felt the solemnity of the occasion.

Judas was first to speak.

"Well, I jest be 'sentially an' eberlastin'ly—" he began.

"Shet up!" stormed Ben.

They looked sheepishly at each other, while Chawm licked his jaws with perfunctory nonchalance. After what seemed a very long silence, Ben said:

"Jude, ax a blessin' afore we eats."

Judas hesitated.

"Did you hear what I was a-sayin' for yer to do?" inquired Ben. "Ax a blessin', I say!" The negro bowed his old snow-fleeced head and prayed:

"Lor', hab mercy on two ole villyans an' w'at dey done steal f'om one 'nudder. Spaycially, Lor', forgib Mars Ben, kase he rich an' free an' he orter hab mo' sense an' mo' honah 'bout 'im 'an ter steal f'om po' nigger. I use to fink, Lor', dat Mars Ben 's er mighty good man, but seem lak lately he gittin' so on'ry 'at yo' 'll be erbleeged ter hannel 'im pooty sabage ef he keep on. Dey may be 'nough good lef' in 'im ter pay fer de trouble ob foolin' 'long wid 'im, but hit 's pow'ful doubtful, an' dat 's er fac'. Lor', I don't advise yo' ter go much outer yo' way ter 'commodate sich er outdacious old sneak-t'ief an' sich er—"

"Judas!" roared Ben, "yer jest stop right now!"

"An' bress dese watermillions w'at we 's erbout ter receib, amen!" concluded Judas. "Try er piece er dis here solid core, Mars Ben; hit look mighty jawleecious."

And so there in the space of moonlight they munched, with many watery mouthings, the sweet central hearts of the pilfered fruit. All around them the birds stirred in their sleep, rustling the leaves and letting go a few dreamy chirps. Overhead a great rift uncovered the almost purple sky.

They did not converse while they were eating, but when the repast was ended Judas apologized and explained in their joint behalf:

"Yo' see, Mars Ben, I 's yo' nigger an' yo' 's my marster. W'at 's yo's is mine, an' w'at 's mine 's yo's, don' yo' see? an' hit ain't no

mo' harm 'an nothin' fo' us ter steal f'om one 'nudder. Lor', Mars Ben, I been er-knowin' all my life 'at I was er-stealin' f'om yo', but I nebber dream 'at it was yo' 'at was er-takin' all er my bestest watermillions an' t'ings. 'Spec' we 's 'bout eben now, Mars Ben. Ef yo' 's a leetle bit ahead ob me I 's not er-keerin'; hit 's all right."

So they wiped their mouths and parted for the night.

"Good-night, Mars Ben."

"Good-night, Jude."

It would be cruel to follow them farther down the road of life, for rheumatism came, and then the war. Many an afternoon the trio, Ben, Judas, and Chawm, sat on the old veranda and listened to the far-off thunder of battle, not fairly realizing its meaning, but feeling that in some vague way it meant a great deal. After war, peace. After peace, reconstruction. After reconstruction, politics. Somebody took the trouble to insist upon having Ben Wilson go to the polls and vote. Of course Judas went with him. What a curious-looking twain they were, tottering along, almost side by side now, their limbs trembling and their eyes nearly blind!

"Got yer ticket, Jude?" inquired Ben.

"No, sah, dat 's all right. Yo' jest drap one in, hit 'll do fo' bofe ob us," answered Judas. And it was done.

They died a year ago. Their graves are side by side, and so close together that a single slab might serve to cover them. If I were rich it should be an imperishable monument, inscribed simply: *Ben and Judas, Æt. 70 years, one month, and fourteen days.*

Maurice Thompson.

PHRYNE IN HADES.

TO Phryne, wandering by Lethe's brink,
Spake, with rude lips, a phantom at her side:
"Ere of this last forgetfulness we drink,
Who in thy memory doth last abide
Of all who loved thee living?" To and fro
Swayed the fair head, and seemed to ponder long
A doubtful thought: and, "Ah, that I might know!
For these with laughter wooed me, those with song,
And all with gifts—save one, and he with tears.
Yet who gave most, most quickly was forgot;
And him who praised me I remember not;
And mirth is but a crackling in mine ears.
Nay,"—and a mist across her wan eyes crept,—
"Yet must I think of him with whom I wept."

William Young.

Maria Mitchell

MARIA MITCHELL'S REMINISCENCES OF THE HERSCHELS.¹

IN visiting Europe some years since with the definite purpose of traveling for study, I accepted whatever letters were offered me to aid me in my efforts. Among others, one of my scientific friends sent me

half a dozen letters of introduction, and then in a private note said, "I dare not give you a letter to the 'Bear of Blackheath.'" Many times while crossing the Atlantic I found myself wondering who the "Bear of Blackheath" might be. One of the first friends I made in London was Mr. Airy, the astronomer royal at Greenwich. I was adopted at once as one of the household, and upon the care of that

family my comfort in the whole of my tour largely depended. But sitting one day in the drawing-room with the astronomer royal, I looked out upon the beautiful country around and asked, "What is this charming region called?" He replied, "Blackheath"; and I awoke to the consciousness that I was talking with the "Bear."

My acquaintance with the Herschels came through the Airys.

The little that is known of the ancestors of the Herschels is honorable. Abraham, Isaac, and Jacob, as the representatives of three generations were called, were sound Protestants, in days when and in places where Protestantism was a reproach. Abraham Herschel, the great-great-grandfather of John, was expelled from Mahren, his place of residence, on account of his Protestantism. Isaac, his son, was a farmer

¹ See "The Three Herschels," in this magazine for June, 1885.

near Leipsic. Jacob, son of Isaac, declined agricultural pursuits, and gave expression to the family aptitude for music by making it his profession, by bringing up his sons to the same calling, and by developing musical ability in all his ten children. Among the sons was the astronomer, Frederick William, who was born at Hanover in 1738, and came to England at one-and-twenty as a professional musician, but caring even more for something else than for music—metaphysics. To the end of his life, when he was known all over the world for his astronomical discoveries, his chief delight was in metaphysical study and argumentation. Perhaps we may ascribe to this taste, prevailing in the little household at Slough, the tendency of his scientific son, John, to diverge into metaphysical criticism whenever his theme, or any interruption of it, afforded occasion in the course of composition.

John Herschel was born in the well-known house at Slough, where strangers were by that time coming from far-distant lands to see the wonderful machine by which great news had already descended out of the sky.

Most astronomers come to astronomy through mathematics, or come to mathematics through astronomy. The Herschels were a musical family; music was their vocation; science was their recreation. Although of Jacob Herschel's children Sir William and Caroline are the only ones who are known to science, it is evident that the taste for science belonged to the whole family, as Caroline Herschel in her autobiography speaks of lying awake and listening to discussions between the father and the elder brothers in which the names of Newton, Leibnitz, and Euler frequently occurred.

William Herschel considered himself very fortunate when he was engaged as musician to an English regiment. Growing in reputation, he was appointed organist in a church, studied Italian, Latin, and Greek by himself, and read mathematical works on music. Thus music led him to mathematics, thence to optics, to astronomy, to discoveries, to reputation. He became known to George III., was pensioned, gave himself wholly to astronomy, was knighted, and soon became a member of all the learned societies of Europe.

Sir William and Sir John were remarkable for the variety of their acquirements. Starting with a love of science, they followed where it led, into the trackless regions of space and among remote nebulae, into those tangled ways where metaphysical and mathematical sciences seem to mingle, touching the margin of that debatable land where theology and science meet without recognition, yet keeping, especially in Sir John's case, the equanimity of the philosopher and a kindliness of heart which

made him tolerant of all and rendered him beloved as well as honored by those who knew him.

Workers in physical science have generally been long-lived, perhaps because only with length of years can anything be done in science. Perhaps, too, scientific studies are health-promoting, for if it is hour after hour over books, it is also hour after hour alone with nature.

The Herschels worked a great many years. Sir William Herschel's papers, published in various scientific journals, stretch through a period of forty years. Sir John Herschel's reach through a period of fifty-seven years—about twice the average length of life. Sir William Herschel died at eighty-three, Sir John at seventy-eight; and, as if to show that a woman can live and work even longer than a man, Caroline, the sister of Sir William, died at ninety-eight.

MARIA MITCHELL'S OBSERVATORY AT LYNN, MASS.

Is it worth while to talk about the unhealthiness of "night air" when that class of people who are most exposed to its influence, whose calling keeps them breathing it, are so long-lived?—for the work of the practical astronomer is mainly out-of-doors and in good night air, instead of indoors in bad air. I think it is Florence Nightingale who asks what air can any one breathe in the night except night air.

It is scarcely possible to understand nature as the Herschels did without knowing some-

thing in many directions, particularly in physical science. One who seeks to understand the relation of worlds must know something of the constitution of those worlds,—their masses, their densities,—of physical geography, of chemistry, of geology, of natural philosophy. He must know something of language, for he must know what has been written. If he would understand the language which is unlike his own he must know something of the genius of the people whence those writings came; he must understand the national mind.

There is a phenomenon well known to astronomical observers as "personal equation." No two persons receive an impression and make it known in the same time. Thus, if one sees a star, and calls out that he sees it, the interval of time which elapses between the sight and the call, the seeing and the speaking, is different for any two persons. We call this difference "personal equation."

There seems to be a "national equation." We do not expect that even the little popular scientific work which we take up written in French shall reach conclusions by the same processes of thought as those by which the little German book will reach the same. If we would understand, then, the science of the period, we must know the national soils in which science has taken root.

A singular illustration of national differences was seen in the case of the discovery of the planet Neptune. Two leading men, one in England and one in France, sitting in their studies, proved by careful mathematical investigations that there must be a planet away out beyond what were considered the limits of our solar system. The Englishman worked out his problem first, but pondered long, thought much, and consulted with others before he published it. The Frenchman finished his computations, put his pencil down, and announced the result in the next day's papers. When the planet was found both Englishman and Frenchman claimed the discovery. But a third, and he was an American, said, "True, you have each declared a planet to exist, and a planet has been found; but you did not agree in your calculations, and the planet which has been found is not the planet announced by either."

Sir John Herschel was less a practical than a theoretical astronomer, as much a philosopher as he was astronomer or mathematician, and almost as much a poet. It is said that his bent was decidedly towards metaphysics, but that his work in astronomy was largely the result of love for his father. When I came to look over his printed papers I found that his reputation must rest mainly on his work as a natural philosopher—a work not on practical experi-

ments, but on scientific methods of thought and reasoning.

I have said that my acquaintance with the Herschels came through the Airys. It was in this way.

Lady Airy hoped that I should know the Herschels. She said, "Sir John Herschel is the acknowledged head of astronomy."

I proposed to go to Paris, and as I had leaned upon Mrs. Airy for all the small learning necessary for moving properly along the periphery of English circles, I asked her for a letter to some Englishwoman in Paris.

An Englishwoman's heart once reached and won is yours forever. When I asked Mrs. Airy for a letter to Paris she said: "I know no one in Paris, but Lady Herschel probably does. I will ask her to give you one." And a letter was dispatched to Lady Herschel. Lady Herschel replied: "I know no one in Paris, but Lady Lyell does. I will write to her." A letter was written to Lady Lyell; she was not in England; the letter followed her; she replied to her sister in England and said, "Give a letter to Mrs. Power, the sister of Sir Francis Horner, now in Paris." And from every one of these persons, wholly unknown to me, I received the courtesy so valuable to a stranger. The letter from Lady Herschel contained a kind invitation to Collingwood, and I was specially advised not "to take it on my way," but to make a separate departure.

Lady Herschel afterward wrote to me that if I would name the day I was likely to spend with them, they would send a carriage to Etchingham, the nearest station to Collingwood, where they resided; but time would not allow, and I started without any notice. I reached Etchingham at four o'clock on one of the shortest of the short English days, and taking the only cab, an open one, and an old man for driver, I started for Collingwood. The night became very dark, our path lay through dense woods, and just as I began to be frightened, the old man turned around and asked me if I knew that part of the country. I gasped out, "No," supposing the next demand would be for my purse, when he said in a very gentle way, "This is Hawkhurst, madam—a very respectable neighborhood." The good old fellow was determined that the American woman should appreciate the country.

I arrived at the Herschels' just at dinner time. While the servant was gone to announce me, I looked around the large hall, and the first thing that caught my eye was Borden's map of Massachusetts. I felt at home at once, for that map hung in the room most familiar to me in America.

The servant returned and asked me into the drawing-room, and Sir John Herschel came

in at once. He reached both hands to me very cordially and said, "We did not receive your letter, but you are always welcome in this house." Lady Herschel followed, also with a very kind welcome.

I found a cheery fire awaiting me in my room, and after a few minutes I was asked down to dinner, only Sir John and Lady Herschel being present.

After dinner the family assembled in the drawing-room, and the elder daughters were introduced to me. There were twelve children, although Lady Herschel seemed young and was still handsome; she must have been fifty years old. Sir John was at that time sixty-six years old, but he looked much older, being lame and much bent in his figure. The eldest daughter was absent; a marble bust of her stood in the drawing-room, and I could well believe what I had heard—that she was a beauty.

The second daughter was on a visit to an old lady of the neighborhood who was ill; I met her afterward at Rome, as a bride. I admired her beauty and her simplicity.

An unmarried daughter, Bella, struck me as very intelligent. She was the only English-woman I met in 1857 who had read Lowell's poems.

Then there were groups of boys and girls. Amelia, a pleasant-looking girl, who had been presented at court, a group of little planetoids—Julia, Rose, Francesca (named for Francis Baily), and a dear little girl, Constance Anne, the latter named for Mrs. Dawes, the wife of the astronomer, who is her godmother. The sons were young men: William was in India, Alexander in Trinity College, and John came home for a vacation from some scientific institution.

In the evening we played with letters, putting out charades and riddles, and telling anecdotes, Sir John joining the family party and chatting away like the young people.

He spoke with great admiration of the clearness of the sky at the Cape of Good Hope, which Sir John and his family had visited for the purpose of examining his father's observations.

Sir John said that one of his imaginings in regard to Saturn was that the satellites are the children of the ring, some of one ring and some of another. He told pleasant little anecdotes of some self-made astronomers who came to him with most absurd notions, such as the non-existence of the moon—founded upon the reading of his works! And one good soul sent to him to have a horoscope cast and inclosed a half-crown. Another wrote to him asking, "Shall I marry, and have I seen her?"

One of Sir John Herschel's numerical prob-

lems was this: If, at the time of Cheops, or three thousand years ago, one pair of human beings had lived, and war, pestilence, and famine had not existed, and only natural death came to man, and this pair had doubled once in thirty years, and their children had doubled, and so on, how large would the population of the world be at this time—could they stand upon the earth as a plane?

We were sitting at the breakfast-table when he asked the question. We thought they could not. "But if they stood closely and others stood on their shoulders, man, woman, and child, how many layers would there be?" I said, "Perhaps three." "How many feet of men?" he asked. "Possibly thirty," I said. "Oh, more!" "Well, we'll say a hundred." "Oh, more!" Miss Herschel said, "Enough to reach the moon." "To the sun." "More, more!" cried Sir John, exulting in our astonishment; "bid higher." "To Neptune," said one. "Now you burn," he replied. "*Take a hundred times the distance of Neptune, and it is very near.* That is my way," said he, "of whitewashing war, pestilence, and famine."

Over the fireplace in the dining-room is a portrait of Sir William Herschel, painted, I think, by Russell, with a diagram of the Georgium sidus (Uranus) beside him. The expression of the face is of great vigor, very unlike that of the engravings in the print-shops. Sir John has a miniature of his father with a still better expression. He does not know the painter, for he picked it up by accident in a shop in London. It is exceedingly like Sir John himself.

Sir John's forehead was bold but retreating; his mouth was very good. He was quick in motion and in speech. He said that efforts were making to induce the English Government to accept the decimal coinage. I remarked that it would not be easy to make Englishmen change their ways. "Oh," he said, "we stick to old ways, but we are not cemented to them."

On Sunday morning Lady Herschel went to church, and I with her. The Herschels, like all the country gentry whom I knew in England, attended service in a little old stone church, with no style about it; this had not even an organ. Miss Herschel told me that a good deal of effort had been made to raise money enough to purchase one, but it had failed. In the afternoon I remained at home and looked over the manuscripts of Sir William Herschel and his sister, Sir John pointing out the interesting parts. They were very carefully preserved, and were kept with a system which was in itself a science. The great astronomer wrote his notes on slips of paper at different times; these slips were afterward compared, the results obtained from them were recorded,

and indices to the manuscripts made. The first notes on the planet Uranus, which he discovered, speak of it as a comet,—he dared not call it a planet,—and as a comet it continues for some time to be spoken of in the notes, probably after he knew it to be a planet.¹

Several of the manuscripts are devoted to the methods of polishing specula; several to observations on light. One of the notes is: "Observed my sister's comet of August 1."

The copies of letters were in themselves numerous and very interesting. The loss of the planet Ceres is mentioned in one to Piazzi. One is to Sir William Watson to ask for a term for the asteroids—what to call them as a *group*. He suggests that more may be discovered. A most remarkable one is to a French gentleman about a chemical discovery, which seems to have been a foreshadowing of photography.

Caroline Herschel followed Sir William to England when he was appointed astronomer to the king, and remained there until his death. She shared in all the night-watches of her brother, and with pencil in hand and eye on clock recorded what he saw, made the calculations, registered, coördinated, classed, and analyzed them.

As a gift for the present Lady Herschel, Caroline Herschel prepared her own biography after she was ninety years of age. It is written in a very clear hand, and although English was not her native tongue, the language is good. The sentences are long, but never obscure. Lady Herschel read some passages to me. She says, "My father told me that as I had neither beauty nor riches, no man would be likely to make me an offer until I was old, when some one might like, on account of my worth, to marry me."

When I mingled with English scientists I was not prepared for so much love of poetry as I found. Mr. Airy, the astronomer royal, could repeat the whole of the "Lady of the Lake." Dr. Whewell, the master of Trinity, was a great lover of poetry, and wrote verses himself, though Sir John Herschel was more particularly the poet of science.

The Herschels had breakfast about eight o'clock. I did not see Lady Herschel at that time, but Miss Herschel poured tea and coffee; Sir John was there. At five or six came dinner, and we were always told the time of day near its approach, and advised to dress, and all who were to come to table made at once some preparation. It was cold weather, but the young

ladies came to dinner in barege dresses and with short sleeves.

It is a common saying in Europe that "Princes, Americans, and fools ride in first-class carriages." Lady Herschel told me that by traveling "second class" she sometimes made valuable acquaintances; she talked with intelligent farmers and learned to know something of a class whom she could never meet socially. I pitied in England the isolation of rank, the narrow circle of class, which becomes narrower and narrower all the way from the peasant to the queen, the peasant having the largest social circle, and the queen the smallest.

I met in England, as all Americans at that time met, great ignorance in regard to America. The eldest daughter of Sir John had read "Uncle Tom's Cabin," and she asked me if it was a true picture of life in America—if it were possible for boys and girls to be educated together; if a girl stood a public examination in America; if a young lady really received guests herself, etc.²

I could scarcely believe when I saw Sir John Herschel in his family, guessing conundrums with the children, playing at spelling, and telling funny anecdotes, that he was the same man of whom one had said to me when I first landed in England, "He is living at Hawkhurst, not very well, and not very good-natured." Probably the expression on his countenance of physical suffering has been mistaken for ill temper. He was remarkably a gentleman; more like a woman in his instinctive perception of the wants and wishes of a guest. Just before I came away he came to me, and reaching out a leaf of a manuscript said, "Miss Mitchell, I thought you would like some of my aunt's handwriting," giving me an autograph which I value extremely. It was given to me as a leaf from a folio volume.

Sir John's mind was full of vigor at the time of my visit. He was then engaged in rewriting his "Outlines of Astronomy," but was no longer an active astronomer. He talked with great enthusiasm of the Cape observatory, and described in a very interesting manner the peculiar appearance of a twisted nebula on the larger of the "Magellan Patches."

I went over the grounds the last day, rainy though it was, to get to the barn to see the remains of the telescope used by Sir William: only the tube was left. It was forty feet long, and the diameter was so great that one could sit comfortably within it. Arago says that "In 1840 the family, then residing at Slough, formed in procession and walked around this telescope, then, seated on benches within the tube, sang the song written by Sir John and sealed up the tube—its work was over."³

Sir John was said to be a man of no wealth.

¹ These notes of an evening's observation are always very clearly written, and the words, "Left off here," are as distinct as the rest. The writer was the sister.

² The youngest child, at that time two years old, was educated at Girton later.

³ See Arago's "Memoirs," first series, p. 265, for a celebration in honor of this telescope.

The family, including the servants, numbered some twenty persons; and when I asked, "What is meant in England by a person of no wealth?" I was told that it meant one who could not portion his daughters when they married.

It was the period of our distressing financial crisis of 1857, and English as well as American families were ruined. I asked of an English lady, "What will become of the daughters of an English family in which there is no property?" She replied, "They will live on their brother." And the question was asked of me, "What will become of the daughters of an American family in which there is no money?" "They will *earn* money," I replied. The answer was, "You Americans are a sensible people."

The house was very extensive, the grounds proportionately so: the table was to me, as all English tables seemed, over-bountiful; but in style of furniture and of dress I know no merchant's family in Boston so simple.

English habits may have changed since 1857, but at that time I saw no young ladies in silk. The plain print for morning and simple white for evening were all that the daughters of the astronomer royal or those of Sir John Herschel wore; and yet in the family of the astronomer royal, as in that of Sir John Herschel, a ring of the door-bell might announce not only the highest potentate of science in England, but the highest representative of any social circle—even the Queen herself.

You would say, in looking at Caroline Herschel's portrait, which hung in the drawing-room, "She must have been handsome when she was young." Her ruffled cap shades a mild face, whose blue eyes were even then full of animation. But it was merely the beauty of age. I suspect that this is often the case, especially when the life has been such as to develop the soul, which overcomes ugliness of feature and coarseness of complexion.

If you had asked Caroline Herschel after ten years of labor what good had come of it, she would probably have answered, with the extreme simplicity of her nature, that she had relieved her brother of a good deal of wearisome labor: and perhaps kept up his vigor and prolonged his life. Probably it never entered her thoughts to be other than the patient and self-sacrificing assistant to a truly great man.

The woman who has peculiar gifts has a definite line marked out for her, and the call from God to do his work in the field of scientific investigation may be as imperative as that which calls the missionary into the moral field, or the mother into the family: as missionary, or as scientist, as sister, or as mother, no woman has the right to lose her individuality. To

discuss the question whether women have the capacity for original investigation in science is simply idle until equal opportunity is given them. We cannot overrate the consequences of such lives, whether it be Mrs. Somerville translating Laplace, Harriet Hosmer modeling her statues, Mrs. Browning writing her poems, or Caroline Herschel spending nights under the open canopy; in all it is the devotion to idea, the loyalty to duty, which reaches to all ages.

One of Caroline Herschel's strong characteristics was the carefulness with which everything was done. We are apt to hurry in everything, as if railroad-speed were the law of daily life—as if our hearts did not beat fast enough. She worked slowly, as if she knew that she had ninety-eight years of this life and all eternity in the next. When she worked in the little observatory at Slough, where the first observations were made, she not only worked in every observatory of the world, but she reached to every school for girls.

If what Caroline Herschel did is a lesson and a stimulus to all women, what she did not do is a warning. Has any being a right not to be? When Caroline Herschel so devoted herself to her brother that on his death her own self died, and her life became comparatively useless, she did, all unconsciously, a wrong, and she made the great mistake of her life.

The fault was only in part her fault. She was honored—late in life—as few women have been, by her family, by her sovereign, by the savants of all Europe. It was too late. It seems probable that her gifts were as fully bestowed as those of her brother; she was left uneducated and undeveloped. It was the English way; it is still the way of the world. Living on more than twenty years after his death, she needed for her own comfort pursuits and avocations outside the life that she had given him, and throughout her nearly one hundred years the world needed all that she could do.

When she kept the records, so systematically and so scientifically that after nearly one hundred years they are still valuable, every line that she wrote was an argument for the higher education of women; when she wrapped herself in innumerable wrappings and took care of the body that the mind might do its duty, she gave a lesson which every girl ought to follow.

She showed also the lesson of the usefulness of the unmarried woman. In England much more than in our country the unmarried woman holds a secondary place—unless she has some title. She even enters the dining-room after every married woman. I would in no way underrate the higher value of the wife and the mother and the blessedness of those whom

God has placed in families, but life need not be a failure and a blank when this position is denied. The family is only a larger one; the usefulness is not so intense, but it may be wider spread.

The peculiarity of Caroline Herschel's character, which in the thought of most persons gave the great charm, was her capacity of self-abnegation. She was the sister of a great man; to help him to make his work complete, to see that it was the best work that could be done, that all guards were placed around it to preserve it, was what she believed to be her duty, and she did it. It seems ungenerous to blame at all where we admire so much.

We make close friendships in England, and then we cross the Atlantic and for a few

months, perhaps for a few years, letters pass, telling of the life on the different sides of the world; then they grow few and far between. In my case came the dreadful war, and America and Great Britain seemed to be still farther separated.

Engrossed as we all were by the great moral question in our own country, personal ties, except of the closest nature, were subordinated. Letters became fewer and then more concisely stated. I heard that Sir John Herschel suffered from "dreadful coughs" in winter, and before the war was over the letters had ceased altogether. Suddenly one spring came the news that sent a pang to many a heart in America—"Sir John Herschel is dead."

Maria Mitchell.

THE OLD BASCOM PLACE.

BY JOEL CHANDLER HARRIS,

Author of "Days and Nights with Uncle Remus," "Free Joe," etc.

VII.

ALL this was no less the result of Francis Underwood's desire than of the doctor's commands. The old practitioner was noted for his skill throughout the region, and after he had talked with Judge Bascom

he gave it as his opinion that the only physic necessary in the case was perfect rest and quiet, and that these could be secured only by allowing the old man to remain undisturbed in the belief that he was once more the owner of the Bascom Place.

"He 'll not trouble you for long," said Dr. Bynum, wiping his spectacles, "and I've no doubt that whatever expense may be incurred will be settled by his old friends. Oh, Bascom still has friends here," exclaimed the doctor, misunderstanding Underwood's gesture of protest. "He went wrong, badly wrong; but he is a Southerner, sir, to the very core, and in the South we are in the habit of looking after our own. We may differ, sir, but when the pinch comes you 'll find us together."

The doctor's lofty air was wholly lost on his companion.

"My dear sir," said Underwood, laying his hand somewhat heavily on the doctor's shoulder, "what do you take me for? Do you suppose that I intend to set up a hospital here?"

"Oh, by no means, by no means," said Dr. Bynum, soothingly. "Not at all; in fact, quite

the contrary. As I say, you shall be reimbursed for all—"

"Dr. Bynum," said Underwood, with some degree of emphasis, "permit me to remind you that Judge Bascom is my guest. There is no question of money except so far as your bill is concerned, and that—"

"Now, now, my *dear* boy," exclaimed the old doctor, holding up both hands in a gesture of expostulation, "don't, *don't* fly up! What is the use? I was only explaining matters; I was only trying to let you know how we Southerners feel. You must have noticed that the poor old Judge has n't been treated very well since his return here. His best friends have avoided him. I was only trying to tell you that they hold him in high esteem, and that they are willing to do all they can for him."

"As a Southerner?" inquired Underwood, "or as a man?"

"Tut, tut!" exclaimed Dr. Bynum. "Don't come running at me with your head down and your horns up. We've no time to fall into a dispute. You look after the Judge as a Northerner, and I 'll look after him as a Southerner. His daughter must come here. He is very feeble. He has but one irrational idea, and that is that he owns the old Place. In every other particular his mind is sound, and he will give you no trouble. His idea must be humored and even then the collapse will come too soon for that poor girl, his daughter—as lovely a creature, sir, as you ever saw."

This statement was neither information nor news so far as Underwood was concerned. "If

I see her," the old doctor went on, with a somewhat patronizing air, "I'll try to explain matters; but it is a very delicate undertaking, sir—very delicate."

"No," said Underwood; "there will be no need for explanations. My sister will go for Miss Bascom, and whatever explanations may be necessary she will make at the proper time."

"An admirable arrangement," said Dr. Bynum with a grunt of satisfaction—"an admirable arrangement indeed. Well, my boy, you must do the best you can, and I know that will be all that is necessary. I am sorry for Bascom, very sorry, and I'm sorrier for his daughter. I'll call again to-night."

As Dr. Bynum drove down the avenue, Underwood was much gratified to see Jesse coming through the gate. The negro appeared to be much perplexed. He took off his hat as he approached Underwood, and made a display of politeness somewhat unusual, although he was always polite.

"Is you seed Marse Judge Bascom?" he inquired.

"Yes," said Underwood. "He is in the house yonder, resting himself. You seem frightened; what is the trouble?"

"Well, suh, I ain't had no sech worriment sence de Sherman army come 'long. I dunner what got inter Marse Judge Bascom. He been gwine on des like yuther folks, settin' 'roun' en talkin' 'long wid hisse'f, en den all of er sudden he break out en shave en dress hisse'f, en go visitin' whar he ain't never been visitin' befo'. I done year 'im say p'intedly dat he ain't never gwine come yer les'n de Place b'long ter 'im. Do he look downhearted, suh?"

"No," said Underwood, "I can't say that he does. He seems to be very well satisfied. He has called several times for Wesley. I have heard you called Jesse, but perhaps the Judge knows you as Wesley. There are several negroes around here who answer to different names."

"No, suh," said Jesse, scratching his head. "I ain't never been call Wesley sence I been bordned inter de worl'. Dey was er nigger name Wesley what use ter go 'long wid Marse Judge Bascom en wait on 'im when I wuz er little boy, but Wesley done been dead too long ago ter talk about. I dunner what make folks's min' drop back dat away. Look like dey er sorter fumblin' 'roun' tryin' fer ter ketch holt er sump'n ne'r what done been pulled up out'n reach."

"Well," said Underwood, "the Judge is in the house. See if he wants anything; and if he asks about his daughter, tell him she will be here directly."

When Jesse went into the house he found the Judge lying on a lounge in the hall. His

eyes were closed, and he seemed to be dozing; but Jesse's movements aroused him.

"Ah! is that you, Wesley? Where is your Miss Mildred?"

"She comin', suh; she comin' right now."

"Very well, very well. You must make yourself at home here," he said to Francis Underwood, who had followed Jesse. "I am somewhat dilapidated myself, but my daughter will entertain you. Wesley, I believe I will go to my room. Lend me your arm."

"Allow me to assist you," said Underwood; and so between the two the old man was carried to the room that had been his own when the house was his. It happened to be Underwood's room, but that made no difference. It belonged once more to the Judge in his disordered fancy, and thither he went.

After a while Miss Sophie came bringing Mildred. Just how she had explained matters to the poor girl no one ever knew, but it must have been in some specially sympathetic way, for when Francis Underwood assisted the ladies from the carriage Miss Bascom appeared to be the less agitated of the two.

"The Judge is as comfortable as possible," Underwood said cheerily. "Jesse is with him, and I think he is asleep. His nervousness has passed away."

"Oh, do you think he is seriously ill?" exclaimed Mildred, clasping her hands together.

"Certainly not, just now," said Francis Underwood. "The doctor has been here, and he has gone away apparently satisfied. Sister, do you take charge of Miss Bascom, and show her how to be at home here."

And so Judge Bascom and his beautiful daughter were installed at the old Place. Mildred, under the circumstances, would rather have been elsewhere, but she was practically under orders. It was necessary to the well-being of her father, so the doctor said, that he should remain where he was; it was necessary that he should be humored in the belief that he was the owner of the old Place. It is only fair to say that Miss Sophie Underwood and her brother were more willing and anxious to enter into this scheme than Mildred appeared to be. She failed to comprehend the situation until after she had talked with her father, and then she was in despair. Judge Bascom was the representative of everything substantial and enduring in his daughter's experience, and when she realized that his mind had been seized by a vagary she received a tremendous shock. But the rough edges of the situation, so to speak, were smoothed and turned by Miss Sophie, who assumed motherly charge of the young girl. Miss Sophie's methods were so sympathetic and so womanly, and she gave to the situation such a matter-of-fact interpre-

tation, that the grief and dismay of the young girl were not as overwhelming as they otherwise would have been.

VIII.

NATURALLY all the facts that have just been set down here were soon known to the inhabitants of Hillsborough. Naturally, too, something more than the facts were also known and talked about. There was the good old doctor ready to shake his head and look mysterious, and there were the negroes ready to give out an exaggerated version of the occurrences that followed Judge Bascom's visit to his old home.

"Well," said Major Jimmy Bass to his wife, with something like a snort, "ef the old Judge is gone there an' took holt of things, like they say, it 's bekaze he 's out'n his mind. I wonder what in the round world could 'a' possessed him?"

"I 'spec' he 's done drapt back into his dolt-age," said farmer Joe-Bob Grissom, who had gone to the major's for the purpose of discussing the matter. "An' yit, they do say that he 's got a clean title to every bit of the prop'ty ef you take into account all that talk about his wife's brother an' sech like."

"Well," remarked the major grimly, "Sarah there ain't got no brother, an' I reckon I 'm sorter prectected from them kind of gwines-on."

"Why, tooby shore you are," said his wife, who was the Sarah referred to; "but I ain't so mighty certain that I would n't be better off if I had a brother to follow you around where the wimmen folks can't go. You 've flung away a many a bright dollar that he might have picked up."

"Who, Sarah?" inquired the major, wincing a little.

"My brother," returned Mrs. Bass.

"Why, you have n't got a brother, Sarah," said Major Bass.

"More 's the pity," exclaimed the major's wife. "I ought to have had one—a great big double-j'inted chap. But you need n't tell me about the old Judge," she went on. "He tried to out-Yankee the Yankees up yonder in Atlanty, and now he 's a-trying to out-Yankee them down here. Lord! You need n't tell me a thing about old Judge Bascom. Show me a man that 's been wrapped up with the Radicals, and I 'll show you a man that ain't got no better sense than to try to chousel somebody. I 'd just as lieve see Underwood have the Bascom Place as the old Judge—every bit and grain."

"Well, I had n't," said the major, emphatically.

"No, ner me nuther," said Mr. Joe-Bob Grissom. "Hit may be right, but hit don't

look right. Pap used to say he 'd never be happy ontel the Bascoms come back inter the'r prop'ty."

"Well, he 's dead, ain't he?" inquired Mrs. Bass in a tone that showed she had the best of the argument.

"Yessum," said Mr. Grissom, shifting about in his chair and crossing his legs, as if anxious to dispose of an unpleasant subject—"yessum, pap 's done dead." To this statement, after a somewhat embarrassing silence, he added: "Pap took an' died a long time ago."

"Yes," said Mrs. Bass in a gentler tone, "and I 'll warrant you that when he died he was n't pestered about whether the Bascoms owned the old Place or not. Did he make any complaints?"

"No 'm," replied Mr. Grissom, in a reminiscent way, "I can't say that he did. He jest did n't bother about 'em. Hit looked like they jest natchally slipped outter his mind."

"Why, certainly," said Mrs. Bass, with a little shake of her head; "they slipped outter your pa's mind, and now they say the old Judge has slipped out of his own mind."

"Well, we need n't boast of it, Sarah," remarked the major with a feeble attempt at severity. "Nobody knows the day when some of us may be twisted around. We 've no room to brag."

"No, we ain't," said his wife, bridling up. "I 've trembled for you a many a day when you thought I was thinking about something else—a many a day."

"Now you know mighty well, Sarah, that no good-natured man like me ain't a-gwine to up an' lose their mind, jest dry so," said the major earnestly. "They 've got to have some mighty big trouble."

"Yes," said Mrs. Bass, grimly, "and they have to have mind too, I reckon. Nobody that never had a horse ever lost one."

The major nodded his head at Joe-Bob Grissom, as much as to say that it was only a very able man who could afford to have such a sprightly wife. The mute suggestion, however, was lost on Grissom, who was accustomed to taking life seriously.

"I hear a mighty heap of talk," he said, "but I ain't never been so mighty certain an' shore that the old Judge is lost his mind. There 'd be lots of fun ef it should happen to be that he had the papers all made out in his pocket, an' I 've hearn some hints thataway."

"Well," said the more practical Mrs. Bass, "he ain't got no papers. The minute I laid eyes on him after he come back here, I says to Mr. Bass there, 'Mr. Bass,' says I, 'the old Judge has gone wrong in his upper story.' Ah, you can't fool me. I know a thing when I see it, more especially if I look at it close. I 've seen folks that had to rub the silver off a thrip

to tell whether it was passable or not. I might be fooled about the silver in a thrip, but you can't fool me about a grown man."

"Nobody ain't tryin' to fool you, Sarah," said the major, with some show of spirit.

"Well, I reckon not," exclaimed Mrs. Bass, somewhat contemptuously. "I 'd like to see anybody try to fool me right here in my own house and right before my face."

"There ain't no tellin'," said Mr. Joe-Bob Grissom, in his matter-of-fact way, ignoring everything that had been said—"there ain't no tellin' whether the old Judge is got the papers or not. 'T would be hard on Frank Underwood an' his sister, an' they ain't no better folks than them. They don't make no fuss about it, an' they don't hang out no signs, but when you come to a narrer place in the road where you can't go forrerd nor back'ards, an' nuther can you turn 'roun', you may jest count on them Underwoods. They 'll git you out ef you can be got out, an' before you can say thanky-do, they 'll be away off yonder helpin' some yuther poor creetur."

"Well," said Major Bass, with an air of independence, "I 'm at the fust of it. It may be jest as you say, Joe-Bob; but ef so, I 've never knowed it."

"Hit 's jest like I tell you," said Joe-Bob, emphatically.

"Well, the Lord love us!" exclaimed Mrs. Bass, "I hope it's so—I do from the bottom of my heart. It would be a mighty queer world if it did n't have some tender spots in it, but you need n't be afraid that they 'll ever get as thick as the measles. I reckon you must be renting land on the old Bascom Place," she went on, eying Mr. Grissom somewhat sharply.

"Yessum," said Joe-Bob, moving about uneasily in his chair. "Yessum, I do."

Whereupon Mrs. Bass smiled, and her smile was more significant than anything she could have said. It was disconcerting indeed, and it was not long before Mr. Joe-Bob Grissom made some excuse for depriving Major Jimmy and Mrs. Sarah Bass of his company.

As he was passing the Bascom Place on his way home he saw lights in the house and heard voices on the piazza.

"Ef it warn't for that blamed dog," he thought, "I 'd go up there an' see what they er talkin' about so mighty peart."

IX.

BUT Mr. Grissom's curiosity would not have been satisfied. Judge Bascom was sitting in a large rocking chair, enjoying the pleasant evening air, and the others were sitting near, talking on the most ordinary topics. This sit-

uation was one of the doctor's prescriptions, as Miss Sophie said. Those around were to wear a cheerful air, and the Judge was to be humored in the belief that he was once more the proprietor of the Bascom Place. He seemed to respond to this treatment in the most natural way. The old instinct of hospitality rose in him and had its way. He grew garrulous indeed, and sat on the piazza, or walked up and down and talked by the hour. He was full of plans and projects, and some of them were so suggestive that Francis Underwood made a note of them for further consideration. The Judge was the genial host, and while his daughter was full of grief and humiliation at the position in which she was placed, he appeared to draw new life and inspiration from his surroundings. He took a great fancy to Miss Sophie: her observations, which were practical in the extreme, and often unflattering, were highly relished by him. The Judge himself was a good talker, and he gave Miss Sophie an opportunity to vent some of her pet opinions, the most of which were very pronounced.

As for Mildred, in spite of her grief and anxiety, she found her surroundings vastly more pleasant than she had at first imagined they could be. Some instinct or prepossession made her feel at home in the old house, and as she grew more cheerful and more contented she grew more beautiful and more engaging. At least this was the opinion of Francis Underwood.

"Brother," said Miss Sophie one day when they were together, "you are in love."

"I don't know whether to say yes or no," he replied. "What is it to be in love?"

"How should I know?" exclaimed Miss Sophie, reddening a little. "I see you mooning around, and moping. Something has come over you, and if it is n't love, what is it?"

He held up his hands, white and muscular, and looked at them. Then he took off his hat and tousled his hair in an effort to smooth it with his fingers.

"It is something," he said after a while, "but I don't know what. Is love such an everyday affair that it can be called by name as soon as it arrives?"

"Don't be absurd, brother," said Miss Sophie, with a gesture of protest. "You talk as if you were trying to take a census of the affair."

"No," said he; "I am trying to get a special report. I saw Dr. Bynum looking at you over his spectacles yesterday."

Miss Sophie tried to show that this suggestion was an irritating one, but she failed, and then fell to laughing.

"I never knew I was so full of humor before," said Francis Underwood, by way of comment.

"And I never knew you could be so foolish — to me," said Miss Sophie, still laughing. "What is Dr. Bynum to me?"

"Not having his spectacles to look over, how do I know?"

"But," persisted Miss Sophie, "you need no spectacles to look at Mildred. I have seen you looking at her through your fingers."

"And what was she doing?" inquired Underwood, coloring in the most surprising way.

"Oh," said Miss Sophie, "she was pretending not to notice it; but I can sit with my back to you both and tell by the tone of her voice when this and that thing is going on."

"This, then, is courtship," said Underwood.

"Why, brother, how provoking you are!" exclaimed Miss Sophie. "It is nothing of the sort. It is child's play; it is the way the youngsters do at school. I feel as if I never knew you before; you are full of surprises."

"I surprise myself," he said, with something like a sigh, "and that is the trouble; I don't want to be too surprising."

"But in war," said his sister, "the successful general cannot be too full of surprises."

"In war!" he cried. "Why, I was in hopes the war was over."

"I was thinking about the old saying," she explained — "the old saying that all is fair in love and war."

"Well," said Francis Underwood, "it would be hard to say whether you and Dr. Bynum are engaged in war or not. You are both very sly, but I have seen a good deal of skirmishing going on. Will it end in a serious engagement, with casualties on both sides? The doctor is something of a surgeon, and he can attend to his own wounds, but who is going to look after yours?"

"How can you go on so!" cried Miss Sophie, laughing. "Are we to have an epidemic of delusions?"

"Yes, and illusions too," said her brother. "The atmosphere seems to be full of them. Everything is in a tangle."

And yet it was not long after this conversation that Miss Sophie observed her brother and Mildred Bascom sauntering together under the great cedars, and she concluded that he was trying to untangle the tangle.

There were many such walks, and the old Judge, sitting on the piazza in bright weather, would watch the handsome pair, apparently with a contented air. There was something about this busy and practical young man that filled Mildred's imagination. His individuality was prominent enough to be tantalizing. It was of the dominant variety. In him the instinct of control and command, so pleasing to the feminine mind, was thoroughly developed, and he disposed of his affairs with a promptness and decisiveness that left nothing to be

desired. Everything seemed to be arranged in his mind beforehand.

Everything, that is to say, except his relations with Mildred Bascom. There was not the slightest detail of his various enterprises, from the simplest to the most complicated, with which he was not thoroughly familiar, but this young girl, simple and unaffected as she was, puzzled him sorely. She presented to Francis Underwood's mind the old problem

FRANCIS UNDERWOOD AND MILDRED.

that is always new, and that has as many phases as there are stars in the sky. Here, before his eyes, was a combination for which there was no warrant in his experience — the wit and tenderness of Rosalind, blended with the self-sacrificing devotion of Cordelia. Here was a combination — a complication — of a nature to attract the young man's attention. Problem, puzzle, what you will, it was a very attractive one for him, and he lost no favorable opportunity of studying it.

So the pleasant days came and went. If there were any love passages between the young people, only the stately cedars or the restless poplars were in the secret, and these told it only to the vagrant west winds that crept over the hills when the silence of night fell over all things.

X.

THOSE were pleasant days and nights at the old Bascom Place, in spite of the malady with which the Judge was afflicted. They

were particularly pleasant when he seemed to be brighter and stronger. But one day, when he seemed to be at his best, the beginning of the end came. He was sitting on the piazza, talking with his daughter and with Francis Underwood. Some reference was made to the Place, when the old Judge suddenly rose from his chair, and, shaking his thin white hand at the young man, cried out:

"I tell you it is mine! The Place always has been mine and it always will be mine."

He tottered forward and would have fallen, but Underwood caught him and placed him in his chair. The old man's nerves had lost their tension, his eyes their brightness. He could only murmur indistinctly, "Mine, mine, mine." He seemed suddenly to have shrunk and shriveled away. His head fell to one side, his face was deadly pale, his lips were blue, and his thin hands clutched convulsively at his clothes and at the chair. Mildred was at his side instantly, but he seemed to be beyond the reach of her voice and beyond the limits of her grief, which was distressful to behold. He tried indeed to stroke the beautiful hair that fell loosely over him as his daughter seized him in her despairing arms, but it was in a vague and wandering way.

Judge Bascom's condition was so alarming that Francis Underwood lifted him in his arms and placed him on the nearest bed, where he lay gazing at the ceiling, sometimes smiling and at other times frowning and crying, "Mine, mine, mine!"

He sank slowly but surely. At the last he smiled and whispered "Home," and so passed away.

He was indeed at home. He had come to the end of his long and tiresome journey. He smiled as he lay sleeping, and his rest was pleasant; for there was that in his dead face, white and pinched as it was, that bore witness to the infinite gentleness and mercy of Christ, who is the Lord.

It was an event that touched the hearts of his old neighbors and their children, and they spoke to one another freely and feelingly about the virtues of the old Judge, the beautiful life he had lived, the distinction he had won, and the mark he had made on his generation. Some, who were old enough to remember, told of his charities in the days when prosperity sat at his board; and in discussing these things the people gradually came to realize the fact that Judge Bascom, in spite of his misfortunes, had shed luster on his State and on the village in which he was born, and that his renown was based on a character so perfect, and on results so just and beneficent, that all could share in it.

His old neighbors, watching by him as he lay smiling in his dreamless sleep, shortened the long hours of the night with pleasant reminiscences of the dead. Those who sat near the door could see, in an adjoining room, Mildred Bascom sitting at Miss Sophie Underwood's feet, her arms around the older woman's waist. It was a brief and fleeting panorama, as indeed life itself is, but the two, brought together by grief and sympathy, often sat thus in the years that followed. For Mildred Bascom became the mistress of the Bascom Place; and although she has changed her name, the old name still clings to Underwood's domain.

THE END.

Joel Chandler Harris.

SUNRISE.

ONE rose before the dawn, and stole along
The dull shore waiting for the light to be;
That he, before the unimpatient throng,
Might watch the sunrise on the splendid
sea.

And one who cared not for the glorious sight,
But for the joy to come with that first ray,
Ran to his casement to greet there the light
That ushered in for him his wedding-day.

But to the One who gives both sea and shore,
Who from the darkness light and gladness
frees,
Rises the sweetest hymn forevermore
Not from the lips of such glad souls as these.

But from the bed where one all night has lain,
Stilling his moans to let his watchers sleep,
Who suddenly across his bed of pain
Sees the faint gray of early morning creep.

He cannot haste with eager eyes to see
Its coming; whether it be dull or fair,—
This day that dawns,—he knows not; it may be
It brings him suffering keener still to bear.

Ah, God! how great the gift that thou hast
given,
When those who only know the night is past
Send to thee, in thy far-off, silent heaven,
The gladdest thanks that day has dawned
at last!

Alice Wellington Rollins.

THE TRAINING OF THE TEACHER.

WITH ILLUSTRATIONS FROM THE NEW YORK COLLEGE FOR THE TRAINING OF TEACHERS.

MODELING MAPS IN PUTTY.

IT is very instructive to study the development of the professional teacher. In earlier times teaching was the duty of the parent, a little later a function of the priest. Hrabanus Maurus himself, who holds the proud title "primus preceptor Germaniæ" even against Melancthon, could not see that the monk who was to become a teacher needed anything more professional than broad culture, high character, and sound learning.¹ But the training of the teacher, to be adequate, must include professional knowledge and skill in addition to these general and very desirable characteristics. This professional element in the teacher's equipment is to be gained by the study of the history and philosophy of education, which unfold the principles on which education is based and the story of their growth and development; by the study of psychology, which familiarizes the future teacher with the characteristics and qualities of the human mind and the laws of

¹ "Scientiæ plenitudinem, et vitæ rectitudinem, et eruditionis perfectionem."

its development; and by the study of the methods of school organization and instruction, by which he is informed of the best results of experience in the field of educational practice. This knowledge is not to be gained by what is vaguely termed intuition, nor by imitation alone.

The absence of any proper and adequate professional training in the past — of over three hundred and twenty-five thousand teachers in the United States, but a small proportion are graduates even of normal schools — has made itself felt not only in the schools of the United States, but in those of Europe as well. The work of the schools, speaking broadly, has been poorly done and the mass of the school population has not even been properly instructed, much less educated. It is not meant by this that the common school, the world over, has accomplished nothing; for the history of Scotland since Knox, of the United States under the Constitution, of Prussia since Jena, and of France under the Republic, tells a far different story. But popular education has not accomplished all the results hoped for, simply because popular education does not as yet exist. The framework, constitutional and administrative, is generally provided, but the proper supply of the necessary agents, thoroughly trained and equipped teachers, is not yet forthcoming. Reasons may doubtless be given why this is so. The teacher's salary is small and his tenure of office is insecure. These obstacles are not easily removed. In the United States the absence of any national system of education makes their removal a matter of extreme difficulty and one involving great loss of time. Public opinion — which, as our latest and kindest critic, Mr. Bryce, says, is not made, but grows in America — must stimulate State, municipal, and district authorities in turn before any appreciable results can be secured. The process is a laborious and uncertain one, for the name of these authorities is legion. Because these obstacles are not removed, the profession of teaching involves a sacrifice which the lawyer, the physician, or the man of business is not called upon to make.

Another consideration, and a very important one, deserves notice. The fact that the universities have very generally neglected to provide instruction in the science of education has had a powerful influence in retarding the

A CLASS IN DOMESTIC ECONOMY.

progress of the teaching profession. In view of the relation which in any sound system the universities should bear to the schools and to the state at large, this neglect is nothing less than culpable, and the efforts now making to repair it come too late to prevent serious loss to the cause of popular education. At least nine German universities, two Scotch universities, and six of our own institutions of first rank have recognized the claim of the science of education to a place in their calendars. It is only a question of time when the English universities and the older and more conservative of our American colleges will follow their example. What has been lost by the delay is pictured by Professor Laurie when he says, "Had Roger Ascham's college, at Cambridge, founded a lectureship on the first two books of Quintilian and on Ascham's own work, and done nothing more, the whole character of English public education would have been revolutionized more than two hundred years ago. We should have been as great a nation, measured by the standards of imperial power and wealth, but our citizens would have had a better use of their brains, greater love of truth, more open minds, more kindly hearts, more of wisdom, justice, righteousness." Enough has been said to show that while the adequate training of the teacher is not a new subject, yet any general recognition of its importance is new. Indeed it would be concealing the truth not to say

that its earnest advocacy is to-day chiefly in the hands of those educationists who are known among their fellows as radicals and progressives.

It seems clear enough that certain fundamental principles of this professional training may be laid down. In the first place, it should follow the secondary education and be wholly distinct from it; and in the second place, it should include the practical work of teaching under competent supervision and criticism, as well as the study of educational theory. These two principles should be examined separately and somewhat carefully.

If the teacher's professional training is to follow his secondary education, it should not be begun before the student is at least eighteen years of age and in possession of what is known as a good high-school or academic education. This is the foundation on which any special education should rest, and on which it must rest if it is to be really valuable. If a college course can be added, so much the better; but the number of those who seem to be able to spare the time and expense for this advanced instruction is not large. It is not easy to see how this position as to the necessity of separating the general education from the special training can be gainsaid, yet the normal schools of this country, almost without exception (there are a few notable ones), violate this principle entirely and plead the force of circumstances as

their justification. The result is that too many normal schools are but high schools with a slight infusion of pedagogy in the curriculum of the last year. More often than not students graduate from these schools before they are eighteen years of age, and before it is possible for them to have acquired that necessary general education which should precede any special and professional training whatever. Students thus graduating become at once teachers in the common schools, and at the expense of the education of countless children slowly acquire that "experience" which is to serve as a substitute for the training they have not secured.

a knowledge of them from candidates for admission, and only refer to them again to discuss their pedagogic relations and for the purpose of explaining how their subject-matters may best be taught.

As to the principle that the professional training of the teacher should include the practical work of the school-room under proper supervision and criticism, there is little difference of opinion. But the practice of normal schools falls far below their professions in this respect. The student teaches in a practice school for a few hours each week or for a few days each month, but this is not sufficient either in

A LESSON IN SLÖJD.

This is a serious evil and one which is not being very rapidly remedied.

The contention of some normal-school principals that unless the students receive their general education under the normal-school roof it will not be good for anything will not bear examination. An educational system cannot be built up on any such basis as that. Trust, not distrust, must be the motto. The grammar schools and the high schools must be trusted to do their own work properly; the normal school can protect itself by its entrance examination. In teaching elementary or secondary subjects it is leaving its own sphere and entering that of another. The law school does not teach history, nor the medical school reading; neither should the training college give instruction in those branches. It should demand

quantity or in quality. In some of the German training colleges, certainly in that at Weimar, the student has a subject assigned him which he teaches uninterruptedly for a whole year in the practice school; and careful preparation for this instruction is made. This arrangement is held to be necessary in order that the student may obtain real grasp of his subject and familiarize himself with the special needs of the children whom he instructs. That the German practice in this respect is superior to that common among ourselves is very apparent. It should be that at which we aim.

On these two principles, and on the further one that manual training should be an integral part of the common-school course, the New York College for the Training of Teachers has been founded, and on these principles it will

be developed. Its aim is to equip teachers thoroughly for the work of elementary and secondary education and to insist that in that education, and consequently in the equipment of the teacher, manual training must be permitted to occupy that place which history, philosophy, and science unite in saying is its due. This is not the place to discuss the subject of manual training. An unbroken series

of instruction. Under the head of manual training, female students only are prepared to give instruction in sewing and cooking, and male students only, when the necessary arrangements shall have been completed, in metal-working. Both male and female students are prepared to teach drawing and modeling, the Swedish *slöjd* (pronounced *sloyd*), which is the most useful form of constructive work for

THE SCIENTIFIC LABORATORY.

of successful experiments has rendered further argument unnecessary. It is an established fact; but the College for the Training of Teachers is perhaps the first institution of its kind to accept it as such, with all that such acceptance implies. Inasmuch, however, as manual training is not generally taught in the schools and it would be impossible to insist upon candidates for admission having a thorough knowledge of it, the first principle which we have laid down above must for the time being be violated. The work of the elementary and secondary schools must be supplemented in the training-college course by that instruction in manual training which will shortly be generally given in those schools themselves. When this is the case, the training college will treat the various divisions of manual training precisely as it treats geography and spelling. That is, it will require knowledge of them for entrance; and only discuss their history and educational value and develop the best methods of presenting them to children.

Candidates for admission to the College for the Training of Teachers are required to be at least eighteen years of age, and either to pass a prescribed examination or to present a certificate of graduation from some approved academy, high school, or college. Pupils of either sex are admitted on equal conditions and are given pretty much the same course

pupils from ten to fourteen years of age, and wood-working. The excellence of the work done in wood by female students has excited no little surprise and some derision. The surprise, however, has been confined to those who have not kept pace with educational progress, and the derision to those who continue to see in manual training not education, but preparation for trades.

Instruction in these various branches of manual training shares with the study of the kindergarten and psychology the larger portion of the first part of the junior year. The careful and systematic study of children, their habits, powers, and peculiarities, is begun at once and is carried on throughout the entire course. In fact, it is principally from this study that the future teacher is to gain at the college that store of information which serves to make up what the world knows as "experience" in handling classes of children and in instructing them. A plan has been perfected by which the method of recording observations of this kind, begun at the Worcester (Massachusetts) Normal School a few years ago, will be extended and made a very prominent feature of the study of the child's mind and its development.

The work in natural science, which has so important a place in the curriculum, is designed to serve two purposes. It trains the students in habits of accurate observation and logical

thought, as well as in the methods of experimentation, and also fits them to construct from very simple and accessible materials the apparatus with which to illustrate in the school-room various physical, physiological, and mechanical processes. It is intended by the faculty to make, in connection with this science training, a fair test of the assertion of Professor Lintner, State entomologist of New York, that entomology is superior to botany as a means of training the child's power of observation.

Just as natural science is made to serve the teacher's professional purposes, so is history. The teacher needs a highly cultivated imagination and a power of illustration, which the study of the philosophy of history and the progress of civilization can supply. In order to gain this the curriculum contains instruction of this character, and it is carried on in connection with a carefully chosen course of collateral reading.

The science of education — the *pädagogik* of the Germans — is almost unknown in this country, as is the fact that Paulsen lectures on that subject to three or four hundred students each semester at the University of Berlin. It is to be developed at considerable length at the college by educators who have made it a subject of profound study. It includes a discussion of the philosophical principles underlying the theory of education, such as that given by Waitz and Rosenkranz, and also an examination of the relation of the family and the state to the work of education in the school. The subject of educational values, the relative importance of various subjects of study for the work of mental development, is also included under this head.

Instruction in the methods of teaching, in school organization and discipline, connects itself naturally with the foregoing and constitutes what is known as the art of education. It embraces didactics, discipline and punishment, school hygiene, and kindred topics. The art of education is studied experimentally as it were, for its precepts are to be observed in operation in the school of practice, and, under proper supervision, applied there by the students themselves. In all this mere formalism is to be guarded against, and this saying of Rosmini must be continually borne in mind: "It is true that the teacher, enriched by his own experience, can communicate what he knows to his pupil; but the teacher himself will, if he is wise, make himself the interpreter and disciple of nature, and lead the child's mind to the knowledge of truth by the same

gradual steps he would have to follow in gaining the knowledge for himself by the much longer road of experience."

The history of education is an education itself, and contributes largely to the professional training of the teacher. It includes the study of the development of educational institutions as well as that of educational theories, and involves a critical analysis and study of such works as Plato's "Republic," Quintilian's "Institutes," Luther's "Letter to the Burgo-masters," Milton's "Tractate," Rousseau's "Émile," and Froebel's "Education of Man." It describes and compares the contemporary educational institutions in various countries; it discusses the gymnasium and the *realschule*, the *lycée* and the English board school, the question of technical education and that of electives in colleges, compulsory education laws and national aid to education in the United States.

The student who has in this way compassed the science of education and its history, the art of instruction and its practice, is entitled to his baccalaureate degree in pedagogy. The degrees of master and doctor are reserved for even higher attainments. The degree of bachelor of pedagogy is to be to the teacher what the doctorate of medicine is to the physician — at once an evidence of thorough professional preparation and a license to practice.

A single institution cannot do much directly in so large a country as our own to supply the schools with properly equipped teachers. Even should the number of its graduates reach several hundreds annually, the teachers of the United States are numbered by the hundreds of thousands. Indirectly, however, it can and will accomplish a great deal. It will serve as a stimulus, and, it is hoped, call many similar training colleges into existence. But should this hoped-for result not follow, it will serve to bring home to the teacher a full appreciation of what it is to belong to a profession which boasts a splendid history, a scientific basis, and a classic literature; a profession to which Alcuin and Abelard, Colet and Comenius, Pestalozzi and Froebel, Thomas Arnold and Mark Hopkins belonged; a profession that has counted and still counts among its members some of the truest, noblest, and best men and women who ever lived. It will improve the character of popular education and through it the quality of citizenship, particularly citizenship in that nation which Abraham Lincoln declared to be "conceived in liberty, and dedicated to the proposition that all men are created equal."

Nicholas Murray Butler.

MANUAL TRAINING AS A FACTOR IN MODERN EDUCATION.

WITH ILLUSTRATIONS FROM THE PHILADELPHIA MANUAL-TRAINING SCHOOL.

IN THE SMITHY DEPARTMENT.

IN modern education the factors may be grouped as industrial, political, social, and moral, each of which is essential to the realization of an harmonious ethical training. An education which discovers the duties men owe to themselves and to society, growing out of their natural or acquired capacities and their position and prospects in life, which trains men to fulfill the ends and aims of their existence, or to know their rights and to perform their duties, is an harmonious ethical training. The results in manual-training schools have been somewhat loosely attributed to the industrial factor alone instead of attributing them to the harmonious cooperation of all the ethical elements involved. The ethics of the modern manual-training school may be expressed in Macaulay's epitome of the philosophy of Bacon — utility and progress.

Education is acquisition and training. The type in modern society which largely determines our civilization is the industrial man ; education in the United States must be considered, primarily, in relation to the needs of the masses, and the masses are of the industrial type. Less than three per centum of the boys of this country can hope to make a living by the practice of the professions ; the mass of American boys must succeed, if they succeed at all, in industrial occupations. A servile adherence to traditional class interests has forced all minds along a narrow public-school course, and by the exclusion of the industrial factor has kept the curriculum a fragment and has maintained a discrimination against the essential group of industrial rights, duties, and interests into which all men are born. More important than that which may be learned at school is the discipline which comes with the

acquisition and the training. To omit industrial discipline in education is to wage war against common sense. The manual-training school is the modern means of acquiring a knowledge of things and of men; its training is a discipline that may be described as having ethical proportions. The new movement is an embodied expostulation against the fatal narrowness of our schools, and there is reason to believe that by the harmonious ethical training realized in manual-training schools some evils now crowding upon society in this country will be remedied.

To the objections that the curriculum of the public schools is already crowded; that the introduction of the industrial factor will only add to present confusion; that the industrial training is technical training, and that the schools of the country are wholly unprepared in faculty or in equipment to add the industrial factor, the reply is the experience of the present manual-training schools: the results reveal that the new education differs from the old chiefly in the administration of educational powers. The time given to manual training might be given to training in language, or mathematics, or philosophy; the question of which training is one of values. Manual training does not mean no training in language, in mathematics, or in philosophy. Given the present condition of society, the capacities of boys and girls and their respective positions and prospects in life, the question is: Shall their education consist of acquisition and training in language, in mathematics, and in philosophy only, or in a sufficient amount of these three, and in industrial training? The question becomes a practical problem in economic administration of educational forces. In academies and in high schools the tendency is to imitate the college. The true function of the academy and of the high school is to help boys and girls prepare for life; too often these schools expend their energies in merely preparing students for college. The manual-training school has for its function the fitting of the young for careers in life appropriate to their characters, their position, and their prospects: it fits boys for college, but first, by its harmonious training, it teaches them to think and fits them for making an honorable living in the world. It is a world school.

Shall a boy know less of Latin, less of Greek, less of French, less of German, less of conic sections or quaternions, less of psychology, and in place thereof know the principles of industrial occupations, the use of tools, the construction of typical forms in the applied arts, and possess both the trained mind and the skilled hand? For the mass of American boys which training is best worth having? Provided that the course in the manual-train-

ing school is, to use a current phrase, "sufficiently literary," could not every school introduce the industrial factor into its curriculum, and by harmoniously administering educational powers already possessed, with absolute certainty increase and intensify the benefits accruing to society from educational work?

A manual-training school is composed of several departments in co-relation: science, mathematics, literature, history, economics, engineering, drawing, and manual work. The harmony of the new education is the harmony of instruction and of construction, which may thus be outlined:

Instruction in mathematics, science, drawing	{	Construction in materials, as wood, metal, etc.
		Laboratory work; graphic presentations in botany, electricity, chemistry, physics, physiology, etc.; collections and investigations.
Literature, history, and economics, drawing..	{	Graphic presentations of historic events; social science; language; biography; economics.
Engineering, drawing..	{	Electrical and mechanical laboratories; models; working machines; designs; ornamentation.
Manual work, drawing,	{	Typical forms in wood and metal; clay modeling; casting; smithing; forging; tool constructions.
Morals	{	Conduct, daily association; industrial relations; social duties; record of personal qualities and powers; self-knowledge.

Experience in Philadelphia proves that drawing, mathematics, and language underlie all other departments.¹ Drawing is as important in the school as are tools in the arts. It in-

volves the knowledge of things and is the graphic language of facts, forms, and objects. It is a means to an expression of the beautiful and to its conception in science, in literature, and in economics. As the ends of the school are not solely industrial, drawing becomes the means for a graphic presentation of political, industrial, and moral conditions of society. The construction of mechanical units is, educationally, only a method of discipline, and drawing becomes the medium for a logical process. In a working drawing are embodied the facts of form, the appearance of an object to the eye, and the ornamentation incorporating elements of design, beauty, and utility. The results in drawing are: the ability to make out and to interpret working drawings, *e. g.*, machine or house drawings; to produce from drawings the indicated forms in plastic material; the understanding of the phraseology of artistic constructions; and the power to elaborate a proposition. The elaborative faculty has constant use in the school in the construction of machine drawings, tracings, blue-prints, sketches, specifications, drawings to scale, and in the applications of drawing in the work of the various departments. In architectural drawing details from private and from public buildings, plans, elevations, constructions, and graphic problems, such as the combination of use and ornament in a construction, sufficiently test the practical value of the training. In free-hand the boy is fitted to delineate rapidly and accurately the apparent form of objects, models,

tools, applications of typical forms in daily life, and to understand the use of light and shade, both natural and artificial. He learns also the properties and the elementary use of colors. He can distinguish between good and bad design, recognize the historical styles of ornament, and analyze or conventionalize plant forms in artistic applications.

Were the applications of drawing and of the principles of art to go no further, the training in the school would differ but slightly from that given in schools of art. Drawing has not been in American schools long, and the greater part of it has been mere school copy work leading to no practical applications. The manual-training school applies drawing in every department. Exercises in wood, metal, smithing, or molding are first drawn to scale, to which the rough material must be reduced according to the blue-print specifications. The first lesson in the metal shop requires the reduction of a block of cast iron, rough from the foundry, to the proportions $4'' \times 2'' \times 1''$. The groove is cut across the rough face with a cope chisel; the whole surface is chipped off with a flat chisel and filed perfectly smooth. Each face is tested mechanically and is reduced to mathematical proportions, according to the blue-print. Successive lessons increase in difficulty as typical forms are composed, and the completion of the last lesson is the embodiment of all preceding lessons. At the completion of the course in the metal shop alone boys are fitted to enter establishments

In the fourth year, special work in various departments; hours, voluntary.

employing skilled workmen and earn fair wages. In a few instances, such boys have been able to earn wages enough to support themselves.

In the process of transforming rough material into typical forms possessing artistic proportions a boy applies mechanical principles, produces material changes visible to himself and capable of undoubted tests; he acquires the discipline shown in muscular accuracy, perfection of sight and of judgment in the exercise involved. Industrial discipline forms habits of inestimable worth. The finished manual lesson, the construction of a typical form in metal, is an unprejudiced record of the industrial boy. In wood-working, or in forging, the same methods obtain as in the metal shop—the drawing, the instruction, the use of raw material, the reduction to required form. The boy proceeds by various exercises, graded in difficulty, in sawing, planing, squaring, chiseling, mortising, mitering, dove-tailing, and in combinations of these, and learns, during his course, the design, the structure, the use, and the care of tools.

Parallel with the work in wood and in cold metal is a course in the manipulation of hot iron. The boy learns the economy of heat and of material. He draws the design, bends, splits, upsets, punches, shapes, and tempers the iron in the construction of rings, squares, hooks, tongs, and machine tools, each of which is a typical lesson in the art of smithing. The necessity for quick work in forging and the impossibility of testing the accuracy of the strokes while the iron is hot compel a mental concentration peculiarly valuable in any system of education. The smithery is as popular with the boys as any department of the school. All courses in drawing, metal-working, wood-working, forging, tin-smithing, pattern-making, molding, and casting, together with the acquisition and the training from the other departments of the school, prepare for the culmination of the industrial training in a construction. By a construction is meant the making of a mechanical unit, such as a steam-engine, an electric dynamo, a bridge, a turn-table, or some other unit involving the composition of forces and of principles with which the previous training has made the boy familiar. These constructions are models in wood or metal, or in both, and are accompanied by complete drawings.¹

Were the instruction in the school to end

here it might, perhaps, be called a trade-school. The training thus far outlined has been in mechanical principles and their applications, but the course has ethical proportions and it does not merely fit a boy for a special trade. Exercises in manual work alternate with exercises in other departments. The industrial factor in education is but one element in the recognition and the interpretation of types in the world of worths and of forms. Mechanical units can be classified, and the just administration of educational affairs provides for the training, the industrial discipline which comes by the construction of a mechanical unit after an adequate study, in a practical way, of mechanical principles. But the construction takes a far higher significance when it is made by a boy equally well trained in language, in mathematics, and in philosophy.

The more complex the construction the greater familiarity with ethical principles is demanded. All the factors in education are inseparably involved in the manual-training school. The new movement is endangered if manual work alone be made the essential characteristic of the school. Then the school becomes a shop, and the ethical completeness of the education promised by the school is lost. It is difficult to make plain the harmony of mental and manual work realized in the school to those to whom the proposition is new, or who have not examined the school personally. As far as possible, each department of the school is a laboratory. In manual work, in drawing, in chemistry and physics, and in engineering, laboratory methods have been long in use. But in conjunction with the methods of the German "seminar," manual skill has worked a revolution in the study of literature, history, and economics. It is on the so-called "literary side" that manual training displays the power of the new education. Mechanical skill acquired by industrial training in free-hand, machine, and architectural drawing; in tool constructions; in working accurately to specifications; in the composition of constructions; in the power which the boy gains to apply his various acquisitions and training to the solution of a given proposition, is a new factor in ethical training for which there is no substitute and which cannot be eliminated from modern education without defeating the primary purposes of education itself. The new education liberates hand power as brain power and the boy is enabled to express his compre-

¹ The training provided in the school may be outlined as follows: Drawing, free-hand, mechanical, architectural, design; wood-working, pattern-making, carving, turning, joinery; metal-working, chipping, filing, fitting; smithing, iron, tin, brazing, molding, casting; mechanical constructions in wood, metal; electrical and mechanical engineering, motor powers,

illumination; modeling and carving; mathematics, arithmetic, geometry, trigonometry, algebra; physics, the study of matter; economic botany; chemistry; physiology and hygiene; the English language and literature (German, French, or Latin); history, general and (especially) American; social science, government, political economy; morals.

hension of men and of things not only in the traditional manner known to schools, but by a graphic language of sketch, of chart, of diagram, and of illustration which remove the last doubt of his mental obscurity. Practical school men appreciate the worth of a trusty measure of a boy's understanding. If he can give the traditional tests of recitation, examination, and thesis, and, in addition, give a graphic presentation of his own understanding of the problem under investigation, he has attained a condition long sought in the schools and he possesses powers of recognized value among men. The manual-training school teaches a boy to think and trains him how to do; it enables him to understand his own powers.

As the school is unfettered by traditions it may incorporate all known best educational methods, and in so far as the incorporation is reasonable, the results will be the same as those already realized wherever those methods obtain. But the peculiar feature of the school — the harmonious coöperation of all the factors present — is an educational discovery. Especially has skill of hand supplemented the understanding in the study of history, economics, and literature. Such subjects as rent, taxation, public debts, banking, labor, have, by graphic presentation by the boy, become intelligible to him. Had he pursued these, or kindred topics, in an ordinary high school, he would have probably satisfied conditions by memorizing the pages of a book. By graphic illustration¹ the life and growth of language, the position of literary men, the tendency of historic periods, the co-relation of historic epochs, the distribution of social conditions, the economic status of nations or of communities, the movements of population, and the political condition of men under differing forms of government, are raised from the dead surface of mere verbal description into comparative reality. Graphic methods are not unknown in our best schools, but industrial training alone can impart the manual skill, the mathematical accuracy, and the mental grasp to understand and to elaborate the visible proofs that the boy understands the subject before him so thoroughly as to be able to construct, as it were, a photograph of the impression it has made upon his mind. Not from manual training alone can this power come; the boy must be trained ethically; the whole boy must be put to school.

As the school is an embodiment of the educational tendencies of the present, in addition to other departments which train boys for modern society a department of electrical

engineering was organized. Electrical science has become the world's property, and it was thought wise to provide a practical knowledge of a force which, as a motor and as a means for illumination, has become essential to the comfort of man. The study of electricity is put side by side with the study of mechanics, of literature, and of chemistry.

American boys usually leave school before they are fourteen years old. Our public schools, in the higher grades, are chiefly attended by girls. Boys find the utilities lacking in the schools, and they are tempted to leave them as soon as they are able to understand the dominant conditions in society. Less than twenty per cent. of American boys enter high schools and less than half of those who enter complete the course. Those who never enter the high school, or who leave before the completion of the course, outnumber those who graduate more than twenty-fold. The wholesome interest taken by boys in industrial training suggests a remedy for many of the evils which have so long prevailed in the higher public schools. Experience in St. Louis, in Chicago, and in Philadelphia leads to the reasonable belief that by the incorporation of manual training in public schools boys will remain longer in school, and at that critical time, from the fourteenth to the eighteenth year, when the character of subsequent life is so largely determined. Experience at Philadelphia further shows the beneficial effects of the new education in the general condition of school interests. In the manual-training school a boy's growth is wholesome because harmonious. He acquires strength of body and of mind. The healthfulness of manual training is of itself a sufficient reason for its introduction into our schools. Subject to the discipline of a harmonious training boys develop a moral power which carries them over the temptations which too often overcome the school-boy. The discipline of the school is that of an industrious and reasonable household. The reason for so healthful moral condition lies in the nature of the school: it touches life at every point; it deals with realities; the boy sees his world not by means of books alone, but also with the aid of daily wrestling with practical problems. By the addition of the industrial factor the chasm between the subjective and the objective world is practically bridged, and the boy finds a way into the meaning of his daily life. The building of this educational bridge is the departure in modern education; it is still in process of construction, but so near completion that many have already traveled safely across.

In the details of the purposes and methods of the new education those engaged in direct-

¹ The illustrations for this paper, taken from work done *in cursu* by boys in the Philadelphia Manual Training School, show, to some extent, the harmony of mind training and hand training.

DEPARTMENT OF JOINERY AND PATTERN MAKING.

ing it are not agreed. They agree, however, that all the ethical factors, industrial, political, social, and moral, must harmoniously dominate the movement. They agree that it provides the fittest education for boys.

It is as a public-school problem that manual training has its chief interest. In organizing these schools, whether special schools of high grade as a part of the public system, as in Philadelphia, or with manual training in each grade of school, as in New York, the faculty must consist of trained specialists. The men in charge of the mechanical departments, wood-working, metal shop, forging, constructions, etc., must be men trained for the work by long experience in great industrial establishments, or possess mechanical skill of high order, acquired in special technical training. A man may be a fine mechanic, yet the school cannot use him unless he is also a real teacher. A man may be a real teacher, yet the school cannot use him unless he is also a fine mechanic. The men in charge of drawing, of mathematics, of electrical and of mechanical engineering, of literature, of history, and of economics must be practical teachers, trained at the university, or possessing an equivalent preparation. There is danger that in the haste to equip these schools the men fitted to direct them may be ignored. The success of the new movement demands as a primary condition

the coöperation of skilled mechanics, practical educators, and the ablest graduates of scientific and polytechnic schools. Unless qualified men direct these schools, they will be mere shops. In the end the requirements of the new education will be a powerful factor beneficial to the teaching profession, as that profession is more likely hereafter to attract men of the highest type of mind when the possibilities in ethical training are made possible in the schools. Not only must the school be directed by high-minded men, it must also be equipped with adequate material and laboratory facilities.

With the training of the new education boys leave school fitted to pursue occupations to which they are adapted. It is a mistake to suppose that those who have completed the courses of the school are found only in shops or factories. As a rule, boys who have been obliged to leave before completing the courses have entered industrial establishments where their already acquired skill has enabled them to earn higher wages than boys who never received such training. The graduates of the school are found in all professions and in many industries. Some are still pursuing higher courses at the universities; some are teachers; others are artisans, architects, engineers, foremen, farmers, business men, and manufacturers. Experience in after life enables them to attest the value of that discipline begun in the school.

IN THE WORKSHOP.

As one happily expressed himself, "I am able to get on in life."

Popular appreciation of the school is well illustrated in Philadelphia. When the manual-training school opened, it was with doubt and hesitation that parents entered their sons. In 1887 there were 130 applicants; in 1888, 250. Of the 58 graduates in 1888, 25 were offered desirable positions before Commencement Day; 20 of whom took scholarships in the University of Pennsylvania, entered college, and before the summer had passed, the remaining boys were at work in various industrial occupations. The average age of the class of 1888 was 18 years.

Manual training is likely to increase both the cost and the efficiency of the public schools, but in a ratio immensely in favor of efficiency. A manual-training school trains boys in actual practice to become familiar with elementary notions, and to acquire a substantial knowledge of the nature of things, and of the rights and duties of men. The limits upon its provision for education can be set only by the actual wants of society as expressed in applications of all knowledge. It is a training needed both by boys and by girls, and is capable of modification suited to the wants of each. The school is a school of things, of principles, of human affairs, opened for the purpose of educating the young naturally, harmoniously, ethically, in order to fit them to enter upon their work in

the world without loss of time, without error in choice of activity, and with constant recognition of the gain both to society and to the

AT THE ENGINE.

individual: a manual-training school is, in the wisest sense, a fitting-school for life and for living. Our public schools upon a philosophic basis will quicken the life of society and aid, as they have never yet aided, in the solution of the industrial problems before the country. In conclusion it may be said that the industrial factor in modern education is a permanent factor; that its early effects are already a revelation to educators of the hitherto unknown powers of boyhood, and that the manual-training school

is the nearest approach to the world of experience into which American boys have yet come. Whether in city or in country, boys need an education that is ethical in character. Experience will correct the early errors in the new movement, and the twentieth century may be well on its way before manual training is as characteristic of an academic course as literature or mathematics now are; but the economic forces in American society will work out a harmonious system of popular education.

Francis Newton Thorpe.

THE DEMOCRATIC IDEAL IN EDUCATION.

WITH AN ILLUSTRATION FROM THE WORKINGMAN'S SCHOOL AND FREE KINDERGARTEN, NEW YORK.

EDUCATION is a means to an end; the value of means is entirely dependent on the end in view. Therefore, before discussing the relative merits of educational systems it is imperative to inquire into the nature of

the end towards which education is proposed as a means. Much of the confusion which characterizes the current controversies on educational topics is due to the neglect of this preliminary inquiry. The contending parties are like a company of travelers who dispute as to the relative advantage of different roads. In the course of the discussion it appears that they are bound for different destinations: no wonder that they could not agree as to the road.

But when we ask what ought to be the aim of education we enter into deep waters. What the Germans call "Weltanschauung," the ideal of life, the conception of the universe and man's place in it, determines the scope and direction of educational systems. The history of these systems is a running commentary on the transformations through which the ideal of life has passed in various periods of history and among various peoples. The Greek education, with the prominence it assigned to the exercises of the palestra, to dietetics, music, etc., reflects the Greek ideal of the *Καλὸν Κἀγαθόν*. The medieval education was controlled by the transcendental ideal of the Church, which regarded the present life solely as a preparation for the next. To come at once to what is nearest, the common-school system of the United States is the outgrowth of democratic tendencies and democratic ideals. What strikes

every one on considering the American common school is its inclusiveness. The multitude pour through its portals; all citizens are alike invited to share its benefits; it is plainly the fruit of institutions based on the assumption that all men are equally entitled to life, liberty, and the pursuit of happiness.

We are concerned in this paper with the democratic ideal and the inferences to be drawn from it respecting the true aim, the matter and method, of elementary education. But at the start it is necessary to distinguish between the lower and the higher democracy. The lower democracy is materialistic. It regards political liberty chiefly as a means of securing to the individual larger opportunities of material well-being. It interprets the "pursuit of happiness" to mean barely more than the pursuit of riches. The public school on this standpoint ought to give its pupils such an education as will enable them to earn a living, also to read the newspapers and to vote with a due appreciation of their private interests on the political issues of the day. As the avenues of commerce are at present overcrowded, and as it is maintained that the public schools are fitting their pupils to become clerks and book-keepers, and have no outlet in the direction of the industries and mechanic arts, the cry has lately been raised that the schools should include some form of manual training in their curriculum. But this demand is still urged from the same materialistic point of view: it is assumed that the business of the school is to educate its pupils to earn a living. If they cannot earn their living as clerks and book-keepers, the school should offer them an industrial training, so that thus they may be

fitted to earn their living where the field of opportunity is wider.

The higher democracy, on the other hand, is idealistic in character. It looks upon political liberty as a new opportunity for the unfolding of the spiritual life of the nation. So far from regarding culture as the privilege of the few, it declares that the growth of a genuine human culture depends on the coöperation of the masses as a main factor in its develop-

But the spirit of democracy spurns such pessimistic views as these. To the first proposition, that the masses are too dull to be cultivated, it replies that this damning opinion must be pronounced a prejudice until it shall have been tested by experiment. And this has never been done, never even been attempted, on any adequate scale. On the contrary, democracy ventures to believe that the masses are dull because they have never been cultivated. In

THE MODELING-ROOM.

ment. Society is an organism; a part cannot flourish at the expense of the whole. Each function attains its maximum excellence in the perfect action and interaction of the others. At that grand wedding supper in which the senses are to be married to the soul all men are invited guests, and to each belongs a share in the feast. In taking this position democracy breaks with the traditions of the past. For from the days of Aristotle down two propositions have been accepted almost as self-evident truths — the one that the majority of mankind are too dull to repay any strenuous effort in the line of their intellectual development; the second that, even if this were not so, society is too poor to support more than a few persons in that life of tranquil leisure which is indispensable to the successful pursuit of science and art. The many, one still hears it frequently said, must spend their days in physical toil and the atmosphere of sordid cares in order that the few may dwell exempt in the pure region of contemplation, in the society of immutable courses. The multitude must pass their lives in intellectual night in order that the light of culture may burn brightly at least in a few favored places.

answer to the second proposition, that society is too poor to exempt any considerable number of its members from physical drudgery, it points to the vast increase of wealth which has come in the train of labor-saving inventions and to the prospect that a more equable distribution of this wealth will in time place sufficient leisure for continued self-culture within the reach even of the humblest. Admitting that genius and even first-rate talent will always be rare, democracy uses the following argument for the culture of the masses. It is conceded that successful intellectual effort of any kind depends as much on favorable environment as on original endowment. Now the masses of the people constitute the environment, as it were, of the men of genius or talent who appear among them. It is indispensable that the environment — that is, the masses — be rightly influenced to obtain the highest possible results. Thus the rise of a truly national art in America will depend not only on the advent of a few fine souls who shall be capable of expressing the spirit of American life in tone, form, and color, but upon the existence of an educated taste among the American people as a whole,

on which the artist may rely to control, inspire, and sustain his efforts. The same is true in regard to American science. The larger the number of persons able to appreciate the best mental work, the greater and more varied the stimulus imparted to those who are capable of doing such work.

And again: the higher the standards of morality which are erected among the people, the more exalted will be the character of the public men of America, the nobler the principles which they confess and to which they conform. Turn in whatever direction we will the same truth meets us, the stream of spiritual endeavor cannot rise higher than its source. And the source is the people, the whole people, in whom is embodied the national life, of which the individual life is but a temporary expression. Thus even if popular culture will not greatly increase the amount of genius in the world,—though some are sanguine enough to believe that it may,—it will supply the basis on which genius must rest for its support, the fertile soil in which the flower of high thinking and fine feeling will flourish as it has never done before. It is the mission of democracy to create a new environment for the grander evolution of the spiritual life.

From this point of view the higher democracy assigns to the public school an altogether new and larger aim. It is the business of the school to cultivate every individual pupil as an individual; to develop, not some particular faculty, but, so far as possible, every one of his faculties; to liberate all the powers of mind and heart latent within him; so to educate him that he may become, not a breadwinner, but a man. The true man will also be an able breadwinner, but he will be much more besides. It is the business of the schools to produce the finest possible specimens of manhood and womanhood, just as the gardener aims to produce fine specimens of fruit or flowers. Elementary education must become a liberal education.

The Workingman's School and Free Kindergarten was established as an experiment in reducing these principles to practice.¹ It is devoted to the democratic ideal in education. It has its place outside the public-school system, but was conceived and is carried on in direct relation to that system. It is designed to become the model of a public school. The points wherein it differs from the ordinary public school appertain to the matter and method of instruction, and may be briefly summarized as follows.

¹ This institution was founded in January, 1878. The name Workingman's School implies that it is primarily intended for the children of working people. Instruction is gratuitous, only children whose parents are too poor to pay a tuition fee being admitted. The

Touching the matter, a scheme of manual training is included in the course of studies. This scheme is planned for children between the ages of six and fourteen. The materials used are clay, pasteboard, wood, and metal, in the order mentioned. The educational objects aimed at are to cultivate the eye and the hand, to develop skill, to call out the active side of the pupil's nature. The series of workshop lessons is carefully graded, and so arranged as to fit in with other branches of instruction, especially geometry and drawing. Upon this organic relation of the school workshop to the classroom the greatest stress is laid. Because it does not satisfy in this particular, the Swedish *slöjd* is not used. Hand culture, apart from its value *per se*, is a means towards a more effective brain culture; the shop lesson is an advance on the so-called object lesson. The latter is based on the principle that the pupil shall learn the elementary properties of things by observing them; the former, on the principle that the pupil shall learn the properties of things by making the things, by toiling over them.

Modeling in clay, in connection with free-hand drawing and designing, is employed to cultivate the taste. The results obtained in this department by children twelve years old, and even younger, are surprising. The artistic capacity of the American people has been likened to the deposits of the precious metals underneath our hills, which remained so long undiscovered but yielded an astonishing return the moment they were systematically mined. The delight in beautiful things, and the feeling for art which we have discovered in a brief experience among some of the poorest children of the tenement-house class of New York, seem to indicate that this comparison is not entirely extravagant. The principle upon which instruction in art is based is essentially the same as that stated above; namely, to cultivate a taste for beautiful objects by the reproduction of those objects.

The teaching of the elements of science fills a larger space than elsewhere in the plan of instruction. The aim of the teacher in this department is to instill a love of nature and to develop the faculty of minute observation. With this end in view what is called "the laboratory method" has been adapted to the requirements of beginners, and is in use for pupils of eleven years and upwards.

A course of unsectarian instruction in morals has been mapped out for the school and will shortly be introduced. In the series of moral

number of pupils at present is about 350. The school and kindergarten are maintained by a society called the United Relief Works of the Society for Ethical Culture. See an Open Letter in this magazine for June, 1888.

lessons thus outlined care has been taken to avoid all disputed points of theology or metaphysics, and to confine attention solely to that important body of moral truths in regard to which all good men are happily agreed.

The method of the school is identical in all its branches. Since the main purpose is to give an "all 'round culture,"—that is, to develop the faculties of the child harmoniously,—and since a faculty is strengthened by its exercise, the method everywhere is to excite the pupils to self-activity. Hence our anxiety in the science department to make the laboratory method available for elementary instruction. Hence our eagerness to put tools into the hands of the little workmen six years old. Hence in the teaching of history, geography, etc., our determination to exclude as far as possible the use of text-books, to deprive teacher and pupils alike of those props of indolence, to make them construct their text-books as they go along.

It is the mission of the school to convert potential into kinetic mental energy; to build up faculty and ever and only faculty; to be, in the Socratic phrase, "the midwife" of the soul in its process of self-manifestation. It does not attempt to load the memory of its pupils with facts, it is not solicitous about the amount of positive knowledge which they may carry away with them; it is satisfied to train them in such a way that they may be able later on to attain the ends of knowledge and virtue, to whatever degree their nature permits, through their own exertions. The school is a gymnasium of the faculties. This, I think, in a single phrase expresses its character.

The extension of the subject-matter and the change in the method of instruction thus described lead to certain incidental advantages, among which the following may be mentioned: 1. The alternation of manual with mental labor is stimulating. Change of occupation is proverbially almost as refreshing as rest. The pupils pass from the shop to the classroom, and

conversely, with new zeal and zest for their tasks in either department. 2. The range of studies, including so much that is concrete and capable of presentation to the senses, affords an excellent choice of subjects for English composition, and constant contact with realities re-acts beneficially on the formation of style. 3. The habits of order, exactness, and perseverance fostered by manual training have an incalculable moral value. 4. Many pupils who seem hopelessly defective on the literary side prove to be "easily first" in the shop, in the modeling-class, etc. Finding that they can do some one thing well their self-respect is restored, and they acquire new confidence and courage to try harder even in those branches in which they have hitherto failed. In this way the shop has been the means of saving souls; that is, of saving children who under the ordinary system would have been regarded, and who gradually would have learned to regard themselves, as hopeless dunces. 5. The variety of educational instruments placed at the disposal of the pedagogue by the new system helps to solve the difficult and delicate problem of the pupil's future vocation. These new educational aids are all so many questions addressed to the child's nature. They help the thoughtful teacher to discover the child's bent, the direction in which it should receive its special training later on. For this is perhaps the gravest charge which can be brought against the prevalent methods, that they take too little account of the specific differences by which human beings are distinguished from one another, and endeavor to fashion all alike upon a preconceived and arbitrary pattern. And this, doubtless, is the highest aim which the educator can set himself: to be not a master but an interpreter of nature, to guide it in the way it would go, to regard every child committed to his charge as a distinct manifestation of the Infinite, and to transform into beneficent reality the divine possibilities of which it is the vehicle.

Felix Adler.

ILLUSIONS.

ILLUSIONS wrap us still, whate'er befall:
The child's illusions, like the gold of dawn,
Fade in the strengthening day, but youth and age
Find fresh illusions at each sequent stage
Of life to fill the lack of those outworn.
Illusions wrap us still, whate'er befall,
Till death, that last illusion, ends them all.

H. S. Sanford, Jr.

WAR DIARY OF A UNION WOMAN IN THE SOUTH.

EDITED BY G. W. CABLE.

[The following diary was originally written in lead pencil and in a book the leaves of which were too soft to take ink legibly. I have it direct from the hands of its writer, a lady whom I have had the honor to know for nearly thirty years. For good reasons the author's name is omitted, and the initials of people and the names of places are sometimes fictitiously given. Many of the persons mentioned were my own acquaintances and friends. When some twenty years afterwards she first resolved to publish it, she brought me a clear, complete copy in ink. It had cost much trouble, she said, for much of the pencil writing had been made under such disadvantages and was so faint that at times she could decipher it only under direct sunlight. She had succeeded, however, in making a copy, *verbatim* except for occasional improvement in the grammatical form of a sentence, or now and then the omission, for brevity's sake, of something unessential. The narrative has since been severely abridged to bring it within magazine limits.

In reading this diary one is much charmed with its constant understatement of romantic and perilous incidents and conditions. But the original penciled pages show that, even in copying, the strong bent of the writer to be brief has often led to the exclusion of facts that enhance the interest of exciting situations, and sometimes the omission robs her own heroism of due emphasis. I have restored one example of this in a footnote following the perilous voyage down the Mississippi.—G. W. CABLE.]

I.

SECESSION.

New Orleans, Dec. 1, 1860.—I understand it now. Keeping journals is for those who can not, or dare not, speak out. So I shall set up a journal, being only a rather lonely young girl in a very small and hated minority. On my return here in November, after a foreign voyage and absence of many months, I found myself behind in knowledge of the political conflict, but heard the dread sounds of disunion and war muttered in threatening tones. Surely no native-born woman loves her country better than I love America. The blood of one of its revolutionary patriots flows in my veins, and it is the Union for which he pledged his "life, fortune, and sacred honor" that I love, not any divided or special section of it. So I have been reading attentively and seeking light from foreigners and natives on all questions at issue. Living from birth in slave countries, both foreign and American, and passing through one slave insurrection in early childhood, the saddest and also the pleasantest features of slavery have been familiar. If the South goes to war for slavery, slavery is doomed in this country. To say so is like opposing one drop to a roaring torrent.

Sunday, Dec. —, 1860.—In this season for peace I had hoped for a lull in the excitement, yet this day has been full of bitterness. "Come, G.," said Mrs. — at breakfast, "leave *your* church for to-day and come with us to hear Dr. — on the situation. He will convince you." "It is good to be convinced," I said; "I will go." The church was crowded to suf-

focation with the élite of New Orleans. The preacher's text was, "Shall we have fellowship with the stool of iniquity which frameth mischief as a law?" . . . The sermon was over at last and then followed a prayer. . . . Forever blessed be the fathers of the Episcopal Church for giving us a fixed liturgy! When we met at dinner Mrs. F. exclaimed, "Now G., you heard him prove from the Bible that slavery is right and that therefore secession is. Were you not convinced?" I said, "I was so busy thinking how completely it proved too that Brigham Young is right about polygamy that it quite weakened the force of the argument for me." This raised a laugh, and covered my retreat.

Jan. 26, 1861.—The solemn boom of cannon to-day announced that the convention have passed the ordinance of secession. We must take a reef in our patriotism and narrow it down to State limits. Mine still sticks out all around the borders of the State. It will be bad if New Orleans should secede from Louisiana and set up for herself. Then indeed I would be "cabined, cribbed, confined." The faces in the house are jubilant to-day. Why is it so easy for them and not for me to "ring out the old, ring in the new"? I am out of place.

Jan. 28, Monday.—Sunday has now got to be a day of special excitement. The gentlemen save all the sensational papers to regale us with at the late Sunday breakfast. Rob opened the battle yesterday morning by saying to me in his most aggressive manner, "G., I believe these are your sentiments"; and then he read aloud an article from the "Journal des Debats" expressing in rather contemptuous terms the fact that France will follow the policy of non-

intervention. When I answered: "Well, what do you expect? This is not their quarrel," he raved at me, ending by a declaration that he would willingly pay my passage to foreign parts if I would like to go. "Rob," said his father, "keep cool; don't let that threat excite you. Cotton is king. Just wait till they feel the pinch a little; their tone will change." I went to Trinity Church. Some Union people who are not Episcopalians go there now because the pastor has not so much chance to rail at the Lord when things are not going to suit; but yesterday was a marked Sunday. The usual prayer for the President and Congress was changed to the "governor and people of this commonwealth and their representatives in convention assembled."

The city was very lively and noisy this evening with rockets and lights in honor of secession. Mrs. F., in common with the neighbors, illuminated. We walked out to see the houses of others gleaming amid the dark shrubbery like a fairy scene. The perfect stillness added to the effect, while the moon rose slowly with calm splendor. We hastened home to dress for a soirée, but on the stairs Edith said, "G., first come and help me dress Phœbe and Chloe (the negro servants). There is a ball to-night in aristocratic colored society. This is Chloe's first introduction to New Orleans circles, and Henry Judson, Phœbe's husband, gave five dollars for a ticket for her." Chloe is a recent purchase from Georgia. We superintended their very stylish toilets, and Edith said, "G., run into your room, please, and write a pass for Henry. Put Mr. D.'s name to it." "Why, Henry is free," I said. "That makes no difference; all colored people must have a pass if out late. They choose a master for protection and always carry his pass. Henry chose Mr. D., but he's lost the pass he had."

II.

THE VOLUNTEERS.—FORT SUMTER.

Feb. 24, 1861.—The toil of the week is ended. Nearly a month has passed since I wrote here. Events have crowded upon one another. On the 4th the cannon boomed in honor of Jefferson Davis's election, and day before yesterday Washington's Birthday was made the occasion of another grand display and illumination, in honor of the birth of a new nation and the breaking of that Union which he labored to cement. We drove to the race-course to see the review of troops. A flag was presented to the Washington Artillery by ladies. Senator Judah Benjamin made an impassioned speech. The banner was orange satin on one side, crimson silk on the other, the pelican and brood embroidered in pale green and gold.

Silver crossed cannon surmounted it, orange-colored fringe surrounded it, and crimson tassels drooped from it. It was a brilliant, unreal scene; with military bands clashing triumphant music, elegant vehicles, high-stepping horses, and lovely women richly apparelled.

Wedding cards have been pouring in till the contagion has reached us; Edith will be married next Thursday. The wedding dress is being fashioned, and the bridesmaids and groomsmen have arrived. Edith has requested me to be special mistress of ceremonies on Thursday evening, and I have told this terrible little rebel, who talks nothing but blood and thunder, yet faints at the sight of a worm, that if I fill that office no one shall mention war or politics during the whole evening, on pain of expulsion.

March 10, 1861.—The excitement in this house has risen to fever heat during the past week. The four gentlemen have each a different plan for saving the country, and now that the bridal bouquets have faded, the three ladies have again turned to public affairs; Lincoln's inauguration and the story of the disguise in which he traveled to Washington is a never-ending source of gossip. The family board being the common forum, each gentleman as he appears first unloads his pockets of papers from all the Southern States, and then his overflowing heart to his eager female listeners, who in turn relate, inquire, sympathize, or cheer. If I dare express a doubt that the path to victory will be a flowery one, eyes flash, cheeks burn, and tongues clatter, till all are checked up suddenly by a warning rap for "Order, order!" from the amiable lady presiding. Thus we swallow politics with every meal. We take a mouthful and read a telegram, one eye on table, the other on the paper. One must be made of cool stuff to keep calm and collected, but I say but little. This war fever has banished small talk. Through all the black servants move about quietly, never seeming to notice that this is all about them.

"How can you speak so plainly before them?" I say.

"Why, what matter? They know that we shall keep the whip-handle."

April 13, 1861.—More than a month has passed since the last date here. This afternoon I was seated on the floor covered with loveliest flowers, arranging a floral offering for the fair, when the gentlemen arrived and with papers bearing news of the fall of Fort Sumter, which, at her request, I read to Mrs. F.

April 20.—The last few days have glided away in a halo of beauty. But nobody has time or will to enjoy it. War, war! is the one idea. The children play only with toy cannons and soldiers; the oldest inhabitant goes by every

day with his rifle to practice; the public squares are full of companies drilling, and are now the fashionable resorts. We have been told that it is best for women to learn how to shoot too, so as to protect themselves when the men have all gone to battle. Every evening after dinner we adjourn to the back lot and fire at a target with pistols. Yesterday I dined at Uncle Ralph's. Some members of the bar were present and were jubilant about their brand-new Confederacy. It would soon be the grandest government ever known. Uncle Ralph said solemnly, "No, gentlemen; the day we seceded the star of our glory set." The words sunk into my mind like a knell, and made me wonder at the mind that could recognize that and yet adhere to the doctrine of secession.

In the evening I attended a farewell gathering at a friend's whose brothers are to leave this week for Richmond. There was music. No minor chord was permitted.

III.

TRIBULATION.

April 25.—Yesterday I went with Cousin E. to have her picture taken. The picture-galleries are doing a thriving business. Many companies are ordered off to take possession of Fort Pickens (Florida), and all seem to be leaving sweethearts behind them. The crowd was in high spirits; they don't dream that any destinies will be spoiled. When I got home Edith was reading from the daily paper of the dismissal of Miss G. from her place as teacher for expressing abolition sentiments, and that she would be ordered to leave the city. Soon a lady came with a paper setting forth that she has established a "company"—we are nothing if not military—for making lint and getting stores of linen to supply the hospitals.

My name went down. If it had n't, my spirit would have been wounded as with sharp spears before night. Next came a little girl with a subscription paper to get a flag for a certain company. The little girls, especially the pretty ones, are kept busy trotting around with subscription lists. Latest of all came little Guy, Mr. F.'s youngest clerk, the pet of the firm as well as of his home, a mere boy of sixteen. Such senseless sacrifices seem a sin. He chattered brightly, but lingered about, saying good-bye. He got through it bravely until Edith's husband incautiously said, "You did n't kiss your little sweetheart," as he always called Ellie, who had been allowed to sit up. He turned and suddenly broke into agonizing sobs and then ran down the steps.

May 10.—I am tired and ashamed of myself. Last week I attended a meeting of the

lint society to hand in the small contribution of linen I had been able to gather. We scraped lint till it was dark. A paper was shown, entitled the "Volunteer's Friend," started by the girls of the high school, and I was asked to help the girls with it. I positively declined. To-day I was pressed into service to make red flannel cartridge-bags for ten-inch columbiads. I basted while Mrs. S. sewed, and I felt ashamed to think that I had not the moral courage to say, "I don't approve of your war and won't help you, particularly in the murderous part of it."

May 27.—This has been a scenic Sabbath. Various companies about to depart for Virginia occupied the prominent churches to have their flags consecrated. The streets were resonant with the clangor of drums and trumpets. E. and myself went to Christ Church because the Washington Artillery were to be there.

June 13.—To-day has been appointed a Fast Day. I spent the morning writing a letter on which I put my first Confederate postage-stamp. It is of a brown color and has a large 5 in the center. To-morrow must be devoted to all my foreign correspondents before the expected blockade cuts us off.

June 29.—I attended a fine luncheon yesterday at one of the public schools. A lady remarked to a school official that the cost of provisions in the Confederacy was getting very high, butter, especially, being scarce and costly. "Never fear, my dear madam," he replied. "Texas alone can furnish butter enough to supply the whole Confederacy; we'll soon be getting it from there." It's just as well to have this sublime confidence.

July 15.—The quiet of midsummer reigns, but ripples of excitement break around us as the papers tell of skirmishes and attacks here and there in Virginia. "Rich Mountain" and "Carrick's Ford" were the last. "You see," said Mrs. D. at breakfast to-day, "my prophecy is coming true that Virginia will be the seat of war." "Indeed," I burst out, forgetting my resolution not to argue, "you may think yourselves lucky if this war turns out to have any seat in particular."

So far, no one especially connected with me has gone to fight. How glad I am for his mother's sake that Rob's lameness will keep him at home. Mr. F., Mr. S., and Uncle Ralph are beyond the age for active service, and Edith says Mr. D. can't go now. She is very enthusiastic about other people's husbands being enrolled, and regrets that her Alex is not strong enough to defend his country and his rights.

July 22.—What a day! I feel like one who has been out in a high wind, and cannot get my breath. The news-boys are still shouting with their extras, "Battle of Bull's Run!

List of the killed! Battle of Manassas! List of the wounded!" Tender-hearted Mrs. F. was sobbing so she could not serve the tea; but nobody cared for tea. "O G.!" she said, "three thousand of our own, dear Southern boys are lying out there." "My dear Fannie," spoke Mr. F., "they are heroes now. They died in a glorious cause, and it is not in vain. This will end it. The sacrifice had to be made, but those killed have gained immortal names." Then Rob rushed in with a new extra, reading of the spoils captured, and grief was forgotten. Words cannot paint the excitement. Rob capered about and cheered; Edith danced around ringing the dinner bell and shouting, "Victory!" Mrs. F. waved a small Confederate flag, while she wiped her eyes, and Mr. D. hastened to the piano and in his most brilliant style struck up "Dixie," followed by "My Maryland" and the "Bonnie Blue Flag."

"Do not look so gloomy, G.," whispered Mr. S. "You should be happy to-night; for, as Mr. F. says, now we shall have peace."

"And is that the way you think of the men of your own blood and race?" I replied. But an utter scorn came over me and choked me, and I walked out of the room. What proof is there in this dark hour that they are not right? Only the emphatic answer of my own soul. To-morrow I will pack my trunk and accept the invitation to visit at Uncle Ralph's country-house.

Sept. 25.—When I opened the door of Mrs. F.'s room on my return, the rattle of two sewing-machines and a blaze of color met me.

"Ah! G., you are just in time to help us; these are coats for Jeff Thompson's men. All the cloth in the city is exhausted; these flannel-lined oilcloth table-covers are all we could obtain to make overcoats for Thompson's poor boys. They will be very warm and serviceable."

"Serviceable, yes! The Federal army will fly when they see those coats! I only wish I could be with the regiment when these are shared around." Yet I helped make them.

Seriously, I wonder if any soldiers will ever wear these remarkable coats. The most bewildering combination of brilliant, intense reds, greens, yellows, and blues in big flowers meandering over as vivid grounds; and as no table-cover was large enough to make a coat, the sleeves of each were of a different color and pattern. However, the coats were duly finished. Then we set to work on gray pantaloons, and I have just carried a bundle to an ardent young lady who wishes to assist. A slight gloom is settling down, and the inmates here are not quite so cheerfully confident as in July.

IV.

A BELEAGUERED CITY.

Oct. 22.—When I came to breakfast this morning Rob was capering over another victory — Ball's Bluff. He would read me, "We pitched the Yankees over the bluff," and ask me in the next breath to go to the theater this evening. I turned on the poor fellow: "Don't tell me about your victories. You vowed by all your idols that the blockade would be raised by October 1, and I notice the ships are still serenely anchored below the city."

"G., you are just as pertinacious yourself in championing your opinions. What sustains you when nobody agrees with you?"

Oct. 28.—When I dropped in at Uncle Ralph's last evening to welcome them back, the whole family were busy at a great center-table copying sequestration acts for the Confederate Government. The property of all Northerners and Unionists is to be sequestered, and Uncle Ralph can hardly get the work done fast enough. My aunt apologized for the rooms looking chilly; she feared to put the carpets down, as the city might be taken and burned by the Federals. "We are living as much packed up as possible. A signal has been agreed upon, and the instant the army approaches we shall be off to the country again."

Great preparations are being made for defense. At several other places where I called the women were almost hysterical. They seemed to look forward to being blown up with shot and shell, finished with cold steel, or whisked off to some Northern prison. When I got home Edith and Mr. D. had just returned also.

"Alex.," said Edith, "I was up at your orange-lots to-day and the sour oranges are dropping to the ground, while they cannot get lemons for our sick soldiers."

"That's my kind, considerate wife," replied Mr. D. "Why did n't I think of that before? Jim shall fill some barrels to-morrow and take them to the hospitals as a present from you."

Nov. 10.—Surely this year will ever be memorable to me for its perfection of natural beauty. Never was sunshine such pure gold, or moonlight such transparent silver. The beautiful custom prevalent here of decking the graves with flowers on All Saints' day was well fulfilled, so profuse and rich were the blossoms. On All-hallow eve Mrs. S. and myself visited a large cemetery. The chrysanthemums lay like great masses of snow and flame and gold in every garden we passed, and were piled on every costly tomb and lowly grave. The battle of Manassas robed many of our women in mourning, and some of those who had no

graves to deck were weeping silently as they walked through the scented avenues.

A few days ago Mrs. E. arrived here. She is a widow, of Natchez, a friend of Mrs. F.'s, and is traveling home with the dead body of her eldest son, killed at Manassas. She stopped two days waiting for a boat, and begged me to share her room and read her to sleep, saying she could n't be alone since he was killed; she feared her mind would give way. So I read all the comforting chapters to be found till she dropped into forgetfulness, but the recollection of those weeping mothers in the cemetery banished sleep for me.

Nov. 26.—The lingering summer is passing into those misty autumn days I love so well, when there is gold and fire above and around us. But the glory of the natural and the gloom of the moral world agree not well together. This morning Mrs. F. came to my room in dire distress. "You see," she said, "cold weather is coming on fast, and our poor fellows are lying out at night with nothing to cover them. There is a wail for blankets, but there is not a blanket in town. I have gathered up all the spare bed-clothing, and now want every available rug or table-cover in the house. Can't I have yours, G.? We must make these small sacrifices of comfort and elegance, you know, to secure independence and freedom."

"Very well," I said, denuding the table. "This may do for a drummer boy."

Dec. 26, 1861.—The foul weather cleared off bright and cool in time for Christmas. There is a midwinter lull in the movement of troops. In the evening we went to the grand bazaar in the St. Louis Hotel, got up to clothe the soldiers. This bazaar has furnished the gayest, most fashionable war-work yet, and has kept social circles in a flutter of pleasant, heroic excitement all through December. Everything beautiful or rare garnered in the homes of the rich was given for exhibition, and in some cases for raffle and sale. There were many fine paintings, statues, bronzes, engravings, gems, laces—in fact, heirlooms and bric-à-brac of all sorts. There were many lovely Creole girls present, in exquisite toilets, passing to and fro through the decorated rooms, listening to the band clash out the Anvil Chorus.

Jan. 2, 1862.—I am glad enough to bid '61 good-bye. Most miserable year of my life! What ages of thought and experience have I not lived in it.

The city authorities have been searching houses for fire-arms. It is a good way to get more guns, and the homes of those men suspected of being Unionists were searched first. Of course, they went to Dr. B.'s. He met them with his own delightful courtesy. "Wish to search for arms? Certainly, gentlemen."

He conducted them all through the house with smiling readiness, and after what seemed a very thorough search bowed them politely out. His gun was all the time safely reposing between the canvas folds of a cot-bed which leaned folded up together against the wall, in the very room where they had ransacked the closets. Queerly, the rebel families have been the ones most anxious to conceal all weapons. They have dug graves quietly at night in the back yards, and carefully wrapping the weapons, buried them out of sight. Every man seems to think he will have some private fighting to do to protect his family.

V.

MARRIED.

Friday, Jan. 24, 1862. (*On steamboat W., Mississippi River.*)—With a changed name I open you once more, my journal. It was a sad time to wed, when one knew not how long the expected conscription would spare the bridegroom. The women-folk knew how to sympathize with a girl expected to prepare for her wedding in three days, in a blockaded city, and about to go far from any base of supplies. They all rallied round me with tokens of love and consideration, and sewed, shopped, mended, and packed, as if sewing soldier clothes. And they decked the whole house and the church with flowers. Music breathed, wine sparkled, friends came and went. It seemed a dream, and comes up now again out of the afternoon sunshine where I sit on deck. The steamboat slowly plows its way through lumps of floating ice,—a novel sight to me,—and I look forward wondering whether the new people I shall meet will be as fierce about the war as those in New Orleans. That past is to be all forgotten and forgiven; I understood thus the kindly acts that sought to brighten the threshold of a new life.

Feb. 15. (Village of X.)—We reached Arkansas Landing at nightfall. Mr. Y., the planter who owns the landing, took us right up to his residence. He ushered me into a large room where a couple of candles gave a dim light, and close to them, and sewing as if on a race with Time, sat Mrs. Y. and a little negro girl, who was so black and sat so stiff and straight she looked like an ebony image. This was a large plantation; the Y.'s knew H. very well, and were very kind and cordial in their welcome and congratulations. Mrs. Y. apologized for continuing her work; the war had pushed them this year in getting the negroes clothed, and she had to sew by dim candles, as they could obtain no more oil. She asked if there were any new fashions in New Orleans.

Next morning we drove over to our home

in this village. It is the county-seat, and was, till now, a good place for the practice of H.'s profession. It lies on the edge of a lovely lake. The adjacent planters count their slaves by the hundreds. Some of them live with a good deal of magnificence, using service of plate, having smoking-rooms for the gentlemen built off the house, and entertaining with great hospitality. The Baptists, Episcopalians, and Methodists hold services on alternate Sundays in the court-house. All the planters and many others, near the lake shore, keep a boat at their landing, and a raft for crossing vehicles and horses. It seemed very piquant at first, this taking our boat to go visiting, and on moonlight nights it was charming. The woods around are lovelier than those in Louisiana, though one misses the moaning of the pines. There is fine fishing and hunting, but these cotton estates are not so pleasant to visit as sugar plantations.

But nothing else has been so delightful as, one morning, my first sight of snow and a wonderful, new, white world.

Feb. 27.—The people here have hardly felt the war yet. There are but two classes. The planters and the professional men form one; the very poor villagers the other. There is no middle class. Ducks and partridges, squirrels and fish, are to be had. H. has bought me a nice pony, and cantering along the shore of the lake in the sunset is a panacea for mental worry.

VI.

HOW IT WAS IN ARKANSAS.

March 11, 1862.—The serpent has entered our Eden. The rancor and excitement of New Orleans have invaded this place. If an incautious word betrays any want of sympathy with popular plans, one is "traitorous," "ungrateful," "crazy." If one remains silent and controlled, then one is "phlegmatic," "cool-blooded," "unpatriotic." Cool-blooded! Heavens! if they only knew. It is very painful to see lovable and intelligent women rave till the blood mounts to face and brain. The immediate cause of this access of war fever has been the battle of Pea Ridge. They scout the idea that Price and Van Dorn have been completely worsted. Those who brought the news were speedily told what they ought to say. "No, it is only a serious check; they must have more men sent forward at once. This country must do its duty." So the women say another company *must* be raised.

We were guests at a dinner-party yesterday. Mrs. A. was very talkative. "Now, ladies, you must all join in with a vim and help equip another company."

"Mrs. L.," she said, turning to me, "are you

not going to send your husband? Now use a young bride's influence and persuade him; he would be elected one of the officers." "Mrs. A.," I replied, longing to spring up and throttle her, "the Bible says, 'When a man hath married a new wife, he shall not go to war for one year, but remain at home and cheer up his wife.'" . . .

"Well, H.," I questioned, as we walked home after crossing the lake, "can you stand the pressure, or shall you be forced into volunteering?" "Indeed," he replied, "I will not be bullied into enlisting by women, or by men. I will sooner take my chance of conscription and feel honest about it. You know my attachments, my interests are here; these are my people. I could never fight against them; but my judgment disapproves their course, and the result will inevitably be against us."

This morning the only Irishman left in the village presented himself to H. He has been our wood-sawyer, gardener, and factotum, but having joined the new company, his time recently has been taken up with drilling. H. and Mr. R. feel that an extensive vegetable garden must be prepared while he is here to assist or we shall be short of food, and they sent for him yesterday.

"So, Mike, you are really going to be a soldier?"

"Yes, sor; but faith, Mr. L., I don't see the use of me going to shtop a bullet when sure an' I'm willin' for it to go where it plazes."

March 18, 1862.—There has been unusual gaiety in this little village the past few days. The ladies from the surrounding plantations went to work to get up a festival to equip the new company. As Annie and myself are both brides recently from the city, requisition was made upon us for engravings, costumes, music, garlands, and so forth. Annie's heart was in the work; not so with me. Nevertheless, my pretty things were captured, and shone with just as good a grace last evening as if willingly lent. The ball was a merry one. One of the songs sung was "Nellie Gray," in which the most distressing feature of slavery is bewailed so pitifully. To sing this at a festival for raising money to clothe soldiers fighting to perpetuate that very thing was strange.

March 20, 1862.—A man professing to act by General Hindman's orders is going through the country impressing horses and mules. The overseer of a certain estate came to inquire of H. if he had not a legal right to protect the property from seizure. Mr. L. said yes, unless the agent could show some better credentials than his bare word. This answer soon spread about, and the overseer returned to report that it excited great indignation, espe-

cially among the company of new volunteers. H. was pronounced a traitor, and they declared that no one so untrue to the Confederacy should live there. When H. related the circumstance at dinner, his partner, Mr. R., became very angry, being ignorant of H.'s real opinions. He jumped up in a rage and marched away to the village thoroughfare. There he met a batch of the volunteers, and said, "We know what you have said of us, and I have come to tell you that you are liars, and you know where to find us."

Of course I expected a difficulty; but the evening passed, and we retired undisturbed. Not long afterward a series of indescribable sounds broke the stillness of the night, and the tramp of feet was heard outside the house. Mr. R. called out, "It's a serenade, H. Get up and bring out all the wine you have." Annie and I peeped through the parlor window, and lo! it was the company of volunteers and a diabolical band composed of bones and broken-winded brass instruments. They piped and clattered and whined for some time, and then swarmed in, while we ladies retreated and listened to the clink of glasses.

March 22.—H., Mr. R., and Mike have been very busy the last few days getting the acre of kitchen-garden plowed and planted. The stay-law has stopped all legal business, and they have welcomed this work. But today a thunderbolt fell in our household. Mr. R. came in and announced that he has agreed to join the company of volunteers. Annie's Confederate principles would not permit her to make much resistance, and she has been sewing and mending as fast as possible to get his clothes ready, stopping now and then to wipe her eyes. Poor Annie! She and Max have been married only a few months longer than we have; but a noble sense of duty animates and sustains her.

VII.

THE FIGHT FOR FOOD AND CLOTHING.

April 1.—The last ten days have brought changes in the house. Max R. left with the company to be mustered in, leaving with us his weeping Annie. Hardly were her spirits somewhat composed when her brother arrived from Natchez to take her home. This morning he, Annie, and Reeney, the black handmaiden, posted off. Out of seven of us only H., myself, and Aunt Judy are left. The absence of Reeney will be not the least noted. She was as precious an imp as any Topsy ever was. Her tricks were endless and her innocence of them amazing. When sent out to bring in eggs she would take them from nests where hens were hatching, and embryo chickens would be served up at breakfast, while Reeney stood by grinning to see them

opened; but when accused she was imperturbable. "Laws, Mis' L., I nebber dun bin nigh dem hens. Mis' Annie, you can go count dem dere eggs." That when counted they were found minus the number she had brought had no effect on her stolid denial. H. has plenty to do finishing the garden all by himself, but the time rather drags for me.

April 13, 1862.—This morning I was sewing up a rent in H.'s garden-coat, when Aunt Judy rushed in.

"Laws! Mis' L., here's Mr. Max and Mis' Annie done come back!" A buggy was coming up with Max, Annie, and Reeney.

"Well, is the war over?" I asked.

"Oh, I got sick!" replied our returned soldier, getting slowly out of the buggy.

He was very thin and pale, and explained that he took a severe cold almost at once, had a mild attack of pneumonia, and the surgeon got him his discharge as unfit for service. He succeeded in reaching Annie, and a few days of good care made him strong enough to travel back home.

"I suppose, H., you've heard that Island No. 10 is gone?"

Yes, we had heard that much, but Max had the particulars, and an exciting talk followed. At night H. said to me, "G., New Orleans will be the next to go, you'll see, and I want to get there first; this stagnation here will kill me."

April 28.—This evening has been very lovely, but full of a sad disappointment. H. invited me to drive. As we turned homeward he said:

"Well, my arrangements are completed. You can begin to pack your trunks to-morrow, and I shall have a talk with Max."

Mr. R. and Annie were sitting on the gallery as I ran up the steps.

"Heard the news?" they cried.

"No! What news?"

"New Orleans is taken! All the boats have been run up the river to save them. No more mails."

How little they knew what plans of ours this dashed away. But our disappointment is truly an infinitesimal drop in the great waves of triumph and despair surging to-night in thousands of hearts.

April 30.—The last two weeks have glided quietly away without incident except the arrival of new neighbors—Dr. Y., his wife, two children, and servants. That a professional man prospering in Vicksburg should come now to settle in this retired place looks queer. Max said:

"H., that man has come here to hide from the conscript officers. He has brought no end of provisions, and is here for the war. He has chosen well, for this county is so cleaned of men it won't pay to send the conscript officers here."

Our stores are diminishing and cannot be

replenished from without; ingenuity and labor must evoke them. We have a fine garden in growth, plenty of chickens, and hives of bees to furnish honey in lieu of sugar. A good deal of salt meat has been stored in the smoke-house, and, with fish from the lake, we expect to keep the wolf from the door. The season for game is about over, but an occasional squirrel or duck comes to the larder, though the question of ammunition has to be considered. What we have may be all we can have, if the war lasts five years longer; and they say they are prepared to hold out till the crack of doom. Food, however, is not the only want. I never realized before the varied needs of civilization. Every day something is *out*. Last week but two bars of soap remained, so we began to save bones and ashes. Annie said: "Now, if we only had some china-berry trees here we should n't need any other grease. They are making splendid soap at Vicksburg with china-balls. They just put the berries into the lye and it eats them right up and makes a fine soap." I did long for some china-berries to make this experiment. H. had laid in what seemed a good supply of kerosene, but it is nearly gone, and we are down to two candles kept for an emergency. Annie brought a receipt from Natchez for making candles of rosin and wax, and with great forethought brought also the wick and rosin. So yesterday we tried making candles. We had no molds, but Annie said the latest style in Natchez was to make a waxen rope by dipping, then wrap it round a corn-cob. But H. cut smooth blocks of wood about four inches square, into which he set a polished cylinder about four inches high. The waxen ropes were coiled round the cylinder like a serpent, with the head raised about two inches; as the light burned down to the cylinder, more of the rope was unwound. To-day the vinegar was found to be all gone and we have started to make some. For tyros we succeed pretty well.

VIII.

DROWNED OUT AND STARVED OUT.

May 9.—A great misfortune has come upon us all. For several days every one has been uneasy about the unusual rise of the Mississippi and about a rumor that the Federal forces had cut levees above to swamp the country. There is a slight levee back of the village, and H. went yesterday to examine it. It looked strong and we hoped for the best. About dawn this morning a strange gurgle woke me. It had a pleasing, lulling effect. I could not fully rouse at first, but curiosity conquered at last, and I called H.

"Listen to that running water; what is it?"
He sprang up, listened a second, and shouted:

"Max, get up! The water is on us!" They both rushed off to the lake for the skiff. The levee had not broken. The water was running clean over it and through the garden fence so rapidly that by the time I dressed and got outside Max was paddling the pirogue they had brought in among the pea-vines, gathering all the ripe peas left above the water. We had enjoyed one mess and he vowed we should have another.

H. was busy nailing a raft together while he had a dry place to stand on. Annie and I, with Reeney, had to secure the chickens, and the back piazza was given up to them. By the time a hasty breakfast was eaten the water was in the kitchen. The stove and everything there had to be put up in the dining-room. Aunt Judy and Reeney had likewise to move into the house, their floor also being covered with water. The raft had to be floated to the store-house and a platform built, on which everything was elevated. At evening we looked round and counted the cost. The garden was utterly gone. Last evening we had walked round the strawberry beds that fringed the whole acre and tasted a few just ripe. The hives were swamped. Many of the chickens were drowned. Sancho had been sent to high ground where he could get grass. In the village every green thing was swept away. Yet we were better off than many others; for this house, being raised, we have escaped the water indoors. It just laves the edge of the galleries.

May 26.—During the past week we have lived somewhat like Venetians, with a boat at front steps and a raft at the back. Sunday H. and I took skiff to church. The clergyman, who is also tutor at a planter's across the lake, preached to the few who had arrived in skiffs. We shall not try it again, it is so troublesome getting in and out at the court-house steps. The imprisonment is hard to endure. It threatened to make me really ill, so every evening H. lays a thick wrap in the pirogue, I sit on it and we row off to the ridge of dry land running along the lake-shore and branching off to a strip of woods also out of water. Here we disembark and march up and down till dusk. A great deal of the wood got wet and has to be laid out to dry on the galleries, with clothing, and everything that must be dried. One's own trials are intensified by the worse suffering around that we can do nothing to relieve.

Max has a puppy named after General Price. The gentlemen had both gone up town yesterday in the skiff when Annie and I heard little Price's despairing cries from under the house, and we got on the raft to find and save him. We wore light morning dresses and slippers, for shoes are becoming precious. Annie donned a Shaker and I a broad hat. We got the raft

pushed out to the center of the grounds opposite the house and could see Price clinging to a post; the next move must be to navigate the raft up to the side of the house and reach for Price. It sounds easy; but poke around with our poles as wildly or as scientifically as we might, the raft would not budge. The noonday sun was blazing right overhead and the muddy water running all over slipped feet and dainty dresses. How long we staid praying for rescue, yet wincing already at the laugh that would come with it, I shall never know. It seemed like a day before the welcome boat and the "Ha, ha!" of H. and Max were heard. The confinement tells severely on all the animal life about us. Half the chickens are dead and the other half sick.

The days drag slowly. We have to depend mainly on books to relieve the tedium, for we have no piano; none of us like cards; we are very poor chess-players, and the chess-set is incomplete. When we gather round the one lamp—we dare not light any more—each one exchanges the gems of thought or mirthful ideas he finds. Frequently the gnats and the mosquitoes are so bad we cannot read at all. This evening, till a strong breeze blew them away, they were intolerable. Aunt Judy goes about in a dignified silence, too full for words, only asking two or three times, "W'at I dun tole you fum de fust?" The food is a trial. This evening the snaky candles lighted the glass and silver on the supper-table with a pale gleam and disclosed a frugal supper indeed—tea without milk (for all the cows are gone), honey, and bread. A faint ray twinkled on the water swishing against the house and stretching away into the dark woods. It looked like civilization and barbarism met together. Just as we sat down to it, some one passing in a boat shouted that Confederates and Federals were fighting at Vicksburg.

Monday, June 2.—On last Friday morning, just three weeks from the day the water rose, signs of its falling began. Yesterday the ground appeared, and a hard rain coming down at the same time washed off much of the unwholesome débris. To-day is fine, and we went out without a boat for a long walk.

June 13.—Since the water ran off, we have, of course, been attacked by swamp fever. H. succumbed first, then Annie, Max next, and then I. Luckily, the new Dr. Y. had brought quinine with him, and we took heroic doses. Such fever never burned in my veins before or sapped strength so rapidly, though probably the want of good food was a factor. The two or three other professional men have left. Dr. Y. alone remains. The roads now being dry enough, H. and Max started on horseback, in different directions, to make an

exhaustive search for food supplies. H. got back this evening with no supplies.

June 15.—Max got back to-day. He started right off again to cross the lake and interview the planters on that side, for they had not suffered from overflow.

June 16.—Max got back this morning. H. and he were in the parlor talking and examining maps together till dinner-time. When that was over they laid the matter before us. To buy provisions had proved impossible. The planters across the lake had decided to issue rations of corn-meal and pease to the villagers whose men had all gone to war, but they utterly refused to sell anything. "They told me," said Max, "'We will not see your family starve, Mr. R.; but with such numbers of slaves and the village poor to feed, we can spare nothing for sale.'" "Well, of course," said H., "we do not purpose to stay here and live on charity rations. We must leave the place at all hazards. We have studied out every route and made inquiries everywhere we went. We shall have to go down the Mississippi in an open boat as far as Fetter's Landing (on the eastern bank). There we can cross by land and put the boat into Steele's Bayou, pass thence to the Yazoo River, from there to Chickasaw Bayou, into McNutt's Lake, and land near my uncle's in Warren County."

June 20.—As soon as our intended departure was announced, we were besieged by requests for all sorts of things wanted in every family—pins, matches, gunpowder, and ink. One of the last cases H. and Max had before the stay-law stopped legal business was the settlement of an estate that included a country store. The heirs had paid in chattels of the store. These had remained packed in the office. The main contents of the cases were hardware; but we found treasure indeed—a keg of powder, a case of matches, a paper of pins, a bottle of ink. Red ink is now made out of poke-berries. Pins are made by capping thorns with sealing-wax, or using them as nature made them. These were articles money could not get for us. We would give our friends a few matches to save for the hour of tribulation. The paper of pins we divided evenly, and filled a bank-box each with the matches. H. filled a tight tin case apiece with powder for Max and himself and sold the rest, as we could not carry any more on such a trip. Those who did not hear of this in time offered fabulous prices afterwards for a single pound. But money has not its old attractions. Our preparations were delayed by Aunt Judy falling sick of swamp fever.

Friday, June 27.—As soon as the cook was up again, we resumed preparations. We put all the clothing in order and had it nicely done

up with the last of the soap and starch. "I wonder," said Annie, "when I shall ever have nicely starched clothes after these? They had no starch in Natchez or Vicksburg when I was there." We are now furbishing up dresses suitable for such rough summer travel. While we sat at work yesterday the quiet of the clear, calm noon was broken by a low, continuous roar like distant thunder. To-day we are told it was probably cannon at Vicksburg. This is a great distance, I think, to have heard it—over a hundred miles.

H. and Max have bought a large yawl and are busy on the lake bank repairing it and fitting it with lockers. Aunt Judy's master has been notified when to send for her; a home for the cat Jeff has been engaged; Price is dead, and Sancho sold. Nearly all the furniture is disposed of, except things valued from association, which will be packed in H.'s office and left with some one likely to stay through the war. It is hardest to leave the books.

Tuesday, July 8.—We start to-morrow. Packing the trunks was a problem. Annie and I are allowed one large trunk apiece, the gentlemen a smaller one each, and we a light carpet-sack apiece for toilet articles. I arrived with six trunks and leave with one! We went over everything carefully twice, rejecting, trying to shake off the bonds of custom and get down to primitive needs. At last we made a judicious selection. Everything old or worn was left; everything merely ornamental, except good lace, which was light. Gossamer evening dresses were all left. I calculated on taking two or three books that would bear the most reading if we were again shut up where none could be had, and so, of course, took *Shakespeare* first. Here I was interrupted to go and pay a farewell visit, and when we returned Max had packed and nailed the cases of books to be left. Chance thus limited my choice to those that happened to be in my room—"Paradise Lost," the "Arabian Nights," a volume of Macaulay's *History* I was reading, and my prayer-book. To-day the provisions for the trip were cooked: the last of the flour was made into large loaves of bread; a ham and several dozen eggs were boiled; the few chickens that have survived the overflow were fried; the last of the coffee was parched and ground; and the modicum of the tea was well corked up. Our friends across the lake added a jar of butter and two of preserves. H. rode off to X. after dinner to conclude some business there, and I sat down before a table to tie bundles of things to be left. The sunset glowed and faded and the quiet evening came on calm and starry. I sat by the window till evening deepened into night, and as the moon rose I still looked a reluctant farewell to the

lovely lake and the grand woods, till the sound of H.'s horse at the gate broke the spell.

IX.

HOMELESS AND SHELTERLESS.

Thursday, July 10. (—*Plantation.*)—Yesterday about four o'clock we walked to the lake and embarked. Provisions and utensils were packed in the lockers, and a large trunk was stowed at each end. The blankets and cushions were placed against one of them, and Annie and I sat on them Turkish fashion. Near the center the two smaller trunks made a place for Reeney. Max and H. were to take turns at the rudder and oars. The last word was a fervent God-speed from Mr. E., who is left in charge of all our affairs. We believe him to be a Union man, but have never spoken of it to him. We were gloomy enough crossing the lake, for it was evident the heavily laden boat would be difficult to manage. Last night we staid at this plantation, and from the window of my room I see the men unloading the boat to place it on the cart, which a team of oxen will haul to the river. These hospitable people are kindness itself, till you mention the war.

Saturday, July 12. (*Under a cotton-shed on the bank of the Mississippi River.*)—Thursday was a lovely day, and the sight of the broad river exhilarating. The negroes launched and reloaded the boat, and when we had paid them and spoken good-bye to them we felt we were really off. Every one had said that if we kept in the current the boat would almost go of itself, but in fact the current seemed to throw it about, and hard pulling was necessary. The heat of the sun was very severe, and it proved impossible to use an umbrella or any kind of shade, as it made steering more difficult. Snags and floating timbers were very troublesome. Twice we hurried up to the bank out of the way of passing gunboats, but they took no notice of us. When we got thirsty, it was found that Max had set the jug of water in the shade of a tree and left it there. We must dip up the river water or go without. When it got too dark to travel safely we disembarked. Reeney gathered wood, made a fire and some tea, and we had a good supper. We then divided, H. and I remaining to watch the boat, Max and Annie on shore. She hung up a mosquito-bar to the trees and went to bed comfortably. In the boat the mosquitoes were horrible, but I fell asleep and slept till voices on the bank woke me. Annie was wandering disconsolate round her bed, and when I asked the trouble, said, "Oh, I can't sleep there! I found a toad and a lizard in the bed." When dropping off again, H. woke me to say he was very sick; he thought it was from drinking the river

water. With difficulty I got a trunk opened to find some medicine. While doing so a gunboat loomed up vast and gloomy, and we gave each other a good fright. Our voices doubtless reached her, for instantly every one of her lights disappeared and she ran for a few minutes along the opposite bank. We momentarily expected a shell as a feeler.

At dawn next morning we made coffee and a hasty breakfast, fixed up as well as we could in our sylvan dressing-rooms, and pushed on, for it is settled that traveling between eleven and two will have to be given up unless we want to be roasted alive. H. grew worse. He suffered terribly, and the rest of us as much to see him pulling in such a state of exhaustion. Max would not trust either of us to steer. About eleven we reached the landing of a plantation. Max walked up to the house and returned with the owner, an old gentleman living alone with his slaves. The housekeeper, a young colored girl, could not be surpassed in her graceful efforts to make us comfortable and anticipate every want. I was so anxious about H. that I remember nothing except that the cold drinking-water taken from a cistern beneath the building, into which only the winter rains were allowed to fall, was like an elixir. They offered luscious peaches that, with such water, were nectar and ambrosia to our parched lips. At night the housekeeper said she was sorry they had no mosquito-bars ready and hoped the mosquitoes would not be thick, but they came out in legions. I knew that on sleep that night depended recovery or illness for H. and all possibility of proceeding next day. So I sat up fanning away mosquitoes that he might sleep, toppling over now and then on the pillows till roused by his stirring. I contrived to keep this up till, as the chill before dawn came, they abated and I got a short sleep. Then, with the aid of cold water, a fresh toilet, and a good breakfast, I braced up for another day's baking in the boat.

If I had been well and strong as usual the discomforts of such a journey would not have seemed so much to me; but I was still weak from the effects of the fever, and annoyed by a worrying toothache which there had been no dentist to rid me of in our village.

Having paid and dismissed the boat's watchman, we started and traveled till eleven to-day, when we stopped at this cotton-shed. When our dais was spread and lunch laid out in the cool breeze, it seemed a blessed spot. A good many negroes came offering chickens and milk in exchange for tobacco, which we had not. We bought some milk with money.

A United States transport just now steamed by and the men on the guards cheered and waved to us. We all replied but Annie. Even

Max was surprised into an answering cheer, and I waved my handkerchief with a very full heart as the dear old flag we have not seen for so long floated by; but Annie turned her back.

Sunday, July 13. (*Under a tree on the east bank of the Mississippi.*)—Late on Saturday evening we reached a plantation whose owner invited us to spend the night at his house. What a delightful thing is courtesy! The first tone of our host's welcome indicated the true gentleman. We never leave the oars with the watchman; Max takes those, Annie and I each take a band-box, H. takes my carpet-sack, and Reeney brings up the rear with Annie's. It is a funny procession. Mr. B.'s family were absent, and as we sat on the gallery talking it needed only a few minutes to show this was a "Union man." His home was elegant and tasteful, but even here there was neither tea nor coffee.

About eleven we stopped here in this shady place. While eating lunch the negroes again came imploring for tobacco. Soon an invitation came from the house for us to come and rest. We gratefully accepted, but found their idea of rest for warm, tired travelers was to sit in the parlor on stiff chairs while the whole family trooped in, cool and clean in fresh toilets, to stare and question. We soon returned to the trees; however they kindly offered corn-meal pound-cake and beer, which were excellent.

Eight gunboats and one transport have passed us. Getting out of their way has been troublesome. Our gentlemen's hands are badly blistered.

Tuesday, July 15.—Sunday night about ten we reached the place where, according to our map, Steele's Bayou comes nearest to the Mississippi, and where the landing should be, but when we climbed the steep bank there was no sign of habitation. Max walked off into the woods on a search, and was gone so long we feared he had lost his way. He could find no road. H. suggested shouting and both began. At last a distant halloo replied, and by cries the answerer was guided to us. A negro came forward and said that was the right place, his master kept the landing, and he would watch the boat for five dollars. He showed the road, and said his master's house was one mile off and another house two miles. We mistook, and went to the one two miles off. At one o'clock we reached Mr. Fetler's, who was pleasant, and said we should have the best he had. The bed into whose grateful softness I sank was piled with mattresses to within two or three feet of the ceiling, and with no step-ladder getting in and out was a problem. This morning we noticed the high-water mark, four feet above the lower floor. Mrs. Fetler said they had lived upstairs several weeks.

X.

FRIGHTS AND PERILS IN STEELE'S BAYOU.

Wednesday, July 16. (Under a tree on the bank of Steele's Bayou.)—Early this morning our boat was taken out of the Mississippi and put on Mr. Fetler's ox-cart. After breakfast we followed on foot. The walk in the woods was so delightful that all were disappointed when a silvery gleam through the trees showed the bayou sweeping along, full to the banks, with dense forest trees almost meeting over it. The boat was launched, calked, and reloaded, and we were off again. Towards noon the sound of distant cannon began to echo around, probably from Vicksburg again. About the same time we began to encounter rafts. To get around them required us to push through brush so thick that we had to lie down in the boat. The banks were steep and the land on each side a bog. About one o'clock we reached this clear space with dry shelving banks and disembarked to eat lunch. To our surprise a neatly dressed woman came tripping down the declivity bringing a basket. She said she lived above and had seen our boat. Her husband was in the army, and we were the first white people she had talked to for a long while. She offered some corn-meal pound-cake and beer, and as she climbed back told us to "look out for the rapids." H. is putting the boat in order for our start and says she is waving good-bye from the bluff above.

Thursday, July 17. (On a raft in Steele's Bayou.)—Yesterday we went on nicely awhile and at afternoon came to a strange region of rafts, extending about three miles, on which persons were living. Many saluted us, saying they had run away from Vicksburg at the first attempt of the fleet to shell it. On one of these rafts, about twelve feet square,¹ bagging had been hung up to form three sides of a tent. A bed was in one corner, and on a low chair, with her provisions in jars and boxes grouped round her, sat an old woman feeding a lot of chickens.

Having moonlight, we had intended to travel till late. But about ten o'clock, the boat beginning to go with great speed, H., who was steering, called to Max:

"Don't row so fast; we may run against something."

"I'm hardly pulling at all."

"Then we're in what she called the rapids!"

The stream seemed indeed to slope downward, and in a minute a dark line was visible ahead. Max tried to turn, but could not, and in a second more we dashed against this immense raft, only saved from breaking up by the men's quickness. We got out upon it and ate supper. Then, as the boat was leaking and the

current swinging it against the raft, H. and Max thought it safer to watch all night, but told us to go to sleep. It was a strange spot to sleep in—a raft in the middle of a boiling stream, with a wilderness stretching on either side. The moon made ghostly shadows and showed H., sitting still as a ghost, in the stern of the boat, while mingled with the gurgle of the water round the raft beneath was the boom of cannon in the air, solemnly breaking the silence of night. It drizzled now and then, and the mosquitoes swarmed over us. My fan and umbrella had been knocked overboard, so I had no weapon against them. Fatigue, however, overcomes everything, and I contrived to sleep.

H. roused us at dawn. Reeney found light-wood enough on the raft to make a good fire for coffee, which never tasted better. Then all hands assisted in unloading; a rope was fastened to the boat, Max got in, H. held the rope on the raft, and, by much pulling and pushing, it was forced through a narrow passage to the farther side. Here it had to be calked, and while that was being done we improvised a dressing-room in the shadow of our big trunks. During the trip I had to keep the time, therefore properly to secure belt and watch was always an anxious part of my toilet. The boat is now repacked, and while Annie and Reeney are washing cups I have scribbled, wishing much that mine were the hand of an artist.

Friday morn, July 18. (House of Colonel K., on Yazoo River.)—After leaving the raft yesterday all went well till noon, when we came to a narrow place where an immense tree lay clear across the stream. It seemed the insurmountable obstacle at last. We sat despairing what to do, when a man appeared beside us in a pirogue. So sudden, so silent was his arrival that we were thrilled with surprise. He said if we had a hatchet he could help us. His fairy bark floated in among the branches like a bubble, and he soon chopped a path for us, and was delighted to get some matches in return. He said the cannon we heard yesterday were in an engagement with the ram *Arkansas*, which ran out of the Yazoo that morning. We did not stop for dinner to-day, but ate a hasty lunch in the boat, after which nothing but a small piece of bread was left. About two we reached the forks, one of which ran to the Yazoo, the other to the Old River. Max said the right fork was our road; H. said the left, that there was an error in Max's map; but Max steered into the right fork. After pulling about three miles he admitted his mistake and turned back; but I shall never forget Old River. It was the vision of a drowned world, an illimitable waste of dead waters, stretching into a great, silent, desolate forest.

¹ More likely twelve yards.—G. W. C.

Just as we turned into the right way, down came the rain so hard and fast we had to stop on the bank. It defied trees or umbrellas and nearly took away the breath. The boat began to fill, and all five of us had to bail as fast as possible for the half-hour the sheet of water was pouring down. As it abated a cold breeze sprung up that, striking our wet clothes, chilled us to the bone. All were shivering and blue—no, I was green. Before leaving Mr. Fetler's Wednesday morning I had donned a dark-green calico. I wiped my face with a handkerchief out of my pocket, and face and hands were all dyed a deep green. When Annie turned round and looked at me she screamed and I realized how I looked; but she was not much better, for of all dejected things wet feathers are the worst, and the plumes in her hat were painful.

About five we reached Colonel K.'s house, right where Steele's Bayou empties into the Yazoo. We had both to be fairly dragged out of the boat, so cramped and weighted were we by wet skirts. The family were absent, and the house was headquarters for a squad of Confederate cavalry, which was also absent. The old colored housekeeper received us kindly and lighted fires in our rooms to dry the clothing. My trunk had got cracked on top, and all the clothing to be got at was wet. H. had dropped his in the river while lifting it out, and his clothes were wet. A spoonful of brandy apiece was left in the little flask, and I felt that mine saved me from being ill. Warm blankets and the brandy revived us, and by supper-time we got into some dry clothes.

Just then the squad of cavalry returned; they were only a dozen, but they made much uproar, being in great excitement. Some of them were known to Max and H., who learned from them that a gunboat was coming to shell them out of this house. Then ensued a clatter such as twelve men surely never made before—rattling about the halls and galleries in heavy boots and spurs, feeding horses, calling for supper, clanking swords, buckling and unbuckling belts and pistols. At last supper was dispatched, and they mounted and were gone like the wind. We had a quiet supper and good night's rest in spite of the expected shells, and did not wake till ten to-day to realize we were not killed. About eleven breakfast was furnished. Now we are waiting till the rest of our things are dried to start on our last day of travel by water.

Sunday, July 20.—A little way down the Yazoo on Friday we ran into McNutt's Lake, thence into Chickasaw Bayou, and at dark landed at Mrs. C.'s farm, the nearest neighbors of H.'s uncle. The house was full of Confederate sick, friends from Vicksburg, and while

we ate supper all present poured out the story of the shelling and all that was to be done at Vicksburg. Then our stuff was taken from the boat, and we finally abandoned the stanch little craft that had carried us for over one hundred and twenty-five miles in a trip occupying nine days. The luggage in a wagon, and ourselves packed in a buggy, were driven for four or five miles, over the roughest road I ever traveled, to the farm of Mr. B., H.'s uncle, where we arrived at midnight and hastened to hide in bed the utter exhaustion of mind and body. Yesterday we were too tired to think, or to do anything but eat peaches.

XI.

WILD TIMES IN MISSISSIPPI.

THIS morning there was a most painful scene. Annie's father came into Vicksburg, ten miles from here, and learned of our arrival from Mrs. C.'s messenger. He sent out a carriage to bring Annie and Max to town that they might go home with him, and with it came a letter for me from friends on the Jackson Railroad, written many weeks before. They had heard that our village home was under water, and invited us to visit them. The letter had been sent to Annie's people to forward, and thus had reached us. This decided H., as the place was near New Orleans, to go there and wait the chance of getting into that city. Max, when he heard this from H., lost all self-control and cried like a baby. He stalked about the garden in the most tragic manner, exclaiming:

"Oh! my soul's brother from youth up is a traitor! A traitor to his country!"

Then H. got angry and said, "Max, don't be a fool."

"Who has done this?" bawled Max. "You felt with the South at first; who has changed you?"

"Of course I feel *for* the South now, and nobody has changed me but the logic of events, though the twenty-negro law has intensified my opinions. I can't see why I, who have no slaves, must go to fight for them, while every man who has twenty may stay at home."

I, also, tried to reason with Max and pour oil on his wound. "Max, what interest has a man like you, without slaves, in a war for slavery? Even if you had them, they would not be your best property. That lies in your country and its resources. Nearly all the world has given up slavery; why can't the South do the same and end the struggle. It has shown you what the South needs, and if all went to work with united hands the South would soon be the greatest country on earth. You have no right to call H. a traitor; it is we who are the true patriots and lovers of the South."

This had to come, but it has upset us both. H. is deeply attached to Max, and I can't bear to see a cloud between them. Max, with Annie and Reeney, drove off an hour ago, Annie so glad at the prospect of again seeing her mother that nothing could cloud her day. And so the close companionship of six months, and of dangers, trials, and pleasures shared together, is over.

Oak Ridge, July 26, Saturday.— It was not till Wednesday that H. could get into Vicksburg, ten miles distant, for a passport, without which we could not go on the cars. We started Thursday morning. I had to ride seven miles on a hard-trotting horse to the nearest station. The day was burning at white heat. When the station was reached my hair was down, my hat on my neck, and my feelings were indescribable.

On the train one seemed to be right in the stream of war, among officers, soldiers, sick men and cripples, adieus, tears, laughter, constant chatter, and, strangest of all, sentinels posted at the locked car-doors demanding passports. There was no train south from Jackson that day, so we put up at the Bowman House. The excitement was indescribable. All the world appeared to be traveling through Jackson. People were besieging the two hotels, offering enormous prices for the privilege of sleeping anywhere under a roof. There were many refugees from New Orleans, among them some acquaintances of mine. The peculiar styles of [women's] dress necessitated by the exigencies of war gave the crowd a very striking appearance. In single suits I saw sleeves of one color, the waist of another, the skirt of another; scarlet jackets and gray skirts; black waists and blue skirts; black skirts and gray waists; the trimming chiefly gold braid and buttons, to give a military air. The gray and gold uniforms of the officers, glittering between, made up a carnival of color. Every moment we saw strange meetings and partings of people from all over the South. Conditions of time, space, locality, and estate were all loosened; everybody seemed floating he knew not whither, but determined to be jolly, and keep up an excitement. At supper we had tough steak, heavy, dirty-looking bread, Confederate coffee. The coffee was made of either parched rye or corn-meal, or of sweet potatoes cut in small cubes and roasted. This was the favorite. When flavored with "coffee essence," sweetened with sorghum, and tintured with chalky milk, it made a curious beverage, which, after tasting, I preferred not to drink. Every one else was drinking it, and an acquaintance said, "Oh, you 'll get bravely over that. I used to be a Jewess about pork, but now we just kill a hog and eat it, and kill another and do the same. It's all we have."

Friday morning we took the down train for the station near my friend's house. At every station we had to go through the examination of passes, as if in a foreign country.

The conscript camp was at Brookhaven, and every man had been ordered to report there or to be treated as a deserter. At every station I shivered mentally, expecting H. to be dragged off. Brookhaven was also the station for dinner. I choked mine down, feeling the sword hanging over me by a single hair. At sunset we reached our station. The landlady was pouring tea when we took our seats and I expected a treat, but when I tasted it was sassafras tea, the very odor of which sickens me. There was a general surprise when I asked to exchange it for a glass of water; every one was drinking it as if it were nectar. This morning we drove out here.

My friend's little nest is calm in contrast to the tumult not far off. Yet the trials of war are here too. Having no matches, they keep fire, carefully covering it at night, for Mr. G. has no powder, and cannot flash the gun into combustibles as some do. One day they had to go with the children to the village, and the servant let the fire go out. When they returned at nightfall, wet and hungry, there was neither fire nor food. Mr. G. had to saddle the tired mule and ride three miles for a pan of coals, and blow them, all the way back, to keep them alight. Crockery has gradually been broken and tin-cups rusted out, and a visitor told me they had made tumblers out of clear glass bottles by cutting them smooth with a heated wire, and that they had nothing else to drink from.

Aug. 11.—We cannot get to New Orleans. A special passport must be shown, and we are told that to apply for it would render H. very likely to be conscripted. I begged him not to try; and as we hear that active hostilities have ceased at Vicksburg, he left me this morning to return to his uncle's and see what the prospects are there. I shall be in misery about conscription till he returns.

Sunday, Sept. 7. (Vicksburg, Washington Hotel.)—H. did not return for three weeks. An epidemic disease broke out in his uncle's family and two children died. He staid to assist them in their trouble. Tuesday evening he returned for me and we reached Vicksburg yesterday. It was my first sight of the "Gibraltar of the South." Looking at it from a slight elevation suggests the idea that the fragments left from world-building had tumbled into a confused mass of hills, hollows, hillocks, banks, ditches, and ravines, and that the houses had rained down afterwards. Over all there was dust impossible to conceive. The bombardment has done little injury. People have returned and resumed business. A gentleman asked H. if he knew of a nice girl for sale. I

asked if he did not think it impolitic to buy slaves now.

"Oh, not young ones. Old ones might run off when the enemy's lines approach ours, but with young ones there is no danger."

We had not been many hours in town before a position was offered to H. which seemed providential. The chief of a certain department was in ill-health and wanted a deputy. It secures him from conscription, requires no oath, and pays a good salary. A mountain seemed lifted off my heart.

Thursday, Sept. 18. (Thanksgiving Day.)—We staid three days at the Washington Hotel; then a friend of H.'s called and told him to come to his house till he could find a home. Boarding-houses have all been broken up, and the army has occupied the few houses that were for rent. To-day H. secured a vacant room for two weeks in the only boarding-house.

Oak Haven, Oct. 3.—To get a house in V. proved impossible, so we agreed to part for a time till H. could find one. A friend recommended this quiet farm, six miles from — [a station on the Jackson Railroad]. On last Saturday H. came with me as far as Jackson and put me on the other train for the station.

On my way hither a lady, whom I judged to be a Confederate "blockade runner," told me of the tricks resorted to to get things out of New Orleans, including this: A very large doll was emptied of its bran, filled with quinine, and elaborately dressed. When the owner's trunk was opened, she declared with tears that the doll was for a poor crippled girl, and it was passed.

This farm of Mr. W.'s¹ is kept with about forty negroes. Mr. W., nearly sixty, is the only white man on it. He seems to have been wiser in the beginning than most others, and curtailed his cotton to make room for rye, rice, and corn. There is a large vegetable garden and orchard; he has bought plenty of stock for beef and mutton, and laid in a large supply of sugar. He must also have plenty of ammunition, for a man is kept hunting and supplies the table with delicious wild turkeys and other game. There is abundance of milk and butter, hives for honey, and no end of pigs. Chickens seem to be kept like game in parks, for I never see any, but the hunter shoots them, and eggs are plentiful. We have chicken for breakfast, dinner, and supper, fried, stewed, broiled, and in soup, and there is a family of ten. Luckily I never tire of it. They make starch out of corn-meal by washing the

meal repeatedly, pouring off the water and drying the sediment. Truly the uses of corn in the Confederacy are varied. It makes coffee, beer, whisky, starch, cake, bread. The only privations here are the lack of coffee, tea, salt, matches, and good candles. Mr. W. is now having the dirt-floor of his smoke-house dug up and boiling from it the salt that has dripped into it for years. To-day Mrs. W. made tea out of dried blackberry leaves, but no one liked it. The beds, made out of equal parts of cotton and corn-shucks, are the most elastic I ever slept in. The servants are dressed in gray homespun. Hester, the chambermaid, has a gray gown so pretty that I covet one like it. Mrs. W. is now arranging dyes for the thread to be woven into dresses for herself and the girls. Sometimes her hands are a curiosity.

The school at the nearest town is broken up and Mrs. W. says the children are growing up heathens. Mr. W. has offered me a liberal price to give the children lessons in English and French, and I have accepted transiently.

Oct. 28.—It is a month to-day since I came here. I only wish H. could share these benefits—the nourishing food, the pure aromatic air, the sound sleep away from the fevered life of Vicksburg. He sends me all the papers he can get hold of, and we both watch carefully the movements reported lest an army should get between us. The days are full of useful work, and in the lovely afternoons I take long walks with a big dog for company. The girls do not care for walking. In the evening Mr. W. begs me to read aloud all the war news. He is fond of the "Memphis Appeal," which has moved from town to town so much that they call it the "Moving Appeal." I sit in a low chair by the fire, as we have no other light to read by. Sometimes traveling soldiers stop here, but that is rare.

Oct. 31.—Mr. W. said last night the farmers felt uneasy about the "Emancipation Proclamation" to take effect in December. The slaves have found it out, though it had been carefully kept from them.

"Do yours know it?" I asked.

"Oh, yes. Finding it to be known elsewhere, I told it to mine with fair warning what to expect if they tried to run away. The hounds are not far off."

The need of clothing for their armies is worrying them too. I never saw Mrs. W. so excited as on last evening. She said the provost-marshal at the next town had ordered the women to knit so many pairs of socks.

"Just let him try to enforce it and they will cow-hide him. He'll get none from me. I'll take care of my own friends without an order from him."

"Well," said Mr. W., "if the South is de-

¹ On this plantation, and in this domestic circle, I myself afterward sojourned, and from them enlisted in the army. The initials are fictitious, but the description is perfect.—G. W. C.

feated and the slaves set free, the Southern people will all become atheists, for the Bible justifies slavery and says it shall be perpetual."

"You mean, if the Lord does not agree with you, you'll repudiate him."

"Well, we'll feel it's no use to believe in anything."

At night the large sitting-room makes a striking picture. Mr. W., spare, erect, gray-headed, patriarchal, sits in his big chair by the odorous fire of pine logs and knots roaring up the vast fireplace. His driver brings to him the report of the day's picking and a basket of snowy cotton for the spinning. The hunter brings in the game. I sit on the other side to read. The great spinning wheels stand at the other end of the room, and Mrs. W. and her black satellites, the elderly women their heads in bright bandanas, are hard at work. Slender and auburn-haired, she steps back and forth out of shadow into shine following the thread with graceful movements. Some card the cotton, some reel it into hanks. Over all the fire-light glances, now touching the golden curls of little John toddling about, now the brown heads of the girls stooping over their books, now the shadowy figure of little Jule, the girl whose duty it is to supply the fire with rich pine to keep up the vivid light. If they would only let the child sit down! But that is not allowed, and she gets sleepy and stumbles and knocks her head against the wall and then straightens up again. When that happens often it drives me off. Sometimes while I read the bright room fades and a vision rises of figures clad in gray and blue lying pale and stiff on the blood-sprinkled ground.

Nov. 15.—Yesterday a letter was handed me from H. Grant's army was moving, he wrote, steadily down the Mississippi Central and might cut the road at Jackson. He has a house and will meet me in Jackson to-morrow.

Nov. 20. (Vicksburg.)—A fair morning for my journey back to Vicksburg. On the train was the gentleman who in New Orleans had told us we should have all the butter we wanted from Texas. On the cars, as elsewhere, the question of food alternated with news of the war.

When we ran into the Jackson station H. was on the platform, and I gladly learned that we could go right on. A runaway negro, an old man, ashy colored from fright and exhaustion, with his hands chained, was being dragged along by a common-looking man. Just as we started out of Jackson the conductor led in a young woman sobbing in a heart-broken manner. Her grief seemed so overpowering, and she was so young and helpless, that every one was interested. Her husband went into the army in the opening of the war, just after their

marriage, and she had never heard from him since. After months of weary searching she learned he had been heard of at Jackson, and came full of hope, but found no clue. The sudden breaking down of her hope was terrible. The conductor placed her in care of a gentleman going her way and left her sobbing. At the next station the conductor came to ask her about her baggage. She raised her head to try and answer. "Don't cry so, you'll find him yet." She gave a start, jumped from her seat with arms flung out and eyes staring. "There he is now!" she cried. Her husband stood before her.

The gentleman beside her yielded his seat, and as hand grasped hand a hysterical gurgle gave place to a look like Heaven's peace. The low murmur of their talk began, and when I looked round at the next station they had bought pies and were eating them together like happy children.

Midway between Jackson and Vicksburg we reached the station near where Annie's parents were staying. I looked out, and there stood Annie with a little sister on each side of her, brightly smiling at us. Max had written to H., but we had not seen them since our parting. There was only time for a word and the train flashed away.

XII.

VICKSBURG.

[Here follow in the manuscript the writer's thrilling experiences in and throughout the siege of Vicksburg, as already printed in this magazine for September, 1885. It is just after the fall of Vicksburg that she resumes.]

Aug. 20.—Sitting in my easy chair to-day, looking out upon a grassy slope of the hill in the rear of this house, I have looked over this journal as if in a dream; for since the last date sickness and sorrow have been with me. I feel as if an angry wave had passed over me bearing away strength and treasure. For on one day there came to me from New Orleans the news of Mrs. B.'s death, a friend whom no tie of blood could have made nearer. The next day my beautiful boy ended his brief life of ten days and died in my arms. My own illness caused him to perish; the fatal cold in the cave was the last straw that broke down strength. The colonel's sweet wife has come, and I do not lack now for womanly companionship. She says that with such a pre-natal experience perhaps death was the best for him. I try to think so, and to be glad that H. has not been ill, though I see the effects. This book is exhausted, and I wonder whether there will be more adventures by flood and field to cause me to begin another.

TO A DOG'S MEMORY.

THE gusty morns are here,
When all the reeds ride low with level spear;
And on such nights as lured us far of yore,
The Hound-star and the pagan Hunter shine
Down rocky alleys yet, and through the pine:
But I and thou, ah, field-fellow of mine,
Together roam no more!

The world, all grass and air,
Somehow hath lost thee; and the roadsides wear
A heavy silence since thy welcomes fail
Bonfires, and fiddles, and the van we knew
Gleaming with gypsies, and the bear that drew
Thy kindled eye, the sulky dancer through
Our leafy Auburndale.

Soft showers go laden now
With odors of the sappy orchard bough,
And brooks, bewitched, begin a madder march;
The late frost smokes from hollow sedges high;
The finch is come, the flame-blue dragon-fly,
The cowslip's outcast gold that children spy,
The plume upon the larch.

There is a music fills
The oaks of Belmont and the Wayland hills
Southward to Dewing's little bubbly stream—
The heavenly weather's call! Oh, who alive
Hastes not to start, delays not to arrive,
Having free feet that never felt a gyve
Weigh, even in a dream?

But thou, instead, hast found
The sunless April uplands underground;
And still, wherever thou art, I must be.
My beautiful! Arise in might and mirth
(For we were tameless travelers from our birth)—
Arise against thy narrow door of earth,
And keep the watch for me!

Louise Imogen Guiney.

TOPICS OF THE TIME.

History and Current Politics.

THE LATE PROFESSOR ALEXANDER JOHNSTON.

WE recall to our readers with sorrow their loss and ours in the untimely death on the 20th of July last of Professor Alexander Johnston of Princeton College. He had been for a few years past a frequent and acceptable contributor to this department of THE CENTURY, and those who have found in his acute discussion of current themes an impulse to deeper interest in contemporary history, and a help to the more accurate knowledge and juster appreciation of the great social and political movements of their fellow-citizens, will find a sad interest in a short account of his work. He was born in Brooklyn forty years ago, on the 29th of April, fitted for college in the preparatory schools of that city, and graduated with the highest honors from Rutgers in the class of 1870. The direction of his studies up to that time was exclusively along the old-fashioned college course, and he excelled in the classics, winning the more important prizes in that department. For the next five years his time was divided between teaching and the study of law, and in 1875 he was admitted to the bar of New Jersey. Not long afterwards he removed to Norwalk, Connecticut, where he founded a classical school, still in existence, and began his literary career. His success as an author brought him in 1884 a call to the chair of jurisprudence and political economy in the College of New Jersey. He carried to his new field enthusiasm and ripe scholarship, the disposition and experience of the teacher, and enjoyed for the short but illustrious remnant of his life such unbroken success and increasing popularity as only genius and goodness can command.

The list of his published works is a long one for a life comparatively so short, and argues not only untiring industry but the possession of the literary gift in a high degree. He wrote for Lalor's "Cyclopædia of Political Science" the articles over his signature on American political history; the article on American history in the American Supplement to the Philadelphia edition of the "Encyclopædia Britannica"; "The Genesis of a New England State," No. 12 of the Johns Hopkins Historical Series; edited the three volumes of "Representative American Orations," and wrote for the periods into which the selections are divided a series of comprehensive and charming summaries; Chapter VII. of Winsor's "Narrative and Critical History of America," that on Political Parties, is by him; the splendid account of our history in Vol. XXIII. of the "Britannica," itself a volume of perhaps four hundred pages; and several other articles in the same encyclopædia, notably that on Washington, are also from his pen. His separate and independent publications are his well-known "History of American Politics," a school "History of the United States," and the volume on "Connecticut" in the American Commonwealths Series. Much of his most original research, moreover, was printed from time to time in reviews and periodi-

cal. All this work is characterized by thoroughness and sincerity. He was the first to correct, and acknowledge, as he discovered them, the few errors in fact or judgment which he made. With such powers it is no wonder that his reputation had crossed the sea, and that the editors of the great "Encyclopædia Britannica" found him the fittest guide for their public as for ours in matters of American history. "The Pall Mall Gazette" playfully remarked, in reviewing the "History of American Politics," that with such a handbook the British editor would thereafter put aside his too well-known habit of blundering over American politics, and in the absence of a similar guide to the story of English parties disport himself in ignorance of his native land.

It was therefore from the hand of the lawyer, the scholar, the author, the professor, that came the terse, incisive, and intelligent criticisms of current politics which we were happy to lay so often before our readers. Professor Johnston's mind was eminently practical, and his success in the class-room, aside from his gracious manner and warm interest in his pupils, was, we hear, largely due to the concreteness of his teaching. It was his habit to make concise statements of principles and then flood them with a mass of adequate illustrations from the everyday world which enthralled his hearers and fixed his instruction in their mind, showing as it did the immediate value of correct theory. The same characteristics marked his editorial work in this department. He had learned in his studies the basis and development of American institutions, and was therefore little affected by modern sciolism. He valued above all else the old-fashioned idea of personal freedom with its corollary of personal initiative and responsibility, emphasized at all times the essential character of local rights and government, and the subservience of political theory to historical induction. Add to this the high ethical plane on which his mind worked, his keen scent for reforms and judicial appreciation of their value, and we have such an outline of his character as it is permitted a friendly co-worker to draw. It seems to us that the moral of his life is to be found in the words at the head of this notice—the value to a sane, practical mind of the study of history not merely for the construction of a science of politics, but for the formation of sound opinions about daily life and about politics as a discipline and an art.

Disasters.

ONE of the dreadful aspects of such recurring horrors as the flood at Johnstown and the burning of Seattle and Spokane Falls, which, with the hurricane of Samoa, will probably be the extraordinary events of the year's annals, is the easy facility with which, after all, the public mind is disposed to deal with them. The Pennsylvania misfortune seems to have lacked none of the tints necessary for the darkest of pictures. The population of a whole mountain region is put into

imminent peril of life and limb; death carries off about as many as it claimed during any of the great battles of the civil war; and the scenes of pathos or despair, by day and night, from flood and flame, seem to have made our newspapers a mass of harrowing details for the possible instruction of posterity. Apart from the loss of life, the fate of the Northwestern cities seems to have had its own dramatic elements. The region is one where but a few years ago the poet found synonyms for desolation in the long roll of the solitary river, but where the enterprise, industry, and thrift of American men and women have established civilization, have built up new States like magic, and have endowed them with rich and splendid cities whose names are still hardly familiar to the rest of the country. It reads like a mockery of history that the burning of a single city in this new region should already entail losses such as, fifty years ago, constituted the "great fire" of our great commercial city. The popular impulse is the same in either case. The response of the popular heart is as instant as electricity. Money, material aid, personal assistance, are hurried to the point of need; for some time no one can think or talk of anything else; a few lessons from the pulpit or the press serve to point a moral of one sort or other; and then the débris is removed and the usual struggle for existence is renewed until, perhaps, it is interrupted by another case of the kind.

And yet there are lessons which should be scored into the popular intelligence by every new case of the kind. One is that we must no longer expect that such calamities, if they are to occur, are likely to be small ones; it is one of the penalties for our growth of population that they are now increasingly likely to be dire misfortunes. The great earthquake of 1811 has left its transient marks in a few swamps and lakes along the Mississippi and in some wild stories of the early settlers; but such an event could not occur in the denser population of our times without reviving and strengthening our memories of the overthrow of Charleston. We see the ancient track plowed by the meteorite through earth and rock: what if such a visitant should have its billet to some great house and distinguished audience in one of our modern cities? It is but in the nature of things that those natural calamities which must be reckoned with as non-preventable and inevitable should nevertheless find more and more shining marks as the surface of the country swarms more thickly with population, industry, and wealth.

But this impossibility of obviating the growing peril of modern life from inevitable natural calamities only adds a keener point to the growing necessity for care in guarding against the results of preventable events. In the case of many of these events responsibility is already fixed and measured by law; but there is still danger enough that the judicial conception of this measure of responsibility will continue to be limited by the smaller facts of the past, and will not grow, as it should, with the growth of the attendant perils. The fool who flings about firebrands and death, and says, "Am I not in sport?" becomes a greater and still greater offender with the passage of every year and the consequent development of more important human interests which may fall indirect victims to his folly. The theory of progressive culpability is one in which

public opinion may furnish the best stimulus for the judicial conscience, so that the law's perception may not stand still, or wait for statutory enactment which is likely to be weighted with obsolete circumstances.

But there remain other fields, perhaps of less definite limitation, but of probably greater public importance, in which still greater service may be done by a trained public opinion. If it be admitted, as it surely must be, that both the avoidable and the unavoidable perils to human life and property are increasing with the density of population, that fact should be enough of itself to establish a rising standard of municipal care and forethought. Indeed, the standard should rise faster than population increases, for the dangers increase more rapidly. Why, for example, should that heathen abomination the fire-cracker be tolerated in one of our growing American cities for even a single additional year? The increase of the danger from this source over last year or ten years ago is not merely in the ratio of the intervening growth of population, but very much greater.

It is not enough, then, that public opinion should rest content with public benevolence, or that it should write off its responsibility as the last car-load of supplies is shipped to the scene of disaster. Every such recurrent event is a warning to other centers of population that it is time for public opinion to push the standard of municipal care yet a little higher. In many of our cities there are still hordes of men who lay hungry claim, as political rewards, to offices for whose duties they are not competent. The disasters of this year are a new and louder warning to every such city to bar out such applicants more strenuously, and to announce more definitely and clearly that it can no longer take such risks or afford to permit its offices to serve as political rewards. The question is no longer one of money, or of taxes, or of the formation of an "office-holding class"; it has taken the more fundamental shape of the increased, the immeasurable, extent to which disasters of every grade may be multiplied beyond their natural limits, by incapacity or carelessness in the occupant of even the minor administrative offices of our modern cities. In this and innumerable relations of the kind public opinion may find its most cheering work in the regeneration of our cities; and by raising the standard of municipal management and municipal civil service it may defeat some disasters altogether and reduce and hold down the evils even of those which are inevitable.

A New College for Women.

THERE have been three distinctly marked stages in the higher education of women in America: co-education, pure and simple, first tested at Oberlin, in 1833; then separate colleges for women, in which line Vassar, in 1865, made the first departure; and last the "annex" plan, marked by the opening of the Harvard Annex in 1879. In England, on the other hand, the first effort to give collegiate training to women came from colleges open exclusively to women (Queen's, 1848), and in 1869 Girton made the first trial of the annex plan. No important co-educational scheme, as we understand co-education, has been tried in England.

The most popular and widely known women's colleges in England are Newnham and Girton, "annexed"

to the University of Cambridge. That is, the students of these colleges perform the same work as the university men, but in their own college building. There is no co-education such as is in operation at Cornell and Ann Arbor. The Newnham women are satisfied so long as they attain the standard of excellence prescribed by the university, and it is a matter of slight importance to them whether or not they receive instruction at the same hour, and in the same room, with their brothers.

There is unquestionably a prejudice in America against annexes. At the Woman's International Congress at Washington one delegate protested in the following terms: "Those bright, enthusiastic, large-framed, and big-hearted young women of the West, those young women who have in their eyes the distant horizon of their prairie homes, will have nothing to do with annexes." Possibly the prejudice is due wholly to unfortunate associations with the word itself. It is certainly difficult to respect the word in its educational significance, when we have annexes to hotels, to shops, and to ferryboats! The English expression for the objectionable term is "affiliated college," a description certainly more dignified.

A new affiliated college opens in October in New York City. It is new in that it is the first woman's

college situated in the heart of a great city, and, again, it is new in being the first affiliated college whose graduates are entitled to a university degree. The students of Newnham, Girton, Somerville, Lady Margaret, and the Harvard Annex must content themselves with what is called a "degree certificate," testifying that the candidate's scholarship would have entitled her to a degree if she had been a man.

The new college, affiliated to Columbia College, will bear the name Barnard, a name made eminent by one of the most far-sighted and advanced educators of America — the late president of Columbia College. Barnard College is situated at 343 Madison Avenue, five blocks from Columbia College. A student of Barnard College will do the same work as a student of Columbia, will have the same instructors, and will take the same examinations. Barnard College opens with a school of arts only, but in time she hopes to offer the broadest opportunity for scientific training.

The college will receive for the first year a freshman class only; consequently, its first graduates will receive their degrees in 1893. It is to be hoped that Barnard College will meet a support which will enable her to keep ahead of the present movement at Columbia towards encouraging and providing for graduate work.

OPEN LETTERS.

A View of the Confederacy from the Inside.¹

A LETTER FROM JUDGE JOHN A. CAMPBELL, FORMERLY ASSISTANT SECRETARY OF WAR, C. S. A.

FORT PULASKI, GEORGIA, 20th July, 1865.

MY DEAR SIR: I learn that you have interfered in my behalf to obtain my release from arrest and confinement. I am obliged by your interposition, and appreciate it the more because that the war has made no change in my feelings toward yourself.

You are aware that I was not a patron or friend of the secession movement. My condemnation of it and my continuance in the Supreme Court were regarded as acts for which there could be no tolerance. When I returned to Alabama in May, 1861, it was to receive coldness, aversion, or contumely from the secession population. I did not agree to recant what I had said, or to explain what I had done; and thus, instead of appeasing my opponents, I aggravated my offense. This was still more aggravated by my opinion that cotton was not king; that privateering would not expel Northern commerce from the ocean, but would affront European opinion, and that privateering and slavery would prevent recognition, and that the war would be long and implacable; that the Northern people were a proud and powerful people that would not endure the supposed insults they have suffered, and that their "pocket nerve" was not their most sensitive nerve. Messrs. Toombs and Benjamin were promising peace before the winter. I had no connection with the Con-

federate Government in 1861, nor until the last of October, 1862. General Randolph, whom I scarcely knew, asked me to be Assistant Secretary of War, with an apology for doing so.

The war had then assumed gigantic proportions: confiscation acts and emancipation proclamations, and the administration of government in New Orleans and North Alabama, seemed to place a new face upon the war. It appeared to be a war upon political and civil society and government within the Confederate States.

The Southern country had greatly suffered: I had spent much time with the sick and wounded, and had witnessed bereavement, distress, destitution, suffering, as well as devotion and fortitude. The civil institutions were debilitated. Much of the business and feeling of the country centered in the War Department, and there was a want of some controlling mind in regulating its civil and judicial business. The conscription brought all persons of military age under its jurisdiction; impressments affected property, military domination very often infringed personal liberty and private right. There had been delay and vexation in the transaction of business.

I did not desire a conspicuous place, and every overture to place me in Mr. Davis's cabinet had been discountenanced with emphasis. I declined to go abroad. My wish was to be of use in mitigating the evils there were upon the country. I cannot make you feel how large they were.

¹ The original of this letter, here printed for the first time, is in the possession of Charles P. Greenough, Esq., of Boston. When Judge Campbell was imprisoned in Fort Pulaski his former associates on the Supreme Bench, Judges Curtis and Nelson, both

wrote to President Johnson, and finally succeeded in getting Judge Campbell released. This letter was written when Judge Campbell learned that Judge Curtis was making efforts in his behalf. The text of the original letter has been carefully followed.—EDITOR.

I never labored more. I do not know that any one man has suffered from any act of mine any aggravation of his calamity. I do know of large classes that experienced sympathy and assistance. When my arrest was known the leading member of the Society of Friends called on Mrs. Campbell to say that every member of the society in the district would petition for my release, and he actually carried to Washington City such a paper.

There are other testimonials equally grateful to my feelings. I resigned twice and attempted to do so at other times. But there were considerations that would not allow me to press the offer. I did not hold to the office from avarice, for the annual salary was never worth \$500 in specie, and became at last just \$100. When I entered the office I supposed I might become useful in the settlement of a peace if I were connected with the Government. There was no opportunity for this in 1863, and not until 1864 had nearly expired could the subject be broached with any advantage.

There were discontents with Mr. Davis, and those who desired to weaken him made use of the desire for peace to effect the object. They represented him as averse to peace and that negotiations would bring peace. None spoke of union as a basis of peace; all repudiated a disposition for peace on that basis. In 1864 I became satisfied that the resources of the Confederacy for another campaign were exhausted. The finances, recruiting of soldiers, commissariat, transportation, ordnance and ammunition, and medical supplies had all failed. None were adequate for another campaign. The Secretary of the Treasury did not make a fair and candid report in November, 1864. The unanswered requisitions amounted to \$170,000,000, and he had no means to answer them. He had issued (nearly) to the maximum limit, treasury notes, and they were at the time thirty to one as compared with specie. But his failure to supply these requisitions, and his inability to do so, prevented the making of requisitions for \$250,000,000, which were also due. This was not regarded in his report nor provided for in his estimates or budget. I brought this matter to the attention of the Secretaries of War and Treasury and the truth was admitted. It became finally to be seen that the finances were in hopeless ruin. Treasury notes to \$400,000,000 had been issued; these were selling as sixty to one for specie at the treasury. The supply of specie 15th February was \$750,000; bonds and certificates of deposit were not salable, taxes were difficult of collection, and irritation and discontent existed because the outstanding indebtedness was not liquidated. The estimates of the year for the War Department were \$1,337,000,000 in Confederate bills and the restriction on issues not taken off.

The condition as to men was nearly as bad. In April, 1862, conscription embraced those between 18 and 35; in October, 1862, those between 35 and 40 were added; in July, 1863, those of 40 and 45 were added; in February, 1864, those between 17 and 50 were added; all men who had placed substitutes in service were called for and exemptions were curtailed. During the war there had been exemptions and details for civil and industrial service. Manufacturies, mechanical and agricultural employments, were sustained by details, but in October, 1864, a sweeping order of revocation was made. This order evinced extreme

weakness; it carried despondency and dismay among the people. It did not serve to recruit the army—the supply of men was exhausted.

The army was reduced by desertions, and these now became more numerous and from a better class of men. The difficulties of the time led to desertions from the workshops and manufacturing establishments. The commissariat experienced the pressure of the time earliest among the bureaux. Supplies were hoarded. Sales were refused for bonds, and certificates and bills could not be had. Impressment could not be relied on. The army was for most of the time on half-rations, and the largest supply at Richmond and Petersburg during the whole winter was a supply of six days.

The transportation was almost exhausted. The Piedmont road, through Danville and Greensborough, North Carolina, became the principal channel of communication. Its entire capacity was 192 tons daily, and the daily demand of the army was 120 tons. The road was put out of repair three days during the winter by rains, and we had to ask the citizens of Richmond for flour from their reduced family supplies, and the 1000 barrels obtained cost \$650,000. In the same woful condition was the transportation by animals. The facts in regard to arms, ammunition, medical supplies, etc. disclose a similar condition of ruin.

You would suppose there could be no difficulty in convincing men under such circumstances that a peace was required. But when I look back upon the events of the winter, I find that I was incessantly employed in making these facts known and to no result.

A committee of Congress was appointed to examine the state of the commissariat; was informed of it and did not report. The President was called upon to afford knowledge of finances, recruiting, etc.,—in a word, the state of the Confederacy,—and did not answer. Letters were addressed on single portions of the deficiency and no heed was taken of them.

In December I wrote to Judge Nelson a letter inviting an interview with him, and asking that Messrs. Ewing, Stanton, or yourself might come. I obtained a license to write this letter and to have this communication.

There were for discussion, as the issue of the war, the questions of union, slavery, confiscation, pains and penalties, forfeitures for taxes, limits of western Virginia—in fact, all civil society in the Confederacy was involved. I supposed that with these intelligent and sober-minded men the embarrassments and perils of the condition could be mitigated. I was then fully disposed for peace. I have never had a reply to the letter, though I was told there was one. In lieu of this there came Francis P. Blair.

He duped Mr. Davis with the belief that President Lincoln regarded the condition of Mexico with more concern than the war; that he would be willing to make a suspension of hostilities under some sort of collusive contract, and to unite Southern and Northern troops on the Rio Grande for the invasion of Mexico, and that after matters were assured in Mexico affairs might be adjusted here. This was the business at Hampton Roads. I was incredulous, Mr. Hunter did not have faith. Mr. Stephens supposed Blair to be “the mentor of the Administration and Republican party.”

We learned in five minutes that the assurances to

Mr. Davis were a delusion, and that union was the condition of peace. I had always supposed this to be the case, and had refused all discussions on the subject of negotiation unless that condition was first admitted. I had never regarded a peace on that basis as inadmissible; but, on the contrary, was firmly persuaded that the programme of independence had failed with the loss of the Chesapeake Bay, Mississippi, Tennessee, and Cumberland rivers, and the coasts of the Carolinas.

The change in the conditions of the war by the confiscation acts and proclamation unquestionably prolonged it. When I came from Hampton Roads I recommended the return of our commission or another commission to adjust a peace. I believed that one could be made upon the concession of union and the surrender of slavery, upon suitable arrangements. I so advised my colleagues. I wrote to Governor Graham of North Carolina a careful letter explaining all my views, for exhibition to his brother senators. A committee was raised to wait on Mr. Davis (Graham, Hunter, Orr) and conversations were had with him. This failed. I then wrote a careful review of all the conditions of the military service and of the financial and political state of the country, and recommended a negotiation for peace on the basis of union, as necessary. This was addressed to General Breckinridge. It was submitted to General Lee, and reports from the Commissary-General, Quartermaster-General, and Chief of Ordnance obtained, and the whole placed before Mr. Davis. This led him to ask Congress to repeal their resolution to adjourn. He submitted these in a secret message, without note, comment, or exposition, and at the same time submitted a public message, scolding Congress for delay and inattention and urging a vigorous prosecution of the war and the adoption of the following measures:

1. Suspension of habeas corpus.
2. Organization of militia.
3. To raise \$3,000,000 in gold.
4. To impress without cash payments.
5. To modify the law as to the use of detailed men.
6. Arm slaves.

The four last were granted, and could not have affected, and did not affect, our condition in the slightest measure.

No notice was taken of the secret message. The Congress replied with tartness to the charges as to delays and inattention, and retorted the charges. Governor Graham was ready with resolutions for negotiations, but the conduct of Mr. Davis indisposed others to consider them.

There seemed to be a superstitious dread of any approach to the one important question of settlement by negotiation. Mr. Davis, with the air of a sage, declared that the Constitution did not allow him to treat for his own suicide. All that he could do would be to receive resolutions and submit them to the sovereign States; that his personal honor did not permit him to take any steps to make such a settlement as was proposed. The result is, that each citizen of the Confederacy is making his separate treaty on the basis of President Johnson's merciful amnesty proclamation.

I have stated to you the facts. I do not pretend to have done more than to accept conditions that were inexorable, and to endeavor to stop the effusion of blood, and to husband the remnants of the resources that had not been consumed by the war. This I did with more urgency, and a more consistent and definite purpose

than any other, I believe. The idiosyncrasy of one man defeated the design. It would not be proper to speak of Mr. Davis in his present circumstances with any harshness. I do not believe for a moment that he participated in the plot to destroy Mr. Lincoln. His humanity, pride, sense of his own reputation and character, tenacious observance of the rules he esteems important, not to take into account his religious and moral principles of action, forbid me to believe this without strong and direct proof. But he was unfitted to manage a revolution or to conduct an administration. Slow, procrastinating, obstructive, filled with petty scruples and doubts, and wanting in a clear, strong, intrepid judgment, a vigorous resolution, and a generous and self-sacrificing nature, he became in the closing part of the war an incubus and a mischief.

I decided to abide the fate of Richmond—an inevitable fate; General Lee could neither hold it nor move away from it. His ruin was sealed, and with that the fate of the Confederacy. This I stated in the letter referred to; I told the Secretary of War I should remain, and should take an opportunity to see Mr. Lincoln, if possible. I would like to have his authority to do so, but should do so without it.

The United States troops entered Richmond the morning of the 3d of April. The evacuation took place the night previously. There was only wanting a licentious soldiery to make the scene appalling, but the United States soldiers behaved with propriety. There was conflagration, plunder, explosions of arsenals, magazines, gun-boats, and terror and confusion.

Mr. Lincoln came to Richmond the 4th of April. I had an interview with him. I told him that the war was virtually ended, that General Lee could not hold his army together, that the public men in Virginia would aid him to restore the Union, and that he might rely on this. I urged him to adopt a course of leniency and moderation—"That when lenity and cruelty play for a kingdom the gentler gamester is the soonest winner"; that I had regarded this war as one between communities, the one contending for independence, the other for continued union; that the successful party in any event should have made his success as little aggravating to the other as possible; that were independence to be won, still a close union was anticipated to be formed. I stated to him my position—that I had remained because I knew that the war was virtually over, and to perform my duty to the country.

It so happened that I was the only person who had occupied any position of prominence that did remain, and so I had to speak for Virginia what would have been more appropriate for a Virginian. I noticed this to Mr. Lincoln.

He concluded to remain until the next morning to have another interview. He made no reply to what I said at this time. The next morning I met him on the *Malvern*, Mr. G. A. Myers, an established member of the bar of Richmond, going with me, and General Weitzel being present.

Mr. Lincoln had reduced to writing his terms of peace. There were three indispensable conditions: 1. Recognition of the national authority. 2. No cessation of hostilities till this was entirely done. 3. No receding by the Executive in reference to slavery, as

manifested in his proclamation and other official papers. All other questions to be settled on terms of sincere liberality.

He agreed to release all confiscations to those States that would forthwith recognize the national authority, and proposed to charge those for the continued expenses that rejected this offer. He handed me this paper after explaining it. He spoke of pains and penalties. He said that it would not be proper to offer a pardon to Mr. Davis,—whom we familiarly call Jeff. Davis,—who says he will not take one, but that almost any one could have anything of the kind for the asking.

I replied to his remarks by urging the suspension of hostilities to treat.

I told him that the effect of such a measure would be peace on his own terms; that General Lee could not hold his army together under such circumstances; that our trouble had been to find the man or men who would take upon themselves the responsibility of action. Mr. Davis objected that he could not constitutionally make peace and destroy himself. General Lee had said that he could only make military conventions; Congress had been unwilling to act without Mr. Davis and General Lee; but that now there would be no hesitation, because the military situation was more critical and the necessity more urgent.

I submitted to him the draft of a convention I had drawn and placed before General Breckinridge and Mr. Davis as a mode to make peace on the basis of union. He assented to the existence of the difficulty, took my paper for consideration, and said he had been considering of a plan to call the Virginia legislature together that they might restore the State to the Union. He said that it was important for that legislature to do so, that they were in the condition of a tenant between two contending landlords, that the tenant should atturn to the successful party who had established his right. He said he had a government in northern Virginia, but that its margin was small and that he did not desire to enlarge it. He learned from Mr. Myers the condition of the legislature and whether it could be convened, and declared that he would make known his conclusion when he got to City Point.

In this conversation there was no effort to mystify or to overreach. I knew that General Lee's army would fall apart, or suffer a great disaster. The stores at Richmond were lost in the evacuation; there were no magazines in the country, and I did not believe that the stock saved in Petersburg could sustain his army five days if all were saved. But the fact was that he lost his supplies at Petersburg, and that his capture was compelled by the disorganized state of his army in consequence of a loss of his provisions. This had been made known as a probable consequence a month previously.

Three days after my conversation the capture of General Lee took place. In the intervening period commenced the work of fulfilling Mr. Lincoln's wishes. He consented in a letter to General Weitzel to the call of the Virginia legislature, but upon the capture of General Lee revoked the call, and the newspapers, with their usual and characteristic disposition to censure, have charged upon General Weitzel and myself some impropriety. The charge against me is that of having circumvented Mr. Lincoln.

VOL. XXXVIII.—126.

Undoubtedly the capture of Lee made the use of the machinery I have suggested as unnecessary for the purpose of securing peace, and I have not complained of Mr. Lincoln. Whether a better plan to secure a prompt, cheerful, and complete pacification could have been suggested or has been adopted remains to be seen. I desired that the men who could control opinion and who commanded the public confidence, and who were ready to abide by the Union, should not be discarded or disfranchised, but their coöperation and aid should be received with cordiality. But I do not place any stumbling-block in the way of any other policy, and am content to have peace and pacification as they may be awarded by the conquering powers.

You are well aware that I was not a fanatical proslavery man; I had voluntarily liberated all of my slaves before the war some years. In 1847 I had, in a review on slavery in the "Southern Quarterly Review," advocated as a duty the amelioration of the law of slavery and proposed the establishment of the legal relations of slaves in the family on a firm foundation, and the removal of restraints on voluntary emancipations, on education, and to abolish all sales under legal or judicial orders or process. In articles on the same subject, and in conversation, I agreed that amelioration was a duty and necessity. In 1860-61 some of the Southern papers called me an abolitionist.

I agree too that President Lincoln's proclamation was one of that class of measures that determine the policy of a people for weal or woe. In the state of the world's opinion there could not be a step backward. Mr. Lincoln felt this, and one of his conditions of peace was "no receding by the Executive" from his position, and his explanation was his promise never to recede.

We have now to test the wisdom of the measure. In regarding the subject of slavery in former years, I have esteemed as the greatest calamity that could befall the country the introduction of emancipation except through the agency of the State governments; that the conditions of the society should be ameliorated by the society itself. I have uniformly admitted that there was a fatal error in supposing that the perils of the South were to be obviated by political or party arrangements at Washington. The remedy was in a social amelioration at home, commencing in the manner indicated in the article in the "Review" and others of a similar nature.

But the precise evil before us is emancipation by the armed force of States not holding slaves and who have enlisted in their armies probably one-sixth of the virile population of slaves as auxiliaries.

Whether prosperity will follow from this disturbance of the society is the difficult problem before us, and surely it is one that will task all the faculties of our peoples and the best qualities of their nature. It does seem to me it is a sufficient burden, and that the conquest is sufficiently embarrassing without the enforcement of the laws that Mr. Seward stated to me at Hampton Roads were the offspring of the most vehement passion in time of war. Mr. Burke, in his tract on the Policy of the Allies, has exposed with his characteristic clearness the rules by which statesmen may compose the elements of a state torn by revolutionary factions and plunged in the worst excesses of civil war. In his speech on Conciliation of America he developed

counsels for enlightened patrial statesmen, who would soothe the discontents in an empire and to preserve it from war. I should rejoice to see these adopted in the present crisis.

I was arrested the 22d of May, at 10 P.M., under a short, abrupt order from the War Department. I was at home, where I had been since the evacuation of Richmond, and expected no evil and thought none. I remained on the gunboat (*Mossvood*) in James River before Richmond a few days, and after an hour's notice was sent to this fort. I saw in the report of the military court a letter that had an indorsement of mine. I supposed it possible that this had something to do with my arrest. I addressed General Ord, commanding at Richmond, a letter of explanation, and requested that copies might be sent to Mr. Stanton and Mr. Holt. But I am still here. The officers are courteous and considerate and I suffer no indignity. But I should be glad to know why I am arrested and detained.

My affairs greatly need attention. Without any fault my fortune has been nearly exhausted. An explosion that took place at Mobile has put in ruins that upon which I depended to support my family. I earnestly desire to labor in their behalf. With kind remembrance to your daughter,

I am your friend,

J. A. Campbell.

HON. B. R. CURTIS, BOSTON, MASS.

Maria Mitchell.

WHATEVER is most characteristic and strongest in the New England type was perceived at once in Maria Mitchell. To those who are not well acquainted with that type she would have appeared perhaps a little hard and brusque. But in the genuine New England character there is always a depth of tenderness which can be depended on to appear when most wanted, and that quality was not lacking in her. She was especially fond of children, and a welcome friend to them, because at once they felt in her the sincerity which was the keynote of her whole being. Those who had only revered and respected her learned to love her after seeing her with children. Respect she always commanded, not only from those who knew her, but from strangers. I remember being impressed with this power when I heard her rebuke a rough man who undertook to smoke in an omnibus; the absolute fearlessness, the plain straightforward telling of the truth that he had no right to do this and that he infringed on the rights of others, and his instant obedience to her request, made an impression upon me which never can be forgotten.

The New England characteristics were perhaps intensified in her by the Quaker training and home influence. Those who were at Vassar during the first years of the college must all remember the silent "grace" at table, which was a tribute of respect to the old father brought to live there by his daughter as one condition of her accepting the call to a professorship. The bond between her and her father was unusually strong, and the two had a happy home together in the observatory building till the old man died. After that time Miss Mitchell still lived there, having some one of her students as a companion, so that her life was, whenever she chose to make it so, quiet and solitary in the company of her telescope and surrounded by

her professional work. The special students in astronomy were never very many, but her influence was not confined to them. She took her meals in the large hall and was familiar with all the students, and wherever she appeared there blew a fresh breeze of genuine life. Clear and strong and pure as the sea breeze over the south shore of her native island, her personality made itself felt, sweeping away all tendency to the sickly sentimentality which is apt to be found where many girls are congregated, and to the flattery of which so many women teachers weakly yield. Her absolute truthfulness of character never failed to find and fortify the honest intent, never missed striking and banishing all affectation. No girl could come before her without being self-judged. Such a presence is of inestimable value in a college like Vassar.

Nothing was more characteristic of her than the way in which she accepted the position and the salary offered her, without ever thinking to inquire whether the salary was the same as that given to the other professors. It was the chance to work that she wanted, the chance for influence in one of the first colleges for women. The money she was to receive was a minor consideration, and quite as characteristic was her indignation when, after being there for a considerable time, her attention was at last called to the fact that she, a mature woman, with a European fame, was receiving a salary less than that paid to some of the professors who were young men, almost entirely without experience, and quite destitute of reputation. The indignant protest, which then called for an equal salary, was not a personal affair. She flamed out in behalf of all women, and of abstract justice, with a glow which forced an immediate increase in salary. The excuse for this injustice must be found first in the fact that, at the time when Vassar College was established, women had not proved what they can do in professional lines, and, second, in the very conservative influences which guided the policy of the institution. In her religious belief Maria Mitchell was attached to one of the so-called most liberal sects. The children of the old Quaker families of Nantucket generally went over to the Unitarians if they departed from the strict faith of their fathers, so that in this matter also she was almost if not quite alone at Vassar. But she was appointed on the ground of her reputation as an astronomer, and fortunate was it for the college that the question of her religious belief was not raised till after her appointment.

The absolute truth which, as I have said, was the keynote of her character, could not fail to make her teaching thorough, for a love of truth is one and the same, whether in the intellectual or the moral sphere. But, as with all true teachers, it was the force of her personal character that acted most upon the young women with whom she came in contact. No one of them but was lifted and strengthened by her strength, sincerity, and single-heartedness. It was difficult for her to use diplomacy in never so small a degree, and what skill in it she did gain was the outcome of long years of experience, and she never employed it without a mental protest. She gave the New England stamp to whatever work she touched, and the lines of influence she has left on many characters are as indelible as those on the rock surfaces of New England's granite hills.

Anna C. Brackett.

The Single Tax on Land Values.

IN your issue for July you publish, under the title "Confiscation no Remedy," a letter from W. M. Dickson of Cincinnati, Ohio. Pray grant me the opportunity to answer briefly the objections raised.

Your correspondent says: "In his book Henry George clamors boldly for the confiscation of the land; for its seizure by the state without compensation to the owner. But of late, in his paper and speeches, he would reach this confiscation indirectly, by imposing upon land the whole weight of taxation."

Far from having advocated any such measures in "Progress and Poverty" as those here attributed to him, Henry George expressly protests against them. In Book VIII., Chapter II., on page 364, he gives the keynote of his theory: "I do not propose either to purchase or to confiscate private right to property in land. The first would be unjust, the second needless. Let the individuals who now hold it still retain, if they want to, possession of what they are pleased to call *their* land. Let them continue to call it *their* land. Let them buy and sell, and bequeath and devise it. We may safely leave them the shell, if we take the kernel. It is not necessary to confiscate land; it is only necessary to confiscate rent." No further comment is needed.

Next your correspondent states that at present the land in Ohio, his native State, pays about one-third the taxes, and improvements and personal property two-thirds; that to place this whole burden of taxation on land would greatly decrease its value and throw such of it as was not worth the tax on the market. The single tax on land values would undoubtedly act just as described — and *that is its object*. But your correspondent jumps at the conclusion that, this being so, the farmers would be most injured and would enlist in a body against the tax on land values; and probably knowing that the farmers constitute fifty per cent. of our population, he continues: "Hence, whatever its theoretic merits may be, George's plan is outside of practical politics. It is simply impossible."

This is a statement, but not an argument. The farmer is as good as any other citizen, but no better, and he is entitled to no special consideration, or special legislation. Nor is land in the country, whether under cultivation or not, any different, economically considered, from land in the city used for building sites. Land is land, and the taxation on its value will fall no heavier on the farmer than upon the manufacturer, or importer, or other citizen. On the contrary, being on land values, most of the tax will be paid where the value is highest — in cities, in mining districts, and upon land held under franchises. But your correspondent having from sentimental reasons selected the farmers (of Ohio) as a standard by which to test the justice of the measure, let us examine the effect the introduction of the single tax upon land values would have upon their condition.

There are three kinds of farmers in Ohio, as elsewhere:

First. Those who lease their farms and pay rent, in money or in produce.

Second. Those who fondly believe they own their farms, but who have them mortgaged.

Third. Those who own their farms free from all incumbrances.

The first class may be dismissed at once, for they have everything to gain and nothing to lose. They would pay their rent to the state in place of paying the landlord, and would be relieved of all the direct personal taxes and the indirect revenue and tariff taxes that they now pay upon everything they consume, from lumber, salt, and woollens through the whole category down to the Bible.

The second class is really part of the first class; for if their farms are mortgaged they do not own them to that extent, but are actually paying rent, and so far belong to the first class, and would enjoy the same advantages under the single tax. Another great and direct gain would be, that to start in life they would not be compelled to invest a large sum of money to buy a farm, but could lease it from the state for a moderate sum annually, and enjoy the same security of tenure as now under private ownership of land. The temptation to buy more land than they can cultivate, for speculative purposes only, thus making themselves land-poor, would also be removed. Inasmuch as they own their land clear of all incumbrance, they would belong to the third class.

This third class, holding their land free of all incumbrance, would of course, with the rest of the community, be relieved of all the direct and indirect taxes. Then it should be remembered that they now pay an annual tax not only on their land but also on their improvements. This tax, which now increases every year the more they improve their property, would be entirely removed. And, finally, consider the following:

In the census of 1880 these figures are given for the State of Ohio: Assessed valuation of real estate, \$1,093,677,705. And in another part of the same census: (Real) value of farms in Ohio, including land, fences, and buildings, \$1,127,497,353.

It will be seen from these figures that *all* the real estate of the State of Ohio was *assessed* at less than the *real* value of all the *farms* and their improvements, leaving out all city lands and mining lands, which are by far the more valuable. Two reasons or explanations exist for this: first, the undervaluation of improved property, which is practiced everywhere more or less, but especially in the large cities; and, secondly, the entire absence from or nominal valuation upon the tax-lists of tracts of unimproved farm lands. These two facts are notorious, and result in the shifting upon the shoulders of the working farmer of taxes that should be paid or shared by land speculators, city property holders, and corporations.

We therefore confidently assert that, by taking all taxes from improvements, by removing all existing direct and indirect taxes, by assessing all land at its full value, whether improved or unimproved, and by taxing all land values to the extent of their rental value, the taxes of the farmers of the third class also would be less than they are at present, and that they would for the first time get the full return of their labor. This is self-evident when we consider that under the single tax upon land values the farmer would pay *no* taxes whatever except the rent of his bare land, and that being based upon the natural advantages he enjoyed, he could *always* afford to pay. All this is more ably discussed in "Progress and Poverty," Book IX., Chapter III.

As to believing that the single tax is a cure for all

ills that flesh is heir to, Henry George does not assert, nor has he ever asserted, it. He does believe that the land monopoly is the greatest of all monopolies, and that it should be the first attacked; but the social benefits to be derived from an introduction of the single tax are so numerous and so far-reaching that even a partial enumeration of them seems indeed like setting up a claim for a panacea.

And here is Mr. Dickson's solution of the social question: "The remedy is restraint, pruning, regulation, not confiscation." But this, instead of being a remedy, is exactly what we have been doing for centuries. No! decidedly other measures are necessary.

First of all, we must stop the restraining, pruning, regulating work of those unjust laws which take from one to give to another; which in violation of the spirit of our Constitution create a privileged class. And after that we must give all the same opportunity to that element *land*, which is as much a matter of necessity to man as air. This will be doing justice; and this the single tax on land values will accomplish, by killing land speculation and practically restoring the land to the people, without disturbing security of titles or tenure.

William S. Kahnweiler.

NEW YORK.

Country Roads.

THE average country road as at present maintained and repaired is a constant source of unnecessary expense to taxpayers and an almost constant vexation to travelers. At its best the dirt road is good for only a few months in the year, and those months the time when the farmer — the man most interested in good country roads — is using his horses on the farm. In the fall, winter, and early spring, when the great bulk of teaming is to be done, the roads are in bad shape, except when kind Providence sends a snow that makes "good sleddin'." Bad roads mean small loads, and small loads mean to the farmer proportionately small profits. I know many and many a farm where the saving in time from hauling larger loads, the saving in wear and tear of horseflesh, wagons, and harness, would over and over again pay for the increased initial cost of a good macadam road.

Made of the best dirt obtainable, applied under intelligent supervision, and kept in order with proper road-making tools, the dirt road never is entirely satisfactory. What, then, can be expected of the quality of roads made of the material most easily obtained, applied by men ignorant of the first principle of road-making, working without proper tools, and supervised either by men equally ignorant, or not at all?

The true remedy for poor dirt roads is good macadam; but with no greater expenditure of money than now, the present roads might be vastly improved. The road tax should be paid in cash: the system of loafing out the tax under pretense of "working the roads" should be abolished. This money should be expended under the immediate supervision of one man for each township, selected for a knowledge of road-making, and put under bonds for the faithful performance of his duties. This would introduce into the system the element of responsibility, which is sadly lacking at present, and to the lack of which are due many of the abuses of the present methods. One man hiring his labor where he pleased, and paying cash for a day's

work, would get considerably more done for the money than a dozen or fifteen roadmasters working out the tax in conjunction with their neighbors and fellow-farmers.

Proper tools should be provided to work with. Road-scrappers are almost unknown in many country districts, and plows and shovels are the tools most commonly used. Very good road-scrappers can be bought to-day for only two or three times the cost of a good plow, and two men, two horses, and a road-scraper will do the work of an equal number of horses and ten men with plows and shovels, and do it better.

Only the best obtainable materials should be used in repairing the roads — gravel when possible, and when not, the dirt most nearly approaching it in quality. The use of "gutter-wash," sods, and stones larger than two inches in diameter should be forbidden. I have seen roads, "mended" with sods, that were for weeks impassable at any gait faster than a walk, and I have seen holes in the road-bed filled with large stones that were a nuisance for years.

The roads should be worked at proper times. The need of the dirt road is little repairs often made. The common practice is to do almost all the work just after "corn-planting." This is wrong, for two reasons: it is too late for the best results, and too much is done at one time. Six inches of earth or gravel will make a far better road if put on in layers of, say, two inches at intervals of a month or so, than will the entire amount applied at once. Just as soon as the roads are settled in the spring, and before they have become dry and hard, the scraper should be put to work leveling and filling the ruts worn during the winter, and slightly rounding the road-bed towards the center. The ground being still moist, and not compact as at the usual time of doing this, the work can be done more easily and rapidly and the road will pack better. Later, a light coat of earth or gravel, to be followed by another when the first becomes packed hard, and this in turn by a third if possible. Lastly, in the fall the entire road should be gone over to see that all gutters and bridges are free, that the road may not be washed out by winter storms and spring rains. All mudholes of course should be filled promptly at all times so that no water may stand in the road, and loose stones should be removed at least once a month.

The usual time for cutting brush — August — seems right, but some reform is needed in the way of doing it. The brush should be cut close down to the ground, and not, as often is the case, cut a foot or more above it, leaving long unsightly stubs to sprout the ensuing spring. It should be piled at once, and burned when sufficiently dry. Under the present system I have seen brush cut, left as cut, the next year's growth cut over the top of that, and the resulting tangle abandoned the third year.

With some such system as this I have sketched, the application to the road work of the business rules which govern every progressive farmer in the conduct of his farm, with the work done under the supervision of a responsible man, done at the proper times instead of whenever convenient, with the proper tools and with a proper quality of earth, by men who were compelled to give a day's work for a day's pay, the dirt road could be made not good, but vastly better than it is. But at its best the dirt road is a costly one to repair:

its only redeeming feature is its comparative initial cheapness, and in the long run repairs even this up. Country communities are apt to complain of the first cost of the macadam road, while annually spending millions of dollars and moving countless tons of earth, without having good permanent roads.

R. A. Learned.

The Iowa Experiment.

"How is prohibition working in your State?" is the question oftenest asked the Iowa man abroad. The inquirer as he listens to the story his question invites usually wears upon his face a peculiar expression which translated into words would read, "I acquit this man of intent to mislead, but my private opinion is, he's romancing." A rather skeptical acquaintance of mine in the East recently said to me, "Your story of empty jails, flourishing schools, and homes of thrift and comfort that were not there before, sounds like one of Washington Gladden's fascinating dreams of an ideal 'Christian League'; but don't you think you'd find it rather difficult to verify your statements with facts and figures drawn from official sources?"

Leaving to others the picturesque features of the subject, let me lay before the readers of *THE CENTURY* a few suggestive "facts and figures drawn from official sources"—some of the results of an investigation suggested by my practical friend's inquiry.

Permit me to say, in passing, that Iowa, far from being "a commonwealth of temperance cranks," as an Eastern journal has it, is a commonwealth of "plain people"—to borrow a phrase from Lincoln; people who do their own thinking, and have their own way of doing, and are daring enough to believe that some things can be done which the wisdom of the conservative East pronounces impossible. Taking advantage of the fact that we have no great centers of population to dictate our policies and load us down, we of Iowa have applied to the State as a whole the identical theory for handling the social evil known as the saloon which Georgia and Illinois apply to counties, and which New York applies to townships; namely, the theory that the majority shall determine whether the evil shall be tolerated and controlled, or prohibited. At a non-partisan election held in the summer of 1882, the question of prohibition *vs.* toleration was submitted to the people, and the voters of Iowa, by thirty thousand majority, declared they had no longer any use for the saloon. But the constitutional amendment which then carried had not been properly submitted, and was by our Supreme Court declared invalid. A disappointed majority then turned to the State legislature for relief, and in the spring of 1884 a prohibitory law was passed. The legislatures of 1886 and 1888 sustained the law and strengthened it by amendments. Thus steadfastly have the people sustained the prohibition, anti-toleration method of handling the saloon.

"But you will not deny the fact that there have been saloons in Iowa during all these years of prohibition? You cannot truthfully say there are no saloons in your State at the present time?"

The outlawed saloon does still linger on our borders; still maintains a precarious, characterless, hole-in-the-wall existence in many of our cities; but its social and

political prestige is gone, and in at least 70 of the 99 counties in the State there cannot be found an open saloon.

Seven years have elapsed since the voters of Iowa formally withdrew their sanction from the saloon. Five years have passed since the voters of Iowa, through their representatives, outlawed the saloon. Is there anything in the present situation to warrant a return to the toleration policy? Let us turn to the figures and see what they say on the subject.

I am indebted to Hon. Frank D. Jackson, Secretary of State, for advance sheets of the "Official Register of Iowa" for 1889. From this source, and by comparison with reports of other years, I discover that the total expense of the counties of Iowa, "on account of criminal prosecutions," was in 1882, the year in which the prohibitory amendment carried, \$401,431.18. In 1883 the total expense of criminal prosecutions was reduced to \$361,173.78. In 1884, presidential year, there was a slight increase in criminal expenses. In 1885 and 1886, years marked by the return of the outlawed saloon and a consequent reign of lawlessness, there was a large increase, the total in the year last named being \$421,024.31. In 1887, the year following the passage of the Clark (enforcement) law, the criminal expenses were reduced to \$282,877.66; and in 1888 they aggregated \$300,424.06 for ten months.

Compare the record of "leading crimes" in 1888 with the same in 1882. In 1888 there were 94 convictions for assault, 13 for breaking and entering, 47 for burglary, 13 for forgery, 13 for gambling, 42 for keeping a gambling-house, 148 for larceny, 9 for murder, 6 for manslaughter, 190 for keeping a nuisance, 59 for selling intoxicating liquors; total, 634. In 1882 there were 188 convictions for assault, 18 for breaking and entering, 78 for burglary, 30 for forgery, 14 for gambling, 41 for keeping a gambling-house, 215 for larceny, 14 for murder, 1 for manslaughter, 658 for keeping a nuisance, 25 for unlawfully selling intoxicants; total, 1282—more than double that of 1888.

A few weeks ago I met Warden Barr, of the Anamosa Penitentiary, on his way to Fort Madison with a carload of prisoners, under orders from Governor Larrabee to take these men from the State quarries to the State shops. I learned that the transfer was ordered in response to a loud call from Warden Crossley, of the Fort Madison Penitentiary, for more hands to enable him to comply with certain contracts for labor into which the State had entered with certain manufacturers. The circumstance led me to write Governor Larrabee for information as to the comparative number of prisoners in our penitentiaries this year and in previous years. From our chief executive I learn that the monthly average of prisoners in the two penitentiaries in 1886 was 696; in 1887 it was 667, and in 1888 it was 607. On the last day of September, 1888, the end of the fiscal year, there were but 535 prisoners in both penitentiaries. I am informed by those who have investigated the subject that no other State in the Union, unless it is Vermont, has as small a percentage of convicts as has Iowa at the present time.

But, going back to the counties, what say our judges? Here is a small pamphlet containing the answers of forty-one district and superior-court judges to a number of questions put to them by Governor Larrabee, one of the inquiries being as to the expediency of re-

pealing the prohibitory law. I find that of the forty-one, 4 favored repeal, 9 were non-committal, and 28 were of the opinion that the law should stay. Let me quote several specially significant passages from these letters.

Judge Traverse, Bloomfield: "My experience is that, wherever saloons are closed, crime is diminished."

Judge Harvey, Leon: "It has reduced crime at least one-half, and the criminal expenses in like ratio."

Judge Lewis, Sioux City: "The law is as well enforced as any other, and has decreased criminal expenses at least two-thirds."

Judge Deemer, Red Oak: "In many of the counties the jail is getting to be almost an unnecessary building, and in the last three counties I visited there was not an occupant."

Judge Carson, Council Bluffs: "When in the senate I favored local option, but I am now satisfied the statute should stand."

Judge Thornell, Sidney: "I should regard its repeal as a calamity."

Judge Bank, Keokuk: "This was the first and only term in my recollection that there was no criminal business transacted in court."

Judge Wilson, Creston: "I was not in favor of the law, thinking that high license would work better. I have carefully watched its workings and am convinced that I was wrong."

Judge Wakefield, Sioux City: "As the saloons were driven out, other business came in to occupy the vacant places."

Judge Wilkinson, Winterset: "Crime and criminal expenses have been lessened."

Judge Johnson, Oskaloosa: "The effect of the prohibitory law has been to reduce very materially crime and criminal expenses in this district."

Judge Kavanaugh, Des Moines: "It has decreased crime over 50 per cent, and added largely to individual happiness."

Judge Granger, Waukon (now of the Supreme Bench): "The closing of the front door of the saloon, whereby it is destroyed as a place of social resort, has canceled nine-tenths of the drunkenness. . . . Our grand juries have comparatively nothing to do. . . . Our criminal expenses since the closing of the saloons have been comparatively nominal."

But roving correspondents for journals in the large cities about us inform their readers that prohibition is killing, or has killed, Iowa. Let us see for ourselves.

The census of 1880 gave our State a population of 1,624,615. The State census of 1885 put the population at 1,753,980—an increase of 129,365. The fact that there has been a decided increase in population since the last census (in 1885) is shown by comparison of the vote of 1884 with that of 1888. The total vote of Iowa in 1884 was 377,153, while that of 1888 was 404,130; an increase of 26,977—an estimated increase of 134,885 in four years.

Iowa years ago won, and has never since lost, the honor of having less illiteracy in proportion to population than any other State in the Union. But note the educational progress she has made during these six years of prohibition. In 1883 there were 11,789 school-houses in Iowa; in 1884, 11,975; in 1885, 12,285; in 1886, 12,444. The value of these school-houses was, in 1883, \$10,473,147; in 1886, \$11,360,472. State Super-

intendent Sabin's report to the last Iowa legislature begins thus: "It is gratifying to be able to report a most satisfactory and prosperous condition of education throughout the State. The past two years have been years of increased interest, activity, and growth. . . . The number of school-houses has been increased by about 500, and their aggregate value by more than \$550,000. The number of teachers is increased by about 500, while our school population is 10,000 greater than the same as reported two years ago."

Another index of Iowa's increasing prosperity is the showing made by our savings-banks. The reports made to our Auditor of State show that the "total assets and liabilities" of Iowa's savings-banks were, in 1883, \$8,419,739.83; in 1885, \$9,618,866.97; in 1887, \$12,666,347.72. Auditor Lyons informs me that on June 30, 1888, the total assets, etc., of the savings-banks had increased to \$14,625,024.84. These figures show that since the adoption of prohibition the resources of these depositories of the poor man's surplus earnings have increased over six million dollars, or over 73 per cent.

A Tenor Farm.

WE are a conservative people in New England and there is plenty of idle money among us awaiting safe investment. Flaming prospectuses of riotously rich Western farm lands attract only after insistent iteration; even then, I fancy, they draw comparatively few of the hoarded dollars which have escaped the depression in "C. B. and Q." and "Atchison and Topeka." I have a plan for using these dollars on a Western farm. It is this. Let a company of capitalists buy the most fertile five hundred acres in Dakota, Kansas, or Southern California, anywhere thereabouts where land is good and the climate equable. Let them erect thereupon a set of dwellings and school-buildings, obeying in the process every sanitary law; also gymnasium, theater, and concert-hall. They should thoroughly fence their property with barbed wire. Now to people it. Let agents be sent throughout the United States in search of tenor voices, behind which are robust bodies and good average minds. Contract with the parents or guardians of these voices and bodies for their time and keep for a term of years, say six. After selecting competent agriculturists to run the farm, and a teacher of physical science,—for the farm and the gymnasium are to furnish the before-mentioned voices and bodies with healthy, normal, and discreet exercise,—get a good corps of teachers of the voice, who know their business (alas! alas! our scheme may fail at this point), another to teach music, and set them to the task of developing these voices and bodies into manly and beautiful singers. It can be done. It will pay a large dividend. Why? Because in this country there is a great cry for tenors. Twenty oratorio societies, ten societies giving high-class instrumental concerts, and scores of vocal clubs would keep the product of this tenor farm continually employed eight months out of every twelve, at from two hundred dollars to four hundred dollars per individual per engagement.

There is not one great American tenor singer. There is only one in England who is kindred to us on account of the language he speaks. Our concert audiences yearn to hear a good tenor. Look at a file of Boston Sym-

phony or New York Philharmonic programmes for the season of 1887-88; how many tenors are numbered thereon? One in Boston, where twenty-four concerts were given; none in New York. And the Boston singer was a *German*! Why is this? Because the right kind of tenors do not exist. Scores of puny, pretty, and weak voices arise to the parlor and church-quartet state of the vocal art, but for some reason go no further. The great need of the country to-day is tenors. Our tenor farm would easily pay twenty per cent.

Irish Estates.

In the valuable and interesting article "The Temperance Question in India," published in the July

number of THE CENTURY MAGAZINE, on page 445 there is drawn a comparison between the tenants of "Out Stills" in India and an agent over an Irish estate which is calculated to convey a wrong impression of the management of properties in Ireland.

The author says:

He [viz., the highest bidder] has farmed the job, just as a man farms the rents of a landlord holding an Irish estate, and it is his interest to get all the money out of it he can.

Such an arrangement is certainly not the custom in Ireland; and even had it been, it would now be impossible to carry it out, since the tenants have the right to have their rents judiciously fixed.

BRIC-À-BRAC.

When Polly Goes By.

'T IS but poorly I'm lodged in a little side-street,
Which is seldom disturbed by the hurry of feet,
For the flood-tide of life long ago ebbed away
From its homely old houses, rain-beaten and gray;
And I sit with my pipe in the window and sigh
At the buffets of fortune — till Polly goes by.

There 's a flaunting of ribbons, a flurry of lace,
And a rose in the bonnet above a bright face,
A glance from two eyes so deliciously blue
The midsummer seas scarcely rival their hue;
And once in a while, if the wind 's blowing high,
The sound of soft laughter as Polly goes by.

Then up jumps my heart and begins to beat fast.
"She 's coming!" it whispers. "She 's here! She has passed!"

While I throw up the sash and lean breathlessly down
To catch the last glimpse of her vanishing gown,
Excited, delighted, yet wondering why
My senses desert me if Polly goes by.

Ah! she must be a witch, and the magical spell
She has woven about me has done its work well,
For the morning grows brighter, and gayer the air
That my landlady sings as she sweeps down the stair,
And my poor lonely garret, up close to the sky,
Seems something like heaven when Polly goes by!

The Elder Galvanism.

A PARABLE FOR NOVELISTS.

I, PAULUS, who love science more than money,
Self, woman, fame, or art,
Dissect a certain sleek, tame household bunny
And galvanize its heart.

Comes Paula, liking science less than habit,
Wit, beauty, youth, and flowers:
Storms — calls me monster — wants her old live
rabbit,
Whose heart beats — beats — like ours!

BY THE SEA.

OLD SALT. "I jes want ter give ye a pointer, young man. With that ther net sot as it is and them durned scoop nets you 're a-handlin' you 'll never catch a fish around yere in a thousand yers."

Reflections.

THE mischief of opinions formed under irritation is that men feel obliged to maintain them even after the irritation is gone.

VOTES should not be counted, but weighed.

THE small writer gives his readers what they wish, the great writer what they want.

To be content with littleness is already a stride towards greatness.

MEN are equally misunderstood, from their speech as well as from their silence; but with this difference: their silence does not represent them; their speech misrepresents them.

J. A. Macon.

Ol' Pickett's Nell.

FEEL more 'an ever like a fool
 Sence Pickett's Nell come back from school.
 She oncet wuz twelve 'nd me eighteen
 ('Nd better friends you never seen);
 But now — oh, my!
 She 's dressed so fine, 'nd growed so tall,
 'Nd l'arnin' — she jes knows it all.
She 's eighteen now, but I 'm so slow
 I 'm whar I wuz six year ago.

Six year! Waal, waal! doan't seem a week
 Sence we rode Dolly to th' creek,
 'Nd fetched th' cattle home at night,
 Her hangin' to my jacket tight.
 But now — oh, my!
 She rides in Pickett's new coopay
 Jes like she 'd be'n brung up thet way,
 'Nd lookin' like a reg'lar queen —
 Th' mostest like I ever seen.

She uster tease, 'nd tease, 'nd tease
 Me fer to take her on my knees;
 Then tired me out 'ith Marge'y Daw,
 'Nd laffin' tell my throat wuz raw.
 But now — oh, my!
 She sets up this way — kinder proud,
 'Nd never noways laughs out loud.
 You w'u'd n't hardly think thet she
 Hed ever see-sawed on my knee.

'Nd sometimes, ef at noon I 'd choose
 To find a shady place 'nd snooze,
 I 'd wake with burdocks in my hair
 'Nd elderberries in my ear.
 But now — oh, my!
 Somebody said ('t wuz yesterday):
 "Let 's hev some fun w'ile Ned 's away;
 Let 's turn his jacket inside out!"
 But Nell — she 'd jes turn red 'nd pout.

'Nd oncet when I wuz dreamin'-like,
 A-throwin' akerns in th' dike,
 She put her arms clean round my head,
 'Nd whispered soft, "I like you, Ned";
 But now — oh, my!
 She curteseyed so stiff 'nd grand,
 'Nd never oncet held out her hand,
 'Nd called me "Mister Edward!" Laws!
 Thet ain't my name, 'nd never wuz.

'Nd them 'at knowed 'er years ago
 Jes laughed t' see 'er put on so;
 Coz it wuz often talked, 'nd said,
 "Nell Pickett 's jes cut out fer Ned."
 But now — oh, my!
 She held her purty head so high,
 'Nd skasely saw me goin' by —
 I w'u'd n't dast (afore last night)
 A-purposely come near her sight.

Last night! — Ez I wuz startin' out
 To git th' cows, I heerd a shout;
 'Nd, sure ez ghostses, she wuz thar,
 A-settin' on ol' Pickett's mar';
 'Nd then — oh, my!
 She said she 'd cried fer all th' week
 To take th' ol' ride to th' creek;
 Then talked about ol' times, 'nd said,
 "Them days wuz happy, wa'n't they, Ned?"

Th' folks wuz talkin' ev'rywhars
 'Bout her a-puttin' on sech airs,
 'Nd seemed t' me like they wuz right,
 Afore th' cows come home last night.
 But now — oh, my!

Mather Dean Kimball.

The Dialect Tale.

We have had it in Irish and Dutch,
 From the east, from the north, from the south;
 The spelling is generally such
 As to twist the most classical mouth.
 We have meekly submitted for long,
 We have patiently tried to pronounce
 This language of story and song,
 But there comes to each pound a last ounce.

O brothers, we pray and beseech,
 If you have a "short story" to tell,
 Put it into your everyday speech,
 And spell as the spelling-books spell!
 If you find it devoid of all wit,
 If it lacketh both humor and sense,
 If it aimeth and faileth to hit,
 Spare, spare us the final offense!

Has the reader no rights of his own?
 Must he read his once-loved magazines
 In language which makes him to groan
 With struggles to guess what it means,
 While, haunted by similar tales,
 He tries to compare and collate,
 Till overtaxed memory fails,
 And he yields to bewildering fate?

"Take care of the sense," we are told,
 "And the sounds will take care of themselves."
 It is time to return to the fold,
 O fillers of library shelves!
 If man is a savage at heart,
 Conventions may suddenly fail,
 And an *auto da fe* in the mart
 Be the end of the dialect tale!

Margaret Vandegrift.

Teddy.

TEDDY 's been to seek his fortune,
 Been a long, long way;
 Weary, foot-sore, and disheartened,
 He 'll be home to-day.

Handsome, winsome, lazy Teddy!
 Boys and girls and old crones say
 With ne'er a penny in his pocket
 He 'll be home to-day.

'T was for my sake that he wanted
 Store of wealth without delay,
 'T is for my sake that he 's coming,
 Coming home to-day.

Shall I frown upon poor Teddy?
 Let his luck his worth outweigh?
 Sure he needs a smile, I 'm thinking —
 I 'll give him one to-day.

William Zachary Gladwin.
